LITERATURE

Mary Stuart. By Florence A. MacCunn. (Methuen & Co.)

MRS. MACCUNN'S 'Mary Stuart' is brief, a matter of three hundred pages, and tells the story of the Queen without explicit criticism of evidence. The experienced reader, however, can see that known sources have been patiently studied, as they are accessible in calendars of State Papers and in most of the published documents, while the latest modern works have been consulted. The author has not space enough for controversy, but exhibits complete balance of judgment. Her narrative is vivid, and avoids rhetorical pursuit of the picturesque. She is extremely sympathetic: none of the Queen's remarkable virtues escapes notice; but she is entirely free from the credulity into which sympathy is apt to run. She points out, on the evidence of the narrative of Nau, Mary's secretary, that Darnley was still unforgiven by the Queen after all the sufferings of her English captivity; while, whatever the precise truth about the Casket Letters may be, Mrs. MacCunn seems to entertain no doubt of Mary's guilty knowledge of the scheme for her husband's murder. Certainly the Queen who pensioned the assassin of her brother, the Earl of Moray, while intimating her desire that a traitor (either Sir James Balfour or Lethington) should be taken off, was not more scrupulous than other queens of the time. It was by the irony of fate that, in the case of Darnley, Mary was forced to sin against her own most cherished virtue, loyalty. Her misery in this situation is, as Mrs. MacCunn notes, almost beyond the power of a forger to express as it is expressed in the "Glasgow letter"; while, on the other hand, the verbal coincidences between Crawford's report and that letter are not to be accounted for on the supposition that the document is completely genuine. As to Mary's knowledge of the design to murder Elizabeth, Mrs. MacCunn returns an open verdict in the present state of the evidence. We may expect a fresh discussion from an eminent student of the papers. Mrs. MacCunn's general attitude is shown in the concluding quotation: "Cry unto her that her warfare is accomplished, that her iniquity is pardoned, for she hath received at the Lord's hand double for all her sin."

No attempt is made to deny the Queen's infatuation for Bothwell, or its passing away like an evil dream. The obscure motives of Lethington seem to be correctly appreciated, and Moray is characterized with a freedom very unlike the enthusiastic admiration of Froude. But Moray, like Mary, we think, sinned *contre son naturel*, and in many cases really tried to do his best for his country. By an oversight five names are said (p. 118) to have been set to the bond for Darnley's murder, and the inference is that Moray's was the fifth. Of course he did not sign, or probably see, the paper; if there was a fifth name (which is unlikely), it would be that of Sir James Balfour. Though Mrs. MacCunn asks, "What had Mary in common with Glencairn?" she really had a great deal. He "could say anything to her," for he had that gay courage which, as Knollys says, she admired even in an adversary. On pp. 107–9 there is a confusion of dates of the month, February–March, 1565–6. On p. 254 the date of D'Aubigny's arrival in Scotland is misprinted. The author's object, the judicial examination of a fascinating character, has been successfully attained, without fear or favour, without pharisaic denunciation or maudlin sympathy, and there is no more trustworthy brief biography of the Queen of Scots.

The illustrations are of unequal value. The Mary exhibited at Messrs. Shepherd's in the summer is certainly not 'Mary at Fotheringay,' but, if genuine, is of about 1579. The plans and photographs of places are all excellent—not so the 'Mary at the Age of Fourteen,' or 'Le Deuil Blanc,' or the Mary of p. 85, which is not Mary at all, in our opinion, but a lady unknown. No pedigree is given for the Hon. Mrs. Boyle's miniatures of Bothwell and Lady Jean Gordon, very good in themselves. The 'Mary Beaton' of the picture at Balfour we have not seen. It is interesting, as reproduced, but we have no information as to its artist and date. To judge from the photograph, the hand is unfamiliar. This portrait deserves expert examination. Some reproductions of portraits from engravings are scarcely worthy of the book, but that of Lethington is striking: its provenance is not mentioned. Mrs. MacCunn expresses her opinion that a biography of the Regent Moray is much needed, and we wish that she would undertake it, with a proper (and unpopular) *apparatus criticus*.

The Political History of England.—Vol. X. *1760–1801.* By William Hunt. (Longmans & Co.)

THE name of Dr. William Hunt on a title-page has deservedly come to be regarded as a guarantee of sound historical workmanship. His contribution to the important series of volumes projected under the editorship of Mr. Reginald Poole and himself cannot fail to enhance a reputation gained in the bypaths of ecclesiastical research, and by many conscientious articles in the 'Dictionary of National Biography.' Dr. Hunt may be presumed to have planned his survey of the reign of George III., from the accession to the close of Pitt's first administration, with an eye to the requirements of that somewhat exacting personage, the advanced student. For him or her the disquisitions of Lecky are too elaborate; a compendium like Dr. Franck Bright's, excellent though it is in its way, is too concise. The 'Political History' comes about midway between the two; it is neither solid joint nor meat extract, but a well-confectioned ragout. Dr. Hunt has not remained content, however, with condensing evidence already ascertained. He has investigated the manuscripts at the British Museum and Public Record Office to good purpose, and has thrown fresh light on many diplomatic transactions, especially on those which produced the Second Coalition.

Dr. Hunt controls his judgment of individuals by continual reference to the ideas of their age. He thus differs from those Whig historians who have insensibly allowed the political doctrines derived from the French Revolution to colour their views on what he bluntly calls the American rebellion. It is, of course, a distortion of fact to represent George Grenville and Lord North, or even the king, as deliberate oppressors. Nothing, Dr. Hunt thinks, can be further from the truth than the idea that England's treatment of her colonies was harsh or illiberal. Unfortunately the mercantile theory involved a conflict of interests and encouraged contraband. The mother-country enforced the law, and friction inevitably ensued. But even when Grenville introduced the Stamp Bill, the debate, according to Burke, was languid, and Franklin himself believed that the colonies had no choice but to accept a tax which was after all to be applied to their own defence.

Dr. Hunt writes clearly and impartially on the campaigns, giving the credit which is their due to victims of incompetent instructions like Burgoyne, and, in a lesser degree, Cornwallis. He hardly takes sufficient account of the value to the Americans of the seasoned French soldiers and their experienced commander Rochambeau. That able man's unstudied memoirs, when read in conjunction with Washington's dispatches, prove him to have originated the move to the south, whereas the American general thought New York a preferable objective; the assistance of troops who understood how to attack fortified positions must, moreover, have materially hastened the fall of Yorktown.

Constitutional history receives instructive treatment at Dr. Hunt's hands; for instance, in his remarks on the changes which have come over the Cabinet as an instrument of government. At the accession of George III., that body, as he says, had by no means attained its modern coherence. The king regarded himself as free to guide each minister by his will. Even Chatham, though he was far from looking upon the premiership as a mere conduit of the royal authority, showed that he was no believer

in a homogeneous administration by choosing his colleagues from the various factions. His son established the doctrine that there should be an avowed Prime Minister, possessing the chief weight in the Council and the principal place in the confidence of the king. But the unstable foundations of his power are well illustrated by the analysis of the House of Commons in 1788, quoted by Lord Rosebery with the just comment that no document has thrown more light on the political system of the period. In it the "party of the Crown" is estimated at 185 members; "the independent or unconnected members of the House" at 108; Fox's party at 138; and that of Pitt at 52. This was, of course, before Pitt's masterly conduct of the Regency Bill had placed him at his highest point of fortune. Yet it was not until 1792 that he ventured to insist on the dismissal of the sullen and openly obstructive Thurlow, and thus achieved a long step in the progress of the development of the Cabinet system. A minister could no longer remain in office, through the king's favour, against the desire of the Prime Minister. Dr. Hunt might have noticed, however, that Dundas spoke and voted to the last against the abolition of the slave trade, though that object was advocated by Pitt; while Addington was indispensable both to Pitt's second ministry and to that of Grenville and Fox, because he filled, though in a more passive way, the post formerly occupied by Rigby and Jenkinson. "The Doctor," said Canning, "is like the measles: every man has him once." He was, in fact, the last of the King's Friends.

The appendix, 'On Authorities,' is adequate, even though it fails to include such a famous pamphlet as Dr. Johnson's 'Taxation no Tyranny,' or such a well-known pamphlet as 'The Rolliad'; and students will bless Dr. Hunt for lists of the administration between 1760 and 1801, the compilation of which must have cost him an infinite amount of trouble.

A New English Dictionary. Edited by J. A. H. Murray, H. Bradley, and W. Craigie.—*Mandragora—Matter.* (Vol. VI.) By H. Bradley. (Oxford, Clarendon Press.)

An exceptionally large number of the words treated in this instalment are, for divers reasons, interesting. In some cases popular "etymology" attracts attention, as in "mandrake," which is the Greek "mandragora" transformed under the influence of "man" and "drake"=serpent (compare "mandragon"). The fabulous "manticore" (a form due to a corruption of Aristotle's μαρτιχόρας, "app. an O. Persian word for 'man-eater,'" the name of a "monster having the body of a lion, the head of a man, porcupine's quills, and the tail or sting of a scorpion"), and the zoological "mantegar," a kind of baboon, are both turned into English as "mantiger." The term for mixed grain, "maslin," from Old French *mesteillon*, has been spelt "mashlum," "mashelton," &c., by contamination of "mash"; "maskeline," &c., from Northern "mask"=mash; and, by "learned pseudo-etymology," "miscellane," &c., from Lat. *miscellanea*, hodgepodge. An American Indian word meaning "petticoat, woman's dress," became "matchcoat" by 1661. "Marshalsea," as if "marshal"+"see," is for "marshalcy," farriery, office of marshal. The derivation of "to manure" is improved by the citation of the Anglo-French "*maynoverer*, to work with the hands=O.F. *manouvrer*." The collection of quotations proves that "mart"=market, was an adaptation of Dutch "*markt* (formerly also written *mart*, and still commonly so pronounced)." "Masterpiece" is explained as

"Probably after Du. *meesterstuk* or G. *meisterstück*, which occurs much earlier, and primarily denoted the piece of work by which a craftsman gained from his guild the recognized rank of 'master,'"

which denotation is even more likely to be the original meaning than is the connexion with the continental terms cited to be correct. The word "mate," companion, is, as we anticipated, finally separated from the synonymous "make," and explained as adopted from Middle Low German or Dutch, and akin to Anglo-Saxon *gemetta*, companion at table. From Thomson's 'Summer' might have been quoted "The stock-dove.....The sad idea of his murdered mate" (1727), between 1667 and 1774 in subsection 3b; and in the preceding paragraph, between 1786 and 1842, Byron, 'Don Juan,' II. cxc., "Haidée.....flew to her young mate like a young bird." For "match"=make to correspond, between 1708 and 1861, Goldsmith's 'She Stoops to Conquer,' II., should be quoted, "I always match my appetite to the bill of fare"; "It's a match" in his 'Good-Natured Man' is sixty years later than the last quotation for "match"=agreement, bargain; while Beattie's "singing match" (Pastoral vii.) is wanted. The figurative use of "market" (sb.) in the last-mentioned play, "has carried that face at last to a very good market," is a century and a half later than the last illustration given, Shak., 'As You Like It,' "Thank heaven, fasting, for a good man's love. Sell when you can, you are not for all markets." For "manner"=outward deportment, between 1557 and 1886 there is room for Mr. Croaker's "he has got into such a rhodomontade manner all this morning" ('Good-Natured Man'). The article on "marrying" (the action) would have been the better for Burton's ('Anat. of Melanch.,' III. ii. 6, 3) "marrying marring, wooing, woing."

It is amazing that only Warton (1788) is quoted for the combination "massy proof," which everybody ought to be able to assign to Milton's 'Il Penseroso,' "The antic pillars massy proof," though ignorance of the imitation would not matter. With this single exception the paragraphs animadverted upon are excellent as they stand, and the articles to which they belong are full of varied interest, and good examples of the enormous advance in English philology and lexicography achieved in this great work. The same may be said of the articles on "mangel-wurzel," "mangle," "manner," "mansion," "many," "marine," "mark," "market," "marry," "marshal," "martagon," "marten," "masquerade," "mass," "master," "match," "mate," "material," "mathematic," "mathematics," and "manor." From the last we quote a specimen:—

"A unit of English territorial organization, originally of the nature of a feudal lordship.

"The doctrine of the lawyers of the 17th c. is that a manor consists essentially of land held in demesne by the lord, to which is attached a seignory over freehold tenants sufficient in number (the minimum is variously stated as two or three) to constitute the court, called at a relatively late time the court-baron, which the lord is bound to hold and the tenants to attend. (The manor was often defined from the point of view of its relation to the lord, as an estate in land consisting of demesnes and services.) This restriction of the meaning of the word is destitute of early authority (though the kind of complex estate described probably existed from the 12th century), but is the basis of the present application. As the status of tenant in fee under a mesne lord is practically obsolete, a manor now consists of the lord's demesne (if any exists) and of lands from the holders of which he has the right to exact certain fees and fines, and within which he has certain privileges. A 'court customary' is held in all manors where there are copyhold or customary tenants of the demesne. A manor is usually named from the principal township, as 'the manor of Barnstaple.'"

It seems a mistake to place "maanovre" (1479)=hand-labour (of digging), under the eighteenth-century importation "manœuvre," instead of under "manure"="to work upon with the hand," spelt "maynoure" (1431). Prudence would not pursue the etymology of "mast" (of ship) beyond Teutonic, as the only temptation to do so is the Lat. *mālus*, a form which presents a broad target for guessers, but no mark for scientific reasoners. Of course it is just possible that its connexion with an Indo-Germanic *mazdo-s* may be a happy conjecture. Earlier quotations for a "manifesto" might have been given. Southey is credited with anglicizing the late Latin *matafunda*=a stone-throwing machine, as "matafund"; but some editions give "matafunda," so that either "matafund" is a false form or the poet's variation should have been noticed. For "masculine"=the masculine gender, there is an amusing reference to a quotation given under "feminine," though the said quotation, dated 1612, is given in the preceding column, less than an inch away from the end of the reference. "Martel"=marten (which is for "martern"=marter's fur), is said to be "? corrupt form of Marter"—the etymologically correct form of the animal's name—"or Marten"; but it may be adapted from Low Latin *martalus* for **martarus*, with *l* by dissimilation; the Old English equivalent of "marter" is *mearð*, preserved as "mart," dialectic, and in "foumart."

We subjoin the excellent discussion of the derivation of a "mask" from French *masque*:—

"The Fr. word (first recorded in 16th c.) is usually believed to be ad. the synonymous Sp. *máscara*, It. *maschera* (see Masker *sb.*[1], Masquerade). But it is difficult to believe that the word has no connexion with med. L. *mascus*, *masca*, which render OE. *gríma*, mask, spectre, in the Corpus Glossary *c* 725. *Mascha* is used *c* 680 by Aldhelm in association with *larva*, which had the senses 'mask' and 'spectre,' and *masca* occurs in the Lombard Laws *c* 800 with the sense 'witch,' cf. Pr. *masco* witch (see Mascot). On the whole the most plausible

view seems to be that the representative of med. L. *mascus, masca* survived in some Fr. dialect, and was thence taken into literary use as an equivalent of the like-sounding Sp. *máscara*. The origin of med. L. *mascus, masca*, is undetermined; some scholars think the original sense was 'mask,' and that the word was from Teut. **maskwo*- net (see MESH *sb.*)."

A Wanderer in Holland. By E. V. Lucas. (Methuen & Co.)

IF the success of a book of travels is to be measured by the travel-fever it excites in the veins of its readers, this volume should have a warm welcome. Dull of spirit must he be who, skimming its pleasant pages and knowing as yet nothing at first hand of Holland and its quaint delights, does not feel himself moved to follow in the "Wanderer's" footsteps. As for him to whom Holland is already dear familiar ground, a chapter or two of Mr. Lucas can hardly fail to set him planning a fresh holiday among favourite haunts in North Holland and Utrecht and Friesland.

Our author, who in a brief preface disclaims for his work all title to be a source of authoritative information, would probably prefer that it should be described as a book of impressions rather than of travel. This is indeed the more fitting definition of a volume in which descriptive writing, personal experience, a little history, and a good deal of unaffected art appreciation—as distinct from art criticism—are agreeably mingled. It is the gaiety of our author, his simple pleasure in things seen, his equal readiness to be detained on his way by a street crowd, a fragment of old architecture, or the shadow of an historical association, the ease with which he allows himself to be amused by anything and everything that delights the average man, which make him so thoroughly agreeable a travelling companion; to accompany him on his wanderings is like spending a few hours in the society of a well-read friend fresh from Holland, who knows his subject and likes to talk about it. Now, he gossips of the peculiarities of people he has met; now, he waxes eloquent over a favourite picture; occasionally he steps to his library shelves and takes down a volume in which is some passage illustrative of his story. And so the evening passes by: if at its close no great store of new facts has been gathered, yet we are the richer by a number of old ones made real and living to our apprehension. To profit by such intercourse it is necessary to share the mental attitude of our author, who declares gaily that

"any old town that is on a river, and that river a mouth of the Rhine, is good enough for me; but when it is also a treasure-house of mediæval architecture, one's cup is full."

A traveller who sets forth on his journey in this mood will never return home unrewarded.

Those who have travelled as extensively in Holland as Mr. Lucas—and the country is so small that no one who goes there at all has any excuse for not exploring its main features thoroughly—will not always see eye to eye with him in his judgments. For instance, we should dispute stoutly his elimination of all effect of strangeness from the sensation produced by the first sight of a Dutch landscape. There may be a family resemblance between certain parts of North Holland and the country of the Norfolk Broads—we might find an even closer English parallel in some districts of Lincolnshire—but to assert that he who knows the one will find nothing new in the other is surely an exaggeration. Except in Holderness—that narrow strip of land on the East Yorkshire coast, reclaimed, like much of the Low Countries, from sea and estuary—it would be difficult to find in Britain anything like the absolute flatness that gives to the greater part of rural Holland a curious and unique dignity, and invests its sunsets with a magic never elsewhere seen inland. And even Holderness, flatness apart, is not Dutch in its effect. It lacks the rich colour which imparts so much charm to the land of emerald-green polders, red roofs, and many-hued windmills—a colour only faintly suggested by the pictures of Holland's greatest landscape painters, whose preference for subdued lights, and skies rather sad than sunny, is responsible for a good deal of misapprehension. Again, it is natural that the deplorable Dutch habit of "trimming" trees should offend a nature-loving eye. But the practice is hardly so universal as our author in his indignation appears inclined to believe. It is yet possible to find trees growing at their own sweet will within the dominions of Queen Wilhelmina. Has Mr. Lucas forgotten the noble beeches of the so-called "Park" at Haarlem? That beech wood could furnish many groups for the joy of a tree-painter.

Mr. Lucas is particularly happy in his vignettes of the different Dutch towns within whose gates he set up, from time to time, his wandering tent. He has his favourites, chosen for the most part not from among those which bulk largest in history, or occupy conspicuous positions in the commercial world of to-day. Kampen and Middelburg are specially dear to him. Nowhere else is he quite so successful as in describing Middelburg's beauties; affection seems to lend felicity to his phrases. To the peaceful charm of Delft he appears a little obtuse; and he certainly underrates the attractions of the Hague. Even without its Vyver, that perfect specimen of a Garden City would be something more than "a not very noteworthy European town." We demur, too, to the "sombre colouring" stated to be characteristic of Amsterdam. If a certain grave—though hardly gloomy—dignity may be allowed the Keizersgracht and Heerengracht, the less aristocratic quarters of the city amply redeem its character for cheerfulness. On this point Mr. Herbert Marshall's illustrations are in flat contradiction to his author's text. A brief "study" of Utrecht is singularly vivid. Apparently Mr. Lucas failed to visit Zeist, which lies only a few miles distant from the old episcopal city. A sketch from his pen of the Moravian settlement hard by the village—one of the very few left in Europe where the old community life, with its "Brethren" and "Sister" houses, its common workshops, and distinctive dress for maidens, matrons, and widows, still flourishes—would have been a welcome addition to this part of his book.

Mr. Lucas has no good word to say for the Helder; but by his own acknowledgment he saw it under depressing atmospheric conditions. We can assure him that in suitable—by which we do not necessarily mean fine—weather the Great Dyke is a highly impressive thing. However, if he does less than justice to this supreme work of Dutch hardihood and industry, he shows himself fully alive to the importance attaching to pile-driving in a country like Holland. It is interesting to compare his account of pile-driving at Amsterdam with that which Mr. Horatio Brown, in his recently published 'In and Around Venice,' gives of the same industry as practised by the Venetians.

Like every foreigner in Holland, Mr. Lucas was struck by the air of general prosperity pervading the community at large. Less here perhaps than in any other European country are extremes of wealth and poverty to be seen side by side. The working population presents everywhere the signs of well-being; and although there are plenty of very rich men in Holland, their mode of life is comparatively simple—the fact of their opulence is not obtruded upon the sojourner in the land. Subordination of private to public interest—rather awkwardly expressed by our author in the phrase that "Holland exists for the State"—and the habit of the educated classes, who avoid seclusion, and make ingress to their grounds easy for their next-door neighbour, have combined with the native industry of the people to preserve the Dutch nation from the pressure of problems which torment the larger countries.

It does not clearly appear when our author's last visit to Holland was paid—apparently at a date just subsequent to the close of the South African war, since he attributes to the feeling aroused by that contest some of the derision which greeted the appearance of an Englishman in the more remote Dutch towns.

The "Wanderer" studied pictures, as he explored cities, purely for pleasure, having no critical end in view; and in one and the other case he bases his preference on grounds of personal liking alone. Where individual pictures are concerned, that liking leads him generally to sound conclusions; but when the golden age of Dutch painting has to be considered as a whole, we discover a singular lack of historical vision in our author. He can understand that seventeenth-century Holland,

"in an expansive mood of satisfaction at her success, should have wished to see groups of her gallant arquebusiers and portraits of her eminent burghers.....and.....that respectable painters of such pictures should arise in some force to supply the need—just as wherever in this country at the present day there are cricketers and actresses, there also are photographers."

But he finds in her circumstances at that date no special incentive to great artistic achievement, and in the glorification of domesticity by her artists no expression

of any "real idea." He ignores the fact that periods of storm and stress have always served as the hotbed of genius, and that the Dutch people in the seventeenth century had just passed through such a fiery ordeal as has fallen to the lot of few modern nations. To one who goes no further than the "establishment of prosperity" for an explanation of the works of Rembrandt and Vermeer of Delft, they must remain for ever unaccountable. Regarded as "effects of peace and quietness" after a prolonged deluge of blood and fire, and fruits of liberty new-won at a cost almost unparalleled in history, they lose their "miraculous" character—except in so far as the epithet may be applied to any work of genius.

Mr. Lucas's taste in pictures is eclectic. He is equally generous in his appreciation of work so diverse as that of Jan Steen and Vermeer of Delft, Peter de Hooch and Jan van Scorel. At Haarlem he has a good word for the fine painting of Jan de Bray and Jan Verspronk—painting apt to receive scant attention from eyes dazzled by the surpassing glories of Frans Hals at his greatest. Against these merits in judgment must be set a slight inclination to depreciate Rembrandt. Surely there is small danger that any visitor to 'The Night Watch' will ever find the fiery little figure of the lieutenant "mean"! And why hint that if Rembrandt had painted Nicolas Maes's 'Unending Prayer,' he would probably have "injured it by some touch of asperity," or accuse him of caring nothing for "delicate charm"? Has Mr. Lucas seen the 'Portrait of a Young Man'—in a broad-brimmed hat — added to the Ryks within the last three years? Could anything be more tenderly painted? And what of the portrait of Burgomaster Six's mother—that incarnation of motherly sympathy, to whom (one feels certain) all the young folk of her day and acquaintance carried their confidences? It is curious that, in commenting on the Six Collection, Mr. Lucas does not allude to this picture, nor yet to its pendant, the portrait of the Burgomaster himself—a pair ranking among the master's most magnificent achievements.

Our author's interest in Dutch painting extends to the modern school. We share his admiration for the art of Matthew Maris. But in his anxiety to exalt that charming painter's versatile gift at the expense of his contemporaries, Mr. Lucas is guilty of grave injustice to one of the latter. No one who looked lately at Josef Israëls's 'Young Lovers' as it hung in the Grafton Gallery, and at the same time called up recollection of his 'Desolate' in the Stadelijks Museum at Amsterdam, will feel tempted to set him down as a man of one mood or one subject.

The attractions of 'A Wanderer in Holland' are much enhanced by thirty-four excellent monotone illustrations after the old Dutch masters. Mr. Herbert Marshall's twenty illustrations in colour are not uniformly successful; some of them have apparently suffered a good deal in the process of reproduction. Where the difficulties of this process have been surmounted, as in the delightful 'Middelburg,' the result is extremely pleasing.

Leaders of the Church, 1800-1900. Edited by G. W. E. Russell.—*Bishop Wilberforce.* By Reginald G. Wilberforce. (Mowbray & Co.)

The accomplished editor of this new series has convinced himself that clerical biographies cannot be written effectively by clergymen. It may be that recent lives of bishops and archbishops were made unreadable by inordinate bulk as much as by professional authorship. The volumes in this series, at any rate, propose avoidance of both dangers: they are to be at once secular and handy; and, composed by "devout and interested laymen," will prove themselves, hopes Mr. Russell, of some benefit to the English clergy, who, though not much in the habit of reading anything, may presumably be attracted by ecclesiastical literature which they are pronounced incapable of producing. It is well that Wilberforce should head the list of divines to be thus canonized. When his Life in three volumes, of which the second and third bore the name of R. G. Wilberforce, was published more than twenty years ago, we made deductions from its too flattering estimate of the bishop, nor was our opinion shaken by the biographer's remonstrances. But time softens judgments; frailties are forgotten; high qualities, attested by contemporary and later evidence, remain conspicuous; and we can accept this much reduced volume as fairly appreciative of a remarkable man, who, in power, versatility, and social charm combined, was perhaps in his own day unsurpassed.

He was by common consent one of the three great preachers of his age. Liddon's sermons, delivered with wondrous clearness, were miracles of homiletic artifice, levelled at a cultured class, reminders of, sometimes imitated from, the great French preachers of the seventeenth century. In Wilberforce's, argumentative power, wealth of imagery, beauty of diction, and what the Court ladies called "golden sweetness" of utterance, were subordinate to their personal effect upon the listener; you came away filled with hauntings of the message even more than with admiration of the messenger. Throughout his life he bestowed extraordinary pains on their preparation; "the sermon which has cost little is worth just what it cost." He wrote laboriously in the first instance, but was independent of his manuscript in the pulpit; and he possessed an unusual power, which he never failed to exert, of working himself up, both during composition and delivery, into a state of spiritual fervour. His more secular oratorical efforts were hardly less notable than his preaching. The finest speech he ever made, which won enthusiastic approval from Lord Derby, is said to have been in the House of Lords on a proposal for the alteration of the Prayer-Book. He himself thought that he had never equalled Magee's oration on the Irish Church Bill. "Exchange of heads, if you will, my lord, not of hats," he said, when the eloquent Irishman by mistake took up his trencher cap in the robing-room.

While his career as a preacher reveals him in his higher mood, the part of working bishop gave scope to the fun and humour as well as to the great organizing aptitude of his nature: out of discordant and resisting materials he forged a new episcopal ideal. It was a time when the majority of English parsons found excitement either in the hunting-field or in Exeter Hall. The nonchalant nominal rule of his predecessors, handsome courtly Bagot and port-wine-drinking Jackson, had left the beneficed clergy almost Presbyterian in their habits, and prelatical interference with their independence provoked at first hostility and indignation. A Berkshire incumbent of good family, visited in the bishop's name by a newly appointed rural dean, faced the intruder threateningly: "If you are paying a neighbourly call, come in and have some lunch; if you present yourself as Rural Dean, yonder is the door." And an old Buckinghamshire vicar, remonstrated with by the bishop at the Athenæum for his unclerical dress, called a waiter, and bade him send out for some white ties, and bring him one whenever "that gentleman" should come into the Club. But opposition soon broke down before the bishop's ubiquity, fascination, tact. His son tells how, when a procession of clergy to a certain church had been arranged, the rector came in alarm with news that while the rest were attired in surplices, two men insisted upon wearing gowns. Wilberforce reassured him, and, greeting the malcontents with the rather unctuous "How do you do-o-o?" which some of us well remember, requested one to read the first, the other the second lesson. The flattered recalcitrants fled to rectory and vestry to find surplices, and the integrity of the *candidatus exercitus* remained unbroken. Before long he had visited every parish and knew every clergyman in his large diocese. Having himself filled successively each office in the Church, from curate up to dean, he was familiar with the habits, needs, and foibles incident to all; his winning manner reconciled those who hardened themselves against his spiritual claim; and a carefully selected staff of archdeacons and rural deans kept him abreast of everything worth knowing in their respective districts. His power of selecting lieutenants was amongst his greatest accomplishments. Disraeli, who had received him as a guest at Hughenden, once expressed admiration at his facility in gathering round himself for work like-minded men. Entertained, moreover, in his diocesan progresses at the houses of territorial magnates, he came to know the influential laity and to win them as he had won his clergy.

His nature was strongly histrionic; that instinct, with the emotional ardour which he had always at command, enabled him to sustain, with electric effect on others and unflagging interest to himself, the mechanical iteration of a great church ceremony. When he was confirming three hundred young people—a function which always moved him deeply—his eye would still glisten and his voice still vibrate in the three-hundredth benediction as in the first. Its effect upon the catechumens, sometimes lasting, was always at the time overwhelming. The publican of a large town once sent to him a remonstrant petition. He had been wont at these times to give a ball, to which came all the girls in their confirma-

tion dresses, and the young men to meet them; now, to his great loss, the balls were entirely unattended. So also the established system of ordination was revolutionized: the bishop enlarged his Cuddesdon house so as to receive all candidates under his roof during the four days of attendance; he gave private audience to every neophyte in turn, and invited notable men to aid in hospitably entertaining them. The present writer recalls on one of these occasions the black head and tall figure of Colenso, as yet unsuspect of heresy, moving amongst the young men in the evenings with Cambridge anecdotes and kindly talk. Twice a day Wilberforce spoke to his candidates in the little chapel; then came the imposing Sunday ministration; and next day all left, feeling, for the time at any rate, that their new profession was an heroic one.

Wilberforce's conversation was amœbean, not monopolist; neither torrential, like Macaulay's, nor boisterous, like Sydney Smith's; he could listen as well as talk, taking no unfair share, reserving the winged word till the fit moment for its discharge. It was the age of the omniscients, Hallam, Milman, Hawtrey; of the fashionable men of science, De la Beche and Murchison; with Bunsen as exponent of all that was best in German erudition, old Rogers reminiscent of the past, Lord Houghton vivacious interpreter of the present. And when, with what Mr. Chillip called "great intellectual friction," these men met at the breakfasts at Lord Carlisle's, or at Holly Lodge, or at Wilberforce's lodgings over the army tailor's in Pall Mall, guests, recalling afterwards the talk in letter or biography, dwelt often on his epigram or anecdote as lingering with specially persistent savour on the palate. He lived to attend Macaulay's funeral, to record in the pages of his journal the historian's "wonderful faculties, his affectionateness, purity, and latterly his increasing seriousness."

He was not a great theologian; no busy bishop can be so: in the now forgotten controversies of his time he relied mainly upon common sense, and that sometimes failed him. It guided him aright, as most men, perhaps, would say to-day, on vexed questions of Ritualism, of Sisterhoods, of F. D. Maurice, of the Irish Church, of Convocation revival, of factory legislation, of the Canada Clergy Reserves; failed him with the 'Essays and Reviews' and in Colenso's case. His rebuke to Lord Westbury's gross rudeness in the House of Lords was pronounced by those who heard it to have been as crushing as it was dignified. His command of temper sometimes gained for him an undeserved semblance of victory over opponents logical and justified, but angry. The "Darwin row" at Oxford showed him clearly in the wrong, Huxley as clearly in the right; but Huxley lost his temper, while Wilberforce retained the satisfied provoking smile which once stung Lord Derby into a quotation from 'Hamlet.' His greatest blunder was in the Hampden case, when he signed letters of request initiating a suit for heresy without having read the extracts on which the charge was based. For a time it shattered his influence, checked his promotion, affixed to his name an unpleasant and a clinging epithet. It was due, we are convinced, to carelessness, not to slipperiness or time-serving, least of all to timidity. No man was more fearless. During a later tide of unpopularity, born of alleged Popish teaching at the Cuddesdon College, an angry crowd of four thousand men tried to howl him down at Bradford. He went amongst them from the platform, stood upon a chair, appealed during a moment's lull "to Yorkshiremen to give a brother Yorkshireman a hearing" — in a few minutes converted groans into cheers, a furious mob into an orderly and enthusiastic audience.

He was ambitious, said his detractors: a charge brought against many men, from Cæsar onwards. Ambitious no doubt he was; keenly disappointed when, through Disraeli's opposition to the Queen's wishes, he was in 1868 passed over for the bishopric of London; nor would he otherwise have left the see of Oxford, incurring the covert reproach conveyed in the valedictory address of his clergy. But his ambition was of that high sort which takes no note of self, and seeks only wider fields for exercise of great powers consciously possessed.

He was the hardest worker of his day: "Till I read the Bishop's Life," said Gladstone, "I had no idea what an idle fellow I was." A day at Cuddesdon has been amusingly chronicled by Burgon. In days abroad—not exceptional, but continuous—his diary carries us through long railway journeys in which letters and sermons were written, to great ecclesiastical functions, to committees steered by his tactful chairmanship (even though G. A. Denison were present), to missionary meetings, conferences of clergy, parochial engagements. At work for twelve unbroken hours—for he rarely lunched—he would arrive at some hospitable country house too fatigued to speak; would retire to his room to dress, descending to the dinner-table fresh as though the day had just begun. This voracity for labour was not inborn. His father, writing to him at school, indicates "unwillingness to work strenuously" as one of his besetting sins. In the eclipse of domestic happiness through his wife's early death he found no palliation of his suffering so effective as incessant work: the habit grew upon him as years went on—would before long have disabled him, as we gather from entries in his diary, had not death more kindly "freed his soul the nearest way."

The end came, as some may still remember, with tragic yet most appropriate suddenness. The long letter which describes it is quoted from the original biography in three volumes by Lord Edmond Fitzmaurice in his 'Life of Lord Granville,' and is also repeated here. There are slight differences between the texts. A good rider in his youth, practising daily when an undergraduate at the Bullingdon hurdles, he relaxed latterly into a loose rein and careless seat. Flung over the head of a stumbling horse, he lay extended, motionless, dead. It was the euthanasia he would have desired for himself—the strenuous life closed, the vital chain broken, in a moment, with no wearing out of body or of mind, no cold obstruction of decay. Of his life this book in its smaller shape tells all we need to know; Carlyle's exclamation, "What a glad surprise!" is the fittest commentary on his death.

Letters to "Ivy" from the First Earl of Dudley. By S. H. Romilly. (Longmans & Co.)

All who are interested in the political life and the literature of the first three decades of the nineteenth century owe a debt of gratitude to Mr. Romilly for this volume. It was thought that the letters, a part of which are now printed, had been destroyed by their recipient; and some of the papers which were found last year are indeed copies. As most of them were either totally without date or but partially dated, the editor's work in this respect alone must have been heavy; but, if only on account of the spontaneity which, as he justly says, gives them a special charm, they were well worth all the pains he has bestowed in dating, annotating, and prefacing them. These letters are, in fact, in striking contrast to those addressed by Dudley to his friend and former tutor at Oriel, who by publishing them in 1840 was said to have inflicted on their writer a harder fate than that of the first martyr: "Stephen was only stoned to death, Ward has been Coplestoned."

The writer of the letters, John William Ward (who succeeded as Viscount Dudley and Ward in 1823 and subsequently became an earl), was an intimate friend of Brougham, Aberdeen, and Melbourne, knew much of Byron and Sydney Smith, and was Canning's devoted follower and Foreign Secretary. Madame de Staël said that he was the only man in England who really understood the art of conversation. Yet he is now chiefly remembered by an uncomplimentary epigram made on him by Rogers, "with a little assistance," says our editor, "from R. Sharp" (Conversation Sharp), and by his own *mot* on Napoleon, uttered in French to Metternich. If these letters do not reveal a man of quite the brilliance we should expect from Brougham's description, they at least show a mind of some cultivation, great good sense, no little amiability and humour, and a total absence of affectation. Singularly enough, there is scarcely a trace of that want of balance which ended in madness.

We are not told how the writer's correspondent, who was Dugald Stewart's second wife, came by her nickname. She was a Cranstoun, sister of Scott's friends Lord Corehouse and the Countess Purgstall, and was much esteemed by Maria Edgeworth. She held a sort of Whig *salon* at Edinburgh, and a letter of introduction from her was held almost indispensable to a lettered Scotsman going south or across the Atlantic. Unfortunately we have not a fragment of her side of the correspondence. The acquaintance began when the neglected son of Lord Dudley and Ward was a pupil of "Ivy's" husband (that nurturer of Whig and Canningite statesmen), and it developed into a lifelong friendship.

The first letter was written from Oxford in May, 1801, the last from Wrottesley Hall

in January, 1832; and the correspondence went on pretty continuously, though there are one or two considerable gaps. Except a few epistles indited from the Continent, they are not of inordinate length and are easy in style. Like Miss Austen (whose books he admired), Ward always writes "you was," nor was he above "he an't," or "aint"; whilst, like most contemporaries, he regularly makes use of the contraction "don't." But he is not otherwise slovenly, and appreciates good English. Thus he praises Perceval's speeches for their "purity, simplicity, and Anglicism," and criticizes unfavourably the writing of Charles James Fox and his own friend Brougham, besides being very severe upon Walpole's friend Miss Berry for her want of acquaintance with grammar, as shown in the preface to Madame du Deffand's letters to him. Politics and literature, on the whole, divide the interest of the letters, but there is a modicum of scandal. Ward was the astonished recipient of Lady Caroline Lamb's confidence about one of her escapades, and gave her excellent advice. But as an intimate of her husband he by no means approved of the lady; and in reference to the subsequent affair with Byron (which he judged to be substantially harmless, though the world did not think so) he declared that if he were the poet he would throw her out of window, "and then send 'Childe Harold' after her." It was from Lady Caroline that he first heard of the general view taken of his own relations with Lady Westmorland, who suffered from the delusion that she was beset by a gang of conspirators against her honour, of whom Ward was the chief. The whole of the strange affair is related to "Ivy" with the utmost ingenuousness. Despite his eccentricity, Ward by his comeliness and wit seems to have found favour with ladies, and, though a bachelor till death, he was often married by rumour.

As a politician he was too sensitive and detached to be effective. But he often judged a situation well. Though sharing many of their views, he was disgusted by the bickerings of the Whigs among themselves and by their factiousness, and left them as much upon this account as from actual disagreement with their opinions. His admiration of Canning did not blind him to the dubiousness of that statesman's conduct in the quarrel with Castlereagh, whom he styles, "though an abominable Minister, an excellent man and a perfect gentleman." Ward quickly saw through Brougham's game of making a catspaw of the Princess (Queen Caroline), and even himself warned her not to be deterred by his friend's advice from leaving England. He defends Canning from interested motives in this connexion, though guardedly, as he does likewise from the suspicion of having temporarily retired from affairs in order to facilitate his future prospects of office. On this occasion of the disbandment of the Canningites, he writes of himself: "A state of complete political insulation is not by any means disagreeable to me." The fact was that he despised the Whigs and disagreed with the Tories, though he had come into Parliament as a follower of Pitt and was to have had a high position if Lord Grenville had taken office in 1811.

Ward's motives in declining Canning's offer of the Under-Secretaryship for Foreign Affairs in the autumn of 1822 are not very intelligible; Lamb (Melbourne) counselled acceptance, but was overborne by Copleston and Ward's father. He himself preferred subordination to responsibility, and had no reluctance about giving up his seat in the Commons. In spite of his continental tastes and diplomatic talents he did not shine greatly when, under Canning's premiership, he actually held the seals, though he became a *persona grata* to George IV. He continued to serve as Foreign Secretary under Goderich and Wellington, and tried to patch up the misunderstanding between the latter and Huskisson, which resulted in the retirement of the Canningites, including himself. Brougham was probably right in thinking that Dudley would have liked to pay his salary instead of earning it, if by so doing he might have remained in office.

Among the best things about politics in these letters is the comparison between Goderich and Wellington, and the appreciation of the latter:—

"It is a great comfort to have a real Minister. Were you never on a journey driven three or four miles by the under-ostler, or by what is called 'an odd man in the stable,' slowly yet insecurely, jolted by every stone, and expecting to fall into every ditch, and were you not afterwards delighted when, happily meeting John, the proper postilion, he mounted, gathered up the reins, cracked his whip, and trotted on a good, sound, even pace? That is just the difference between Goderich and the Duke."

During an interview with his last chief the Foreign Secretary found that his eye

"was caught by a scrap of paper that lay open on the table.....It was from his (Wellington's) house-steward, with whom he communicates in writing, and was in these words: 'Will your Grace be pleased to have some fresh tea ordered in, as we are now making use of the best canister?'"

The writer reflects that "all the Hyson, Souchong, and Pekoe in the house" might have been used before Canning would have known about it, and that the knowledge of such a *trait* (which he communicates in confidence, as not come by quite fairly) might cause Joseph Hume to make a declaration of confidence in the Duke.

Ward met Byron in Portugal in 1809, and soon perceived him to be a person of no common mind.

"This discovery by no means prevented me from cheating him extremely in the sale of some English saddles with which I equipped him at Lisbon to make the tour of Portugal and Andalusia,"

he tells "Ivy." He thought the portrait drawn of himself by the poet, in the eighth stanza of 'Childe Harold,' "a pretty accurate resemblance." Later Byron and Ward seem to have become intimate, and once contemplated a tour together in Holland. Byron liked Ward, finding him "piquant," as he writes in his 'Journal'; but the latter did not admire his friend's poetry without reservations, and, though pleased with the references to himself in Moore's 'Life,' was constrained to admit that the biographer, in his account of the poet's separation from his wife, had shown great partiality. He even tells "Ivy" in confidence that "an eminent medical man," who attended Byron, had told him enough to convince him "that he thought B.'s conduct quite intolerable, and indeed hardly to be accounted for in a person in his right mind."

There are some excellent things about Rogers, including the story of the banker-poet's indignation at being addressed in a letter from the Marquis of Douglas as "My good Sir":—

"I never shall forget the bitterness with which he recounted to me this outrage upon his dignity—the formidable elongation of his chin, and the paralytic convulsions of his head."

"Ivy's" friend gives her a diverting account of a correspondence between Bentham and the Spanish philosopher-statesman Jovellanos, and is amusing on the subject of Madame de Staël and Sir James Mackintosh. Before closing our notice we would only record our inability to comprehend how the index-maker came to make the entry "Ward, William Henry, 1st Earl of Dudley." The vast majority of letters in the text are signed clearly "J. W. W." Mr. Romilly's chapter-prefaces are, in general, excellent, but his notes are perhaps too exclusively political.

In one of those that are not political we believe that he errs. Writing of the first John Murray, Ward says:—

"He is the prince of all booksellers and publishers—liberal-minded, well-educated, and well-mannered, and of a pleasing aspect—though he squints. If I recollect, though, Mr. Lintot squinted, and if so it is all right."

Were it not for the "Mr." prefixed to the name we should think it more likely that the "Lintot" above mentioned was Pope's bookseller rather than "the dentist who gave parties" of the editor's note.

NEW NOVELS.

The Toll of the Bush. By William Satchell. (Macmillan & Co.)

This is a colonial novel of remarkable merit and distinction. It has a rounded completeness, a full and broad humanity, which are by no means characteristic of contemporary fiction. The scene of the story is an early settlement in the north island of New Zealand, and its atmosphere and background are sketched in masterly style, and with the sure touch of first-hand familiarity. The whole action of the tale takes place in the one half-made settlement, and so it may fairly be said that, without adventitious or extraneous aid of any sort, the author has produced a purely colonial novel of notable interest and of considerable intellectuality—a story full of real characterization, and at the same time alive with action, movement, and even with adventure. This is no mean or common achievement, and Mr. Satchell has earned congratulation and support. The book is thoroughly respectable from the literary standpoint, but, apart from that, it is a genuine picture of life in New Zealand, and such pictures have a practical educational value in this country, where not half enough is known of the workaday realities of existence in the oversea portions of the Empire. Contemporary fiction dealing with

Australasia consists too often of intensely pessimistic sincerity or amiable, optimistic twaddle. Here, however, is a story in the golden middle path—genial, kindly, void of bitterness, and perfectly free from platitudinous unreality. The author presents a charming heroine, two brothers (one colonial-born, and one a "new-chum" from England), a delightful old colonist of the early days, and at least five other characters who are too well and faithfully limned to be called simply sketches. Mr. Satchell deserves well of his readers.

The Man. By Bram Stoker. (Heinemann.)

Mr. Stoker would appear to take his novel seriously. It starts off with a "Fore-glimpse" and also a "Fore-word," and it runs to over four hundred pages. Somewhat portentously we are informed that

"the great Book of Life is fashioned in a manner strange to those who only read books made by the hands of man.....The book lies open and the morning sunlight falls on the obverse side, so that the Duties, therein written in gold, shine conspicuous."

This is much ado about nothing. The prelude is pitched in so solemn a key as to make us impatient when we find there is so little wool for so much cry. Mr. Stoker's is a frankly sentimental story, which does not seem based on anything like real experiences. The heroine is a girl who is so independent of view as to make a proposal of marriage to a young man. He is a worthless creature, and refuses until he remembers that the girl is an heiress and he is in debt. But she has by this time repented, and not only spurns him when he offers, but also spurns the man she does love. This may be very like a woman, but it is not very like a man to bolt to the wilds of America after the spurning. Women do change their minds. However, the Man must be established as a hero at any cost; and Mr. Stoker succeeds in his object. Also, the lady becomes a peeress in her own right. But the bulk of the story need not have been written if either man or woman had displayed common sense. The result is of the "romantic" order, and should be dear to the heart of sweet seventeen, perhaps even sweet and twenty.

Lone Marie. By W. E. Norris. (Macmillan & Co.)

Whether Mr. Norris's heroines be American or English, they do not differ greatly in their leading characteristics, foremost of these being a profound conviction of their own wisdom whilst performing acts of consummate indiscretion. Nevertheless they are invariably attractive, and Marie Ludlow, who is supposed to be steering a typical compatriot mother and daughter through the shoals and quicksands of London society, is undeniably interesting. "You are so fond of pitying people, Marie," remarks the young American girl, with surprising astuteness, "that you don't neglect any chance to make them objects of pity." This is undoubtedly the key-note to a good many of Marie's performances, notably with regard to Gordon Heneage, the most unmitigated scamp, to whom she almost succeeds in losing her affections, even while she is busy thrusting him upon the less aspiring, but certainly quicker-witted heiress. Lord Westenhanger, Gracie's choice, who might have been Marie's, is the straightforward English gentleman whom Mr. Norris draws so well; and the whole story, which is full of readable incident, is written with his usual care and finish.

Stars of Destiny. By L. Parry Truscott. (Fisher Unwin.)

In one or two previous efforts the author of this novel has prepared the reader to expect cleverness, and cleverness he certainly provides in 'Stars of Destiny.' It is a deft, closely wrought, well-finished study of the loves of two women and a man—the old, eternal triangle, flesh and brain and soul, but treated with the faithful sincerity which gives something as good as originality to the best-worn study. We have a man of a sensitive and critical nature, a writer of the delicate sort, and a gifted lady, somewhat his senior in years, who is married to a man she never sees, a patient in a private asylum. The man and the married woman have educated themselves into loving upon a high plane—a tie of a purely spiritual and intellectual kind. This finer, better part of love has come to be regarded by both, not as a part, but as the whole of real love. The other side of love has been so well disciplined as to be nearly effaced by these two superior souls. Comes then a pert, pretentious miss, adorably pretty and incurably shallow, to awaken in the man recognition of the animal in him, and in the woman understanding of the plain fact that its spiritual and intellectual side is not the whole of love. An alluring pair of eyes and a dimpled neck draw the man into fleeting disloyalty to his higher love and his better self. It sounds very simple, even a little trite; but the thing has been done well.

The Waters of Destruction. By Alice Perrin. (Chatto & Windus.)

Mrs. Perrin has advanced considerably since she wrote 'East of Suez.' Her present book, if it has no particular distinction of style, is in no sense imitative. The story is not novel, though it bears retelling by one who knows its details intimately, as Mrs. Perrin evidently does. A young Indian civilian, an engineer, is placed in charge of an isolated station, after tasting only of the gaiety of Anglo-Indian life in a large centre. Loneliness, homesickness, and mischance lead to his allowing a dying missionary to perform the marriage service between himself and a native girl. Later comes the inevitable revulsion, and the Englishman suffers the penalty which follows disregard of racial laws. Then, too late, is a timely death in England, and the fortune that makes Home possible for the prematurely weary young civilian. But fate is inexorable, and the man presently finds his way back from England to the desolate spot in which he married and sickened of his native wife. Mrs. Perrin is a really able delineator of native and Eurasian character. She has a keen faculty of observation, and shows here a genuine respect for the verities.

Beggar's Luck. By Nellie K. Blissett. (Chapman & Hall.)

The scenes are swiftly and easily shifted in this romance. In the first few chapters (not perhaps the worst in conception and treatment) the reader's interest is well engaged and well sustained. Some of the devices are naturally of the familiar and legitimate stock-in-trade of the modern historical drama. The figure and voice of Mazarin himself are seen and heard for a brief and not wholly ineffective moment in the midst of a whirling night of plot and adventure. The hero tells his own and the heroine's "tangled tale of love." The author has some command over her material, and depicts, in an unstrained and fairly picturesque way, the aspect and language of the times. She does not too greatly force the note, as romancers were once wont to do. Often in such books there is as little to blame as to praise; but this is not to say that Miss Blissett's novel is mediocre. It is on the whole alert, competent, and full of ingenuity; and the little drama ends happily.

The Breath of the Gods. By Sidney McCall. (Hutchinson & Co.)

The public owes gratitude to any writer whose work can throw a fuller light upon the ideals that inspire the national life of Japan. This book is evidently written by one who knows and loves the country. A prefatory note disclaims all attempt at the reproduction of actual characters; and as the time is that of the outbreak of war with Russia, and officials of State figure in the pages, the foreword is not unnecessary. The scene opens at Washington, in the house of Senator Cyrus C. Todd, shortly to be dispatched as Minister from the United States to Tokio. A brief retrospect of the man's former life "out West" is excellently done. He, his wife and daughter, and the Japanese schoolfellow of the latter, Onda Yuki-ko, with a couple of suitors, proceed to Japan, the remainder of the book being occupied for the most part with the adventures of Yuki, the heroine. The effect of her American education yields gradually to the familiar environment, and the struggle is well described. The utter subordination of the individual to the family, but above all to the State, is the law which moulds the destinies of this girl. "Only the very young and inexperienced think it necessary to state willingness to die for a country," says Prince Haganè to her at the outset. Self is as nothing in comparison with a greater self, in which personal desires and hopes are merged; and happiness is not the aim of life. This patriotism, pure and noble, is finely shown; the genre painting, although too crowded with details, is good; but the end is disappointing.

XUM

JUVENILE BOOKS.

MESSRS. A. & C. BLACK.

Mr. D. Daly has set forth a translation and abridgment of *Don Quixote*, which should be acceptable in the schoolroom. He shows sagacity in selection, and the illustrations by Mr. De la Bere add grace to the volume.—*The Head of Kay's* is a school story of the most modern type, by the now practised hand of Mr. P. G. Wodehouse. Many boys may learn something from the experiences of Kennedy in reforming an ill-conditioned houseful of "men" (!); their judicious elders must grieve at the sordid slang in which the book abounds.

MESSRS. BURNS & OATES.

In *A Ridingdale Year* Father Bearne adds another pleasant instalment to his series of stories for Roman Catholic youth, already favourably known. The young protagonists look agreeably quaint in their long linen blouses, as sketched by an anonymous illustrator.

MESSRS. W. & R. CHAMBERS.

Messrs. Chambers publish two capital studies of schoolboy life by Andrew Home, *The Boys of Badminster* being the eponymous story. Good characterization and plenty of humour should make this a success.—*Chums in the Far West*, by Everitt McNeil, deals, in the American language, with a sufficiently exciting trip of two good boys, who join, as the result of a school competition, in what turns out to be an Indian campaign. The type is familiar.—*Steady and Strong* is a stirring collection of short pieces by the late G. A. Henty (whose posthumous output is remarkable), Messrs. Manville Fenn, John Oxenham, Louis Becke, R. E. Francillon, and William Atkinson. The names guarantee success with boyhood.—*Wilful Cousin Kate*, by L. T. Meade, is a disagreeable story. The heroine is a beautiful and brilliant minx with a curious mesmeric power which she sometimes exercises in a baneful manner. We suppose the book is meant for girls, but we cannot recommend it.

MESSRS. DENT & CO.

Messrs. Dent send us three volumes of *Stories from Shakespeare, for Children*. The stories are not those of Charles and Mary Lamb, but have been retold by Alice Spencer Hoffmann. Mr. T. H. Robinson illustrates 'Julius Cæsar' and 'Macbeth,' and Mr. Patten Wilson 'Hamlet.' Each volume contains a useful outline of Shakspeare's life, well adapted for children's reading, and includes quotations from the works. The illustrations are worthy of praise.

MESSRS. DUCKWORTH & CO.

A Little Boy Lost, by W. H. Hudson, is a story of adventure, tinged with magic influence, following in its groundwork somewhat on Alice's adventures in various places, but hardly so apparently simple or so really deep as Lewis Carroll's immortal works. It is effectively illustrated.

MESSRS. WELLS GARDNER & CO.

Mr. S. R. Crockett has written children's stories before in 'Sweetheart Travellers' and 'Sir Toady Lion,' to which *Sir Toady Crusoe* is a sequel. It is a story of thrilling, but largely imaginary, adventure, concerning a boy poacher who habitually carries a revolver. The illustrations, by Mr. Gordon Browne, will increase the illusion.—*Without Fear and Without Reproach*, by F. J. Harvey Darton, is a more or less historical account of the exploits of the Bayard of history and legend. The illustrations by Mr. Jellicoe add much to the attractiveness of the book.—*Prudent Paulina*, by C. M. George, illustrated by G. M. C. Fry, is one of the series of comical rhymed stories, illustrated by coloured pictures, which have been the joy of many a child at Christmas time.

MESSRS. HODDER & STOUGHTON.

White Fire combines religion and adventure; but the date is modern, and the admirable missionary and his undaunted wife and comrades protect their converts in the South Seas from kidnappers and other pests with the aid of Maxims and Winchester rifles. Mr. John Oxenham has already proved his descriptive and analytic powers, and these strong-hearted champions of morality are not less original than their surroundings are romantic. A tidal wave is among the trials of the hero's constancy. The illustrations by Mr. Grenville Manton are good.—With the assistance of Mrs. Seton, who accompanies him with pleasant decorations, Mr. Ernest Thompson Seton goes on contriving pretty books about animals of the wilds for boys. *Woodmyth and Fable* is a collection of odds and ends from the stores of his knowledge of the woods and wood-lore. They are in mingled prose and verse, and are illustrated by the author. The fable tends at times to be somewhat "American," particularly in respect of its "moral," as witness this complete episode:

"'The line between business and robbery has never yet been clearly defined,' said the Blue Jay, as he swallowed the egg of the Robin, who was off hunting for worms."

But all the tales are not on this facetious level, and most of them are representative of the observation of the writer, who in his own country has a very large following. They will be welcome to children here also.—*The Buried Ring*, by Amy Le Feuvre, chronicles the home life of two charming and original little girls and of certain "grown-ups" who belong to them.

MESSRS. HUTCHINSON & CO.

Adventures in Pondland, by Frank Stevens, is a study of the contents of a pond, written in the form of the adventures and conversations of two children. This style of writing annoyed the critic in youth by its tacit claim of superiority, but he learnt much from it in spite of doubts as to its ultimate justification. In other words, we applied its teachings, and, somewhat to our disgust, found them right. It is something to make a child do that.

MESSRS. LONGMAN & CO.

The Red Romance Book, edited by Andrew Lang, ought to rejoice many young readers in the coming season. "All the stories were done by Mrs. Lang out of the old romances," says the editor, who proffers excellent advice as to what should be read, being the sworn foe of the youthful prig. Mr. H. J. Ford has provided alluring illustrations, some of which are full of bright colour. The stories come largely from the North, which produces, perhaps, the best romances in the world; but we have also 'The Tale of the Cid,' 'Don Quixote's Homecoming,' 'Cupid and Psyche,' 'Guy of Warwick,' and others, a goodly company for entertainment.

MR. EVELEIGH NASH.

Mr. Theodore Roberts publishes through Mr. Nash *Brothers of Peril*, a well-fancied tale of old Newfoundland. The local colour is good, and in the aboriginals we are reminded of the older view of the dignified and courteous red man, not the "pesky redskin" of more vulgar days. The sea chapters are particularly good.

MESSRS. NELSON & SONS.

In *A King's Comrade* Mr. C. W. Whistler continues his Anglo-Saxon stories. The tale centres in the slaying of Ethelbert, about 792, and readers are reminded that the East Anglian king was a martyr and the patron saint of Hereford Cathedral. The book is well illustrated in colours, and, as an example of a thread of history woven into a fabric of adventure, may serve both a useful and an amusing purpose.—*Red Dickon the Outlaw*, by Tom Bevan, is a story of the fourteenth century, when, we are assured, "Merrie England" by no means deserved her adjective. Nevertheless we observe that bugle-calls ring out and folk in leather jerkins slash at one another, from which we have little doubt that the story will prove "merrie" to boys of the present century.—*The Ghost of Exlea Priory*, by E. L. Haverfield, is illustrated in colours, and is a school story for girls.

MESSRS. NISBET & CO.

The Meteor Flag of England burns to much purpose in Dr. Gordon Stables's new volume. His theme is the conflict to be waged in 1980 between this country and the united forces of Germany, France, and Russia. The conditions of war will have been altered by that time, but the personalities are not supposed to have changed. May the king live for ever! It is pleasant to think that at the age of 140 or so he will be able to treat with his known courtesy the then elderly Kaiser, his prisoner in the Tower. For such is the result of an impetuous attack upon the Firth of Forth which the Kaiser commands in person. A more formidable invasion is that by Russia of the north of Scotland. The sack of Aberdeen drives home the neglect of our Northern seaboard. On the whole, we find an excess of the farcical in the book; but many of its points may be reflected on in all truth and soberness. If London ever is besieged may we have at our backs a multi-millionaire as patriotic as Baynes!

MESSRS. PARTRIDGE & CO.

In *Ruth Gwynnet* Morice Gerard sets forth the history of a young schoolmistress, a foundling who survived a snowstorm on the Cornish coast, and was brought up by an honest chief of the coast-guard. Her character is well drawn, and the secret of her birth ingeniously kept and discovered—on the whole a good story. It is illustrated by Mr. E. J. Skinner.

THE RELIGIOUS TRACT SOCIETY.

Two rattling tales of adventure are *A Trooper of the Finns*, by Tom Bevan, and *The Brigands' Prey*, by A. M. Jackson. Mr. Bevan's hero fought in the Thirty Years' War, and boy readers will learn from his brave story something of that wild and warlike time. 'The Brigands' Prey' is the tale of two valiant British lads who, being kidnapped in Italy, contend successfully with their captors, with pirates, and with many other villains.

MESSRS. SEELEY & CO.

In *The Crown of Pine* Prof. A. J. Church has published through Messrs. Seeley a book which should be acceptable to intelligent boys. A tale of the days of Claudius, when Christianity was just emerging from Judaism, it not only gives distinctness to many historical characters otherwise known merely by name, but also impresses on the young reader the essential modernity of the classical ages. The story of Eubulus, the descendant of Achilles, including his victory in the Isthmian games, will be read with sympathy by little athletes; and the graver interest of the attitude of Aquila and Priscilla (a typical Jew and a typical Roman) and of other known characters to the new opinions uttered in their day by Paul of Tarsus is not less vividly sustained. The illustrations are by Mr. George Morrow.—*The Last of the White Coats*, by G. J. Whitham, is a story in which Charles II. displays the good-nature which was one of his redeeming points. Young Oliver and Hugh Gisborne have been cruelly bereaved by the war, in which their fathers

have fallen, kinsmen upon opposite sides, and circumstances put them to strange shifts and adventures. But both have the inflexible loyalty to right for which their fathers fell, and their fortunes are redeemed by good-comradeship, courage, and fidelity. Mr. Oscar Wilson has illustrated the book.—*The Little Colonel of Arizona*, by Annie Fellows Johnston, sets forth how a widow and her family from Kansas, being in reduced circumstances, settle on the Indian border. There is a great deal of detail as to their experience in roughing it in the wilderness, especially in the matter of food. On the whole, they are well drawn, and one can sympathize with the scholarly Joyce, who pins her faith on inflexibility. "Let us be inflexible," she quotes, "and fortune will at last change in our favour." The illustrations are by Mr. E. B. Barry.

S.P.C.K.

It is always a pleasure to meet with Browning's *Pied Piper of Hamelin*, though one would find more enjoyment in its presentment by the S.P.C.K. were the pictures (by Van Dyck) more closely related to the legend and placed nearer the subject depicted.—Mr. G. Manville Fenn's stories are generally worth reading, but we do not account *Nephew Jack* one of his best. The sayings and doings of a certain Chinaman give the note to the story. There is more dialogue than searchers after incident will like.

OUR LIBRARY TABLE.

A most modest, but an admirable biography is that of a master of economic principle, *Sir Louis Mallet*, by Mr. Bernard Mallet, himself no mean economist. Sir Louis Mallet was not, as some may think, only the friend of Cobden and of other distinguished men; he was also a considerable as well as an upright and a conscientious public servant, and one of the mainstays of Cobdenic ideas. Sir Robert Morier was given to exaggeration of phrase on behalf of the opinions which he vehemently espoused. A letter of his to Mallet, in praise of Mallet, which is here quoted, will only seem exaggerated to readers who are not acquainted with Mallet's work. Morier declares that Mallet "realized more perfectly and completely than Cobden himself the higher and more ideal side of the Cobdenic creed." Morier goes on to generalize his observation by explaining that in all cases a great disciple must add to the master's teaching, as Paul did to that of the first preachers of the Christian faith. Morier's final observation was true of Mallet and Cobden: "What the disciple afterwards gives out as the faith of the master is really a joint product of their two minds, and their two individualities." There came, some years after Cobden's death, a division of opinion in the Cobden Club, which has a present and future economic and political importance. Mallet and Morier favoured, and the sterner school of free-traders opposed as heretical, the creation of a network of commercial treaties. Mr. Bernard Mallet defends with moderation, skill, and force the opinion of Mallet and of Morier, and refers in a foot-note to "the author of a pamphlet" in which their views were developed. The 'Letters by a Disciple of Richard Cobden,' the publication of which by the Cobden Club was proposed by its literary "tasters," and all but produced a schism in that body in 1870, are said by the biographer to seem "from their style to be the work of" Morier. Mr. Mallet ought to know; perhaps he does know, and thinks it better to make his statement in the form we quote. It was, however, strongly suspected at the time that the author was Sir Louis Mallet. This was shown, we think, by the London letter to a Rochdale paper in the confidence of the then honorary secretary and the then secretary of the club, both now dead. In any case the letters were, as Mr. Mallet says, "a scathing refutation of insular ideas of free trade." The very phrase, which reminds us of Mr. Balfour, is evidence of the importance of this publication of the views of so undoubted a free-trader as Sir Louis Mallet. Mr. Mallet writes with such impartiality upon the point that it is impossible to judge of his own view; it is enough that he does his duty as a biographer in stating Sir Louis Mallet's side, and explaining the position of opponents. He goes on to admit that these opponents had a strong practical case in "the misrepresentation and distortion to which the argument for the treaty policy lent itself in the hands of those who sought to undermine free trade." *The Athenæum* is not concerned with politics, nor with the use to be made of economic doctrine, and can only direct those interested to the gold mine which this book presents. Sir Louis Mallet's attitude on such State activities as he thought socialistic, and on bimetallism, is more disputable than his trade views. As a great permanent official he had perfect opportunities of studying the course of British trade. To the character of the man we have already made allusion. Mr. Mallet admits his occasional pessimism, but fights against the charge of persistent gloom. He says, with justice, that Mallet had a "hearty whole-souled laugh." He quotes the present editor of *The Spectator*, who has given, in a letter to the biographer, a perfect appreciation of Mallet's personality, admirably expressed. It is the case that one of Mallet's best friends, still living, when that official was moved by his political masters from the Board of Trade to the India Office, went about telling common friends that "Mallet will now have a fresh world to despair of." Mallet was given to beginning his sentences about politicians by the words, "I despair of....." He had, however, the happy disposition set forth in the biography. He had seen much falling-off from the true faith, and much want of courage among public men. While he might take note of such departure from the faith, he was not embittered by it, but continued, as Mr. St. Loe Strachey says, to look invariably "at public affairs from the highest standpoint." The publishers are Messrs. J. Nisbet & Co.

Mr. Richmond Smith's *The Siege and Fall of Port Arthur* (Eveleigh Nash) is interesting in itself, and has the unusual honour of a preface by General Sir William Nicholson, who represented this country at the Japanese headquarters. Sir W. Nicholson explains that Mr. Richmond Smith, who worked chiefly for the Associated Press, was popular with the Japanese, and that this led to special facilities being offered him for the execution of his task. The British general takes as the newest incident of the war a point to which *The Athenæum* has twice called attention in its reviews of descriptions of the operations at Port Arthur: "the effect produced by grenades charged with a high explosive, the employment of wooden mortars to project such grenades," and adds, "the utility of wire screens for the purpose of throwing the grenades aside." Another matter on which Sir W. Nicholson writes concerns a controversy which has been raging in the columns of *The Times* on the utility of fortresses. The preface proves that strong works may be of value to Powers that have plenty of men. Port Arthur needed a war garrison of "50,000 Russian troops, while the strength of the Japanese force needed to capture" it "can hardly have been less in the aggregate than 150,000." It is clear from his language that Sir William Nicholson approves the expenditure of France upon her eastern fortifications. It does not follow, as he seems to think, that such considerations conclude the matter for ourselves. It may still be the case that, not being plentifully provided with trained men,

"we have wasted much money on the defences of our naval bases, besides locking up as garrisons for these bases too large a proportion of our small regular army."

Sir W. Nicholson admits that if the

"navy were so powerful and so ubiquitous that its local and temporary loss of sea command.....would be inconceivable, it might be deemed an extravagance to fortify and garrison naval bases."

"Inconceivable" is too strong a word; we have to discover upon what objects it is most necessary that we should expend money and men, both limited. In his final words Sir W. Nicholson calls attention to the fine passages in Mr. Richmond Smith's last chapter which describe the valediction pronounced by General Nogi to the spirits of the dead Japanese. In addition to the text there is among the illustrations a striking picture of Baron Nogi reading before the temporary altar, in strange contrast to the next sketch, which represents his rival General Stoessel at the railway station waiting for his train to Russia. The speech of General Nogi beginning, "I, Nogi Maresky," is, even in translation, an example of the best heroic ceremonial style. One paragraph opens with the simple statement of fact—true, as the correspondent shows, of whole battalions of the Japanese infantry—"I, Maresky, with many of you, took a solemn oath to achieve victory or accomplish death." Mr. Richmond Smith's chapters on the courage and discipline of the Japanese are full of careful discrimination. He explains at length the fact to which *The Athenæum* has previously alluded, that some of the town troops coming from industrial districts did not show the courage of the ordinary rural battalions composed of peasantry and fishermen. He tells the story of a reserve battalion from Osaka, which during the most bloody portion of the final engagements refused to advance from cover. The major in command was shot down, on account of the unwillingness of his men to follow, as were some British infantry officers at the battle of Ladysmith. In the case of the Japanese battalion the defaulting regiment was sent to the rear, was compelled to do manual labour, and was forced to attend daily at a special shrine erected to the departed spirit of the commanding officer who had been killed to their disgrace. At the end of some weeks of this treatment the regiment petitioned to be "given another chance in the fighting line." Our author goes on to discuss the future of the Japanese army as manufactures and wealth increase, and writes with a wisdom which impresses us with the solidity of his observation. We learn from Mr. Richmond Smith that the first use of the wooden mortars for projecting dynamite grenades over the heads of the friendly line into the line of the opponent was by the Russians: the Japanese immediately adopting the idea, and proceeding to utilize it on a large scale. Mr. Richmond Smith describes the horrors which resulted from this new practice of war, acres of ground being covered with scattered remnants of bodies whence clothing had been torn by the force of the explosion, which blew the soldiers into bits. While, however, at least one battalion flinched, as has been stated, Mr. Richmond Smith was unable to discover among individuals "a single case of insubordination." The Japanese soldier profoundly respects "his officer, who is regarded as the representative of the Emperor."

Personal Studies. By Henry Scott Holland, Canon of St. Paul's. (Wells Gardner & Co.)—These obituaries deserved to be made into a book. They were written chiefly for *The Commonwealth*, the organ of the Christian Social Union—written, therefore, from the High Tractarian and sacerdotal point of view,

XUM

yet with a literary force which appeals to an unregenerate public, and in most cases from a close personal knowledge of the men portrayed. They reveal their author as a generous enthusiast; where he admires, he admires strongly, with an ecstasy sometimes uncontrolled: if slight streaks of miry clay mingle with iron in the image he has set up, he deals out merely gentle exculpation of our brother's frailties. His descriptive stroke is swift and sure, exhibiting by successive touches all the sides of a many-faceted character, while his analysis of mental and moral complexities is conveyed in strikingly penetrative language. It may not be always the real man that is presented to us, but only the writer's conception of the man, with the uncertainty which hangs over Macaulay's King William or Carlyle's Sterling, and, indeed, over all descriptive biographies where the hero is not made to reveal himself in correspondence or in talk. Sometimes a single phrase is happily employed to characterize the man; such as the "dogged individuality" of Temple, the "lordly recklessness" of Salisbury, the "delicately varied sameness" of Westcott, the "infinite motion" of Liddon. Flashes of humour run through the narratives: in the clash of optimism with pessimism, when Gladstone and Ruskin first met face to face; in Jenny Lind's saucy rebuke of the intruding Americans; neat summaries occur, as that authority, discipline, mystery, were the motives of Newman's ideal Church. Occasional censure is not wanting to shade the florid estimates: stress is laid on Gladstone's imperviousness to metaphysics, science, and Socialism; on Liddon's unreasonable dislikes; on Tolstoy's inability to conceive the State in the spirit of Pericles or of Augustine; or Sir James Paget's supposed deadness to the claims of suffering humanity in the mass. The one weak chapter of the book, inferior both in insight and in eloquence, seeks to make Cecil Rhodes a lofty and unselfish idealist. We imagine that to those who best knew the hero of Kimberley and the Rand the laudation here awarded will seem ludicrous, the blame beside the mark.

Mr. Henry James tells us in the preface to *English Hours* (Heinemann) that the papers from his pen collected in this volume have already been reprinted, thirteen out of the sixteen in a book entitled 'Portraits of Places,' and that they have again been in part rewritten. Their association with a large and excellent series of illustrations by Mr. Joseph Pennell gives a special interest to the present republication. We have this week a new book on Oxford, as well as a new edition of Mr. Andrew Lang's 'Oxford,' so note that Mr. Henry James and Mr. Pennell also deal with Oxford. Mr. James pleasantly contrasts the emotional attitude of his brother Americans at Oxford with the comparative indifference of its permanent residents and the "irreverence" of its undergraduates. The author holds the balance even between Oxford and Cambridge, and thinks that if asked "to mention the prettiest corner of the world" he should "point the way to the garden of Trinity Hall." Its principal beauty, however, depends on the bridge of its neighbour Clare and the transpontine lawns of its other neighbour, Trinity. The "magnificent group of horse-chestnuts" is now, we fear, less "remarkable for the fact that their giant limbs strike down into the earth, take root again, and emulate, as they rise, the majesty of the parent stem," than when these passages were penned. In his chapter on London Mr. Henry James notes as its greatest charm the walk from Notting Hill to Great George Street, Westminster, amid the rustle of trees and the song of birds. He tells us that "in all the town-scenery of Europe there can be few things so fine" as the view from the bridge across the Serpentine. He is, we think, unfair to one feature of the long walk which he commends, describing the beautiful entrance to Hyde Park at Apsley House as "low park-gates in" a "neat but unimposing frame." The essay called 'Browning in Westminster Abbey' differs from the remainder of the volume in not being topographical, and the description of Lichfield deals also with literature. Mr. Pennell's illustrations are admirable. Without descanting on their appropriateness and their beauty, we note some peculiarities. The pretty vignette above the preface represents a scene at Westminster which has no existence; Turner himself never took a greater liberty with the facts. The plate entitled 'The Senate House, Oxford,' is also a puzzle, for while the name is exchanged with that of a view in Chester, the Sheldonian is not properly a Senate House. Cambridge has Senate and Electoral Roll where Oxford has Congregation and Convocation. Almost the only failure among the plates is 'A Devonshire Lane.'

Messrs. Peel and Minchin, in the preface to *Oxford* (Methuen), disclaim for it the title of a guide-book. A guide-book it is, of a superior class. The foundation, the changes, and the famous members of each college, are succinctly discussed. The coloured drawings are well chosen, and are, with few exceptions, of a high order, though their warmth of tint is perhaps too uniformly suggestive of a July evening. The view of Magdalen tower, however, is not from Addison's walk, which, beginning opposite Holywell mill, extends to the high ground terminating the vista. The "a fig for Dr. Kennicott" story used to be localized not at Exeter, but in the garden of the Hebrew Professor at Christchurch, where, in Dr. Pusey's time, the tree still grew. And the prayer for all sorts and conditions of men, with its Chaucerian "Christës sake," transformed by modern spelling, was written, not by Sanderson, but by Gunning, Master of St. John's College, Cambridge. "Finally," as the prayer in question says, we have seen no book which we would so readily place as this in the hands of visitors intent on a serious yet somewhat fleeting study of the Enchantress City.

The main object of *The Old Colonial System*, by G. B. Hertz (Manchester, University Press), is to combat the "exasperating" misconception of imperial history which, as a University Extension lecturer, Mr. Hertz has found generally prevalent. It is possible that, where Moses and the Prophets, in the shape of Lecky's 'History,' have failed to convince, Mr. Hertz may not be more fortunate. He has, however, in his illustrations of the contemporary opinions of the past, dived into remote corners, whence he has produced much valuable and suggestive material. Of the twelve chapters in the volume the one on 'United Empire Loyalty,' describing the different schemes for a settlement put forward by distinguished loyalists, is perhaps the most interesting. The account of the mercantile system is disappointing, and Mr. Hertz is a little inclined to put forth conclusions not startlingly original as though they were discoveries. He wonders why Pitt did not give birth to a new constructive organization of the Empire. The answer is obvious. Pitt, agreeing therein with Franklin, up to a very late date, and with most men of his time, did not consider that any new organization was required. They would have contended that all that mattered was the spirit in which the organization was worked. Mr. Hertz is probably right in thinking them wrong, but that is not the question. We are told that Chatham and Burke "appealed to an imagination too high for contemporary politics without possessing quite enough genius to raise their world from its existing level." One would like to know what practical statesman ever achieved the latter task. Lord George Germain is described as "an able man with sound views on tactics." If by "tactics" be meant strategy, few students of the history of the War of Independence will agree with the judgment; nor was he "Secretary of the Colonial Department of the Board of Trade." Whatever Burgoyne's faults, he surely was not "pompous and prolix"; and in a book which shows evidence of much research it is startling to find that Lord Hillsborough "was afterwards made Secretary of State for India [*sic*] before he knew the geographical whereabouts of Bengal." Nevertheless the book, if not to be taken quite so seriously as its author intends, is timely and useful.

Mr. Walter Del Mar's *India of To-day* (A. & C. Black), though not so good as the volume in which he described his tour 'Around the World through Japan,' is to be commended. The order adopted for a "ten weeks'" tour in India is not, perhaps, the best, but there is an index, and the tourist will be able to adapt the succession of the chapters to his requirements. Mr. Del Mar again shows his powers of observation, and is compelled to note that from the extreme south to the north-west of India "you may travel for months without seeing a smile or any other sign of happiness." The glance of hatred, though not infrequent, is not the rule. We agree with Mr. Del Mar that, commonly, the "eyes turned towards you show only indifference." The illustrations, which are chiefly of architecture, are almost wholly new and are adequate.

We reviewed last week so many books on *Nelson* that it is difficult for us to do more than mention the appearance of a perfect little pocket edition under that title by Prof. J. K. Laughton, published by Mr. George Allen, and excellently illustrated. There is a full chronology of the events of Nelson's life.

We have on our table *A Woman of the World*, by Ella W. Wilcox (Cassell), — *The Manchester Quarterly Journal of Literature and Art* (Sherratt & Hughes),—*The Geography of To-day*, by C. A. Wood (Manchester, Heywood),—*Jews in Many Lands*, by E. N. Adler (Macmillan),—*Tactics for Beginners*, by Major C. M. De Gruyther (Gale & Polden),—*The Cambridge University Calendar, 1905-6* (Cambridge, Deighton & Bell),—*Early Christian Ireland*, by Eleanor Hull (Nutt),—*Spiritual Difficulties in the Bible and Prayer Book*, by H. M. Luckock (Longmans),—*Verses, Grave and Gay*, by Gwilym (Whitehaven, Burlington), —*The Banks in the Clearing House*, by W. Howarth (Wilson),—*The Devil's Due*, by G. B. Burgin (Hutchinson),—*Kokoro*, by L. Hearn (Gay & Bird), — *Loveday*, by L. T. Meade (Hodder & Stoughton),—*Grimm's Fairy Tales and Household Stories*, by the Brothers Grimm, illustrated by H. L. Shindler (Routledge), — *The Evolution of Dick*, by C. W. (S.P.C.K.), — *Spanish-English Dictionary of Mining Terms*, by F. Lucas (Technological Institute), — *Appendix to Japanese Grammar*, by H. J. Weintz (Hirschfeld Brothers),—*Friedhelm*, by E. K. Seth-Smith (S.P.C.K.),—*Deborah's Life*, by J. Blyth (Nash), — *Rachel's Secret*, by Elizabeth H. Mitchell (S.P.C.K.), — *Nostalgia*, by G. Deledda, translated by Helen H. Colvill (Chapman & Hall),—*The Sword of Gideon*, by J. Bloundelle-Burton (Cassell),—*A Bearer of Despatches*, by Emil Loch (S.P.C.K.),—*The Wind-Jammers*, by E. J. Hains (Nash), — *The Neville Twins*, by G. R. Wynne (S.P.C.K.), —*Oak Farm*, by G. Martin (Sonnenschein),— *On Company's Service*, by W. Pett Ridge (Hodder & Stoughton),—*Physical Chemistry*, by A. Findlay (Longmans), — *The Baptist World Congress*, with Introduction by the Rev. J. H. Shakespeare (Baptist Union),— *Calendar of the Plea Rolls of the Exchequer of the Jews*, edited by J. M. Rigg (Macmillan),

—and *Natural History for Young People*, by R. E. Bonser (Cassell). Among New Editions are *Lent Legends, Stories from Heathen Mythology and Greek History*, and *The Followers of the Lord*, all by J. M. Neale (S.P.C.K.),—Bunyan's *Grace Abounding* (R.T.S.), — and Max Pemberton's *Iron Pirate* (Cassell).

'EMMA, LADY HAMILTON.'

October 21st, 1905.

YOUR reviewer of my book on Lady Hamilton animadverts on a short and incidental sentence (p. 181) touching the praise by the Elliots of Emma in 1795 and 1796. *Lady* Elliot is specially emphasized in my note to the passage. Your reviewer, assuming rather hastily that I have not studied so simple a book as the Minto 'Life and Letters,' quotes from that book one passage alone, and that not in its entirety, concerning Sir Gilbert's description in November, 1796. He was then sympathetically critical. Some years afterwards, as I have not failed to relate, he became a declared enemy. With these particular comments of his I will deal presently. But your reviewer has not marked that in my note I did not rely on this source alone. Hamilton, writing to Greville exactly a year earlier, in November, 1795, says, in a letter which will be found in Add. MS. 34710 D, "Lady Elliot who has been here with her family *has taken quite a passion for Emma*"; and, further, "Emma is not at all displeased to retire with me at times from the great world, altho' none is better received when she chuses [*sic*] to go into it."

The portion of Sir Gilbert's qualified comments in 1795 cited by your reviewer should be supplemented by the rest. Elliot calls her "the most extraordinary compound" that he "ever beheld." "Her face is beautiful," he adds; "she is all Nature and all art." (This I have emphasized in a sentence of my own elsewhere in the book.) "That is to say," he explains, "her manners are perfectly unpolished." Then follows the ease-of-a-barmaid sentence, the pith of which I also embodied in another sentence of my own in the opening chapter. He proceeds to say that she

"is exceedingly good humoured, and wishing to please and be admired by all ages and sorts of persons that come in her way; but besides considerable natural understanding she has acquired since her marriage [here Sir Gilbert is mistaken; it was before it] some knowledge of history and the arts, and one wonders at the application and pains she has taken to make herself what she is."

In vol. i. p. 442 and vol. ii. p. 364 of the same memoirs will be found the highest praise of Emma's talent, as displayed in her 'Attitudes'; while in that volume also occurs a mention of her homeliness, which I have introduced in another part of my work. I think that Lady Elliot may be said at this time to have been a warm admirer. Sir Gilbert praised her gifts while he criticized her manners.

In no case do the strictures on a brief remark occurring in a passage about the Countess of Lichtenau, and only referring to the Elliots

"*among others*," affect the broad fact of Emma's social position in the eyes not only of the Neapolitan Court, but of the English ladies at Naples.

With regard to the Nelson likeness, your reviewer should compare its aspect with that depicted on one of the bronze "Nile" medals, and on one of those struck to commemorate Nelson's return home in 1800. Nelson himself wrote to the effect that no two portraits of himself were the same. WALTER SICHEL.

*** The point we raised was not whether Emma was or was not beautiful, accomplished, and ladylike, but whether Mr. Sichel was or was not correct in stating that in or about 1796 "the Elliots were praising and applauding her to the skies," and we quoted some sentences from Sir Gilbert Elliot's description of her as evidence on the question. Mr. Sichel finds this description "sympathetically critical." We can only say that it does not strike us in that light. As to the portrait, we cannot believe that it was meant for Nelson; nor—in view of the fact that Romney was more or less paralyzed and imbecile at the date given—can we accept the unsupported assertion on its label.

POEMS WRONGLY ATTRIBUTED TO CHAUCER.

IT occurs to me that many of your readers will be glad to have, for reference, a list of the numerous poems that have wrongly been attributed to Chaucer in past times, but are certainly not his. The following gives them in the order of their appearance in the old folio editions. Some appeared previously, but separately.

Poems printed by Thynne (1532).

1. Eight Goodly Questions.—By Lydgate?
2. Balades: to King Henry V. and to the Knights of the Garter.—By Hoccleve.
3. Three Sayings.—Anonymous; only 14 lines.
4. The Romaunt of the Rose, ll. 1706 to end.—Ll. 1-1705 are genuine.
5. The Testament of Creseyde.—By Henrysoun.
6. A Goodly Balade: "Mother of norture."
7. The Flower of Courtesy.—By Lydgate.
8. La Belle Dame sans Mercy.—By Sir R. Ros.
9. The Assembly of Ladies.—By a Lady.
10. The Complaint of the Black Knight.—By Lydgate.
11. A Praise of Women: "Al tho the lyste of women euyl to speke."—By Lydgate?
12. The Testament of Love, in prose.—By Thomas Usk.
13. The Lamentation of Mary Magdaleyn.
14. The Remedy of Love.
15. The Letter of Cupid.—By Hoccleve.
16. A Commendation of Our Lady.—By Lydgate.
17. To my Soverayn Lady.—By Lydgate.
18. To King Henry IV.—By John Gower.
19. The Cuckoo and the Nightingale.—By Clanvowe.
20. Envoy to Alison.—Anonymous.
21. A Moral Balade.—By Scogan. This quotes the whole of Chaucer's 'Gentilesse.'
22. Go forth, King.—By Lydgate.
23. Balade of Good Counsel.—By Lydgate.

First printed by Stow (1561).

24. A Saying of Dan John.—By Lydgate.
25. Yet of the same.—By Lydgate.
26. Balade de Bon Consail.—Only 7 lines; different from No. 23.
27. A Balade which Chaucer made in the praise or rather dispraise of women for their doubleness.—By Lydgate.
28. The Craft of Lovers.
29. A Balade: "Of their nature they greatly them delite."
30. The Ten Commandments of Love.
31. The Nine Worthy Ladies.
32. A Virelai.
33. A Balade: "In the Season of Feuerere."
34. A Balade: "O Mercifull and merciable."
35. Mercury, Pallas, Venus, Minerva, and Paris.
36. A Balade pleasaunt: "I haue a Ladie."
37. A Balade: "O Mossy Quince."
38. A Balade, warning men against deceitful women.—By Lydgate.
39. A Balade on Chastity.
40. The Court of Love.

First printed by Speght (1598 *and* 1602).

41. Chaucer's Dream; or, 'The Isle of Ladies.'
42. The Flower and the Leaf.—By the authoress of 'The Assembly of Ladies.'
43. Jack Upland, in prose.

Printed in Morris's Chaucer (1866).

44. Prosperity.—By J. Walton.
45. Leaulte vault Richesse.—Eight lines.
46. Proverbs of Chaucer.—Twenty-two lines (of which eight are genuine).
47. "Moder of God."—By Hoccleve.

The piece called 'Chaucer's Prophecy' in Bell's edition is only No. 3 reprinted.

Perhaps Nos. 18 and 21, respectively attributed to Gower and Scogan, have never been actually quoted as Chaucer's; but it is difficult to be sure of this. At any rate, they occur in "Chaucer's Works."

The list of forty-seven pieces includes at least twenty by authors whose names we know. Several more may be Lydgate's, and some are far too bad to be even his.

Among these names we may certainly include those of several known men, such as Hoccleve, Gower, Scogan, Lydgate, Henrysoun, Walton (translator of Boethius), Usk (see 'Dict. Nat. Biog.'), and Sir Richard Ros. Of Clanvowe we know only the name for certain; but whether it was Sir John or Sir Thomas is not decided.

WALTER W. SKEAT.

'A SUBURBAN ROMANCE.'

A PARAGRAPH appears in your 'Literary Gossip' stating that Mr. W. T. Spencer, of New Oxford Street, claims to have discovered an unknown story by Charles Dickens with the above title, in an annual called 'The Josephine Gallery,' published in New York in 1861. There can be no doubt that this is an instance of a dodge which was more than once resorted to in America during the period of the existence of *Household Words*. The story referred to appeared in that paper on December 14th, 1850, and the conclusion was, no doubt, jumped at that Dickens wrote it. This was not the case. The author of the story was W. H. Wills, the sub-editor, and it will be found in his volume of 'Old Leaves.' Some of the stories and sketches in that volume, as was pointed out in your columns a week or two ago in regard to 'A Curious Dance,' are indicated by a hand pointing to the chapter number, as having received those "masterly touches which gave to the old leaves here freshly gathered their brightest tints." 'A Suburban Romance' is not so indicated, and therefore must be accepted as the work of W. H. Wills.

B. W. MATZ,
Editor of *The Dickensian*.

THE DEATH OF EDWARD THE ELDER.

IN connexion with the interesting suggestion made by Mr. F. M. Stenton, in your issue of October 7th, that Fearndune of the 'Chronicle' and Ferenduna of William of Malmesbury are identical with Farndon near Chester, it may be worthy of note that Farndon is referred to twice in Domesday Book under the form Ferentone, and was one of the most important manors in this part of Cheshire. It was held partly by the bishop and partly by Bigot under Earl Hugh. The latter portion T.R.E. had belonged to Earl Edwin.

Bigot's part included the present township of Aldford, and at this spot there are still to be seen considerable earthworks known as Aldford Castle (locally called Blobb Hill), evidently intended to protect the important ford by which the old Roman road crossed the Dee at this point. It is not impossible that this is the very spot where Edward died.

WM. FERGUSSON IRVINE.

Literary Gossip.

A NEW book by the author of 'Elizabeth and her German Garden,' entitled 'The Princess Priscilla's Fortnight,' will be published by Messrs. Smith & Elder on November 6th. The story tells the impressions of a visit in which Germany and England are made to look on one another with the keen, but never unkind humour which is inseparable from the pen of the German Elizabeth.

WE deeply regret the death of Mr. G. L. Craik, one of the most civilized and cultivated men connected with the letters of the English-speaking world in the last half century. Mr. Craik, who belonged to a well-known Scottish literary and ecclesiastical family, was in youth the right hand of the late Alexander Macmillan, and remained for forty years the chief literary adviser of the Macmillan firm.

MR. ERNEST A. VIZETELLY writes:—

"On the question raised in Prof. Laughton's article, whether Nelson's early knowledge of naval tactics was derived from French sources, I would suggest that Prof. Laughton is mistaken when he asserts that there were at the time no books in English treating directly of such tactics. The principal work of the French writer, Paul Hoste, to whom he alludes by name, had been translated into our language by C. O'Bryen (*sic*) in 1762. See British Museum Catalogue."

M. RIBOT is a candidate for the seat in the Académie Française vacant by the death of the Duc d'Audiffret-Pasquier, and there is reason to believe that he will be elected.

KATHARINE TYNAN'S new novel 'Dick Pentreath,' which Messrs. Smith & Elder will have ready next Thursday, is the story of a dog and his master—that is to say, primarily the story of the master, but through it flashes the red and silver of Sancho, a Clumber spaniel. The human hero is a young country gentleman of small fortune. Through no fault of his own, he loses the girl he loves on the eve of his wedding-day, and makes a mad marriage with a coarse peasant. After the marriage Dick Pentreath, and Sancho with him, suffer intolerable things; but in the end there is happiness.

MR. FISHER UNWIN has arranged with Pastor Wagner, of Paris, for the publication of copyright English editions of his two most famous works, 'Jeunesse' and 'La Vaillance.' The author has revised each book for English publication, and has also written a preface addressed to the youth of Britain. 'Jeunesse' will appear under the title 'Towards the Heights.'

'THE CONFLICT OF IDEALS IN THE ENGLISH CHURCH' is the title of Canon Knox Little's new volume which Sir Isaac Pitman & Sons are publishing early in November. It is an attempt to examine the various ideals of the different schools of thought in the Church to-day, as dispassionately as possible, but from the point of view of an English Catholic.

MR. F. G. AFLALO has written his reminiscences as an angler, which Sir Isaac Pitman & Sons will publish next Monday under the title of 'The Salt of my Life,' illustrated with fifty photographs. The book ranges over both the Northern and Southern hemispheres.

The second part of Mr. Demetrius C. Boulger's 'History of Belgium' will be published early next year. It brings down events to the end of the reign of Leopold I.

E. Grant Richards will publish shortly a collection of letters written by members of Sir Walter Scott's family to an old governess, edited, with an introduction and notes, by the Rev. P. A. Wright Henderson, Warden of Wadham College, Oxford. These letters, hitherto unpublished, throw some light on the history of the Scott family, and form, in a small degree, a supplement to Lockhart's 'Life.' Most of them deal with what might be called trivial things, but they show strong family loyalty and affection.

Messrs. Probsthain & Co., in conjunction with the Orient Press, will issue shortly the first volume of "Love Stories of the East"—Nizami's 'Laili and Majnun.'

Mr. John Masefield has edited a reprint of 'The Fancy,' by John Hamilton Reynolds, Thomas Hood's brother-in-law and the friend of John Keats. The little volume, published anonymously in 1820, purported to be 'A Selection from the Poetical Remains of the late Peter Corcoran, of Gray's Inn, Student-at-law,' and it cannot be doubted that the prefatory memoir is in its main features autobiographical. Portions of it relate to life at Shrewsbury School in the palmy days of Dr. Butler. Mr. J. B. Yeats has furnished a number of illustrations for the volume, which Mr. Elkin Mathews will shortly publish in his "Satchel Series."

The November number of *The Dickensian* will contain an article on Sir Henry Irving and Dickens by O. Sack, with a reproduction of a drawing of Irving as Jingle by the late F. G. Kitton. Among the other articles will be 'Turveydrop and Deportment,' by Leicester Romayne; and 'If Dickens had been an Actor,' by Justin McCarthy. The frontispiece is a reproduction of an unfamiliar portrait of Dickens, and there will be a sketch by Harry Furniss, and a picture of the Pickwick room at the Leather Bottle. The cover design is a reproduction of that drawn by Marcus Stone for the original covers of 'Our Mutual Friend.'

'Essays in Socialism New and Old' is the title of a new volume, by Mr. E. Belfort Bax, which E. Grant Richards has in preparation.

Glasgow University will hold on April 18th, 1906, a commemoration of Francis Hutcheson, Professor of Moral Philosophy in the University from 1730 to 1746.

Lord Rosebery is expected to take the chair at the annual meeting of the Scottish History Society in Edinburgh this afternoon. With the second volume of the 'Edinburgh Justiciary Court Records,' sent out this week, some fifty volumes have been issued to members since the formation of the Society. Forthcoming volumes include the 'Statuta Ecclesiæ Scotticanæ,' which is being brought out with a translation and notes by Dr. David Patrick, and 'The Records of the Baron Court of Stitchill,' by the late Rev. George Gunn.

The session of the Aristotelian Society will open on November 6th, when the President, Dr. Hastings Rashdall, will deliver an address on 'Causality and the Logic of History,' which will deal with the question of the miraculous as a logical conception.

Mr. Richard Cameron, F.S.A.Scot., gave the opening lecture to the Edinburgh Assistant Booksellers' Association on Thursday night upon 'Books, Libraries, and Literature in Days of Old.'

At the monthly meeting of the Booksellers' Provident Institution on Thursday, the 19th inst., Mr. C. J. Longman in the chair, the sum of 96*l.* 10*s.* was voted to fifty-five members and widows of members. One member was elected, and one fresh application for membership received. A letter was read from Mr. Hugh Spottiswoode stating that he would contribute 25 guineas as a slight token of his thanks to the booksellers for their assistance in forwarding the sale of 'Printers' Pie.' A dramatic performance will be given on Thursday, December 14th, at St. George's Hall, for the benefit of the funds.

The library of the late Sir Joseph Hawley will be sold on November 20th by Messrs. Hampton & Sons at Leybourne Grange, Malling, Kent, the residence of the late owner. The county histories are numerous, and include Hoare's 'Ancient and Modern Wiltshire,' Shaw's 'Staffordshire,' Surtees's 'Durham,' and Clutterbuck's 'Hertford,' mostly in choice bindings. In addition, there are rare books of travel and examples of all branches of literature.

The letters from Wilhelm to Caroline von Humboldt, hitherto kept in the hands of the family, are being prepared for publication by Frau von Sydow, a great-grandchild.

The third centenary of the birth of Corneille will be celebrated in Paris next June, and is likely to be a brilliant affair. The programme will consist of three principal events: a fête at the Sorbonne under the presidency of M. Loubet, who will receive delegates from the academies, universities, colleges, schools, &c.; the inauguration of the monument to Corneille offered to the city of Paris; and the production of various works by the dramatist.

The death is announced at Genoa of Signor Baldassare Avanzini, founder and director of the *Fanfulla*. Avanzini was born about 1840, and started his career in a Government office. In 1870, with the co-operation of several others, he started the *Fanfulla*, one of the most successful journals of modern Italy. His own contributions were usually signed E. Caro. A literary weekly, the first of its kind in Italy, the *Fanfulla della Domenica*, was an offshoot of the famous daily. Signor Avanzini was one of the founders of the Press Association of Italy.

The death, in his seventy-first year, is also announced from Bonn of Hermann Usener, formerly Professor of Classical Philology at the university of that town.

There appeared on Wednesday the 'Statute Book' ('The Public General Acts') for 1905 (3*s.*), by far the thinnest for many years. There are only twenty-three Acts, of which the longest is the work of a private member. The second part of the volume describes the Private and Local Acts.

The other Parliamentary Papers of the week include the Forty-Eighth Report of the Inspector of Reformatory and Industrial Schools, Part II., General Report and Appendixes III. to XI. (11*d.*).

SCIENCE

The Voyage of the Discovery. By Capt. Robert F. Scott, C.V.O. With over 270 Illustrations. 2 vols. (Smith, Elder & Co.)

Never has a Polar expedition returned with richer results, geographical and scientific, than those of which the record is contained in these two splendid volumes. Although assisted by the Government, especially in the measures taken for its relief, it was essentially a private venture on the part of two of our great societies, supported by a munificent donation from Mr. Longstaff and other subscriptions; and its usefulness was enhanced by its being part of a larger scheme, in which two other nations, Germany and Sweden, collaborated with us in different parts of the Antarctic area. If to England's share fell what was in some respects the most fruitful field of operations, it must be admitted that the achievements of our party, which remained out a year longer than the others, were incomparably the most important. Capt. Scott can justly claim, as he does in his final words,

"that the voyage of the Discovery was not conducted in a spirit of pure adventure, but that we strove to add, and succeeded in adding, something to the sum of human knowledge."

And Sir Clements Markham, whom its commander styles "the father of the expedition," stated publicly that its members had accomplished far more than was expected of them.

The detailed record of their experiences has been eagerly awaited, and has not been unduly delayed. We cordially congratulate the author and the publishers on having combined to produce a book which is in every way worthy of so remarkable an expedition. Better photographs could not be desired than those which supply the majority of the 270 illustrations; and each occupies exactly its proper place in the text—a matter which is too often neglected. There are twelve coloured plates from water-colour drawings by Dr. E. A. Wilson; and many, we fancy, will regret that of the large collection exhibited in London by that delightful artist so small a proportion could be included in this work. All of those chosen are admirably reproduced, and some (as 'Moonlight on a Frozen Sea' and 'An Emperor Penguin Rookery') are beyond praise. There are two excellent maps, illustrating the discoveries by land and sea; but it is unfortunate that space has not been found for a survey on a larger scale of the immediate neighbourhood of the ship's winter quarters. Neither of the maps sufficiently indicates the boundary between the sea-ice and the Barrier ice to the east of the Cape Armitage peninsula; and it is therefore difficult to estimate the evidence for the insulation of Mounts Erebus and Terror. Capt. Scott speaks so modestly in his preface of his qualifications as historian of the expedition that he has pro-

vided an agreeable surprise for his readers. To relate the varied incidents of a three years' voyage would be "a weighty task" for most writers; but he discharges it with such apparent ease and with so remarkable a gift of description and selection that it could not be in more capable hands. With many touches of dry humour and a generous appreciation of the efforts of his men he has told us exactly what we wanted to know; and no man could wish for higher praise. His chief object, he says, has been the guidance of future voyagers, and for this reason he has entered into rather minute details of management and equipment; but in spite of his apologies on this score, there are very few pages which the most fastidious will care to skip.

Something must be said upon the main outlines of the expedition's work. After an uneventful voyage to the southern hemisphere the Discovery left New Zealand in December, 1901, and spent what remained of the short Antarctic summer in exploration along the edge of the Barrier ice-sheet to the east of Victoria Land. In 76°–77° S. latitude and 150°–156° W. longitude new land was discovered, which was named King Edward VII. Land; and it was found that, if the observations of Ross in 1842 were correct, the ice-sheet has receded thirty miles or more in the last sixty years. This retreat does not seem to have been uniform, but to have occurred principally in the latitude of a great promontory which existed between the meridians of 165° and 170° W. longitude. The Parry Mountains, charted by Ross to the south-east of Mount Terror, were found to be non-existent; and it is possible that Ross had been deceived by mirage, which had projected to the eastward the mountains subsequently discovered by Capt. Scott, and named by him the Royal Society Range.

Early in February, 1902, the Discovery returned to Victoria Land, and took up her winter quarters in a sheltered bay of McMurdo Sound to the west of Mount Erebus. With pardonable pride Capt. Scott considers that "no Polar ship ever wintered in a more interesting spot" than this, which was to be the home of the explorers for the next two years. On three sides they were surrounded by the vast unknown, and how bravely and diligently they laboured to penetrate its secrets may be seen from the chart of the sledge journeys which accompanies the second volume. At first they were somewhat handicapped by inexperience of the perils of sledging; and in a reconnaissance during the autumn a young seaman lost his life on a dangerous ice-slope, while others of the party were only rescued with difficulty. But this was the single toll which the grim climate levied upon their numbers, although in the first spring there was a moment when scurvy, that most terrible scourge of the old Arctic travellers, threatened them with disaster. The disease appears to have been due to defects in some of the tinned foods supplied to the expedition; but energetic measures were taken at once, and the danger disappeared.

On November 2nd Capt. Scott entered upon his great southern journey, accompanied by Dr. Wilson and Lieut. Shackleton. They started with nineteen dogs; but for some inexplicable reason these animals proved deficient in staying power, and, even before the "farthest south" was reached, they were of no use in the traces. With indomitable courage the party pushed on to the utmost limits of safety along the surface of the great ice-sheet, within view of a lofty mountain range on the west. Capt. Scott thus describes one of the most exciting moments of the advance:—

"On the near side is a bold, rocky, snow-covered cape; and as we rapidly altered its bearing this afternoon, it seemed to roll back like some vast sliding gate, and gradually there stood revealed one of the most glorious mountain scenes we have yet witnessed. Walking opposite to Wilson [who was suffering from snow-blindness], I was trying to keep him posted with regard to the changes, and I think my reports of this part must have sounded curious. It was with some excitement I noticed that new mountain ridges were appearing as high as anything we had seen to the north; but, to my surprise, as we advanced the ridges grew still higher, as no doubt did my tones. Then instead of a downward turn in the distant outline came a steep upward line; Pelion was heaped on Ossa, and it can be imagined that we pressed the pace to see what would happen next, till the end came in a gloriously sharp double peak crowned with a few flecks of cirrus cloud.....All our thoughts in camp to-night turn to this splendid twin-peaked mountain, which, even in such a lofty country, seems as a giant among pigmies."

This scene was close to the furthest point reached, which, as all the world knows, placed the "record" some 250 miles nearer to the Pole. Despite the loss of the dogs, they returned in quick time, though with much suffering, Lieut. Shackleton being very ill, and the others tainted with scurvy; and on February 3rd, 1903, after ninety-three days out, they reached the ship, which was already in communication with the relief vessel. It is interesting to remember that Capt. Cagni, on his North Polar journey in 1900, started with 104 dogs, to whose draught-power he largely owed his success; and if Capt. Scott had been equally well provided—and also with the best dog food—he would no doubt have reached a far higher latitude. We are not sure that Capt. Scott would persuade the Italian explorer, or any of his Arctic brethren, that Antarctic sledge-parties are at a disadvantage as compared with Arctic in the matter of speed; for in arguing for the superiority of sea-ice over land-ice as a travelling surface, he seems to forget that the former, where it is not land-locked (as it practically is in McMurdo Sound), is liable to break up and drift with every wind.

The expedition was destined not to escape in 1903, for the open water did not come within four miles of the ship. But the second winter proved less stormy than the previous one; and in the spring sledge-parties were again sent out in all directions. This year the principal effort was to the west, and was again under the leadership of the commander himself. For his account of his various misfortunes—of the severe blizzard which kept the party in their tents for a week, and of the hairbreadth escapes of himself and two sailors, who made a forced march of 200 miles, 9,000 ft. above sea-level, over the inland ice—we must refer our readers to his own graphic narrative. But we must find room for his testimony to the magnificent spirit of his men. One day a sailor overstrained himself in sledge-hauling, and was kindly excused by his captain from part of the heavy work on the march:—

"Handsley came to me to-night to beg that he might not be made an example of again. I tried to explain that I had no intention of reflecting on his conduct; but apparently nothing will persuade him but that his breakdown is in the nature of disgrace. What children these men are! and yet what splendid children! They won't give in till they break down, and then they consider their collapse disgraceful. The boatswain has been suffering agonies from his back; he has been pulling just behind me, and in some sympathy that comes through the traces I have got to know all about him, yet he has never uttered a word of complaint, and when he knows my eye is on him, he straightens up and pretends that he is just as fit as ever. What is one to do with such people?"

Twelve days after the captain's return the relief ships arrived at the edge of the ice, which was then twenty miles from the Discovery. For a month her release seemed hopeless; but at length a propitious storm, aided by a prodigal expenditure of gun-cotton, freed her in the nick of time. After a fruitless attempt to explore the north-east coast of Victoria Land, she reached New Zealand in April, 1904, and, returning thence by the South Pacific, arrived in England five months later.

It is too soon at present to expect any estimate of the full scientific results of this great expedition. The book contains two valuable appendixes by Mr. Ferrar and Dr. Wilson, the geologist and the zoologist of the party, on the two branches of knowledge—as illustrated by these regions—which they respectively represented. There are also interesting observations in the body of the work on the habits of the seals and penguins.

In his concluding chapter Capt. Scott sums up the more important geographical problems upon which his researches have thrown light. Among these are two questions of general interest: first, whether Victoria Land continues on to Graham Land, and so is part of a vast continent—which he inclines to answer in the affirmative; and secondly, what is the nature and origin of the (so-called) Ice Barrier. On the latter point opinions are still much divided. Mr. Bernacchi, the physicist of the party, who was also a member of the Newnes Expedition of 1899, thought formerly that this ice-sheet (as it should rather be called) was simply a gigantic glacier-tongue, moving from west to east, and that on the south side of it—possibly not more than fifty miles away—would be found an open sea. Capt. Scott, by his southern journey, has shown the latter conjecture to be unfounded; but he so far agrees with the theory as to maintain that the Barrier ice-sheet is afloat at least as far south as he travelled. His investigations have proved that the whole region was once much more heavily glaciated than at present; and his own theory is that the ancient ice-sheet then filled nearly the whole of the Ross Sea; that, as the mass gradually wasted from above, it became buoyant and floated while remaining fast; and that it is now rapidly diminishing. But one of his officers, on

revisiting after thirteen months a depôt which Capt. Scott had left in November, 1902, found that the depôt had moved in that time 608 yards slightly east of north. Capt. Scott admits that the rapid movement of the ice-sheet in this direction is a complication of the problem; it would seem to show that there is a far larger supply of ice pressing up from the south and west than would be accounted for by the two great outlets of the inland ice which he discovered. In short, while we know much more about the Barrier than we did before the expedition, the new facts of its vast extent and its rapid movement make it more mysterious than ever.

With such interesting questions still unsolved, we are led to express a hope that the Antarctic career of Capt. Scott is not yet closed. His tact and perseverance, his indomitable pluck, and his great popularity with his men—combined with his comparative youth and his unique experience—mark him out as a leader who should have another chance of service in the same field. If in a much poorer country Sven Hedin could find funds for the completion of his Asiatic researches, England might surely find a second Longstaff to carry on the work made possible by the generosity of the first.

ANTHROPOLOGICAL NOTES.

Mr. Lewis Abbott in *Man* for October continues the discussion of the origin of the eoliths. In an animated article he characterizes M. Boule's conclusions as over-hasty generalizations, and maintains the possibility of establishing a scheme of classification based upon objects that could not have been produced in cement works. Another controversial article is by Mr. N. W. Thomas, who criticizes the definitions of "magic" offered by MM. Hubert and Mauss in the 'Année Sociologique.' Mr. John Garstang describes his recent excavations in the prehistoric cemetery at Hierakonpolis (when 188 graves were registered and photographed), and gives specimens of the typical objects now being exhibited at the Institute of Archæology of the University of Liverpool. Mr. W. Innes Pocock contributes a description and measurements of four hitherto undescribed crania from shell-bearing sand-hills near San Francisco, now in the Cambridge Museum. Capt. G. R. Hearn communicates (through Mr. Risley) his observations of the ceremony of passing through fire performed by a Brahman called the "Panda" on the day or night of the full moon which ushers in the Holi festival at Phalen, a gât village in Mathura. The legend on which the ceremony is founded bears a close resemblance to the story of Shadrach and his companions in the book of Daniel. J. E.-P., in a review of 'Saints and Sinners' by Mr. R. Lamb, characterizes the custom of over-dressing, insisted upon by the mission ladies in the New Hebrides, as a greater evil than even the introduction of firearms and alcohol by traders, inasmuch as it has to do with the large increase of pulmonary consumption that is tending to the extermination of the native population.

Mr. A. B. Cook in *Folk lore* discusses the European sky-god as known to the Italians, and has accumulated a great mass of evidence relating to the worship of Jupiter, the claims of kings to divine prerogatives, and cognate matters. Mrs. Wherry contributes an account (partly from her own observation) of the dancing-tower processions in Italy, one of which—that of the Ceri at Gubbio—has already been described in a separate publication of the Folk-lore Society.

In his presidential address to the Prehistoric Congress on September 26th M. Émile Rivière made some observations on "la préhistoire" as being still a very young science. Referring to the discoveries in the Dordogne, he said that they did not afford the least trace of Tertiary man or of his industries, nor of any *pithecus*. Relics of Quaternary man are found in great number, and representing all the successive stages in his history—Chellean, transitional, Mousterian, Solutrean, Magdalenian. In the last but one of these the industries of worked bone, reindeer horn, and ivory appear concurrently with the taste for personal adornment; and in the last they receive a great development, and quickly attain a character of artistic decoration. He adduced in evidence numerous engravings and statuettes which are preserved in the museum at Perigueux. The palæolithic discoveries in the Dordogne have been so important that the remains of the neolithic and bronze periods in that country have been comparatively neglected, though these are not inconsiderable. As many as 24 menhirs and 110 dolmens exist there. The President offered a tribute to the memory of many deceased explorers, including the most recent, Élie Massénat, and especially M. Tabanou, who died, while still a young man, two years ago, a victim to his ardour in prehistoric research, for he was crushed by a block of stone, when excavating the Solutrean station of Badegoules, near Terrasson. M. Rivière has just published a second edition of his pamphlet (26 pp. and two plates) on 'Les Parois gravées et peintes de la Grotte de La Mouthe, Dordogne."

SOCIETIES.

Royal Numismatic.—*Oct.* 19.—Sir John Evans, President, in the chair.—Mr. H. F. Newall and Herr Armin Egger were elected Fellows.—Mr. W. S. Lincoln exhibited a series of medals of Nelson in silver, bronze, and pewter.—Mr. F. A. Walters showed a York halfpenny of Henry VIII. struck by Wolsey and bearing his initials T.W. This coin is unpublished.—Mr. W. J. Webster exhibited a sixpence of the first coinage of James I. with mint-mark a thistle-head; a pattern broad in silver by Rawlins of Charles I., and a crown of Charles II. of 1663,—and Mr. H. B. Earle-Fox, a lead impression of the obverse of the tetradrachm of Euthydemus II. of Bactria.—Mr. W. C. F. Anderson presented to the Society a proof in bronze of the medal for regular attendance of school children awarded by the Berkshire Education Committee. On the obverse is shown a seated female figure instructing children, and on the reverse a stag (the badge of the county) standing near an oak-tree, typifying the old forest of Windsor. The medal was designed by Mr. H. G. Willinck (a member of the Education Committee, whose badge of three acorns is placed on the reverse), and was executed by Mr. Frank Bowcher.—The President read a paper on 'The Silver Map-Medal of Sir Francis Drake.' This medal, of which only three specimens are known, consists of a thin silver circular plate engraved on one side with the Eastern hemisphere, and on the other side with the Western. The course taken by Drake in his famous voyage round the world is marked by a dotted line, the date of his departure being inscribed 1577 ID. DEC. (*i.e.*, December 13th), and of his return, 1580 4 CAL. OC. (*i.e.*, September 28th). The President gave some interesting particulars of Drake's voyage. This medal was issued soon after Drake's return; but the artist is uncertain, though probably Flemish.—Mr. Percy Webb gave an account of a recent find of Roman coins at Little Wellington Wood, near Watchfield, in Berkshire. The coins were discovered in an old stone-lined well, and were contained in a small earthenware vessel. They numbered only twenty-three, and extended from the reign of Gallienus to those of Carausius and Allectus, the coins of the last two emperors having been struck at London and Colchester. The date of the burial was *c.* A.D. 295.

Entomological.—*Oct.* 18.—Dr. T. A. Chapman, V.P., in the chair.—Mr. C. W. Bracken and Mr. W. H. St. Quentin were elected Fellows.—Mr. Rowland-Brown exhibited series of Erebias taken this year in the Pyrenees. He also exhibited short series of *Lycæna orbitulus* from the Central Alps, and *L. orbitulus* var. *oberthuri*, Stgr., *L. pyrenaica*, and *L. pheretes* from the Brenner and Cortina districts, remarking that as between these species there seemed to be a greater superficial affinity between *pyrenaica* and *pheretes* (not reported from the Pyrenees) than between *pyrenaica* and *orbitulus*.—Mr. E. C. Bedwell exhibited eight specimens of *Apion lævigatum*, Kirby, one of the rarest indigenous Apions, found on August 31st sheltering under plants of *Echium vulgare* in the Lowestoft district.—Mr. R. Shelford showed a Ligæid bug, the fore-limbs of which, comparable to those of the mole cricket, were well adapted to fossorial habits; a Brenthid beetle with a deep channel running along the dorsal part of the prothorax, inhabited by Acari; and an Anthribid beetle with a crescentic sulcus on the prothorax. All the specimens were from Sarawak, Borneo.—Mr. C. J. Gahan, on behalf of Mr. C. O. Waterhouse, exhibited a living example of *Phaneroptera quadripunctata*, a species which had been found in some numbers in a vinery near Chester. It is a Southern European species, and is not known as British.—Mr. W. J. Kaye brought for exhibition a long series of *Heliconius numata* from the Potaro River, British Guiana, clearly proving that these very variable forms were only aberrations, and were not sub-species, at least in this locality.—Mr. A. H. Jones exhibited a collection of Lepidoptera made by him in Majorca during the first half of last June, and remarked upon the great paucity of lepidopterous species in the island.—Mr. Frank P. Dodd communicated a paper 'On a Parasitic Lepidopteron from Queensland.'—Commander J. J. Walker read a paper by Mr. E. G. R. Meade-Waldo, 'On a Collection of Butterflies and Moths made in Morocco, 1901-2.' The species enumerated included a Cœnonympha and a Satyrus new to science.

MEETINGS NEXT WEEK.

Mon. Royal Academy, 4.—'The Bones and Muscles of the Trunk and their Relation to the Surface Forms,' Lecture II., Prof. Arthur Thomson.
— London Institution, 5.—'A Cruise with the Commissioners of Irish Lights,' Sir Robert Stawell Ball. (Travers Lecture.)
Tues. Society of Arts, 8½.—'Colour and Race,' Dr. John Beddoe.
Wed. Archæological, 4.—'Japanese Sword-Blades,' Mr. A. Dobrée.
— Entomological, 8.
Thurs. Royal Academy, 4.—'The Bones and Muscles of the Trunk and their Relation to the Surface Forms,' Lecture III., Prof. Arthur Thomson.
— London Institution, 6.—'Art and Humour,' Mr. M. H. Spielmann.
— Linnean, 8.—'Plant Ecology interpreted by Direct Response to the Conditions of Life,' Rev. G. Henslow.
— Chemical, 8½.—'Solution and Pseudo-Solution: Part IV. Some of the Arsenious Properties of Arsenious Sulphide and Ferric Hydrate,' Messrs. E. Linder and H. Picton; 'The Molecular Conductivity of Water,' Mr. P. Blackman; 'The Stereoisomerism of Substituted Ammonium Compounds,' Mr. H. O. Jones; 'The Influence of Very Strong Electro-magnetic Fields on the Spark Spectra of Ruthenium, Rhodium, and Palladium,' Mr. J. E. Purvis; and four other Papers.
Fri. Philological, 8.—'On the *N* and *R* Words I am editing for the Society's Oxford Dictionary,' Mr. W. A. Craigie.

Science Gossip.

The Swedish explorer Sven Hedin has started on a journey through India and Tibet. The expenses of the expedition will be defrayed by the King of Sweden, Emanuel Nobel, and others.

The sixth Huxley Memorial Lecture will be delivered on Tuesday by Dr. John Beddoe, the subject being 'Colour and Race.'

The moon will be full at 5h. 11m. (Greenwich time) on the morning of the 12th prox., and new at 4h. 47m. on the evening of the 26th. The latter being little more than twenty-four hours after she is in perigee, exceptionally high tides may be expected. An occultation of Aldebaran will take place on the evening of the 13th: disappearance at 6h. 35m., and reappearance at 7h. 16m. The planet Mercury will be at greatest eastern elongation from the sun on the 27th prox., and visible in the evening during the second half of the month, moving from the constellation Scorpio into Sagittarius. Venus rises a little later each morning, and will be in conjunction with the moon on that of the 25th; she will pass about 4° north of Spica on the 8th, and 1° north of α Libræ on the 25th. Mars is visible in the evening (diminishing in brightness) near the boundary of the constellations Sagittarius and Capricornus. Jupiter is at opposition to the sun on the 24th, and brilliant all night, not far to the south-east of the Pleiades. Saturn is in the constellation Aquarius, due south at 7 o'clock in the evening on the 5th, and at 6 o'clock on the 20th.

A large group of sun-spots has lately been visible traversing the solar disc, and is now passing off the western limb. A large spot is also advancing from the eastern limb.

We have received the eighth number of the *Memorie della Società degli Spettroscopisti Italiani*. Father Testa gives an account of the observations of the Perseid meteors, obtained last August at Pavia; Signor Bemporad communicates a set of new tables for the transformation of equatorial co-ordinates into rectilinear co-ordinates of celestial photography; and the diagrams of the spectroscopical images of the sun's limb are continued to the end of June, 1903.

FINE ARTS

MINOR EXHIBITIONS.

Two small exhibitions claim attention this week. At the Dutch Gallery, temporarily removed to 39, Old Bond Street, is a selection of drawings by Prof. Legros. There is nothing here to surprise, but much to delight the artist's admirers. Although Prof. Legros keeps closely to one consistent attitude, although every drawing bears strongly the impress of his temperament, he finds for it constantly fresh expressions, and he is far too objective ever to become mannered. He has looked at many of the old masters, indeed, but he has looked in his own way. There are drawings here, such as *Les Trois Ages* (No. 34), which, in their balance and rhythmic disposition, remind one of Raphael, though the forms are heavier and have a more rustic distinction. In another drawing, *Les Cheminaux, Après le Crime* (41), we find a reminiscence of one of Titian's frescoes, but the action is less vivid, for Prof. Legros's bias is towards the expression of serene melancholy or passive resignation. From Claude one may suppose he has learnt the subtle art of irradiating his silhouettes with the diffused glow; but again there is a difference of mood. His is the serene evening of a sadder day. Of this aspect of his art *Le Liseur* (13) is a noble example. But almost all the landscapes here have great qualities of design, and in all alike the artist manages by the simplest means to convey a strongly felt poetical mood.

His power of suggesting colour while keeping it within the strict limits of its effectiveness for expression is remarkably shown in *Les Ruines* (22), a harmony of golden green. No less remarkable is the *Effet de Matin* (27), where a momentary and subtle effect, which our more realistic landscape painters would have recorded with searching accuracy, is hinted at by the slightest means. But how completely the artist has distilled from it its poetical and imaginative qualities!

A number of Mr. R. F. Wells's bronze statuettes, among them some new ones, deserve notice. They have the rare distinction of real plastic quality, and are inspired by a tender and sympathetic feeling which is in harmony with Prof. Legros's work. — In an adjoining room are some drawings by Miss Dorothea Landau which show some promise, but are scarcely beyond the stage of a good pupil's work.

At the Carfax Gallery is a small selection of pictures. The most important is Whistler's well-known *Connie Gilchrist with a Skipping Rope* (10), once sold for 13 guineas. It is unlike most of Whistler's portraits of its period, both in the colour scheme, with its notes of red on a ground of old gold, and in its attempt at rendering a momentary pose. The movement is not, it is true, much insisted on, nor is the figure very convincing. There is, in fact, something of a contradiction between the subject and the treatment. The gaiety and spontaneity of the gesture demand, one feels, something more sparkling, more incisive in handling, than Whistler could allow himself. It is all toned down, deadened, and half effaced. If one thinks of Mr. Sargent's 'Jaleo' or 'Carmencita,' one cannot doubt that Whistler was here out of his element. What he has given, however, as no one else could, is a certain naïve coyness and simplicity, which are very charming. A large Goya, *Portrait of the Duchess of Alva* (14), makes a striking contrast to the Whistler by its aggressive vitality. The figure is splendidly posed and set up, and the character asserts itself undeniably, though by no means agreeably. In the perfect ease of the modelling and an unusual grace of handling it must be counted as a fine example of the master. Next to this hangs a portrait of two babies, ascribed to Cornelis de Vos. It is very rarely that the portraiture of royal babies has resulted in works of art; but De Vos has here succeeded a great deal better than most artists. It is not exactly an inspired work, but it is a piece of brilliant and sound craftsmanship. It is, we suppose, a rather early work, for the painting of the babies is still precise and almost dry, though the accessories already have a Rubens-like exuberance. The colouring is rich and glowing. From De Vos we pass to a landscape ascribed to Barker of Bath (16). This is so like a Gainsborough that it is difficult not to suppose he had a hand in it; but there are touches which forbid the idea that he painted the whole. It is unusually thin in pigment and delicate in touch for Barker, but, if it be his, must count as an extraordinarily fine example. Near by hangs a curious picture of a Landsknecht ascribed to the school of Nuremberg (18); it is, in fact, a painting from one of Dürer's woodcuts.

To the school of Antwerp is attributed an *Adoration of the Magi* (1), which just misses the finest quality of the work of Herri met de Bles, but is nevertheless accomplished and decorative.

No. 2 is an early Turner, *Lake and Castle of Inverary;* at least we take it to be such, though, through overcleaning, it has acquired a dubious air. Nor can it ever have been a masterpiece. Another and more interesting picture of the English School is the *Cornfield* by James Ward (8), an early work entirely in the style of Morland, and almost, though not quite, of his quality. Another James Ward, *Silenus and Satyrs* (34), shows him as a rather brutal interpreter of Venetian and Flemish traditions, with vigour and decision of touch. The Bonifazio Veronese, *Santa Conversazione* (5), is a sumptuous piece of colour, with more careful deliberation in the execution than was usual with that most slovenly of Venetian artists.

Two very charming little Lelys, *The Earl of Rochester* and *Lady Lisburne* (9 and 11); a beautiful Poelenburg, *Bathers among Ruins* (26); and *An Entombment* (13), which looks like a Spanish imitation of a Gerard David, are among the more remarkable things in an interesting exhibition.

MR. J. G. WALLER, F.S.A.

The death is announced of Mr. John Green Waller, F.S.A., the archæologist, in his ninety-third year, at his residence at Blackheath. In conjunction with his brother Lionel, he commenced in 1840 the publication in folio parts of a series of 'Monumental Brasses.' The last part was issued in 1864. On monumental brasses, mural paintings in churches, and ecclesiastical symbolism generally, Mr. J. G. Waller was one of the highest authorities. He was also a distinguished artist, and his designs in painted glass and in brass adorn many churches. On the settlement of the late Charles Roach Smith in Lothbury, where he founded his museum of London antiquities, Mr. Waller formed a close friendship with him, which continued until Mr. Smith's death in 1890, when Mr. Waller edited a posthumous volume of his friend's 'Retrospections.' They joined in the formation of the British Archæological Association in 1844, and together adhered to the body retaining that name when the separation of the association into two bodies occurred shortly afterwards. They were also together in the establishment of the London and Middlesex Archæological Society in 1855. Mr. Waller was an honorary member of that society, and of the Essex and Surrey Archæological Societies, the British Archæological Association, and other learned bodies, in which he filled many offices, and to which, as well as to *The Gentleman's Magazine* in the old days, he contributed memoirs of value. He was learned in London topography, and his paper on the Holebourne in the *Transactions* of the London and Middlesex Archæological Society is a classical authority on that subject.

Mr. Waller did not join the Society of Antiquaries of London until 1886, though his high standing as an archæologist would have secured his election long before, had he sought it. He had been an exhibitor to the Society as far back as 1838. He was speedily invited to serve on the Council, and his intervention in the meetings when subjects of which he was master were being discussed was always welcome.

Notwithstanding his advanced age, he was present at the anniversary meeting and dinner of the Society on last St. George's Day, and frequently attended the evening meetings, where he had his accustomed seat next to the Vice-Presidents, on the right of the chairman. He was also present at the Royal Academy dinner this year. His erect figure and genial presence gave no sign of his great age. In a letter written three months ago he said:—

"I was over forty years in Bolsover Street, and never thought I should survive my Portland lease. .....But I am surviving too many friends.....Franks made my acquaintance even before he had left Cambridge; our friendship was over fifty years..... I may perhaps say that I have read my last paper, as it is not to be expected that I can go on with mental work very much longer, though I still amuse myself in art as well as science, and the Pebble Bed often occupies me. I am yet a V.P. of the Quekett Club, continuing for four years after serving two as President. So at present I don't give up."

It is given to few men to attain distinction so early in life, and to win the friendship of so many generations of fellow-students. E. B.

ARCHÆOLOGICAL NOTES.

Two of the inscriptions in a hitherto unknown linear script discovered by M. de Morgan at Susa, and published in the sixth volume of 'Textes Élamites - Sémitiques,' have been examined by Herr F. Bork, who dissents from the interpretation that Father Scheil would place upon them. He does not think that the relation of the signs to the later cuneiform is incontestable, nor even that they were necessarily ideographic or pictorial. Nor will he accept as proved the relationship of the script to the Sumerian, nor Father Scheil's theories as to the comparative ages of Sumerian and Elamite culture. In all this there is more assertion than argument. But when he contests Father Scheil's view as to the sudden disappearance from Western Asia of all scripts but the cuneiform, he seems to be on firmer ground. The site of Susa has indeed been carefully and scientifically excavated, but in other parts of Mesopotamia we have as yet done little more than touch the surface of the ground in our search for portable objects. Even without the example of Tel el-Amarna to guide us, it is plain that there is still room for many unknown scripts to be discovered.

M. Georges Rivière has drawn attention to the peculiar bas-reliefs coming from the

Mekong region in Cochin China, and recently exhibited in Paris at the Archæological Exhibition of the Petit Palais. These, which come for the most part from the temple of Angkor, are said by the natives to be the work of a race which they call Khmer, and M. Rivière sees in them a great resemblance to Sumerian work as testified by the monuments of Gudea and others. The resemblance is not, perhaps, so close as to strike everybody, but that there was actual communication at an early date between Indo-China and the countries at the head of the Persian Gulf should surprise nobody. Coasting vessels working along the shores of India must frequently have been driven out of their course, and the tradition which attributes all Babylonian civilization to seafaring strangers may therefore be well founded.

M. Georges Foucart has communicated to the Académie des Inscriptions a remarkable study on the decorated vases of Negadeh, in which he advances the theory that the objects portrayed thereon were intended to ensure their continuance for the use of the dead in the next world. Thus the triangular signs which have hitherto been taken as denoting mountains are, he thinks, nothing else than the loaves of bread which the piety of later ages stored in the tombs; while the ostriches, gazelles, and other animals were also intended for the food of the dead. The representations of boats he imagines to be examples of the divine bark. Incidentally, he has occasion to examine the standards or ensigns of the different gods displayed on the prows of these boats, and he succeeds in identifying most of them to his own satisfaction with the deities of the later pantheon. The article, which, like all M. Foucart's work, is readable, concludes by drawing attention to the fact that the monuments discussed show, according to him, no trace either of foreign conquest or of an indigenous civilization afterwards to vanish.

M. Maspero's annual reviews of Egyptological books are now appearing in the *Revue Critique*, and are as trenchant and as well worth reading as usual. He gives much attention to the 'Chronologie' of Dr. Eduard Meyer, and takes this author to task for his arrogant use of the word "absurdity" in his comments on systems other than his own. Without going beyond the bounds of courtesy, M. Maspero lets it be seen that he does not favour Dr. Meyer's scheme for compressing the whole of the thirteenth and fourteenth dynasties—comprising, according to the Turin Papyrus, some 150 kings—into the space of 210 years, and he warns him that in this respect the coming winter may have surprises in store for him. Nor does he think that Dr. Meyer has been wise in trusting for the chronology of the eleventh dynasty to the conclusions of Dr. Breasted, some of which he thinks are already invalidated by the work at Deir el-Bahari and elsewhere. On the whole, however, he is favourable to the book, which, he says, does for Egyptian chronology in the twentieth century what Lepsius did in the nineteenth. Among other books, M. Maspero notices Father Mallon's 'Grammaire Copte,' which he greets with pleasure as worthy of replacing the now antiquated grammar of Peyron, although he thinks the author has been led astray in places by Dr. Steindorff's Semitizing theories. He speaks well, too, of Baron von Bissing's 'Mastaba des Gemni-kal,' of Mr. H. R. Hall's 'Nitokris-Rhodopis,' and of Dr. Erman's little book on Egyptian religion, although he blames the last-named for having, like most Egyptologists, too much neglected the study of magic. When we consider that in its origin the religion of the Egyptians was not far removed from that sorcery to which in its long decadence it gradually returned, the omission is extraordinary.

M. Eugène Revillout has published a monument coming from Rhodes, and depicting a person in Egyptian costume in a style characteristic of Egyptian art. On the back of the statue is written in demotic, "Before Osorhapi, the great god, and Isis, the great goddess, Dionysios the priest of the year." We have here, then, one of the few inscribed monuments of the Greek worship of the Alexandrian divinities, and M. Revillout asks us to notice that the word for priest is not the Egyptian *ab oueb*, but is a demotic transcription of the Greek *ἱερεύς*. The date he puts at somewhere in the reigns of the early Ptolemies. The Egyptian form of the Greek Sarapis is noteworthy, and leaves little doubt that the "Great God," as Sarapis was generally called in the West, was looked upon, at the beginning of his vogue, as a composite deity combining the attributes of Osiris with those of the Nile god.

A curious find has been made by M. Jean Clédat in some excavations carried on by him at Tel el-Herr, between the Suez Canal and the site of the ancient Pelusium. He has come across, together with some objects of the Saitic and later Greek periods, a Jewish coin of the "Fourth year of the Independence of Sion," which leads him to hope he is on a site of Jewish antiquities.

A second and cheaper edition of Mr. W. St. C. Boscawen's sound and interesting book 'The First of Empires' is now published by Messrs. Harper. One is glad to see that most, if not quite all, of the misprints noticed in our review of the first edition have now been corrected.

Fine-Art Gossip.

Numerous exhibitions open to-day, including that of the Royal Society of British Artists. At the Baillie Gallery are to be seen paintings and sketches by N. H. J. Baird, water-colours by W. Foxley Norris, and 'Faerie Folk' and other pictures by Marion Wallace-Dunlop. Messrs. Dickinson exhibit pictures and sculpture by members of the Cheyne Art Club. Mr. Percy French shows at the Modern Gallery, New Bond Street, Irish and other water-colour drawings. Messrs. Henry Graves & Co. have sketches in water colour of English and foreign landscape by E. H. Fahey. Mr. Gutekunst exhibits etchings by A. Canale, Rembrandt, and A. Zorn; Mr. T. McLean, cabinet pictures; and Messrs. Shepherd Brothers, pictures by early British masters and modern painters.

The November number of *The Burlington* opens with an editorial article on 'German Art and the German Character.' Mr. D. S. MacColl traces to its source in folk-lore the subject of a curious miserere carving in Worcester Cathedral. Mr. Roger Fry writes on 'Mantegna as a Mystic,' while Mr. Claude Phillips publishes, with a short appreciation, a picture by Watteau in the Uffizi which seems to have escaped notice. A hitherto almost unknown Spanish master, Bartolomè Vermejo, is identified by Mr. Herbert Cook as the painter of two panels in the collections respectively of Sir Julius Wernher and Mrs. Gardiner of Boston. Mr. Campbell Dodgson publishes a set of six engravings from the British Museum, which he shows to be the earliest signed works of Michel Le Blon; a Netherlandish picture now in London is identified by Mr. Weale as belonging to the little-known school of Ypres; and Mr. A. J. Koop contributes an account of the portrait panels attributed to Bramantino. The miscellaneous articles include one on 'English Lead Cisterns,' by Mr. Lawrence Weaver, and an account of the silver plate in the Duke of Newcastle's collection at Clumber, by Mr. J. Starkie Gardner.

The Rev. John Ferguson has ready for immediate publication by Messrs. Oliver & Boyd, under the title of 'Ecclesia Antiqua,' a volume dealing with the ecclesiastical antiquities of Linlithgow. The volume will contain a plan of the recently discovered Carmelite Priory to the south of the town. The priory was founded before 1290, and was destroyed about 1561, and its existence had been forgotten until its remains were accidentally disclosed while a drain was being cut.

Mr. Roger Fry has just completed the new illustrated edition of Sir Joshua Reynolds's discourses which will be issued shortly by Messrs. Seeley.

The Antiquary for November will include articles on 'An Ancient Seacoast Village in Sussex,' by I. Giberne Sieveking; 'Old Phyllis Court, Henley,' by Ernest W. Dormer; and 'Henry IV. and Archbishop Scrope,' by the Rev. A. N. Cooper.

Pierre Miciol, who was born in 1833 at Lyons, and died there recently, achieved distinction both as a portrait painter (chiefly in crayons) and as an engraver. He obtained a Premier Grand Prix de Rome for engraving in 1860. He was honorary president of the Société Lyonnaise des Beaux-Arts.

We regret to hear of the death, at the age of eighty-three, of Florent Willems, who, exhibiting little or nothing for the last twenty years, is almost unknown, except by name, to the present generation. Willems was born on January 8th, 1823, at Liège, but lived nearly all his life in Paris (he died at Neuilly). He obtained a third-class medal at the Salon in 1844, a second in 1846, and a first in 1855, and other honours followed in quick succession. For many years his pictures of life in the sixteenth and seventeenth centuries were exceedingly popular, and engravings of them were in great demand. He deservedly earned the name of the modern Terburg, and many fine private and public collections on the Continent contain examples of his work. His fame rests almost as much on his work as a restorer as on his original productions. He spent two years in restoring Raphael's 'St. John the Baptist,' now in the Louvre. He had for his most famous pupil and friend M. Alfred Stevens.

The Italian artist P. C. Gilardi, who died recently at Borgosesia, at the age of sixty-eight, began life as a sculptor, but afterwards studied painting at Turin, at Florence, and at Rome. Since 1889 he had been Professor of Painting at the Turin Academy. He painted a large number of portraits, but acquired his celebrity chiefly through his genre pictures of Italian life *circa* 1750.

The death, in his eighty-first year, is announced from Vienna of the historical painter Karl Geiger.

The reorganization of the Louvre is taking definite shape, and work will commence as soon as the Colonial Office is removed. The Pavillon de Flore will be entirely transformed and annexed to the museum. On the upper floors will be shown a number of objects which have been stowed away for years. As we have already stated, the French schools of art will be rearranged.

The Archæological Department at Rangoon has begun an investigation of the prehistoric civilization of Burma, and more particularly of the lake dwellings in Upper Burma, about which at present little is known.

MUSIC

THE WEEK.

NORWICH MUSICAL FESTIVAL.

The twenty-fourth of these gatherings began on Wednesday morning, so that we shall be able to write about only the morning and part of the evening programme of the first day. Before, however, referring to

the works performed, a word or two must be said concerning the musical scheme. No fewer than fifteen British composers have been invited to conduct works of their own, of which several have been written expressly for the festival. The one foreign novelty is the cantata 'St. Agnes,' by Signor Luigi Mancinelli, who wrote 'Isaias' for a former Norwich Festival. This prominence given to British music deserves note, also the fact that the merits of all the composers represented have already been recognized by those who sit in judgment on them, and by the public. Art may be cosmopolitan, yet each country does well to honour its own men.

Wednesday morning's programme opened with Sir Charles Villiers Stanford's 'Te Deum,' originally produced at Leeds in 1898. In this work the composer displays skill of a high order, also wonderful restraint; he seems instinctively to feel how his subject-matter should be treated, and at what length. The music is thoroughly appropriate to the text, and that there are no strong traces of individuality in it is, perhaps, a real merit—the words, not the man, are the essential. In some modern masses the personal element is too pronounced, and at times the dramatic, as in the great Requiems of Berlioz and Verdi. The work in question is rather in the sober church style of Cherubini.

The performance under the composer's direction was good; the choir, however, was heard to better advantage in the familiar 'Hymn of Praise,' given afterwards under Signor Randegger, the festival conductor. The soloists in the 'Te Deum' were the Misses Perceval Allen and Mildred Jones, and Messrs. Ben Davies and Robert Radford; and in the second work Madame Albani and Mr. Ben Davies.

The first piece on the evening programme was Sir Frederick Bridge's overture 'Morte d'Arthur,' written about twenty years ago, for, we believe, a Birmingham festival, but recently revised and rescored. It is easy to connect the various sections with certain lines of Tennyson's poem; for all that, the music keeps within the limits of the art, and requires no explanations as to its meaning. The subject-matter is of dignified, poetical character, and the music, in which here and there Weberish touches can be noted, is impressive. The performance under the composer's direction was excellent.

Mr. John Coates sang "Oh Love, no Love," No. 13 of Browning's 'Ferishtah's Fancies,' by Mr. Granville Bantock. Whether the poem yearns for music may be open to question, but the composer has set it to music in which both intellect and emotion play a strong part. Mr. Coates had to battle at times against heavy orchestration, but declaimed his lines with dramatic force, and as he had no music before him, the result was all the more impressive. Mr. Bantock conducted.

Of five Choral Ballads, settings by Mr. Coleridge-Taylor of Longfellow's poems, all we can now say is that, with their rhythmic variety, harmonic and orchestral colouring, they are very picturesque. Next week we shall say something more about these and other novelties in the exceedingly long programme.

Musical Gossip.

Herr Gustav Mahler's Symphony, No. 4, in G, was performed, for the first time in England, at the Promenade Concert at Queen's Hall last Wednesday. The work, which was produced at Munich in 1901, bears the sub-title 'Das Himmlische Leben,' taken from the poem, the setting of which forms the Finale. The poem is a Bavarian folk-song which figures in the collection of German traditional poetry published in 1805 under the title 'Der Knaben Wunderhorn.' It provides the key to the symphony, which contains many themes in the nature of South German folk-songs. These are presented in varied orchestral attire, the composer displaying remarkable fertility of resource. But the work, which occupied close upon an hour in performance, is too long, and weariness came before the end was reached. The most attractive movement is the third, which opens with a quite simple, but charming theme, upon which are built several clever variations. In the Finale a melodious soprano solo, well laid out for the voice, is the chief feature. Mr. Wood directed a satisfactory performance of the symphony, which makes large demands upon the performers; and Mrs. Wood sang the vocal part in artistic style.

'Madama Butterfly' was performed at Covent Garden on Tuesday evening. Madame Giachetti impersonated Butterfly; her voice showed signs of fatigue, but her conception of the part deserves high praise. Signor Zenatello as Pinkerton was most successful. The composer was called before the curtain many times. The house was crowded in every part. The opera was repeated on Thursday, and will be heard again next week, when we shall have something to say about the music.

Mr. Lamond gave a pianoforte recital at the Bechstein Hall last Saturday afternoon. His rendering of Beethoven's Sonata in E minor, Op. 90, was admirable. In the Paganini Variations of Brahms, both sets, he displayed absolute mastery over the formidable technical difficulties, but the real greatness of the achievement lay in the pianist's highly intellectual, yet strongly emotional reading of the music.

The sixth season of the Leighton House Chamber Concerts begins on November 9th. The dates of the remaining seven concerts are as follows: November 30th, December 14th, January 11th, February 1st and 15th, and March 1st and 22nd. The Kruse Quartet will appear at the first, and the programme includes Schumann's Quartet in A, and Sir Charles Stanford's Pianoforte Trio, No. 2, in G minor.—The Berlin Philharmonic Trio (Herren W. A. Witek and J. Malkin and Frau Vita Gerhardt) will give a concert at Leighton House next Friday evening.

The dates of the fourth series of Broadwood Concerts at the Æolian Hall are as follows:—November 2nd, 16th, and 30th; December 14th; January 11th and 25th; February 8th and 22nd; March 1st, 15th, and 29th; and April 5th. Among the novelties will be a Nonet by Sir Charles Stanford for strings and wind, and a Quartet for strings by Mr. Cyril Scott; also chamber works by Messrs. R. Vaughan Williams, Roger Quilter, Josef Holbrooke, &c.

Performances next week.

Sun.	Sunday Society Concert, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
Mon.	Miss Marie Motto's Concert, 3, Bechstein Hall.
—	Mlle. Candida Miloti's Vocal Recital, 3, Steinway Hall.
—	London Choral Society, 8, Queen's Hall.
—	Miss Mary Willis's Concert, 8.15, Steinway Hall.
—	Messrs. Tertis and Bowen's Viola and Pianoforte Recital, 8.30, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
Tues.	Mr. Gervase Elwes's Vocal Recital, 3.30, Æolian Hall.
—	Miss Sylvia Blackston's Vocal Recital, 8.30, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
Wed.	Miss Kathleen Parlow's Orchestral Concert, 8.15, Queen's Hall.
—	Wessely Quartet, 8.30, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
Thurs.	Miss Margaret Bennett's Pianoforte Recital, 3, Bechstein Hall.
—	Mlle. Thérèse Grabowsky's Vocal Recital, 3.30, Æolian Hall.
—	Messrs. Broadwood's Concert 8.30, Conduit Street.
—	Scottish Concert, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
Fri.	London Ballad Concert, 3, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
Sat.	Symphony Concert, 3, Queen's Hall.
—	Mr. Horace Kesteven's Pianoforte Recital, 3, Bechstein Hall.
—	Misses Eyre's Concert, 3, Æolian Hall.
—	Orchestral Concert, 3 30, Crystal Palace.
—	Royal Italian Opera, Covent Garden.

DRAMA

Queens of the French Stage. By H. Noel Williams. (Harper & Brothers.)

Mr. Noel Williams, the author of more or less ambitious works on Madame Récamier and her friends, on Madame de Pompadour, Madame de Montespan, and Madame du Barry, has undertaken a series of kindred studies on the chief French actresses of the seventeenth and eighteenth centuries. Materials are abundant, and perhaps even a little threadbare; but the volume leads us by pleasant stages from Molière to Garrick, and furnishes us with side-lights on celebrities such as Racine, Maurice de Saxe, Marmontel, and Voltaire. It is less amusing than might perhaps have been hoped from the kind of society into which it conducts us, the attempt of the author being rather to supply the latest results of modern investigation than to furnish pictures of life under changing, but always animated and generally licentious conditions. Much has been added during late years to the domain of conjecture, and something to that of fact. We are led accordingly, in the perusal of the volume, to the reconsideration of some debated subjects, though to few changes of estimate or opinion.

Mr. Williams is not specially accurate. He is careless rather than otherwise culpable, since the errors we trace are as a rule *coquilles*, and are not seldom mended on subsequent pages. The word "Molièristes," which occurs on p. 9, is afterwards rightly printed *Moliéristes* (p. 75); and the memorable passage in Racine assigned to Phèdre, which opens wrongly on p. 106 as

> Je suis mes perfidies,
> Œnone, et ne suis pas de ces femmes hardies
> Qui, goûtant dans la [*sic*] crime une tranquille paix,
> Ont su se faire un front qui ne rougit jamais,

begins rightly on p. 185 as

> Je sais mes perfidies,

while "la crime" is altered to "les crimes." A mistake of a century is made in the date of the 'Élomire Hypocondre.' "Alcena" is a facile but regrettable substitution for the Alcina of Ariosto, or the Alcine of Molière. These and similar slips amount perhaps to little. In style also Mr. Williams is occasionally slipshod as well as pedestrian. Interesting as, owing to its subject, the work must needs be, it would have been more attractive had the author supplied glimpses into a world in which *les libertins*—among whom Molière is to be counted—were aggressively assertive.

Of the six lives—those, namely, of Armande Béjart, Marie de Champmeslé, Adrienne Lecouvreur, Marie Anne de Camargo, Justine Favart, and Claire Joseph Hippolyte Clairon—narrated afresh by Mr. Williams, all are more or less closely associated with literature. As the "wife of Molière," under which name the bio-

grapher speaks of her, Armande Béjart is the most interesting and the most frequently discussed. Early writers on Molière did not hesitate to speak of the marriage of Molière as incestuous, and a legal memorial is in existence in which, after the death of the dramatist, Armande is described as the "orphan of her husband" and the "widow of her father." Much of the information on which these accusations rest has been shown to be inaccurate, and by most modern writers (though not all) the charges against Molière are dismissed. Mr. Williams is naturally on the side of the majority in repelling the monstrous assertions. No further repudiation seems necessary than is contained in the fact that, after Montfleury the actor had presented to Louis XIV. a memorial imputing more or less directly to Molière the worst that could be inferred from the fact that he had lived with the mother before marrying the daughter, the monarch stood sponsor to Molière's child born of the union, and associated with himself in so doing Henrietta of England, the wife of his brother the Duke of Orleans. Less easy is the task of freeing "Mademoiselle Molière" from the charges of mercenariness and immorality. Gaboriau ('Les Comédiennes Adorées,' p. 253) speaks of her in connexion with her husband as "cette froide et implacable coquette, qui fut le désespoir de sa vie, et peut-être aussi, hélas! le terrible aiguillon de son génie"; while the dramatist himself he characterizes inadequately as "mari toujours trompé, amant toujours épris."

Arriving at Marie de Champmeslé, we pass from Molière to Racine. Racine's *liaison* with this actress, openly recognized, appears to have had little that was romantic or ideal, though a certain measure of interest attaches to it in the indiscreet revelations of Madame de Sévigné. The delicious suppers which la Champmeslé accorded to Racine and her other lovers Madame de Sévigné describes as *diableries*. La Champmeslé's attachment to the Comte de Clermont-Tonnerre is responsible for a brilliant though familiar epigram which Mr. Williams quotes:—

> A la plus tendre amour elle fut destinée
> Qui prit longtemps Racine dans son cœur:
> Mais, par un insigne malheur,
> Le *Tonnerre* est venu, qui l'a *déracinée*.

The reason why the foreign actors—that is, the Italians—were in 1697 expelled from France was, it is said, the representation of a licentious comedy called 'La Fausse Prude,' in the heroine of which Madame de Maintenon was recognized. Saint-Simon, by whom this is asserted, is right; but the banishment of the actors cannot be regarded as religious persecution, as is to be inferred from the context.

With Adrienne Lecouvreur we come on the track of Voltaire. The lover with whom her name is most closely connected is, of course, Maurice de Saxe, with whom, in the famous play of Scribe and Legouvé, as presumably in that of Madame Bernhardt, held as yet in reserve, her fate is associated. Whether Adrienne died of grief over the infidelities of her martial lover, or was indeed (as, in spite of all denials, there seems some reason to conclude) murdered in a fit of anger and jealousy by the Duchesse de Bouillon, is a subject on which Mr. Williams is wisely reticent. Melodramatic as it is, the story told by Mlle. Aïssé leaves the duchess under a cloud of suspicion. Charles Coypel's portrait of Adrienne, a reproduction of which forms the frontispiece to the volume, has elicited strangely diverse comments. It is at least its author's masterpiece in portraiture. Its resemblance in expression to the portrait by De La Tour of Sophie Arnould does not seem to have called forth comment.

As a dancer Mlle. de Camargo scarcely seems to deserve a place among the "Queens of the Stage." Her illustrious parentage and her grace have secured her a place not only in Mr. Williams's volume, but also among the 'Comédiennes Adorées' of Gaboriau. Her foot was said in her own day to rival that of Perrault's Cendrillon, and anticipated in its ephemeral fame that of the Trilby of to-day. Grimm is responsible for the statement that she conquered from the Jansenists the right to wear the short skirt with, as she stated, the *caleçon*, which, after a phrase she employed, was then called *la précaution*. Holding the scales evenly between her and her rival Sallé, Voltaire in a madrigal to her wrote:—

> Les Nymphes sautent comme vous,
> Et les Grâces dansent comme elle.

Justine Favart, like Adrienne Lecouvreur, brings on the scene Maurice de Saxe. The hero was now, however, fifty, and had to lay an assiduous siege to Justine, who, in a fashion rare on the stage, exhibited to her husband what Byron calls

> that household virtue most uncommon
> Of constancy.

It was only with due regard to domestic welfare that she "availed herself of the benefits and assistance" of a man whom she disliked. Saxe meanwhile wooed her in lines which he calmly appropriated, without acknowledgment, from Voltaire, and cavalierly called "rhymed prose." We here learn that the scanty attire worn by some Jacobite Highlanders shocked the ladies of Brussels, as its idea has since, if report is to be trusted, outraged the authorities of a modern American city.

Literature comes closest to La Clairon in Marmontel, who openly boasted of her favours. Goldsmith, however, spoke of her as "the most perfect figure I have ever seen on any stage"; Voltaire's admiration is called "almost fanatical"; Diderot was not less enthusiastic; and D'Alembert described her as incomparable. Garrick — whose approval, though warm, was judiciously qualified—commissioned Gravelot to execute a design representing her in all the attributes of Tragedy. When she was imprisoned at Fort l'Évêque he offered her a loan of five hundred guineas, which was not accepted. Mlle. Clairon's life was interesting and romantic. The actress is noteworthy as having been the subject of one of the most venomous of printed attacks in the "Histoire de Mademoiselle Cronel, dite Frétillon, Actrice de la Comédie de Rouen, écrite par elle-même"—a work which had great circulation, though written by an obscure scribe, and was imitated with equal malignancy, but less ability, by an Englishman in 'The Secret Memoirs of Harriott Pumpkin' (Mellon).

Under Clairon is given an account of Elizabeth Berkeley, Countess of Craven, afterwards Margravine of Anspach. The work has some full-page portraits. It also contains—what is rare in a work of the class—an adequate index.

THE WEEK.

NEW. — *Capt. Drew on Leave: Comedy in Four Acts.* By Hubert Henry Davies.

IN making a short reappearance in England before returning to America, that land of performance as well of promise to the actor, Sir Charles Wyndham has fallen back upon Mr. Hubert Henry Davies, to whom he owes 'Mrs. Gorringe's Necklace,' the most conspicuous of his recent triumphs. The selection may pass as judicious. Short as is the dramatic career of Mr. Davies, it furnishes instances of triumphs as well as rebuffs, and holds out prospects of still further advance. Possessor of a lambent humour, of insight into character, and of a neat turn of irony, he is safe while he remains within the lines of comedy. When he goes outside these he is on dangerous ground. Conscious that the charge of lightness brought against his pieces is maintainable, he seeks to fortify them by the infusion of melodramatic situations and characters, in the management of which he is unhappy and inexpert. It is better, says the proverb, to leave well alone. The axiom holds equally true when for "well" we substitute some more colourless word, such as "indifferent." Mr. Davies's subject is in the present instance unwisely chosen. When, by an unwritten law of the English drama, the connexion between a single man and a married woman must necessarily remain innocent, it is better to leave the question of adultery, accomplished or meditated, in the hands of those who, like the French dramatists, are under no similar restraint. When Mr. Davies's heroine is found at night in the sitting-room of a single man, into which she has injudiciously and, in fact, idiotically ventured, one regards the entire situation as flimsy and trivial, as well as incredible, and feels that a Frenchman would send for a housemaid with a broom to sweep the cobweb away. While, however, the main incident is weak and almost puerile, the sketches of character are amusing. Capt. Drew, a sailor home on leave, deliberately meditates, during his stay in the country, some of those Lothario-like proceedings to which sailors are proverbially prone. Whether a wife or a maiden is chosen for the subject of his advances is a matter of indifference. Accident determines that it shall be a wife. In pure wantonness, he begins his wooing, only to discover that it prospers beyond his expectations, and almost beyond his wishes. In the course of a day or two the Captain and Martha Moxon, who is by way of being a *femme incomprise*, are over head and ears in love with each other. Finding the lady compromised by his attentions, he determines, like a gallant man, to return to his ship. This does not at all suit the lady, who, taking advantage of her husband's absence, visits at night his bachelor quarters for the purpose of

learning what it all means. Here she is surprised, not by her husband, but by a young naval black sheep, who, seeing an opportunity for blackmail, seeks to exact 1,000*l.* as the price of secrecy. Rather than her lover shall pay so exorbitant a sum for an hour or two's virtually innocent flirtation, Martha tells all to her husband, who, after fuming for a time and hinting at separation, thinks perhaps he is himself to blame for conjugal neglect; takes her, in Tennysonian fashion, to the grave of their dead child; and then kisses again with tears. All this is not only thin, but invertebrate and inconsiderable. Its comic environment, meantime, and the opportunities it affords for acting are admirable. Miss Marion Terry acts with inexpressible charm as Martha, and renders her dalliance so sympathetic and moving that we are disposed to condone its silliness. Miss Mary Moore is exquisitely attractive in one of those inconsistent and irrational characters in which she has no equal. In addition to his customary vivacity, Sir Charles Wyndham indulges in some serious love-making, which, however, is rather too sudden for belief. Mr. Vane Tempest and Mr. Eille Norwood are also seen to advantage, and the whole is so far a success that it constitutes a sympathetic, if not wholly convincing entertainment.

Dramatic Gossip.

The next question concerning Sir Henry Irving is the nature and site of the memorial to be erected in Westminster Abbey. The latter will offer the chief difficulty, space for a worthy monument being hard to find. Upon the amount of subscriptions and the choice of a sculptor much will, of course, depend.

With a view, probably, to avoid the possibility of a contingency such as last year shook the very foundations of Drury Lane pantomime, and deprived the shareholders of the customary dividend, Mr. Collins has secured the help of Sir Frank Burnand in the production of 'Cinderella,' this year's "Christmas annual."

An unusually interesting copy of Pope and Warburton's edition of Shakspeare, 1747, will be included in the Tallmadge sale about to be held in New York. It is said to be the copy which was lent by Sir Edward Walpole to Dr. Johnson, who lost the sixth volume, and kept the books until his death. In 1745 Johnson had begun to prepare an edition of Shakspeare, but the appearance of Pope and Warburton's in 1747 caused him to postpone his work, and it was not until his 'Dictionary' had been completed that he again turned his attention to Shakspeare. This copy contains numerous annotations and emendations by Styan Thirlby, who contributed some notes to Theobald's edition, and contemplated an edition of his own. At his death in 1753 this copy of Pope and Warburton went, we are told, with all Thirlby's books, to Sir Edward Walpole (who, as already stated, lent it to Dr. Johnson); and eventually it appeared in the first part of the Heber sale, when it fetched 6*l.* It was then, or afterwards, acquired by John Tyrrel, whose Shakspearean library was sold in 1850, and at whose sale it was bought by Rodd for W. E. Burton, the comedian. At the Burton sale in New York in 1860 it was acquired by Mr. Tallmadge, along with other Shakspeareana referred to in these columns on October 7th.

Given originally at the Court on May 23rd last as an afternoon entertainment, Mr. Bernard Shaw's 'Man and Superman' was put in the evening bills at the same house on Monday last. The chief alteration in the cast consists in the substitution of Mr. J. H. Barnes for Mr. Charles Goodhart as Roebuck Ramsden, a part Mr. Barnes plays to perfection. Mr. Granville Barker reappears as John Tanner, Miss Lillah McCarthy as Ann, and Miss Sarah Brooke as Violet Robinson. The abridgment (for such it is) of Mr. Shaw's principal work is received with the warmest applause, and the theatre with its Shaw revivals is obtaining a fresh lease of popularity.

The London run of 'The Duffer' will be resumed by Mr. Grossmith in December on his return from a country tour which began on Monday at the Court Theatre, Liverpool.

In the new year Messrs. Vedrenne and Barker promise at the Court a rendering by Prof. Gilbert Murray of the 'Electra' of Euripides. Previous performances of this author have been the most meritorious and attractive representations given by the management. In 'Capt. Brassbound's Conversion,' also to be produced, the heroine will be played by Miss Ellen Terry. A third entertainment will consist of 'A Question of Age,' by Mr. Robert Vernon Harcourt, and 'The Convict on the Hearth,' by Mr. Frederick Fenn. 'Pan and the Young Shepherd,' by Mr. Maurice Hewlett, has already been announced.

The next Shakspeare Festival at Stratford, under the direction of Mr. Benson, will consist of 'King Henry VI.,' all three parts of which, we understand, will be played.

A rendering by M. Jean Richepin, in three parts and eight tableaux, of 'Don Quixote' has been produced at the Comédie Française, with M. Leloir as the Knight, M. André Brunot as Sancho Panza, Mlle. Lecomte as Dorothée, and Madame Rachel Boyer as Dulcinée.

'Le Bonheur, Mesdames,' is the title of a four-act comedy of M. F. de Croisset produced at the Variétés, with MM. Baron and Brasseur and Mesdames Jeanne Granier, Marie Magnier, and Lavallière in the principal parts.

Mr. Comyns Carr is preparing for Mr. Tree an adaptation of Dickens's unfinished novel of 'Edwin Drood.'

'Andalosia,' announced as a five-act "versical play" — an atrocious description — by Florian Endli, has been given at Berlin. It deals, like Godwin's 'St. Leon,' with the supposed possession of the purse of Fortunatus.

'Unlösbar,' a drama by Prof. Ohorn, an ex-Benedictine monk, produced at the Stadttheater in the Saxon town of Chemnitz, deals with the question of a married priesthood in Germany in the twelfth century.

LITERATURE

China and Religion. By Edward Harper Parker. (John Murray.)

The frequency with which, during late years, missionary riots have disturbed the peaceful relations otherwise existing between China and Western nations has given rise to the impression that the Chinese are a deeply religious race who resent the introduction of faiths which may clash with those in which they put their trust. But this is far from being the case. As Prof. Parker shows in the work under review, the Chinese are naturally, and by education, sceptics, and prefer the non-spiritual system of Confucius to all others which have appeared above their intellectual horizon. It is only when missionaries offend the national instincts in a secular sense that the Chinese gorge rises; and the only reason why missionaries come under the national condemnation more than other people is that they are brought into more points of contact with the natives than their lay fellow-countrymen.

The history of the religions which have from time to time been presented to the Chinese, as related by Prof. Parker, lends confirmation to this view. In his pages he describes in chronological order the various religious systems in China, beginning with the rude native worship of forefathers. There is a craving in the human mind for spiritual life; and so when in A.D. 67 Buddhist missionaries arrived in China and translated into Chinese some of their Indian Sûtras, they were received gladly, and for a time basked in the warmth of Imperial favour. They brought with them just the spiritual essence which Confucianism lacked. They imparted to the people an "entirely new conception of soul transmigration, a Messiah, spiritual rewards and punishments, sin, humility, and self-denial." And the people readily listened to these new revelations. At a later time, however, the Buddhists fell into disfavour, owing to "priestly immorality, cupidity, and corruption," and incurred bitter persecution. Instead of resisting the evil they bowed to the storm, and as a consequence have survived and flourished down to the present day.

Christianity made its appearance in China under the guise of Nestorianism; and, like their predecessors, the missionaries of the new faith were received willingly, and ran for some centuries a declining course until, at the time of Kublai Khan, they were to all intents and purposes little better than Shamanists. To them succeeded the Roman Catholics in the thirteenth century, and in spite of many vicissitudes of fortune they have more than maintained their position. Year by year they have added to the number of their priests and have mightily increased the record of their converts. Mr. Parker tells us that whereas there were, in 1866, 263 European and 242 native priests, having care over 383,580 Christians, at the present time there are 1,063 European and 493 native priests, 4,961 places of worship, and 803,000 Christians.

The first exponent of Protestant Christianity in China was Dr. Morrison, the lexicographer, who arrived at Macao in 1807. The time was unfortunately chosen. The echoes of our conquests in India were ringing in the ears of the Chinese authorities, and gave rise to an amount of suspicion which even now has not been eradicated. Our merchants also were attempting to enlarge their borders, and there was altogether a feeling of unrest as to the foreign relations of the country. The war in Europe was reflected at Canton, and gave rise to many international difficulties. But notwithstanding these obstructions the missionaries who were then beginning to flock to the standard made sure if slow headway. In one way the obstruction they met with had its advantage. It enforced leisure upon them, and among other good effects enabled Morrison to complete his dictionary and translate the Bible into Chinese. Morrison was followed by many devoted men and women who have given up their lives to the publication of the Gospel in China. Numbers of these have met death in the prosecution of their self-imposed task, and many more have sacrificed their lives to the climate. But the fact remains that good work has been done, and that in 1898 there were many thousands of worshipping Christians among the natives. The author tells us that in the same year there were about 2,500 Protestant missionaries distributed over the eighteen provinces. The number is large, and the effect of so many examples of righteous, self-denying lives cannot but exercise an influence for good among the people. One of the most hopeful signs to be observed in China at the present day is a readiness to embrace Christianity.

Prof. Parker's book is a storehouse of learning; it is free from bigotry, and contains a fair and honest statement of what the relations of the Chinese have been and are towards foreign religions.

The Wives of Henry the Eighth. By Martin Hume. (Eveleigh Nash.)

We are sometimes all but tempted to declare that the worst epithet that can be applied to an historian is "impartial." In matters that touch us nearly to be impartial is to be inhuman. Now knowledge of humanity and sympathy with its weaknesses are essential to any picture of the men and women of any period. Even the chroniclers, such as Barbour and Wyntoun, were not impartial, as the celebrated description of Kirkpatrick of the Closeburn by the latter testifies. But between the partiality of Wyntoun and the violent partisanship of Froude there is a wide and unfathomable gulf fixed. It is the impassable barrier that is set between the preacher and the artist. Major Hume in this, his latest book, and certainly one of the most deeply interesting he has written, is just sufficiently partial to make us feel that he is human.

In this particular task he is specially well equipped, as he has the training of his work at the Record Office and his knowledge of Spanish to assist him. Some of his intimate personal details about the Court life of Henry and his queens are only attainable in the curious chronicle of Guaras, the Spanish merchant, unearthed and published by Major Hume himself many years ago. Of all our kings Henry VIII. has perhaps been the subject of most controversy. The *odium theologicum*, which when imported rarely fails to exclude both kindliness and light from any subject, has done its worst upon his memory. The staunchest Catholic has failed in making much of him, the starkest Protestant has had no better luck. The present volume deals with him more as a man than king. It shows him to us, big, burly, sometimes bullying, vain always, and not unseldom weak. Perhaps it fails a little in omitting to touch upon his culture, his love of music and of art.

But, after all, the book does not profess to be a 'Life' of Henry; it is an account of his six wives, and of the parts they played in history. Woven into the web —now and then appearing in the woof, and forming a second motive of the book —are the various influences that pushed on the "Reformation" of the Church, a measure carried out (as, for that matter, are many kinds of reform) by a loud-voiced minority — a circumstance which in itself neither invalidates nor sanctifies a measure. Katharine of Aragon stands out, as a true daughter of the Catholic kings (did she not say at last in desperation that it was greater honour to have been their child than to be Queen of England?), as perhaps she never has before in any book upon the time. Curiously enough, the writer (though not blind to any of her faults—her want of tact, her lack of pliability, and her occasional deceit) contrives to paint her picture perhaps in brighter colours than those with which he thought his palette had been set.

Of course she had the advantage of being Henry's wife, whereas Anne Boleyn, in the language of the time, was but a concubine, and all the rest were merely shadows, which the vast bulk of bluff and bullying King Harry almost obscured.

Still it is curious how strong a hold "Nan Bullen" took upon men's minds in Spain. During the Carnival at Toledo, after the figures of the Moors and Jews, the giants and the Cabezudos, Ana Bolena rides (to hell) upon a strange Apocalyptic

beast called La Tarrasca, amidst the people's jibes. Old-fashioned folk still say when talking of a naughty child that she is "mas mas mala que Ana Bolena," and thus Queen Katharine is avenged.

All the long diplomatic duel between those royal, diplomatic, and morose horse-copers, Henry VII. and the Catholic King, Major Hume sets before us, so that we follow it throughout its labyrinth of lies as readily as we can follow the mendacity of diplomats in the veracious columns of the Yellow Press. We see the Catholic Queen send off her daughter to the far-away island, more as ambassadress than wife, and watch her from the ramparts of Granada as she rides down the rocky path to where the road crosses the Darro and comes out on the plain. We follow her (after a two months' voyage) to England; see her meeting with her father-in-law, contrary to all Castilian customs; attend her wedding, and watch the making of her character during the long struggle after Prince Arthur's death, until her second marriage, as a queen. Her brief and transient happiness; her ride through London to her coronation, with her dark chestnut hair flowing down almost to her feet, amidst the acclamations of the citizens, who loved and honoured her, and, what is stranger, stuck to her in evil fortune; her triumph after Flodden ("wa' is me for Flodden"); her disillusionment; the shadow of the "concubine" upon her life, all the long struggle of the sham "divorce"; lastly, her death, still unsubdued—the writer makes us feel and see all, as if we had been there.

But in his moralizing upon her fate he seems to drift a little from the true course that warriors and artists choose and know instinctively is right. No doubt, had she but temporized, she might have kept her revenues, her title as a queen; perhaps, the Catholic religion would have gained; but Katharine would have lost her name as one of the few English queens whose life was guided by principle. No greater fallacy was ever penned or promulgated than that the line of least resistance is the best. If the fool in his rash race attains the goal, the shining angel on the brink cuts a poor figure, and must console itself with the cap and bells the fool puts off when he assumes the laurel wreath of fame. Through no fault of the author's, but from the inherent nature of the players on the stage after the death of Katharine, the other actors seem less graced, although the interest is sustained to the last word of the last page.

The type and binding, paper, illustrations, and the rest are good. To those who like a drama well put on the stage these are important, but to those who think that a scintilla of the mind weighs far above (even gilt) leather and prunella, the play's the thing, and in the present work the author sets his puppets out in his best vein.

Auction Prices of Books. Edited by Luther S. Livingston. Vol. III. (New York, Dodd, Mead & Co.; London, Stock.)

Book-Prices Current. Vol. XIX. (Stock.)

In our notice (*Athenæum*, August 26th) of the second volume of Mr. Livingston's valuable and painstaking compilation we referred to its importance as a guide to the value of Americana; the present instalment —which extends from Lapham to Richards —emphasizes what we then said. Mr. Livingston has evidently not spared himself trouble to make this section complete; and he has included every pamphlet, newspaper, and periodical as well as every book sold under the hammer for many years past. To take only a few entries at random: New York occupies 23 columns, Massachusetts 11, New Hampshire and New Jersey 10, Pennsylvania 18; whilst with respect to American authors, Cotton Mather heads the list with over 24 columns. Increase Mather occupies 17, Longfellow 12, Lowell 9, and Poe 7 columns. These entries appeal, of course, to American rather than to English collectors. But for English dealers in books Mr. Livingston's compilation possesses an importance which cannot be overestimated, for until now there has been in this country no trustworthy guide either to Americana or to their market values.

It may be said generally that every pamphlet or book printed in America before the War of Independence — perhaps we should be justified in extending the limit up to 1800—has a market value; whilst the high and increasing price of many is more than sufficient to commend them to the notice of the bookseller and book-hunter. An occasional find—Poe's 'Tamerlane,' for instance—more than compensates for a whole year of blank days in the pleasant hobby of book-hunting. For Poe's 'Tamerlane, and other Poems,' 1827, indeed, Mr. Livingston makes only three entries, and each relates to the same copy. At the Ives sale in 1893, when in the original paper covers, it sold for 1,850 dollars; at the Maxwell sale in 1894 (after being bound by Lortic—at a cost, it is said, but not by Mr. Livingston, of over 60*l.* — with the covers included) it dropped to 1,450 dollars; but at the McKee sale, in 1900, it produced 2,050 dollars, and is now, we understand, in the library of Mr. Halsey, of New York, the owner of one of the two other copies yet recorded, the second being in the British Museum. American collectors have apparently not yet turned their attention to French and other translations of Poe, or, at all events, not to any noteworthy extent. Yet collections of such an author cannot be regarded as complete without translations, some of which have a literary interest of their own. Take, for example, Baudelaire's versions of Poe. The only instances in Mr. Livingston's work are three copies of the 1884 impression of 'Nouvelles Histoires Extraordinaires,' of which the first edition appeared in 1857, and the second in 1859. The earlier issues of Baudelaire's translations of Poe will in due course be sought after by American collectors, and may in time become valuable (they are by no means common to-day). We are surprised to find that Mr. Livingston has omitted to mention the most interesting Poe item sold in America during the period covered by his volume, viz. the original MS. of 'The Bells,' which in 1903 fetched 2,145 dollars, or 2,100 dollars more than Poe received for the MS. and publication rights half a century before. Perhaps, however, MSS. of this description do not fall within Mr. Livingston's scheme; but it ought to have been sufficiently comprehensive to include such unique "lots."

The 17 columns of entries under William Morris form a very interesting feature of the present volume, and afford an instructive view of the fluctuations of the Kelmscott Press publications. That "boom" must have been a costly lesson to many an enthusiastic speculator. 'The Defence of Guenevere,' 1892, was sold at 2*l.* 6*s.* in 1893, and the last entry is of 2*l.* 16*l.* in 1903, though 9*l.* 2*s.* 6*d.* had been reached in 1899. 'The Earthly Paradise' begins at 15*l.* in 1898, and ends with 14*l.* 10*s.* in 1903, after having sold for 32*l.* 10*s.* (this copy was in morocco). These are only two illustrations out of many, all of which tell the same tale. It is noteworthy that American prices are considerably in advance of those realized in this country, a fact in part explained, we presume, by the duties levied on such books. Of course there are in Mr. Livingston's volume many other illustrations of the fluctuations of the book market, but in no other instance, we think, has the rise been so well maintained for a time, or the fall been so sudden.

When 'Book-Prices Current' was started in 1887 the demand for first and early editions of the English poets and dramatists was only lukewarm; and if any one had then suggested that Shakspeare quartos would within less than twenty years realize from 500*l.* to 2,000*l.*, or even more, he would have been regarded as a hopeless visionary; yet we know to-day that the prophecy would have been true. Many instances of steady rise in prices are also to be found in Mr. Livingston's entries under Milton, whose publications occupy 20 columns. 'Paradise Lost,' 1667, with the first title-page, starts with 33*l.* 10*s.* paid for the Turner copy in 1888, while in 1903 a copy in the original sheepskin sold for 355*l.*; 'Paradise Regain'd, and 'Samson Agonistes,' 1671, in 1888 (again Turner's copy) was sold for 12*l.*, but in 1903 reached 70*l.*, although in the interval copies (probably very indifferent ones) had sold for as little as 8*l.* The Sunderland example of the 'Poems,' 1645, sold for 12*l.*, whilst the latest sale here recorded shows 99*l.*, and the French example sold in America in 1901 produced 555 dollars. It is perhaps not always fair, when dealing with early English poetry, &c., to set the lowest price realized against the highest, for condition makes all the difference; but the illustrations which we have quoted may nevertheless be taken as indicating a general upward tendency.

Mr. Slater, in his letter on 'Some Marlowe Riddles,' in *The Athenæum* of September 23rd, says that "during the past twenty years 23 copies of old, though in most instances late, editions" of Marlowe's works are chronicled as having been sold by auction. As a matter of fact, over 30 early quartos have been sold. Mr. Slater's five examples of 'Hero and Leander' must refer to the 1637 edition; but Mr. Livingston records the sale in America of three copies of the far rarer 1609 issue: the first of these, sold in April, 1890, brought 14 dollars, and the third, in the McKee sale, 1901, 70 dollars; both were poor copies, but the prices paid at an interval of eleven years bear out what we

have already said about this class of book. On the other hand, early octavo editions of Molière are declining in value.

The auction-room sometimes pays slight regard to literary reputations. Few English divines had more repute than Paley, yet we find here only one entry concerning him; while Tom Paine occupies two columns. Of William Law's English-printed works only two copies of the 1729 edition of 'The Serious Call' find a place here, and of James Montgomery but one trifle, 'The Chimney Sweeper's Friend,' 1824, which is prevented from falling into oblivion by Cruikshank's plates. To Samuel Parr there is not a single reference, and the same may be said of both Mark Pattison and Porson.

We have found very few slips in Mr. Livingston's volume. The authorship of few anonymous works is better known than that of Dr. J. A. Paris's 'Philosophy in Sport' (of which an interesting account appeared in *The Bibliographer* of February, 1882), but it appears to be unfamiliar to Mr. Livingston. The cross-reference under 'P. (R.)' to Pattock (R.) is, of course, a mistake for Paltock. Mr. Livingston endows the Earl of Northbrook with a final *e* (p. 358), and deprives Mr. Weale of two of his initials. It is not strictly accurate to catalogue 'Illustrations of the Literary History of the Eighteenth Century' under John Nichols, as his son John Bowyer was responsible for the seventh and eighth volumes.

'Book-Prices Current' has shown an alarming tendency to grow bulkier every year; but the present volume is a notable exception, containing as it does 100 pages fewer than the previous issue. The season has been below the average in the prices realized. But for the Shakspeare quartos and folios, which added over 5,500*l.* (excluding 'Titus Andronicus,' sold privately) to the general total, it would have been poor indeed. Only two libraries worthy of the name — those of the late John Scott and of Mr. Joseph Knight — were dispersed during the season. The individuality of each of these fine collections is but imperfectly seen in Mr. Slater's severely condensed reports.

Several of the entries of rare books recorded in this volume suffer from the desire to get a quart into a pint pot. This is seen in entry No. 4709 of the remarkably fine copy of Waller's 'Poem on St. James's Park,' sold at Messrs. Hodgson's: the whole of the valuable note in the catalogue is omitted. Room should have been found for the name of the late Sir John W. P. Campbell Orde, of Kilmorey, as the owner of the natural history books sold by Mr. J. C. Stevens on June 21st, and reported on p. 480. In the same way the names of four owners of books in the sale at Messrs. Sotheby's on June 10th and three following days are omitted, and the whole of this important sale is reduced to three pages. The copy of Valturius, 'De Re Militari,' 1472, No. 5098, was imperfect, wanting folios 162 and 173, and was sold "not subject to return."

Mr. Slater's omissions are considerable and somewhat erratic. The Gilbert White correspondence, offered, and not sold, in April, 1904, is duly entered in last year's volume of 'Book-Prices Current.' The letters, in two lots, were again put up in March last, and this time they were actually sold, to buyers about whose identity there can be no question; but the sale is not here referred to in any way. The four interesting Thackeray lots in the sale at Messrs. Sotheby's on July 1st are also omitted: as two of these consisted of Thackeray's pen-and-ink sketches for 'The Book of Snobs,' we think that their literary interest would have fully justified their inclusion. The Bunbury correspondence, sold at Messrs. Sotheby's in May last, was worthy of a note, if only for future reference. Of course, we recognize that in a book of this kind the line must be drawn somewhere, but we are not convinced that Mr. Slater has yet discovered the happy medium.

Poetical Works of Robert Bridges. Vol. VI. (Smith, Elder & Co.)

The sixth volume of Mr. Bridges's poetical works contains 'The Feast of Bacchus,' privately printed in 1889, and 'Nero, Part II.,' published in 1894. 'The Feast of Bacchus,' is in part a version of the 'Heautontimorumenos' of Terence, and is described by Mr. Bridges as an attempt to give Menander to the English stage:—

"All that is beautiful in Terence, and therefore possibly most of what is Menander's, has been carefully preserved; and some extant fragments of his have also found a lodging."

Mr. Bridges is fond of this kind of conjectural reconstruction, and he does it, certainly, with skill and the finest taste. But we confess to preferring him when he is wholly himself, and to liking a translation to be a translation. What FitzGerald did with Calderon is an interesting thing in English, yet to the student of Spanish literature it is almost valueless, and most readers would rather become acquainted with Calderon than with FitzGerald. Mr. Bridges cannot believe that he has been able to get any nearer to Menander, seeing him through Terence, than Terence did, seeing him in the original. The credit of much of what is best in Mr. Bridges's play is his own; and the play, as he arranges and writes it, is amusing, full of "go," really good light-hearted reading. It was, very likely, done in order to bring a new metre into English, "a comic metre which will admit colloquial speech without torturing it." Here is a specimen:—

Oh, will you never learn
To keep your place, woman? Was there ever a thing
Which I ever proposed or did in my whole life, in which
You did not go against me? But should I ask you now
What wrong I am doing, or why I do the thing I do,
You would not know: you could not tell me anything
Of the matter in which so confidently you oppose me. Fool!

"A natural emphasizing of the sense," Mr. Bridges tells us,

"gives all the rhythm that is intended.....He has been told that it will be said by the critics to be prose; but that if it were printed as prose, they might pronounce it to be verse; and this is the effect aimed at."

An attempt not wholly dissimilar has been made recently in France, by a writer of original talent, M. Paul Fort, whose 'Ballades Françaises,' rhymed as well as metrical, are printed in prose. It seems to us that these experiments, interesting and even valuable as they are, are only a trifle less unsuccessful than the broken prose in which Walt Whitman wrote his poetry. There is, it is true, a regular metrical beat throughout the whole of Mr. Bridges's verse; printed as verse, it is rarely difficult to read as such, though we are by no means sure that, if it were printed as prose, the discovery of this metrical beat would be always easy. But it does not seem to us that a form of verse so like prose gives sufficient pleasure to the ear to make it worth while for any one to take the trouble to write it rather than prose. Acting, except with a company of poets born and made, would reduce it instantly to prose.

In his note to 'The First Part of Nero,' Mr. Bridges tells us:—

"This play was not intended for the stage, as the rest of my plays are. It was written as an exercise in dramatic qualities other than scenic."

The statement, though not repeated, evidently applies also to 'The Second Part of Nero.' This second part, 2,724 lines in length, added to the 3,233 lines of the First Part, only brings us to the death of Seneca, leaving the last two years of Nero (with which the Elizabethan play of 'Nero' is largely concerned) untouched. Is there to be a Third Part, finishing the history? Mr. Bridges has gone so carefully through events, step by step, after the manner of a chronicle play, that it would be a pity if he did not finish a work which, untheatrical as it is, is in parts finely dramatic. In the story of Nero there is at least one point of extreme difficulty. For dramatic effect the fall of Nero ought to be due to the direct action of his rival in love and successor on the throne, Otho. Historically, it was not due to Otho's direct action, and his part in it was of the nature of an accident. History is full of accidents, but for the drama there can be only cause and effect. Mr. Bridges, of course, is not concerned with the working out of any central motive, and can thus, in his detached and leisurely way, give us a series of historical tableaux; and this he does with power and truth. Throughout, it is the grave persons and philosophers, Seneca, Petronius, that he sets talking with the finest effect: the whole last scene, leading up to the death of Seneca, is both history and drama. Seneca indeed dominates this play, and that enigmatic character, who anticipated some of the Christian pity and yet was a coward and a casuist, is indicated acutely and tolerantly. Of the women in the play, only Epicharis has any reality. Nero himself is seen, as it were, in passing; he is at an intermediate stage of his career, not so interesting a figure as he was earlier or as he is to become later. The writing has dignity and a sort of equable and temperate grace throughout, only rarely becoming so nearly lyrical as in this speech of Petronius:

You little think
What charm the witching night hath for her lovers:
How her solemnity doth deepen thought,

And bring again the lost hellenic Muse
To sing from heaven: or on moonlit swards
Of fancy shadows in transfigured scene
The history of man,—Thus, like a god,
I dwell; and take the early morning cries
For calls to sleep; and from divinity
Fall to forgetfulness, while bustling day
Ravages life; and know no more of it,—
Your riot and din, the plots and crimes of Rome,—
Than doth a diver in Arabian seas,
Plunging for pearls beneath the lonely blue:
But o'er my slumbering head soft airs of dreamland
Rock their wild honey-blooms, till the shy stars
Once more are venturing forth, and I awake.

The book is not so carefully printed as the other volumes in this welcome, and, for the most part, admirably correct edition: on p. 144 a word has fallen out from the end of l. 396; on p. 180 the *e* has fallen out from the word "thine"; and on p. 196 an *h* has still more indecorously fallen out from "Hear, hear!"

The War in the Far East. By the Military Correspondent of *The Times*. (John Murray.)

The excellent book before us is not the work of one correspondent in the field, but is made out of the letters of the various correspondents employed in 1904-5 by *The Times* newspaper, their letters being in part rewritten by the distinguished military critic who, we suppose, is properly styled "The Military Correspondent." The result, of course, is a work in the nature rather of history than of correspondence. It does not compete with, nor fill the place of, such collections of letters from the field as the volume on Port Arthur reviewed by us last week. It does fill in relation to the Russo-Japanese war the place of '*The Times* History of the War in South Africa.' Considered as history, it more than performs the promise of the author's preface, and provides a military history as good as is for the present possible. The whole truth is told, except in the one case where the author warns us of the contrary with repeated words of caution. The leadership of the Japanese armies is handled with polite discretion.

One of the few faults which can be found with this history of the Eastern war is that the language employed with regard to the Russian forces is somewhat contradictory. We are told that it was only when the Russian artillery and infantry were provided with trench and parapet and clear field of fire that they "proved to be of any serious service at all." The Russian cavalry were so handled as to miss every opportunity of use. In other passages a somewhat different line is taken, namely, that "their army, though good, is not good enough to fight Japanese." To say this is to tell us little, for the unconquerable spirit displayed by almost every soldier of the Japanese army is such that there is no army which, under conditions anything like equal, can be pronounced "good enough to fight Japanese." As for navies, it can hardly be asserted that even the British tradition, as displayed in Nelson's letters and recorded conversation, equals the quiet heroism, seeking no reward, which is shown to have inspired the absolute self-sacrifice of those who went to certain death at the entrance to Port Arthur. As our author well writes, "the honour of fighting for the general good is enough."

On the subject which he calls "the entanglement of Port Arthur," and compares with "the entanglement of Ladysmith," the Military Correspondent of *The Times* takes an opposite view to that put forward by General Sir William Nicholson in his preface to the Port Arthur volume criticized by us last week. "Whether Port Arthur should have been held or not" was, as is here stated, argued in *The National Review* for September, 1904. The strong opinion in the negative which is expressed in the early part of the volume before us is gradually modified, in quotations from later letters, on account of the change in the situation produced by the progress towards the East of the Baltic fleet.

We go with the Military Correspondent in his clear statement that "offensive war" is "the only form of hostilities which affects the decision of a potential enemy." We admit the danger to navies, as well as to armies, of the fortress lure:—

"Fortresses.....exercise a fatal attraction upon wavering minds, and over the portals of every fortress should be inscribed as a warning to fleets and armies those terrible words which Dante, the first of reporters, discovered over the gates of hell."

Our author also quotes at length the advice given at the beginning of the war by the highest authority in Russia, General Dragomiroff, whose death is announced this week, that Port Arthur should be evacuated, inasmuch as there was "no reasonable chance of relieving the town by the action of the field army."

It is impossible to decide the question at issue between Sir William Nicholson and the Military Correspondent of *The Times* without bringing into account considerations more political than military. "The entanglement of Ladysmith" was political. That the Russian fleet ought to have been forced to attack Togo at all hazards is clear. That the dreadful blow to the prestige of Russia implied by the abandonment of Port Arthur, with all its docks and stores, after its creation as the seat of the viceroyalty by the direct act of the Autocrat, should have been incurred is another matter. It was before the beginning of the war certain that Russia would hold Port Arthur. It was foreseen by all clear-sighted observers that Japan, by cutting the neck of the peninsula, would be able to force the advance of the Russian field army to a point at which all the chances would be on the Japanese side. We are inclined to agree with the view which may be seen to underlie the present volume, that the best policy on the part of Japan would have been to content herself with cutting the neck and holding to it, and similarly isolating Vladivostock.

One of the most interesting facts about the book before us is the extent to which the author draws morals for our own use. He has a valuable passage in which he declares that it is a commonplace in this country that all "is a question of money; so many pounds sterling, so much efficiency, and so many more soldiers. That pernicious heresy, joined to" other considerations, "has given England the most costly and, for its purpose, the most inefficient assemblage of armed forces that the wit of man could devise."

Of incidental points worthy of attention we note the demonstration of the enormous military advantage conferred on France by the renewal of cordial relations with this country. One side is presented by the evidence of the extent to which forces more than equal to our regular army, which had been allotted by the French mobilization scheme to coast or to Algerian defence, are set free for use upon the Rhine.

Another matter worth attention is the value of training for garrison artillery. The Russian failure in gunnery was even more stupendous in the case of the land batteries at Vladivostock and Port Arthur than it was at sea.

"To call a man an artilleryman is not to make him one, and garrison artillery demands even greater science and more highly developed training than the more popular branches of the Royal Regiment."

A book upon South Africa by Capt. Fletcher-Vane, which appeared on the same day as did 'The War in the Far East,' and which we notice in 'Our Library Table,' points out grave disadvantages in the existence of the Victoria Cross. In our review of Hatzfeldt's 'Letters' we showed how fierce were his charges of jobbery in the distribution of the Iron Cross. It is interesting to note that the Military Correspondent of *The Times* writes: "No officer in uniform should be permitted, at any time, to wear decorations not won by actual presence and good service on the field of battle."

We note with interest that our author tells us that Sir Henry Brackenbury saved India "from the incubus of a huge army death-trap at Rawal Pindi." Lord Roberts saved India from the incubus of a new fortress at Mooltan. He sanctioned some defensive works at the Indus Bridge (in which we think that he was right), and we believe some detached forts round Rawal Pindi to protect the stores. There is perhaps a slight exaggeration in the suggestion that a real fortress at Rawal Pindi was intended at a later date. We notice a similar tendency to exaggerate the importance of the works which were erected about the same time at Guildford and elsewhere in the neighbourhood of London.

The maps are more complete than those in almost any book of military history; and the volume has, as might be expected from its publisher, a strong back, a point of some importance in the case of a volume which has to live on library shelves for the years which may precede the publication of a more permanent history. We name this matter because it is perhaps a weak spot in connexion with the excellent '*Times* History of the War in South Africa.'

NEW NOVELS.

The Brown Eyes of Mary. By E. Maria Albanesi. (Methuen & Co.)

Madame Albanesi's heroines are seldom otherwise than charming, and Mary of the brown eyes is no exception, yet we cannot help thinking that artistically she would be more satisfying if her unselfish loyalty had not been expended upon an object so

utterly unworthy. The effect produced is a feeling of irritation akin to that aroused by the pure, gentle, loving women of Thackeray and Dickens—an effect which could easily have been obviated by allowing some vestige at least of lovableness to appear in Mary's ruined father. On the other hand, we feel obliged to the author for the mitigating circumstances which attend her heroine's self-sacrifice — an absorbing and healthy occupation, a horse (of sorts) to ride, and at least two lovers in constant attendance. Country life under such conditions seems rather an idyllic existence than otherwise, and it certainly makes a delightful story, containing no undue demand upon our susceptibility. Even Mary's suffering when forsaken by the less worthy of her admirers does not, though admirably described, distress us beyond measure, as the ground is thus cleared for the man of real merit. The conclusion, though scarcely probable, is effective.

So like a Woman. By G. Manville Fenn. (Chatto & Windus.)

This is melodrama naked and unashamed. Two brothers—John, strong and virtuous, and Will, weak and unscrupulous — love the same maiden. Will murders a money-lender who has him tightly in his power; John, in strict accordance with melodramatic notions of English law, is convicted of the offence. The young lady, though her heart is really John's, consents, two years after this gross miscarriage of justice, to marry Will. John hears of their betrothal through a sympathetic warder, and contrives, with the assistance of the warder's wife, to make a remarkable escape from prison. A cab accident brings Will's wicked career to a timely close, and his death-bed confession leaves John free to marry the girl he has never ceased to love. Some may wonder how the Crown succeeded in proving that John was guilty, and why, having been convicted, he did not suffer the full penalty of the offence. But 'So like a Woman' is not intended for readers who are inclined to ask such questions. It is written for people who can enjoy a sensational story without any disturbing doubt as to its probability.

Return. By Grace MacGowan Cooke and Alice MacGowan. (Hodder & Stoughton.)

This is an eighteenth-century tale of Georgia and the savannahs, by authors of whom it may be said that they trace their ancestry back to "those who fought with targe and claymore for the gateway of Georgia's sea-islands." It is a good and spirited story, and much care has evidently been taken to render its background and detail accurate and convincing. Here and there, in their endeavour to be realistic and to provide their tale with a veritable atmosphere, the authors have fallen into a stilted, over-archaic, and tiresome diction; but for the most part the story developes naturally, the characters have actual personality, and the savour of romance is well maintained. The times and scenes dealt with are not hackneyed, and the reader is made to feel that the authors have really lived in the atmosphere of their work, as a writer should, if he would convince others. The central character of the story is a passionate, beautiful, and self-willed girl, who flies from her home in Charlestown to escape the humiliation put upon her by a bridegroom who leaves her to await him at the church, and writes to her that, even as she has jilted scores of good men, so he jilts her. The adventures that subsequently befall both man and woman are entertaining in themselves, and, as here set forth, account admirably for the character-development which accompanies them.

The Lady Navigators. By Edward Noble. (Brown, Langham & Co.)

'The Lady Navigators' is genuine comedy; it is full of real humour, a gift for which the reader of modern fiction cannot be too grateful. A middle-aged lady of title—a champion of woman's rights, and the president of societies for this and that—charters an ocean-going steamer to carry a party of her women friends, all sworn to demonstrate to the world how unnecessary men are. These ladies are particularly anxious to prove the Board of Trade a foolish and bigoted body in that it refuses to grant navigating certificates to ladies. They are bent upon navigating their own vessel, and showing the worth of their own doctrines regarding the superfluousness of men. They are obliged to carry a male captain and officers, but these they make their guests as soon as they are clear of the Thames, in order that they themselves may take charge, or rather, those of them who, for this very purpose, have taken lessons in seamanship. The humorous possibilities of such a situation are sufficiently obvious. Mr. Noble has made the best use of them. The book has not the direct strength of 'The Edge of Circumstance,' nor the serious characterization of 'Waves of Fate'; but, besides its other merits, it includes some fine pictures of sea life.

A Quaker Wooing. By Mrs. Fred Reynolds. (Hutchinson & Co.)

An ardent young Quaker's love for a merry-hearted maiden not belonging to his religious faith—such is the not unfamiliar theme of this engaging story. Hard to please must be the reader who is not attracted by the freshness and charm with which 'A Quaker Wooing' is written. The story has atmosphere, movement, humour, delicacy. Audrey Holte, ready at first to make fun of the strong, earnest man to whom in the end she gives her heart, is a delightful picture of girlish vivacity. But the character that stands out most clearly in the book—the one which the author has drawn most sympathetically —is the "Quaker squire's" blind mother.

In Desert Keeping. By Edmund Mitchell. (Alston Rivers.)

Mining, says one of Mr. Mitchell's characters, "is little better than the profession of an adventurer." And the chief figure in this romance is adventurer or nothing. Indeed, he is a diabolic adventurer. Apparently he has at different times deserted his wife, squandered her fortune, and forged her name. That is respectable blackguardism for a start. But when we encounter him first he is also a full-flavoured murderer. Subsequently he turns blackmailer, discovering that his wife has a secret; and by that time we are ready to credit anything concerning him. Mr. Mitchell is very generous of his invention, but we are not quite clear as to the precise facts of the murder in the desert. Was it a kind of duel? or was it naked murder? In any case the interest of the story does not depend on such accurate knowledge. It is written with spirit, and includes lovers, but there is little or no attempt on the part of the author to draw living people. Apparently the theatre of events is Arizona.

Ursula Raven. By T. Wilson Wilson. (Harper & Brothers.)

The author in this story has her favourite background of Westmorland hill and dale. Here she is thoroughly at home, and the local colouring, the characteristics, and the dialect of the Dale people are all put to good use. The plot is mainly concerned with the iniquitous holdings of royalties and wayleaves by one bad man, Lord Blencarn, who tries to make a corner in green slates for his own profit and the destruction of his neighbours. Ursula Raven's father has been ruined in this way, and when she goes as schoolmistress to the remote village of High Thordale, she finds that a young quarry-owner, who is to become her friend's lover is in similar peril. Bernard Gilpin is ultimately rescued from the shipwreck of his career and his happiness, but not one of the four young people who play the principal parts in the story is spared some hard knocks from fate. Ursula, whose strong nature is perpetually shadowed by the tragedy of her early youth, finds happiness awaiting her in the very quarter whence her troubles came. The story, which is long, is well told, and shows care and thought in the development of the characters. The author should be on her guard against a tendency to adorn tragic circumstance with too much realistic detail.

A Captain of Men. By E. Anson More. (Alston Rivers.)

Tyre is the scene of this story; the period is some ten and a half centuries B.C.; a grandson of Tiglath-Pileser is the hero, and David, the son of Jesse, one of the minor characters. Perhaps the most prominent of its incidents is that which describes how the traders from Tyre first made their way to Cornwall under the hero's captainship, and so got command of the traffic in tin which proved extremely lucrative to the city. The author, it will be seen, has had the courage to attempt an ambitious theme, and he has not been altogether unsuccessful. Certainly the reader will gain no special antiquarian knowledge from a perusal of the book; but he will find that the story is sufficiently brisk and entertaining. Mr. More is not unduly stiff and stilted; he does not drag in history or archæo-

XUM

logy to the detriment of his narrative; and his characters are not so far removed from ordinary life, either in speech or action, as to be wholly unconvincing. But after all the merits of the book are not of a conspicuous nature; it is fairly well written and fairly exciting, but nothing more.

BOOKS FOR THE NURSERY.

MESSRS. A. & C. BLACK.

Willy Wind, and Jock and the Cheeses, by the Duchess of Buckingham, comes to us with the glamour of tradition about it, and it deserves a larger audience, as it is in the true folk-lore vein. The book is beautifully printed in bold, large type, and well illustrated by Mr. J. S. Eland, so we expect it to go far.—Animal autobiographies are generally popular in the nursery, and a book which will charm many children is *The Black Bear*, by H. Perry Robinson. Wahka, the sturdy hero, was born and bred in the Rockies, and he gives in his simple tale a wonderful picture of the forest folk and of their free and joyous life. The end is somewhat sad, for gold is discovered, and the coming of man means the destruction of the wild things, and the last picture in the book shows us Wahka, caged and lonely, dreaming of all he has loved and lost.

MESSRS. BLACKIE & SON.

Amongst Messrs. Blackie's publications *Droll Doings*, pictured by Harry B. Neilson, with verses by the Cockiolly Bird, should add much to the merriment of many a nursery.—*Round the World*, by Ascott R. Hope, happily combines instruction with amusement.—*All the Best Stories and Rhymes*, illustrated by John Hassall, is a comprehensive survey of infant lore.—The same publishers also send a most entertaining *Black Cat Book*, rhymes by Walter Copeland, cats by Charles Robinson; an alphabetical book of hunting pictures (surely a somewhat strange choice of subject for infant delectation); a dainty booklet of *Rhymes and Reasons*, by Florence Harrison; several miniature volumes easy to hold and easy to read; and *The Little One's Book of Bible Stories*, well adapted by Mrs. L. Haskell, but not adorned by the gaudy plates which are so freely interspersed.—Amongst the annuals — those delightful medleys of short stories, verses, and pictures without which Christmas would not be Christmas—*Blackie's* takes a foremost place.

MESSRS. W. & R. CHAMBERS.

A Book of Baby Birds, verses by B. Parker, illustrated by N. Parker, deals with the distinctive features of twelve different kinds of birds from egg days onward. — A mere glimpse of the cover of *Foxy Grandpa*, by Bunny, is sufficient to arouse a vociferous chorus of approval in the nursery. This wily grandparent was a prime favourite among last year's Christmas heroes, and, as Foxy Grandpa up-to-date, should add fresh laurels to his wreath. Each page contains six pictures, supplemented by a slight thread of commentary, though the illustrations are sufficiently clever to tell their own tale.

MR. A. GARDNER, OF PAISLEY.

An original contribution to Christmas enjoyment is a collection of *True Stories* (*Naigheachdan Firinneach*) by the well-known writer "Fionn," for Gaelic-speaking infants. From the first light allegory on Highland education to the well-developed story of the '45 the book is instinct with a feeling which it is pleasant to see so vigorous. The fierce *manes* of Alasdair MacMhaighstir should be soothed by this revival.

MESSRS. WELLS GARDNER & CO.

The Prize, *Chatterbox*, and *Sunday* are volumes of the well-known illustrated periodicals, and are as good as usual.—*Leading Strings* is a collection of stories in simple language, suitable for young children. The type is large, and the pictures are numerous.

MESSRS. T. C. & E. C. JACK.

In *Old Testament Stories*, selected for the children by Edwin Chisholm, with pictures by R. T. Rose, the colours are too crudely bright to please us. The Biblical language is mainly retained in narrating the stories of Abraham, Isaac, Jacob, Joseph, and Moses. We hardly think that part of Abraham's history is milk for babes, yet, told with the point concealed, will it satisfy the inquiring mind of youth?

MR. JOHN LANE.

A Year of Songs for a Baby in a Garden, by W. Graham Robertson, is also illustrated by him. The verses are fluent and taking on the whole, though occasionally they seem to us not to run trippingly enough. What will a child make of this?

> Drowned we're lying
> (Fragrant doom)
> In the flying
> Cherry bloom.

Those two words in the second line have an adult ring. The rest of the poem, however, is simple and effective. The illustrations are clever, and the whole book has been admirably produced.

MESSRS. NELSON & SONS.

It is often said, and with much truth, that children's books seem more calculated to tickle the adult palate than to please the simpler tastes of the little folk to whom they nominally address themselves. Happily there are exceptions, notably amongst Messrs. Nelson's publications. *Our Diary*, illustrated by John Hassall, and *Jack Frost*, pictures by Ruth Cobb, verses by Edward Shirley, will undoubtedly fascinate the small people for whom they are designed. The diary of "Teddy and Me," detailing 'What We Did at Shrimpton' and at other entrancing localities, has a large number of full-page illustrations, reproduced in the gorgeously brilliant reds, blues, and yellows beloved of childhood. The antics of a frolicksome band of goblins, including Jack Frost, will be specially appreciated by the nature-studying little ones of to-day. Verses thoughtfully suggestive of the mysteries of sunrise and of sunset, of snowstorm, wind, and rain, are accompanied by illustrations which effectively supplement their imaginative qualities.

MESSRS. NISBET & CO.

Little Red Riding Hood, by Anne Batchelor, has nice big type, and the pictures are good. The little book takes the shape which may be described as "dumpy."

MESSRS. C. A. PEARSON.

The Wallypug in the Moon, by G. E. Farrow, belongs to the well-known "Wallypug" series and is a somewhat elaborate and unattractive wonderland story.

MR. ALSTON RIVERS.

The Zoo, by Walter Emanuel, is one of the best of the animal books which are such favourites with girls as well as boys. The inimitable Mr. Hassall is responsible for the illustrations.—From the same publisher comes *The Guide to Fairyland*, by Dion Clayton Calthrop, a veritable fairy Baedeker, who leads the way from queen's castle to giant's cave, from witch's hut to dragon valley, through a kingdom where fancy and imagination reign supreme. The accompanying pictures will repay close scrutiny.

MESSRS. ROUTLEDGE & SONS.

Sky-High: a Flight of Fancy for Children, by Dorothy Furniss, has fifteen coloured pictures and several other plates, which occupy each a full page. The author sends a little boy and girl on some excellent adventures, and we detect in her drawings a grace and facility (especially in the little figures) which are doubtless a family affair. Some of the coloured pictures are rather scratchy in their effect, but we are generally pleased with 'Sky-High,' and think children will be too.

MESSRS. WARNE & CO.

The latest addition to Miss Beatrix Potter's picture story-books is *The Tale of Mrs. Tiggy Winkle*, which although, from the pictorial point of view, not so entirely fascinating as its predecessors, is still in its artful simplicity well fitted to charm the heart of childhood. Mrs. Tiggy Winkle herself, as any one not devoid of onomatopœic sense must divine at once, is a hedgehog, and a most estimable person to boot. She it is who retrieves and washes lost handkerchiefs and pinafores for deserving little girls—she and none other who takes in washing for Jenny Wren, Cock Robin, Tom Titmouse, old Mrs. Rabbit, Squirrel Nutkin, and innumerable other small folk of the country-side. She is delightfully little, and makes the very best of company over a cup of tea. All nice children will envy Lucie, who was so lucky as to find her way to Mrs. Tiggy Winkle's dainty laundry inside the hill, to see her clothes-props cut from bracken stems on the short green grass outside the tiny door, and to hear her singing at her work.

SHORT STORIES.

Captains All. By W. W. Jacobs. (Hodder & Stoughton.)—Mr. Jacobs is, perhaps wisely, forsaking his bargees after giving them a very fair share of attention. He has lately taken to deep-sea sailors as characters for his ingenious fictions. His most devoted admirers, however, have no real cause for alarm or regret. The change is largely one of names. The characters themselves remain, as ever, Mr. Jacobs's own very amusing inventions, belonging neither to the deep seas nor the coast, nor to any other kind of mere workaday real life. They are the puppets in Mr. Jacobs's humorous marionette show, and, as a rule, are more continuously funny than anything of flesh and blood that ever was on sea or land. In 'Captains All' we have half a score of the tales this author has taught laughter-loving English readers to expect from his pen. The brand is well known and well liked, and there is nothing fresh to be said about it, unless it be a word of praise for the writer's assiduity, his sustained freshness, and his faithful adherence to the standard he has set before him. The book is thoroughly enjoyable.

The Black Spaniel. By Robert Hichens. (Methuen & Co.)—Apart from the tale which gives the title to this volume, we should describe the rest of the stories as studies for 'The Garden of Allah.' They are Oriental in texture, and their orientation is after Mr. Hichens's well-known manner. He writes on the edge of the morbid, and the tale which is not concerned with Egypt and the desert is a striking example of his bizarre imagination. It concerns metempsychosis, and is almost unwholesome. The idea is that a lover of animals has lost a black spaniel, which finds its way to the vivisection table. In consequence he becomes furiously anti-vivisectionist, and in particular his animosity is fastened on a certain doctor addicted to experiments on animals. When this doctor

dies, the man, who must inevitably by this time be regarded as insane, assumes that his soul has passed into a black spaniel. This he buys and tortures. It is somewhat ghastly, and not a little unhealthy, but it is told with the author's meticulous detail and skill. It has his usual fault of excessive length. Of the other stories 'The Mission of Mr. Eustace Greyne' is frankly and cynically amusing; and the atmosphere of the desert pervades the remaining tales and sketches. As we have said, they are drawings from Mr. Hichens's sketch-book. To our thinking, 'Mr. Greyne' is the pick of the book.

The Seventh Dream. By Rita. (Hurst & Blackett.)—In the second of the three stories here presented Rita bestows upon Bulwer Lytton flattery of that kind which is proverbially the most sincere. A doctor imprisoned on a false charge of murder, while the real criminal, in astral form, offers him freedom on condition of secrecy, hypnotism galore, and a phosphorescent flame playing about the floor of a dilapidated summer-house—all these things carry us back, with no violent effort of memory, to that wonderful essay in the supernatural, 'A Strange Story.' The other two tales, which treat of similar topics, display no particular originality. All three stories are well told and constructed, and will, we doubt not, prove acceptable to the author's numerous admirers.

Divers Vanities. By Arthur Morrison. (Methuen & Co.)—Mr. Morrison, as every one knows, founded his reputation on his studies of the East End, accomplished during Henley's editorship of *The National Observer*. Since then he has developed that side of his literary bent, and has also diverged into popularity as a writer of detective stories. We have no doubt that he would desire to be represented rather by the book before us, which treats of sordid life in the metropolis. It has three divisions: 'Cross-Coves,' 'Heads and Tails,' and 'Old Essex'; and of these the stories and sketches in the first two illustrate modern cockney life. Spotto Bird was a "crook" who, in escaping the police, ran at midnight into a room where an innocent maiden had made the Hallowe'en preparations to discover her lover. The idea is neat, and is handled with just the right amount of feeling. Mr. Morrison has no sentimentalism, but he would not be so successful if he had no sentiment. Thus Billy Wilks, burglar, in the unlawful exercise of his profession, kills a man, and is disposed to give himself up. But he does not, and, as Mr. Morrison puts it, he "was hanged for quite another murder after all." Mr. Morrison has wit rather than humour, and it is pretty often a grim wit; but one is conscious that in walking about among his characters, one is among real people. They may not be nice—we may even have a distaste for them; but they exist. Occasionally the author is tempted out of the strict path of rectitude, tempted by a desire to make a point. The aforesaid Spotto was reclaimed for a month by a philanthropist who considered crime a curable disease. If the philanthropist had existed, the story would have been credible, and Spotto's subsequent conduct almost pardonable. But we do not believe one bit in that philanthropist. He has been put up by Mr. Morrison as a "cock-shy."

In Life's Byways. By C. S. Bradford. (Alston Rivers.)—Stories which depict life in the remote and little-known corners of the empire are worth the consideration of all thoughtful readers; and the writer who can help to familiarize English people with the lives of their fellow-subjects of the outposts deserves well of the British public. Burma, though a part of our great Eastern possession, is comparatively little known to the average home-staying reader. Here are sixteen short stories, all of which deal with different phases of Burmese life. They are graphic, and though the author's outlook is too embittered to be philosophic, and he may not have seen life in pagoda-land very broadly, he has seen it vividly, and his descriptions are arresting. His style is almost wholly irritating, being a bad variant of the Kiplingesque, and involving the neglect of some useful punctuation marks. But this is none the less forcible writing. Many of the tales are strongly dramatic, most have a live and real interest of their own. The author is no subtle analyst of character, but he has felt the barbaric romance of tropical life, and his imagination as a story-teller lends itself to the treatment of the fiercer human passions. There are no niggard faults here. What the book lacks is restraint, the gift of literary selection, the distinction of literary style. It is worth reading, and its author may well give us something better presently.

Where the Sun Sets. By Francis Sinclair. (Sampson Low & Co.).—The reviewer places this book under the head of short stories because its author puts his work forward in that guise, but the nine sketches which the volume contains are not truly stories at all. A preface tells us that the writer belongs to a "coterie of wanderers who make it a point to foregather in London during the month of May." We seem to have heard of May meetings in London.

> "All our associates have travelled far and wide. .....At our reunions members are expected to recount any striking adventures in which they have taken part, the only conditions being that a contribution is edifying as well as entertaining, and that in its main points it must be true.....The stories which follow were contributed at various meetings."

In a literary sense these sketches are never true; if they are edifying, the reviewer has missed their points; it is not every reader who will discover entertainment in them. Most are concerned with events which are supposed to have occurred in the Southern hemisphere, and among them they furnish tolerable material for as many real stories. But they are given here by one who has not troubled himself to master the rudiments of the writer's craft. The consequence is that these nondescript epistles are written largely in catch phrases; and when, as frequently happens, an especially trite saying is used, the author emphasizes it by the use of quotation marks. In short, the book is drearily commonplace. This is a pity, for the author has presumably seen a good deal of the world, and might, at the cost of a little care and study, have produced a good collection of travel notes.

OUR LIBRARY TABLE.

The Battle of Wavre and Grouchy's Retreat (John Murray) is a review of the Waterloo campaign from a somewhat novel standpoint, namely, that of Wavre. The author, Mr. W. Hyde Kelly, R.E., does not neglect the initial operations, which, indeed, are essential to a due understanding of this side of the campaign; his opening pages present a clear and correct account of the moves of June 14th-15th, which so largely determined the events of the three following days. The author does not censure Ney for failing to occupy Quatre Bras on the evening of the 15th, justly pointing out that Napoleon himself commended that marshal for the progress which he had actually made. Wellington's refusal at that same time to commit himself definitely to the defence of the Nivelles and Quatre Bras positions until he had clearer news from Mons and the front generally, is likewise approved. Censure is passed on Napoleon, though guardedly, for not making every effort to seize Quatre Bras and Ligny on the night of the 15th-16th. The French troops had done wonders in the way of marching and fighting, and probably stood in urgent need of rest before the events of the morrow. It is therefore probably too much to say (p. 37): "The Napoleon of Jena and Austerlitz would have won the campaign on the 15th." The troops were not yet seasoned enough to endure a prolonged strain, and moreover there had been several contretemps, *e.g.*, Bourmont's desertion, which caused suspicion and delay. D'Erlon's oscillations on the 16th are discussed briefly and with good sense, but even so the incident remains inexplicable in some particulars. Too much credit is given to Thielemann for his handling of his corps on the 16th. He was "contained" by a smaller French force; and the one considerable effort that he made before sundown was unsuccessful. At the end of the fight his dispositions were far better, and probably saved the Prussians from what might have been a far sharper pursuit.

The delays and mistakes in the conduct of that pursuit are here suitably criticized. Grouchy's inability to interpret the evidence that trickled in as to the line of the Prussian retreat marks him out a mediocre commander; but it should be remembered that all antecedent probabilities were in favour of the supposition that Blücher would make for Liège. Further, the move towards Moustier which Mr. Kelly recommends might have imperilled Grouchy's rear; for the position of Bülow's corps was not exactly known, though it was believed to be marching from Liège. Altogether, Grouchy's situation was less clear than is here represented. In one respect he must be censured: he, essentially a cavalry general, was strong in that arm; yet his scouting (partly owing to the faults of Exelmans) was miserably ineffective. When the artillery duel was beginning at Waterloo, Grouchy was still in the dark as to the chief facts of the situation. This and his own pedantry or timidity lost the French the last chance (not a hopeless one) of winning the campaign. It is perhaps scarcely correct to say, as Mr. Kelly does (p. 96), that Grouchy ought to have digressed from his original instructions. Surely he ought to have interpreted them according to their spirit, not their letter. The author rightly commends Thielemann's defence at Wavre, and closes his volume with notes and comments on several questions of minor importance. Altogether it is an interesting addition to the works on the campaign of 1815, and enables even those readers who are not equipped with any special knowledge of military affairs to see how readily events at Waterloo might have gone far differently had Grouchy and his lieutenants done their work with greater perspicacity, zeal, and energy.

Messrs. Archibald Constable & Co. publish *Pax Britannica in South Africa*, by Capt. Fletcher-Vane, of which the first part is a somewhat belated account of the later stages of the war, while the greater portion deals with subsequent events. The author appears to us at first, heraldically if not personally, conceited, and his style confused, while he undoubtedly repeats himself. But he has a great deal to say worth saying, and should be read. He went out to fight as a Tory Imperialist, was gradually converted to opposite views, and stayed on in South Africa as what is commonly called a pro-Boer. The story of his change is deserving of attention, although he may be considered to have become a prejudiced witness. One of the first facts which weighed with him was the discovery that many of the best of the British-born inhabitants of the Transvaal either fought against us or were strongly opposed to British conquest. Capt. Fletcher-Vane mildly ridicules "the permanent underlying belief

of the Englishman that all foreigners, if it were possible without scandal, would cheerfully become British subjects." As early as June, 1900, he saw the correspondence between General Botha and Lord Roberts; and he proves that we might have had at that time more than we obtained at the conclusion of the war. In July, 1901, Capt. Fletcher-Vane was greatly shocked at orders which he received to arm the natives hitherto employed as scouts, and to shoot Boers dressed in khaki who might be taken prisoners. It is a curious comment on this order that in the well-known photograph of the conference between Lord Kitchener, Botha, and De Wet, General Botha, seated next to Lord Kitchener, is dressed in khaki. Our author points out "that the only regular forces of the Transvaal Government before the war commenced were dressed in khaki." At a later period Capt. Fletcher-Vane took an active part against the policy which led to the shooting of Commandant Scheepers, the case against whom, as well as that against some of the boys who were sentenced to death, is considered in the volume. The author has some good stories about Mr. Chamberlain's tour, and contrasts the statement on behalf of the Colonial Office and the War Office in the House of Commons, "that there were only 500 houses destroyed in the two colonies," with the actual facts as they afterwards met Mr. Chamberlain's eye. Capt. Fletcher-Vane's military experience does not perhaps justify his criticisms of headquarters staff, but some of the muddle which he describes has been made sufficiently apparent by the evidence before the Commission on the War.

We do not know when the official history of the war will deal with the Lindley story; but *The Times* history may be expected to take the same view of some of the later strategy as that put forward by Capt. Fletcher-Vane. It is hardly necessary for him to suppress names in the good stories which he tells of Nitral's Nek (also known as Uitval's Nek or Selekat's Nek) and the surrender of the Lincolns. The name of the colonel in command, whose services were dispensed with after two inquiries, is so well known that it seems unnecessary to have replaced it by that of "Colonel Henry." The story of this officer having, a few days previously to his own surrender, presided over a court which informed "Ricardo of the Guards.....that no British officer under any circumstances ought to surrender" was not known to us. There is a good deal of information upon contracts in the volume which confirms that view of the South African customs of the war which has recently caused the appointment of the Royal Commission. There are also some amusing stories as to remounts. Some of the military police employed under Capt. Fletcher-Vane used to collect horses left by the yeomanry columns as useless, and, after feeding them, take them to the yeomanry and exchange "these quiet horses" for the more lively ones which the latter could not manage.

THE critic who reads more than seven hundred pages of *Our Empire*, by the Earl of Meath and others (Vol. II. 'Great Britain in Asia,' Messrs. Harrison & Sons), and finds no remark to make, is excused from writing on it at length. Until we leave India and Ceylon we ask ourselves why the book was written. The history, which is excellently given, is all to be found elsewhere, and the title is likely to suggest a different kind of book. It is not handy in shape, and those who wish for a complete view of our position in the East throughout the ages will probably go elsewhere to find it.

When we come to the short chapters at the end there is much to criticize. The statement with regard to North Borneo, that "in 1881 Her late Majesty granted a Royal Charter to the" Company, is slightly misleading, inasmuch as it suggests that the charter was issued, as are municipal charters, almost as a matter of course. It was, however, a new departure of first-class importance, and was the modern precedent for the South Africa charter and two other charters. They are not likely to have successors. As regards Wei-Hai-Wei, the question arises whether we were "forced in self-defence," as the authors think, to occupy a station of which they say, a little later, that the Government doubt its utility. The statement that Lord Kitchener, since he has been in India, "has taken his measures promptly to meet the invaders if they should appear" is also highly controversial. We are, then, better pleased with the earlier part of the volume.

THE pleasant personality of a distinguished journalist is recalled by the *Memoirs of Sir Wemyss Reid, 1842-1885*, edited by Mr. Stuart Reid (Cassell & Co.). Sir Wemyss Reid lived, of course, to a much later date than that mentioned in the title, but the present volume contains his earlier reminiscences, and another volume of autobiography, relating his connexion with *The Speaker*, is to appear when lapse of time has made it possible to reveal the secrets of the day. True is the statement by the brother who edits the present volume that Sir Wemyss Reid's

"knowledge of the secret history of the Liberal Party in the memorable days when Mr. Gladstone was fighting his historic battle for Home Rule, and during the subsequent Premiership of Lord Rosebery, was exceptional."

Sir Wemyss Reid, however, was not throughout his life "the trusted friend of both statesmen." He was undoubtedly the trusted friend of Lord Rosebery and W. E. Forster, but the confidence of Gladstone in the great journalist was intermittent. Sir Wemyss Reid it was who "ran" Gladstone for Leeds, and who had afterwards in consequence to substitute the membership of the son who still sits for a division of that constituency. One of the amusing stories here relates how the good looks of the later candidate formed so substantial an asset of his cause that Sir Wemyss Reid had to promise to factory girls that they should "give him a kiss if you like." Mr. Herbert Gladstone not unnaturally blushed deeply when submitted to this process—even Whips can blush. Sir Wemyss Reid ends his account of the episode by the statement, based perhaps on 'Pickwick,' that "kisses are not to be despised as electioneering weapons."

We trust that the perfect accuracy of the volume before us will be continued in its successor, which is to deal with secrets. As to only two statements have we a doubt, and one of these is obscure, while the other is in harmony with popular belief. The obscurity lies in the words, "That year [1877] was indeed the best year in the history of the Republic. It still had the support of the great mass of the public." We should imagine that the French Republic has nominally possessed each year since 1877 an increasing amount of support from the French electorate. Boulangism itself did not produce in its electoral supporters the impression of being hostile to the republican form of government. The error of fact which we suspect, in the case where, as we admit, popular belief is opposed to our view, concerns the position of Beaconsfield at the time of "Peace with Honour": "If he had seen fit to dissolve Parliament then, he would have swept the country." The two leading advisers of the electoral policy of the Tory party at the time have both of them often stated that their report to their Prime Minister was that he was in a minority at that moment.

WE have so recently noticed the book on Russia of M. Victor Bérard that it is not necessary that we should say much of the translation by Mr. Fox-Davies and Mr. G. O. Pope (David Nutt). We have little fault to find with the translation, with the exception of the spelling "Czar," which occurs, indeed, in the title, *The Russian Empire and Czarism*. Mr. Frederick Greenwood contributes an introduction to the volume, and in it praises, not too much, the writings of M. Bérard. We entirely agree that "he is an authoritative critic." We do not entirely agree with the words "he is a friendly critic," except that M. Bérard has become friendly to us now. Neither do we agree with Mr. Greenwood that M. Bérard's book on Russia "has no match in English authorship for English uses." The new edition of the book by Sir Donald Mackenzie Wallace is in our opinion a safer guide.

MR. CHARLES WHIBLEY has equipped the new edition of Disraeli's biography of *Lord George Bentinck* (Constable) with an eloquent, not to say vehement, introduction. Frankly partisan in tone, it leads through unsparing denunciation of Cobden and Peel up to a parallel between the leader of the Protectionists in 1846 and the leader of the Protectionists to-day. Thus it trenches so closely upon present politics that we, being non-political, must leave Mr. Whibley's opinions to speak for themselves. Enough that they are sufficiently robust to satisfy the most thoroughgoing of Tariff Reformers. Some of his views stand, however, in need of revision. Thus, the statement that Cobden "hated Factory Acts as bitterly as he hated Trade Unions" is too sweeping. He was opposed, no doubt, to the regulation of male adult labour, but he approved of State intervention in favour of women and children.

MR. HUBERT BLAND has selected from his weekly contributions to the press a bunch of papers which he publishes under the title *With the Eyes of a Man* (Werner Laurie). We gather from this title, as well as from the dedication, that Mr. Bland claims for his attitude a certain manly common sense, and in this he is justified. The contents of the book cover a wide range, but it is mostly concerned with sex. Yet whatever the subject Mr. Bland's treatment is virile and unsentimental. He is at times a cynic, and at times a philosopher, but always a man of the world. His posture suggests even a touch of Nietzsche here and there, or if not of that oracle of modern Epicureanism, then of Pater, as revealed in his observations on the 'Art of Life.' He is also something of an Imperialist, witness such sentiments as these:—

"If you would read history aright, never a moment suppose that we owe our privileges to Parliament. Freedom is never won by words, and Parliament never did more than ratify what the sword had first made sure. And the sword kept what the sword won.....For men get what they are willing to fight for; just that and nothing more."

Mr. Bland's outlook is large and tolerant, and he is full of worldly wit, such as would arm young innocence if it would read and heed. There is perhaps little new in these pages, but old wisdom is forcibly and steadily put, and has the backing of an individuality behind it. In his lighter moods Mr. Bland drops into a form of fiction in which the foibles of society are touched with cynical humour; and these are not the least agreeable parts of an agreeable book.

MR. HAROLD BEGBIE is a clever journalist, and his *Master Workers* (Methuen & Co.) contains admirable pieces of sketchy biography. A slight exaggeration is pardonable in such books, and the accounts given of the King, Lord Roberts, Sir John Fisher, various politicians, ecclesiastics, and men of science, are not free from some distortion. The one

exception occurs in a curious case. Mr. Winston Churchill has in all probability a career before him which, if possible, exceeds the prophecies of Mr. Harold Begbie. Many of these sketches, including that of the member for Oldham, were written some few years ago; and the "white, washed-out face .....tired.....worn, harassed," has disappeared since Mr. Churchill became the fine polo-player which he has made himself by practice throughout the year. In spite of his over-enthusiasm for each and every "sitter," Mr. Harold Begbie sometimes gives us the impression that he sees more clearly than he pretends. He declares, for example, "false" and "unsatisfactory" an estimate of the Archbishop of Canterbury, which reads uncommonly like a first thought of his own: "A courtier with a predilection for the society of intellectual people, with an easy mind regarding the problems of life."

THE Librairie Hachette & Cie. publish a volume by M. Gabriel Monod, *Jules Michelet*, containing studies on the life and works, with many fragments. Madame Michelet—who wrote a good deal which bore her husband's name, and who is proved by her own essays, recently published in *La Revue de Paris*, to have written at least as well as he did—issued several volumes of Michelet's fragments, and her task has now passed to M. Monod. Michelet's dislike of England, admitted by M. Monod, comes out in this volume.

SOME of our readers, but hardly those who admire 'Pickwick,' may like to know of the reprint, from the original plates, of the G. W. M. Reynolds *Pickwick Abroad* (Glaisher), with its quaint views of Paris in the time of Louis Philippe. The attempt to continue Sam Weller was, perhaps, the least unsuccessful portion of the volume, but the turning-out of his phrases became of necessity somewhat of a mechanical operation. The art is a simple one: "Wonders will never cease, as the tailor said to the gentleman when he paid his bill." "I daresay we shall do very well without it, as the boy said, when his master could not find the birch rod steeped in vinegar." "I won't have nothing to say to you, as the devil observed to Don Juan." "Silent as the knocker at Newgate" seems an interesting piece of old London reminiscence.

THE edition of *Sir Roger de Coverley* and other essays from *The Spectator*, with illustrations by H. M. Brock, published by Messrs. Dent, adds to reading which is a perpetual delight drawings in which the artist seems to have felt and expressed entire sympathy with an era full of contemplative interest.

THE fine-paper edition of *A History of the Four Georges and of William IV.*, by Justin McCarthy and Justin Huntly McCarthy, published by Messrs. Chatto & Windus in two volumes, will appeal to those who desire to fill in their odd moments with profitable reading. The size is convenient for the pocket.

FROM Messrs. Bell & Sons we have received a volume of *Poems by Alfred, Lord Tennyson*, with illustrations by Eleanor F. Brickdale. It contains ample selections from the earlier works, and is printed in a bold, clear type which will be the joy of elderly eyes. The illustrations are in a vein for which the artist has established a reputation, and will be widely appreciated.

MR. HENRY FROWDE has sent us a new edition of *The Ingoldsby Legends*, with the old title-page and Cruikshank's illustrations. This is one of the "Standard Oxford Editions," and nothing need be said beyond mentioning the publisher's name and the collection to which it belongs.

MR. JOHN LONG'S *Carlton Classics*—published in a form handy for the pocket, in paper at threepence, cloth at sixpence, and leather at a shilling—represent the latest feat in cheap publishing, and they are certainly wonderful. The leather form, in which we have Thackeray's 'The Four Georges,' is particularly attractive. Here Mr. Hannaford Bennett supplies a 'Biographical Introduction' which perpetuates the foolish statement that Thackeray burlesqued Tennyson's 'Timbuctoo.' If Mr. Bennett had read the two pieces concerned, he would have seen how hopeless this statement is. We have also before us 'Childe Harold's Pilgrimage' in paper, and Macaulay's 'Warren Hastings' in cloth.

A SUMPTUOUS edition of Burton's *Anatomy of Melancholy*, in three volumes, comes to us from Messrs. Duckworth. Mr. Nimmo's edition having become scarce, there is room for this venture, which is welcome.

FROM Mr. Heinemann we have a large-type, fine-paper edition of *The Ebb Tide*.

MESSRS. CASSELL send us a pocket edition of Mr. Barrie's story *The Little Minister*. We find this at the head of all Mr. Barrie's work, so far as popularity is concerned.

Underneath the Bough is a collection of quotations, both prose and verse, of edifying tendency, described as a "posie of other men's flowers," collected by Theodora Thompson, and published by Mr. John Lane. The allusion in the title is, of course, to one of the most famous of the quatrains rendered into English by FitzGerald from Omar, while the sub-title alludes to Montaigne. The juxtaposition of these names affords a good clue to the entrance to the maze, in which the author's own thread is not too apparent. The "jug of wine" and the "thou" of Omar are absent, but there will be crumbs, hardly a loaf, of "bread" for those who like to take their reading at second hand and purged of all author's dross.

DR. JOSIAH OLDFIELD hails from the Lady Margaret Fruitarian Hospital, Bromley, Kent, and his two lectures *Myrrh and Amaranth* (Sampson Low & Co.) are ward sermons delivered to his nursing staff. The first shows the wickedness of vivisection and meat-eating, and the second the glory of drudgery, which, the author asserts, does not exist. The proceeds of the publication are to go to building a chapel for the oddly named hospital. The aim is so excellent that we have no heart to vivisect the book; but if the chapel is as decorative as the Doctor's language it will be a glory to behold.

The Library for October contains a number of articles of varied interest. Mr. Pollard's article on 'Recent Caxtoniana' gives some convincing arguments in favour of the theory, recently put forward on somewhat insufficient grounds, that a contemporary likeness of Caxton is to be found in a little-known engraving here reproduced. As Mr. Pollard is probably the first authority on a subject of this kind, the theory may be adopted in the absence of any fresh evidence to the contrary. We hope that the publicity given to the engraving may lead to the discovery of other copies of it. Mr. Cholmeley continues in 'A Book of Snobs' his reflections on modern schools and schoolmasters in the shape of a vigorous castigation of 'The Hill'; and Mr. Plomer contributes another of his most useful studies of early English bookselling, this time on 'Westminster Hall and its Booksellers.' Mr. Burpee's account of 'Canadian Bibliography' contains a useful list of works on the subject, though we fear his ideal can only be attained if the bulk of Canadian literature is much smaller than it is generally thought to be. The index for the current volume shows the wide range of interest covered by *The Library*, and fully justifies the confident appeal it makes to all cultivated lovers of books.

WE have on our table *Sermons at Rugby*, by the Bishop of Hereford (Nisbet), — *In the Country of Jesus*, by Matilde Serao, translated by R. Davey (Heinemann), — *The Scientific Temper in Religion*, by the Rev. P. N. Waggett (Longmans),—*History of the Dogma of the Deity of Jesus Christ*, by A. Réville (Green),—*The Immanence of God*, by B. P. Bowne (Constable),—*The Way*, by Sir R. Anderson (Nisbet),—*Science the Demonstrator of Revelation*, by S. J. Broadbent (Nisbet), — *Where to live round London: Southern Side*, by W. H. Shrubsole (Homeland Association), — *The Conquest of Jerusalem*, by Miriam Harry (Heinemann),—*Outcasts of the East*, by Florence Bailey (Nash),—*The Flaming Sword*, by Silas K. Hocking (Warne),—*Garden City and Agriculture*, by T. Adams, with introductory address by H. Rider Haggard (Simpkin & Marshall), — *Rome and Pompeii*, by G. Boissier, translated by D. H. Fisher (Fisher Unwin),—*The Tragedy of South Africa*, by A. M. S. Methuen (Methuen),—*The Emancipation of Egypt*, by A. Z. (Chapman & Hall),—*The Cotton Industry and Trade*, by S. J. Chapman (Methuen),—*Report of the Second International Cotton Congress* (Manchester, Thiel & Tangye),—*Little Olaf and the Bears*, by A. Craxford (Nisbet),—*Mick, an Ugly Dog*, by Emily Underdown (S.P.C.K.),—*The Girls of St. Gabriel's*, by May Baldwin (W. & R. Chambers),—*Three Little Cooks*, by Lucy Crump (Arnold),—*That Little Limb*, by May Baldwin (W. & R. Chambers),—*The Queen of Shindy Flat*, by Bessie Marchant (Wells Gardner),—*Magic Casements*, by A. S. Cripps (Duckworth),—*The Gods of Pegāna*, by Lord Dunsany (Elkin Mathews),—*The Trident and the Net*, by the author of 'The Martyrdom of an Empress' (Harper),—*The Brown House, and Cordelia*, by Margaret Booth (Arnold),—*Woman Disposes*, by Leoline Phillips (Skeffington),—*Historical Tales from Shakespeare*, by A. T. Quiller-Couch (Arnold),—*Publications of the Modern Language Association of America*, edited by C. H. Grandgent (Cambridge, Mass., the Association),—*A Catechism of Tamil Grammar*, by the Rev. G. U. Pope (Oxford, Clarendon Press),—*Dix Leçons sur le Martyre*, by Paul Allard (Paris, V. Lecoffre),—*The Third Kiss*, by H. Flowerdew (Eveleigh Nash),—*After London*, by R. Jefferies (Duckworth),—*Kitty and the Viscount*, by Mulvy Ouseley (Gay & Bird),—*John Carruthers, Indian Policeman*, by Sir E. C. Cox (Cassell),—*Old Readymoney's Daughter*, by L. T. Meade (Partridge),—*Mansie Wauch*, by D. M. Moir (Blackwood),—*Trafalgar Refought*, by Sir W. L. Clowes and A. H. Burgoyne (Nelson),—*Made in Heaven* (Gay & Bird),—*A Pillar of Dust*, by Frances Campbell (Bristol, Arrowsmith),—*Facing the World*, by Jean A. Owen (R.T.S.),—*Brother East and Brother West*, by Leighton Leigh (Heinemann),—*His Most Dear Ladye*, by Beatrice Marshall (Seeley),—*The Mother*, by N. Duncan (Hodder & Stoughton)—*The Professor's Legacy*, by Mrs. A. Sidgwick (Arnold),—*Dr. Martineau's Philosophy*, by C. B. Upton (Nisbet),—*An Essay on Women*, by C. A. Witchell (Kegan Paul),—*Radio-activity*, by E. Rutherford (Cambridge, University Press),—*Religio Medici, and other Essays*, by Sir T. Browne (Gibbings), — *Notable Pictures in Florence*, by E. Harwood (Dent),—*The Boz Birthday Book*, by J. W. T. Ley (Chapman & Hall),—*A Popular History of Newbury*, by W. Money (Simpkin & Marshall),—*Who killed Sir Edmund Berry Godfrey?* by A. Marks (Burns & Oates),—*The Claims of the Faith*, by the Bishop of Burnley (Nisbet),—*The Eternal Religion*, by J. Brierley (Clarke),—*La Couleur, la Lumière, et l'Ombre dans les Métaphores de Victor Hugo*, by Edmond Huguet (Paris, Hachette),—*Songs of the West*, by S. Baring-Gould and others (Methuen),—*Printing at Brescia in the Fifteenth Century*, by R. A. Peddie (Williams & Norgate),—and *Jean-Christophe, l'Adolescent*, by Romain Rolland (Paris, P. Ollendorff).

LIST OF NEW BOOKS.

MR. GEORGE LILLIE CRAIK.

MAY I add a few details to your brief note concerning Mr. George Lillie Craik? His father, Dr. James Craik, of St. George's, Glasgow, was at one time Moderator of the General Assembly of the Church of Scotland. His uncle Prof. George Lillie Craik, after whom he was named, held the Chair of English Literature at Queen's College, Belfast, and wrote a history of the subject which enjoyed a wide circulation. Under such influences Mr. Craik was educated first at the High School, and then at the University, of his native city, and there imbibed the strong love of literature which proved so useful in the profession in which forty years of his life were passed. For after spending some time in an accountant's office in Glasgow he was invited in 1865, by the late Mr. Alexander Macmillan, to join the publishing firm, of which, until his death, he remained an active member, though never, as has been stated, occupying the post of "literary adviser."

No one who came into contact with Mr. Craik could fail to be impressed by the sympathetic kindliness of his nature, which won for him the affectionate regard both of his fellow-workers and of many of the eminent authors whose work bore the imprint of the firm. To a sound judgment in matters of business he united a fine taste for the best literature. He was specially devoted to the poetry of Wordsworth and Tennyson, and enjoyed the intimate friendship both of the late Poet Laureate and his son. To his love for Wordsworth were due his active co-operation in the scheme for preserving "Dove Cottage," and his keen interest in the monumental edition of Wordsworth which was edited by Prof. Knight in the "Eversley Series." Besides the authors already mentioned, he was on intimate terms with Mr. John Morley, Huxley, Charles Kingsley, Matthew Arnold, Mrs. Oliphant, Sir Henry Roscoe, Sir Norman Lockyer, Miss Yonge, Mrs. Molesworth, William Black, Sir Lauder Brunton, Ainger, Sir Archibald Geikie, and Mr. Alfred Austin. He took also a keen interest in art, and was for a time a director of the Fine-Art Society. Mr. Holman Hunt and Mr. Briton Rivière were among his warmest friends, and Mr. Hunt's well-known picture 'The Strayed Sheep' was in his collection.

Both in London and in his successive country homes in Kent and in Hampshire Mr. Craik was much given to hospitality, and was a genial and delightful host. And no account of him would be complete that did not touch on his special sympathy for the young. To his Scottish upbringing may be traced his deeply religious nature; and his long residence in England never chilled his love for everything Scottish. Mr. Craik was twice married: first, in 1865, to Miss Dinah Maria Mulock, author of 'John Halifax, Gentleman,' and an early friend of his partner Mr. Alexander Macmillan. After her death in 1887 he married, in 1892, Miss Anna Holme, who survives him. His younger brother, Sir Henry Craik, was until recently the head of the Scottish Education Department.

Γ.

POEMS WRONGLY ATTRIBUTED TO CHAUCER.

PROF. SKEAT, in his valuable list in last week's *Athenæum*, might perhaps have included two, 'The Court of Venus' and 'The Pilgrim's Tale,' which were at least ascribed to Chaucer by Bale. Francis Thynne, 1599, in his animadversions on Speght's 'Chaucer,' 1598, said that his father had brought out his edition of Chaucer in 1532, in two columns, but that he was bringing out a one-columned edition which contained 'The Pilgrim's Tale,' a thing more odious to the clergy than even 'The Plowman's Tale.' Cardinal Wolsey persuaded the king

"so to mislike of that tale that Chaucer must be new-printed and that discourse of 'The Pilgrim's Tale' left out."

The only two fragments preserved which are known by the name of 'The Court of Venus' are, I believe, adaptations of earlier editions. The Bright fragment at Britwell has the title-page, Prologue, eleven complete lyrics, and part of a twelfth. The Prologue begins with the line

In the moneth of May, when the new tender grene,

which is evidently the equivalent of Bale's Latin "In Maio cum viridescerent," ascribed to Chaucer. The Bodleian fragment contains the conclusion of one poem, and the whole of another, of the same character as those of the Britwell fragment, and then commences 'The Pilgrim's Tale,' evidently Bale's "In Comltatu Lyncolniensi fuit." Of course the internal evidence shows that Chaucer did not write the poem.

There are very many interesting points to be considered in relation to these strange fragments, which I treated at length in *The Athenæum* of June 24th and July 1st, 1899, in articles entitled 'The Metrical Psalms and "The Court of Venus,"' and 'The authorship of "The Newe Courte of Venus."'

CHARLOTTE CARMICHAEL STOPES.

THE DEATH OF EDWARD THE ELDER.

Falkirk, N.B., October 28th, 1905.

I HAVE just noticed Mr. F. M. Stenton's interesting attempt to localize the place where the Saxon King Edward died: the Fearndune of the 'O.E. Chronicle' of the year 924, the Ferenduna of William of Malmesbury, which, it is implied, cannot be more than a few days' journey from Chester. Mr. Stenton says this must be Farndon, near Chester. But it is named in Domesday as Ferentone, which shows that it is a different place-name. Fearndune is therefore probably Farndon, near Newark, though I have not Domesday at hand, to see if it is named there. It may conceivably be Faringdon, near Swindon—in Domesday Ferendone. Cheshire names are very rare in the 'O.E. Chronicle'; perhaps we only have Eddisbury, Runcorn, and Wirral. This tends to make it uncertain that Mercia, in the tenth century, extended as far as Mr. Stenton thinks. JAMES B. JOHNSTON.

Literary Gossip.

'FIFTY YEARS OF FAILURE: Confessions of an Optimist,' is the title of an anonymous work which Messrs. Smith, Elder & Co. will have ready on the 10th. It is the record of a man who has done many things, and seen and known men and cities. The "failure" consists in the inability to amass more than a competence of this world's goods. Linked with some of the best families in England and Scotland, the author covers the period from the close of the Crimean War to the present day. Eton, Oxford, life in a publishing firm, in the British Museum, and as secretary of one of the Church societies, comprise the outline of his early experience. But the main interest in the book lies rather in the persons he has met and the friendships he has made than in any variety of incident. The author's identity may be revealed to some by the portrait frontispiece. On the same date Messrs. Smith, Elder & Co. will also issue a new and cheaper edition, in one volume, of S. G. Tallentyre's 'Life of Voltaire.'

THE King has given Mr. W. H. Wilkins permission to publish in his forthcoming biography of Mrs. Fitzherbert certain papers which were placed in Coutts's Bank by Mrs. Fitzherbert in 1833, for the purpose of the vindication of her character, after her death, by explaining her relations with George IV. These include the certificate of her marriage with George IV. and a letter from the clergyman who performed the ceremony—in short, all that is necessary to prove that a ceremony did take place. These documents have now been removed to the domestic archives in Windsor Castle. The book has been written with the consent of the present head of Mrs. Fitzherbert's family, and with the assistance of the descendants of many of her circle. It will embody a large number of letters and documents hitherto unpublished, as well as many pictures from private collections, and will be published by Messrs. Longman.

E. GRANT RICHARDS will publish shortly 'The Theatrocrat: a Tragic Play of Church and Stage,' by Mr. John Davidson. This is a modern play in blank verse, dealing with the relations of the life, the religion, and the dramatic art of the day to what has been called "the new knowledge." The play is preceded by an introduction of about twenty thousand words, in which, discoursing of 'Wordsworth's Immorality and Mine,' 'Heaven and Hell,' and 'God and Sin,' Mr. Davidson expounds in prose the matter of his Testaments—the matter which he has applied to life and conduct in 'The Theatrocrat.' The book is dedicated 'To the Generation knocking at the Door' in the following lines:—

Break—break it open; let the knocker rust:
Consider no "shalt not," and no man's "must";
And, being entered, promptly take the lead,
Setting aside tradition, custom, creed;
Nor watch the balance of the huckster's beam;
Declare your hardiest thought, your proudest dream:
Await no summons; laugh at all rebuff;
High hearts and youth are destiny enough.
The mystery and the power enshrined in you
Are old as time and as the moment new:
And none but you can tell the part you play,
Nor can you tell until you make assay,
For this alone, this always, will succeed,
The miracle and magic of the deed.

READERS will be glad to hear that another substantial volume of Acton's letters is now in course of preparation for the press. In the volume already published Acton naturally consulted the interests and tastes of a Prime Minister's daughter, and some of the letters might almost be said to be those of a Lord-in-Waiting. In the new series the essential Acton will be presented, a student of history unrestingly alert to apply his endless erudition to the defence and elucidation of contemporary Christianity. His own final attitude towards the great religious controversies in which he figured is set forth by himself with a plainness of speech which, perhaps by accident rather than by design, was somehow eluded during his lifetime.

THE sixth edition of Mr. Watts-Dunton's 'Coming of Love' being out of print and unprocurable, Mr. John Lane is about to issue a seventh. Its speciality will be the inclusion of those missing sections of the poem which were not available when the material of the book was put together, having been lent in manuscript to friends and temporarily mislaid. The volume will be prefaced by a dedicatory epistle, and will also be enriched by a crayon portrait of the author by D. G. Rossetti.

The Saturday Review attains this week its fiftieth year. We congratulate our contemporary on its continued vigour, and an independence which is rare enough in the present age to be a matter of congratulation for all who take a serious view of criticism.

MESSRS. BELL will shortly publish in one small volume Leland's 'Itinerary in Wales,' edited by Miss Lucy Toulmin Smith. Though the new edition of the whole Itinerary (originally projected by Mr. Laurence Gomme) has made considerable progress, the publishers have thought it advisable to issue those portions which relate to Wales independently. Leland's scattered notes have now for the first time been brought together, and the names identified and elucidated with the assistance of Dr. Gwynogfryn Evans.

MR. ELLIOT STOCK will publish about the middle of November a new work by Mr. J. C. Wright, entitled 'In the Good Old Times.' It seeks to show the changes that have taken place in the social, industrial, and moral condition of England during the last century and a half, particularly the contrast between that period and the present day. The author looks with a lenient and sympathetic eye on the customs of our forefathers.

MR. HENRY FROWDE is about to publish 'The Last Poems of Richard Watson Dixon,' selected and edited by Mr. Robert Bridges.

MESSRS. F. V. WHITE & Co. will have ready early this month a romance of Sir Walter Raleigh, by Mr. H. A. Hinkson, entitled 'The Splendid Knight.' Although primarily intended for boys, the book will also, it is hoped, appeal to grown-up lovers of romance. It is illustrated by Mr. Lawson Wood.

MR. ANDREW LANG is to continue next week in *The Illustrated London News* the causerie which used to adorn *Longman's Magazine*. We may therefore have the interesting spectacle of his and Mr. Chesterton's views on the same subject, unless they agree to leave each other a limited field. But both writers are well known for their width of range.

A NEW novel, entitled 'A Golden Trust,' by Theo Douglas, will be published by Messrs. Smith, Elder & Co. on the 10th. The scene is laid partly in the home of Northumbrian wreckers, which conceals a treasure, partly in the Paris of 1792, whither the murderous designs of his kinsmen drive the young hero. There he woos and wins anew the girl-wife to whom his intriguing relatives had hastily married him; and returns to discover the lost hoard.

THE earlier poems of Christina Rossetti are to be added to "The Red Letter Library," with an appreciation by Mrs. Meynell.

THE new series of *The Dublin Review*, which begins in January under the editorship of Mr. Wilfrid Ward, will have Mr. Reginald Balfour for its sub-editor.

WE are requested by Messrs. Routledge to state that the volumes of "The Muses' Library" issued in the series since its purchase by them from Mr. A. H. Bullen,

its original projector and editor—viz., the Poetical Works of Johnson, Goldsmith, Gray, and Collins (in one volume), Sir Lewis Morris, Coventry Patmore, Poe, Adelaide Procter, D. G. Rossetti, Tennyson, and Palgrave's 'Golden Treasury'—were not selected for the series by Mr. Bullen, who ceased to edit it after its ownership passed out of his hands.

THE death is announced in Glasgow of Mr. Robert Ford, in his sixtieth year. Mr. Ford edited the poems of Robert Fergusson, and an anthology of the songs of Scotland, and published various volumes of Scottish humour, including 'Thistledown.' His 'Vagabond Songs' was published quite recently. He was a native of Perthshire, and for the last thirty years had been engaged in a Glasgow warehouse.

VARIOUS changes and modifications have been or will be effected in Parisian journalism this week. Three newspapers—*La Patrie*, *La Presse*, and *L'Écho de l'Armée*—were sold at public auction on Monday last, and were purchased for 650,100 francs on behalf of a syndicate of politicians, of whom MM. Méline, Noblemaire, and Lieut.-Col. Porthmann, of the *Presse Nouvelle*, are the principal figures. M. Léon Bailby, the editor of *La Presse*, has resigned his post, and goes over to *L'Intransigeant*, which is to become an evening paper. Its policy, however, will be unchanged, and it will be directed as heretofore by the inimitable Rochefort.

M. JULES LEMAÎTRE'S address on Wednesday week at the annual public meeting of the five French Académies was a charming discourse on the 'Culte des Vieux Livres,' of which a full report appeared in *Les Annales Politiques et Littéraires* of last Sunday. M. Lemaître confessed to a weakness for old bindings, of which the designs are never of a "géométrie irréprochable: toujours quelque tremblement ou quelque hésitation des lignes nous rappelle et nous présente la main vivante et mobile de l'ouvrier qui les exécuta." He insists, moreover, that a classic is much better in its contemporary dress and type than in a modern impression: "Ce sera comme si l'aspect et le toucher du vieux livre vous inclinaient à l'état d'esprit des ancêtres pour qui ces moralités et ces histoires furent écrites."

ALPHONSE ALLAIS, who died in Paris on Saturday last, was a well-known figure in French journalism. Born at Honfleur in 1853, he studied pharmacy, but on his going to Paris at the age of twenty-six, Bohemian life and journalism, and his "joie des plaisanteries," soon made him famous. At Montmartre he was one of the founders—the others were R. Salis and A. Bruant—of the famous *Chat Noir*, and succeeded Goudeau as chief editor; since the foundation of *Le Journal*, fourteen years ago, his 'Vie Drôle' never ceased to be one of the chief features of that paper. His 'Nouvelles à la Main' and his stories in twenty lines were characteristically Parisian, and among the most polished of their kind. He published several collections of his contributions to the newspapers. He wrote 'Innocent' in 1895 in collaboration with his old friend M. Alfred Capus, and upon this was based his book entitled 'L'Affaire Blaireau,' 1899.

THE death mask of Heine, the existence of which was hitherto unknown, has recently come into the hands of Prof. Hans Meyer, head of the Bibliographical Institute at Leipsic, who has acquired the residue of the poet's possessions after over four years' negotiation with their owner. Readers of the 'Florentine Nights' will recall a passage in which Heine expressed his dislike of death masks. The MSS. include letters from distinguished men, and Matilda's album, with verses by Heine, Laube, and others; and among the miscellaneous articles are the stuffed remains of the famous parrot. The more important parts of the literary remains passed into Prof. Meyer's hands some five years ago.

SIR HORACE BROOKS MARSHALL'S chairmanship at the Newsvendors' Dinner last Tuesday was a great success. The guests numbered 250, and the subscriptions amounted to 2,410*l*. We congratulate all concerned, not forgetting Mr. Wilkie Jones, the secretary, to whom the Institution is so much indebted. The chairman stated that, during the sixty-five years the Institution had existed, only three times had applicants for pensions been put to the expense and anxiety of contested elections.

SCIENCE

MEDICAL BOOKS.

Clinical and Pathological Observations on Acute Abdominal Diseases. By Edred M. Corner. (Constable & Co.)—This small work embodies and somewhat amplifies the Erasmus Wilson Lectures delivered before the Royal College of Surgeons in 1904. The main theme of the lectures is the identity of the infective agents and the pathological changes concerned in the production of most of the acute abdominal diseases, such as appendicitis and the various intestinal perforations. The subject is well worked out and deserves consideration.

Lectures on Diseases of Children. By Robert Hutchison. (Edward Arnold.)—Until recently clinical teaching on the diseases of children in the great medical schools of the metropolis has certainly not received due attention. Its importance can hardly be overestimated, and yet systematic instruction on the feeding of infants and the ailments peculiar to childhood has been hitherto most insufficient, except at the special hospitals. Dr. Hutchison points out in his opening lecture that during the last fifty years adult mortality has fallen by about four per thousand, whereas infant mortality remains as high as ever it was. These figures, which we have no reason to doubt, are highly significant, and call for attention. Yet at the present time a considerable proportion of medical students successfully pass their qualifying examinations and start as doctors with very little practical knowledge of the diseases of children. A book such as this by Dr. Hutchison comes at an opportune moment. There are many recent and excellent works on the subject, but this deals rather with certain common diseases which are often not fully dealt with in the larger books nor discussed in the ordinary course of ward work. The contents having been originally given in the form of lectures, the style is colloquial, but we think the value of the book is increased by its simplicity and directness. The subjects are dealt with mainly from their clinical aspect, their pathology being necessarily somewhat abridged. To the average medical student the book should prove of great help, as it abounds in small details of importance in diagnosis and treatment, the outcome of the author's wide experience. The illustrations are unusually good, especially those depicting the chief forms of mental deficiency. The lectures most worthy of notice are those dealing with the feeding of infants and their alimentary disorders. The book is sure to have the wide circulation which it thoroughly deserves.

The Edinburgh Stereoscopic Atlas of Anatomy. Edited by David Waterston. Part II. (T. C. & E. C. Jack.)—This is the second section of the 'Stereoscopic Atlas,' and consists of a series of fifty stereoscopic photographs illustrating the anatomy of the abdominal and pelvic viscera. There is no descriptive text, but figures are appended indicating each separate organ. The photographs are extremely good, and the stereoscopic effect obtained is excellent. The utility of the work is questionable. It cannot take the place of dissecting, and it is universally accepted that diagrams are more serviceable as an aid to dissection than the best photographs. It appears to be a novel and probably temporary method of trying to teach anatomy.

A volume entitled *Medicine and the Public*, by Dr. S. Squire Sprigge (Heinemann), has a special object which might not be gathered from its title. It forms, in fact, a view of the connexion between the medical profession and the State, with explanations of the modes of entering the various public medical services.

RESEARCH NOTES.

INVESTIGATION into the peculiar properties of nickel, which seems in many respects to differ from most known substances, has lately led to unexpected results. M. Paul Sabatier, the well-known Professor of Chemistry at Toulouse, has found that it is one of the most powerful of catalyzers, or bodies which bring about reaction by their mere presence, without themselves undergoing any modification in the process. Thus he has discovered that hydrogen may be made to combine with any volatile organic substance by directing a stream of hydrogen charged with the vapour of the substance on a column of finely divided nickel; and he has further found that the reaction is coextensive with the surface presented by the metal, a plate of nickel, for instance, giving a much less marked result than a powder. His explanation of this is that the gas really forms a hydrate with the metal, which remains on its surface, but gives up its hydrogen to the other substance on its arrival, thus leaving the metal free for another hydrogenation and another cleansing. Besides this, he has established that nickel will bring about what he describes as a doubling of the molecule in many volatile compounds, thus converting acetylene into methane, and so on. In all these reactions nickel is followed more or less closely by its twin cobalt, by copper, and by some other metals, including, of course, platinum. While it is a more powerful catalyzer than any of them, it at the same time possesses a singular sensitiveness to the action of chlorine, of the other halogens, sulphur, and arsenic, the presence of a mere trace of any one of them causing it to lose its catalyzing powers. M. Sabatier compares this, with much reason, to the inhibitive effect of infinitesimal quantities of certain poisons, such as salts of silver, upon living ferments. The culture of *Aspergillus niger* in a silver cup is, he reminds us, impossible.

Experiments on the effect of a strong magnetic field on nickel have also been made by Dr. G. Schmaltz. As the effect of heat upon all the ferro-magnetic metals is to rob them of their magnetic properties, Dr. Schmaltz has tried whether the converse result could not be

obtained, and in this he has fully succeeded. He finds that a magnetic field of 1,200 units is sufficient to diminish the heat-conducting power of nickel by about one-half.

One of the most disputed points in magnetism during the early part of last century was whether magnets had or had not an effect upon living, and more particularly upon human, beings. Lord Lindsay and Prof. Varley some time ago, in order to determine this question, made an electro-magnet big enough to enable one to place one's head between the poles. Undeterred by the fact that the experiment produced no result, Lord Kelvin continued to assert that some effect ought to be perceptible in the case of a living being so placed. Two of M. Curie's pupils—M. Chéneveau and M. Georges Bohn—some two years ago resumed the same experiments, using as their *corpora vilia* certain infusoria. The experiment was difficult, owing to the apparent impossibility of maintaining a sufficiently strong magnetic field without a fatal rise in temperature; but they were finally able to pronounce that the movements of the animals in the magnetic field became slower, that their growth was arrested, that they ceased to multiply, and that, in the case of Stylonichia especially, they died in about four days without dividing. There seems, therefore, little room for doubt on the subject.

Mr. V. Bjerknes, of Stockholm, has taken up and extended the work of his father, Prof. C. H. Bjerknes, on the analogy of the mechanics of the hydrodynamic field with that of the electrostatic, and has published the results in the *Archives de Genève*. He finds that the "curls" of the weight-moving force in the electrostatic, and of the force of energy in the hydrodynamic field, are the same, though the signs are contrary, and that therefore they should produce equal effects in the movements of masses. He especially applies this to the formation of vortices or whirlpools, and points out many other likenesses between the two forces. The article, which is a good specimen of purely mathematical reasoning, should certainly be studied by those who tend towards an electro-magnetic explanation of all physical phenomena.

In a series of articles on electrification by contact M. Jean Perrin has studied the formation of living matter, which he declares to be always in the colloidal state, and to be due to a mixture of hydrosols and "cosgula" or clot-producing material. This really goes back to the artificial protoplasm of Bütschli, but M. Perrin points out that the action of metallic salts in coagulating a colloid is dependent on their containing ions of a contrary sign to those of the colloid, and that the degree of valency counts also for something in the affair. He further says that the absolute insolubility of living matter in water or other aqueous solutions is a necessary condition of its existence, and corresponds to the recognized insolubility of most colloids. Its extreme subdivision he thinks may be attributed to an effect of electrification by contact, which always makes for extent of surface. Hence he concludes that electrification by contact plays a great part, not, indeed, in bringing about the formation of living matter, but in what has been called here viability, or the rendering of matter fit for life, and he pleads for its further study. The article runs through several numbers of the *Journal de Chimie Physique*.

In this connexion it may be as well to note that Mr. Douglas Rudge has written to a contemporary to say that he has tried experiments with salts of pure barium and gelatine, and finds that they produce the growths which their discoverer, M. Raphaël Dubois, would call "eobes," and Mr. Butler Burke "radiobes," as easily as radium salts, "or even more so." The solubility of the salt of barium employed was, he found, the only factor that required attention.

F. L.

SOCIETIES.

MICROSCOPICAL.—*Oct.* 18.—Dr. Dukinfield H. Scott, President, in the chair.—An old Wilson screw-barrel simple microscope, date about 1750, presented by Major M. J. C. Dennis, was described by the Secretary, who traced the history of microscopes focussing by means of a screw cut on the body tube.—Mr. E. Moffat exhibited and described a simple portable camera for use with the microscope.—A form of hand microtome, devised and used by Mr. Flatters, was exhibited and described by the Secretary.—Messrs. R. & J. Beck exhibited and described the Ashe-Finlayson "Comparascope" as made by them.—The President said they had the instrument before them some time ago in a less developed form. It seemed likely to be extremely useful to microscopists, as it could be applied to any microscope, and afforded a ready means of directly comparing objects under conditions which rendered it possible to detect slight differences easily.—A paper by Prof. H. G. Hanks, a Corresponding Fellow of the Society, entitled 'Notes on Aragotite, a Rare Californian Mineral,' was read by the Secretary. The mineral, which is a hydrocarbon, was first described by Mr. F. E. Durand in a paper read by him before the Californian Academy of Sciences, on April 1st, 1872. It was not until 1893 that Prof. Hanks obtained specimens of the mineral. These he subjected to various experiments. He now disputed Mr. Durand's conclusion that it might be some modification of idrialite, and gave a table showing that in chemical composition, colour, streak, hardness, and specific gravity aragotite differs from idrialite.—The President called attention to a number of slides from the collection recently presented to the Society by Mr. W. M. Bale, of Melbourne, and said that a specially interesting feature of the exhibit was a collection of orchid seeds, which were excellently mounted and gave a good idea of the extremely simple structure of these minute seeds.

CHALLENGER.—*Oct.* 25.—*Annual Meeting.*—Mr. E. W. L. Holt in the chair.—The following gentlemen were elected to serve as the Committee: Mr. E. W. L. Holt, Dr. W. T. Calman, Dr. R. N. Wolfenden, and Dr. G. H. Fowler (Hon. Secretary).—At the subsequent meeting for scientific business, Dr. E. J. Allen and Mr. D. J. Matthews exhibited and explained charts illustrating the physical conditions of the English Channel during 1903 and 1904. The observations, which were conducted with the Plymouth Laboratory of the Marine Biological Association as a centre, had been made by the Association's steamers Huxley and Oithona, by ocean-going liners and cross-Channel steamers, and at lightships and lighthouses. They extended from about Dungeness to Cape Finisterre, and showed the north-easterly movement of oceanic water of high salinity and temperature, the southerly movement of water of low salinity from the Irish Sea, and the varying effects of these movements on the waters of the English Channel in different months.

BRITISH NUMISMATIC.—*Oct.* 25.—Mr. Carlyon-Britton, President, in the chair.—The Hon. Whitelaw Reid, American Ambassador, was elected an Honorary Member, and Mrs. P. W. Remnant and Mr. Henry Perry Members.—Miss Helen Farquhar read a monograph on 'Portraiture of the Stuarts on the Royalist Badges,' in which, by carefully reasoned comparison, she traced many of the medallic portraits of the first and second Charles to their prototypes in contemporary paintings by the Court artists. By this means she was enabled to correct the dates previously assigned to some of these medals and badges, and to venture suggestions as to the probable occasion of their issue.—In connexion with this paper a special exhibition of Stuart memorials had been invited, and the tables were crowded with badges, medals, coins, miniatures, jewels, and curios of every description bearing portraiture of the Stuarts. The exhibitors, in addition to Miss Farquhar, included Mr. P. Berney-Ficklin (who contributed 76 speciments from his large collection, part of which is now at Whitehall), Prof. Herbert Cox, Major Freer, and Messrs. T. W. Barron, G. Thorn Drury, W. Talbot Ready, L. L. Fletcher, W. J. Webster, O. Fitch, W. S. Churchill, and W. J. Andrew.—Donations to the Society were made by Major Creeke, Messrs. Spink & Son, and Mr. L. Forrer.—The first volume of the Society's proceedings, *The British Numismatic Journal*, was submitted to the meeting. It is a crown-quarto volume bound in buckram, containing 500 pages, with 25 plates and 30 other illustrations. It is issued to members only.

MEETINGS NEXT WEEK.

MON.	Royal Academy, 4.—'The Upper Limb,' Lecture I., Prof. A. Thomson.	
—	London Institution, 5.—'The Egyptians in Sinai,' Prof. W. M. Flinders-Petrie.	
—	Royal Institution, 5.—General Monthly.	
—	Society of Engineers, 7½.—'The Metallic Preservation and Ornamentation of Iron and Steel,' Mr. Sherard Cowper-Coles.	
—	Aristotelian, 8.—President's Address, 'Causality and the Logic of History.'	
—	Institute of British Architects, 8.—President's Address.	
—	Geographical, 8½.—'Travels in the Mountains of Central Japan,' Rev. W. Weston.	
TUES.	Institution of Civil Engineers, 8.—President's Address.	
WED.	Geological, 8.—'The Coast-Ledges in the South-West of the Cape Colony,' Mr. E. H. L. Schwarz; 'On the Glacial Period in Aberdeenshire and the Southern Border of the Moray Firth,' Mr. T. F. Jamieson.	
THURS.	Royal Academy, 4.—'The Upper Limb,' Lecture II., Prof. A. Thomson.	
—	London Institution, 6.—'Tchaikowsky,' Sir A. C. Mackenzie.	
FRI.	Astronomical, 5.—	
—	Physical, 8.—'The Question of Temperature and Efficiency of Thermal Radiation,' Mr. J. Swinburne; 'Note on Constant Deviation Prisms,' Mr. T. H. Blakesley.	

Science Gossip.

THE new Zoological Department of the University of Liverpool, including Museum and Laboratories of Zoology and of the practical applications of zoology, will be opened on the 18th inst. by the Earl of Onslow, formerly President of the Board of Agriculture and Fisheries. The Earl of Derby, Chancellor of the University, will preside, and addresses will be delivered by Lord Onslow and others.

THE death is announced from New Zealand of Mr. F. W. Hutton, F.R.S., who, having seen some service in the army and navy, went to New Zealand, and settled at Christchurch as Professor of Biology and Geology, after holding other scientific posts in the colony. In 1893 he gave up his professorship for the post of Curator of the Christchurch Museum. Mr. Hutton was an accomplished and voluminous writer on evolution, geology, and kindred subjects, and his comment on 'The Origin of Species' was warmly recognized by Darwin. His recent books 'Darwinism and Lamarckism, Old and New' (1899), and 'The Lesson of Evolution' (1902), are probably the best known of his works; and his colonial reports and geological and zoological papers represent a good deal of careful study.

COL. C. T. BINGHAM has been appointed by the Secretary of State for India editor of the 'Fauna of British India,' in succession to the late Mr. W. T. Blanford, F.R.S.

DR. BEDDOE'S Huxley Memorial Lecture, though delivered at the Society of Arts, was under the auspices of the Anthropological Institute.

WE regret to announce the death, on the 26th ult., of Dr. Ralph Copeland, Astronomer Royal for Scotland. He was born at Woodplumpton, near Preston, in Lancashire, on September 3rd, 1837, but went abroad in early life, and began his astronomical career at Göttingen in 1867, afterwards becoming successively assistant at Lord Rosse's Observatory, Birr Castle; at that at Dunsink, under Prof. (now Sir Robert) Ball; and at Lord Lindsay's at Dunecht. In 1889 he was appointed to succeed the late Prof. Piazzi Smyth at Edinburgh, and superintended in 1896 the construction of the new Royal Observatory on Blackford Hill. Whilst in Germany he joined an exploring expedition to East Greenland; and subsequently took part in many scientific expeditions, particularly those sent to observe the transits of Venus, at Mauritius in 1874 and at Jamaica in 1882, also the total eclipses of the sun in India in 1898 and in Spain in 1900.

WE also have to regret the loss last month of Dr. Walter Friedrich Wislicenus before he had completed his forty-sixth year. Born at Halberstadt, in Saxony, on November 5th, 1859, he had been connected with the Strasburg Observatory since 1880, and took part in the German expedition to South America to observe the transit of Venus in 1882. He was named Professor Extraordinary of Astronomy at the

University of Strasburg in 1894. His lunar and planetary observations were very numerous, besides which he took great interest in historical and chronological questions as connected with astronomy, and contributed to Valentiner's 'Handwörterbuch der Astronomie' and to Ginzel's 'Spezieller Kanon der Finsternisse.' But one of his most useful labours was the editing of the astronomical 'Jahresbericht,' which has appeared regularly every May since 1896. We have had occasion to notice this each year, and hope that it will be continued by other hands.

Madame Ceraski, examining photographic plates taken by M. Blajko at the Moscow Observatory, has detected another variable star in the constellation Ursa Major. Its magnitude appears to change between about 9·5 and 12·5; its designation in a general list will be var. 106, 1905, Ursæ Majoris.

The Leonid meteors will be due on the morning of the 16th inst., but the display is not likely to be brilliant, particularly as the moon (only four days past the full) will be very bright if the sky be fine. The Andromedes, however (sometimes called Bielid meteors from their connexion with Biela's comet), will probably exhibit an evening shower a few days later, though the exact date cannot be assigned.

The Report for 1904 of His Majesty's Astronomer at the Cape of Good Hope (Sir David Gill, F.R.S.) to the Secretary of the Admiralty is dated 1905, February 15th, but has only recently been received. The new transit circle has been installed, but a large amount of work had to be done, in the determination of its division errors and other instrumental constants, before it could be brought into regular use. This work was completed towards the end of last year. The arrangements for the new sidereal clock and the erection of a nearly air-tight enclosure for it have also occupied much time. An accident to a portion of the Victoria telescope during the absence of the regular observers caused a suspension of some of the operations. However, the non-reversible transit-circle was used throughout 1904, chiefly for the observations necessary to complete the Cape General Catalogue for 1900, and the new reversible one came into regular use at the beginning of 1905. Work has been continued with the equatorials and the astrographic telescope and laboratory; and a considerable number of star-spectra have been photographed. Sir David Gill undertook, at the request of the Colonial Governments, the general superintendence of the Geodetic Survey of South Africa, and has taken a prominent part in the preparation of arrangements for the establishment of a central office to complete the Geodetic and Topographic Survey of British South Africa south of the Zambesi.

FINE ARTS

ART, ANCIENT AND MODERN.

The National Gallery of British Art (The Tate Gallery). With an Introduction by Sir Charles Holroyd. (Cassell & Co.)—This volume is handsomely got up, and great care seems to have been taken with the illustrations, both the "Rembrandt" photogravures and the half-tone blocks being admirable specimens of their kind. It is not so easy to praise the choice of the pictures which have the honour of full-page photogravures. One must suppose that the same taste for the prettily anecdotic and the turgidly sentimental which has in the main controlled the formation of the collection itself has governed the choice of the publishers. We cannot doubt that if the choice had been in the hands of Sir Charles Holroyd it would have been very different, for though in his introduction he speaks of the work of the English illustrators like Maclise and Leslie with a tolerance which few artists share, one can see that his real enthusiasm is for Stevens, the early Millais, and Watts. In the book, however, we find some of the most deplorable efforts of modern popular picture-making flaunting in photogravure, while the few serious designs which the gallery contains — the works by Alfred Stevens, Leighton's 'The Sea gave up its Dead,' and Madox Brown's 'Christ washing Peter's Feet'—are relegated to small illustrations in the text. It could hardly be expected, indeed, that a work on this collection could have great artistic interest, but more might, we think, have been made out of it than has here been done. In selecting from such a gallery there was surely no need to emphasize the popular aspect.

Drawings of John M. Swan, R.A.—Drawings of D. G. Rossetti. "Modern Master Draughtsmen." (G. Newnes.)—Most of Mr. Swan's drawings lend themselves admirably to reproduction. His firm and rather decided contours and solid modelling, and the general plastic quality of his design, stand the test well, and the present volume is a just tribute to his real power as an animal draughtsman. In his animals he has, owing to his intimate knowledge and his early appreciation of Barye, arrived at a real sense of style. Curiously enough, in the figure drawings given in this volume this sense of style deserts him completely. When he treats the human figure we miss altogether the large unified curves of contour, the economy of means, and the emphasis on the essential. But the animals are often superb, and we welcome a book which will make their merits more widely known.

The drawings of Rossetti are of more delicate material than Mr. Swan's, and many of them have lost altogether their finer flavour in the process of half-tone reproduction. Still where, as in the earlier drawings, so much depends upon the invention, upon the general disposition of line and mass, and where these show such profound feeling and such authentic inspiration, one cannot but derive a keen pleasure from such a collection as this. Nothing, for instance, could altogether destroy the mysterious charm of the 'Sangraal,' or the 'Palace of Art,' or the marvellous portrait of Miss Siddal (plate xxxiii.). There are some drawings that are new to us in this collection, and though we could have spared a good many of the over-elaborate and empty later drawings in exchange for yet more of the inimitable early inventions, the collection is full of interest.

Les Grands Artistes.—Praxitèle. Par Georges Perrot.—*Lysippe.* Par M. Collignon.—*Douris, et les Peintres de Vases Grecs.* Par E. Pottier. (Paris, Renouard.)—In these three little volumes we have studies of well-known artists, or groups of artists, by writers whose names are a sufficient guarantee for the authority of their work. In M. Perrot's volume we have an opportunity of seeing how one who has written admirable descriptions of the earlier phases of art deals with the masters of Hellenic sculpture, while M. Collignon's subject gives him scope for the amplification and revision of the chapter on Lysippus in his 'Histoire de la Sculpture Grecque' in the light of more recent discoveries. The books are evidently written for artists and for the general reader rather than for archæological specialists; but their scale is sufficient to allow of a discussion of the various problems involved, which is, indeed, indispensable to a critical treatment of the subject.

M. Perrot naturally begins his study with the Hermes of Olympia, as the one authenticated original from the master's hand; and here, as indeed throughout the volume, he finds a fitting theme for the eloquence of criticism and fine expression of artistic appreciation that mark his style; one feels throughout that the book could only have been written in French, and that few, even among French authors, could have written it so well. To turn from the manner to the matter, M. Perrot's treatment of Praxiteles is not strikingly original, but is rather an impartial summary of recent theories, with a tendency to compromise rather than to accept or reject decisively, which is perhaps a merit in the present state of our knowledge. He accepts Furtwängler's theory of the later date of the Hermes, and of an earlier period, represented by the Satyr cupbearer, in which Praxiteles shows Polyclitan influence. M. Perrot is guarded in his opinion of the various works that have recently been claimed as Praxitelean originals. He is most inclined to accept the suggestion in the case of the Leconfield head, which he regards as belonging to one of the numerous Aphrodites that came from the master's studio. He is rightly more sceptical as to the Eubouleus, in which he thinks the Praxitelean traits are sufficiently explained by attribution to a pupil. On the other hand, a comparison of the Aberdeen head in the British Museum with the Hermes leads M. Perrot to confirm its Praxitelean attribution; but while this opinion is shared by many competent critics, it is hardly justified by the analysis of the forms here given. The modeling of the forehead, for example, is by no means identical; there is not the flow of line that characterizes the Hermes.

In M. Collignon's 'Lysippe' one turns first of all to see the position he assigns to the Agias. Accepting the statue found at Delphi as a contemporary copy in marble of the bronze original, he naturally awards it the place of honour among Lysippean works that have survived. The essential difference between it and the Apoxyomenus, which has hitherto occupied that place, is admitted by him; but he would explain the difference by regarding the Agias as an early, the Apoxyomenus as a later work of the master. This theory is not easy to reconcile with the facts, for the Agias was set up, according to M. Collignon's own dating, between 338 and 334 B.C. Even if we place the beginning of the artist's career in 350 B.C., not, as is more probable, in 370, the Agias is a work of his maturity. And the differences between the two are so great as to make the attribution of the Apoxyomenus to Lysippus—an attribution by no means well grounded on external evidence — very doubtful. Perhaps the expedience of compromise may be pleaded here, too, but it seems to cause confusion in any attempt to grasp the artistic character of the master; above all, it obscures the vigour and power of expression that mark his work. But for comparison with the Apoxyomenus, it is difficult to believe that M. Collignon would have been led to regard the Azara head of Alexander in the Louvre as coming nearest to the work of Lysippus. Many other examples are far more vigorous in their portrayal of character, and so fit better the literary descriptions as well as the style of Lysippus, as represented by the Agias. It will probably be some time before the balance of opinion as to Lysippus settles down again after being so rudely disturbed; but M. Collignon's treatment of this master seems, so far as one can judge at present, to allow too little rather than too much weight to the brilliant discoveries of his colleagues at Delphi.

Readers who are familiar with Greek vases will probably wonder why Douris, perhaps the least original among the masters who sign Attic vases, should be chosen to give his name to M. Pottier's work. The author anticipates this criticism by the reply that we possess more vases signed by Douris as painter—twenty-eight in all—than by any other master; while in other cases we often have to do only with the potter. The line taken in the book is consistent with the title. No attempt is made to supply a general sketch of Greek vase-painting, or even of the work of the best-known Attic masters; but Douris and his work are taken as

typical and followed throughout. Out of twenty-five illustrations, fifteen reproduce his vases, while the majority of the rest show technical details of the manufacture of Greek pottery—everything, in short, is described in relation to the master selected as a theme. And, this method being adopted, it is skilfully carried out. In his scenes from ordinary life—the school, the gymnasium, and the camp—in his vivid and quaint representation of the uncouth revels of satyrs, in his dramatic groups from the contest of Ulysses and Ajax, in the pathetic picture of Eos with the corpse of her son Memnon, Douris touches on the most characteristic themes of the Greek vase-painter; and M. Pottier avails himself of the opportunity to treat him as typical of his fellows and rivals. Perhaps this plan is best for arousing the interest and holding the attention of those for whom the book is written; but if it is to be the only one in the series on Greek vase-painters, one cannot but feel that the notion conveyed will be partial, and that the most vigorous and dignified work of these artists will be unavoidably ignored.

All these books are examples of popular writing in the best sense, and the editors of the series are to be congratulated on having induced distinguished specialists to produce volumes so readable and so instructive.

EARLY ENGLISH PAINTERS AT SHEPHERD'S GALLERY.

As usual at this gallery, the visitor has a chance of exploring the neglected byways of English art, and becoming acquainted, thanks to Mr. Shepherd's industrious research, with a number of minor masters whose names have already dropped into (often undeserved) obscurity.

It is rarely, for instance, that one finds an example of F. W. Hurlstone, the friend of Haydon and enemy of the Academy, who had some fame in his day. If he often painted as well as this *Gil Blas and the Canon Sedillo* (No. 98), he must have been an original and vigorous artist. Already, while the older tradition was still strong, he seems to have struck out in the direction of certain more modern painters—to have anticipated the strong colour and vigorous handling of Phillip—almost, indeed, to have surpassed him, and carried the research for salient relief and vibration of colour to the point where the Impressionists took it up. It is certainly not a great masterpiece: there is commonness in the design, and there are lapses in the drawing; but it is an exceedingly interesting picture, not without its importance in the history of nineteenth-century painting. — Thales Fielding, the brother of Copley, is another little-known man; by him is a tolerable picture, *Richmond, Yorkshire* (110). —Michael Wright (the despised "Wright" of Pepys's 'Diary') is not familiar, and yet the portrait of *Mary, Daughter of Lord Montague* (108), is an accomplished performance somewhere near to Kneller, but with less swagger and more feeling.—There is a highly characteristic Kneller, *Portrait of a Youth* (105), and a portrait of *Lord Crewe* (79) which, if it be indeed his, shows him in a more sensitive and sympathetic mood than was usual with him. — Joseph Highmore's *Portrait of a Lady* (84) and Richardson's admirable *Portrait of Richard Wilson* (99) fill up a vague and indecisive period of English portraiture with respectable and sound but uninspired workmanship; and Allan Ramsay's portrait of a woman (113) shows at least a certain scrupulosity of taste.—One more painter whose name has been somewhat overlooked, Nathaniel Dance, is seen in a portrait of *Lord Cremorne* (120), which comes within an ace of being first-rate.

Of well-known names there are a few examples here—none, perhaps, of great importance, but all of interest. A very early Gainsborough, *Joshua Kirby and his Wife* (74), must be placed first, for, although the faces have still the wooden doll-like air of the older English portraits, the woman's blue dress, her hand, and the hat which lies on her lap are painted with an exquisite precision, a dainty, yet cautious deliberation, which show already the great master, but show him as yet unconscious of his powers, and only trying as it were to do his best like a conscientious student. His small *Landscape* (125) is still rather early, but already easy and assured. It has unfortunately lost a little of the inimitable accent of his touch in some parts by abrasion. —The Romney, *Lord Clanricarde* (73), is a rather dull portrait, but more definitely artistic in intention than many of his conspicuous successes. — A most delightful Zoffany of *Sir Horace Mann* (81), a small full-length figure in a landscape, attracts one by the originality of the colour scheme, in which a dry red and curious discoloured greens predominate.—Finally, we may mention a really good Callcott (117), no common event; a curious and unfamiliar, but indubitable Wilson (114), with strong reminiscences of Crome in it; a most delicately painted *Lady in a Straw Bonnet* (82), which may possibly be an early Raeburn; and some very slight, but in their way perfect notes of atmospheric effects by Turner.

ETCHINGS AT GUTEKUNST'S GALLERY.

The extraordinary merits of Canaletto as an etcher must have long been known to professional etchers, since his influence is traceable in Méryon and the early Whistlers, but he has hardly been recognized by the public at large. The collection of his works seen here prove that he was as distinguished in his use of the needle as he was unmatched in the handling of paint. Some of them, it is true, appear at first sight a little dull in composition, rather literal and topographic than artistic in intention; but Canaletto always concealed the rare delicacies of his feeling beneath an air of matter-of-fact indifference. They are there, the delicacy and sensibility, none the less, and reveal themselves to the patient amateur. Sometimes, indeed, as in the *Porte del Dolo* (No. 7), the grandeur and dignity of the design are unmistakable at a first glance; and never does the artist fail for an instant in the certainty of his touch and in economy of means.

Together with these the present exhibition comprises a selection of Rembrandt etchings—all, it is needless to say, in excellent, and some remarkable, states. It so happens that among them are included also some of the most inspired and the most moving of Rembrandt's works. *Tobit Blind*, *Abraham's Sacrifice*, *Abraham entertaining the Angels*, *The Return from Egypt*, and *Christ among the Doctors* are all final interpretations of the subjects—interpretations which rise to the mind at once when the themes are named, to the exclusion of all others. It is always a pleasure to see these again, however familiar they may be; and to see them in fine condition, as they are here, is an opportunity not to be missed.

By way of contrast, we suppose, some of Mr. Zorn's etchings are included. He has real gifts of hand and eye which make everything he does assured and intentional, but he approaches etching from the point of view of tone, not of line, and his vision is lacking in distinction, as his mind is in imagination. Still, in some of the later work he seems to get more into real relation with his subject—to express something more than his summary, but brilliant observation of the fact. Beside Rembrandt and Canaletto it is difficult to note him with anything but a passing curiosity in the vigorous expression of an essentially common perception.

CHARLES H. POINGDESTRE.

124, Cheyne Walk, Chelsea, S.W., October 30th, 1905.

I have learnt to-day of the sudden death of this well-known animal and landscape painter on Thursday morning, the 26th inst. A native of Jersey, he may literally be said to have died "*alone* in London," where he had lived for a considerable length of time in retirement at Victoria Mansions. His studio was for more than thirty years in the Via Babuino in Rome, and his name will recall to a few survivors memories of his career as acting president of the British Academy of Painting in that city.

During my own recollection (1875–81) he painted numerous scenes of the wild life in the Campagna around Rome, such as buffaloes and cattle wading in the stagnant water while vainly sheltering their unwieldy forms from tormenting flies and mosquitoes amidst the tall reeds and bulrushes. These subjects have often appeared on the walls of our Royal Academy.

After dinner he was accustomed, like other Anglo-Romans, to make one of the circle of Englishmen and Americans who habitually frequented that division of the Caffè Greco in the Via Condotti known to us all as the "Omnibus."

I remember well his familiar face and figure as he sat nightly imbibing *caffè nero* in that chosen resort of artists and writers, hallowed by long Roman use and custom. Poingdestre had a sorry trick of tip-tilting his hat over his eyebrows which lingers in my memory — a peculiarity seemingly trivial in itself, but highly irritating to the nerves of his opposite neighbour.

Thackeray and Gibson, the sculptor of 'The Tinted Venus,' were of those gone before my time; but we still counted among us Morris-Moore; F. Marion Crawford; Halswelle; Rogers, the American sculptor of 'The Blind Girl of Pompeii'; and Davies, the writer of 'The Pilgrimage of the Tiber,' with numerous other celebrities since better known to fame.

Of the long list I knew so intimately only two or three are now living, and I am nearly the last left to record and enumerate the rapidly vanishing throng.

Poingdestre was a man of very taciturn and reserved character and temperament, almost unsocial in manner, but a worthy friend in need of all artists. William Mercer.

LATE CELTIC.

Christ Church, Oxford.

May I venture to protest against a misuse of the term "Late Celtic," which seems to be spreading in England? The term was, I believe, invented to denote an art which appears in Celtic lands somewhat late in the history (or prehistory) of the Celtic races, and which lasts for several centuries, arising before the Roman conquest of western Europe, maintaining a half-suppressed existence during the Roman period, but in the end strong enough to influence mediæval art. It belongs to no special date or political area, but is an art which meets us in various settings.

But quite recently the idea seems to have got abroad that this Late Celtic art is confined to pre-Roman days in Britain. In museums, pottery of the Roman period, but of Celtic tradition, is being relabelled not only Late Celtic but also pre-Roman, and more than one puzzled curator has told me that he understood this was now the correct attribution, but that he could not see why the pottery was not Roman. Lately, a reviewer took me to task

for noticing Late Celtic art in a sketch of Roman Britain, and writers on the pre-Roman age are beginning to include Roman objects of Late Celtic style under their pre-Roman headings.

In addition, the unfortunate term is being used as a refuge for all sorts of objects. The other day, in a work *quem honoris causa non nomino*, a bracelet of Italian type, possessing Pompeian parallels, was assigned to the Late Celtic region, because (apparently) the writer did not know what else to make of it.

F. Haverfield.

Fine-Art Gossip.

Continuing the remarks we have made in previous weeks on the rapid reorganization of the Louvre and other museums of France, we may say that the Château of Maisons, close to Paris, which now belongs to the Administration of the Fine Arts, is to be adorned with many French pictures of the seventeenth and eighteenth centuries from the "reserve" of the Louvre. We wish that Écouen, which also belongs to the State, and is closed against the many visitors who go to the neighbouring Montmorenci to see the glass, might be handed over to the Under-Secretary for the Fine Arts and receive similar treatment as regards the Renaissance period. Maisons is no longer a good specimen of Mansard, while, stripped as it is, Écouen is still the most interesting château of France.

To-day is the private view of the autumn exhibition of Messrs. Marchant & Co. at the Goupil Gallery, which includes a collection of works by the Dutch artist J. C. W. Cossaar.

To-day also we are invited to the private view of the London Sketch Club at Messrs. H. Graves & Co.'s galleries.

M. Gustave Surand and M. W. Blair-Bruce have a show of 'Animal Subjects and Trafalgar and Marine Pictures' at the Doré Gallery. The private view is to-day.

At the New Gallery the Society of Portrait Painters open their season next Monday.

Messrs. T. Agnew & Sons invite us to the private view of their annual winter exhibition on Tuesday next.

The Royal Society of Painters in Water Colours hold the private view of their winter exhibition on Saturday next.

An exhibition of nearly one hundred water-colour drawings by M. Henri Harpignies will be opened to-day at the Leicester Galleries, Leicester Square. This famous artist, who is now in his eighty-sixth year, is the last of the Barbizon school of painters, and the contemporary of Corot, J. F. Millet, Daubigny, and Rousseau.—At the same galleries Mr. Arthur Burrington holds to-day a private view of water-colours, 'In Gardens Fair and Meadows Sweet,' and Prince Bojidar Karageorgevitch, who has of late devoted himself to the production of gold and silver objects, is about to show a collection of his work.

Some changes have occurred in the arrangement of pictures at the National Gallery. The Bartolommeo Vivarini is brought down into a place where its beauties can be seen; and Bartolommeo deserves more praise than he has had. It hangs now beside the Alvise Vivarini so long and so unnecessarily hidden from the public in the Director's offices. It is certainly not a masterpiece, but it is an excellent example of an important phase of Venetian art which is otherwise unrepresented in our gallery. We have repeatedly urged this alteration, and are very glad to see it accomplished.

The death is announced on Friday week last, at a great age, of Mr. Rudolf Lehmann, the well-known portrait-painter, who had many famous sitters, and gained special success by means of emphasizing the charms of the ladies who were his subjects. For the modern developments of art he had no regard, and his smooth and accomplished work is not likely to take a high place in the history of portrait-painting.

In the course of the present month the first instalment of reproductions (twenty in number) of drawings by Old Masters will be distributed to members of the newly formed Vasari Society. The artists represented are Leonardo da Vinci (four drawings), Piero di Cosimo, Raphael (two Madonnas), Timoteo Viti (two heads), Pisanello and his school, Titian, Paolo Veronese, Hans Holbein I. and II., Ambrosius Holbein, Lucas van Leyden, and Rubens. A second set of drawings will be issued next spring. The Hon. Secretary of the Society is Mr. G. F. Hill, 10, Kensington Mansions, S.W.

The *Revue Internationale des Falsifications* is probably unknown to many of our readers, and yet it has reached its eighteenth year. Its chief concern is with commercial adulterations; but the current issue (of which the London agents are MM. Hachette) contains the first of a series of articles on 'La Falsification des Œuvres d'Art et le Commerce des Faux' by M. Ch. Franche. There is in Paris an *officine* where needy artists of ability are employed in manufacturing old and modern "masters," and several recent lawsuits in the French courts show that the trade in such pictures is one of considerable proportions. M. Franche makes many interesting revelations, one of which concerns three so-called works of Delaroche in the famous San Donato sale of 1870, which together realized 80,000 francs; these were simply copies by artists who received from 400 fr. to 500 fr. each.

M. Léon Augustin Lhermitte has been elected to the vacancy (caused by the death of Henner) at the Paris Académie des Beaux-Arts, receiving nineteen votes to sixteen cast for M. Flameng. The new member obtained a medal at the Salon in 1874 for 'La Moisson,' which is now in the museum at Carcassonne. Two of his principal works are at the Luxembourg. M. Xavier de Ricard has been appointed Conservateur of the Château of Azay-le-Rideau, to which we referred in these columns some weeks ago.

Last spring the Société des Amis du Luxembourg purchased "une superbe toile" by Toulouse-Lautrec, known as 'Un Aspect du Moulin Rouge,' and offered it in due course to the Luxembourg, which possessed only a sketch by this artist. It was provisionally accepted by M. Bénédite. A few days ago the rumour gained currency in several newspapers that the gift was refused at a recent meeting of the Directeurs des Musées Nationaux, of whom the president is M. Léon Bonnat. M. Bonnat states in reply that there is not a word of truth in the rumour. M. Frantz-Jourdain, a member of the Société des Amis du Luxembourg, insists that the picture by Toulouse-Lautrec was refused, and refused "en termes peu aimables." And so the matter stands at present. But no one seems to know exactly where the picture now is.

M. J. E. Blanche has just been awarded the Grande Médaille by the city of Venice for his picture 'Le Verre de Venise,' which is regarded as one of his best works. Some time ago the same artist received a similar medal at Budapest for 'The Summer Girl.' It has been rumoured that M. Blanche had decided to live in London for the greater part of each year, but this is denied, and he will shortly resume in Paris the painting classes which he directs in conjunction with M. Lucien Simond.

Mr. Bodley, R.A., revives in Tuesday's *Times* the idea of a Campo Santo by the Abbey, but does so without any reference to the definite proposals made some years ago by Mr. Shaw Lefevre when Chief Commissioner of Works. These had the approval of the Dean of that day, who objected to further burials within the Abbey.

The Pannwitz Collection, dispersed at Munich on October 24th and 25th, realized a total of 1,150,000 marks, very high prices being paid for the rare examples of Meissen china. A pair of life-sized guinea-fowl fetched 38,000m.; 'The Horse Tamer,' 13,750m.; the group of Augustus III. with a lady (probably Countess Brühl), 10,450m.; the jays, 13,420m.; and the clock with paintings in the Chinese style, 12,760m. The celebrated gourd-shaped vases fetched 59,500m. Among other models by Kändler the large clock and the group of Freemasons were purchased for 28,600m. and 18,150m. respectively; the cocks with the caduceus mark for 14,300m. A standing cup with cover was bought for 10,780m., and another with the mark of Heinrich Straub, of Nuremberg, for 22,550m. Among the Swabian wood-carvings 'The Legend of St. Eligius' was acquired for 11,000m., and the figure of St. George for 9,185m.

MUSIC

THE WEEK.

NORWICH MUSICAL FESTIVAL.

Last week we were able to notice only hurriedly the five Choral Ballads of Mr. Coleridge-Taylor. The composer has to be judged by a high standard of his own, his scenes from 'Hiawatha,' and compared with these his Choral Ballads have done nothing to enhance his reputation. We spoke of rhythm and colour as two prominent factors in the music. For the most part, however, there is a lack of inspiration; moreover the constant repetition of words becomes wearisome. No. 4, 'The Quadroon Girl,' for baritone solo and female chorus, forms an exception. Here the composer seems to have felt the pathos of the poem; the music, like that of 'Minnehaha,' is simple and direct in its appeal; and be it noted that there is no vain repetition of words. Mr. Andrew Black sang the solo with effect.

The same programme included five Bohemian Poems, for baritone and orchestra, by Mr. Joseph Holbrooke. This composer has shown a liking for gloomy subjects; but here, with the exception of No. 4, 'The Story of a Drum,' the poems deal with life, liberty, and love. They are all clever, No. 3, 'Ere your Beauty,' and No. 4, mentioned above, being the finest. There is no concession to public taste in any of the numbers, but the music is healthy, strong, and spontaneous. Mr. Black was again successful as the soloist. The new scena 'Sir Launcelot and Queen Guinevere,' by Mr. Herbert Bunning, is pleasing and picturesque, though not powerful.

The name of Sir Hubert Parry is largely associated with sacred music, yet in his choral setting of Browning's 'Pied Piper of Hamelin' he has shown that he can deal effectively with a secular poem in which humour abounds. However light and merry the music, it is always refined; moreover it is constructed with rare skill, yet without a trace of pedantry. The ballad achieved instantaneous success, and we are glad to see it announced for Mr. Fagge's last choral concert of the present series. The soloists were Messrs. Ben Davies and Ffrangcon

Davies, who evidently enjoyed the fun as much as the audience.

Signor Mancinelli's new cantata 'St. Agnes' deals with the story of the maiden martyr as related in the 'Acta Martyrii.' The best portions of the short work are the Prelude, the choruses of Christians and of Romans, and the final "Agnes" solo. The music may not show marked originality, but it is well written. The composer writes in a thoroughly natural style; as an Italian, he is not ashamed, as some English composers seem to be, of simple expressive melody.

Space prevents a detailed account of the long festival programmes. We must, however, record excellent performances of Sir Edward Elgar's 'The Apostles,' of Sir A. Mackenzie's fine orchestral ballad 'La Belle Dame sans Merci,' Mr. A. Hervey's picturesque tone-poem 'In the East,' Edward German's spirited 'Welsh Rhapsody,' Dr. H. W. Davies's impressive 'Everyman' Overture, and Dr. Cowen's clever and amusing 'John Gilpin.' Madame Albani, the Misses Agnes Nicholls, Ada Crossley, and Muriel Foster, and Mr. John Coates, the principal singers in addition to those named, were all at their very best, while the admirable playing of the London Symphony Orchestra was a special feature of the festival. As so many composers conducted their own works, Mr. Alberto Randegger had a comparatively light task, but he may be congratulated on the tact and energy he displayed in his position.

ROYAL ITALIAN OPERA.—*Boito's 'Mefistofele.'*

MUSICIANS are apt to repeat subjects. Beethoven, notwithstanding the success of Paer's opera 'Leonore,' took the same subject for his 'Fidelio,' and in like manner Rossini was bold enough to measure his 'Barbiere' against that of Paisiello, which for many years had enjoyed extraordinary popularity. Arrigo Boito likewise produced his 'Mefistofele' in 1868, at a time when the reputation of Gounod's 'Faust' was world-wide. The operas of Paer and Paisiello gradually fell into oblivion, but Boito's work has not affected the success of Gounod. Neither is it likely ever to do so: in spite of certain scenes in common, the libretti are essentially different, the one aiming rather at pleasing the public, the other at displaying faithfully Goethe's complete scheme of salvation. Boito's music, too, is less direct in its appeal. It is very clever and characteristic, yet not so emotional as that of Gounod, neither does the workmanship always show a strong, sure hand. But there are many fine pages in the work: the Brocken scene is very original, and the 'Death of Margaret' highly dramatic.

The performance on Tuesday was in many respects excellent, yet Signora Giachetti and Signor Zenatello were not at their best vocally; while Signor Didur, who sang well, was not sufficiently commanding as Mefistofele. The orchestra was often too loud. In spite of the shortcomings mentioned, it was, however, a most interesting evening.

Musical Gossip.

THE second volume of 'The Oxford History of Music,' by Mr. H. E. Wooldridge, will be ready very shortly. It begins with the 'Ars Nova' of the later fourteenth century, and discusses in successive detail the problems of Musica Ficta, the Hexachord system of Guido, and the origin and character of Faulx Bourdon. It then describes in order the various schools of composition:—the Early English School, culminating in John Dunstable; the French and Gallo-Belgic Schools which arose under his influence; the growth of the Proportional System; and the careers of Ockeghem and of Josquin Desprès. There follows the rise of secular music in France and Italy, with an account of the three great opponents of the Flemish School. Finally, there is a survey of English music from the time of Dunstable to that immediately following the Reformation, until the climax is reached in the perfection of the old polyphony under Wilbye and his contemporaries, and the work of Palestrina.

THE London Choral Society's first concert took place at Queen's Hall on Monday evening, when a good performance was given of 'The Apostles' under the direction of Mr. Arthur Fagge.

THE programme of the first Symphony Concert at Queen's Hall this afternoon includes Bach's sixth Brandenburg Concerto, which, it is believed, will be performed for the first time in England. A curious feature of the work is the absence of violins from the score. In Méhul's opera 'Uthal,' by the way, there are no violins. Grétry, on leaving the theatre after the first performance, cried out, "Six francs pour une chanterelle!" Bach no doubt, like Méhul, aimed at a peculiar sombre tone effect.

MR. F. CORDER, chairman of the Society of British Composers, calls attention to the fact that the programmes of six orchestral concerts to be given shortly by the Sunday Concert Society do not contain a single work by a native composer, and in the name of his Society he expresses regret that "any body of music-lovers should be thus regardless of the claims of native art." For this regret there is just cause.

MISS HILL RIVINGTON announces an interesting series of three recitals "illustrative of violin music of the seventeenth, eighteenth, and nineteenth centuries," to be given at the Salle Erard on the afternoons of November 8th, December 13th, and January 25th. The programme of the first is of great interest. In addition to the instrumental music there will be songs by composers of the seventeenth century.

IN connexion with the 150th anniversary of Mozart's birth (January 27th, 1756), Herr F. Nikolas Manskopf will open a special Mozart exhibition in his Musical Museum at Frankfort.

PERFORMANCES NEXT WEEK.

SUN.	Sunday Society Concert, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
MON.	Miss Alice Chartres's Vocal Recital, 3, Bechstein Hall.
—	London Symphony Orchestral Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
TUES.	Miss E. L. Déyo's Pianoforte Recital, 3, Æolian Hall.
—	Mischa Elman's Violin Recital, 3, Queen's Hall.
—	Herr E. Krall's 'Cello Recital, 3.15, Steinway Hall.
—	Miss E. Amethe's Orchestral Concert, 8.30, Æolian Hall.
—	The Berlin Trio, 8.30, Bechstein Hall.
—	Mr. Richard Buhlig's Orchestral Concert, 8.30, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
WED.	Miss Hill Rivington's Violin Recital, 3, Salle Erard.
—	Royal Italian Opera, Covent Garden.
THURS.	Royal Italian Opera, 2.30 and 8, Covent Garden.
—	M. Louis Abbiate's 'Cello Recital, 3, Bechstein Hall.
—	Miss K. Goodson's Pianoforte Recital, 3, Æolian Hall.
—	Kruse Quartet's Chamber Concert, 4.30, Leighton House.
—	Royal Choral Society, 8, Albert Hall.
—	Miss Florence Schmidt's Vocal Recital, 8.30, Bechstein Hall.
FRI.	Miss Louisa Dale and Mr. H. Earle's Concert, 3, Bechstein Hall.
—	Popular Concerts for Children, 3, Steinway Hall.
—	Miss M. de Forest Anderson's Flute Concert, 8, Queen's Hall.
—	Miss Lilian Crow's Violin Recital, 8, Bechstein Hall.
—	Patti Concert, 8, Albert Hall.
SAT.	The Chaplin Trio, 3, Steinway Hall.
—	Chappell Ballad Concert, 3, Queen's Hall.
—	Mr. H. Kohler's Pianoforte Recital, 3, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.

DRAMA

THE WEEK.

WALDORF.—*Lights Out: a Drama in Four Acts.* From the 'Zapfenstreich' of F. A. Beyerlein.

PRODUCED at the Lessing Theatre, Berlin, on October 29th, 1903, 'Zapfenstreich' by Herr Beyerlein, who was till then best known as a novelist, took an immediate hold upon the German public, and enjoyed, thanks to the vivacity and accuracy of its pictures of regimental life, an extraordinary success not wholly unmixed with scandal. On January 8th, 1904, it was presented in London by the German company holding possession of the Royalty, and last year, under the title 'La Retraite,' found its way to Paris, where, with moderate success, it was played at more than one theatre. In presenting it in an English rendering the management of the Waldorf sought an answer to two questions: Would problems of military life, which are vital in Germany, be acceptable, or even tolerable, in England, where the conditions are non-existent, or, if existent at all, assume shapes so essentially different? Was the termination—as cruel as, under the conditions, it is inevitable—likely to prove acceptable to a public disposed to consider the carillon of wedding bells as the only fitting close to a love story? Both these demands were, as the result of the experiment, answered in the affirmative, and the venture is a popular and, as the event will probably prove, a remunerative success. Not very easy of acceptance is perhaps the *dénouement*, which, except that the heroine is a willing and not a reluctant subject of patrician lust, is the same as in the Roman story of Appius and Virginia. The plot may be briefly stated. Klara Volkhardt, the daughter of an inflexible old sergeant and the affianced of a republican corporal, becomes the mistress of Lieut. von Lauffen. His abduction of her leads to an assault by the corporal upon his superior officer, necessitating a court martial. In the course of this the sergeant learns of his daughter's shame. Seeing no remedy for this state of affairs, since considerations of caste or of military discipline prohibit the lieutenant from marrying his victim or from meeting her father in single combat, the sergeant shoots his child. Attempts had been made both in France and in England to substitute a milder decree for that which demanded as victim a woman presumably innocent, and assuredly guilty of no crime calling for a death penalty. The logic of the situation, however, triumphed over its painfulness. It is, of course, futile to say that military rule brings with it artificial injustice. War in itself—though it is, when regarded from one point of view, one of the most terribly natural of human conditions—is, from another, artificial, and its mere existence abrogates most conditions of justice and dreams of advance. With a wry face, accordingly, but with no further sign of difficulty, the public accepted a conclusion which is in absolute antagonism to every decree of poetical justice. From the moment when the direct action began the audience yielded all the acquiescence and

sympathy demanded. During the first act and half the second the movement was slow, and the actors seemed ill at ease under their new conditions. From that point onward attention did not waver. Not the slightest difficulty was offered by the forms of the court martial, the proceedings, indeed, appearing sage, comprehensible, worthy, and reverent.

Not a great part is that of Lieut. von Lauffen. It was, however, in the main, well played by Mr. H. B. Irving. The sergeant—the most dramatic character of the whole—was enacted with virility and intensity by Mr. Fulton; and Mr. H. V. Esmond exhibited passion as the corporal. Mr. Dawson Milward assigned weight to the military counsel for the defence. Much success attended the make-up and the proceedings generally of the German officers. Miss Eva Moore played with tenderness and earnestness the *rôle* of Klara, the one feminine personage in a drama the action of which never for a moment quitted the guardroom, the officers' quarters, and the precincts of the barrack.

GREAT QUEEN STREET. — *German Plays: Der Familientag: Lustspiel in drei Akten.* Von Gustav Kadelburg.

A NEW season of German plays, the seventh, began on Saturday at the Great Queen Street Theatre, the scene of some previous experiments, under the management of Herr Hans Andresen. The present company retains one or two members of the old, but is much altered. That any improvement is perceptible may not be said. There is, however, no noticeable falling off, and the interpretation of the opening novelty reveals points by study of which most of our English companies might profit. First played at the Berlin Lustspielhaus on November 28th, 'Der Familientag' is essentially and characteristically Teutonic. It has scarcely a pretence to plot, but has obtained a firm hold on Germany, due to the rather sentimental humour of its dialogue and the fidelity of its pictures of the various members of an aristocratic, but not wholly prosperous family, who to the accompaniment of a dinner at a fashionable hotel discuss and decide upon various matters connected with the development and maintenance of the family fortunes. Love has of course its share in the domestic deliberations, and the matter really in debate is whether, by a contemplated *mésalliance*, the heir forfeits, in accordance with tradition, the right to his inheritance. Fortunately, since the youth in question enjoys general popularity, it is discovered by one of the family, who is a noted archæologist, that a precedent establishing the right of the head of the house to marry whom he will lurks in the family records. In a blandly German way all this proves amusing and stimulating. Herr Hans Andresen is seen once more to high advantage; and the presentation of the characters generally is commendably free from caricature.

Dramatic Gossip.

THE next piece in which Mr. H. B. Irving will be seen is 'The Jury of Fate,' by Mr. C. M. S. McLellan, which he will produce at the Shaftesbury Theatre. Its leading idea seems to be that of a man whose prayer to lead over again a wasted life is granted.

'THE HEROIC STUBBS' is the name selected for the new play of Mr. Henry Arthur Jones, with which in January Mr. James Welch will open Terry's Theatre.

'THE INDECISION OF MR. KINGSBURY' is the title of an adaptation by Mr. Cosmo Gordon Lennox from the French of M. Georges Berr, in which Mr. Charles Hawtrey will appear at the Haymarket. Before its production, however, Mr. Hawtrey will be seen on Saturday afternoon next in 'Lucky Miss Dean.'

AT the close of the season of the Kendals at the St. James's the theatre will be let to Mr. Mollison, who will appear in 'Beside the Bonnie Brier Bush,' a four-act adaptation from Ian Maclaren, produced at the Shakespeare Theatre, Liverpool, on April 3rd.

THE reappearance of Mr. George Alexander at the St. James's will take place on February 1st in a comedy by Mr. Pinero entitled 'His House in Order.'

THE engagement at the Comedy of Mr. William Collier is on the point of expiring, and 'The Mountain Climber' (an adaptation by Mr. Cosmo Hamilton of 'Der Hochtourist,' first given at the Thalia Theater, Berlin, on August 20th, 1903) will be produced by Mr. Huntley Wright on the 18th inst. It will be preceded by 'The Little Father of the Wilderness,' a story of Versailles life under Louis XV.

THE production by Mr. Forbes Robertson of the new piece by Mrs. Madeleine Lucette Ryley is fixed for Tuesday, the 14th inst.

AN English rendering of 'Der Familientag' is, it is said, in preparation for a West-End theatre.

THE long-promised 'Voysey Inheritance' of Mr. Granville Barker will be given at the Court on Tuesday afternoon.

'THE LABYRINTH,' Mr. Courtney's rendering of 'Le Dédale' of M. Paul Hervieu, has been successfully produced at the National Theatre, Washington, by Miss Olga Nethersole, who took the character of Marianne.

WHEN Mr. Gaston Mayer assumes, on behalf of Madame Réjane, the management of the reconstructed Royalty, the house will—for the second, if not the third time—be renamed the New Royalty. Among pieces contemplated, in addition to those already named, are 'Les Cabotins,' by M. Tailleron; 'Le Pont,' by M. de Croisset; 'Brichanteau,' adapted by M. de Feraudy from M. Jules Claretie; 'Le Barbier de Séville' of Beaumarchais; M. Mirbeau's 'Les Affaires sont les Affaires'; 'Notre Jeunesse,' by M. Alfred Capus; 'La Rafale' and 'Le Détour,' by M. Bernstein; and 'Le Père Lebonnard' of M. Jean Aicard. Some mention is made of a revival of 'Louis XI.' by Casimir Delavigne. This programme is necessarily subject to modification.

THE memorable, though, alas! all but forgotten visit of the Rotterdam dramatic company to London is, after a lapse of twenty-seven years, to be repaid, performances of 'The Walls of Jericho' at Rotterdam, Amsterdam, and the Hague, by Mr. Arthur Bourchier's company, being arranged for January. Unlike their Dutch rivals, however, the English actors will take over a solitary piece, and not a repertory.

'DER HERR HAUSHOFMEISTER' is the title of the adaptation of Mr. J. M. Barrie's 'Admirable Crichton,' which has been produced at the Berlin Lustspielhaus with indifferent success. It may perhaps be maintained that every country has the drama it deserves.

TO CORRESPONDENTS.—R. S.—W. de G. B.—F. V. D.—F. W. R.—received.

C. B.—Writing. E.—Many thanks.

No notice can be taken of anonymous communications.

MESSRS. BELL'S
NEW BOOKS.

MINIATURE ILLUSTRATED CATALOGUE post free on application.

Crown 8vo, 6s. net.

INTERLUDES in VERSE and PROSE. By the Right Hon. Sir GEORGE OTTO TREVELYAN, Bart.

*** This Volume includes 'Horace at Athens,' 'The Cambridge Dionysia,' Extracts from 'The Competition Wallah,' 'The Modern Ecclesiazusæ; or, the Ladies in Parliament,' 'Anglo-Indian Lyrics,' 'The Dawk Bungalow,' &c.

"Sir George Trevelyan has done the State fresh service by revising and rearranging his *jeux d'esprit* of more than forty years ago. The title selected is the only unsatisfactory thing about the book. For the rest, we have some of the brilliant things tossed off with the energy and vivacity of the clever university man who is just beginning to feel his feet in the larger world outside the college quadrangle."
Punch.

Medium 8vo, with Title-Pages, End-Paper, and Cover Designed by the Author, and numerous Illustrations, 10s. 6d. net.

IDEALS in ART. By Walter Crane. [*Ready November 8.*

Contents:—The Arts and Crafts Movement—The Teaching of Art—Methods of Art-Teaching—Notes on Tolstoi's 'What is Art?'—The Influence of Modern, Social, and Economic Conditions on the Sense of Beauty—The Social and Ethical Bearing of Art—Ornament and its Meaning—Thoughts on House Decoration—The Progress of Taste in Dress in Relation to Art Education—Temporary Street Decoration—The Treatment of Animal Forms in Decoration and Heraldry—The Designing of Book-Covers—The Use of Gilding in Decoration—Raised Work in Gesso—The Relation of the Easel Picture to Decorative Art—A Great Artist in a Literary Searchlight.

NEW VOLUME OF
THE ENDYMION SERIES.

Post 8vo, 7s. 6d. Also 75 Tall Copies on Japanese Vellum, 21s. net.

POEMS by TENNYSON. Illustrated by ELEANOR FORTESCUE-BRICKDALE.

*** This volume, which is uniform with 'Keats' and 'Shelley,' illustrated by Mr. Anning Bell, and 'Browning,' by Mr. Byam Shaw, contains a selection from the early poems of Tennyson, including 'The Princess' and 'Maud.' There are about seventy illustrations by Miss Fortescue-Brickdale, who has also designed a special cover, end-papers, and title-page for the volume.

Crown 8vo, 5s. net.

The COMPLETE WORKS of ADELAIDE ANNE PROCTER. With Introduction by CHARLES DICKENS, and Portrait Etched by C. O. MURRAY after the Painting by B. Gaggiotti Richards.

CHEAPER REISSUE, 6s. net.

MILLET and the BARBIZON SCHOOL. By ARTHUR TOMSON. Small 4to. With Photogravure Frontispiece and 52 other Illustrations.

LITERATURE

The Gentleman's Magazine Library.—London. Edited by G. Laurence Gomme, F.S.A. 3 vols. (Stock.)

WHEN Edward Cave founded *The Gentleman's Magazine* in 1731, the individuality of London—and every great city possesses an individuality—was perhaps more marked than at any other period of its history. That individuality chiefly lay in a picturesque incongruity, the features of which had been greatly enlarged by the events of the past seventy years. In the central portion of the town, the old churches and halls which dated back to the days of the Plantagenets had been devastated by the Great Fire of 1666, and had been replaced by the graceful structures of Wren, dominated by the grand dome of St. Paul's, and surrounded by Caroline and Georgian mansions, which served at once for warehouses and dwelling-places. Beyond these modern erections, a belt of varying width extended from Aldgate in the east to Charing Cross in the west, mainly composed of gabled and barge-boarded houses which dated from the times of Tudor and Stuart. Further afield the builder, since the days of Charles II., had been busily engaged in constructing the newer streets and squares which were rapidly converting the fields of St. James's and Soho, Bloomsbury and Marylebone, into crowded centres of population. There is a kind of picturesqueness that appeals more to the historic sense than to the æsthetic feeling of beauty. Such was the picturesqueness of London north of the Thames. Beauty in parts the City has always possessed in a high degree, but since the Fire it has never formed an harmonious whole.

During a life that exceeded a hundred and thirty years, *The Gentleman's Magazine* witnessed, and often recorded, changes in the appearance of the capital which, as years went on, made more for utility and less for beauty. The massive mansions of the City merchants were gradually demolished; the black-and-white houses of Aldgate and Cripplegate, Cloth Fair and the Strand, made way for bricks and mortar; and the Georgian squares of the West End threw out unlovely tentacles that embraced the most distant suburbs. So far had modernization extended that in 1868, when the original series of the Magazine came to an end, the Metropolitan Railway had become an accomplished fact, while the Victoria and Albert Embankments and the Holborn Viaduct were on the verge of completion. It needs keen retrospective vision in the Londoner of our day to trace the landmarks of 1731, and it is good that in this handy form we should have the assistance of the correspondents of "Sylvanus Urban" in doing so.

The volumes before us contain the greater number of the contributions to *The Gentleman's Magazine* which deal with the area that is now comprised within the administrative county of London, the districts north of the Thames being included in the first two volumes, and those south of the river in the third. The duty of the editor seems to have been confined to the work of selection, and he states that it would not have been possible to indicate or correct by notes inaccuracies and deficiencies in the text. It would have involved the expenditure of some time and trouble to do so, but there was no impossibility in the matter, and it is a pity that an attempt was not made to correct errors that were due to imperfect knowledge on the part of the writers. It might, for instance, have been pointed out that Limehouse does not "derive its name from an immense number of limetrees with which, in former times, the place abounded" (ii. 236), and that Shadwell (Shadewell, *temp.* Hen. III.) was not "formerly called Chadwelle," nor did it take "its name, as is supposed, from a spring dedicated to St. Chad" (ii. 265). These omissions render it necessary that the reader should possess a certain amount of knowledge before he can safely assimilate the contents of these volumes.

For several years after the foundation of the Magazine London archæology was not one of its strong points. Beyond some interesting letters on Vauxhall Gardens, which appeared in 1742 and 1765, it contained scarcely a single communication of importance relating to London. The year 1778, when the Magazine came into the hands of the Nichols family, may be said to mark the establishment of a school of London topographers. Foremost amongst these were John Bowyer Nichols, the final letters of whose names, "N. R. S.," will be found at the foot of many valuable articles; his son John Gough Nichols ("J. G. N."); Thomas Edlyne Tomlins ("T. E. T."), the author of that masterpiece of scientific topography 'A Perambulation of Islington'; Alfred John Kempe ("A. J. K."), whose monograph on St. Martin's-le-Grand is of the highest value; Thomas Faulkner, the historian of Chelsea and Kensington; and many other antiquaries of distinction. In the department of dramatic history the value of the papers on the London theatres by Joseph Haslewood ("Eu. Hood"), which occupy sixty pages of the reprint, can scarcely be exaggerated. But perhaps the chief interest of these papers resides in the fact that they contain reminiscences of localities and scenes in London, which, if unrecorded in print, would have perished with the life of the contributor. With the exception of a few show bills which were transcribed and reprinted by J. T. Smith in his 'Streets of London,' we should have known almost nothing of that "festival of misrule and disorder," the old May Fair, had it not been for the recollections which the veteran antiquary John Carter furnished in 1816, and which have been copied into Hone's 'Every-Day Book,' and numerous other publications. Another valuable piece of contemporary evidence is the journal of Thomas Rugge, of which a large portion was communicated to the Magazine by Peter Cunningham. But to specify all the articles of interest which will be found in these volumes would occupy too much space, though, in view of the recent elevation of St. Saviour's Church to be the cathedral of an episcopal see, special attention may be drawn to the useful series of papers on that edifice printed in the third volume.

In bringing his work to a close the editor remarks that his diggings have not exhausted the material which is to be found in the Magazine. In order to vary the practice of quoting from the work under review, it may perhaps be permitted to disclose an unexcavated nugget which will be found in vol. xxii. p. 419 (New Series, October, 1844):—

"Between Holborn and Oxford Street the line of a new street is in a state of considerable forwardness. The vaults for the houses on either side of the way are completed, and the width of the thoroughfare is now marked out; through the whole distance a sewer is formed about fifteen feet below the surface. When the whole length is completed, there will be a direct communication between Holborn and Oxford Street, avoiding the circuitous way by St. Giles's Church. While digging ground for the vault on the site which was formerly the area of 'The Rookery,' the workmen met with some curious remains. Outside the walls, where stood the hospital for lepers, was found the root of a vine, in good condition. Several pieces of marble slabs were also taken out of the ruins of the above hospital, as also a marble slab with the following inscription on it: 'Buckeridge Street, 1688.' This street was built shortly after the fire of London, and out of some of the materials publicly sold after that calamity. A quantity of wood excavated here (some of which is oak) was discovered to be in a charred state."

Of the many hundred passengers who daily tread the pavement of New Oxford Street, few can be aware that they are traversing the site of the vineyard which was attached to St. Giles's Hospital, and was perhaps the source of the "medical comforts" that were supplied to the inmates. In stimulating our memories of these things Mr. Gomme has done a service to every Londoner.

It is to be regretted that the scheme of the publication did not admit of the reproduction of the plates which illustrated many of the articles. In these days of cheap processes the cost would not have been great, while the value of the book would have been infinitely enhanced. As a compensation for this loss, we are presented with an excellent and comprehensive

index, which we have successfully tested in many instances. Without it, indeed, the reprint would have resembled the proverbial bundle of hay. Misprints are few, considering the nature of the text. In vol. iii. p. 145, two spinster ladies are called "dames of the late John, and sisters of John Hardress." They were probably "daurs.," or daughters, of the elder John. Taking the volumes as a whole, we have confidence in stating that no working London antiquary can afford to be without them.

The Legend of Fair Helen. By Eugene Oswald. (John Murray.)

Mr. Oswald's book on Helen of Troy seems to have been originally a set of lectures, delivered probably to the English Goethe Society, of which he is secretary. It is not easy to understand whence the readers of the book are expected to come. Any one who wants to "get up" the whole body of myths about Helen—a study curious enough—cannot do better than consult the very full article in Roscher's 'Ausführliches Lexikon der Griechischen und Römischen Mythologie.' Perhaps Mr. Oswald's purpose was to illustrate the second part of Goethe's 'Faust,' in which Helen is more or less of an allegory of beauty. In Homer, of course our earliest source, there is no trace of conscious allegorizing, but when once the beautiful and charming daughter of the Swan had become a central figure in Greek literature, she was certain to be allegorized eventually.

Mr. Oswald begins with the Homeric Helen and her analogues in the whole realm of *Märchen*, and offers notes which attest some reading, yet can hardly be meant for scholars, who, if they are concerned about the Epic Cycle, are more apt to turn to the late Provost of Oriel's essay than to a summary of a few pages. Meanwhile the reading public will probably invade no scholarly works. The student who consults Catullus does not select Sir Theodore Martin's version; the reading public does not apply to Welcker's 'Der Epische Cyclus,' nor even probably agree with Mr. Oswald in thinking the Earl of Derby's 'Iliad' "beautiful." For what conceivable reader are the following opinions meant?—

"Welcker (1846) says that the reference to the Judgment of Paris, in Iliad xxiv. 23-30, is a late addition to a late book of the Iliad. Duruy [translation Mahaffy] says that the events mentioned in Iliad xxiv. 23-30, are 'a fable, later than Homer and Hesiod.'"

Mr. Oswald therefore reasons:—

"This might explain the lateness of the introduction of the story in Iliad xxiv."

It might, indeed! But

"of course the account might be older, might be in the 'Cypriacs,' and only be forgotten at the time when the bulk of the Iliad arose."

It *was* in the 'Cypriacs.' Is it meant that "the bulk of the Iliad" is later than the 'Cypriacs'?

We can scarcely regard the book either as truly scholarly or as frankly popular. However, the reader who is not already familiar with the theme will find a great deal that is new to him regarding the various Greek treatments of the story of Helen and about the variations by moderns, such as, among others, Goethe, Sir Lewis Morris, and Dr. Kenealy; and about three lines of Mr. Stephen Phillips in which there are allusions to the heroine. The Germans, too, have worked at Helen in their various ways, and their names and books are enumerated. But for an original rendering of the charm of Helen we must not apply to Mr. Oswald, while for Helen in ancient art it is more satisfactory to go to Engelmann's article in Roscher's wonderful collection above mentioned. The book, prettily bound and adorned by a photograph of a mid-Victorian Helen by D. G. Rossetti, has a very pleasing appearance, and is suitable as a modest yet cultured wedding present.

The English Dialect Dictionary. Edited by Joseph Wright.—Parts XXIV.-XXVIII. *T—Zwodder, Supplement, and Bibliography.* —Parts XXIX.-XXX. *The English Dialect Grammar.* (Frowde.)

When, in July, 1896, Prof. Wright issued to his subscribers the first 144 pages of 'The English Dialect Dictionary,' it was understood that the work was to consist of about thirty half-yearly parts of the same size, so that fifteen years, more or less, would be required for its completion. Little more than nine years have elapsed, and the dictionary is already finished, although it contains over four hundred pages more than were promised, and includes the 'Dialect Grammar,' which was announced as a separate work, for the appearance of which no time was specified. It is impossible to contemplate this result without admiration for the editor's extraordinary energy. The execution of the work, considering the rapidity with which it has been produced, is surprisingly good. This, of course, is not to say that it is faultless. Judging from our own experience, we should think that if an appeal were made to dialect students to contribute additions and corrections, sufficient material could soon be collected for a pretty large supplementary volume. It is to be hoped that such a volume will some day be published. The supplement included in the present issue is very incomplete even as regards the supplying of omissions, contains hardly any corrections, and itself requires a considerable amount of correction. We say this, assuredly not with any intention of depreciating the great work that has been accomplished, but because it is important in the interests of dialectal study that it should not be regarded as final. The 'Dialect Dictionary,' as it stands, is so valuable that we are very grateful for Prof. Wright's wise decision to hasten its completion, instead of spending another six years over the work in order to bring it nearer to perfection. It must be remembered also that a work which is long in hand is always exposed to the risk of accidents that may prevent it from being finished at all.

The portion of the 'Dictionary' extending from T to the end of the alphabet is at least equal in the interest and value of its contents to any preceding portion, and we think we have been able to discover a considerable improvement in some points of method. As the material remaining to be disposed of has grown smaller, it has naturally become more manageable. Owing perhaps partly to this, and partly to increased skill gained by experience, this last portion contains very few instances of the want of cross-references, of which formerly we sometimes found reason to complain. There is not much etymology in this instalment—it would have been possible to give a good deal more without venturing on uncertainties; but what there is is sound, and many illuminating quotations are furnished from writers of the sixteenth and earlier centuries. Among the many articles that are remarkable for their intrinsic interest and the skill with which the matter has been handled it may be worth while to call special attention—because they are somewhat liable to be overlooked—to those on the little words *the*, *that*, *to*, *what*, and *with*. The full treatment of dialectal uses of ordinary words, indeed, is one of the most valuable features of this dictionary, and it is all the more important because this subject has frequently escaped the notice of compilers of glossaries. It is not often that Prof. Wright is fairly chargeable with having included words that are out of place in a dialect dictionary. *Tranmire*, however, explained as "a high moorland plateau," must surely (however the author referred to may have understood it) be nothing but a place-name (it is obviously the Old Norse *trana-myrr*, "cranes' bog"); and the statement that *urn* is Scotch for "a tomb, grave," has no better foundation than the fact that half a dozen Scottish verse-writers have shown their literary culture by using one of the commonest of poetic conventionalities.

The Supplement, which occupies 179 pages, contains many things that seem to us questionable. The curious phrase "abated in his vitals," quoted from a Lancashire writer of the eighteenth century, appears to have nothing dialectal in it; it is rather a bit of attempted fine writing. Under *Annaseed*, a name applied to *Myrrhis odorata*, a cross-reference should have been given to *Anise* in the body of the 'Dictionary.' *Awkendale* should have a cross-reference to *Haughendole*. *Baudminnie*, "a plant having the same properties as the savin," is the same word as *baldmoney;* the curious description becomes intelligible when the medicinal uses of baldmoney and savin are known. *Belvet* is probably not a "misprint for velvet"; it was some thirty years ago, if it is not now, a common mispronunciation of that word in certain districts. The Manx *Bach* is certainly not the Welsh *bach*, "little"; it appears elsewhere in the Supplement as *Bough*, with the correct explanation, "a term of contempt, a poor, silly creature." The Wigtonshire *Brachton*, "a term of contempt," and the Galloway *Brawchton*, "anything weighty or unwieldy," ought at any rate to have been compared, if not placed under one heading. We have no space to go through the list of matters of this kind that we have noted, but we must mention that *Poppoe*, given as a West Yorkshire word for a donkey, on the evidence of a single quotation from a Sheffield writer, is really the ordinary word in baby language for a horse in South Yorkshire and the

adjoining counties, and ought certainly to have been given with the proper explanation in the 'Dialect Dictionary.' The Supplement seems from some cause to have been much less carefully prepared than the rest of the work.

The classified Bibliography, which extends to fifty pages, and is accompanied by a full index, is a marvel of completeness, and, so far as we have been able to test it, perfectly accurate.

In the very interesting preface to his 'Dialect Grammar' Prof. Wright explains that the index was compiled and printed first, and that the grammar itself was written mainly from the materials contained in the index. That this was the right way of going to work is not likely to be doubted by any one who understands the nature of the task to be performed. The index, so far as it relates to the phonology (which is the largest and most elaborate part of the grammar), consists of a list of about 2,400 words, none of them exclusively dialectal, selected as being likely to be widely familiar to speakers of pure dialect, and as affording material for conclusions as to the manner in which the sounds of Old English and Old French are represented in the speech of various districts. After each word follows the enumeration of its varieties of local pronunciation, with indications of the geographical area over which they severally extend. The compilation of this index has been a task of immense difficulty. Copies of the word-list were sent to 1,200 persons, who were requested to furnish the editor with information respecting the pronunciation of the words in their own neighbourhoods. The result was that Prof. Wright had to undergo the labour of digesting into shape, testing, and reconciling the statements contained in half a million slips.

That a large proportion of this huge mass of material was untrustworthy or unintelligible will surprise no one who knows how few even of educated people have any notion of accurately analyzing the sounds of their own speech. The difficulty was greatly increased by the circumstance that the simple phonetic notation used in the 'Dialect Dictionary' was found not to be sufficiently delicate for the purposes of the 'Grammar,' because in many dialects extremely subtle varieties of sound are distinct in etymological significance; and it had therefore to be abandoned for one much more complicated and more difficult to understand and use correctly. A phonology of English dialects based mainly on the reports of unskilled observers must necessarily contain many errors. We believe, however, that the work has been better done by Prof. Wright than it could have been done by any other man living. His book supplies an excellent groundwork for future investigations, and its thoroughly scientific arrangement will render it easy for subsequent workers to improve upon it in detail.

Prof. Wright does not attempt in this 'Grammar' to point out the bearing of the facts of modern dialect pronunciation on the historical grammar of English. He intimates in his preface that he intends to do this fully in another work. The announcement will be received with keen interest by all students of English philology. The portion of the 'Grammar' treating of accidence is comparatively of small extent, but much of the matter that it might have contained is already in the 'Dictionary,' and would gain little or nothing by rearrangement.

The six volumes of the 'Dialect Dictionary' are an achievement of which Prof. Wright may reasonably be proud, and no one will have a right to complain if he should consider that he has spent enough time and labour on this one task. Nevertheless, we cannot help strongly desiring that he may in the future have opportunity and inclination to produce the volume of additions and corrections which is needed to render his dictionary thoroughly complete.

Modern India. By William Eleroy Curtis. (Chicago, New York, and Toronto, Fleming H. Revell Company.)

This book, written by an American for Americans, is most puzzling to deal with. It is a strange medley of wit and wisdom with error and ignorance, of fun and burlesque with serious study, the good qualities, however, predominating. It is a pity that the author did not get a competent friend to read his MS. and correct errors. This would have improved the book in its serious aspect, but with equal certainty it would have detracted from the amusement to be got from its more frivolous pages; so the profit must be balanced against the loss.

The story begins with the voyage to India, on which Mr. Curtis was shocked with the dress and display of some ladies:—

"I have never known the most vulgar or the commonest American woman to make such a display of herself in a public place as we witnessed daily among the titled women upon the P. & O. steamer Mongolia, bound for Bombay. Nor is it exceptional. Whenever you see an overdressed woman loaded with jewelry in a public place in the East, you may take it for granted that she belongs to the British nobility."

The arrangements at Bombay for landing passengers and dealing with their luggage are highly praised, the author getting off with a payment of 5 per cent. on his typewriter and kodaks. The city made a favourable impression, and is excellently described. Its statues attracted attention, that of Queen Victoria being specially admired; others are noticed—to Lord Cornwallis, and

"to the Marquis of Wellesley, younger [*sic*] brother of the Duke of Wellington, who was also governor-general during the days of the East India Company, and did a great deal for the country. He was given a purse of $100,000, and his statue was erected in Bombay, but he died unhappy because the king refused to create him Duke of Hindustan, the only honor that would have satisfied his soul."

Social customs are mentioned, and the word "gymkhana" is a puzzle:—

"And if you want another conundrum, what is a chotohazree? It is customary for smart people to have their chotohazree at the Gymkhana, and I think that you would be pleased to join them after taking the beautiful drive which leads to the place. Nobody knows what the word was derived from, but it is used to describe a country club—a bungalow hidden under a beautiful grove on the brow of a cliff that overhangs the bay—with all the appurtenances, golf links, tennis courts, cricket grounds, racquet courts, and indoor gymnasium, and everybody stops there on their afternoon drive to have chotohazree, which is the local term for afternoon tea and for early morning coffee."

We live and learn.

Mr. Curtis found these customs pleasant, and set about preparing his establishment after the Oriental manner by hiring as bearer a stalwart Mohammedan of imposing presence, who turned out to be a fraud:—

"It was a mistake. Beauty is skin deep. No one can judge merit by outside appearances, as many persons can ascertain by glancing in a mirror. Ram Zon, and that was what we called him for short, was a splendid illusion. It turned out that he could not scrape together enough English to keep an account of his expenditures and had to trust to his memory, which is very defective in money matters."

The usual sights were seen and are described, and then we are plunged deep in statistics of 'The Empire of India.' These are probably derived, immediately or otherwise, from official sources; they are intelligently set forth and expounded.

The author visited Baroda, and describes with much humour and accurate detail a wedding at which he was present. He did not admire the dancing girls ("the nautches," as he calls them), nor the orchestra, which produced

"the most dreary and monotonous sounds without the slightest trace of theme or melody or rhythm.....exactly as if some child were trying to play a bagpipe for the first time."

The religions of India—a subject beyond the capacity of most travellers—are next dealt with, and Mohammedans are pronounced to be vastly superior to Hindus; "not so ignorant nor so filthy nor so superstitious nor so submissive to their priests." Comparisons usually are odious, and this one is unfortunate. We are next told that the Sikhs recognize Mohammed as the prophet of God and exponent of His will, the fact being that no two religious bodies are more bitterly opposed than Sikh and Moslem.

'How India is Governed' is told with greater accuracy; and the author handsomely and ungrudgingly testifies to the benefits of British rule, and dwells on the value of its lessons for America in dealing with the Philippine Islands. Railways come in for criticism chiefly as regards carriages, and defects are noticed which might with advantage be remedied. By rail Mr. Curtis travelled north, visiting Ahmedabad, Jaipur, &c., and is led to bewail the absence of "a board of geographic names similar to that we have in Washington.....to straighten out discrepancies in the nomenclature on the maps." There is an official mode of transliteration, on the whole a good one, but unfortunately writers and map-makers depart from it as they please, with results bewildering to the uninitiated. Errors, too, are introduced even by reporters: witness the information that the country of the Rajputs "is called the Rajputana—pronounced Raashpootana," and that the celebrated tomb is named "the Taj Mahal, which means 'the Crown of the Palaces,' and is pronounced Taash Mahal."

After Agra and Delhi, Simla and the Punjab were visited, and readers are intro-

duced to the Kiplings, father and son. Famines and their antidotes are discussed, the need for educating the people in agricultural science being noticed, whilst the success of irrigation schemes is acknowledged. Indeed, no pages of the serious part of the book are better than the few devoted to this subject. Next the frontier question is considered, Peshawar and the Afridis being mentioned, whilst American missionaries are deservedly praised.

Afghan matters are treated in a statesmanlike way; and as several quotations illustrative of Mr. Curtis's fun and inaccuracy have been made, it is but fair to give one which shows that he can see clearly and write sensibly:—

"The problems connected with the aggressive policy of Russia on the Indian frontier are very serious from every point of view to every Englishman, and whenever the time comes, if it ever does come, the frontier will be defended with all the power of the British Empire. The aggressiveness of Russia has been felt throughout India much more than any one can realize who has not lived there and come in contact with affairs. It has been like a dark cloud continually threatening the horizon; it has disturbed the finances of the country; it has entered into the consideration of every public improvement, and has, directly or indirectly, influenced the expenditure of every dollar, the organization of the army, the construction of fortifications, and the maintenance of a fleet. The policy of Lord Curzon is to bring all the various frontier tribes, which aggregate perhaps 2,000,000, under the influence of British authority. To make them friends; to convince them that loyalty is to their advantage; to organize them so that they shall be a source of strength and not of weakness or peril; to teach them the blessings of peace and industry..... The commercial and the military policies are closely involved, and in a measure one is entirely dependent upon the other."

The author has also sound views on the army, on temperance, and on education in India, and has something to say on the recent expedition to Tibet.

The volume is closed by a chapter on Calcutta, its Government House, the Viceroy and Lady Curzon, to whom, as "An Ideal American Woman," it is dedicated. It contains a series of letters written for *The Chicago Record-Herald* during the winter of 1903-4; perhaps these, with additions from other sources, account for what is bewildering in an attractive and well-illustrated book.

Origines Islandicæ. Edited and translated by Gudbrand Vigfusson and F. York Powell. 2 vols. (Oxford, Clarendon Press.)

By the issue of these volumes the Clarendon Press has fulfilled a promise of long standing. It is now more than sixteen years since Gudbrand Vigfusson died at Oxford, leaving to his fellow-editor the task of completing what was then understood to be in the main an edition of 'Landnámabók.' This, however, is now seen to form only a comparatively small part of the whole work, which is described in the sub-title as "a collection of the more important sagas and other native writings relating to the settlement and early history of Iceland." 'Landnámabók,' in fact, occupies only 236 pages out of a total of 1,398 of texts and translations. A prefatory note explains the intention and range of the collection, but gives no particulars of the relative share in the work taken by the two editors, or of the reasons which have so long delayed its appearance.

As to the success with which the editors have carried out their intentions, there are several distinct points of view from which this might be estimated, and the verdict in each case would be somewhat different. Least favourable would it be if the work were to be considered as a contribution to the critical study of the texts contained in it. Even if the work had appeared in 1890, it would in some respects have fallen short of the standard set by other Scandinavian scholars; and at the present day its defects are still more conspicuous. But the book is in the first place intended for the English reader, and it is only fair to judge it on that basis. Taken in this light, it cannot be denied that it opens up wide areas of historical knowledge which it would formerly have been difficult or impossible for the ordinary man to explore. The 'Corpus Poeticum Boreale,' with all its faults, helped to spread much light on the old poetry of Norway and Iceland; and the 'Origines Islandicæ' will, at the very least, make blank ignorance of Iceland and its remarkable history inexcusable in those who ought to know something of it. It is a great thing to have so much unique historical material brought together and translated, and to many readers the extent and variety of it will probably be something of a surprise. Translations of separate sagas into English are now numerous enough for some knowledge of their form and content to be fairly common, but any clear idea of the general scope and history of early Icelandic literature can as yet only be found where the subject has been specially studied.

It was inevitable, yet in some ways unfortunate, that a work like the present should begin with 'Landnámabók,' which is neither typical of what is best in Icelandic literature, nor in itself attractive to the outsider. It is true that an intense interest in the names of persons and places is characteristic of all saga-writing and of the Icelanders in all ages, but that will not greatly aid the English reader to enjoy 250 pages of mingled genealogy and topography. In any case, it was surely unnecessary to give a full translation of this text, most of which can hardly interest any one unable to read the original. Even an ordinary translation would be forbidding enough, but the editors have made their rendering doubly repellent and confusing by attempting to convert the proper names themselves into English forms. It would have been much more helpful and considerate to translate only such portions as contain really interesting narrative, and the time and space thus saved could with advantage have been spent on a clearer and more accurate presentation of the text. A separate essay on the correspondences between the Icelandic and Old English names might have been added, if it was thought necessary.

Some minor historical and genealogical texts appended to 'Landnámabók' complete the first of the five books into which the 'Origines' are divided. Book II., entitled 'The Old Constitution,' begins with the 'Íslendingabók,' as to which the editors put forward the view that it is really a translation of a Latin work by Ari. The remarkable character of this brief compendium of Icelandic history, and its unique position in the literature, are not brought clearly enough before the reader, no doubt owing to the peculiar views on Ari's literary activity held by Dr. Vigfusson. It is true that scholars are not in complete agreement on this matter, but in a work of this kind it would have been wiser to refrain from speaking of "Ari's 'Landnámabók,'" "acknowledged and evident works by Ari himself," &c., as if the authorship were a matter of established certainty. It is, however, admitted by every one that 'Íslendingabók' is Ari's genuine work, and it is also certain that in all mediæval historical writing there is nothing that can quite be set beside it. It deserved not only to be translated, as here, but to be fully annotated as well.

The sections which follow, on 'Primitive Law and Custom' and 'Early Constitutional Law,' contain much that is interesting, but without a fuller account of the sources there is considerable chance of the reader either missing or misunderstanding the significance of the separate items. To suggest, as the editors do, that all the materials in the second section are directly derived from Ari, is a view improbable in itself and incapable of proof.

In the third book, on the 'Conversion and Early Church of Iceland,' we begin to come more into contact with representative forms of Icelandic literature. 'Kristni Saga' is an interesting work, and the short 'Early Church Legends' which follow it are good reading. 'Hungrvaka,' too, is the work of a skilled writer, and certainly deserved to be included. It is more a matter for doubt whether the editors should have so far indulged their partiality for the bishops as to print the sagas of Thorlák, Pál, and Jón, which cover a period much later than the bulk of the two volumes, and are at times somewhat tedious. In the later sections of this book, however, there is a good deal of miscellaneous information on church matters, which will at times be useful for reference.

In opening the second volume one enters on a much more attractive field. In place of dry details or pious discourses the reader will here meet with some of the masterpieces of Icelandic literature, well-told stories of real men and women whose character and actions are presented with a conciseness and clearness that are unrivalled in any other writings of the Middle Ages. It is indeed remarkable that a small and remote nation could in a short period have produced the mass of excellent literary material contained in this volume. Yet some of the longest and best sagas are entirely omitted, while others are given in part only. The difficulty of compressing all the relevant material into 750 pages must have been considerable, and there is sometimes room for criticism with regard both to the omissions and inclusions, but on the whole the contents are well chosen. The arrangement also is natural, and the reader will soon discover that the historical place and literary merits of the different sagas

are not indicated by their position in the book. Starting with the south-west district of Iceland, the texts follow the order of 'Landnámabók,' and include (wholly or in part) some twelve or so of the leading sagas, besides a number of shorter tales connected with these. In the fifth book are given those sagas which relate to the colonization of Greenland and the discovery of America. The latter subject has attracted so much attention on both sides of the Atlantic that its novelty has somewhat worn off, but there is abundance of less familiar information about Greenland in the sagas of Thorgils and Thormod the poet.

In both volumes the text is usually printed as well as the translation, though occasionally the one is given without the other. The translation is not always perfectly accurate, and in the more literary sagas might well have been made more thoroughly readable. The ease with which Icelandic can usually be translated into English of a kind is a snare against which the translator has constantly to be on his guard; to render it into good, natural, idiomatic English is, on the other hand, a very difficult task, which has never yet been quite satisfactorily accomplished. In a work like this, which is plainly one for the English reader rather than the Icelandic scholar, it would have been well worth while to bring the translation as near as possible to perfection. The versions which are given often fail to do justice either to the knowledge and abilities of the editors or to the merits of the original.

The remarks prefixed to the various texts contain much useful information and some acute speculations, but the conclusions reached are not always so easy or so certain as they are assumed to be. The remarkable freedom with which Icelandic scribes took on themselves the functions of editors makes the task of reconstructing texts very difficult and dubious, and in many cases we can hardly hope to get behind the actual form in which the work happens to have been preserved. To determine the authenticity of a passage by a minute conjectural calculation of lost pages in a manuscript is ingenious, but the cases are rare in which it can be convincing. Where longer and shorter recensions of a saga exist, the editorial treatment is not wholly consistent. In 'Harðar Saga,' for example, the text of the shorter version is taken as far as it goes, while in 'Flóamanna Saga' the longer text is preferred; yet the two cases appear to be exactly parallel, and have been so regarded by other scholars. In any case, the change from one version to another (caused by gaps in the manuscripts) is not marked with sufficient clearness, being only mentioned in a foot-note instead of being made obvious by a break in the printing.

A needless addition to an otherwise heavy task has been made by the adoption of an archaic orthography, which, besides the extra work involved, has been responsible for a considerable number of misprints and inconsistencies. No doubt many of the texts, if preserved in manuscripts contemporary with their composition, would appear in a spelling somewhat similar to that which has been adopted. But scarcely any work of literary value in Icelandic has come down to us in this form, and there is no good reason for departing from the orthography usually employed in standard editions of the sagas. Apparently the editors originally intended to confine this archaic spelling to the first volume, but it has also been carried through the greater part of the second, with the result that in some cases it is applied to texts which (in their present form) are not old enough to have ever had it. Where important manuscripts actually exist in an early form it is only right to reproduce them faithfully, but a spurious air of antiquity is of no real service, and creates difficulties both for editor and reader. Classical Icelandic literature, ancient and modern, has, on the whole, a settled orthography which stands in no need of being interfered with.

In one point, however, this archaic spelling has been employed with a further object, viz., that of suggesting Gaelic forms of personal names, and so lending apparent support to the theory of a strong Gaelic element among the early settlers. Thus the very common Icelandic name Ketill is ingeniously written Cetil in all cases "where it presumably represents a disguised Icelandised Gaelic Cathal"; and Þórmóðr is printed as þormodr in order to look a little more like an Irish Diarmaid. This persistency in finding Gaelic names where none exist is pushed to extremes when a Svartkell becomes Cathal Dubh, or Mág-Snorri is converted into Mac-Snorre. With the same end in view, both Skafti and Skofti are transformed into Shafto; while Hjalti becomes both Shelty and Sholto. Then we read that

"Sholto was a native of the Steer-water county in the South, of mixed Norse and Celtic (Un-Norse) descent, lineally descended, like bishop S. Thorlac, from a Cetil (here representing a Gael. Cathal) the Onehanded; descended also from a settler Lunan (Irish); Sholto's very name is expressive of this descent, meaning Shetlander or *Shelty*, and (if we be right) the *Caledonian*."

Yet 'Landnámabók' says nothing about Ketill Einhendi having any Gaelic connexions, and it expressly states that Thorstein Lunan was a Norwegian (*maðr norrænn*). This instance shows fairly how little weight can be attached to the repeated assertions of the editors with respect to Gaelic influence on early Iceland. The question how large the Gaelic element really was, and what its influence may have been, is a very interesting and difficult problem, which ought not to be prejudiced by random statements.

As the above remarks will show, the present work is by no means free from some of the faults which marked its predecessor, the 'Corpus Poeticum Boreale'; but fortunately the comparison of the two works will hold for the merits as well as the defects. Even the serious student of Icelandic (still a rare person in this country) may find in it texts which are not otherwise at hand, and to read it through will revive much knowledge and give some new ideas. Above all, there is reason to hope that its appearance will help to foster an interest in Icelandic studies, and so help to make the English people more and more familiar with the history and literature of a kindred race, whose work is only now beginning to be rated at its true worth.

NEW NOVELS.

The Difficult Way. By Mabel Dearmer. (Smith, Elder & Co.)

Mrs. Dearmer's new novel shows an advance upon her previous work. The leading motive of her story is strong; and her handling of its tragedy—the tragedy of a union between two naturally antagonistic temperaments held together by the solitary link of a mutual passion—if it does not carry entire conviction, is by no means unskilful. We pity John Pilgrim, the religious enthusiast with a slum parish in South London, and his frankly pagan wife, even while we are conscious that we do not wholeheartedly believe in them. For this scepticism the author's omission to account for the situation which is the basis of her narrative is mainly responsible. It is inconceivable that such a man as Pilgrim should have married a girl like Nan without grave previous searchings of heart; yet we are left to infer that he took the step almost airily. It is difficult to dismiss the suspicion that Mrs. Dearmer invented her situation for literary purposes, without any serious consideration of its probability. Nan's permanent exaltation after her husband's death has the same note of unreality; it suggests a literary convention rather than observation of life. In her unexalted state she is a pleasing and natural figure—and genuinely alive, which can hardly be said of the two men who love her. Mrs. Dearmer has succeeded best with her subordinate characters.

The Cherry Ribband. By S. R. Crockett. (Hodder & Stoughton.)

This is not the worst of many good studies of Westland Whiggery that our author has given us. It differs from his usual types in a touch of something deeper and more spiritual. This is true even of Ivie Rysland, the heroine, who is otherwise so masterful a maid that she horsewhips Grierson of Lag and afterwards pinks him in a duel. But she is softened by love and her experience of the kindness of devout women. Daughter of a soldier of fortune, nursed in a regiment, she follows her father to Scotland when he casts in his lot with Graham of Claverhouse and becomes his sergeant-major. Grif Rysland is as well drawn as his daughter, and is modified, even as she, by the strange atmosphere of the time and place. For the rest, we find wealth of incident, and much allusion to historical names, not always according to knowledge.

The Princess and the Kitchen Maid. By Dorothea Deakin. (Chatto & Windus.)

The tired housewife often dreams of an ideal "cook and general," who has all possible virtues, and no faults whatever. In Miss Deakin's attractive story this beautiful ideal is painted so cleverly that the lady who makes the acquaintance of Maud, the perfect "cook and general," will fancy that she has had a glimpse into Paradise. The heroine of the story, having lost her money, goes out to service, and so thoroughly enjoys it that she feels that she has found her true vocation in cleaning grates,

cooking dinner, and helping to take care of baby. She declines to marry a rich but priggish lover, and finally weds the dairyman. Miss Deakin has written a bright and amusing story, and her angelic kitchen-maid is so thoroughly alive that the reader is almost persuaded that such a kitchen-maid is a possibility. The author is less successful with her male characters. Neither the prig, nor the dairyman, nor the baker, is in the least convincing, although the dairyman is mildly amusing. However, Maud is alone sufficient to make the book interesting. The reader will part from her with regret, and a strong conviction that the dairyman was not half good enough for such a treasure.

Rose o' the River. By Kate Douglas Wiggin. (Constable & Co.)

This is a rather slight and mildly interesting story of a young woman who temporarily lost her lover because she accepted the attentions of another young man. Afterwards she repented, and the lover was happy once more. The scene of this not very startling tale is laid in a New England village, beside a stream down which logs are floated from the great Maine forest. Of course the logs "jam," and the "loggers" perform prodigies of bravery and skill in setting them free. Nothing, however, of a very exciting nature takes place. There are several characters in the book who might have been drowned in the interests of humanity, but the author has failed to drown them. Of these, "Old Kennebec," whose interminable lies as to his imaginary exploits as a "logger" are supposed to be humorous, cannot be said to be wholly successful. There are doubtless readers who will find him amusing, but in this instance Mrs. Wiggin seems to have mistaken her own high spirits for humour. If her book is described as a rather pretty little story, there is no need to say more about it.

Saints in Society. By Margaret Baillie-Saunders. (Fisher Unwin.)

If it had been written in other than a sentimental vein, this first novel might have claimed consideration for its ironic qualities. The theme is the degeneration through success of a perfervid religious Socialist. When we meet him first Mark Hading is almost fanatically in earnest, and has convinced his friend "Lord" Henry Vade that he is a "man." Also Hading is saddled with a pretty slip of a wife who is discontented, and vulgar, and uneducated. But when society, including the Countess of Listower, takes him up, he marches on his fate with a whole-heartedness that is simply amazing. Obviously he was rotten-ripe for the temptation. He succumbs to his friend's sister, Lady Veronica, though why she should succumb to him does not appear. This lady is described (and all the author's descriptions are careful) as comparable with Emma, Lady Hamilton, but "much thinner and much colder," while "her smile was a chronic and determined simper." Lady Veronica's infatuation certainly requires explanation. So, too, does Chloris Hading's reclamation. While her husband, developing rapidly into a newspaper king, declines in morals, Chloris, the ill-conditioned cockney girl, improves out of knowledge, and wins the affection of a generous and manly baronet. The débâcle is in keeping with this lack of knowledge and observation. Mrs. Baillie-Saunders's style is much the best thing about her novel. It is picturesque and clear, and has vivacity. As a first novel the book is by no means to be contemned, and when she learns her art the author will probably do something that will count.

A Village Mystery. By Mrs. Coulson Kernahan. (F. V. White & Co.)

This tale recalls to mind the unsophisticated stories of another generation. It includes a son who has quarrelled with his father and returns too late, a lost uncle, an impostor, a benevolent priest, and the conflict of religions. It runs its innocent course well enough, though some readers may object to the tendency on the part of the author to balance Roman Catholicism against Protestantism. The mystery is not much of a mystery, and the characters have no real existence; they are in great part Irish, though the scene is English. The book is a fair sample of the ordinary novel, and probably has its place and public.

The Cleansing of the "Lords." By Harold Wintle. (John Lane.)

We do not know whether we are right in classing 'The Cleansing of the "Lords"' as a novel. The story is vague, the plot slight. The book is concerned with proceedings under an Act for the election of the peers by a committee—as the author says, "a sort of homœopathic revolution." Apparently, titles were to be taken from all the titled who were not elected—at all events, from all such peers: a drastic measure which has been (in practice) unknown in the country of the Revolution itself since 1802, and has prevailed only in the democratic State of Norway. The book does not strike us as amusing, but there are points about it which are humorous. Such are the discussion of the style of the dowagers and the fierce opposition of the American peeresses. The next most violent protest to that of "ladies of Trans-Atlantic birth, either Peeresses already or likely at some future time to become so," was that of the "interests"—"the Liquor Trade," and so forth.

"The sporting papers threatened openly that if, as seemed probable, one peer, a member of the Jockey Club and a very large owner of race-horses, was displaced, the whole of the racing community who possessed either votes or influence would use them on the other side at the next election."

In the middle classes "at this time *The Book*—meaning Burke—was spoken of in that tone of voice which John Wesley used in speaking of his Bible." After scenes in ladies' clubs and among company promoters, to the latter of whom is attributed even more influence with politicians than they possess, we come to strange bargaining about the working of the Act. The leading villain, who has floated a West African concern, tells the leader of the House of Commons, who has been speculating in shares which he has been "put into" by this thief, "A baby could make a fortune if he had your inside knowledge." We believe that the opposite is known to be the case, namely, that there is no one on the Stock Exchange whose acquired habit of business would not defeat the wiles of the politician with "inside knowledge." There follows a conversation between the Home Secretary and the Prime Minister which does not strike us as being lifelike. To the Prime Minister are attributed, for example, these phrases used to a Cabinet colleague: —"You always did feel an antipathy to the Bill.....Come, come! you hold a very low estimate of our.....honour." It occurs to us that the whole book is intended for an allegory or a parable—which is it?—and that the present Government are hinted at, and redistribution of seats suggested.

POETRY, NEW AND OLD.

A Book of English Love Poems. Chosen out of Poets from Wyatt to Arnold by Edward Hutton. (Methuen & Co.) — Mr. Hutton's claim that this book is "all of gold, with scarcely enough alloy to make it current," is well founded. The choice has been made with excellent taste, though we feel inclined to cavil at the omission of Sidney's "My true love hath my heart." Besides many of ancient days who are but names to most readers, Mr. Hutton includes such later, but equally neglected, poets as Peacock, Darley, and Beddoes, and it may well be that his book will prove instrumental in persuading some to turn aside a moment from the beaten path of poetry, and explore the by-ways. The introduction contains much sound criticism expressed with commendable boldness. The book is one to read and ponder over at odd moments; and though Mr. Hutton anticipates a little gloomily that it will become "just a gift-book from lover to lover," we have no doubt that it will be very welcome to a more discriminating world also.

We are glad to see that *A Day Book of Milton* has been published by Messrs. Methuen, compiled by R. F. Towndrow. We hope it may lead to a more general appreciation of a master misjudged by many. The selections include both prose and verse.

The Complete Works of Adelaide A. Procter. With an Introduction by Charles Dickens. (Bell & Sons.)—Few critics nowadays will be found to regard Miss Procter's work with an enthusiasm like that of Charles Dickens. It is work that shows to best advantage in selections; considered in the bulk, it exhibits a monotony of theme and treatment which must in time prove irksome. It may be that materialized angels and Golden Gates have lost their fascination for us moderns; it may be that simple precept and moralizing in verse are not so popular as they once were; but the fact remains that her poems lack the qualities of subtlety and suggestiveness. Then, too, the workmanship is uneven; the lyrics are too facile, the legends have worn a little threadbare; they do not carry us away now; we are disposed to criticize.

Such is the view induced by the perusal of Miss Procter's work as a whole; yet such poems as 'Cleansing Fires' and 'The Dark Side' prove that she possessed the true lyrical gift. Even 'The Golden Gate' and 'The Angel's Story' still have charm for those who are not ashamed to yield to what Stevenson calls the "direct appeal." 'Legends and Lyrics' have long given considerable pleasure to the

less sophisticated lovers of poetry—those who modestly profess themselves unable to comprehend what is "deep"—and the loftiness of the author's ideal is manifest; but such commonplaces as the bald contrasting of present with past, rich with poor, and the immediate application to human life of the more obvious lessons drawn from nature, while novel and instructive enough to those who have never before taken the trouble to think, cannot be expected to interest others.

There is talent, it is true, but spun out to excess, so that it is difficult to find one poem which can be unreservedly praised. Even 'A Lost Chord,' by which Miss Procter's name has been to a great extent preserved among us, cannot be said to show her lyrical powers to advantage; and the poem called 'The Child and the Bird,' first printed in 1899, and included here for the first time in any collection, is in no way remarkable. The less-known 'Chaplet of Verses' had an admirable purpose, but its claim to rank as poetry is not high, and its occasionally polemical tone was, and is, likely to displease many.

Perhaps the greatest misfortune which could have overtaken Miss Procter as a poet was the early and widespread popularity which her work attained in her lifetime. The lessons which she needed most, and which circumstances seem to have prevented her from learning, were the lessons of elimination and self-criticism; and for the lack of these, it may be, she failed to do herself justice. However, the collected poems make an attractive volume, and there are still, doubtless, many of the simple to whom they will be very welcome.

All lovers of modern verse will be glad to see a new edition of *Ionica* (George Allen), with a discriminating notice of the author by Mr. A. C. Benson. This issue contains various pieces which were published earlier and laid aside, and is, therefore, fuller than any hitherto available. We are very glad to have all that can be recovered of a singularly graceful and distinguished writer, who, in spite of his imitation of the Tennysonian manner, has a note of his own, a haunting echo of the classic *desiderium*.

Ways of Verse. By Arthur Lewis. (Elkin Mathews.)—These ways of verse are devious, and it is a pity that they do not repay the trouble which is involved in threading them. Mr. Lewis does not seem to realize that lucidity is not without its value, even in poetry. Hence in the poem called 'The Hero'—the idea of which is well enough—we are treated to the following extraordinary stanza:

> Till one arose, and thus he cried—
> "Grant, if they will, we be belied
> In his true self, O that were what
> To them—to us, by whom begot,
> In his great name, the best that we
> For now—for aye—will ever be?"

Stuff such as this can have little value, and it is characteristic of the book, though the complications are not always so baffling. Even in his simpler moods the poet goes astray. He is not content with our language as it is, but must needs put it to uses for which it was never intended. He asks:—

> Am I the man who had a will
> To snatch a joy a year ago?
> Am I the one who took his fill
> Of sorrow sick one drear ago?

Again, his sense of humour is deficient, and fails to preserve him from the verbal entanglements into which the unwary versifier is apt to be lured. In 'By the Waterside' he says:

> Sit we where running waters wile
> Still hours away; and let them lave
> Thy feet with mine; and but a smile,
> A pressure of the hand, I crave.

Here an inoffensive stanza is marred by the grotesqueness suggested in the second and third lines—a grotesqueness which could have been easily avoided. We will not deny that occasionally, as in 'The Hero' and 'The Dreamer,' Mr. Lewis has an idea capable of furnishing forth a fine poem. But he does not know how to use it; his words tumble over each other, and in the confusion the idea is not always easy to trace.

In his less ambitious efforts he is tolerable; but the fact that one or two of the shorter poems, like 'Pervert,' 'Do the Right,' and 'The Sigh,' have some degree of merit, is not in itself enough to counterbalance the extraordinary imperfection of the rest. It is only in the hands of a master that a lyric can even seem to descend to obscurity without losing force. But here there is small sense of poetry and little mastery of technique, many of the rhymes even being open to objection.

Voices of the Desert. By Ernest Favenc. (Stock.)—These verses have for their principal theme the desert country of Western Central Australia, whose "enshrouding atmosphere of awe and mystery has," the author tells us in his preface, "a voice of its own, distinctly different from that of the Australian bush." We cannot honestly say that this "voice" is reproduced here with any striking success. There is a mediocrity in the versification which goes far to defeat the author's object; there is also a profusion of commonplace epithets, and a lack of such a sense of humour as would have saved him from placing words like

> What is yon star that now, though quickly westing,
> Shines still so clear?

in the mouth of one who is, presumably, a kind of bushman. Occasionally he comes nearer to achieving his end, as in the following stanzas from the poem called 'Desert Ghosts':—

> The blacks had told us—they lie at best—
> Of a fair lagoon in the unknown west.
> And I rode through the blaze of a summer day
> To find out the spot where that water lay.
>
> The setting sun made my eyes grow weak
> As I eagerly looked for the promised creek—
> The angry sun! and he frowned me back,
> But I wearily thought of the homeward track.
>
> Timber in sight! The blowsy sun
> Dropped suddenly down, for his work was done,
> Timber it was! I looked around:
> The withered blue-bush lay on the ground.
>
> Through the sullen twilight I rode ahead,
> Till the stalks of the 'lignum shone gaunt and red.
> But the hole was dry, the bed was bare;
> The bones of a wild dog rotted there.

The poem goes on to tell of a vision, wherein the ghosts of all who had perished in this desert land appeared worshipping in a spectral cathedral. There is rough power in the description; the author has, undoubtedly, something to say, but he has not yet mastered the art of expressing it in terms of poetry. He is, perhaps, more successful when dealing with the terrible human associations of the desert than in purely descriptive pieces. 'The Madman's Dream of the Golden Mountain' is good of its kind, as also is the poem called 'Found Dead,' while in a different vein 'The World's Victims' is pretty and suggestive.

The author rhymes "gone" with "morn," and "warning" with "dawning"; he is, moreover, lacking in the instinct for preserving verbal dignity, as in the lines:—

> No fond delusion across our way,
> But a feeling of rest that has come to stay.

The concluding verses, called 'Gloria Mundi,' are conventionally Swinburnian in tone, and show some attempt at poetic diction.

Poems. By Post Wheeler. (Elkin Mathews.)—Mr. Wheeler seems to be young enough to have had many models, the influence of whom is seen everywhere; yet he has undoubtedly lyrical power of his own, and probably an individuality. Here you may trace Rossetti and Swinburne and Browning among others, and here you may also catch an elusive something which must stand for Mr. Wheeler himself. Would any one be at a loss to recognize the inspiration of this?—

> It was the hour, at even,
> When the Great Angel tolls
> The bell above the Sea of Glass
> And the broad gate unrolls
> And up, like holy incense, come
> The little children's souls.

Or of this again?—

> Sweet eyes, sweet lips, sweet hair with sunlight warm—
> Ah, lips to show me love were sure between;
> Pale hands, soft heart, low voice and kiss at even—
> Were this but all, my world would yield me heaven.
> (Ah no! There is no night!)

Mr. Wheeler's muse delights in the cadences of the minor key, and is most individual therein. He can write with genuine feeling:

> Just one small light between me and the dark.
> Just one small heart between the gale and me.
> One soft small hand to guide my yawing bark
> Across strange wastes of all uncharted sea.

And at times this mood goes aslant into macabre imaginings which might have appealed to Christina Rossetti, as in the curious poem entitled 'Since I Died':—

> Some near day, in the rain-washed weather,
> They will bring her here in a dress of white,
> And we shall lie and whisper together—
> Ever together by day and night!
>
> She never knew it—never has guessed it—
> Never has thought that death was a lie!
> Never has dreamed how I kissed it and blessed it—
> But then she will know what it means to die.
>
> I will show her how not to surrender—
> Never to run with the riot and stir,
> For oh, she will far rather rest in the tender
> Passion a dead man holds for her!

The section of poems devoted to children is engaging and pretty, touched with the melancholy sentiment characteristic of the writer. He has a real gift of poetry, and we shall expect from his pen a subsequent volume of even better value.

OUR LIBRARY TABLE.

Mr. Fisher Unwin publishes *The Siege of Port Arthur*, by Mr. David James, *The Daily Telegraph* correspondent. The ground covered is the same as that dealt with in 'The Siege and Fall of Port Arthur,' by Mr. Richmond Smith, lately reviewed by us. Mr. James gives a slightly fuller account of the first great attempt to rush the fortress by storm. He agrees with Sir William Nicholson, and differs from the Military Correspondent of *The Times* and the late General Dragomiroff, upon the fortress question or "entanglement of Port Arthur." A point well brought out by Mr. James is that the loss of eighteen of the largest howitzers, in the Japanese ship sunk by the Vladivostock squadron in Tshushima Straits, was a heavy handicap to the besiegers. Grant's unsuccessful attacks on Richmond will be remembered in connexion with the story here told of the butchery in the failure to storm the fortress in August, without engineering preparation. "It was decided to draw deeply on the courage of the infantry": in other words, the Japanese Government and General Nogi attempted to do with Japanese troops what no other troops in the world have ever been asked to do, and no troops could do. Those who remember the newspaper attacks on General Methuen which were produced by the unsuccessful daybreak advance against the Boers, following on the losses of his previous battles, will be able to contrast the stoicism with which Japan commanded the first attack and then avoided making a scapegoat of the general. The forts were surrounded by entanglements constructed with ¼-inch steel wire, too stout to be cut by nippers. The ranges were all marked with objects painted white, so that they were revealed by the searchlights during the night attacks. The forts were packed with machine guns, and those so concealed as to be out of danger from the Japanese artillery, and to play with impunity on the storming parties when they

reached the deep moats. As the author says, "Modern fortifications scientifically constructed cannot be rushed, even by the bravest soldiers." The Japanese tried night after night. They succeeded in destroying the entanglements by cutting, and in some cases blowing up, the stakes on which the wire was supported. A few men survived to reach the redoubts themselves, and one threw a canister of dynamite into "one of the machine-gun shelters before being discovered and killed." The condition of the shambles may be guessed, and the author ends his words upon the subject by saying, "I refrain from further reference to the awful condition of the Japanese wounded." It was, as he says, "a butchery of willing men, vainly massacred for the sake of a national sentiment that could not wait." Of the capture of the great fort on December 5th, when there were 12,500 casualties on the one small hill, Mr. James writes:—

"In no instance in the history of the world was so much horror contracted into so small a space, for the revolting destruction wrought by dynamite bombs and high-explosive shells was never more hideously exemplified."

In agreement with Mr. Richmond Smith, he adds:—

"The corpses—and there were over 2,000 of these on the hill side the day I visited the hill—were mostly denuded of their clothing, scorched, deformed, and defaced beyond recognition, and in the trenches there was a pulp of mutilated humanity."

The trenches were heaped "with arms and legs and dismembered bodies all mixed together and then frozen into compact masses."

Messrs. Chapman & Hall send us *Reminiscences of a Retired Diplomat*, by Sir Frederick St. John. The author does not tell his story very well, for he hardly makes enough of a career in itself most interesting. His journey from Pekin to Europe, across Siberia, was, for example, earlier than most of those which have been written about, and there is much that might be said at the present time about the state of things in the early sixties, when the Polish exiles were passing in great numbers along the road. The profession of Sir F. St. John brought him into contact with two of our best diplomatists, Lord Lyons and Sir Frederick Bruce; but, although he gives a good portrait of Lord Lyons, he tells us little with regard to that best of ambassadors, who, however, had not risen to his highest position at the time when he was a colleague of Sir F. St. John. About Sir Frederick Bruce there is more. It is related how Lord Elgin made, concerning his brother, "the remark, so characteristic of both, how much he regretted not to possess his brother Frederick's brains—'I should have made so much better use of them.'" The fame of Lord Elgin stands higher now than that of Sir F. Bruce, but there are those who think that the latter was the greater public servant. Sir F. St. John gives an exceptionally pleasant picture of the man as he was, and names among their common friends at Pekin Anson Burlingame and his wife, without, however, giving, as he might have done with advantage, an account of the fascinating career of the Senator for New York, afterwards Chinese ambassador to all the Courts of Europe. There are some errors which should be noticed in the event of the interest of a diplomatic career carrying the book to a second edition, the most startling of which is the obvious slip of "Sir Mortimer Morant, British ambassador at Washington."

Messrs. Hurst & Blackett publish *Trouble in the Balkans*, by Mr. John Booth, a correspondent of *The Graphic*, whose rough but most vivid sketches interest us more than his letterpress. The character of the terrible populations which fight with one another in South-East Europe has never been better hit-off than in the pictures of this volume. We are disposed to think that the ideal book about the Balkans for the general reader would be one to which Miss Durham contributed the text and Mr. John Booth the illustrations.

The social history of some fifty or sixty years ago receives an entertaining commentary from Mr. Alexander Innes Shand in his *Days of the Past* (Constable). The author of this "medley of memories" knows London club-life intimately; he has made ventures in the City, with, it may be inferred, the usual results; military ambitions induced him to frequent officers' messes in the days before purchase. As a student of the law he became acquainted with Edinburgh judges who could remember the drinking bouts of Hermiston or Kilkerran, and sat under famous Edinburgh divines like Guthrie. Journalism brought him in contact with bygone editors, novelists, and historians. A devotee of the open air, he writes with gusto about journeys by coach, trips up the river, and, more especially, sport in Scotland. His sketch of a Highland poacher who lost all interest in life after the English proprietor, whom he had rescued from an ugly accident, had given orders that he should be allowed to shoot and trap as he pleased, is capitally done. By way of contrast we get a stolid Dorset gamekeeper who punctually each morning went through the ceremony of going to the gun-room for the orders "which he seldom got and never desired," and as punctually adjourned to the servants' hall for a tankard with the old butler. Mr. Shand's memories, however, might with advantage have been less of a "medley." His tendency to hop from topic to topic produces a blurred impression, and he is provokingly chary of dates. We gather that he was introduced to London a few years after the birth of the Princess Royal—that is, in the early forties; but for the rest we have to be content with such vague indications as "about fifty years ago" and "in the middle of the last century." The bulk of his literary recollections concerns personages who long survived that period, such as the publishers John Blackwood and Murray, Hayward, Kinglake, and Sir William Smith. Mr. Shand may not make material additions to our knowledge of Laurence Oliphant, whose biography has been written at length, but he frequently gives us some illuminating touches; for instance, Hayward's groan over Chenery, after he became editor of *The Times*, "I introduced him to Lady Waldegrave, and now—" and Blowitz's ejaculation over his own Paris letter, "Isn't it beautiful?" That must have been a most entertaining Christmas dinner at the Athenæum when Herbert Spencer, under the genial influence of Sir Edward Hamley, went in for high jinks and drolleries, and discussed Transatlantic manners and other matters more cynical "with the profundity of omniscience and the rollicking fun of a Toole." It is somewhat misleading, by the way, to talk of Luttrell as a frequenter of Crockford's. He may have been seen there occasionally, but he denounced the demoralizing influences of the establishment in a scathing poem.

A vivacious picture of society, mainly naval, in the reign of the second George is presented by Mrs. Matcham in *A Forgotten John Russell* (Arnold). Her John Russell appears to have been a distant connexion of the Bedford family. From humble beginnings he became British consul at Tetuan, and, after spending many years at Woolwich in the lucrative employment of Clerk of the Cheque, died as Minister at the Court of Portugal. The essence of good nature, he was the general factotum of a large circle of friends. His office at Woolwich served for a parcel-collecting centre, whence pipes of madeira, parmesan cheeses, and other gifts in kind were forwarded to great dames like Lady Hervey, "the beautiful Molly Lepell," or humble captains on leave, probably, as Mrs. Matcham surmises, without much regard to the ceremony of paying duty. The Duke of Richmond employed his "dear Bumbo" in countless jobs, the management of the New Shoreham electors among them. To Russell officers pining for promotion poured out their grievances, while gossip reached him from every naval station. His raciest correspondent was, perhaps, Capt. Vanbrugh, a nephew of the dramatist, who on one occasion exultingly told him that he had sent a fever packing with "three bottles of neat good port, all of which I swallowed warm, by draughts in half-pint basins." Eating and drinking play, indeed, important parts in this jovial correspondence. It does not make material additions to historical knowledge, though we get an able account of Vernon's capture of Porto Bello from the pen of Campbell, a purser on the flagship. But Mrs. Matcham's readers will rub shoulders with Walton of the "number as per margin" dispatch, with the hapless Byng, and with Rodney, as yet a captain and grateful for a present of lemons. Dr. Johnson would have chuckled over Jack Russell's description of Garrick keeping no company below nobility, and that dutiful son appears to great advantage as mentor to his younger brother Wager, who seems to have been a bit of a pickle. A touch of romance attaches to their pretty sister Charlotte, whom the gallant Capt. Gardiner worshipped in vain, and who, after being jilted by a Kentish gentleman—"a beast whose vices were pride, jealousy, and avarice," as an outspoken friend remarked—married into one of the great mercantile families of Lisbon. Mrs. Matcham is to be congratulated on her judicious editing of this fresh and pleasant volume. Her John Russell has been most tactfully rescued from oblivion.

A Coat of Many Colours. By the Author of 'Honoria's Patchwork.' (Chapman & Hall.)—It is some years since the class of pleasant desultory writing to which 'A Coat of Many Colours' may be assigned came very much into vogue. The authors of such work, in which the personal note is predominant, usually prefer to remain anonymous. But to carry off the inevitable strain of egotism in the impressions and theories expounded, the gift of a graceful, facile pen is essential, and this "Honoria" has in a very marked degree. Her new book professes to be compiled from letters to an intimate friend and the contents of a private note-book. She has already shown herself in the 'Patchwork' to be a woman of refined literary taste and of wide reading. Here several chapters are devoted to her sentiments after a close study of Swedenborg, another to her views upon Shakspeare's heroines; and later, when the "Best Friend" is on a visit to Italy, she has a great deal to say, and a great many quotations to make—too many, indeed—on the history of Florence and the Venetian school of painting. As a whole, however, there is little aspiration towards a severely instructive standard; the graceful note of the writer's personality is well sustained; and the glimpses which Honoria allows us into her country home and the events of her own daily life are not the least pretty part of the book.

Reflections of a Householder, by E. H. Lacon Watson (Brown, Langham & Co.), is another book which must be relegated to the desultory class created by the demands of a restless age not remarkable for application in its reading. Perhaps because the author is a man, the humour in this instance is more decided, and the material of the "reflections," though

almost purely personal and domestic, is handled in a comparatively impersonal manner. The material is slight indeed, and is largely and affectionately concerned with the vagaries of the "Householder's" young wife, presumably a recent acquisition. The chapters describing his unwilling efforts to keep a dog for the amusement of the latter are amongst the most entertaining. 'Concerning Books' proves the writer to be something of a student; and on the whole the reviewer closes the volume with a sensation of regret that so excellent a style should be devoted to such ephemeral matter.

Dean Church. By D. C. Lathbury. "Leaders of the Church." (Mowbray.)—Mr. Lathbury is, we suppose, one of the ablest journalists of his day—we are not speaking of to-day, when the ideals of journalism are rapidly changing, hardly, perhaps, for the better. This book is therefore clever and readable. It tells in a small space what is otherwise accessible only in the lengthy series of volumes which give the documentary history of the Oxford Movement. Moreover Mr. Lathbury enjoyed the personal acquaintance of the Dean, and his sketch is something more than mere reproduction. Indeed, we do not know that we have ever seen so illuminating an account of the ritual troubles of Archbishop Tait's times. We are pleased, too, with the way in which what, for want of a better term, we may call Church's "agnosticism" is emphasized by the writer. The modern extremist, with his ignorance, intolerance, and absolute scorn of scholarship, might learn a good deal from the wise sentences quoted by Mr. Lathbury. The "gutting" of the historical works and the sermons is also well done. Indeed, nothing is left undone which can supply the reader with the sense that he knows something of the subject.

A Primer of Classical and English Philology. By the Rev. W. W. Skeat. (Oxford, Clarendon Press.)—This admirable little treatise is remarkably interesting, in view of the great amount of information compressed into a small compass. More than half the space is devoted to the principles of "gradation," which are explained in general agreement with Brugmann's 'Short Comparative Grammar of Indo-Germanic Speech' (1902-4), in which there are admissions of the fallibility of the theory of Indo-Germanic sonant nasals and trills. As to "sonant *n*" Prof. Skeat says: "Another supposition, that will suit the problem equally well, is to suppose that the *n* was preceded by a dull and indeterminate vowel, such as is heard in the last syllable of *abandon*.....or *tendon*." In the table of 'Regular Substitution of Vowels' we find the weak grade of E. *o* represented by Greek *α* and Gothic *i*. Surely Greek *α* only corresponds to Gothic *a* and to Gothic *u* or *au-r* in connexion with nasals and trills, *m*, *n*, *l*, *r*; while to Gothic weak-grade *i* from E. corresponds the *ε* of *τεκεῖν*, *ἑκτός*, *πεζός*, *ἑδοῦμαι*, the second syllable of *γένεος*, *κ.τ.λ.*, not to mention *ἑπτά* and the Doric *πετοῖσαι*. In *πατάνη*, dish, *σαφής*, clear, *ἄστυ*, city, the radical *α* may have arisen from weak *ε* followed by an intrusive nasal.

This primer is an excellent introduction at once to the philological study of the English language and to Indo-Germanic comparative philology, among its features being clear exposition, effective arrangement, and a judicious choice of illustrative groups of cognate words.

Das Buch Koheleth. Kritisch und metrisch untersucht, übersetzt und erklärt von Vincenz Zapletal, O.P. (Freiburg, Schweiz; Collectanea Friburgensia, Neue Folge, Fasc. VII.)—The special interest evinced by scholars in the Book of Ecclesiastes is, no doubt, due to the fact that it touches on problems which at one time or another occupy and sometimes over-occupy, the minds of all thinking men. It is also for this reason that students are not likely to tire of new works on the subject, provided, of course, that, like the book before us, they are scholarly, and also well written. Another interest attaching to the new work is that it comes from the pen of a trained Catholic critic. We can here only single out some of the most important points for brief notice. In opposition to writers like Siegfried, who consider Ecclesiastes to be the work of at least five different authors, Herr Zapletal stoutly maintains the unity of the book, regarding the apparent self-contradictions of Koheleth as merely different aspects of the same theme. He holds, moreover, that the cycle of ideas embodied in Ecclesiastes lies entirely within the range of other parts of the Hebrew Scriptures, thus taking a view which is diametrically opposed to those of Winckler and many other scholars. He fully discusses the alleged influences of Greek writers on Koheleth, but dismisses them all as inadequately proved, and unnecessary besides. Herr Zapletal has, independently of Prof. Paul Haupt, been led to the adoption of a metrical theory in regard to Koheleth, and for this purpose he prints afresh the Hebrew text arranged in verse-form. This theory helps in his view to confirm the unity of authorship, and he thinks that the dismemberment which the book suffered at the hands of Siegfried and others was largely due to a want of knowledge on this point. All these views are marshalled with great critical skill and supported by much erudition. The book is, therefore, one to be carefully studied.

Biblia Hebraica. Edidit Rud. Kittel. Pars I. (Leipsic, J. C. Hinrichs.) — For this new edition of the Masoretic text of the Old Testament Prof. Kittel has secured the collaboration of Profs. S. R. Driver, G. Beer, F. Buhl, and G. Dalman, and a number of other well-known scholars. The present part contains the Pentateuch and the historical books from Joshua to 2 Kings, so that one may expect part ii. to complete the edition. Prof. Driver is responsible for Deuteronomy and Joshua, and the other books have been prepared for press by equally competent scholars. The text itself is edited on strictly Masoretic lines, both as regards the consonants and the vowel-points and accents, the editors having made full use of the labours of Baer, Ginsburg, and others, whilst at the same time following a uniform method on certain debatable points. We think that the omission of the sign of "raphe" to indicate the aspirate character of the letters בגדכפת is fully justified, notwithstanding considerable manuscript authority to the contrary, for the correct pronunciation is already secured by the absence of the "daghesh." A similar wise discretion is exercised by the editors on other points. The notes at the bottom of the pages give, besides variants, &c., of a Masoretic character, readings suggested by the versions and some modern emendations. The edition will, no doubt, be very widely used.

In *The Trinity House, London, Past and Present* (Smith & Elder), Mr. Walter H. Mayo gives in a small compass a pleasant and interesting account of that ancient corporation. It does not, and does not pretend to, come into competition with the much fuller 'Trinity House of Deptford Strond' by Mr. Barrett, but, even on its own small scale, it does add something to our knowledge. Unfortunately the author, in his desire to accentuate the importance of the Trinity House work, insists on its extreme value to the national defence, and dwells with complacency on its rendering the Thames virtually impregnable against the enemy in in 1803, by mooring a line of crazy hulks below Gravesend—under the command of Col. William Pitt. The fighting power of the ships and their colonel was probably on a par, and the curious might ask what Mr. Mayo imagines they could have done if the blockade of Brest and Boulogne had been effectively broken.

The eighteenth volume of Prof. Wiener's edition of *Tolstoy* (Dent) contains some of the most famous writings and utterances of the seer. 'The Death of Ivan Ilich' deals with those great facts of life which Tolstoy always treats as a master. The two plays, 'The Power of Darkness' and 'The Fruits of Enlightenment,' are familiar to readers of the Russian philosopher. In the latter piece some of the views propounded seem paradoxical, and the same may be emphatically said about 'The Kreutzer Sonata,' which created a sensation sixteen years ago. Many of Tolstoy's views in this work have been stoutly challenged, as have his remarks upon art.

The nineteenth volume contains some valuable miscellaneous matter, extracts from Tolstoy's correspondence, and some papers on social topics, such as the relation of master and workman. On such points we are always glad to have the dicta of Tolstoy. Now and then one feels that the ordinary reader, not acquainted with Russian matters, will need a few notes. Otherwise how is he to understand who Pugachev was, the rebel who almost overthrew the government of Catherine II., and Arakchéev, the minion of Alexander I.?

The illustrations in both volumes are good, especially those from paintings and photographs; but we do not see how a picture of the Eiffel Tower adds to the value of the volume in which it appears.

We may call attention to a spirited and modest little volume, *The World's Navies in the Boxer Rebellion* (Digby & Long), by Lieut. C. C. Dix, R.N. There is, perhaps, not much in it that we have not read before; but Mr. Dix gives a personal note to the events which he describes, and makes them live before us in a way that an older writer might envy. Half the book might be quoted in illustration of this, but for the present our readers must rest satisfied with two short extracts from the story of the capture of Tien-tsin, in which the fighting was more severe than any before it in the record of Chinese war; the allied loss, in killed and wounded, being given as 775 out of a total of 6,000, or about 13 per cent. A mixed party of Japanese, French, Austrians, marines, blue-jackets, and some of the Chinese regiment, numbering in all about 300, had reached some houses within easy range of the wall. To advance in daylight was impossible; to retire, exceedingly dangerous; and so they stayed where they were. About 4 o'clock young Dix, then a midshipman, was sent back for instructions and a doctor. He had what he calls "a most exciting run";—

"I had only left our position about five yards when a bullet grazed my hand and took the skin off two of my knuckles, and I 'll bet I beat all records for the 100 yards. On my way, after this, a Frenchman passed me, bent on a similar errand in the opposite direction. He, poor fellow, when within five yards of me, fell with a splash into one of the canals. There was just time to glance at him before hurrying onwards, the result of the investigation being more flattering to Chinese marksmanship than one would have imagined, his wounds numbering two, either of which would have been sufficient to kill him. I had reason to feel sorry for the poor chap, because perhaps one had been meant for me."

Independently of the reputation of a good sprinter, the run earned Mr. Dix his promotion at an early age. He seems to have rejoined his party under cover of darkness, and though the Chinese kept up a brisk fire, the night, with two exceptions, passed quietly.

"One was the wounding of a marine by a chance bullet; the other was caused by a party of Frenchmen who, on it commencing to rain, tried to crowd into a hut which was being used by some of our

officers. On being cleared out they were most indignant, seeming to think that 6 feet, by 10, by 6 [360 cubic feet], was ample accommodation for about 30 human beings, and they assured us that they were 'bons camarades.' Perhaps they were, but with the exception of a couple, they had to find shelter elsewhere."

The book is interesting, being full of life and as breezy as a midshipman's yarn ought to be.

Our Philippine Problem, by Henry Parker Willis (New York, Holt & Co.; London, Bell & Sons), is a careful "study of American colonial policy," well deserving the attention of the politician and historian. The author is thoroughly master of his subject, and has taken great pains to gather facts in support of the following conclusions which he puts before us. The United States Government is extremely liberal in defraying the cost of the army of occupation and certain other expenses, yet the administrative machinery is so costly that taxation has risen to a ruinous height. The customs tariff ignores the interests of the Philippine consumer, and discriminates sharply in favour of American goods. With respect to the Iglesia Filipina (which has thrown off the authority of Rome, is Unitarian in its doctrines, and already includes the majority of the people), more regard is paid to the Roman Catholic vote at home than to local sentiment. The American civil servants, though highly paid, are of an inferior type to English colonial officials; justice is not fairly administered, as the judges are absolutely dependent upon the political authorities; the American soldiers, owing to their dissolute habits and oppressive methods, have alienated public feeling; and many of the other Americans are "undesirables." The author thus sums up the result of his inquiry:—

"The islands are a source of expense and trouble to the American people as a whole, and our occupation thus far has been injurious to the native inhabitants. There is no advantage accruing to us from their retention which cannot be gained through reasonable trade and military arrangements with our possible successors."

The author is fully convinced that the Filipinos are capable of managing their own affairs. He is in favour of granting the islands home rule at once, with a view to full independence in the course of time.

We must call attention to the third edition of Westcott's *History of the English Bible* (Macmillan), which has been revised and brought up to date, with admirable care and scholarship, by Mr. Aldis Wright, who is specially strong on bibliographical matters. Scholarly as it is, the volume is full of interest for the ordinary reader. It gives abundant details both of the Authorized and Revised Versions, and has that effective brevity of illustration which can only proceed from deep knowledge.

Messrs. James Clarke & Co. send us in their new "Copyright Library" *The Black Familiars*, by Mrs. Walford, and *Kit Kennedy, Cinderella*, and *Flower-o'-the-Corn*, all by Mr. Crockett. We are pleased with the get-up of the Library, which is likely to be popular.

Messrs. J. & J. Leighton have sent us a bound and illustrated *Catalogue of Early Printed Books, MSS., &c.*, which deserves warm commendation. It runs to 1,738 pages, and the great care that has been taken to provide references to bibliographical authorities, with the abundant plates of rarities provided (upwards of 1,350), much enhances its value. It forms an excellent book of reference, the more so as the size of the original plates is indicated, where they cannot be reproduced on the same scale.

We have on our table *The Life of Jesus Christ*, by A. Pitt-Kethley (Routledge),—*The Children's Morning Message*, by Amy Le Feuvre (Hodder & Stoughton),—*The Enthusiasm of God*, by D. T. Young (Hodder & Stoughton),—*The Pastoral Idea*, by J. T. Inskip (Macmillan),—*Religion in Common Life*, by J. Caird (Allenson),—*Nonconformity in the Nineteenth Century*, by C. S. Horne (Law),—*Christian Politeness and Counsels for Youth*, by the Christian Brothers (Dublin, Gill),—*Comparative Religion: its Genesis and Growth*, by L. H. Jordan (Edinburgh, Clark),—*Jesus of Nazareth*, by E. Clodd (Watts),—*Ethical Religion*, by W. M. Salter (Watts),—*The Religion that Fulfils*, by F. J. Gould (Watts),—*Is "Nunquam" to be Relied Upon? A Reply to "Nunquam's" Attack on Christianity*, by G. R. Oakley (S.P.C.K.),—*Thoughts on Life and Religion*, by Max Müller (Constable),—*Of God and His Creatures*, an annotated translation, by J. Rickaby (Bell and Burns & Oates),—*Nature's Nursery*, by H. W. Shepheard-Walwyn (Hutchinson),—*Ways of Nature*, by J. Burroughs (Constable),—*The Lay of the Wee Brown Wren*, by H. W. Shepheard-Walwyn (Longmans),—*Two Bird-Lovers in Mexico*, by C. W. Beebe (Constable),—*Game Laws*, by a Solicitor (Cox),—*Poverty and Hereditary Genius*, by F. C. Constable (Fifield),—*Heredity*, by C. W. Saleeby (Jack),—*Industrial History of the United States*, by K. Coman (Macmillan),—*English Local Government*, by R. C. Maxwell (Dent),—*Calcutta Past and Present*, by K. Blechynden (Thacker),—*Turkey and its Future*, by A. J. Dunn (Effingham Wilson),—*Romance of the French Abbeys*, by E. W. Champney (Putnams),—*Annual Report of the Smithsonian Institution, 1904* (Washington, Government Printing Office),—*The Acorn*, No. I. (Caradoc Press),—*Aristotelian Society, Proceedings*, Vol. V. (Williams & Norgate),—*Great Roll of the Pipe, 1176-7* (Spottiswoode),—*Royal Navy List*, No. 112 (Witherby),—*Methods in Microscopical Research*, by A. Flatters (Sherratt & Hughes),—*American Library Association, Twenty-Seventh General Meeting* (American Library Association),—*The Future Peace of the Anglo-Saxons*, by Major S. L. Murray (Watts),—*First Steps in Quantitative Analysis*, by J. C. Gregory (Arnold),—*Easy Mathematics, Arithmetic*, by Sir Oliver Lodge (Macmillan),—*Stories from the History of Rome*, by Mrs. Beesly (Macmillan),—*First Year German*, by W. C. Collar (Ginn),—*Elementary Electrical Calculations*, by W. H. N. James and D. L. Sands (Longman),—*Ralph's Reprint of Certificate Questions*, by J. Lightfoot (Ralph & Holland),—*Preparatory Cæsar*, by F. Ritchie (Longman),—*Elementary Greek Grammar, Accidence and Syntax*, by J. Thompson (Murray),—*London Bridge and how it is Played*, by Capt. H. M. Beasley (Heinemann),—and *Figure Skating*, by H. R. Yglesias (Routledge).

LIST OF NEW BOOKS.

'THE WAR IN THE FAR EAST.'

November 4th, 1905.

In his courteous notice of my book 'The War in the Far East' your reviewer states that it is "made out of the letters of the various correspondents employed in 1904-5 by *The Times* newspaper, their letters being in part rewritten" by me.

I am afraid that I have unwittingly misled your reviewer by stating in my preface that I have "made free use of articles contributed to *The Times* by correspondents in various parts of the world." The only letter that I have embodied in the book is that descriptive of the snow battle of Heikautai, by *The Times* correspondent at Tokio, representing ten pages out of 656, and my foot-note on p. 481 fully acknowledges the source of this information, and states that the account is transcribed almost verbatim.

I have naturally referred, in many places, to the information sent to *The Times* by many valued correspondents, both from the seat of war and from foreign capitals, but I should not dream of rewriting anything sent by so much more capable hands than my own, and, whether for better or worse, I am alone responsible for the facts stated and the opinions expressed throughout the book, save where the contrary is explicitly stated.

THE MILITARY CORRESPONDENT OF *The Times*.

THE DEATH OF EDWARD THE ELDER.

The College, Llandovery, November 5th, 1905.

May I be allowed to make a few observations in defence of my identification of "Fearndune in Myrcum" with Farndon on the Dee, with reference to Mr. J. B. Johnston's letter in the current issue of *The Athenæum*? In the first place, the statement that Ferentone, the Domesday equivalent of Farndon, "shows that it is a different place-name" from Ferenduna, overlooks one very important factor in the problem—the capriciousness of the Domesday scribes in the spelling of proper names. Their inconsistencies in this respect are innumerable, and in particular they were very apt to confuse the endings proper to place-names compounded respectively of *tún* and *dún*. Proof of this can easily be found in Domesday Book, although it cannot well be set out here; but the fact that on two successive folios of the Survey Baldon St. Lawrence, Oxfordshire, appears as Baldentone and Baldedone will illustrate my meaning. This difficulty, then, is rather apparent than real, and in any case it does not affect the close connexion into which Edward's death is brought with the siege of Chester by William of Malmesbury, or rather by the contemporary panegyrist whom he is paraphrasing. This connexion is good evidence against any identification of Ferenduna, which would place it more than an easy distance from that city; in particular it renders it distinctly improbable that Edward, on the very eve of his death, should have made an unrecorded and apparently purposeless dash across country from Chester to the somewhat obscure village of Farndon, Notts, which even in Domesday Book appears merely as an appendage to the Bishop of Lincoln's great manor of Newark. It is also certain that Ferenduna cannot be identified with Faringdon, near Swindon, for, whatever may have been the case in earlier times, by the tenth century this place was undoubtedly not in Mercia at all, but in Wessex. Lastly, I am afraid that I do not see how the question is affected by the fact that Cheshire place-names are rare in the 'Anglo-Saxon Chronicle'; the same remark might be made about Staffordshire, which was probably the nucleus of the original Mercia. No independent chronicle, as Lappenberg long ago pointed out, has come down to us from that kingdom; hence in part our ignorance of its early geography and any uncertainty which may exist as to its westward extension at the beginning of the tenth century.

F. M. STENTON.

ROYAL HISTORICAL SOCIETY'S PUBLICATIONS.

The latest volume of the Society's "Camden Series" presents the text of the original Minute Book of a Puritan classis in the reign of Queen Elizabeth. The headquarters of the classis were at Dedham, and the period covered by this record of its deliberations lies between the years 1582 and 1589. The MS. itself is now in the possession of Mr. J. F. Gurney, of Keswick Hall, Norfolk, and it has been edited for the Society by Dr. Roland Usher, of Harvard, with a critical apparatus that is in keeping with the high standard of American historical scholarship in the present day. A noticeable feature of this edition is the reprinting of Archbishop Bancroft's rare tract known as 'Dangerous Positions,' as a key to the significance of the "classical movement" of the period. Dr. Usher claims, in fact, that Bancroft's narrative of this movement cannot be properly understood without a perusal of the records of a typical presbytery. Be this as it may, their juxtaposition in this edition can scarcely fail to be highly instructive to students of the ecclesiastical history of the period, who already owe much to the labours of the late President of the Society, Dr. Prothero, in this field.

Dr. Usher has compiled a remarkable biographical summary of the Presbyterian body during this reign, and the text of this Dedham Minute Book and of the correspondence that supplements its evidence has been reproduced by him with scrupulous care.

Apart from its important bearing on the ecclesiastical policy of the period, this record possesses considerable interest from its allusions to parochial and social questions. The spiritual and moral discipline enforced by these worthy presbyters seems to have been as exacting as that which we associate with the pre-Reformation *régime* or with the Laudian system of a later period. We infer, however, that when the meetings "concluded" to "deal with" parties suspected of false doctrine, desirous of marrying "at unequall ages," refusing public confession of an "offence committed secretlie," they did not have recourse to the spiritual courts. Certainly, in extreme cases, we gather that after "private prayers," "reprehensions and admonitions," "withdrawing the common tokens of love and cheerful salutations," and the supplementary exhortations of fellow-ministers, had failed to produce the desired effect, it was desirable to "call for the ayde of the magistrate to enforce both the private offenders and the negligent backward professors of the congregation to their Christian duties." On some points, too, we find that the members were not wholly agreed, as: "whether it were convenient a woman shuld pray, having a better gift than her husband," or "tutching Churchwardens whether they and their offices were lawfull."

They were, however, unanimous as to the method of controversy with Papists, "to handle them throughlie." A still more interesting glimpse of the religious and social life of the local community may be obtained from certain "Orders" agreed upon in 1587, which provide, *inter alia*, for personal visitations by the minister and "auncients," "always accompanied with one of the constables," to the "poore and chiefly the suspected places" of the town, for the purpose of "understandinge the miserable estate of those that wante and the naughtie disposition of disordered persons," and to "provide for them accordinglie."

The meaning and importance of these hierarchical dispositions are well explained by Dr. Usher. The whole work forms a valuable addition to the modern historical literature dealing with the subject, which, we may add in conclusion, is set out here in a useful 'Bibliography.'

SALE.

Messrs. Hodgson included in their sale last week the library of the late Rev. F. Procter, of Whitton, Norfolk, that of the late Jonathan Rashleigh, of Menabilly, Cornwall, and other properties. The following were the chief prices realized: The Engraved Works of Sir Joshua Reynolds, 3 vols., 26*l.* Drummond's Noble British Families, 2 vols., 10*l.* Ackermann's History of Oxford University, large paper, 2 vols., 19*l.* 5*s.* Rowlandson's Compendious Treatise on Modern Education, coloured plates, 30*l.*; The Dance of Life and Death, 3 vols., History of Johnny Quæ Genus, Goldsmith's Vicar of Wakefield, and others illustrated by Rowlandson, 12 vols., cloth, 45*l.* 13*s.* Dickens's Works, Edition de Luxe, 30 vols., 20*l.* 10*s.* Thackeray's Works, with Bibliography by Shepherd, Edition de Luxe, 27 vols., 19*l.* 15*s.* Meredith's Works, Edition de Luxe, 32 vols., 12*l.* 5*s.* Morris's British Birds, Moths, Butterflies, &c., 16 vols., 12*l.* 5*s.* Baily's Sporting Magazine, 78 vols., 11*l.* Badminton Library: Hunting, large paper, 7*l.* 2*s.* 6*d.* Dictionary of National Biography, 67 vols., cloth, 35*l.* Lovell Reeve's Conchologia Iconica, 20 vols., 72*l.* Sowerby's British Mineralogy and Exotic Mineralogy, 7 vols., 12*l.* 10*s.* Quarterly Journal of the Geological Society, 1845-74, 10*l.* 10*s.* Elwes's Monograph on the Genus Lilium, 10*l.* Ravenscroft's Pinetum Britannicum, 3 vols., 10*l.* 5*s.* Lambert's Genus Pinus, 10*l.* White's Selborne, original edition, half-bound, 9*l.* 5*s.* Angas's New Zealanders Illustrated, 9*l.* 17*s.* 6*d.* Jesuit Relations and Allied Documents (America and Canada, 1610-1791), edited by Thwaites, 73 vols., 24*l.* 10*s.* Brinkley's Japan, Edition de Luxe, 12 vols., 10*l.* 15*s.* Stevenson's Twelve Months, with 12 curious full-page engravings, 1661, 23*l.* 10*s.* Fabritii Libro della Origine delli Volgari Proverbi, 1526, 20*l.* Horæ, on vellum, printed by Guillaume Godar (15 leaves wanting), 19*l.*

Literary Gossip.

Mr. Edmund Gardner has nearly completed a work on which he has been engaged for some years. At present the title chosen is 'St. Catherine of Siena: a Study of the Religion, Literature, and Politics of the Fourteenth Century.' The book is not a conventional life of an ecclesiastical saint, but a study of the work and times of one of the greatest women in history. Mr. Gardner has been fortunate in discovering a number of hitherto unknown letters of St. Catherine herself, and it is thought that his work will throw new light upon the religious and political state of Italy in the epoch immediately preceding the Renaissance. Messrs. J. M. Dent & Co. will publish the book, which will not be ready for some considerable time.

Mr. John Boyd Kinnear has condensed some lectures which formed part of a series he has delivered on Sunday evenings during the last three years, and they will be published in a volume by Messrs. Smith & Elder on the 17th inst. under the title 'The Foundations of Religion.' The suggestions offered in the book are those of reverent thought, unshackled by creeds or theological refinements.

A new book for children by Lady Ridley, the wife of Mr. Justice Ridley, will be published by the same firm on Tuesday next. It is entitled 'The Sparrow with One White Feather,' and relates the story of a child who is transported into the kingdom of fairies by the agency of the sparrow. Mrs. Adrian Hope provides illustrations to the story.

E. Grant Richards has arranged with Mr. John Masefield to write a work on the New England pirates, from Teach to Avery, and the pirates of Madagascar and the Bight of Benin. Among the pirates treated of will be Bartholomew Roberts, Capt. Misson, Capt. Tew, the female pirate Anne Bonny, Capt. Kidd, and indeed the whole fellowship of ruffians, known to English readers through Capt. Johnston's entertaining but almost inaccessible work of the early eighteenth century.

Mr. B. H. Blackwell has in the press 'Poems of the Seen and the Unseen,' by Mr. C. Witham Herbert, a volume which is likely to excite some interest, especially among Roman Catholics. Mr. Herbert has versified the philosophy of religion in a striking way.

Mr. Fisher Unwin will publish very soon a volume by Miss M. Cordelia Leigh, daughter of the late Lord Leigh, entitled 'Our School out of Doors.' It is designed for the assistance of teachers of nature study who are taking their scholars for outdoor rambles. The lessons are arranged for each month of the year, dealing in as simple a manner as possible with the natural objects common at the different seasons. The book has been revised in manuscript by Lord Avebury, Prof. Lydekker, and Dean Ovenden.

'The Plays and Poems of Robert Greene' will be issued immediately by the Clarendon Press in two volumes, uniform with the Oxford editions of Kyd and Lyly. The editor is Prof. J. Churton Collins, who has taken great pains with the text and notes.

Mr. J. W. Clark, Registrary of the University of Cambridge, is preparing for publication in December, through Messrs. Macmillan & Bowes, a reproduction of Loggan's 'Cantabrigia Illustrata.' The volume will be of the size of the original folio, and the average dimension of the plates, which occupy one page each, will be 11 in. by 9 in. the opposite page having a description, historical and archæological, of each view.

Two new volumes of verse are to be issued by Mr. Elliot Stock immediately: 'The Life of the Ages,' by Miss Florence Verinder, author of 'Beyond the Sunset'; and 'The Duke of Enghien, and other Poems,' by Mrs. S. F. Hollings.

Mr. Shan F. Bullock is about to publish with Messrs. Maunsel & Co., of Dublin, a new novel entitled 'Dan: the Dollar.' The scene is laid in the north of Ireland, and deals with Irish farm life.

Vol. IV. of Dr. Beattie Crozier's 'History of Intellectual Development' is nearly complete, and will be published early in the new year. Its sub-title will be 'The Wheel of Wealth: being a Reconstruction of the Science and Art of Political Economy.'

The forthcoming number of *The Classical Review* contains a long account by Prof. W. M. Ramsay of his last explorations in Galatia. A considerable amount of new epigraphic material is presented, and the earlier printed inscriptions are exhaustively discussed in the light of the new evidence.

Sir Rowland Blennerhassett, in an article on 'The Threatened War of 1875,' gives in *The National Review* many facts, hitherto unpublished, which confirm the view taken by *The Athenæum* when noticing from time to time memoirs and other works in which the statements of M. de Gontaut-Biron have received support. The matter is one of historical as well as of continuing political importance.

Mr. H. J. Glaisher, of Wigmore Street, has just ready Mr. Norreys Connell's new volume of stories entitled 'The Pity of War.' It includes 'My Friend Yoshomai,' which attracted much attention when it appeared in *The Cornhill Magazine*.

Mr. G. B. Hertz writes:—

"In your criticism of my book 'The Old Colonial System,' in your issue of October 28th, I am accused of praising Lord G. Germain's strategy. On the contrary, I recognize its worthlessness, and used the words 'sound views on *tactics*' designedly. They are justified by the reference to the Ninth Report of the Historical MSS. Commission (part 383), given in my foot-note. This authority shows that Germain had good judgment as to the uses of cover and as to Gage's errors."

A correspondent writes:—

"'Editorial Wild-Oats' is advertised by Messrs. Harper as Mark Twain's '*latest* work.' But the title only is new. All the six pieces in the book have appeared in book form before. I did not recently, like many journalists, take 'Adam's Diary,' by Mark Twain, as new, for I remembered the title. But in this case the title suggests a new work. Is the adjective I have italicized authorized by Mark Twain?"

We shall publish next week our annual survey of German literature by Dr. Ernst Heilborn, who, as usual, pays considerable attention to the leading dramatists, and notes the advance of romantic fiction.

Prof. Jeffrey Bell writes to us:—

"As the Oxford correspondent of *The Times* stated in the issue of November 2nd that a recently elected Fellow of Magdalen is a 'grandson of Sir Charles Bell,' it may be said that the 'celebrated anatomist' had no children, and, *à fortiori*, no grandchildren."

Sir Charles Brooke, the well-known Raja of Sarawak, is supervising an account of his life which is being written by Mr. Harry De Windt and Mr. A. C. Bampfylde (late of the Sarawak service). The work will appear next year.

We have received the following announcement:—

16, James Street, Haymarket, S.W.

In my work 'Some Famous Women of Wit and Beauty,' published this year, there are two essays, on Mrs. Grote and on Lady Eastlake, which consist to a considerable extent of extracts from the memoirs of those ladies. This fact is not stated in my volume, and I desire to acknowledge my indebtedness to the works 'Mrs. Grote: a Sketch,' by Lady Eastlake, and 'The Journals and Correspondence of Lady Eastlake,' edited by her nephew Charles Eastlake Smith, from which the essays in my volume were mainly compiled. John Fyvie.

A little book about Quaker children and their quaint bringing-up, by Miss M. Carta Sturge, will shortly be published by Messrs. J. Baker & Son, of Clifton.

Messrs. W. Heffer & Sons, of Cambridge, have arranged to publish a series of phonographic records—for the teaching of English, French, German and other languages—which have been made under the supervision of Mrs. J. G. Frazer, the author of many well-known French school-books. The publishers assert that, after many experiments and elaborate precautions, it has been found possible almost to eliminate the objectionable sound associated with the phonograph.

The successor of M. de Heredia at the Paris Bibliothèque de l'Arsenal has not yet been appointed, but several candidates, some with political and some with other claims, are in the field. The best possible appointment would be that of M. Henry Martin, whose claims were urged the other day by *L'Éclair*. M. Martin has been for many years a valued assistant librarian in the Library of the Arsenal, and the 'Catalogue des Manuscrits' is his work. All students who have worked at the library will gladly acknowledge that he is not merely a "fonctionnaire," but also "un guide et un collaborateur."

The death is announced of M. Charles Buloz, who was born in Paris on September 23rd, 1843, and in 1877 succeeded his father in the editorship of the *Revue des Deux Mondes*. He resigned this post some ten years ago.

We have to announce the death on the 4th inst., at the age of sixty-five, of a leading Danish economist, Prof. N. C. Frederiksen. He was an honorary member of the Cobden Club, a regular contributor to prominent economic journals, and the author of 'The Public and Private Economy of Finland,' published by Mr. Edward Arnold in 1902.

MM. Frederik Muller & Cie., of Amsterdam, are selling from December 11th to 16th no fewer than four collections which offer many rarities and fine books—those of J. W. Stephanik and J. I. Boas Berg, of Amsterdam, and Chev. P. H. Delacourt and Chev. G. van Havre, of Antwerp. The catalogue of the books of the last-named runs to 190 pages, and contains many reproductions from incunabula.

According to the *Berliner Tageblatt*, the sale of the autograph collection of Meyer Cohn fetched 150,000 marks. Five letters of Heine were sold for 1,245 marks.

Recent Parliamentary Papers include a Report on the Manuscripts of the Earl of Egmont, Vol. I., Part 2 (1*s.* 9*d.*); Regulations relating to the Royal College of Science, the Royal College of Art, and to Museums under the Board of Education (6*d.*); and Statistical Abstract relating to British India, 1894-5 to 1903-4 (1*s.* 3*d.*).

SCIENCE

My Life. By Alfred Russel Wallace. 2 vols. (Chapman & Hall.)

On p. 223 of the first volume of this autobiography we light upon 'Remarks on my Character at Twenty-One.' Mr. Wallace's narrative, in other words, can hardly be called a model of conciseness. Still its wonderful candour wins ample forgiveness for its prolixity. Mr. Wallace takes his readers into his confidence with an ingenuousness which will at once astonish and delight them. They will learn all about his diffident courtship of Miss L., who broke off the engagement because she suspected him of secret affections for the widow of an Indian officer "as utterly remote in my mind from all ideas of marriage as would have been an aunt or a grandmother." They will be told that Mr. Wallace has been an unfortunate speculator in slate quarries and lead mines, and that he has discovered building and litigation to be expensive pursuits for a man of science. As a boy he disliked fat, but an open-air life has made him fond of it; he considers the new school of dentists no improvement on the old. He has never been able to use an oath, though he has frequently felt "those impulses and passions which in many people can only find adequate expression in such language." The union of high scientific attainments with simplicity of character is, of course, no new phenomenon, but autobiographical literature might be ransacked in vain for a more engaging example of the alliance than these pages disclose.

A prodigious memory, despite a head so shaped as to prove him, according to phrenology, to be "but moderately developed in form and individuality," enables Mr. Wallace to give a minute account of his childhood. A Micawber of a father who frittered away his means on an illustrated magazine and other disastrous investments, and an irascible head master of the Busby type, stand out from the much-elaborated picture of those early days. The philosopher laments that at Hertford Grammar School marbles were not made a text for a lesson on the immorality of gambling, nor pegtops the vehicle for teaching in mathematics. Mr. Wallace, in fact, owed but little to his professed instructors, though the affection of an elder brother, who was a land surveyor and who for seven years took him over many parts of England and Wales in pursuit of their common avocation, must have counted for a good deal in his mental development. Mr. Wallace narrowly escaped becoming a watchmaker, and for a brief period he was a teacher in a school at Leicester. There he became acquainted with H. W. Bates, whom he afterwards accompanied to the Amazon, and there he studied Malthus's 'Principles of Population':—

"It was the first work I had yet read treating of any of the problems of philosophical biology, and its main principles remained with me as a permanent possession, and twenty years later gave me the long-sought clue to the effective agent in the evolution of organic species."

It is characteristic of Mr. Wallace that, after describing the influence on his mind of a great work like Robert Chambers's 'Vestiges of the Natural History of Creation,' he should proceed with much gravity to comment on the delineations of his mental powers as supplied by two phrenologists, both of whom seem to have been experts in the fine art of trimming.

Mr. Wallace's fascinating books have long since made the reflecting public familiar with his voyages on the Amazon and in the Malay Archipelago. But his autobiography agreeably supplements a story of whole-hearted and courageous devotion to science. Out of the 750 copies which formed the first edition of his 'Travels on the Amazon and Rio Negro,' 250 remained unsold when he returned from the East, and the ultimate profit was only a few pounds. In Sarawak he wrote the memorable article which was his first contribution to the question of natural selection.

The magnanimous relations between the author and Darwin have already been illustrated in ample detail by the latter's correspondence. The letters now published for the first time supply, however, some interesting examples of their agreements to differ. A survey of their chief divergences (vol. ii. pp. 16-22) supplies a luminous abstract of Mr. Wallace's modifications of the theory of natural selection. Examiners and examined—two sub-species of the genus Homo which, from the examples he gives of their blunders, would appear to be but dubious conformers to the doctrine of the survival of the fittest—will find it most useful.

Of Mr. Wallace the advocate of land nationalization and Mr. Wallace the believer in spiritualism we learn much in these guileless volumes. The Prime Minister comes under his condemnation for the "amazing statement" that if labourers all had from one to four acres on secure tenure, they could not live on their holdings. Despite Bellamy, whose 'Looking Backward' appears to have been the cause of Mr. Wallace's conversion to Socialism, the experiment would seem a trifle risky. Nor did a sister of Mr. Balfour rise to Mr. Wallace's requirements as an investigator of spiritualist phenomena. Many readers of these pages will, we think, be similarly unable to follow Mr. Wallace in his extraordinary faith, with the explanations and conclusions it involves.

An Introduction to Geology. By J. E. Marr, Sc.D. (Cambridge, University Press.)—Long experience as Lecturer on Geology at Cambridge has led Dr. Marr to understand the difficulties which the science usually presents to the student on first taking up the subject, and the best way in which these difficulties can be overcome. In the little work just issued he introduces the readers to the elements of geology in a simple and attractive manner, yet with a breadth and accuracy that show the hand of a master. Whether dealing with the physiographical or with the stratigraphical side of the science, the writer delights in unfolding broad principles without worrying the student with excess of detail, and he discusses these principles with praiseworthy economy of technical terms. He who reads and digests the book will acquire a sound knowledge of the rudiments of the science, and will be prepared to take up with advantage the study of any advanced treatise on geology, or, better still, to go forth into the field and read for himself the story of the strata.

The Mammals of Great Britain and Ireland. By J. G. Millais. Vol. II. (Longmans & Co.)—With commendable punctuality Mr. Millais has issued the second of the three admirably illustrated volumes in which he is giving an account of the beasts of these islands. The present volume deals with otters, badgers and stoats, and the Rodentia. We think that the effect of some of the plates would have been improved by a darker background, but we own that we make the suggestion with respectful diffidence. Whether Mr. Millais treats the views of Dr. Forsyth-Major with as much consideration as he should is a question which, fortunately, we are not called upon to answer.

It is to be regretted that Mr. Millais has not attached himself more often to the views of the naturalist just named, instead of following, as he does, a younger school, which has divided and subdivided species till its zoological studies are intelligible only to specialists. We believe and

hope that this method of over-refinement is but a temporary aberration. The book before us is destined to have a long life, and we should have been better pleased had there been no "sub-species" in it at all. It is true that the author has given proof of his attachment to varietal forms by the perils to which he exposed himself by his visits to some of the smaller of the Orkney Islands, where the presence of a stranger does not always call forth demonstrations of delight. We look forward with much interest to the concluding volume of this important publication.

Astronomy in the Old Testament. By G. Schiaparelli, Director of the Brera Observatory in Milan. Authorized English Translation, with many Corrections and Additions by the Author. (Oxford, Clarendon Press.) — The original edition of this work ('L'Astronomia nell' Antico Testamento'), which appeared at Milan in 1903 and formed No. 332 of the scientific series in the large collection of manuals in course of publication there by Ulrico Hoepli, was noticed in *The Athenæum* for November 7th (p. 618) of that year. There is therefore no need for an extended notice of the present English version. The translator does not give his own name, but acknowledges help from Prof. Driver and Mr. A. E. Cowley. The author in a preface expresses his obligations to English helpers for various hints and remarks which have led him to make several improvements and corrections. He has avoided making any reference to the novelties recently published (especially by some learned German Assyriologists) with regard to the astronomical mythology of the ancient peoples of Nearer Asia and the influence which this is supposed to have exercised on the historical traditions of the Hebrews, because he believes that their conclusions have not, at any rate as yet, been brought to the degree of probability which history requires. We can only repeat what we said in 1903—that it is impossible to read this interesting little work without admiring the wealth of learning with which the author has discussed astronomical and chronological allusions in the Old Testament; and, for the reasons given above, the English edition will be of value even to those who have read the Italian.

SOCIETIES.

ENTOMOLOGICAL.—*Nov.* 1.—Mr. F. Merrifield, President, in the chair.—Mr. J. W. H. Harrison was elected a Fellow.—The Rev. F. D. Morice exhibited (1) *Panurgus maricei*, Friese, a species of a bee new to science, taken by him near Gibraltar, and remarkable from the fact that whereas the other species of this genus are entirely black, in this the colour of the male face was bright yellow, the legs partly yellow, and the abdomen spotted down each side; and (2) the unique type specimen of *Eriades fasciatus*, a male of the Chelostoma group taken at Jericho in 1899, in which again, while all its congeners are practically unicolorous, this species presents a brightly banded abdomen not unlike that of a wasp.—Mr. W. J. Lucas showed a male specimen of the earwig *Forficula auricularia*, taken at Warwick in September, with a drawing of the cerci (forceps), which were very abnormal, the broader basal part of the two appearing to be more or less fused.—Mr. G. C. Champion exhibited various interesting insects from Guatemala recently received from Señor Rodriguez, including *Heterosternus rodriguezi*, Cand., *Pantodinus klugi*, Burm., *Plusiotis adelaida*, Hope, and a species of Orthopteron greatly resembling a dead withered leaf, possibly a new species of Mimetis.—Mr. Norman H. Joy showed specimens of a Coleopteron new to the British Islands, taken in the neighbourhood of Streatley: *Læmophilus monilis*, F., and *Dacne fowleri*, n. sp., from Bradfield, Berks, with specimens of *D. humeralis*, and *D. ruffifrons* for comparison.—Mr. H. St. J. Donisthorpe showed a specimen of a new Agathidium discovered last year in Cumberland, and now taken by him in Durham: and a series of *Prionocyphon serricornis* from the New Forest, with a drawing of the larva, which he said lived under water in the holes of trees, and appeared to emerge for pupation and descend into the ground.—Dr. F. A. Dixey exhibited preparations of the scents of some African butterflies collected by him and Dr. Longstaff during the recent visit of the British Association, together with specimens of the species investigated.—Mr. P. I. Lathy communicated 'A Contribution towards the Knowledge of African Rhopalocera'; and Col. C. T. Bingham a paper entitled 'A New Species of the Hymenopterous Genus Megalyra, Westwood,' by Mr. J. Chester Bradley, Ithaca, N.Y.

PHILOLOGICAL.—*Nov.* 3.—Prof. I. Gollancz in the chair.—Prof. J. G. Robertson was elected a Member.—Mr. W. A. Craigie read a paper on the R and N words he is editing for the Society's 'Oxford Dictionary.' In continuation of his former R work he had finished the articles (128 pages) to *Reservoir*, and they would be published as a double section on January 1st, 1906. But the Goldsmiths' Company's grant of 5,000*l.* to the Oxford Delegates in order to complete vol. vi. of the 'Dictionary' induced them to shift Mr. Craigie from R to N, so that on the completion of M—than which N is much shorter—the volume can appear. Mr. Craigie then commented on twenty-one R words. *Rein* for a horse, O.Fr. *reine*, was probably not from Lat. *retinere*. *Rein*, a reindeer, was a later form than "reindeer," which was from Old Norse, and not from Lapp, which only borrowed O.N. forms. King Alfred mentions *hranas*, reindeer, before 900. *Reit*, seaweed, or *reek*, has no known etymology. "*Renable* of tongue," in 'Piers Plowman,' is O.Fr. *resnable*, eloquent or fluent, and survives in the Engl. dialect *rennable*. Of *rend*, to tear, the O.Fris. *renda* is the only known analogue: the infin. *rent* occurs in 1647. *Rennet*, which curdles milk, is of the fifteenth century, is from *renne*, cause to run, and takes the forms *rendels*, *rindles*. *Rennet-apple* is perhaps from Fr., a little queen, or a frog. *Republic* meant in 1603 a state, monarchy: then, popular government. In U.S.A. "Republican" was first applied to the Democratic party. *Rerd*, noise, used in 'Beowulf,' &c., is now confined to the Northern dialects. The verb *rerd*, to speak, roar, is used of ice cracking. *Rere*, or late suppers, occurs in Robert of Brunne in 1303. *Reredos* has some thirty spellings, and is from F. *areridos*, which occurs in 1399. It lasted from 1372 to 1540, and then became obsolete, but was revived by Parker's 'Glossary' &c., in 1849–50. Besides the screen behind the altar, it meant a covering of velvet or silk, and also the back of a fireplace. The legal *rejoin* and *rejoinder*, the answer to a plaintiff's statement, was an English, and not a French meaning. *Relation* and *relative* both existed with the same meaning from the seventeenth century. The grammatical *relative* was in Purvey's Bib'e, *c.* 1400; and Palsgrave in 1525 has "relative pronouns." *Relay*, for a fresh batch of hounds, dates from *c.* 1410; for one of horses, from 1659. *Relent* was first to melt, become liquid, and then soft: beans once dried, will *relent*. *Reliable* came from the Scottish trials in 1569, and has been fully treated by Fitzedward Hall. *Relic* is in the 'Ancren Riwle,' *c.* 1225, and *relict* is used in the same sense; for a widow it comes from Scotland in 1545. *Relief*, what is left, is O.Fr. *relef* (L. *relevare*), left and picked up: it lasted till the sixteenth century. As a payment by an heir to the overlord, when the former picked up his father's estate, it dates from 1330. As outstanding bits in sculpture it is from It. *rilevo*. *Religion* comes in about 1200, meaning bound by monastic vows: the modern sense dates from 1535. The adj. *religious* was earlier. Shakspeare's *relish* "your nimble notes," and "a love-song," in 'Lucrece' and the 'Two Gentlemen' has never been rightly explained; it was to trill in singing. *Relishing* is in Gawain Douglas's 'Palace of Honour,' 1513. It may be an extension of the ordinary meaning of "relish." *Remene*, make mention of, interpret, expound, render, is used by Wyclif; a *remener* was a translator: it was sometimes printed *remeve*, remove. *Remord*, remorse (of conscience), has died out. Turning to N words, Mr. Craigie first dealt with "a nalle," an awl, and showed that in our 'Dictionary' two words—the O.E. *æl*, *al*, *eal*, awl, and *awel*, which has nothing to do with it, Lat. *fuscinula*, a fleshhook—had been confused, owing to the comparatively modern spelling of "awle," 1565. The instances quoted from 1000 to 1548 for *æl*, awl, in its various spellings, and for *awel* from 725 to 1400, conclusively proved Mr. Craigie's point. He then dealt with *nail*, for driving in, specially with regard to the Crucifixion; *nag*, 1400, Dutch *nagge*, 1579, from the English; *nag*, to irritate (Scand. *nagga*, to bite, irritate), found in Brockett's 'North-County Glossary' in 1825, and in literary use from 1860; *nab*, a cant word used in Urquhart's Rabelais, and in Shadwell, 1686; *nab*, a projecting part of a rock, *c.* 1350, Scandinavian: *nab*, head, hat, nob, in Harman's 'Caveat'; *nape*, *c.* 1300, which has no cognate; *nasty* in the 'Anturs of Arthur,' *naxty* in the sixteenth century, a word innocent here, but not used in the presence of ladies in the United States. The early use of *resentment* as an acknowledgment of a benefit—"the resentment of favours"—was shown by several quotations; and that of *resent*, meaning "to give out a perfume." For the Supplement to the 'Dictionary' the Society desires corrections like the above of *awl*, and also quotations for earlier and for different uses of words and their meanings, and for later occurrences of obsolete words.

INSTITUTION OF CIVIL ENGINEERS.—*Nov.* 7.—Sir Guilford Molesworth, the retiring President, alluded to the loss which the Institution and the engineering profession generally had sustained during the recess by the deaths of Mr. James Mansergh and Mr. G. R. Stephenson, Past Presidents, and of Sir William Shelford, member of Council. He then formally introduced his successor in the chair, Sir Alexander Binnie, who delivered an address in which he traced the influence of scientific thought and investigation upon the development of engineering practice. The President subsequently presented the medals and premiums awarded by the Council for papers read at the Institution in the past session.

ROYAL INSTITUTION.—*Nov.* 6.—Sir James Crichton-Browne, Treasurer and V.P., in the chair.—Lady Alford, Mr. W. Friedlaender, Dr. A. Muirhead, and Mr. D. A. Thomson were elected Members.

SOCIETY OF ENGINEERS.—*Nov.* 6.—Mr. N. J. West, President, in the chair.—A paper was read on 'The Metallic Preservation and Ornamentation of Iron and Steel Surfaces,' by Mr. Sherard Cowper-Coles.

MEETINGS NEXT WEEK.

MON. Royal Academy, 4.—'The Lower Limb,' Lecture I., Prof. A. Thomson.
— London Institution, 5.—'Flies and how They Disappear,' Mr. H. Hill.
— Surveyors' Institution, 8.—President's Address.
TUES. Asiatic, 4.—'Antiquarian Notes in Ceylon, Burma, and Java,' Mr. R. Sewell.
— Statistical, 5.—'Statistical Skimmings from the International Congress,' Sir J. Athelstane Baines.
— Colonial, 8.—'The Anglo-Australian Position from an Australian Point of View,' Mr. W. J. Sawden.
— Institution of Civil Engineers, 8.—'On Waterways in Great Britain,' Mr. J. A. Saner.
— Zoological, 8½.—'On the Papillary Ridges in Mammals, chiefly Primates,' Dr. Walter Kidd: 'On a Collection of Mammals brought home by the Tibet Frontier Commission,' Mr. J. L. Bonhote; 'Notes on the Geographical Distribution of the Okapi,' Dr. Einar Lönnberg; 'Notes on Goral found in Burma,' Major G. H. Evans; 'The Mammals of Crete,' Miss D. M. A. Bate.
WED. Meteorological, 7½.—'The Rainstorm of August 24th-26th, 1905, in Co. Dublin and Co. Wicklow,' Sir J. W. Moore; 'The Aquameter,' Mr. W. B. Newton.
— Entomological, 8.—
— Folk-lore, 8.—'The King of the Wood on Celtic Soil,' Mr. A. B. Cook.
— Microscopical, 8.—
— Society of Arts, 8.—Inaugural Address by Sir Owen Roberts.
— Dante, 8½.—'Italian Architecture and Pictorial Art in Umbria and the Marches,' Rev. Newton Mant.
THURS. Royal Academy, 4.—'The Lower Limb,' Lecture II., Prof. A. Thomson.
— Historical, 5.—'Canning and the Secret Intelligence from Tilsit,' Dr. J. Holland Rose; 'The Rhyming Dispatch, Jan. 31st, 1826,' Sir Harry Poland.
— London Institution, 6.—'The Oldest Road in England,' Mr. Hilaire Belloc.
— Linnean, 8.—'Contributions to the Embryology of the Amentiferæ,' Part II., Misses M. Benson, E. Sanday, and E. Berridge; 'The Ears of Certain Sharks,' Prof. C. Stewart.
— Chemical, 8½.—'Silicon Researches,' Part IX., Mr. J. E. Reynolds; 'Condensation of Ketones with Mercury Cyanide,' Messrs. J. E. Marsh and R. de J. F. Struthers; 'Application of the Microscopic Method of Molecular-Weight-Determination to High-Boiling Solvents,' Messrs. G. Barger and A. J. Ewins; 'Green Compounds of Cobalt produced by Oxidizing Agents,' Mr. R. G. Durrant; and other Papers.
FRI. Institution of Mechanical Engineers, 8.—'On the Properties of a Series of Iron-Nickel-Manganese-Carbon Alloys,' Dr. H. C. H. Carpenter and Messrs. R. A. Hadfield and P. Longmuir.

Science Gossip.

WE congratulate Prof. G. H. Darwin, F.R.S., on becoming K.C.B. This well-deserved honour is the only one of interest to science, literature, or art in last Thursday's list of promotions and distinctions.

THE decision of the General Committee of the British Association to accept the invitation of Leicester instead of that of Dublin has caused some regret in Ireland, as it probably postpones the next meeting of the Association in Dublin for many years. It is an open secret that friction in South Africa between the officials and an Irish representative contributed to this result.

THE death, in his seventy-fifth year, is announced of Dr. Johann Meidinger, Professor of Physics at the Technical Institute in Karlsruhe, and author of a number of valuable works dealing with the practical side of his subject, among

them 'Geschichte des Blitzableiters,' 'Heizung von Wohnräumen,' 'Gas oder Elektrizität,' &c.

Prof. W. H. Hussey, of the Lick Observatory, has been appointed Director of the Detroit Observatory at Ann Arbor, Michigan.

The Janssen Medal of the French Astronomical Society has been awarded to Prof. Percival Lowell, of the Massachusetts Institute of Technology, for his work on the planet Mars.

The tenth satellite of Saturn (the orbit of which is near that of Hyperion, the seventh satellite) has been named Themis, which does not seem a very happy designation, as it is also borne by a small planet, No. 24.

FINE ARTS

Annual of the British School at Athens. —Vol. IX. *Session 1902-3.*—Vol. X. *Session 1903-4.*

More than two-thirds of the ninth volume of this 'Annual' is again taken up with excavations in Crete. There is a long and very interesting instalment of Mr. Arthur Evans's description of the Palace of Cnossus, and a detailed account of the excavations of the Director and students of the School at and near Palaikastro. The results of the excavations at Cnossus have already been chronicled from time to time in *The Times* and elsewhere; but here we have a fuller account, illustrated with numerous plans and diagrams, and with representations of vases, seals, statuettes, and many other objects. The discoveries that are recorded in the present instalment may be divided generally into three groups: the "theatral area," the very remarkable temple deposits, and the "Royal Villa" to the north-west of the Palace. Other new features are an "official residence," at the south-east angle of the Palace area, which resembles the Royal Villa in having its main approach by a staircase, and in repeating on a miniature scale the essential features of the Palace architecture; some very curious oblong pits, of great depth, beneath the late palace, and evidently of earlier date; and a series of treasure-chests beneath the pavement of the long corridor. It is difficult to resist the suggestion of Mr. Evans that what he calls "the theatral area," with its low steps ascending on two sides from a level space, afforded accommodation for spectators at some ceremony; perhaps, however, this may not have been more than the arrival of a procession, for which similar provision is made at Eleusis and elsewhere in later Greece. But Mr. Evans's identification of the χόρος made by Dædalus for Ariadne, and his comparison of the later dancing-places sacred to her consort Dionysus, are too ingenious to be ignored.

The temple deposits, which apparently contained the whole apparatus of a shrine, with objects of worship and of cult and votive offerings, caused much astonishment when they were discovered. The interest they aroused is fully justified by the more complete account here supplied. The snake goddess and her votaries, with their strange and elaborate costumes, and the votive garments of the same kind, emphasize once more the artificial character of the Minoan civilization. The occurrence of a plain marble cross as a symbol, possibly in the same position as the double axe for which a similar position was previously inferred in a shrine in the Palace, is remarkable. It is, of course, no new thing to find the cross as a religious symbol in pre-Christian times; but the extraordinary resemblance of the shrine as reconstituted by Mr. Evans to a local shrine of modern times shows how cautious one must be about superficial resemblances. The faïence reliefs of goats, cows, fish, and other subjects are among the finest of their kind that have been found; their excellence of design and of workmanship is striking. But here, as in the bronze and terra-cotta vases, of which many admirable specimens are reproduced, we feel that the work throughout is separated by a great gulf from the characteristic style of Greece: it may excel it in some points of animal representation; but even where the types persisted, the spirit pervading them is different, as one might expect in work produced for the fashionable court of a monarch of a decadent age—for so one is now fully justified in describing the later Minoan period.

The "Royal Villa" has, as its most characteristic feature, a kind of throne-room with the throne set in a niche at its back, and open to the air above by a sort of light-well such as is common in early Cretan houses, though here, apparently, roofed over. Mr. Evans claims this as the earliest form of basilica. The name is appropriate enough; but the history of the basilica is too obscure at present for a continuous development to be traced.

The excavations of the British School itself in Crete are, so far as the present number is concerned, mainly confined to Palaikastro and its neighbourhood; they are, however, considerably varied by the exploration of some small subsidiary sites. The general plan of the site and of the houses it contained does not add very much to what was previously found; but we have now a fairly complete notion of a Cretan country town, and a good deal has been done to clear up doubtful points. Perhaps the most interesting observation is that of Mr. Bosanquet, that the curious "set-backs" in the walls correspond here with internal partitions, and that we may possibly see in this fact the origin of this puzzling architectural device. Mr. Dawkins's survey of the houses is a very useful piece of work.

The pottery found is again interesting; but we protest against the taste which can call such a Kamares "fruit-stand" as that figured on p. 308 beautiful. The excavators are to be congratulated on finding so complete and typical a specimen; but in artistic effect it resembles the worst and most florid of South Italian pottery of late Greek times, and must represent a similar age of decadence. Mr. Duckworth's studies of the skulls and other bones found in the various ossuaries round Palaikastro may ultimately have important anthropological results; but only the discoveries and preliminary observations are chronicled at present. Mr. Myres's account of his excavation of the shrine of Petsofá is fully illustrated by plates showing the various votive offerings he found; he also adds a suggestive note on the comparison of the Cretan type of jacket and skirt with North European models, and infers a common origin. This opens up an investigation which may lead us far; dress, as well as language, physical type, art, and customs, must be taken into account in ethnological matters, and in this case all indications seem to confirm the essential difference between the civilization of Crete and that of historical Greece.

The space devoted to Hellenic matters in the present volume is comparatively small. Mr. Wace, in publishing a statue of Apollo seated on the Omphalos, takes the opportunity of discussing some of the problems relating to Hellenistic art, especially Schreiber's theories as to the influence of Alexandria. He certainly makes out a *prima facie* case for a more comprehensive and cosmopolitan treatment. Mr. Tod gives a careful study of an unpublished Attic decree, treated in a manner which might well serve as an introduction to the class of documents to which it belongs; and Prof. Ramsay contributes another portion of his invaluable studies on the topography of Asia Minor, this time on Pisidia and the Lycaonian frontier. Mr. Dawkins's 'Notes from Karpathos' are an interesting combination of topography, folk-lore, and other observations. His record of the wooden locks in local use throws some light on classical examples. In quoting parallels to the throne and semicircular steps in the apse of the church of St. Sophia in Saria he might have added the church at Paroikia, in Paros, where there is also a baptistery with a cruciform font. Finally, Byzantine architecture is represented by Mr. Comyn's plan of the church at Daou-Mendeli. Its curious hexagonal shape is seen again in a mosque in Cairo. It was rebuilt, as Mr. Bosanquet points out in a note in the next number of the 'Annual,' in the sixteenth century, though the design may be a century or two earlier.

The tenth volume of the 'Annual,' which follows the ninth at less than the usual interval, and so brings us nearer to the period which it records, marks the transference of the main centre of the explorations of the School from Crete to Greece itself. Mr. Evans's account of further excavations in the Palace at Cnossus is comparatively short, and mainly taken up by a record of various detailed investigations of levels or building, the most considerable being concerned with a reconstruction of the Palace façade at its latest period. A careful record of the pottery fragments from various strata has cleared up several doubtful points as to the relative chronology of the vases of the "Middle Minoan" age. The most interesting illustration is a restored fresco of a shrine of the now familiar type, with little axe-heads inserted in the capitals of the columns, in a manner that recalls the small votive axe-heads which Mr. Hogarth found inserted in the crevices of the stalactites of the Dictæan cave. The account of the excavations of the British School at Palaikastro is of a similar character. Here, also, repeated observation and new discoveries have made it possible to classify styles and periods with greater completeness than before; and Mr. Dawkins's compara-

tive table of the discoveries at Palaikastro, Cnossus, and other sites in Crete, and of early sites elsewhere in the Ægean region, showing what is representative of early, middle, and late "Minoan," with their various subdivisions, is much to be commended. New discoveries, both on the town site and in the cemeteries, are useful as contributing to this result rather than as yielding any startling novelties.

The beginning of the work of the British School in Laconia, the district assigned to it by the Greek Government, is marked by Mr. Forster's articles on topography and inscriptions, and by Mr. Tod's publication of the inscriptions relating to teams of ball-players at Sparta. A descriptive catalogue, by students of the School, of the antiquities in the museum at Sparta, will form a most valuable instalment of this work, and its publication is promised in the School Report. Among other articles may be mentioned the publication by Mr. Hopkinson of a pinax from Præsos, with a representation of a hero and a sea-monster, which the author is inclined to assign to a Melian origin; a further study of the Eteo-Cretan language, with the publication of a new inscription by Prof. Conway; and a discussion, by Mr. Wace, of grotesque figures of Hellenistic date, which he gives good reasons for regarding as amulets against the evil eye. Mr. Hall publishes a photograph which reproduces accurately for the first time the appearance of the Cretan vases carried by Keftians in the painting of the tomb of Senmut at the Egyptian Thebes. An article, by Dr. Schäfer, on the ancient Egyptian plough and other agricultural implements, will be useful for reference, in view of the interest aroused by Cretan and other discoveries in the appliances in use in the Eastern Mediterranean. An editorial apology for the appearance of this article in German alleges the difficulty of rendering the many technical terms by their exact English equivalents; but to most English readers this difficulty will present itself in an aggravated form. In such a case it would be better, perhaps, to translate, and to add the German equivalent of the technical words in brackets.

The chief event in the history of the School recorded in the present volume does not belong to the session 1903–4, but took place on April 8th, 1905. This was the opening of the Penrose Memorial Library, which serves as a worthy monument of the first Director of the School, and adds greatly to the convenience of students and visitors. The opening of the Library by the Crown Prince of Greece was attended by many friends of the School, who gave expression to the general wish for its continued prosperity in its enlarged and beautified buildings.

Sir Joshua Reynolds, P.R.A. By William B. Boulton. (Methuen & Co.)—The multiplicity of recent monographs on great artists is exemplified by the case of Sir Joshua Reynolds, the present being the fourth of such works noticed in our columns within as many years. Like its immediate predecessors, it presents no fresh facts, but we do not think that this in itself renders the production of such works undesirable. They at any rate attest and stimulate a widening interest in the history of art. Fresh facts about great painters at the present day not infrequently owe their freshness to their relative insignificance. There are, of course, difficulties still to be solved, but for the most part the lives and works are known; it rests with us whether we enter in and enjoy. As a means thereto each generation apparently prefers new handbooks, and the improvement in the processes of illustration suffices to render the last comers the most serviceable. Among the constantly increasing mass of Reynolds literature there are two landmarks: the 'Life and Times' by C. R. Leslie and Tom Taylor, and the 'History of the Works' by Messrs. Graves and Cronin. Mr. Boulton's work is the fullest in biographical interest of any of those which have appeared since that of Leslie and Taylor in 1865. To the students of the technical processes of Reynolds's art the book makes but slight appeal. "The whole subject," as the author modestly observes, "seems hopelessly obscure to the lay mind." We could wish the reservation thus imposed were more general. Reynolds entered very fully into the social and intellectual life of his time, and the wealth of anecdote of contemporary diarists and letter-writers has been aptly laid under contribution. The list of his sitters shows, as Mr. Boulton says, "how completely the human interest of Sir Joshua's time is preserved in his canvases." Perhaps on occasion it may appear that this human interest has proved too engrossing. Time seems to tarry somewhat during the recital of his life in London—the period of "affluence and leisure," though the latter word reads incongruously in reference to one whose works are numbered in the thousands.

We find some characterization of contemporaries who sat to him—and there were few of any note who did not—as well as interesting accounts of his friendships. It was Dr. Johnson who recorded Reynolds's statement that it was by reading Richardson's essay on the theory of painting that his imagination was first excited to become an artist. The impulse, however, was well controlled, for when the matter was under discussion in the family circle he made the remark that "he would rather be an apothecary than an ordinary painter, but if he could be bound to an eminent master he should choose the latter." The same shrewd common sense ordered the affairs of his busy life. His accessibility, his acquaintances among all ranks of society, his friendships with men of utterly divergent opinions, seem to exemplify the truth of Richardson's remark that "a portrait painter must understand mankind, and enter into their characters, and express their minds as well as their faces: and as his business is chiefly with people of condition he must think as a gentleman and a man of sense."

"The most invulnerable man I know," is Johnson's famous dictum on Reynolds—"the man with whom, if you should quarrel, you will find the most difficulty how to abuse." There have, however, been hostile critics, and Mr. Boulton's review of their evidence is both temperate and convincing—notably so, perhaps, in reference to the interpretation of Sir Joshua's character which is found in Sir Walter Armstrong's recent monograph. But it was surely unnecessary to undertake the defence of Reynolds against the annotations made by Blake in the copy of Malone's life of the artist now in the British Museum! Blake did not give his abusive epithets the publicity of print, and in charity to him they might have been left where he placed them. They certainly add nothing to our knowledge of Reynolds.

To Blake, as also to Barry in the bitter moods of constant penury, there was doubtless no little gall in the contrast presented between Reynolds's 'Discourses,' which inculcated an arduous apprenticeship to "the grand style," and the fact that he himself had annually a hundred sitters. To the consciousness of this contrast may be in part perhaps ascribed the reason why in treating of the 'Discourses' Mr. Boulton seems to do very inadequate justice to their merits. Sir Joshua did not use the pen with the same facility as the pencil; in his concluding discourse he states that he is truly sensible how unequal he has been to the expression of his own ideas. He succeeded nevertheless in giving utterance to a body of precept which has placed him easily first of English writers on æsthetics. His 'Discourses' were addressed to students at the outset of their careers. He says of himself, "It appeared to me too late when I went to Italy to acquire that readiness of invention which I observed others to possess." It is therefore futile to seek to interpret his precepts by the circumscribed standard of his own performance. The notes made during his visit to Italy seem to show that his attention was directed first to the works of such artists as are mentioned most frequently in Richardson's treatise. Traces of the same influence subsist in the 'Discourses,' notably perhaps in the comparative frequency of reference to works of the Bolognese masters. He hardly mentions the earlier painters of the Quattrocento or the Primitives, but that he was not blind to their distinctive excellence is to be inferred from a passage here quoted from Cotton's 'Life,' in which he states simplicity and truth to be more often found in the old masters who preceded the great age of painting than either then or subsequently. It is, however, to the masters of the great age itself, and above all to Michael Angelo, that he directs the student. As for himself, he says in his last address:—

"I have taken another course, one more suited to my abilities and to the taste of the times in which I live. Yet, however unequal I feel myself to that attempt, were I now to begin the world again I would tread in the steps of that great master."

The illustrations to Mr. Boulton's work are well selected and excellently reproduced. They might perhaps, however, with advantage have included one or more specimens of Reynolds's efforts in "the grand style." The absence of any list of his principal works is due no doubt to considerations of space, but in view of this it would, we think, have been advisable to state, either in the list of illustrations or on the plates themselves, where the originals are now to be found. This is rendered the more desirable from the fact that a considerable number of the subjects selected to serve as illustrations are not mentioned in the letterpress. We notice that the picture of the architect James Paine and his son, correctly so styled on the plate, is referred to in the course of the text as that of Thomas Paine and son; and the statement that the picture of 'Mrs. Hartley and Child' is described by those who have seen it as in the very finest preservation would certainly suggest some less accessible locality than the National Gallery, where, however, this picture has now been for two years.

Reynolds: Discourses. With Introductions and Notes by Roger Fry. (Seeley & Co.)—The clearness of type and general attractiveness of format make this a very desirable edition of the 'Discourses,' while to the serious student it is rendered of great value by the critical introductions which it contains, notably perhaps by its discussion of the theory of beauty set forth in the third of the 'Discourses.' Change of method causes much statement of art theory to resolve itself into mere comment of the day. Even Reynolds's 'Discourses' have come to need editing. Reputations alter, and at times the assertion of a principle is rendered less impressive by the artist chosen to illustrate it. Moreover "new gods are crowned in the city," and their names were never upon his lips—although indeed, as Mr. Fry suggests, the rarity of references to the Primitives noted above may have been out of deference to

contemporary opinion, since in his diary of a journey to Flanders and Holland he expresses a warm admiration for works of the Van Eycks. But the enduring value of the 'Discourses' arises from the fact that they attempt to expound the laws of artistic expression from the artist's point of view, and as Mr. Fry observes, it is rare that a writer has at once the requisite practical knowledge and the power of generalization. It is the union of the same qualities found in Mr. Fry's interpretative comments which renders him a valuable exponent of Reynolds's teaching. The volume contains some thirty illustrations from the works of the painters who are most frequently cited in the 'Discourses,' and in these, as is natural, the later Italian schools are somewhat fully represented. The interest of the plates is further considerably enhanced by Mr. Fry's brief appreciations of the various artists. We may mention those of Veronese, Lodovico Caracci, Salvator Rosa, and Le Sueur as among the most felicitous. They form an engaging series of critical judgments, and tend to establish the substantial truth of some of the more commonly disputed of Sir Joshua's pronouncements.

THREE EXHIBITIONS.

MESSRS. AGNEW'S GALLERY.

It is long since the exhibition in aid of the Artists' General Benevolent Institution has produced such a sensational event as the appearance on Messrs. Agnew's walls of the great Velasquez nude from Rokeby. Ever since the exhibition of Old Masters in 1890 this has remained in memory as one of the great masterpieces of painting; and those (and they must be many) who of recent years have made fruitless pilgrimages to the Tees, and have sadly consoled themselves with the absurdities of the neighbouring Bowes Museum, will fully appreciate the rare opportunity the picture-lover now has. Since its exhibition fifteen years ago the picture has undergone a process of cleaning which has brought out its extraordinary pearly notes. It is now surprisingly fresh and curiously modern in its vision. It is, indeed, the starting-point for most modern renderings of the reclining nude. That salience of the hip which the Venetians avoided, as breaking too sharply the rhythm of the contour, is here made the key to the whole design by the treatment of the shoulder as a variant upon the same curve—a secondary crest, as it were, in the long undulating rhythm which encompasses the whole figure. It is extraordinary how Velasquez has here managed to give the actual model (noting even such details as the sharp fold of the flesh round the straightened shoulder), and yet to accommodate it to a noble simplicity of style. Only, perhaps, in the face reflected in the mirror — itself a miraculous note in the colour scheme—is there a fall from the demands of great style, a certain commonness and a disillusionment. Venus is a goddess till one looks at the face, and then she becomes a well-made Spanish model. But, after all, one may take it at that, discount even the cupid's wings, somewhat naïvely and obviously attached, yet the picture remains not only one of Velasquez's masterpieces, and unique of its kind, but also one of the greatest interpretations of the human form in all art—interpreted not under the stress of a great imaginative idea, dominated by no deep poetical mood, but simply by an intense, almost unconscious sense of the pure beauty of the thing. And how amazingly simple and direct the expression of this interpretation becomes! In this lies, one supposes, the secret of its great style. We have here no bravura, no rhetorical emphasis, no self-consciousness of any kind, yet the simplicity is attained by a marvellous exercise of science, so that the means used are obliterated and forgotten in the total impression. The colour is of the utmost perfection. Starting from a few notes that actually occur in the nude, from an apposition of pearly grey in the half-tones and a suggestion of warmth in the lights, Velasquez found a scheme of dark silvery grey, toned white, and dull red, each note of which heightens and intensifies the harmony; while two notes—one of blue and one of dull, transparent bluish-green—are merely enough to suggest an opposition to the prevailing tone of warm neutrals.

Beside such a masterpiece one can hardly look with a favourable eye on the average works of the English School which hang near by. A general impression of pretty woolwork results from the comparison with Velasquez's assured science. Oddly enough, a Lawrence, *Mrs. Michel* (No. 14) — a thing in itself essentially common, almost vulgar—holds its own better than most by reason of the certainty and grip of the draughtsmanship and the large ease of the pose. The Reynoldses are, for the most part, weak, though one, *Lady Mary Wrottesley* (17), shows a delicate taste in the colour and a fine distribution of the design. Then there are an exquisite, but rather slight Gainsborough, the portrait of *Mrs. Fitzherbert* (7); a fine, though somewhat laboured Crome, which was seen not long since at the Huth sale (6); and a magnificent Morland, *The Benevolent Sportsman* (19), a picture which shows what delicate sensibility and what assurance of hand Morland had at his best.

Of the French portraits none can be said to be first rate. We note a brilliant, but rather uninteresting Nattier, *La Marquise Perrin de Cypierre* (1); a very pretty Van Loo of *Madame de Pompadour* (4); and Largillière at his best in the *Comte de Richebourg* (5), and at his ordinary level of pompous mediocrity in two, more ambitious canvases.

THE LEICESTER GALLERIES.

Here are some water-colour drawings by M. Harpignies. A strong sentiment for certain moods of nature, a personal feeling for cold greens and greys against pale watery skies, some dexterity, and but little sense of style are what distinguish them. Now and again nature provides the artist with a composition, as in the *Bords du Rhône* (No. 4), the *Château de Clisson* (31), and a few more, and then M. Harpignies accepts it gratefully. More often the scene that attracted him had in it no elements of large pictorial design, and then the artist contentedly does without it. The most interesting and the most ambitious drawing is *Aux Bords de la Rivière* (73), which has a strength of tone that reminds one of Th. Rousseau, and some curious notes of rich deep green and dark inky greys which tell finely. Perhaps M. Harpignies excels most in his power of rendering the luminosity and gradations of tone in the sky. The *Bateau à Vapeur, Paris* (18), is remarkable for this quality.

In the centre cases of the gallery are to be seen specimens of the jewellery and silverwork of Prince Bojidar Karageorgevitch. They show technical skill and that restless ambition for novel and inauspicious forms which has infected decorative design abroad for some years. There is scarcely a spoon or fork here that one could conveniently use—none that is not tortured into a design which has nothing to do with its ostensible purpose.

THE GOUPIL GALLERY.

The drawings of a comparatively unknown Dutch artist, Mr. J. W. Cossaar, are shown here. He scarcely seems yet to have fixed upon a personal style. His allegiance wavers between the vaguely romantic method of some modern Dutchmen and the incisive tone and witty shorthand of the painters of Montmartre. In both he shows considerable talent and power of adaptation. On the whole, we prefer his Parisian drawings—little lanes and side streets with a sharp light striking across between gloomy walls or broad squares, like the *Place Clichy* (No. 19), or the brilliantly suggested *Church Doorway at Montmartre* (21). Among the water-colours the *St. Cloud* (62) seemed to us by far the best—really remarkable in its simplification and a certain original feeling for colour. It is a decidedly promising exhibition.

NOTES FROM ROME.

No discovery of importance having taken place during my long absence from Rome, I must gather the matter for this letter from facts which, although not up to date, have remained unknown to the greater part of the followers of Roman archæological events.

The new electric railway from Rome to the Castelli Romani, follows the line of the Via Tusculana as far as the Osteria del Curato, and the line of the Via Latina as far as the Bosco di Grottaferrata. Its construction has been attended by discoveries at two points, viz., at the Porta Furba, where it crosses the old aqueducts, and at Ciampino, where it enters the belt of Roman villas occupying the lower slopes of the hills of Tusculum.

The narrow ridge upon which the Porta Furba is built may be described as a natural bridge or isthmus connecting the southern section of the Campagna with the Esquiline, the Viminal, and the Quirinal, by means of which the ancient engineers were able to carry their aqueduct Romewards with the minimum expenditure of time and labour. We find, therefore, converging towards the Porta Furba, and running parallel or one above the other, for a considerable space, no fewer than seven aqueducts: the Anio Vetus, the Marcian, the Tepulan, the Julian, the Claudian, the Anio Novus, and the Alexandrian, the last now represented by the Acqua Felice of Sixtus V. Had these channels run each its own way, that is to say, apart from each other, there would have been seven strips of public ground, each 30ft. wide, marked with boundary stones and kept free from buildings or cultivation. Owing, however, to their general contact and superposition, there seems to have been but one band of reserved space on each side of the group, much larger than usual, so as to afford room for a "chemin de service" for the use of the *aquarii*, or custodians of the aqueducts, and for the transportation of materials in case of repairs. The road, paved with the usual pentagonal blocks of lava, and lined with "margines," is 4·10 m. wide, and runs sometimes on the east side of the group, sometimes in the middle of it, following in preference the wanderings of the Marcian, with the construction of which it must have been contemporary. This ancient road is now approximately represented by the Via del Mandrione, one of the most picturesque lanes in the suburbs of the city, a walk through which will make the student more familiar with the water supply of ancient Rome, the construction, the management, the respective size and importance of the seven channels converging at the Porta Furba, than all the books written on the subject. One of the terminal stones found in these last excavations bears the following inscription:—

"The Emperor Augustus, son of the deified Cæsar, has repaired by order of the Senate the channels of the Julian, the Tepulan, and the Marcian [and raised this terminal stone, which is], the seventy-first,"

counting backwards from the end of the three channels within the walls of the city. Now as the interval between each of the stones is known to have been 240 ft., equal to 71·28 m., it is evident that the one discovered in the work for the electric railways stands at the distance of 71·28 m. × 71 = 5,060·88 m. from the ancient outlet near the Porta Viminalis.

The other discoveries made between Ciampino and the Borghetto of Grottaferrata have shown once more the vastness of the difference between the ancient and the present state of the Campagna. Between the eighth and the twelfth milestones of the Via Latina there were at least four flourishing villages, with temples, baths, fountains, and fora. The name of the first towards Rome is unknown; it was discovered in 1865 by Gagliardi and Andreoli, near the Osteria del Curato, and it is described in the *Bullettino dell' Istituto* of the same year, pp. 84–6. The second, on advancing towards the hills, was named Ad Decimum, or else Respublica Decimiensium, from its proximity to the tenth milestone. This beautiful and rich township was first discovered in the seventeenth century by the learned Monsignor Ciampini, and has been largely excavated by Count Vincenzo Senni in recent years. It contained, among other edifices, a marble temple (perhaps) of Isis, which must have been held in great veneration by the peasants of the Campagna, to judge from the quantity and quality of the votive offerings found within its precincts. In fact, the number of these terra-cotta ex-votos (heads, masks, hands, eyes, noses, feet, figurines, animals, &c.) is such that the owner of the ground has made use of them in raising the dry wall which encloses it on the south side.

The village Ad Decimum was bordered, on the same south side, by a road built at the time of Augustus by Valerius Messalla to connect across country the Via Appia with the Castrimœniensis, the Latina, Tusculana, Labicana, Prænestina, Collatina, and Tiburtina. The road, now called Cavona, separated the said village from another of equal importance and prosperity, the name of which has just been revealed by an inscription discovered *in situ*, which says:—

"By the authority of the senate and people of Tusculum, Marcus Lorentius Atticus, superintendent of public works, has rebuilt from the foundations the compital shrine of the Augustan gods which belongs to the Vicus Angusculanus, and which has been injured by time and neglect."

Another inscription found in the same place (namely, at the junction of the Via Valeria and the Via Latina) speaks of other repairs or embellishments made at the expense of a freedwoman or *liberta* of Marciana, sister of the Emperor Trajan. This interference of the imperial lady in the affairs of the Vicus Angusculanus proves that she must have owned property in the neighbourhood, and explains the origin of the name of Valle Marciana, still given to the delightful valley which opens near the village in the direction of Marino.

A letter to the daily papers from the director of the excavations at Pompeii, Prof. Antonio Sogliano, announces the finding for the first time of the true *signum Christi* among the ruins of a Pompeian villa buried in the eruption of 79. The *signum*—in the shape of a monogrammatic cross framed in a crown of ivy—was found stamped on a terra-cotta lamp which was lying about nine feet above the floor of the apartment, at the point where the bed of ashes gives place to the bed of lapilli. The discovery, as announced by Sogliano, has made a considerable stir among the ordinary class of readers, who are evidently ignorant that the monogrammatic cross belongs to the third century after Christ, that is to say, it begins to appear in Christian utensils only a century and a half after the burial of Pompeii. I do not know the details of the find, nor can I explain how, and in what circumstances, a lamp of the third, if not of the fourth century, happens to be buried in a mass of rubbish formed apparently in the year 79. It was probably lost or dropped there by seekers after hidden treasures, of whose prowling among the half-buried remains of the city many traces have already been found. I need not repeat the statement that, for a long series of years after the catastrophe of 79, the Christians most carefully avoided making use of the sign of the cross, which was considered an *infamis stipes* by the Gentiles. Even in the seclusion of the catacombs, secure from profane intrusions, the sign is only alluded to under the symbolic shape of an anchor, of a trident, of a hammer, or of a *tau*. I am afraid that, as regards the question of the preaching of the Gospel among the Jewish colonists at Pompeii, and the possible constitution of a Christian nucleus within the walls of that delightful seaside resort, we must still hold fast to the opinion expressed by the late Commendatore de Rossi in the *Bullettino Cristiano*, 1864, p. 69–71, notwithstanding Prof. Sogliano's opinion that the great founder of the science of Christian archæology was but a fanciful dreamer.

News has just reached me from Palestrina of a wonderfully rich find made in the pre-Roman necropolis below the rural church of San Rocco, a locality already known from the discovery of the Bernardini treasury in February, 1875 (now exhibited in the Kircherian Museum). The objects discovered are mostly cists, formerly described as "mystic" because they were supposed to have been connected with the mysteries of Dionysos. This theory, however, is quite obsolete: the cists were but receptacles for the requisites of the toilet (and also of the palæstra), such as strigils, salve-boxes, mirrors, hairpins, combs, and cosmetics of various kinds. The Ficoroni cista, the best existing specimen of the kind, found near the same locality, bears the following inscription in letters characteristic of the middle of the third century B.C.: "Novius Plautius made me [viz. the cist] at Rome. Dindia Magolnia [a lady from Prænestе] presented me to her daughter" (probably on the wedding day). I hope to gather more detailed information about the present excavations as soon as I am able to visit the spot.

In the last number of the *Arte*, Prof. Adolfo Venturi, the eminent art critic and Director of the National (Corsini) Gallery, makes the following statement in connexion with the alleged portrait of Pietro Aretino by Titian, which Prince Chigi recently sold to Messrs. Colnaghi, of London:—

"Before expressing publicly my opinion on this controversy, I have again examined the vile canvas (*tela scompisciata*) in London. The picture is unworthy of being kept even in the storeroom of a public gallery. The head is painted against a greyish, opaque background, with faulty lines and flat surfaces, without transparency or warmth. The lips of the 'Aretino' are of a dull red, divided by a black line; the beard of a dirty grey; the neck has livid shadows. The garments are worthy of the head."

After criticizing every other detail of the picture, Signor Venturi concludes by saying that the British public is as much in the wrong in rejoicing over this acquisition as the Italian in regretting its loss. RODOLFO LANCIANI.

Fine-Art Gossip.

AT the Brook Street Art Gallery paintings by deceased masters are on view, including 'The Port of Amsterdam in 1689,' by Ludolf Backhuizen.

MESSRS. DOWDESWELL are showing water-colours, principally of Venice and Normandy, by Mr. Alfred East, A.R.A.

AT Messrs. Obach's gallery the Society of Twelve have an exhibition of prints and drawings.

MR. ROBERT DUNTHORNE holds to-day, at the Rembrandt Gallery, in Vigo Street, a private view of etchings by Mr. J. M. Swan, R.A., Mr. Alfred East, A.R.A., Mr. Brangwyn, A.R.A., Mr. L. P. Smythe, A.R.A., Sir Charles Holroyd, and other artists.

THE Artificers' Guild have to-day, at 9, Maddox Street, Regent Street, a private view of their recent work.

WITH reference to the forthcoming 'Life and Letters of Lord Leighton,' by Mrs. Barrington, we have been asked to state that a small volume on Leighton, written by Miss Alice Corkran, and published by Messrs. Methuen in 1904 in their series entitled 'Little Books on Art,' was also authorized by Lord Leighton's executors.

ISIDOR VERHEYDEN, whose death in his sixtieth year is reported from Brussels, was Director of the Brussels Academy of Fine Arts. His landscapes showed an intimate knowledge and love of nature, and his portraits were clever. His portrait of his friend Constantin Meunier is one of his most valuable works.

THE Petit Palais is likely to be enriched by another interesting gift, following close on those of Ziem and Dalou. Henner's nephew has offered to the administration a number of important works by Henner, including portraits, studies, drawings, landscapes, and sketches of finished pictures. Two exhibited works—the 'Bara' of the Salon of 1882, and the 'Nymphe' of the Salon of 1903, both of which the artist always refused to sell—are included in the gift. A room, to be known as the Salle Henner, will be devoted to the exhibition of these works.

THE distinguished glass painter Champigneulle, whose death took place recently at Bar-le-Duc, was for many years president of the Société Artistique de Peinture en Verre. The greater number of the modern church windows in Lorraine are his work.

MUSIC

THE WEEK.

QUEEN'S HALL.—*Symphony Concerts.*

THE programme of the first Symphony Concert of the new series at Queen's Hall on Saturday evening was divided between music of the past and music of the present. It began with a Theme and Variations and Rondo from a Mozart Serenade in B flat, the music of which is delightfully fresh, piquant, and, moreover, charmingly scored. It was followed by Bach's Brandenburg Concerto, No. 6, to which reference was made last week. The absence of the violins naturally gives a somewhat dark tone-colour to the music, though the latter—at any rate in the busy Allegro and bold gigue-like Finale—is anything but sombre. A detailed list of the instruments of the score was given in the programme-book; but the cembalo, though rightly included in the list, was not represented in the performance. A short Adagio from Beethoven's 'Prometheus' music, in which the 'cello solo part was extremely well rendered by Mr. Jacques Renard, completed the classical portion of the programme. All three works were admirably rendered under the direction of Mr. Wood, and evidently much enjoyed.

The other two items were Sir Edward Elgar's Orchestral Variations and Dr. Richard Strauss's 'Domestic Symphony.' The former work, though written on old lines, is thoroughly modern in spirit, and shows dignity combined with restraint. In the Strauss symphony the composer's efforts to extend his art beyond what seem to be its natural limits are not successful; and yet there are admirable pages in the score which indicate what he might achieve if he would only withdraw from paths which illustrious predecessors pursued in vain, though not without honour to themselves.

On the following Monday evening the London Symphony Orchestra gave its first concert, and the programme included Strauss's tone-poem 'Also sprach Zarathustra,' of which the magnificent rendering under Dr. Richter deserves special record. This work opens in an imposing manner, and as the programme which the composer set himself to illustrate, when divested of its high-flown language, is of a legitimately emotional character, the music continues well for a time; but the trivialities of the Dance-song section are altogether disturbing, and the short impressive Coda only just helps to soften anger against a man who thus plays with his great gifts. After Strauss came Beethoven with his 'Eroica.' No doubt the strident syncopated chords in the Allegro and other passages must have sounded strange—nay, extravagant—when the work was produced a hundred years ago; but the hearers were not perplexed with a form specially devised by the composer to suit a programme in his mind—the 'Eroica' Symphony in the main followed the lines on which Haydn and Mozart had worked—neither were they troubled with a confusing and semi-official programme such as the one given with the 'Domestic Symphony.'

QUEEN'S HALL.—*Mr. Richard Buhlig's Concert.*

MR. RICHARD BUHLIG at his concert on Tuesday evening played Brahms's two pianoforte concertos. He has fine technique, and in his readings of these works displayed many excellent qualities. On the whole, he created a highly favourable impression. In the concertos, especially in the second, the music is strongly intellectual; and there was something of the same kind in the pianist's rendering of it. Mr. Buhlig has announced four recitals, the programmes of which include works which will fully test his artistic powers.

Musical Gossip.

THE Berlin Philharmonic Trio, consisting of Frau Vita Gerhardt, Herr Anton Witek, and Herr Joseph Malkin, gave a chamber concert at Bechstein Hall on Tuesday evening. They played with excellent unity of feeling and expression, and with marked executive skill, Robert Volkmann's Trio in B flat minor (Op. 5). Of this seldom-heard work the most impressive and interesting feature is the Largo, which is planned on dignified lines. The last movement is, however, excessively long, and contains much dry and uninspired music. Frau Gerhardt included among her solos Bach's Chromatic Fantasia and Fugue, in which her strong technique served her well; and Herr Witek played Max Bruch's 'Scottish Fantasia.'

THE Playgoers' Club will give a concert tomorrow evening, at the London Hippodrome, in aid of the pantomime fund for poor children. Many distinguished artists have offered their services for so deserving a cause. The London Symphony Orchestra, under the direction of Sir A. Mackenzie, will perform the conductor's 'Britannia' Overture, and works by Berlioz, Tschaïkowsky, Grieg, and Wagner.

A CONCERT will be given at the Æolian Hall on Wednesday afternoon in aid of the funds of the Central Bureau for the Employment of Women. Miss Ada Crossley, Messrs. Francis Braun and Leonard Borwick, and other well-known artists have offered their services.

THE programme of a pianoforte recital to be given this afternoon by Mr. B. Köhler at Bechstein Hall includes an unpublished Waltz in F sharp minor by Chopin.

THE first meeting of the thirty-second session of the Musical Association will be held at the King's Hall, Messrs. Broadwood's, Conduit Street, on Tuesday, November 21st, when Mr. Thomas Casson will read a paper on 'The Development of the Resources of the Organ.'

OWING to his engagements at the Leipsic municipal theatre, Herr Nikisch will be unable to conduct, as announced, the second London Symphony Concert on November 23rd. Herr Peter Raabe, conductor of the Kaim Orchestra at Munich, will appear in his place.

AT the special performance at the Berlin Opera, on November 20th, of Beethoven's 'Leonore,' *i.e.*, of his opera in its original form and under its original title, Frau Plaichinger will impersonate Leonore, and Herren Kraus and Knüpfer, Florestan and Rocco respectively.

THE death is announced of Clementina Fanti, a singer who in the far past achieved fame on the stage. She had attained the ripe age of ninety-seven.

VARIOUS reports have been circulated concerning the production of Strauss's new opera 'Salome.' *Le Ménestrel* of November 5th announces definitely that it will take place at Dresden on the 20th of this month.

PERFORMANCES NEXT WEEK.

SUN.	Sunday Society Concert, 8.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
MON.	Royal Italian Opera, Covent Garden.
TUES.	Mr. R. Buhlig's Pianoforte Recital, 3, Æolian Hall.
—	Mr. Karl Klein's Orchestral Concert, 8, Queen's Hall.
—	The Misses Sassard's Vocal Recital, 8.15, Æolian Hall.
—	Mr. York Bowen's Pianoforte Recital, 8.30, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
WED.	Mr. Percy Grainger's Pianoforte Recital, 3, Bechstein Hall.
—	Royal Amateur Orchestral Concert, 8.30, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
THURS.	Messrs. Broadwood's Concert, 8.30, Æolian Hall.
—	Mr. Frank Merrick's Pianoforte Recital, 8.30, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
FRI.	London Ballad Concert, 3, Queen's Hall.
—	Miss Susan Strong's Vocal Recital, 3, Bechstein Hall.
—	Miss Elsa Wagner's Violin Recital, 8, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
SAT.	Mr. Lawrence Kellie's Song Recital, 3, Steinway Hall.
—	Mozart Society's Concert, 3, Portman Rooms.
—	Symphony Concert, 3, Queen's Hall.
—	Mischa Elman's Violin Recital, 3.30, Crystal Palace.
—	Royal Italian Opera, Covent Garden.

DRAMA

THE WEEK.

SHAFTESBURY.—*The Correct Thing: a Play in One Act.* By Alfred Sutro.

THE anniversary of the production at the Garrick of 'The Walls of Jericho,' by Mr. Alfred Sutro, has been commemorated at the Shaftesbury, its present home, by the addition to the programme of another piece by the same author. Not altogether a novelty is 'The Correct Thing,' as it was seen on a solitary occasion in June last at Drury Lane. It is a social sketch of more hardihood than attractiveness, showing the manner in which a man of the world has to disembarrass himself of the mistress of whom he tires, whose affection threatens him with *collage*, or his continued liaison with whom interferes with his chances of pecuniary or social advancement. As the means in question consist in pensioning her off or passing her on to a friend, it will be seen that the title has a sufficiently ironical signification. 'The Correct Thing' strengthens a bill without necessarily adding to its popularity. It is a little too outspoken to commend itself to English shamefacedness. Our readiness to be shocked is ingrained, and English men of the world, even when among themselves, hesitate to refer to or acknowledge what they know. Miss Darragh resumes the part of the "lovely woman" who "stoops to folly," of which she was the original exponent; and Mr. Nye Chart replaces Mr. Norman McKinnel as the hero.

GREAT QUEEN STREET.—*Die berühmte Frau: Lustspiel in drei Akten.* Von Franz von Schönthan und Gustav Kadelburg.

LITTLE more than a decade has elapsed since the production of this mild and agreeable satire upon feminine emancipation, and it is already regarded in the Fatherland as out of date. It is written, however, with much sprightliness, passes amidst incessant laughter, furnishes fine opportunities to one or two actors, and constitutes a pleasing entertainment. Its central figure is scarcely the "celebrated woman" who gives its title to the piece, but her husband, a good-natured and mildly profligate baron, no longer in his first youth. For the absence of his wife, who is in Milan, studying character for her new book, the hero finds consolation in the opportunity thus afforded of pursuing his flirtations. He discovers himself in face, however, of new and unexpected developments of womankind. When he aspires to the favours of a lovely operatic star he finds her too absorbed in her profession to listen to masculine homage; and when, with some discouragement, he seeks a reconciliation with his wife, he sees her also so preoccupied with her art as to be indifferent, and even hostile, to his return. Other interests are there, but this is as much as needs be told.

As the Baron, Herr Willy Klein, a recent and valuable acquisition to the company, exhibits a genuinely fine creation; while as a Hungarian count Herr Hans Andresen adds to his large repertory a strikingly new character. The female parts are played more conscientiously than attractively.

HIS MAJESTY'S.—*Afternoon Representation: Revival of 'An Enemy of the People.'* By Henrik Ibsen.

To Mr. Tree the London playgoer owed his first opportunity of seeing 'An Enemy of the People,' which was produced by him at the Haymarket on June 14th, 1893. The performance then witnessed was noticeable as the earliest attempt on the part of a regular London management to profit by the temporary fervour inspired by the appearance of a collected edition of Ibsen's prose dramas. The nature of the present performance, so far as essentials are concerned, is not greatly changed. It is true that two only of the original performers reappear, and that, as regards the masculine exponents, the alteration is in no instance an improvement. We miss, for instance, the authority Mr. Kemble assigned the Burgomaster. Thomas Stockmann, however, remains in the fullest sense the hero of Ibsen's drama of revolt, and Mr. Tree's conception of him is unchanged. A reproach previously hinted, that the intellectual aspects of the doctor are subordinated to the physical, may possibly be

again incurred. It seems as if the retention of Mr. E. M. Robson as the representative of Aslaksen, the diminutive advocate of moderation and temperance, were due to the desire to profit by the contrast between his insignificant presence and fussy ways and the virile force and vitality of Stockmann. Mr. Tree's make-up has something of the Viking, and his untamable energy and fiery revolt represent fully the sense of wrong under which the whole was written. Thomas Stockmann, according to Mr. Archer, who ought to know, is the only genial character Ibsen has ever drawn. What is called geniality we are disposed to regard as self-confidence and robust assertiveness. Mr. Tree at least supplies a finely graduated and effective presentation of a hot-headed "village Hampden," over whom censure passes unperceived, and whom opposition stimulates to further mutiny. Miss Rosina Filippi was excellent as Mrs. Stockmann; Miss Margaret Halstan was an attractive Petra, and Mr. Shelton a mirthful Morten Kiil. The revival had keen interest.

COURT. — *Afternoon Representation: The Voysey Inheritance: a Play in Five Acts.* By Granville Barker.

CONSIDERED in the light of *mémoires pour servir*, Mr. Granville Barker's work given on Tuesday afternoon at the Court has claims upon attention. Somebody may even, out of the materials provided, obtain a good play. That feat, however, has not been accomplished by Mr. Barker. Witty and effective dialogue, admirable characterization, biting satire of human nature, and the basis of a story are all included, but a play there is not. A total absence of sympathy is in itself sufficient disqualification for a popular success. The interest is wavering and uncertain, and the spectator is constantly disturbed and baffled. Separate scenes are conceived brightly enough. The progress of the story is, however, like that of the Gryphon, which, in pursuit of the Arimaspian,

—— swims, or sinks, or wades, or creeps, or flies.

The inheritance in question in the title is that of a solicitor, more capable than honest, who, dying unexpectedly, and in a sense prematurely, leaves to a family of average endowments, moral or intellectual, a heritage of shame, and to the weak but honourably disposed son who is his partner a fearful responsibility, involving many possibilities of criminal prosecution. No issue from the situation is provided. Of that we do not complain. What is chiefly to be deplored is that the author is most long-winded when he is called upon to be most concise, and flutters from one point to another in a way that is perplexing, and goes near being annoying. Excellent performances were given by Mr. A. E. George, Mr. O. B. Clarence, and other actors; and the whole, if greatly reduced in dimensions, might, in spite of its want of cohesion, form an interesting and edifying entertainment.

Dramatic Gossip.

WHAT is called a "tribute to the late Sir Henry Irving" has been paid by Salvini. As the English actor is described as "an artist of superior intelligence," as one "deprived of all physical and vocal talent," and owing a great measure of his financial success "to Miss Ellen Terry's brilliant co-operation," the worth of the tribute is open to question.

THIS evening witnesses the performance at the Great Queen Street Theatre of 'Ein Fallissement,' a four-act piece of Björnstjerne Björnsen, given in Berlin, in a German translation, at the Schiller Theater on October 16th, 1894.

'FOR THE CROWN' is withdrawn this evening from the Scala to make way on Tuesday for 'Mrs. Grundy,' for which Mrs. Tree has been specially engaged. In this Mr. Forbes Robertson will play a clergyman of the "Broad Church" type.

No London theatre being available for the continuance of the run of 'Dr. Wake's Patient' when, in order to make way for 'A Midsummer Night's Dream,' it is removed from the Adelphi, the piece will be sent into the country.

THE next performance of the Stage Society will take place on the 26th inst. at the Scala Theatre, and will consist of an adaptation of Mr. E. F. Benson's 'Dodo' and 'Jimmy's Mother,' by Hope Merrick.

IN consequence of a contribution to its funds from the German Embassy in London, the management of the German plays elects to consider itself as the recipient of a subsidy.

THE National Theatre Society, from the Abbey Theatre, Dublin, will pay a third visit to London on the 27th and 28th inst., when at St. George's Hall its members will give seven plays, of which five are new to London. The pieces selected are Lady Gregory's 'Spreading the News'; 'Kathleen ni Houligan' and 'On Baile's Strand,' by W. B. Yeats; 'The Well of the Saints' and 'The Shadow of the Glen,' by J. M. Synge; 'The Building Fund,' by William Boyle; and 'The Land,' by Patrick Colm. Such unlimited production is scarcely favourable to a critical estimate of the novelties.

IN making her arrangements for the establishment of a French theatre in London Madame Réjane seems to have reckoned without her host. Members of the Comédie Française may, says M. Claretie, be permitted to take part in the opening performance, but their inclusion, for however short a time, in the company will not be allowed. This and other limitations imposed seem likely to play havoc with the chances of the new venture.

THE death is announced of Maria Daly, an actress who in the seventies acquired some reputation in secondary rôles in the pieces of Tom Taylor, Charles Reade, and others. She was in her seventy-sixth year, and had long been an annuitant of the Royal General Theatrical Fund.

'LA MARCHE NUPTIALE,' a four-act play by M. Henry Bataille, produced at the Paris Vaudeville, has a more serious interest than pieces ordinarily given at that house. Having run away with her music-master, who proves wholly incompetent, and having been protected and aided by the husband of a school friend, with whom she has fallen in love, Grace de Plessans takes refuge in suicide. Madame Berthe Bady created a favourable impression as Grace.

'LA RAFALE,' a three-act play of M. Henry Bernstein, produced at the Gymnase, has a repellent subject, but furnishes Madame Simone Le Bargy with opportunities of which the most is made. There is some question of the artist being seen in London as the heroine Hélène.

'FLORETTE ET PATAPON' is the title of a farce by MM. Maurice Hennequin and Pierre Wéber which has been successfully given at the Nouveautés.

TO CORRESPONDENTS.—J. M.—F. K.—A. B.—J. C.—received. B. D.—Writing.
J. K.—Much obliged: too late for notice.

MESSRS. BELL'S
NEW BOOKS.

MINIATURE ILLUSTRATED CATALOGUE post free on application.

Crown 8vo, 6s. net.

INTERLUDES in VERSE and PROSE. By the Right Hon. Sir GEORGE OTTO TREVELYAN, Bart.

"The present collection of his (Sir George Trevelyan's) lighter writings is altogether delightful, and will be found so by a generation which knew nothing of Cambridge, or indeed of this habitable globe, in the early sixties.....This is a capital book, with summer lightning of wit on every page."—*Morning Post.*

Medium 8vo, with Title-Pages, End-Paper, and Cover Designed by the Author, and numerous Illustrations, 10s. 6d. net.

IDEALS in ART. By Walter Crane.

Contents:—The Arts and Crafts Movement—The Teaching of Art—Methods of Art-Teaching—Notes on Tolstoi's 'What is Art?'—The Influence of Modern, Social, and Economic Conditions on the Sense of Beauty—The Social and Ethical Bearing of Art—Ornament and its Meaning—Thoughts on House Decoration—The Progress of Taste in Dress in Relation to Art Education—Temporary Street Decoration—The Treatment of Animal Forms in Decoration and Heraldry—The Designing of Book-Covers—The Use of Gilding in Decoration—Raised Work in Gesso—The Relation of the Easel Picture to Decorative Art—A Great Artist in a Literary Searchlight.

NEW VOLUME OF
THE GREAT MASTERS SERIES.

Post 8vo, with 32 Illustrations and Photogravure Frontispiece, 5s. net.

RUBENS. By Hope Rea.

[*Ready Nov.* 15.

Crown folio, with 54 Photogravure Plates, and 11 Collotype Reproductions from Drawings, &c., Cheaper Reissue, 2l. 2s. net.

ANTHONY VAN DYCK. A Historical Study of his Life and Works. By LIONEL CUST, M.V.O. F.S.A., Director of the National Portrait Gallery, Surveyor of the King's Pictures and Works of Art.

With nearly 100 Illustrations, small 4to, 10s. 6d. net.

RICHARD COSWAY, R.A. By GEORGE C. WILLIAMSON, Litt.D.

NEW VOLUME OF
THE ENDYMION SERIES.

Post 8vo, 7s. 6d. Also 75 Tall Copies on Japanese Vellum, 21s. net.

POEMS by TENNYSON. Illustrated by ELEANOR FORTESCUE-BRICKDALE.

Demy 8vo, illustrated, 7s. 6d. net.

SAM BOUGH, R.S.A. Some Account of his Life and Works. By the late SIDNEY GILPIN.

CHEAPER REISSUE, 6s. net.

MILLET and the BARBIZON SCHOOL. By ARTHUR TOMSON. Small 4to. With Photogravure Frontispiece and 52 other Illustrations.

Uniform with 'How to Collect Old Furniture,' 'How to Identify Old China,' &c.

With numerous Full-Page Plates and other Illustrations. Post 8vo, 6s. net.

HOW to COLLECT BOOKS. By J. HERBERT SLATER, Editor of 'Book-Prices Current,' Author of 'The Romance of Book Collecting,' &c.

"Probably no sounder guide could be found to the changes of taste and fashion in book collecting."
Manchester Guardian.

LITERATURE

GERMAN LITERATURE.

IT is a curious sensation to stand still for a moment amidst the stir and bustle of the day and look back upon the literary movement even of a brief period. It is like sitting on the bank of a stream. We gaze on the leaves and broken blossoms that are carried past: a little while, and they are swallowed by the waves. Who can say whether the stream, even while we wateh, may not be rolling grains of gold along its bed? What eye can penetrate so deep? But as the years go by, one thing is ever more clearly and unmistakably borne upon us—that a great many of our own hopes, errors, and aspirations are swept away in the rush of the hurrying waters.

CRITICAL ESSAYS.

Readers will recollect the charges brought against German criticism by Hermann Sudermann. They resulted in a literary controversy in which Sudermann came off second best. Not that his weapons were by any means blunter than they might have been; rather he was blinded by a sense of personal injury, and was so intent upon the weaknesses of his opponents that he entirely overlooked their great advantages. So far as a comparison is at all admissible, it appears to me that literary criticism, if estimated by its artistic qualities alone, stands at the present moment on a higher level than purely creative work. Its authors display a more vigorous and pronounced personality, it is more individual in expression, and its style has more colour. In the course of the past year three Berlin critics have collected and published their essays: Paul Goldmann has given us 'Aus dem dramatischen Irrgarten,' Alfred Kerr 'Das neue Drama,' and Felix Poppenberg 'Bibelots.' From the obscure and eddying dance of shadows these three literary personalities step forth and stand before us clear and firm in outline.

Paul Goldmann's is the least complicated nature of the three. He lived for many years in France, and the artistic ideal he has brought back is specifically French. His is a voice crying in the wilderness, undauntedly proclaiming the necessity of returning to a definite and approved stage-technique. He is the sworn foe of naturalism in its German developments, and is possessed by an ardent desire for grandeur, passionate action, colour, and form. His power of analysis is, under certain conditions, very keen, and his style has always distinction; but the really characteristic thing about him is his temperament, which gives life and passion to his writing, and continually flashes out when he has to do battle for his convictions. Thoroughly sincere and clear-sighted, he stands firmly in his place amidst all the confusions of modern days. Alfred Kerr affects temperament, but does not really possess it. His genius is rooted in romanticism, and he finds a kindred spirit in a Brentano or Jean Paul. The arabesques with which he decorates his work so lavishly are for him a sufficient end in themselves. He writes not so much to advocate an opinion as to please himself and to cultivate the graceful and grotesque tricks of his art. He has developed a marked style of his own, a diction prodigal of interjections and unfinished sentences, and packed with daring improprieties. None the less he has helped to bring into the literature of the present day a breath of the romantic spirit, or rather of the romantic atmosphere: this critic who pays homage to Gerhart Hauptmann has yet, by virtue of his literary qualities, been largely instrumental in dethroning naturalism and erecting an altar to romanticism. The same may be said of Felix Poppenberg, although he consciously set his affections on romanticism from the very first, and has always been the opponent of realism with its lack of colour. Of the three he is perhaps the most pre-eminently an artist. Deliberately and of set purpose he has excluded from his 'Bibelots' all critical studies on subjects connected with the stage. Old letters, congenial personalities, refinements of technique—these are the themes in which he finds his happiest inspiration. He, too, seeks in the first instance to find himself, but while doing so he lets himself be guided by his sensitive artistic instincts—an unwearied explorer who, even in the remotest quarters of the earth, is still in quest of "home." And he finds a home wherever his finely trained æsthetic sense is touched to sympathy, wherever a note of kindred longing is borne to his ear. He has assiduously cultivated the ideal of Goethe, to fashion life itself into a work of art. And his style is in harmony with such a nature; it is like finely chased goldsmith's work: every epithet is nicely chosen, every period has its rhythm, and he has a power of expressing the finest shades of meaning extremely rare in our literature. No doubt this elaborate stylist occasionally falls a victim to preciosity, but his composition is always full of colour and rich in latent lyric sentiment. This, indeed, is true not only of Poppenberg, but of Kerr and Goldmann as well: the modern German essay contains many lyric elements. Perhaps such a markedly personal and lyric attitude may sometimes make these critics unjust towards productions with which they do not feel in sympathy, but at the same time it elevates their prose to the dignity of art.

POETRY: LYRIC VERSE.

My retrospect carries me from the authors of whom I have spoken not to the drama, with which they are so largely occupied, but straight into the heart of lyric verse itself. No sooner, however, do we set foot upon the ground of creative art pure and simple than we find ourselves compelled to apply a lower standard. Many are called, but few chosen. Original personalities are still to be met with, but we must take their aims rather than their achievements into account. The tendency of the literary aspiration is in this case of almost greater importance than the individual behind it.

The collected poems of Otto Erich Hartleben—who was but a youth when he entered the arena of letters fifteen years ago along with the young Hauptmann, and who has now been carried off by a premature death—have been published under the title 'Meine Verse.' They show that even this realist was not disinclined to dally with art for its own sake—that he, too, sought in his dreams a land that lies beyond the world of reality. Side by side with rhymed narratives from the Old Testament we come across a poem describing the seduction of some young girl or other—love-songs sound the note now of yearning renunciation, anon of outspoken sensuality. There is thus in his work no lack of variety, but the speech of the heart is but rarely uttered, and still more rarely do we find that intimate, indissoluble union of form and matter by which alone the lyric poet can produce a living work of art. The verses are no more than verses; they do not make a poem. While Otto Hauser, in his 'Reigen schöner Frauen,' starts from very different æsthetic principles and takes up his pen to write elaborate lyrics in the romantic manner, yet the path he follows leads him eventually to the same goal of disillusionment. His poems are careful and distinguished in form, but the 'Dance of Fair Women' never gets set in motion, so to speak; Hauser seeks his love in many a fantastic embodiment, but in each instance she is equally lifeless, the colour on her cheeks is only rouge.

Although the reflective lyric, once so dear to the Germans, seemed to have become extinct in its own special home, yet J. V. Widmann, the graceful Swiss poet, has once more brought it to the front in his half-lyric, half-epic puppet-play, 'Der Heilige und die Tiere.' The torments which poor, dumb animals endure, and on which a pitiless Creator looks down from above, are shown by the Tempter in the desert to the youthful Jesus. He gazes, and can find no answer to the questions that assail His soul; at last He turns from the ghastly spectacle to the race of men to whom He has been sent. And so the thoughtful and sympathetic play ends without an answer, as was, indeed, inevitable: the problem must remain unsolved. A more serious objection from the literary point of view is that Widmann

possesses in only a limited degree the plastic faculty which such a large and Faust-like theme demanded.

In order to mark how wide a sphere the German lyric embraces in its recent tendencies I will select two of its latest representatives — Frank Wedekind and Christian Morgenstern. Both come from the remotest fields of romanticism; both address themselves to the *Volkslied* where it verges on the "coster-song." The barrel-organ has taken the place of the lyre. Frank Wedekind, whose quaint, fantastic dramas are well known, consciously declares himself a Satanist in his volume of poems entitled 'Die vier Jahreszeiten.' His song celebrates not the pure and loving maiden, but the prostitute; brutality and coarseness are glorified; evil triumphs; voluptuous and purely sensual delights leave no room for spiritual emotion. The literary expression is designedly banal, the lyric form suggests a droning jingle. Nevertheless, it is incontestable that such unpleasing audacities are fully in harmony with Wedekind's odd and fantastic personality. He does not merely strain after originality — he really is original. His uncultivated instincts are flattered by viciousness, and he makes it into a system. Among the many "fleurs du mal" of his poems, however, there are also scattered a few verses full of genuine feeling. Christian Morgenstern, who is likewise by no means devoid of talent and who made a successful *début* with his earlier poems written in a fantastically dithyrambic style, aims in his 'Galgenlieder' directly at burlesque effects. He tries to mystify both his reader and himself, and thinks to achieve a grotesque humour by a union of the college practical joke with a variety of ghostly and gruesome elements. But he has shown no particular dexterity in the matter, and his 'Gallows-Songs' strike us as laborious distortions rather than genuinely comic grotesques. For him, as for so many of our younger writers, romanticism has proved but a deceitful guide.

If I had to characterize the literature of the past year in a few words, I should say that far too many literary fashions, which lead only to confusion, are followed, and there is a consequent lack of that *naïveté* which by the simplest means can shape an inner, personal experience into a work of art.

DRAMA.

The drama, in its last year's history, has specimens of every conceivable literary tendency to display, but no single work that can be regarded as a complete artistic success. The desire for grandeur has once more come to life, and has led two Viennese authors to take their subjects from old English drama. They fancied — but were wrong, as it proved — that they could not but rise to the grandeur of their subject. Richard Beer-Hofmann's tragedy 'Der Graf von Charolais' is a free adaptation of Massinger's 'Fatal Dowry.' A characteristic point of difference meets us at once: while in Massinger the mad caprice of a tyrannous fate derives directly from the events as such, in Beer-Hofmann there is constant talk about the decrees of fate, but we never comprehend their inner connexion with the characters. While Massinger's men stand firm and upright on the stage and are apt to act before they weigh the consequences, Beer-Hofmann presents a puny set of elegiac, introspective moderns who anxiously render themselves an account of their own motives. Only the main outlines of the plot remain the same. In order to redeem his father's corpse from the hands of hardhearted creditors who refuse to give it up, Count Charolais submits to be imprisoned in place of the deceased, and thereby gains the heart of Judge Rochfort, who gives him his daughter in marriage. Charolais seems to stand at the summit of happiness, when suddenly fortune proves false and deals him a fatal blow. His wife deceives him: the Brutus-character within him is aroused; he compels Judge Rochfort, the father, to pass sentence on his own child, and then carries it into effect with his own hands. Beer-Hofmann's tragedy opens admirably. The figure of the usurer who is not to be moved by the prayers of Count Charolais is a complete success. But immediately after this the author wastes a whole act in working out the reason why Judge Rochfort offers the Count his daughter's hand, and in doing so he suppresses the other important motive, duly provided by Massinger, which explains why the daughter breaks her marriage vow. In Massinger she is already in love with some one else when her father arbitrarily disposes of her hand; in Beer-Hofmann she yields to the first libertine who tempts her, from mere weakness, from caprice, from ennui, and this, too, after she has been married for three years. By such treatment the dramatist robs his subject of all its grandeur. In Massinger the tempting fruit offered by fate to the virtuous Count is already poisoned; the maiden who comes down to him like a goddess from above loves another. But in Beer-Hofmann the tragedy is brought about by a mere chance occurrence; there is a gap between the first and second parts of the play; and if the revelation of the Brutus-character in Charolais comes as a surprise even in the English original, here it remains altogether incomprehensible how a man of such mild and elegiac temperament can conduct himself so tragically.

But if Massinger's ponderous armour proves too much for Beer-Hofmann's strength, Hugo von Hofmannsthal, the other Viennese poet, is weighed down even by the much lighter and more fashionable equipment of Otway. Hofmannsthal's play 'Das gerettete Venedig' is founded on Otway's 'Venice Preserved.' Here, again, it is characteristic that in Otway the fire of the drama blazes up to its height at the moment when Jaffier, a traitor to his friends and fellow-conspirators, is himself betrayed by the Senators, and when he begins to hate his wife because she has persuaded him to plunge his friend into destruction, while Hofmannsthal at this point has only a poor, perfunctory epilogue to give. He has certainly recognized the defect of the English play clearly enough. Otway's Jaffier betrays his friends and fellow-conspirators because one of them has offered violence to his wife; originally his soul was free from any thought of treachery. Hofmannsthal, on the other hand, has endeavoured to represent his Jaffier from the very beginning as a pitiful coward—a man who is continually boasting of his courage, though he starts in terror at every unexpected noise, and whose fears give him no peace until he has disclosed his dreadful secret. But what has the dramatist attained by such a treatment? He has made a character who may perhaps be psychologically interesting, but whom, humanly speaking, we can only regard as an utterly contemptible creature, the central figure of a tragedy! He aimed at grandeur, and has put pettiness and meanness in its place. With such a worthless hero the whole piece necessarily collapses.

A similar, perhaps unconscious, desire for breadth and grandeur may likewise have induced Gerhart Hauptmann to borrow the subject of his dream-play 'Elga,' which is founded on Grillparzer's tale 'Das Kloster bei Sendomir.' This is the story of a Polish countess who plays her husband false with the comrade of her youth. We see the count tormented by doubts and fears; his suspicion becomes a certainty, and he confronts his wife with her paramour in the very spot where they have sinned. The latter confesses their guilt, while she denies it. There is but one way, declares her husband peremptorily, by which she can save her life: she must kill with her own hand the child that has been begotten in adultery. At the moment, however, when she is actually preparing for this inhuman deed, her husband strikes her down. For this subject, full of horrors as it is, Hauptmann has chosen the form of a "dream-play"; it is presented in a series of visions seen by a German knight who has taken refuge in the Polish cloister. In order, however, to invest these visions with the air of unreality proper to a dream, Hauptmann would have had to break the logical chain of development presented by Grillparzer and substitute a visionary unity, appearing in the midst of wild confusion; and this he has not done. He follows Grillparzer closely in the order of his scenes, and the play offers nothing characteristic of a dream. On the other hand, he has, most unwisely, made certain changes in the characterization. In Grillparzer the Polish countess, who does not shrink from murdering her own child, is a thorough prostitute at heart—one of those women whose very nature it is to deceive; in Hauptmann she is merely a wife who plays her husband false because she loves another, and she is not here confronted with the last great ordeal, of purchasing her life at the price of her child's murder. The subject in Hauptmann's hands loses none of its brutality, yet the effect is by no means imposing. Neither a proper dream-play nor a proper realistic drama, 'Elga' misses the advantages legitimately offered by either of these forms, and is a hybrid production without vitality.

Clara Viebig in her play 'Die Bäuerin' has been more successful in achieving a certain grandeur of effect. She has not yet mastered the technique of the drama; instead of leading up to her effects she takes the spectator by surprise. But there is one scene in which the peasant woman, racked by the pangs of jealousy, kneels by the sick-bed of her husband and prays the Holy Virgin to let him die, only that the other, her rival, may not gain possession of

his heart; and in this scene there is genuine passion and that indescribable something that grips us and carries us unquestioning along.

If grandeur is the quest of some of our playwrights, brightness or brilliancy is that of others. Josef Ruederer in his comedy 'Die Morgenröte' has dramatized an episode in the life of Lola Montez, and depicted the revolutionary agitation which that seductive beauty occasioned in Munich in the year 1848. The subject presented an opportunity for bold and brilliant colouring, but Ruederer's picture has a dingy, monotonous, and trivial effect. This is equally the case with Hermann Bahr's 'Sanna'; the action of the piece falls in that period when grandfather courted grandmother, and this gives the Viennese æsthete plenty of opportunity for elaborating refinements of style. But side by side with sentiment of the most naïve and would-be-childlike character he introduces all sorts of objectionable perversities, and ends finally on a revolutionary note. Thus the play, for all its polish of style, appears but a crude and awkward piece of work.

It is an old observation that the strictly realistic method is best adapted for comic effects. In Germany, as elsewhere, realism has now betaken itself from the domain of tragedy to that of comedy, and if only our authors were not so apt to lose themselves in triviality—if only they were not, almost without exception, as much inclined to Philistinism as the Philistines they laugh at—the change would be heartily welcome. In 'Biederleute,' a comedy by Robert Misch, there is a character happily enough observed and rendered—that of a crafty, hypocritical rogue who lives upon alms and whose every villainy succeeds and prospers. But the author spins out his subject, which would have served for a one-act comedy, into three long acts, and grows banal and tedious in consequence. A similar objection applies to Otto Erich Hartleben's last work, 'Im grünen Baum zur Nachtigall.' In several scenes student life with its riot and revelry is amusingly represented, and the question of the duel is introduced in a half-serious, half-comic fashion. But Hartleben, though very much more of an artist than Misch, is yet no more successful in finding the proper form for his picture. It is as if some 'Scene in an Inn' by an old Dutch master had been painted on the vast scale of an altarpiece, and the result is that there is something empty and fatuous in the composition.

Hartleben led the way in 'Rosenmontag,' and others follow in his track, lured by the hope of a similar success. Their method is to employ a strictly realistic treatment in the earlier acts of a drama, and so obtain a comic effect in the portrayal of laughable characters and surroundings, and then, when the original comedy begins to drag, to transform it on a sudden into tragedy. Anything more inartistic than this it would be hard to conceive, for every tragic effect should be led up to by causes inherent in the theme proposed. However, such a mode of procedure frequently secures a stage success, and Arno Holz and Oscar Jerschke have adopted it in their play 'Traumulus' with the desired result. Traumulus is the nickname bestowed on a head master by his pupils, because he is a dreamy sort of person who is taken in by everybody, his wife included. For three acts Traumulus plays the part of a comic figure in the piece; he is equally ludicrous as the author of a patriotic festival-play, as a deluded husband, and as a master whose pupils get the better of him. But suddenly and without any preparation the dark shadows of tragedy fall upon him. For the first time in his life he suspects his favourite pupil, and on this occasion his suspicions are as unjustified as his former confidence was indiscriminate. He drives the boy to his death, and his own marriage, his professional career, and happiness as a father are utterly wrecked. From the literary point of view the piece is without merit, but I have analyzed it in detail because it is typical, and shows what the method of strict realism, employed purely as a stage-device, has brought us to in Germany. "Comic tragedy," might be the designation of productions of this class.

Finally I may here mention Max Dreyer's play 'Die Siebzehnjährigen,' Georg Hirschfeld's 'Nebeneinander,' and Ludwig Fulda's 'Maskerade,' thus bracketing three authors from whom, as it once seemed, we were justified in expecting something great, but who have one and all stopped short in their human, and consequently in their literary, development. Whether Hirschfeld describes the miseries of an unhappy marriage, Dreyer the sorrows of a love-sick youth of seventeen, or Fulda the devotion of a young girl to a worthless man—in every case there is a lack of that sincerity which penetrates and participates in the inward life of the characters, and which alone can guarantee the sympathy of an audience. There is something flippant and heartless in the tragic sentiment of the two former authors, and in the cheap cleverness with which the latter solves the dramatic problem. The technical skill which once could pave the way to telling stage-effects has gone, and what has come to take its place?

FICTION.

The seekers also take the first place in the narrative literature of the past year. The tendencies shown in drama may be easily recognized in the novel and short story as well, but in the latter instance they lead to better results. Goethe once said that a drama should provide action, and a novel situations: well, the conditions of modern life everywhere favour the author who describes situations. The dramatist must compel the imagination of the spectator to follow him, but the modern novelist is met half-way by the imagination of the reader. Nor does it greatly matter whether his mirror presents pictures of real life or mere dreams and visions.

Young hearts are kindled anew by the old enchantress, Romanticism. Hans Müller, whose lyric poems I mentioned on a former occasion, makes an attempt in his 'Buch der Abenteuer' to revive the old Italian tale in the manner of Boccaccio. For him a "Novelle" means the description of some strange and marvellous experience, and he has achieved success in several of his stories. He may be taken as representative of the æsthetic tendency which characterizes a generation of the younger authors of Austria. By the side of Müller we may place Karl Goldmann, another young writer, who is, however, more attracted by the mystic side of romanticism than by its love of fable. In his book 'Das Rätsel des Angelus, und andere Novellen,' he is a little inclined to wander in Novalis's footsteps, but unfortunately he is only one of the "Epigonoi," not a truly kindred spirit. The mystic element in his tales strikes one as having been consciously worked in—it is not an essential part of the subject and the characters.

We possess, however, a genuine and original romanticist in Riccarda Huch. Her latest volume 'Seifenblasen' proves that once again. What she sees has not been seen before in quite the same way; it bears the unmistakable impress of intimate, personal experience. Moreover she possesses a strong, masculine sense of humour, and confronts life with an assurance based on the consciousness of her own individuality. Her new volume contains one perfect cabinet-piece of romantic art—the little tale 'Aus Bimbo's Seelenwanderungen,' which is really little more than a sketch. Scurrility and tragedy are here set against each other with unfaltering skill; the dazzling colours are placed daringly side by side, and that dreamlike, visionary effect which Hauptmann, in his 'Elga,' conspicuously failed to convey, has here been rendered with complete success. Even in her earliest writings, when romanticism was not, as now, the fashion of the day, Riccarda Huch's work was specifically romantic in sentiment; she fared by herself along the road where so many jostle now. But she has always followed the bent of her own genius; and if she is here associated with the band of seekers, it must be added that this seeker has been successful in her quest.

Romanticism has also brought the stylistic novel once more into vogue. Otto Hauser, the Viennese, may again be taken as its representative. His 'Lucidor der Unglückliche' is a curious book. The style is successfully modelled on that of the old chronicles, but what is really characteristic of it is this: Lucidor is a poet, and, what is more, a poet who sets little store on what he writes; he wishes to "live" poetry rather than compose it, and in a certain sense he manages to do so. And thus the romantic ideal, that we should fashion life itself into a work of art, appears once more—an ideal which Goethe's personality and ordered life once brought within tangible reach of the German Romanticists, an ideal which Germans still call by Goethe's name, but which threatens to recede further and further from our sight, however much our literature may be occupied with it.

Since Theodor Fontane left us, the novel of city life has had no worthy representative. Edward Stilgebauer's 'Goetz Krafft' cannot be mentioned without a secret shudder which is not only, nor in the first instance, due to its interminable length. Georg Wasner, too, who passes for a talented pupil of Fontane's, and whose new novel 'Steine' describes with a certain cleverness and power of characterization the decline and downfall of a bourgeois family, is devoid of any real poetical gift. His writing is dry and premeditated, and possesses little grace of style.

There is more vitality, however, in the

romance of peasant and country life. Ludwig Thoma's novel 'Andreas Vöst' is, for example, a notable book. The inhabitants of the little Bavarian community are drawn with a vigorous pencil, and in the principal figures characterization attains to real depth. The action is strong, and humorous side-lights are not wanting. A quarrel has broken out between Andreas Vöst and the young clergyman of the parish on the question of building the church steeple; the antagonism becomes violent, and a genuinely human tragedy is brought about. The old theme of man's struggle for his rights is introduced. On the occasion of the burgomaster's election the clergyman has borne false witness against Andreas Vöst and slandered him cruelly; the latter has to struggle hard with the authorities for the rehabilitation of his name, and after all he does not receive justice. And so religious doubts arise in the soul of this peasant, who ascribes to God a share of responsibility in the behaviour of His representative on earth. The root that held him firmly in his place has been, as it were, torn away, and he oscillates to and fro with every breath of wind that blows upon him. The man who was once upright and honourable ends as a criminal. The novel, which is thus a kind of indictment, though Thoma cannot be accused of distorting or misrepresenting matters for his own purpose, shows how much the author can do. His observation and description of actual life are excellent; his criticism of antiquated social conditions is keen and forcible, and his characterization full of vigour; but into the clear, untroubled realm of art, beyond the reach of chance and circumstance, he has not yet found his way.

In a certain sense Helene Raff strikes one, in her village sketches, as more artistic than the incomparably more talented Thoma, but that may only be because she deals with less ambitious themes. Still, the vital question in a work of art is, after all, not the magnitude of the subject, but how far the author has proved equal to his self-imposed task, and in her latest book, 'Die Braven und die Schlimmen,' Helene Raff displays a thorough command over her material. She possesses the happy gift of sketching a scene or figure in a few strokes; the village with its common and its pastures takes shape before our eyes, and we see the sun rise calmly over the hills. She also has a happy vein of humour, and is most successful in her portraits of those rustic characters who are superior to their surroundings by virtue of possessing a similar humour themselves. But at the same time she has a tender and understanding heart; she does not pass by any one, however "bad" he may be, without discovering some amiable qualities in him, and even for his rash and hasty deeds she can find a word of pardon.

In our most recent literature the treatment of country life and surroundings has, under distinctly romantic influences, developed into a regular art of describing landscape. Frenssen's 'Jörn Uhl' may be referred to as a model which has not yet been surpassed in this respect, and if we were to trace the development still further back, we should come to Theodor Storm. North Germany is in this point emphatically superior to the South, and perhaps we may take two women writers, Clara Viebig and Anselm Heine — both of whom are North Germans by birth — as representatives of the movement. Clara Viebig in her 'Naturgewalten' depicts the scenery of her native Eifel, and in one or two of her stories shows an almost perfect mastery of the art of making the temperament and actions of her characters indicate the peculiar nature of the soil from which they have sprung. In her volume of short stories, 'Aus Suomi-Land,' Anselm Heine puts into artistic form the impressions of a traveller in Finland. Hers is the less vigorous, but much the more subtle nature; her psychology is good, and she does not lose herself in analysis, but always preserves the charm of tone and atmosphere. In the tale 'Lintula's Herr' she describes a simpleton who is driven to commit suicide because he cannot comprehend the meaning of life, and her description brings out with profound truth the intimate, purely animal communion in which the poor half-idiot lives with the nature that surrounds him. Here we have another proof how much this art derives from Romantic influence: Ludwig Tieck in his 'Der fünfzehnte November' has treated a similar psychological problem in exactly the same spirit.

The idiot as seen from the Romantic point of view is also to be found in Jakob Wassermann's romance 'Alexander in Babylon.' Here he is a half-brother of Alexander's, and affects us as a sort of uncanny double, a living parody of the world-conqueror's character and actions. Indeed, it would almost seem as though the artist had succeeded better with the parody than with the actual portrait. The motive which led Wassermann to picture Alexander the Great in the days of his decline and death in the mysterious city of Babylon was the same as that which made Hofmannsthal and Beer-Hofmann stretch out their hands so eagerly for subjects from old English drama—the desire for grandeur and colour. In this case, too, the subject seems to offer everything—the mighty genius of a man who brings the world beneath his sway, but is at the same time condemned to perpetual isolation by reason of his transcendent gifts; the diversity of characters who attend upon him; the mystic semi-obscurity in which the outworn Oriental civilization is involved; wild debauchery and crime; and gorgeous festivals. Wassermann does manage to give shape to much that lies dormant in his subject: there are passages of description brilliant in force and colour, the language rises at times to impressive heights, and the characterization is life-like and original. His romance is full of beauties, yet the impression that it makes is not one of beauty: there is power in it, but as a whole it is hardly powerful. The young author has failed to attain the supreme effect towards which everything is directed: the Alexander he depicts is lacking in the greatness which did in very truth make him conqueror of the world. His death ought to come like the fall of a Titan, but its only significance here is to bring the novel to a hasty conclusion. And thus Wassermann associates himself with the dramatists Beer-Hofmann and Hofmannsthal: they all give us works of aspiration, not of attainment.

It is in the name of those who seek and aspire that the literature of the past season must needs be christened. In that there is something human that cannot but excite sympathy. But Art is a remorseless goddess; she withholds her favours from the men who woo her, and flings her garlands in the lap of a sportive child.

ERNST HEILBORN.

Mrs. Brookfield and her Circle. By C. H. and F. Brookfield. 2 vols. (Pitman & Sons.)

TENNYSON'S biography, Carlyle's correspondence, and the literary memoirs of the Victorian era in general have long since raised pleasant anticipations of the papers of the Rev. William Henry Brookfield and his accomplished wife, a niece of Hallam the historian. They have now been given to the world, with an agreeable running commentary, by Mr. and Mrs. Charles Brookfield. As illustrative of a great and vigorous age which has passed away, these letters possess no inconsiderable value. We have, perhaps, had nearly enough of the Carlyles and Lady Ashburton; still the Sage appears at the Grange in a most genial light, guffawing over jokes and joining in games. Brookfield set down in his diary a racy description of a Christmas dinner he enjoyed in Cheyne Row when he happened to be *en garçon*. "The talk was incessant, but remarkable for nothing but cheeriness"; the food generous, and rendered palatable by such potent liquids as wonderful nut-brown ale from the neighbourlng "Cricketers." The grim figure of domestic tragedy fails, somehow, to dominate the scene as, according to some, it should. But then Brookfield's was one of those sane intelligences that refrain from trying to pry beneath the surface of conversation and discover a sinister meaning where none is intended.

The freshest letters concern that brilliant band which included Tennyson, Thackeray, and Spedding, and which carried with it from Cambridge an intimacy that continued unabated to the end. The author of 'Vanity Fair' it was who christened them "the Set," and their correspondence undeniably reflects that peculiar closeness of thought which makes the reader feel at times almost an intruder. Some of their jokes are esoteric; others, regarded from this distance of time, look rather thin, though no doubt they were voted quintessences of wit by those to whom they were addressed. The general impression we derive is that of a high-minded comradeship—a comradeship which served letters well by keeping up Tennyson's heart when the critics regarded his poems as poor stuff, and by encouraging Thackeray to go on and prosper. "The Set" held fiercely by their university: "I often wonder," said Venables, "what we have done to deserve being gifted as we are so much above those cursed idiotic oxford brutes." But, alas! even the conceit of robbing the senior university of its capital letter could not be kept up for ever, and in the very next letter Brookfield

condescends to allude to Oxford minds, though he adds that "they are not considered to have any value except as arises (as in turnspit dogs) from their extreme rarity." The Set, again, would have none of Dickens; when 'Master Humphrey's Clock' appeared, Brookfield could find no genius in it, and "Dickens wouldn't do." Later he came to the conclusion that 'The Chimes' were "as utter trash as ever was trodden under foot."

Still, the Set surveyed mankind with a reasonably tolerant eye, except when some audacious fellow dared to attack any member of the brotherhood. He, of course, had to be dealt with faithfully. They found their rallying-ground in Mrs. Brookfield's drawing-room, and it is impossible to imagine a fitter hostess for literary talent than that witty lady. We are told that Mrs. Procter was jealous of her, and Mrs. Brookfield could, of course, throw beauty into the scale of social success as against that formidable antagonist. But she had also high qualities of heart, and Thackeray, in particular, set the utmost store by her affection, as has long been known from his published letters to her. On the whole, her correspondence strikes a more natural note than that of her husband, who occasionally forces his humour. Thus she gives a capital description of Tennyson superintending the dismantling of the bedroom in his Ebury Street lodgings because, having invited herself and some other ladies to dinner, it had occurred to him that there was no drawing-room. A bright spirit closely in touch with her was Harry Hallam, who died young, like his more famous brother, and Thackeray's touching reflections on the funeral come as a welcome relief to volumes which suffer, if anything, from a surfeit of jokes.

Brookfield's sense of the ridiculous does not seem to have acted adversely to his ecclesiastical prospects, though, like Sydney Smith, whom his wife described as "hideous, odd-looking, with a mouth like an oyster and three double chins," he was not altogether exempt from the weakness of girding at the cloth. But he had the misfortune to preach a sermon when the bishop-selecting Lord Shaftesbury was among the congregation, and in the course of it he mentioned that it was not absolutely necessary to salvation to believe that Christ was tempted by the conventional physical Devil. "The man's a Freethinker" was the inevitable report to Palmerston, and thus it was that Brookfield, despite considerable talents and unbounded social success, never reached the Bench, or even a deanery. Still he enjoyed his life, and lived it worthily. And if we cannot, as the Set did, "echo helpless laughter" to his jest, we can welcome with unalloyed pleasure the record of so bright a personality.

Tekel: a Study of Educational Problems of the Day. By Frank J. Adkins. (Sonnenschein & Co.)

We learn from the preface to this volume that much of the subject-matter of these rather loosely and carelessly written chapters has already appeared in magazine articles: this accounts for the fact that much that Mr. Adkins presents to his readers is smart rather than convincing. Inasmuch, however, as "the book is a record of purely personal experience," it necessarily contains many suggestions that teachers and managers of schools may peruse with advantage. Mr. Adkins, we read on the title-page, is a graduate of Cambridge, and we gather from his book that he has worked in an elementary school, so that his experiences entitle him to be heard with consideration; but the attitude he assumes towards schools and their managers as well as towards the classwork done in them savours much of scholastic trade-unionism. He is so greatly concerned with the growth, social advancement, and financial prosperity of the teaching profession that he will hardly gain the confidence of general readers; while his utterances concerning "cram," the value of information, and the training and use of memory in education are so far exaggerated that they cease to be convincing.

Mr. Adkins is addicted to cryptic utterances which require interpretation. For instance, he insists on the expediency of realizing "that information is nothing more than the ashes of the torch of learning." The only meaning that we can extract from this—and we doubt whether other readers will be more successful—is that information is worthless. Mr. Adkins's teaching in this respect verges on absurdity; and it may become disastrous by tending to make young and aspiring teachers careful to leave no "deposit of useful knowledge" in their pupils' minds. The majority of children who attend public elementary schools until they are twelve or thirteen years old are, unfortunately, subjected to no further means of education or mental development, except always the struggle for existence; it is therefore highly expedient that they should carry away with them a reasonable amount of information, and this they can well do without forfeiting the disciplinary advantages of school-life; and we venture even to think that they will find a trained and well-stored memory a valuable asset in after life.

We do not altogether agree with the author in his estimate of the local authorities on whom recent legislation has imposed the burden of school management. In his opinion

> "they can deal effectively with the machinery of education, but they can hardly be expected to reflect upon the end that this machinery should accomplish."

It seems to us that the authorities, knowing their own requirements and being able to gauge pretty accurately the needs of their districts, and, in less degree, those of the whole country, are certainly competent to reflect upon the objects that the school machinery should attain; while the machinery of education—*i.e.*, the organization of classwork and the individual training of scholars—should be left almost wholly in the hands of the teachers.

Mr. Adkins devotes the most serviceable chapters in his volume to consideration of the routine in schools and training colleges. In these matters he seems to speak from practical experience, and his proposals for alteration and reform deserve attention. In the schools themselves he would substitute intensive for extensive study; fewer subjects should be attempted, but they should be more exhaustively treated. This by itself would be a great gain, for it involves judicious correlation of subjects; and the absence of correlation is a striking feature in public elementary education as well as a serious impediment to progress. Corresponding improvement is desirable in the training of teachers, whether pupil-teachers or students in training colleges; and we are glad to find that Mr. Adkins does not advocate the abolition of pupil-teachership, but recognizes its utility and value as a natural growth in our national system. He would, however, ensure to teachers a more comprehensive and better-planned course of study and professional preparation. Utilitarianism in education has, we are told, sapped, and is sapping our "intellectual foundations"; Mr. Adkins protests against it, and against the "provincialism" with which we are now threatened, for, as he truly says, we do not want a "cotton education" in one county and a "woollen education" in the adjoining one: the country needs a sound basis of general education on which specialized instruction may rest.

The paragraphs devoted to the teaching of modern languages, the opening of penny banks in connexion with elementary schools, the use of corporal punishment, and the like, are eminently sane, and therefore worth reading.

Mr. Adkins has the grotesque habit of quoting texts from the Old and New Testament, whether applicable or not to the question immediately under consideration; he forces them upon the reader at every turn, either by way of illustration or argument—for the one they are out of place, for the other useless, even with the verbal alterations which seem to him desirable. This frequent misuse of texts greatly disfigures the book, and seems to remove the treatment of the subject-matter from the free air of rational discussion into the evil atmosphere of sectarian priggishness.

George Monro Grant. By W. L. Grant and F. Hamilton. (T. C. & E. C. Jack.)

"Principal Grant" is the page-heading that runs through this book; and it is as Principal of Queen's College, Kingston, Ontario, that the subject of this biography will probably live in the memories of most of those who knew him, personally or by repute. But Grant deserves, and will doubtless receive, wider recognition as one of the "makers of Canada," having for many years championed the unpopular cause of the federation of the various States that now form the Dominion of Canada, and lived to see that federation carried out successfully. In fact, "federation" may be described as Grant's master passion, whether it were of allied yet antagonistic religious bodies or of political entities. It is remarkable that he whose life was to be so full of active usefulness should, while yet a child, have been seemingly incapacitated for the battle of life by the loss of his right hand; yet it is probable that

this very accident, which prevented his entering upon any manual occupation, was the prime cause of that strenuous life. But for the childish curiosity which led to his meddling with a hay-cutter and paying the penalty with his right hand, Grant might perhaps have become nothing more than a successful farmer, unknown by name even to his fellow-colonists; whereas now his name is writ large upon the pages of Canadian history.

The book begins with life in Pictou County, Nova Scotia, where Grant was born in 1835, his father being a Scottish immigrant from Banffshire, who from farming took by turns to teaching, legal work, and auctioneering; while his mother, to whose sagacity and piety Grant owed much of his character, was a granddaughter of the "godly Mr. Monro" of Hugh Miller's 'My Schools and Schoolmasters.' Brought up in an atmosphere of sectarian bitterness—for "these were the days of ecclesiastical and political factions at their fiercest," when kirkmen and "anti-burghers," the former Conservatives and the latter Liberals, "hated each other with a whole but an unholy hatred"—young Grant became filled with that passion for unity which, as we have said, dominated his life.

In his eighteenth year he left Nova Scotia for Glasgow University, where he had as fellow-students, amongst others, Mr. James Bryce and the late Sir William Hunter. Of student life at Glasgow sixty years ago we have an entertaining account, Grant, though a divinity student, being full of animal spirits, and having a fondness, which lasted to the end of his days, for outdoor games, especially football; while in the debating hall few could equal him. When he revisited Glasgow some twenty years later he found the old janitor dissatisfied with the grand new college, and lamenting that the students were too respectable: "He never saw a snowball made in the new quadrangle, and the rectorial election meetings were more like 'prayer-meetings' than anything else."

While at college young Grant joined the Barony Church, with the minister of which, Norman Macleod, he formed a deep and lasting friendship, the personality of "Norman of the Barony" becoming a vital force in his life. "He was the greatest man I have ever known," Grant would often say. To the influence of Norman Macleod is probably due the warm attachment which Grant came to feel for the Established Church, voluntaryism being, in his view, unsuitable for a country like Scotland, though he advocated it in Canada. When not occupied with his studies Grant was engaged in mission work in the city wynds or in the parish of Cathcart, in tuition, and as Scottish correspondent of the Nova Scotian *Record*. In the summer of 1860 he took his testamur in theology at Glasgow University, and after a tour on the Continent was ordained as a missionary for Nova Scotia, where he landed once more in January, 1861. Norman Macleod had offered the young man the position of his assistant, and his refusal was the turning-point in his life. Had he accepted, his career might have been more brilliant, but hardly more useful.

When Grant returned to Nova Scotia he found his native Church in an unsatisfactory condition, contrasting very unfavourably with her Free Church and U.P. rivals; and he at once set about, with his characteristic energy, to remedy this state of affairs. After a few months of mission work at River John he was removed to Prince Edward Island, where, in the space of eighteen months, he succeeded in building two churches and seeing provision made for their incumbents. Towards the end of 1862 he received a call to St. Matthew's Church, Halifax, and in the following May the young minister, not yet twenty-eight, was formally inducted into his charge. Here his sphere of usefulness was greatly enlarged, and immediately he set himself to the attainment of two of his heart's dearest wishes—a native-trained ministry and the higher education of the province, giving his hearty support to the Education Act of Dr. (now Sir Charles) Tupper, for whom he always had a great admiration.

Grant did not find his new sphere a bed of roses, his schemes meeting with much opposition in some quarters, and he himself being accused of "unsoundness." As examples of his liberality of spirit may be mentioned his warm friendship for the Roman Catholic Archbishop of Halifax, Monsignor Thomas Conolly, and the fact that he offered Father Chiniquy the use of his church to lecture in as a protest against the attacks made on him by the Roman Catholic mob of Halifax, and the cowardly inaction of the mayor. Of the so-called "religious press" he once remarked: "Religious newspapers! The Irish Church, I believe, means a church *not* for the Irish people. So most certainly a religious newspaper means a newspaper that has no religion." Grant was an ardent politician, holding that "a clergyman should speak freely, vote freely, and he may freely be elected a representative of the people." He was for many years a Conservative, and a warm admirer of Sir John Macdonald; but towards the end of his life he broke with his party and gave his support to the Laurier Government. As we have said, Grant was an enthusiastic federationist, and an equally strong opponent of annexation to the United States, and even of a commercial union with that country: his vehement denunciation of the latter proposal led, in 1896, to an irreparable breach between him and Prof. Goldwin Smith, with whom he had previously been on terms of friendship.

When British Columbia entered the Union, and as a condition the survey of a transcontinental railway was at once begun, the engineer-in-chief, Sandford Fleming, in 1872 took Grant with him as secretary in his expedition through the Rocky Mountains to Victoria. The results of this journey were embodied by Grant in 'Ocean to Ocean,' a book which has passed through several editions.

In October, 1877, Grant was offered the vacant Principalship of Queen's University, Kingston, Ontario, which he accepted after some doubts; and in December he was installed in the post which he occupied till his death. How Grant laboured to raise the university to the high position it now occupies is described in the latter half of this book. Though successful in his efforts to collect the large sums necessary for this purpose, it was at the cost of his health, which a tour round the world failed to restore completely; and a later campaign to collect funds resulted in his breakdown, and shortly in his death, which took place on May 13th, 1902, his wife, to whom he was devoted, having predeceased him by somewhat over a year.

With his staff Grant maintained cordial relations, in spite of his masterful spirit; and by his students he was beloved. There were strange contradictions in his character; for instance, he was a warm friend of Hofmeyr's and a sympathizer with the Boers, his admiration for Rhodes turning to loathing after the Jameson Raid; yet when the war broke out, he took the British side, and heartily approved of the sending of Canadian troops, but grieved that Canada should be so niggardly as to allow the mother country to pay for them. Free trade among the component States of the Empire was one of his cherished ideals. He was an optimist, and "sympathy was the secret of his optimism." "Life was for him in the finest sense a success. He was born a Nova Scotian and a colonist; he died a Canadian and a citizen of the empire." These words sum up his life. The record of that life was worth telling, and his son and one of his students have produced a book that is well worth reading.

NEW NOVELS.

French Nan. By Agnes and Egerton Castle. (Smith, Elder & Co.)

"'Tis a picture," say the authors, "of married lovers, framed in the style of Mr. Chippendale, as befits the days when Lady Anne 'in the sweet of her year' smiled and wept upon a younger world." In other words, Mr. and Mrs. Castle's new romance keeps to their favourite century — the century of "legs" and lace, of the duello, and of powdered wigs and daintiness. Lady Anne is one of Mr. Meredith's dainty rogues in porcelain, as the authors would freely admit, since they claim that this story is a rendering in Dresden of 'The Taming of the Shrew.' Lady Anne was of French blood on her mother's side, and had all the extravagance and petulance which are traditionally associated with education in Paris. She was caught by a plain English squire while on the grand tour, and, to say the truth, she hardly deserved so excellent a lover and husband. She has tantrums, and runs away, only to find her husband—in despair or disgust, or both—will let her have her own way. If she will have her fling, she may; and the story is the story of her fling. She lives in town, goes to the wrong places in her wilful ignorance, and runs all hazards. It is to her husband, who watches over her unseen, that she owes her escape from trouble and scandal, and her final return to home and happiness. The fact is that Lady Anne had always loved her husband, but was too headstrong to say so. This dainty comedy is not designed for aught but entertainment, and fulfils its mission admirably. If we could slap Nan at times, we could also

proffer her our homage at other times. No authors know better how to use romance than Mr. and Mrs. Castle, and none can give the air of this artificial century with so excellent a grace.

Kipps. By H. G. Wells. (Macmillan & Co.)

In writing 'Kipps' Mr. Wells fulfils the promise of 'The Wheels of Chance,' the hero of which, the admirable Hoop-driver, emerged to his holiday on a newly acquired bicycle from a draper's emporium. The realization of that emporium is here in particularity, whereas it was but sketched in the earlier novel. Moreover, to emphasize the distinction, Hoopdriver was a *jeu d'esprit*, Kipps is ludicrous and pathetic as life. Kipps, that by-blow of a man of means and family, embarks on the world under the auspices of his maternal uncle and aunt in a little shop at New Romney. The pictures of his schooldays, of his quarrels, of his amours, of his groping after adolescence, are faithfully and vividly rendered by the author. It is part of Mr. Wells's genius to take trouble about details; and it pays—the impressions come out more clearly for these illuminating particularities. Take the portrait of Mr. Edwin Shalford, of Folkestone, the fortunate proprietor of the emporium to which Kipps is bound. Shalford is admirable; Shalford must have existed; or if he did not, he exists now once and for ever:—

"Mr. Shalford always wrote 'By order,' though it conveyed no earthly meaning to him. He was one of those people who collect technicalities upon them as the Reduvius bug collects dirt.....When he wanted to say he had a six-penny-ha'penny longcloth to sell, he put it thus to his startled customers: 'Can Do you one, six half, if y' like.' He always omitted pronouns and articles and so forth; it seemed to him the very essence of the efficiently business-like. His only preposition was 'as' or the compound 'as per.'"

Under this man young Artie Kipps was unlikely to make way in the world, but he grew up and stumbled into manhood and love. The lady was instructor in a wood-carving class, an excellent specimen of her sex in her way. But this was sheer idealism, and Kipps could not wing his way into so lofty and ethereal an empyrean as that in which Helen Walsingham shone as a star—at least not yet. And so the fumbling, stumbling footsteps of this simple soul, with the voice of the cockney and the heart of a lamb, brought up against the great Chitterlow, an actor and one of the unacted. If it may seem that the Chitterlow episodes overrun into farce, and touch on Dickens, it is nevertheless to them that we are indebted for an astonishing orgy. Chitterlow and Kipps make a night of it, and that scene is handled with the breadth and humour of a master. The fortune that comes from a dead grandfather alters Kipps's life. He is a gentleman now, with twelve hundred a year, and his situation in regard to Helen Walsingham has materially altered. We should have liked a clearer view of the reasons which persuade the woman that she can marry the man, but we are glad she accepts him, for that opens up the most luminous period in Kipps's life, both in respect of pathos and humour. Kipps cannot live up to his place, either in spirit or in aitches; and though the lady is kind, and even affectionate, she begins to pall. In that cold empyrean he is out of place. No; his right place is by Ann, the Ann of his childhood and calf-love; and so he solves his problem as is wisest. In this engrossing story Mr. Wells comes to his own once more. He has set aside the speculations of scientific imagination, and deals with warm human life to-day. This is the work which was designed for him in the end, and we cannot doubt that he will continue to devote himself to it.

Jacob and John. By Walter Raymond. (Hodder & Stoughton.)

The chief figure in Mr. Raymond's new novel is Hannah, the serving-maid and housekeeper to an aged miser in a Somersetshire village at the time of the South Sea Bubble. Hannah is beautifully and warmly human, whether in her protective love of the boy who has grown up with her and wants to marry her, or in her simple infatuation for a mean little lawyer's clerk. Hannah is the real central figure, not Jacob or John. John, who is the old man's grandson by bend sinister, enlists in a spirit of despair, and is captured by Turks and imprisoned in the service of the Emperor of Salee. In the course of the narrative we have his experiences there related in a journal to his Hannah; but though the adventures are well devised and have colour, they are not quite in key with the rest of the story. The interest really circles round the Somerset village with its rustics, admirably delineated by Mr. Raymond. He knows his county, and can gauge the humours of the villager. His essential tenderness finds expression in the portrait of Hannah, but he is not so successful with the villains. It was a pretty thought that the girl whom John was to marry should read his journal with Hannah in the clematis bower, and thus evoke in herself romantic ideas of the gallant slave oversea. That slave on his return proves wonderfully different from the raw lad who ran away. Perhaps that is a flaw in the picture, for servitude among Turks would hardly civilize and educate to the degree represented. However, Mr. Raymond's tale is unusually attractive.

Fortune's Cap. By Mary E. Mann. (Hurst & Blackett.)

Mrs. Mann's sense of humour carries her new novel through; but it is not on the level of her previous work. The idea is far-fetched, and has been used before; it belongs to the sentimental school which is associated with, say, Mr. Tom Gallon. A maid, who might almost have been drawn from the "Marchioness" with variations, is buffeted about a lodging-house, and devotes herself to the stepson of one of the lodgers, because he is ordinarily kind to her. The stepson is a cavalier young man, and virtually defies and neglects his stepmother, who accordingly leaves all her considerable fortune to the maid. "People don't do these things"; and if they did, the plot would develope differently from Mrs. Mann's, which involves the education of the maid, and the restitution of the balance for every one. But if there is little truth to life in the story, there is plenty of brightness, and the tale is enlivening.

The Quakeress. By Max Adeler. (Ward, Lock & Co.)

This strikes us as being essentially what an earlier generation was wont to call "a pretty story." Sometimes the prettiness comes perilously near to a suggestion of the ludicrous, as when the heroine and her lover, finding it inconvenient to attend public worship, decide to hold a "meeting" *à deux* in the garden; but sometimes also the author rises to higher levels, notably in his thoughtful and well-balanced criticism of the relations between slaves and slave-holders "down South." His remarks, perhaps, lose some of their interest as referring to social conditions which are now completely a thing of the past. There is the same suspicion of obsolescence about his pictures of Quaker life attended by all those delightful peculiarities which the Friends have almost completely laid aside. But the fair Quakeress wavering between a suitor of sterling worth and an attractive scoundrel makes, as we have said, a pretty story, and the parson's wife who provides comic relief is good enough to raise a laugh.

The Idlers. By Morley Roberts. (F. V. White & Co.)

Had this novel been written by Anthony Hope, one can conceive in how different a vein it would have been. It would have been rather elusive, delicately suggestive, with a touch of primness, and a gently cynical and humorous patronage of human affairs; and it would certainly never have ended in tragedy. But Mr. Morley Roberts is whole seas away from Anthony Hope. His style is aggressive and fluent; his methods are crude and even blatant; he never shirks issues, and he would laugh at the idea of elusion. He is a plain, blunt man, and calls a spade a spade. His characters say "Blast it!" which is coarse, but quite mild; and the favourite expression of the youthful hero is "Rot." But Mr. Roberts, with all his defects and lack of minor graces, is eminently forceful. This tale of an intrigue is well handled, and sometimes well told. It is always told with power; and it has the merit of being essentially interesting. Mrs. Buckingham is what General Bigham calls a "mantrap"; he also calls her a "blasted cat"; but these things have no effect on the fanatical enthusiasm of twenty-one for a pretty woman. The lady's character is painted in somewhat lurid colours, and it is certain that if she were as black as the author depicts her, she must have been very, very horrid. Mr. Roberts seems to take a positive delight in harrying her eventually into ruin, which, it is evident, she richly deserved. His success with some of the other disreputable characters is not so manifest, and we do not credit the "smart" husband and wife who live upon blackmail, even if the one was son of a marquis, and the other daughter of an earl. The boy, however, is well limned, and his father is excellent.

XUM

The Princess Priscilla's Fortnight. By the Author of 'Elizabeth and her German Garden.' (Smith, Elder & Co.)

ELIZABETH of the German Garden has created a delightful field for her ready wit and light handling of persons and circumstances in the astonishing adventures of Her Grand Ducal Highness the Princess Priscilla. It is not surprising that a number of adventures can be crowded into one fortnight, when a German princess, bored by the etiquette and conventions of her surroundings, goes to seek her soul in the rustic simplicity of a Somerset village, in company with the old librarian of her father's Court. The inexperience of these two equally well-meaning people leads them into an infinite variety of blunders, from which Priscilla is finally glad enough to be rescued by the prince from whom she is supposed to have run away. Meantime, all unthinkingly, as Miss Ethel Neumann Schultz, she turns the heads of the young men, wins the enmity of their mothers, and scatters her long-suffering guardian's money in the village with a recklessness which leads to serious consequences. The book, which is pure light-hearted comedy, occasionally overstepping the borderland of farce, is not, however, devoid of those poetical fancies which constituted the charm of Elizabeth's garden and her solitary summer.

The Benefactor. By Ford Madox Hueffer. (Brown, Langham & Co.)

MR. HUEFFER'S fiction is clever, but occasionally irritating. In reading it one is too often made conscious of an unrestful striving, on the author's part, after the smart turn of speech or the unusual simile. At the same time we find genuine feeling in this novel, and if the writer had only permitted himself the virtue of simplicity, and thought less of his phrases, it would have been wholly convincing and good. At this time of day a story-writer of Mr. Hueffer's taste and discernment should have got beyond the cult of mere cleverness, and learnt the vapidness of the superior pose. This novel is the tale of a middle-aged dilettante in literature, one of the sons of a painter who left a respectable fortune behind him. This amateur of all the arts is admittedly a superior person, and an incorrigible weakness for playing the great man and patron of genius reduces his worldly affairs to chaos. He is the "Benefactor," and he lives in a charming old house, in a charming old village, which was once a port of note. The book is an acute and sympathetic study of character, marred only by the vein of artificiality already mentioned.

The Claim Jumpers. By Stewart Edward White. (Hodder & Stoughton.)

IN this simple story of the adventures of a young man of New York in the West, Mr. White takes something of a new departure. Here is none of the intensity which made 'The Blazed Trail' notable, and lent a certain distinction to 'The Magic Forest' and 'The Silent Places.' The author pursued the vein of those books far enough, as was apparent in the last of them, and doubtless he was wise, therefore, to break fresh ground. Here he presents us with a young man and a maiden whose love affairs, in a wild piece of mining country, are made far more of than the matter referred to in the title. The hero is a tenderfoot in the beginning, having been brought up strictly upon "the home shelter system" by parents whose reverence for social conventions is a religion. The girl, on the contrary, is of Western origin, and knows nothing of social conventions. Both are types with which many writers have made us familiar since Bret Harte wrote. But Mr. White knows that his characters represent familiar types—that his scheme is by no means original. He has relied on his treatment to supply the element of freshness, and we think him justified. It is a good tale, told simply and with spirit. There is no inspiration, but there is creditable workmanship.

Lieut. Gullivar Jones. By Edwin L. Arnold. (Brown, Langham & Co.)

SOMETHING tolerably extravagant was to be expected of the author of 'Phra the Phœnician,' and certainly this story is as strong in that way as could be wished. Mr. Rider Haggard never gave his imagination freer play, and he has always been at more pains to make his fancies plausible. Lieut. Jones, of the American navy, acquires by chance an old carpet, which we are to suppose is a survival of the days of 'The Arabian Nights.' While examining it he casually expresses a wish that he were anywhere rather than where he is — in the planet Mars, for example. The carpet promptly curls him up into a bundle, and whisks him off through his open window in New York city, delivering him with a shock, shortly afterwards, in Mars. Here he has many adventures among fair maidens, men, and strange great beasts. Mr. Arnold appears to have drawn upon his notions of the earth's early history for his pictures of life in present-day Mars. The tale has entertainment in it for those who are not too critical; but it is not convincing, in the sense that even the wildest extravagance may be made momentarily convincing, by deft craftsmanship.

Lady Jim of Curzon Street. By Fergus Hume. (Werner Laurie.)

IT is a pleasure to be able unreservedly to recommend this book. The characters are all so well drawn that to have read it is, as it were, to have added to the number of one's acquaintance. Nature had intended Lady Jim for a queen amongst women, but somehow she got marred in the making, and when the reader is introduced to her she is a modern Circe, insatiable in pursuit of the material pleasures of life, and unscrupulous in her methods of attaining them. These lead her to fraudulent dealings with her husband's life-insurance and a callous betrayal of the man who has risked all to help her. A terrible retribution follows, and we close the book with a sense of the due proportion of all things which is at once stimulating and soothing. The dialogue is all through of the cleverest, and the plot is well conceived and elaborated.

SPORTS AND PASTIMES.

Flood, Fell, and Forest, by Sir Henry Pottinger, Bart. (Arnold), is mainly a series of articles on travel and sport in Norway, most of which have appeared in various periodicals. For their collection and reproduction in two volumes the author suggests that ancient excuse, the request of friends, and the result need not in this case be regretted. From these pages a fair notion of what Norway was fifty or sixty years ago may be acquired. Shooting and fishing—the former moderate, the latter very good—could be easily got at little cost; the people were friendly and hospitable, unspoilt by modern developments. Now things are greatly changed, but not improved, except perhaps in the matter of rent, facilities of travel, and accommodation.

Sir H. Pottinger describes a journey in 1857 to the Tana, a great river east of the North Cape; he has a lively recollection of the mosquitoes—"the gray terror," he calls them—and their descendants are probably as bloodthirsty now. He next takes the reader out shooting, chiefly after elk, but also for grouse, blackgame, &c. An excellent chapter is that describing a visit to a great estate in the country between the Vefsen Fjord and the Rös Lake in Helgeland. To those who knew these parts twenty-five years ago it is strange to read of the villa at Svenningdal as comfortable quarters, and of a billiard-table either there or elsewhere.

We note some repetition and overlapping of matter, but, all things considered, the tales are well told, if occasionally with some pardonable complacency. The illustrations are numerous and well selected, the frontispiece deserving special mention.

The American Thoroughbred, by Charles E. Trevathan (New York, the Macmillan Company), is a volume of "The American Sportsman's Library," a publication which seems to have been suggested by our well-known and highly appreciated "Badminton Library." If such a book had been brought out in this country about the time (1881) when Iroquois, bred in America, nearly performed a species of "hat trick," by winning the Two Thousand (for which he ran second) as well as the Derby and the St. Leger the probability of its making a hit would have been greater than it now is. Even now, however, there must be a considerable number of Englishmen to whom the work will be welcome, as it contains a sufficiently complete, though succinct, history of the American thoroughbred (of the "running" as distinguished from the "trotting sort") from the earliest times to the coming of Sir Archy, son of "imported" Diomed (winner of the first "Derby" at Epsom), and from the passing of Sir Archy to the present time, when Dobbins, bred in America, and the hero of a great match with Domino in that country, is domiciled among us, but has done nothing to take away the reproach of his name, a most extraordinary, not to say damnatory one, for a "high-mettled racer."

The compiler of the volume says very truly that "the American turf is only the English turf transplanted, with some alterations, to a new soil"; and it may be added that the American thoroughbred is somewhat less thoroughbred—*exceptis excipiendis*—than our own, which is not in every case, or, one might say, in the majority of cases, of unblemished descent from Oriental ancestry. The celebrated Foxhall, for instance, who won the Grand Prix de Paris in the same year in which his compatriot Iroquois won the Epsom Derby, can be proved to be "dicky," as professionals say, in his pedigree; and the same remark applies to Duke of Magenta and other American horses that have paid visits to this country, though they may not have run here. The fact is that the term "thorough-

bred" is not used nowadays to mean more than that the animal's genealogy is inscribed (without any mark indicating a mistake), or can be traced to lineage that is inscribed, in the 'English Stud-Book,' which is the ultimate and authoritative reference for all "thoroughbreds" ("Arabs," &c., excepted) all the world over.

Naturally the cultivation of the American thoroughbred began in Virginia, which for horse-breeding purposes may be regarded merely as a far-away part of this country, and in our stud-book one may read of "the Fairfax Arabian," an Eastern horse imported by somebody belonging to the family of the Fairfaxes, whose name is redolent of Virginia. But most prominent among the Virginians, as is pointed out in this compilation, was Col. Hoomes, the importer of Diomed, or perhaps the purchaser of the horse after importation, in 1798-9. The compiler, however, does not mention that the said Col. Hoomes, of Bowling Green, Virginia, ran a horse, but an English horse (Horns, exported to America, and there named Escape), for the Epsom Derby in 1801. Slight mention only is made of Mr. Whitney's Nasturtium, that was to have won our Derby a year or two ago, but fell upon evil days, after having cost 50,000 dol. (10,000*l*.), it is reported, as a two-year-old, though due credit is given to imported Watercress, sire of Nasturtium, and to English thoroughbred horses in general. "It is still the habit of the breeders of America," says the compiler, "to go to England for both sires and dams, that they may get proper out-crosses for the native blood of America."

There is a useful index, and there are a baker's dozen of illustrations, partly representing matches of which the very names of the opponents are unknown to British readers in the main; famous horses, such as Glencoe (English), Boston (American), Lexington (American), Fashion (American mare) and Salvator (American); and owners of racehorses.

Great Batsmen: their Methods at a Glance. By George W. Beldam and Charles B. Fry. (Macmillan & Co.)—This is an intensely interesting book, and it will be found invaluable by all who are concerned with the higher philosophy of cricket. It marks as great an advance in the analysis and illustration of the methods of great batsmen as Prince Ranjitsinhji's 'Jubilee Book of Cricket' did upon its predecessors. The object which the authors have set before them is to answer the question, "How do the leading batsmen play?" and they do it by presenting us with 600 action-photographs taken by Mr. Beldam with remarkable skill in the actual course of strokes genuinely played. The skill in timing the camera, the ingenuity and knowledge of the game required to achieve this purpose, will perhaps only be appreciated by those who have seen the photographer actually at work, but the result is here in a remarkable series of illustrations revealing the strokes of cricket in the making. The positions displayed are sometimes surprising. Take, for instance, the frontispiece, which shows Mr. Jackson's bat high above his head as the result of his "carry through." Most batsmen who do not happen to have played in a net provided with a roof of netting or on board ship would refuse to believe that their bats perform such antics in the air. We have often heard it said of late years, by some of the greatest batsmen of the last generation, that they regret that cricket is becoming too scientific and that it would be better if boys were not taught cricket, but allowed to develope their natural genius. But the fact is that the strokes of cricket are unnatural and need to be taught. A boy has to be coached and coached until the original sin in him is eradicated, and he at last arrives at the pitch of excellence when he discards the use of the natural, horizontal bat and plays with a vertical bat, so placing the maximum amount of wood between the ball and his wicket. This fact, with all its corollaries, will be found convincingly demonstrated by the studies of the methods of great batsmen here supplied. Mr. Fry's commentary is as good as we should expect from an athlete of so alert and analytical a brain. He is never tired of learning or of drawing deductions from his great experience, and his observations will certainly prove instructive, as he hopes, "not only to those who are interested in how the leading batsmen play, but also to those who wish to learn the art of batting." With reference to Ranjitsinhji, Mr. Fry points out that the camera shows that, except in the one instance of his method of glancing to leg, his actual movements are much the same as those of English cricketers. But he is appreciably quicker. That it is this fact which makes him appear so different from others, and so dazzling in his method, we do not doubt. To any one watching him from the pavilion, and much more so to one keeping wicket behind him, all bowling looks different and cricket seems another game. It may be, as Mr. Fry suggests, that this extra quickness of his enables Ranjitsinhji to watch the ball a fraction of a second longer before beginning his stroke, but our own impression is that he forms his judgment of the ball more rapidly, and completes the preliminary part of the stroke he has decided upon with extraordinary celerity; he is then able to pause and watch the ball nearer to him than most batsmen can do before completing his action. These two facts taken together differentiate him from other batsmen. The increased amount of back-play, the mastery of which distinguishes the first-class player from the fast-wicket scorer, is one of the chief developments in the game during the last ten years. Like the hook-stroke and the pull-drive, it is well illustrated here, and it is most interesting and satisfactory to find that the camera discloses the fact that Mr. W. G. Grace is not an active supporter of those who maintain that back-strokes should be played without moving the right foot.

We fancy the picture on p. 525 is wrongly labelled L. S. Wells; it should surely be C. M. Wells; but otherwise we have noticed no slips.

Great Lawn Tennis Players: their Methods Illustrated. By George W. Beldam and P. A. Vaile. (Macmillan & Co.)—This book consists in the main, like that we have just noticed, of a large number of plates (as many as 229), prepared from photographs of some of the best exponents of lawn tennis in the act of playing various strokes, accompanied by remarks thereon. The idea of illustrations from life showing how strokes are made—as regards position of body and racket and method of grip on the racket—is modern and good. The scheme is indeed excellent, but unfortunately the way in which it is carried out is open to many objections. The book is, in fact, spoilt by the text. For this apparently Mr. Vaile is alone responsible, inasmuch as the first person singular is thrust forward on almost every page. Further than this, it would appear that Mr. Vaile is responsible for the choice of illustrations, for the reader is presented with no fewer than forty-seven views of that gentleman. Apart from extreme looseness of composition, careless arrangement, and much redundancy, the reader would be inclined to study this book with a view to improving his own play: not so, however, when he is wearied by incessant references to the author as well as to another book he has written. Mr. Vaile needs to learn that modesty is a recommendation even of great discoverers.

No doubt Mr. Vaile has made a close study of the game, and the plates of the book show well how a good "follow through" helps a player in his stride. They also show how a good player is always on the move, making for the right position for taking the next return—one of the greatest secrets of good play. Another strong feature consists of the illustrations which show the balancing of the body, mainly by means of the second arm.

Mr. Vaile talks a great deal about the "defective English grip" of the racket, and he considers that the doom of English lawn-tennis players is imminent because they use a racket with "a big handle and a wrong grip." Moreover, he does not appear to be ready to admit that there can be two opinions regarding some of his views and criticisms concerning English play and tactics: thus he foreshadows the doom of the Dohertys without the smallest hesitation, but with patronizing indulgence. However, since the date of Mr. Vaile's prophecy Mr. H. L. Doherty has again secured the championship—this time by three sets to love!

One of the few good points about the book is the suggested change—not exactly novel—in the foot-fault rule. The suggestion is that at the moment of serving both the feet shall be behind the service line—as high up as the server pleases. The book is well got up.

A Bibliography of Works in English on Playing Cards and Gaming. Compiled by Frederic Jessel. (Longmans & Co.)—The want of a good bibliography of cards and card games has long been felt by those interested in the matter. The only important bibliography existing was both incomplete and inaccurate, probably because its author was forced to rely on second-hand citations for his references. Others, like Mr. Marshall's 'Bibliography of Gaming' in *Notes and Queries*, were limited in their scope. Mr. Jessel's book is not open to these remarks. It is compiled from personal knowledge of the books themselves in nearly every case, and it is very full. The only important omission is due to a strict observance of his own very proper rule of discriminating between magazines and newspapers, which has led him not to mention the only account in English of the earliest work on cards—a letter by Sir E. A. Bond which appeared in our columns on Jan. 19th, 1878 (No. 2621). It might be advisable, since the most important works on the early history of cards are in Latin, to publish a list of them as an appendix, either to a second edition of this work or to the promised French bibliography of the subject, which we shall heartily welcome. The notes on the various articles are useful, but we regret that Mr. Jessel did not call attention to the importance of Cutlin's articles on cards in the Report of the U.S. National Museum for 1896.

The early history of cards in Europe has, within recent years, been freed from the uncertainties in which it had been involved by the industrious conjectures of a long series of writers. We now know that cards were introduced into Europe in 1377 or shortly before, and that they consisted, then as now, of four suits of thirteen cards each, the honours being of the German type, king, overknave, and underknave. The suit-marks were possibly coins, cups, bells, and birds, but were certainly variable. In 1379 we hear of their introduction into Viterbo, in Central Italy; in 1384 they are legal at Nuremberg, and in 1392 they are made at Paris. No cards dating from this period are known to exist. Early in the fifteenth century they fell under the ban of the Church, and new cards were invented to take their place, such as the so-called "Mantegna" cards, the tarot, and the minchiate packs. These were "emblem" or picture cards, numbering 22 in the tarot, 50

XUM

in the "Mantegna," and 41 in the minchiate pack. They were invented at Florence, and the subjects were symbolic of the conditions of human life or of natural changes. Later, towards the middle of the fifteenth century, the tarot pack was added to the original pack of 52 cards, now grown to 56 by the addition of four queens, forming a pack of 78 cards, in which the 22 cards form a permanent suit of trumps (*trionfi*, triumphs). From this time forward cards ran their course unchecked. For those with a taste for long-drawn-out pleasures, tarot and minchiate—for others, basset, trappola, primero, maw, ombre, quadrille, whist—succeeded each other as fashionable games, the last but recently dethroned by bridge. Mr. Jessel gives a list of 55 works on this fascinating game, of which the earliest —"apparently the first printed description in English of the Game of Bridge"—is a small four-page tract published in 1886 under the title of 'Biritch, or Russian Whist.' Poker has some 43 entries, while whist-guides, laws, &c., amount to 243, and books about whist number 55.

Mr. Jessel has done an admirable piece of work, and his book is well printed and conveniently arranged. We can recommend it not only to libraries, but also to clubs for card-room reference, and to all who wish for a ready means of finding out what has been written in our language about cards and gaming.

OUR LIBRARY TABLE.

The Autobiography of Samuel Smiles, LL.D. (John Murray), judiciously edited by Mr. Thomas Mackay, might well be an additional volume of the familiar 'Self-Help.' It is a record of honourable, if unsensational industry, of adverse circumstances bravely surmounted, and we are afraid that it must be accused as well of containing passages of dullness. Dr. Smiles had not the art of investing foreign travel with charm, and his descriptions of his numerous trips to the Continent are provocative of a yawn. The chapters, again, which set forth how he collected the raw materials of his biographies of George Stevenson and the great engineers repeat inevitably much that he had previously given to the world in a more connected form. Still, in the course of a varied life as medical man, journalist, secretary to railway companies, and man of letters he came across many notable persons, and duly earned their respect and confidence. If, as a poor boy at Haddington, he only looked on Jane Welsh, afterwards Mrs. Carlyle, from over the way, he became intimately acquainted with Cobden as a rising journalist, and we get a vivid idea of that politician's inexhaustible activities as organizer of the Anti-Corn-Law League. Dr. Smiles also knew Ebenezer Elliott, the poet of the movement, and describes him as cheerfully bearing his last illness and appreciative of the talents of young Monckton Milnes. He met Hudson, the deposed "Railway King," after ruin had overtaken him and when he had been in vain endeavouring to soften the hard hearts of the North-Eastern directors. Dr. Smiles's charitable verdict is that the man was more foolish than reckless: "Had he been utterly unprincipled, and acted with sufficient cunning, he might have become as rich as Crœsus." The story of the bullion robbery on the South-Eastern is told once more in these pages, and that with animation; while a singular instance of arbitration concerns the purchase by the railway of the property and buildings of St. Thomas's Hospital. The award was 290,000*l.*; but how had the figure been reached? By the simple process of adding up the nine valuations which had been made and then dividing them by nine! These are fair samples of the experiences which are to be found scattered up and down this cheerful and unpretending narrative. As the present generation of youth is flippantly disposed to greet the name of Dr. Smiles with smiles not altogether devoid of irony, Mr. Mackay justly reminds them that his 'Life of George Stevenson' and 'Lives of the Engineers' record many incidents in the lives of great men that would otherwise have been irretrievably lost.

Mrs. Bayard Taylor's recollections, entitled *On Two Continents* (Smith & Elder), are by no means uninteresting, though abridgment would have improved them. The daughter of Hansen, the celebrated German astronomer, and the wife of the well-known American diplomatist and man of letters, she has naturally seen a good deal of the world. Her English readers will probably find those chapters most attractive which deal with the Congress of Berlin, which was held not long after Bayard Taylor had been appointed United States Minister in that city. "Tall, large, and rather handsome, but none too intellectual," is his somewhat surprising description of Lord Salisbury to his wife, while she adds a vivid little portrait of Beaconsfield, studiedly nonchalant and self-confident, as became a man who held the winning cards. General Grant, while on his travels, appeared in Berlin at this time, and astonished the Germans not a little by dressing in civilian clothes. "As a matter of fact, simple Republican that he was, he had left his uniform at home." Mrs. Bayard Taylor's earlier pages are full of her husband's American colleagues in literature, George William Curtis and the rest of them, and she tells a rich story of a roasting they administered to Martin Tupper. The author of 'Proverbial Philosophy' was induced to talk about the Melian Venus, and Bayard Taylor capped his recitation of his own words of wisdom by the ribald lines about Sennacherib and Jehoshaphat. She saw Emerson in an earthquake at Florence, when he preserved his equanimity as a true philosopher and gave absolutely no outward sign of excitement. Mrs. Bayard Taylor writes about her husband's poetical productions in a tone of wifely admiration which, to tell the truth, does not always coincide strictly with their intrinsic merits. But there is no harm in that, and, for the rest, it is enough to say that, though she is rather apt to devote four or five pages to an incident for which half a page would be ample, she always rambles pleasantly.

Prof. Reinsch's *Colonial Administration* (Macmillan) is his third contribution to the useful "Citizen's Library of Economics, Politics, and Sociology," which is being issued in New York, and its clear and broad-minded advocacy of principles of justice towards so-called inferior races ought to promote the adoption of sound methods of administration in the experiments now being made in Cuba and the Philippines by the American people, to whom it is especially addressed. The temper and language of Prof. Reinsch's introductory chapter could scarcely be improved. It is a statement of sound policy, of dangers to be faced as well as of duties to be performed by every nation, alike of the New World and of the Old, that takes upon itself the responsibilities of empire-making. Only by recognizing and overcoming the growing tendencies of present-day "expansion," we are forcibly reminded, can ruinous evils be averted:—

"While we preach the doctrine of universal brotherly love, we look with disdain upon nations, no matter how highly civilized, who differ from us in the least shade of colour; we abolish slavery, and under the pretext of providing a moral education for the natives, introduce forced labour; we preach peace while we are stirring up into warlike feelings societies that for ages have lived in a condition of peacefulness; we cry for the open door, meanwhile plotting all the time to reserve to ourselves the markets over which we can exercise any control; and while our science has made the idea of evolution an ingrained part of our being, we carve up the world into artificial tracts and attempt to impose upon the natives an alien system of social institutions. Such contradictions invite the suspicion that we have here to do with a vast aggressive movement of national selfishness, which is simply paying a bare and empty respect to ideas of morality that in practice are totally disregarded."

"The lesson to be drawn from this objection, therefore, is that by all means reckless exploitation in the new countries is to be made impossible, not only in order to protect the inhabitants of these regions, but also to prevent a very dangerous reaction upon our own industrial and social life."

In working out the details of this excellent doctrine, through chapters on education and general improvement, colonial finance, currency and banking, colonial commerce, means of transport (or, as he calls it in American phrase, transportation), land policy, the labour question, and defence and police, Mr. Reinsch, with more or less special reference to Cuba and the Philippines, draws his illustrations from British, French, German, and other Old World achievements and failures, and he repeatedly calls attention to the exceptional crimes and blunders committed in the Congo State. He has for the most part made good use of the numerous books cited in his notes. Though he must not be blamed for occasional errors, which do not weaken his argument, two or three of these may be pointed out. "The negroes in South Africa" (p. 44), for instance, generally speak, not "the Hottentot dialect," but the Bantu language, along with Dutch and English. The "tax of 52 cents a gallon" imposed on spirits imported into West Africa is by no means "prohibitory as far as the natives are concerned" (p. 75). It is only in some of our South African possessions that the hut tax "is used for the purpose of increasing the supply of native labour" (p. 124). It is, moreover, an exaggeration to say that the Indian tea trade "has been endangered by the increase of the British tea tax to 8*d.* a pound in 1903" (p. 222).

In noticing Mr. Henry Foljambe Hall's work *Napoleon's Notes on English History* (Dent & Co.) the reviewer has unfortunately to speak of the author in the past tense. Mr. Hall, whose enthusiasm on behalf of Napoleon I. knew no bounds, died before this book had finally passed through the press. As his friend and publisher Mr. Dent remarks in a tactfully sympathetic preface, Mr. Foljambe Hall was in a sense the victim of his own eagerness to promote further research in all that concerns Napoleon: "The very strenuousness of his living was beyond what his physical nature could endure." The signs of these characteristics are observable in this interesting volume. It was a happy thought that inspired Mr. Hall with the desire to go one step further than M. Frédéric Masson in his 'Napoléon Inconnu,' and to compare Napoleon's notes on English history with the volumes which he is known to have used during those months of strenuous study at Auxonne. Mr. Hall, happily for students of the period, succeeded in gaining access to them. The result is shown in the present volume, which, among its other services, recalls the names of historians of England well known in their own day, but almost forgotten by posterity—*e.g.*, John Barrow (of whose life next to nothing is known), Paul de Rapin-Thoyras, and Thomas Carte. As has too often happened, the Frenchman was better known among his people, and at the Hague and Wesel, where he subsequently lived, than were the two Englishmen. Fate was certainly unkind to Barrow, the author of twenty-five substantial volumes; but Carte perhaps deserved the ill success which attended his 'History of England,' for in the very first volume (published in 1747) he went out of his way to prove

that the touch of the Pretender had been efficacious for the "King's Evil."

Such were the materials on which the young Napoleon worked (of course in French translations in the case of Barrow and Carte) during the hard months spent at Auxonne. Mr. Hall throughout compared Napoleon's notes with the originals, and was able to throw interesting light on the habits of mind of the young officer. Thus, in making notes from Barrow's very full account of Magna Charta, Bonaparte omitted the clauses respecting liberty to leave the country save in time of war, the custody by temporal peers of the vacant monasteries of which they were patrons, and the rights of wardship conferred on barons over their military sub-tenants, &c. Some of the omissions are hard to account for. Bonaparte did not name the death of Richard II., though Barrow had mentioned it. On the other hand, Bonaparte noted the force of the national spirit which led to the undoing of bad governments and to great revolutions. In referring to Oliver Cromwell he did not note the fact that Cromwell refused the crown. Certain of his phrases are of interest as showing the beliefs or prejudices of the lieutenant. Thus: "Mary Stuart, widow of Francis II., Queen of Scotland, and heiress of England, lost her head on the scaffold. She took the side of the Christian religion. This was the chief reason of her death." His notes, however, on the rise of the power of Parliament in the reign of James I. reveal not only perspicacity, but also a keen interest in the subject. In view of the probably correct story respecting Napoleon's remark after Waterloo, "It has always been the same since Crecy," we should remember that he took his account of the old wars mainly from English sources. Thus he notes on the battle of Blankenberg (Sluys): "Twenty thousand French [*sic*] and two admirals were slain, and 230 of their vessels taken." For Crecy he entered the French losses as "two kings, many other independent lords and knights banneret, 1,200 knights, 1,500 gentlemen, 4,000 men-at-arms, and 30,000 infantry. Three knights and a few soldiers were the entire loss of the English."

Mr. Foljambe Hall appended very complete notes to this volume, respecting the manner in which Bonaparte used his authorities; and it is here, of course, that the chief value of the book lies. On certain topics, perhaps, the notes are needlessly full, and we have noticed occasional slips, as when Mack is named as the general defeated at Marengo. Mack came utterly to grief at Ulm, while Melas was overborne (not in the least discreditably) at Marengo. On the whole, however, we have every reason to be thankful that this work, evidently a labour of love, was carried through by its author very nearly to its final recension.

THE English-speaking peoples do not, as a rule, take a keen interest in the literature of their neighbours, and probably it is in consequence of this that we have so few books written on the subject apart from such as are more or less purely academical. This is a pity, and we therefore welcome Otto Heller's *Studies in Modern German Literature* (Ginn & Co.), which are written for readers who possess no special or first-hand knowledge of the subject, and which are frankly admitted to be "distinctly unscholastic in form as well as in substance." The author's purpose is to indicate broadly the chief aspects of modern German literature, and he hopes, it would appear, by so doing to assist in bringing the German and the American into more genuine sympathy with each other. Whatever may be his success in the latter object, he has at least made a creditable beginning in the accomplishment of the former. The present volume deals mainly with the modern German stage, for of the three essays which it contains the two principal are devoted respectively to Sudermann and Hauptmann. They give, apart from the particular discussion of these authors, a good general idea of the lines on which German drama has developed during the last fifteen years or so, and illustrate clearly enough the most significant literary movement of that period, viz., the rise of naturalism, its temporary predominance, and its present decline. Herr Heller is not a very great or original critic, but he is genuinely interested in his subject, and that goes for much; he has read and assimilated a great deal of the best German criticism bearing on the matter, and his outlook is generally sensible. Occasionally he makes a rather wild statement; surely, for example, it is an exaggeration to say that

"the theater to-day occupies in the national consciousness of the Germans a place such as throughout the history of mankind it has been known to command only once before, at the time when Greek tragedy was in its flower."

For our own part we doubt whether the ascendency of the stage in Germany, such as it is, has been a benefit to literature. The Germans have hardly ever been, and are not now, really great in the drama proper, and the present desire for theatrical success warps many talents from their true bent. Herr Heller, indeed, implies as much as this himself in speaking of Sudermann and Hauptmann, and we cordially endorse his opinion that the former is greater as a novelist than as a dramatist, and that the latter's chief claim to distinction lies in the domain of lyric poetry. His general estimate of the two authors is decidedly good, though perhaps unduly favourable, but he devotes too much space and time, we think, to a detailed analysis of their works. The third essay, which is entitled 'Women Writers of the Nineteenth Century,' is somewhat scrappy and unsatisfactory. It is difficult to deal briefly with so large a subject, and we doubt if it will succeed in interesting the general reader. We trust that Herr Heller (who writes English fluently and naturally, although the pseudo-scientific terminology to which American scholars are addicted is too much in evidence for our own taste) may be able to carry out his intention of following up the present volume with further studies.

UNDER the title of *The Spirit of Rome* (John Lane) Vernon Lee has collected some pages from her notebooks which, as she frankly confesses, she found it impossible to use up: doing for herself, in short, what the people sometimes termed "literary ghouls" do for famous writers deceased. One rather wonders where the readers will be found for these snippets of impression, though, of course, Vernon Lee works the sentimental-topographical vein as well as any one, and there are one or two pleasant little pictures in these pages, as of the German theological students out for a holiday, sitting among "fallen pillars and broken friezes," and singing about the Lorelei. But most of the book does not go much beyond what the average smart journalist has now learnt to write, grammar and all. Indeed, only a very urgent demand for "copy" could justify such a sentence as "Yesterday morning, feeling very ill and sad, Rome came for half-hour with its odd consolation." Vernon Lee should also next time get a classical friend to check her Latin—both grammar and mythology; for we must own ourselves unconvinced by the easy familiarity of her reference in this way.

MR. J. E. FOSTER'S *Churchwardens' Accounts of St. Mary the Great, Cambridge, from 1504 to 1635* (Cambridge Antiquarian Society), gives a complete transcript of a manuscript hitherto known only by the extracts already printed by the historians of Cambridge. It is matter for regret that the volume should be issued without introduction or notes, but it is promised that these shall follow at some future date. Meanwhile their place is in part supplied by an elaborate index. The accounts proper do not begin till 1513, and at important transitional periods the record was ill kept; but the great changes of the Reformation are mirrored in the still waters of the accounts of the Cambridge University Church much in the same way that they are in the accounts of humbler parishes. The entries on the purchase of frankincense are interesting. There are no entries in the early accounts, but they appear in the accounts of Mary's reign, and do not cease till after 1575; a purchase "to perfume the church" is noted in 1562, and purchases occur almost annually from 1566 to 1575. The curious method of electing the churchwardens, which before the Elizabethan Reformation was declared to be of high antiquity, continued without change. The two churchwardens of the past year each chose one elector for the coming year. The two electors co-opted six parishioners, and these eight chose the two new churchwardens, and also (before the Reformation) appointed wardens for the care of special lights. The eight electors either chose the auditors, or acted themselves as auditors. In the seventeenth century the election began to be made "with the consent of the minister." "Minister" displaces "priest" first in 1578, and is used regularly from 1597 onwards. Payment of the priest's "wages" began to be a charge on the churchwardens' account in 1552. His pay was at first 3*s.* 4*d.* a week, and in the Stewart period it had reached the sum of 13*l.* 6*s.* 4*d.* a year. By a blunder (p. 125) the salary is represented as 4*d.* a week, which the total shows to be false—a misleading entry which should have been corrected. The editorial work is not in all respects satisfactory. "Per billam huic folio confut' et annex'" is a passage one does not expect to see in a text edited by a Cambridge antiquary. The correct "jemeus" (hinges) is corrected in the Errata to "jemens," though the spelling "jemevs" stands in the text to prove that there is nothing amiss. The glossary contains some curious entries; for instance, the well-known "tucking girdles" are solemnly glossed "sewing tucks in them"; "apparel" has many meanings other than "embroidery sewn on vestments," a meaning which will not fit the word selected for explanation. The scribe makes a curious use of a terminal *t*, writing "herst" (for herse), "hight altar," and "deskt" (for desk). An entry of the index represents "deskt" as a real word. Other words which present more serious difficulty are not entered in index or glossary; for instance, "pans to put *othe* in the silver censers," which may be an error. A yard of "whight branched" (1517) deserves notice as an early instance of the use of "branched" for embroidered. Perhaps the name of the stuff has been accidentally omitted.

A Day Book of Montaigne. Compiled by C. F. Pond. (Methuen & Co.)—This is a very pleasant addition to the "Day Book" series. Perhaps there is no other man so fitted for such dissection as is here performed as the first of literary egotists, who could, with supreme indifference as to their reception, give to the world his meditations upon all things, from the trivial to the sublime—from his father's eccentric method of getting upstairs to "Conscience," "Vertue," and the heights of worldly prudence. His self-communings, in their candour and simplicity, are full of that agreeable wisdom which is easy of assimilation at all seasons; and if the tendency of modern times be to dwell upon extracts, and make a literary meal of fragments, Montaigne can furnish forth as choice morsels as any man can desire. But apart from all con-

siderations as to the merit or expediency of such an extension of the cult of the calendar and the Birthday Book as is to be found in this series, we can honestly say of the present volume, as Montaigne said of his father's diary, "a thing very pleasant to read," "and fit for us to pass the time withal"; and we do not doubt that many will find it so.

Heimweh. By John Luther Long. (New York, the Macmillan Company.)—Mr. Long is an American novelist whose books have won a wide popularity among American readers. In 'Heimweh' he has given us eight stories, or rather novelettes, for neither in length nor in treatment are they precisely short stories. In the first of these, which gives its title to the book, we are told the story of a day labourer and his wife, from the day of their marriage until their death. The story is marked by pathos, simplicity of treatment, and a delicate sympathy with the joys and hardships of humble life in America. The second story, 'The Siren,' is in an entirely different vein. It describes a courtship carried on between two bold swimmers, who, at the last, swim out too far from land, and are drowned. It recalls inevitably a famous chapter in 'Lord Ormont and his Aminta,' but it has its original features, and is so undeniably readable that it would be ungracious to dwell on its Meredithian origin. 'The Loaded Gun' is another evidence of the author's versatility. The plot is not over probable, but the story is fresh and bright, and its two leading characters are clearly drawn. Among the remaining stories, 'Guile' is a pleasant idyll of love as it came to a Quaker maiden; and 'Iupiter Tonans' is meant to be a humorous extravaganza, and is the one decided failure of the book. Mr. Long may be fairly congratulated on his new volume. It shows that his aims are right, and so, for the most part, are his methods. He occasionally writes sentences which are American rather than English, but it should be remembered that he writes for an American public, to whom turns of expression that seem odd to an English reader are familiar and welcome.

THERE are garden books to-day in plenty, and many display little knowledge of gardening, and less of writing. "Handasyde" evidently knows and loves a garden, and this fact gives some interest to *The Four Gardens* (Foulis) which would scarcely be derived from the writing. These gardens are in Scotland, and are "the haunted garden," "the old-fashioned garden," "the poor man's garden," and "the rich man's garden." Scotland "is not conspicuous for the poor man's garden," but a rich man may carve an oasis out of a wilderness. There is a pleasant flow of sentiment attending these chapters, which almost attain at times the form of fiction; and they will make agreeable reading to those fond of the sentiment of gardens.

Peterkins: the Story of a Dog (Lane) is translated from the German of Ossip Schubin by Mrs. John Lane, who has done the work so well that the book might be taken for an original English story. The dog, a white Spitz, is excellently pictured by Ossip Schubin, and plays with sufficient naturalness a part which is both useful and sentimental. Mr. Cottington Taylor has provided attractive illustrations, and the text is printed in luxurious large type. Mrs. Lane has added a few words about the author and dogs in literature by way of introduction. Every dog has his day, and we expect that Peterkins will now have a long one in this country, where there are, we think, many more dog-lovers than in Germany.

IN *Interludes* (Fourth Series), by Horace Smith (Macmillan), we note again the sound sense and humour which distinguished the author's earlier volumes. There is an attractive homeliness in the style after that of many flashy essayists who are seldom wise, and always clever. The essay on 'Likes and Dislikes' could not be more pertinent than to-day. That 'In Extenuation of Poetry' contains some good criticism, and throughout we notice that the author gives us just enough literary quotation to be effective. 'A Farrago of Verses' at the end shows the author's happy facility.

MESSRS. MACMILLAN'S edition of *Esmond*, introduced by the deft and learned pen of Mr. Austin Dobson, and illustrated by Mr. Hugh Thomson, is sure of success. Artist and annotator represent a combination of grace and charm which could not be bettered in the present age. It is part of the irony of fate, we suppose, that in so well printed an edition a word in the Latin motto on the title-page should go wrong.

MESSRS. A. CONSTABLE & CO. send us a pocket edition of *The Private Papers of Henry Ryecroft*. We have re-read the book with delight, and are pleased to see that it has been welcomed by the world in general, as this is the seventh edition.

WE are glad to see a third edition of S. G. Tallentyre's elaborate and interesting *Life of Voltaire* (Smith & Elder), which we noticed at length on its first appearance.

MR. A. C. FIFIELD has sent us a charming, well-printed edition of *Phantastes*, with thirty-three new illustrations by Arthur Hughes. It takes the place, says Mr. Greville MacDonald, of "an edition illustrated without the author's sanction." Mr. Hughes is the very man to do the work, and has done it with a grace which is all his own, recalling those early days which gave us more delightful fairies than we can find to-day.

MR. FROWDE has added to his excellent series of "Standard Oxford Editions" *Browning's Poems, 1833-63*, and *Cowper's Poems*, edited by H. S. Milford, whose editorial service is well done.

A TIMELY addition to Messrs. Methuen's "Little Library" consists of Dickens's *Christmas Books*, 2 vols. There is a judicious and anonymous introduction which is refreshingly candid concerning the merits of the stories as moderns judge them.

Prayers, by R. L. Stevenson, with an introduction by Mrs. Stevenson (Chatto & Windus), will appeal to all his admirers, for they present the essence of the man. He prays for "courage and gaiety and the quiet mind"; he asks for deliverance from "mean hopes and cheap pleasures."

WE have on our table *Shelburne Essays*, by P. E. More (Putnam),—*The Art of the Theatre*, by E. G. Craig (Foulis),—*The Successful Investor* (Marlborough Press),—*Punctuation Simplified*, by T. Bridges (Bridges),—*Memory Test-Book*, by H. G. Spearing (Oxford, Clarendon Press),—*A Boy Musician* (Blackie),—*How to Learn and How to Teach Foreign Languages*, by J. Rosenblum (Hirschfeld),—*Swahili (Zanzibar) Grammar*, by A. C. Madan (Oxford, Clarendon Press),—*Criminal Responsibility*, by C. Mercier (Oxford, Clarendon Press),—*The Hungarian Diet of 1905*, by A. B. Yolland (Budapest, Franklin Society),—*The Secret of Popularity*, by Emily Holt (Methuen),—*Chambers's Effective Reciter*, edited by R. C. H. Morison (W. & R. Chambers),—*Organic Evolution*, by C. W. Saleeby (Jack),—*Nelson Centenary Naval Exhibition, British Museum* (The Trustees),—*Motor Vehicles for Business Purposes*, by A. J. Wallis-Tayler (Crosby Lockwood),—*The Science of Symbols*, by G. Blount (Fifield),—*Monopolies, Trusts, and Kartells*, by F. W. Hirst (Methuen),—*A Queen of Napoleon's Court*, by Catherine Bearne (Fisher Unwin),—*The Romance of Woman's Influence*, by Alice Corkran (Blackie),—*Selections from Joseph Addison*, by B. Wendell and C. N. Greenough (Ginn),—*Essays in Logos and Gnosis*, by T. Simcox Lea (Frowde),—*The Land of Unreason*, by Dean Gulliver (Simpkin & Marshall),—*Ethnological Notes on the Aboriginal Tribes of New South Wales and Victoria*, by R. H. Mathews (Sydney, White),—*The Private Diary of Amanda Ranga Pillai*, by J. F. Price (Madras, Government Press),—*General Sociology*, by A. W. Small (Fisher Unwin),—*Souvenir of Sir Thomas Browne*, by C. Williams (Jarrold),—*Judah Hallevi's Kitab al Khazari*, by H. Hirschfeld (Routledge),—*People I Have Read*, by S. Cumberland (Pearson),—*Did Shakespeare write 'Titus Andronicus'?* by J. M. Robertson (Watts),—*The Laws of Health*, by D. Nabarro (Arnold),—*Golden Rules of Sick Nursing*, by W. B. Drummond (Bristol, Wright),—*Red Rose*, by T. W. H. Crosland (Marlborough Press),—*A Handful of Leaves* (Perth, Stevenson Nicol),—*Poems of Love and Nature*, by L. A. Rickett (Longman),—*After-Dinner Ballads*, by H. C. S. Colborne (Greening),—*Studies in Canadian Poetry*, by J. Cappon (Toronto, Briggs),—*Songs by the Stoep*, by J. Runcie (Thompson),—*Shadow and Gleam*, by Lilian Street (Elkin Mathews),—*America to England*, by Minot J. Savage (Putnam),—*The Guarding of a Goddess*, by J. D. Ware (Gay & Bird),—*A Book of Verse*, by Lady Magnus (Routledge),—*Blue-Grass and Rhododendron*, by J. Fox, Jun. (Constable),—*An Australian Cricketer on Tour*, by F. Laver (Chapman & Hall),—*Truth, Wit, and Wisdom*, by A. Ashton (Chapman & Hall),—*Maud Irving*, by A. De Haven (Sands),—*The Flight of Georgiana*, by R. N. Stephens (Nash),—*The Bride of a Day*, by R. B. and Dorothea Townshend (Allen),—*The Speculations of John Steele*, by R. Barr (Chatto & Windus),—*The Unknown Depths*, by E. O'Donnell (Greening),—*Haunted by the Ghosts*, by J. L. Robson (Simpkin & Marshall),—*The Nunnery Wall*, by Elizabeth Holland (Nash),—*Choephoroe of Aeschylus*, translated by W. Headlam (Bell),—*The Second Athenian Confederacy*, by F. H. Marshall (Cambridge, University Press),—*Thucydides*, Book I., edited by E. C. Marchant (Macmillan),—*Paradise Lost*, Books IV. and V., Biography by D. Salmon, Notes by W. Elliott (Longman),—*Rational Living*, by H. C. King (Macmillan),—and *Legends of SS. Ninian and Machor*, by W. M. Metcalfe (Paisley, Gardner).

AMONG Reprints and New Editions we have *Maud*, by Tennyson, illustrated by W. G. Robertson (Lane),—*The Young Duke*, by Beaconsfield (De La More Press),—*Christmas Eve*, by R. Browning (Allenson),—and *Poems of John Henry Newman* (Lane).

Literary Gossip.

Sir Algernon West has written a memoir of Sir Henry Keppel with the approval of the admiral's family, and the book will be published by Messrs. Smith & Elder on the 27th inst., with several portraits and sketches, including one of the King with Sir Henry. The family realized that a more succinct narrative than the voluminous diary already published was desirable; moreover, the diary in no way touched the last quarter of a century of the admiral's life.

The great scheme for the Nile dam involved a survey to set up marks whereby the rise of the Blue Nile could be annually gauged, and the surveying party was accompanied by Dr. Hayes. In 'The Source of the Blue Nile,' also to be published by the same firm on the 27th of this month, Dr. Hayes relates his travels, and incidentally produces an account of Abyssinia as it is to-day, its geography, ethnography, social customs, and religions, collating his own experiences with those of previous travellers. The work is illustrated by two maps and thirty-two pages of illustrations, and includes an Entomological Appendix by Prof. E. B. Poulton.

Messrs. Longman have in the press, and will publish in January, the first instalment, in two volumes, of a new work by Dr. James MacKinnon, entitled 'A History of Modern Liberty.' Dr. MacKinnon has imposed on himself the task of tracing the development of political, intellectual, and religious liberty from the Middle Ages down to recent times. These two volumes deal respectively with the origins of the subject in the Middle Ages, and with the contribution made to it by the age of the Reformation. Acton, it may be remembered, cherished the idea of writing a history of liberty, which he, unfortunately, did not carry out. Dr. MacKinnon's work promises to realize this idea, as far as modern history is concerned.

E. Grant Richards has arranged with Mr. L. Cope Cornford to publish immediately a work entitled 'The Canker at the Heart: being Studies from the Life of the People in the Year of Grace 1905.' It has been Mr. Cornford's object to present the actual condition of those suffering from lack of employment, of those who will not work, of those who cannot work, and of the very poor and hopelessly afflicted, in a series of studies drawn from his own observation of the people themselves. He deals only by inference with the economic side of the subject, and leaves the reader to form his own conclusions both as to causes and means of remedy. 'The Canker at the Heart' is appearing in *The Standard*.

Under the title 'A Passive Resister of the Seventeenth Century,' Mr. George Cuttle has compiled from Evelyn's 'Diary' a series of extracts illustrating the passive resistance of the clergy to the decrees of the Government in Puritan times. A short note is added giving some particulars concerning Evelyn's life and movements. Mr. Elliot Stock is the publisher.

The publication of *The Library* has been taken over by the De La More Press. The editors hope in the future to make a strong point of illustrations, and the next number will contain a freely illustrated article on Sir Thomas Browne by Prof. Osler, who has been for many years a collector of, and keen student of, Browne's works. There will also be an interesting symposium by Lord Avebury, Mr. Passmore Edwards, Mr. Sidney Lee, and others on the proper scope of the public library.

Three important political articles in the December *Independent Review* are 'The Regeneration of the House of Commons,' by Mr. C. P. Trevelyan, M.P.; 'Irish Land Purchase,' by Mr. Robert Donovan; and 'An Ideal Budget,' by Mr. F. W. Hirst. Mr. H. G. Wells writes on Socialism under the somewhat perplexing heading 'This Misery of Boots.' Mr. H. B. Marriott Watson's paper 'The Unknown God' presents the point of view of an agnostic. The number also contains 'Euthanasia: from the Note-Book of an Alpinist,' by Mr. G. L. Dickinson; 'What People Read,' by Lady Bell; an appreciation of Heredia, by Mr. F. Y. Eccles; and a poem, 'On the Wiltshire Downs,' by Mr. M. McN. Sharpley.

Mr. Arnold Wright is severing his connexion with *The London Argus*, which, with the cordially expressed approval of the late Lord Salisbury, the Duke of Devonshire, and Mr. Chamberlain, he founded in 1887 to represent the views of the Conservative municipal party in London, and which he has edited ever since.

Sir Frederick Price, K.C.S.I., who has been long a resident at Ootacamund, is engaged upon a history of the famous hill station of Madras, which Lord Ampthill declared the other day to be "the most desirable place of residence for Englishmen in the whole of Asia."

Dr. G. M. Theal, having completed the publication of the Cape records in this country down to the year 1831, is starting for South Africa. At his advanced age Dr. Theal does not regard his return to England or the continuation of his work here as probable. We have already called attention to the remarkable results of the Cape Historiographer's mission, which are recorded in forty-five substantial volumes published between 1897 and 1905, the texts of which have been for the most part transcribed by Dr. Theal's own hand. In addition to these official labours he has found time to supervise new issues of his own historical works as well as to edit the important ethnological work compiled by Mr. Stow, which was recently noticed in these columns.

The Gentleman's Magazine, after the December number, will cease to be published by Messrs. Chatto & Windus, having been transferred to Messrs. Harmsworth, and will be published by them at the office of *The Observer*. No details are at present to hand concerning its development or other change, but it is to be hoped that a magazine with such a venerable history will retain its few surviving traditions.

A new work by Mr. G. L. Dickinson, author of 'Letters from John Chinaman,' will be published immediately by Messrs. Brimley Johnson & Ince. Its title is 'A Modern Symposium,' and its subject the present state of political parties and their ideals, as contrasted with those of the poet, artist, and business man.

Abbot Gasquet is preparing for publication in the January number of *The Dublin Review*—the first under Mr. Wilfrid Ward's editorship—a record of some of the impressions he formed during his recent visit to the United States.

Now that fairies and duchesses are falling out, it is worth noting that Faber, the writer of well-known hymns, quarrelled with "the little people" long ago, and said to Lady Etheldreda Howard in her schoolroom, "Suppose we take angels for fairies, and see how we get on." 'Ethel's Tales of the Angels' were the result; and one of these, 'The Child to whom Nobody was Kind,' is to appear this year, for the first time, as a popular illustrated toy-book.

The death, at an early age, is announced from Edinburgh, on Monday, of Mr. David Lawson Johnstone, author of many stories of adventure and novelettes. For James Henderson he wrote various serials in *Young Folks;* Messrs. Sampson Low published his 'Mountain Kingdom'; and Messrs. Chambers his best story, 'The Rebel Commodore,' which followed the fortunes of Paul Jones. He was a capable literary workman, less known than he deserved to be.

The December part of *Chambers's Journal* will be a Christmas issue with half a dozen complete stories. Amongst the articles are 'The Sun's Distance,' by Mr. Alexander W. Roberts; 'Reminiscences of Sir Henry Irving,' by Mr. A. Stodart Walker; and 'Rejected by the Publishers,' a paper giving examples of mistakes in regard to manuscripts submitted to them.

An extra issue (No. 4 *bis*) of the *Revue Germanique* has reached us, which is concerned with Schiller, and throws many interesting side-lights on his literary career. It appears that at the time of the French Revolution he was made "citoyen français," as a friend of liberty, under the somewhat wild title of "Le Sieur Giller." Other attempts at his name in French papers of the day were Gilleers, Gisler (which is perilously near that enemy of liberty, Gesler), and Schyler.

An account of the life and work of the late Baron Lambermont, the distinguished Permanent Secretary of the Belgian Foreign Department for many years, is about to be published in Brussels. It is written by Count André de Robiano, who was long his assistant in the Rue de la Loi; and among unpublished papers in the work may be mentioned the Baron's journal kept during his military service in Spain at the time of the first Carlist war.

M. Alfred Rambaud, who died in Paris yesterday week in the sixty-third year of his age, was a member of the Institute, and Ministre de l'Instruction Publique in the Jules Ferry Cabinet, 1879–80, and again in the Méline Cabinet, 1896–8. He succeeded the Duc d'Aumale at the Académie des Sciences Morales et Politiques in 1897. He was a prolific author, and was one of the first French writers to introduce Russian literature to the notice of his compatriots. His 'Histoire de la Russie' is one of the best books of its kind in France. He also wrote popular histories of French colonial expansion and of 'Civilisation Française,' and in collaboration with M. Lavisse compiled a 'Histoire Générale de l'Europe.' His last work was a 'Histoire de Jules Ferry.' He was for several years editor of the *Revue Bleue*.

The Street Noise Abatement Committee, which met at 1, Finsbury Circus last Saturday, has decided to promote a Bill in Parliament next session which will give the police power to suppress organ-grinding and street cries. The County Council by-laws have proved quite ineffectual for the protection of the public. All who do literary and artistic work in London,

Fluctibus in mediis et tempestatibus urbis,

will hope that the Bill may pass without delay.

Many book-collectors will regret to hear of the death last week, in the forty-seventh year of his age, of William Hutt, who, when a youth, was for several years in the office of *The Athenæum*. Nearly twenty years ago he joined his brother Charles, who, after working as a porter with Messrs. Hodgson, started as a bookseller, and built up an excellent connexion with collectors in England and America. They had a well-filled shop in an old house in Clement's Inn Passage. After a time the two parted, and William Hutt took the shop adjoining. William Hutt had a remarkable knowledge of modern early editions and of books on Alpine subjects. Latterly he had been in the employ of Mr. Charles Jackson, of Charing Cross Road, who is getting up a subscription for the widow, left entirely destitute.

The only Parliamentary Paper of general interest to our readers this week is Ordinance of the University Courts of the Universities of St. Andrews, Glasgow, Aberdeen, and Edinburgh: General No. 1, Regulations for Degrees in Arts, Supplementary to Ordinance No. 11—General No. 6—of the Universities Commissioners (½*d.*).

SCIENCE

RESEARCH NOTES.

Sir William Ramsay's paper on the new radio-active substance which he proposes to call radio-thorium (see *The Athenæum*, No. 4065) is now published. From 250 kilogrammes of thorianite from Ceylon, he obtained, after a treatment which he details, 25 grammes of a barium carbonate possessing a radio-activity equal to that of 14 milligrammes of radium bromide. Dissolved in hydrobromic acid, this left a residue of what appeared to be radium bromide, of which one part was more soluble than the other. The more soluble part proved to have the radio-activity not of radium, but of thorium; and this it possessed even after all the thorium was eliminated. The new substance has a soluble sulphate, while that of radium is insoluble, and it also forms an insoluble oxalate. Its solutions produce an emanation several hundred thousand times more active than those of thorium, and it appears to be quite different from actinium. Its discoverer thinks it probable that it forms the immediate product of ordinary thorium, and that helium, which is present in large quantities in the original mineral, is its ultimate product. It does not seem to have been yet submitted to spectroscopic examination. The original paper, as read by Prof. Blanc at the Liège Congress, is printed at length in *Le Radium* for the current month.

Mr. Makower's paper before the same Congress on 'The Transmission of Excited Activity to the Cathode' is also published in *The Philosophical Magazine*. It demonstrates, in the words of Mr. Jackson—who, like Mr. Makower, hails from the Victoria University of Manchester, and has subjected his colleague's paper to a prolonged analysis in the same number—that "the molecules of excited activity, initially uncharged, are projected from radium emanation with velocities large when compared with those of gas molecules." After a certain percentage of encounters with the gas molecules, he goes on to say, a negative electron is shot off, leaving the activity positively charged. It seems to follow from this that Mr. Makower and Mr. Jackson both regard the activity as no mere quality, but as a substance, which looks like a return to the fluid theory of electricity confirmed in some sort by the remarkable experiments of M. de Heen. But, this apart, the paper is both instructive and readable, and the new university is to be congratulated upon its connexion with the writer.

In the same magazine Prof. J. J. Thomson has an article in which he details certain experiments demonstrating the emission of negative electrons or corpuscles by the metals of the alkalis, even when not heated. In it he states

that, "with more delicate apparatus than that used in these experiments, it is probable that this property might be detected in all substances." This universal radio-activity of matter, which Dr. Gustave Le Bon was the first to demonstrate, is the pivot of his theory on the evolution of matter, and it is satisfactory to see that its probability is now admitted by one of our most distinguished professors of physics. Mr. Whetham, in an ungracious review of Dr. Le Bon's 'L'Évolution de la Matière,' lately suggested that Dr. Le Bon was to be blamed for quoting Prof. Thomson's conclusions in support of his theory.

Another curious confirmation, alike of the validity of Dr. Le Bon's experiments and of the soundness of the conclusions that he has drawn from them, is to be found in M. Paul Langevin's recently published theory of magnetism (see *The Athenæum*, No. 4069). M. Langevin lays it down that either an electromagnetic ray or a ray of light is given off every time that an electron undergoes a change of speed. Now Dr. Le Bon demonstrated six years ago that electromagnetic or Hertzian waves were emitted by every electric spark, and from this and other evidence he drew the conclusion that Hertzian waves and both visible and ultra-violet light are the final stages reached by matter in its return to the ether of which it was originally formed.

Another discovery with regard to ether-waves, or rather pulses, is announced by Dr. K. Hahn. It has long been known that the Röntgen rays will discharge any charged body on which they fall, and Prof. Righi has contended that they would also impress a charge upon a body previously without one. Dr. Hahn has now established by experiment that all bodies upon which the rays fall receive a positive charge, although the effect is often masked by the secondary rays which they at the same time produce. His explanation of the phenomenon is that the pulse is absorbed by the body impinged upon, thus breaking some valency bonds, whereby both positive and negative electrons are set free. Given a sufficiently strong impact, both ions and electrons are projected outside the body; but the electrons, having less mass, leave first and in greater numbers. Thus their projection leaves the body with a negative charge. Dr. Hahn also thinks that his experiments decide conclusively the question of the true nature of the Gamma rays, which he regards as ether pulses and as the counterpart of the Röntgen rays.

Attention may be drawn to a recent publication by the Société Française de Physique called 'Ions, Électrons, Corpuscules.' It is a collection of all the papers referring to the subject which have been printed of late years in French, English, Italian, and German, all appearing here in the first-named language. It is edited by M. H. Abraham and M. Paul Langevin, and will be invaluable to every student of the subject. Illustrations would doubtless have increased too much its already rather unwieldy bulk, though a few diagrams are included in its pages. Perhaps the only serious fault that can be found is that it lacks an index.

M. Charbonneau has contributed to the number of *Le Radium* mentioned above the description of a most ingenious arrangement whereby, by the use of two vacuum tubes of special construction, any induction coil or other transformer can be made to give all the effects of an electrostatic machine. It will be good news for the possessors of powerful coils, and anything that tends to the simplification of apparatus is a benefit to science.

Mr. Butler Burke has written to a contemporary that he considers M. Raphaël Dubois's claim to priority of discovery in the matter of "radiobes" "quite irrelevant." Mr. Burke's latest explanation with regard to his awkward position is that he has discovered not one, but two species of growths in gelatine, one of which is "very like that discovered by M. Dubois and others," and observable with an ordinary lens, while the other comprises the actual and veritable "radiobes," only to be seen with "the highest powers." Unfortunately, there is no hint to this effect in his first communication to *Nature* of May 10th last, nor in his article in *The Fortnightly* of September.

F. L.

SOCIETIES.

Astronomical.—*Nov.* 10.—Mr. W. H. Maw, President, in the chair.—The Astronomer Royal read a paper on observations of Jupiter's sixth and seventh satellites from photographs taken at the Royal Observatory, Greenwich, with the 30-inch reflector of the Thompson equatorial, and showed slides from the photographs and diagrams illustrating the orbits of the satellites. He also read a paper on the Greenwich observations of the satellite of Neptune from photographs taken with the 26-inch refractor.—Father Cortie gave an account of his expedition to Vinaroz, on the east coast of Spain, to observe the total solar eclipse of August 30th, and showed photographs of the corona, &c.—Mr. Thwaites gave an account of his expedition to Burgos, and showed slides of the eclipse from his negatives taken with the Newbegin telescope.—Mr. Maunder gave a short illustrated account of the Labrador eclipse expedition, which unfortunately failed, owing to dense clouds on the day of the eclipse.—Mr. Cowell read a paper on the secular acceleration of the earth's orbital motion, which he considered might be ascribed to the resistance of the ether. He also read a paper on the Ptolemaic eclipses of the moon recorded in the 'Almagest.' In a previous paper he had shown that the conditions of five ancient solar eclipses would be satisfied by adopting certain corrections in the distance of the moon from the node and in the distance of the moon from the sun. In the present paper he showed that these conclusions are supported by the eclipses of the moon recorded by Ptolemy.—Other papers were taken as read.

Statistical.—*Nov.* 14.—The Guy Medal (in silver) was presented to Mr. R. H. Rew for his work in connexion with the preparation of the Reports of the Special Committee appointed by the Society to investigate the Production and Consumption of Meat and Milk in the United Kingdom, and for his paper entitled 'Observations on Production of Meat and Dairy Products.'—Sir J. Athelstane Baines read a paper entitled 'Statistical Skimmings from the International Congress.'

Linnean.—*Nov.* 2.—Prof. W. A. Herdman, President, in the chair.—Col. A. H. McMahon was admitted a Fellow.—Mr. Jesse Reeves was elected a Fellow.—The Rev. G. Henslow exhibited the tails of trout and grayling to show the heterocercal origin of the homocercal tail, by means of the hypural bones which balance the vertebra turning upward towards the upper lobe. He then delivered an address on 'Plant Œcology, interpreted by Direct Response to the Conditions of Life.'—The President opened the discussion, which was carried on by Mr. H. M. Bernard, Dr. D. H. Scott, Mr. W. F. Kirby, the Rev. T. R. R. Stebbing, Mr. H. Groves, Dr. W. G. Ridewood, and Mr. W. C. Worsdell.

Meteorological.—*Nov.* 15.—Mr. Richard Bentley, President, in the chair.—Sir John W. Moore communicated an interesting paper on 'The Rainstorm of August 24th to 26th, 1905, in Counties Dublin and Wicklow,' which in the absence of the author was read by the Secretary. The atmospheric disturbance which caused the torrential rainfall was near the shores of Kerry and Cornwall on the 24th, and the next morning it was near the Scilly Islands. Thence it travelled slowly northwards up St. George's Channel, its centre passing near Dublin early on the morning of the 26th. At this time the system suddenly changed its course, crossing the Channel eastwards to Wales, passing over Central England, and out to sea at the mouth of the Humber in a north-easterly direction. It appears that the rainfall on the 25th exceeded three inches at all stations in the counties Dublin and Wicklow, while it rose above four and even five inches at stations near the Dublin and Wicklow mountains. Sir John Moore is of opinion that this remarkable downpour was brought about by the co-operation of the following factors: (1) a chill antecedent to the arrival of the rain-bearing depression; (2) the slow progress of the depression; (3) the fact that the counties Wicklow and Dublin lay to the westward of the cyclonic centre, and so received its north-easterly and northerly winds; and (4) the physical configuration of those counties and their coast line. As the result of this remarkable rainstorm a destructive flood occurred over the low-lying parts of the Bray Urban District, near the mouth of the Bray River. At Little Bray the water rose to a height of four feet in the streets, flooding houses, destroying domestic animals and fowls, wrecking furniture, and covering floors, yards, and gardens with a thick alluvial deposit.—A paper by Dr. W. B. Newton was also read, describing 'The Aquameter.' This is a new instrument for accurately measuring the amount of aqueous vapour present in the atmosphere.

Institution of Civil Engineers.—*Nov.* 14.—Sir A. R. Binnie, President, in the chair.—The paper read was 'On Waterways in Great Britain,' by Mr. J. A. Saner.

Society of Biblical Archæology.—*Nov.* 8.—Mr. F. Legge in the chair.—Prof. Flinders Petrie read a paper on 'The Early Monarchy of Egypt.' He considered fully all the arguments of Dr. Sethe's paper on the subject; he claimed, too, that Sethe had already accepted the kings of the first and second dynasties as identified by the author. But in the following points it was contended that Sethe's reasons were not conclusive, and that other considerations lead back to the arrangement previously arrived at. That the king Narmer is a predecessor of Mena is shown by the style of the rapidly changing art of the time. Merneit is not necessarily a queen, and if rejected as the fourth king of the first dynasty, then a gap must be left there in the series. As to the pre-Menite kings, it is highly probable that the kings who reigned before Mena were buried at the capital—Abydos—and in the royal cemetery. In that cemetery, at the earliest part of it, are tombs under and smaller than those of the first-dynasty kings; in one tomb is the name of the Horus Ka, in another is only the name of the Horus Ro, and scattered about are objects with the names of Zeser, Narmer, and Sma. Not one of these can be shown to have lived after Mena, and all of them agree with the character of kings before Mena. The whole of the evidence of style and locality shows that these are part of dynasty 0. These later names of Kha-sekhem and Ka-ra were also shown to belong probably to the place which the author had before assigned them.—The Chairman said that the acceptance of Prof. Petrie's theories must depend on evidence rather than on authority.

Mathematical.—*Nov.* 9.—*Annual Meeting.*—Prof. A. R. Forsyth, President, in the chair.—Messrs. P. I. Anderson and J. A. H. Johnston were elected Members.—The De Morgan Medal was presented to Dr. H. F. Baker.—The Council and officers for the ensuing session were elected, as follows: *President*, Prof. A. R. Forsyth; *Vice-Presidents*, Prof. W. Burnside and Sir William Niven; *Treasurer*, Prof. J. Larmor; *Secretaries*, Prof. A. E. H. Love and Mr. J. H. Grace; *Other Members of the Council*, Dr. H. F. Baker, Mr. A. Berry, Mr. J. E. Campbell, Prof. E. B. Elliott, Dr. J. W. L. Glaisher, Mr. G. H. Hardy, Dr. E. W. Hobson, Major P. A. MacMahon, Mr. A. E. Western, and Mr. A. Young.—The following papers were communicated: 'On Improper Multiple Integrals' and 'On the Arithmetic Continuum,' by Dr. E. W. Hobson,—'On the Arithmetical Nature of the Coefficients in a Group of Linear Substitutions (Second Paper),' by Prof. W. Burnside,—'On the Asymptotic Value of a Type of Finite Series,' by Mr. J. W. Nicholson,—'On an Extension of Dirichlet's Integral,' by Prof. T. J. I'A. Bromwich,—and 'The Continuum and the Second Number-Class,' by Mr. G. H. Hardy.

Aristotelian.—*Nov.* 6.—Dr. Hastings Rashdall, President, in the chair.—The President delivered the annual address on 'Causality and the Logic of History.' The idea of causality was distinct from that of the uniformity of nature. The first was a necessity of thought, the latter a mere postulate of physical science, which we were justified in employing solely by the fact that our experience was in favour of it. There was therefore nothing a priori incredible in the idea of an actual suspension of some natural law based upon induction from experience. The real difficulty lies in the evidence. He wished to protest against two opposite tendencies—the tendency of many theologians to suppose that a suspension of a law of nature could be proved by the same kind and amount of evidence which would establish any not antecedently improbable historical event, and the tendency of most philosophers to refuse to treat seriously the evidence

for abnormal or unusual events, whether of the kind recorded in the religious history of the past or the kind investigated by the Society for the Promotion of Psychical Research. The ultimate basis of historical evidence lay in certain generalizations, partly as to the way in which human beings behave, partly as to the way in which nature behaves. The testimony for an ordinary historical event assumed the uniformity of nature. An alibi was said to be proved when a credible witness testified that he saw the accused at a distant place at the time of the alleged crime. The value of this evidence depended upon the assumption that a man could not be in two places at once. Assume that the uniformity of nature may be violated, and the evidence would not prove his innocence. Hence, in spite of the a priori possibility of a suspension of physical law, it was practically impossible to get enough evidence to prove an isolated suspension of physical law in the remote past. On the other hand, it was a mistake to assume that the uniformity of nature prevailed in the sphere of human action, or even in the growth of plants. There, too, no doubt the law of causality held; but biologists who knew something of philosophy, and philosophers who knew something of biology, were beginning to recognize that psychological and biological laws were laws of a different kind from the mechanical uniformities of succession which prevailed in the region of mechanics. They involved final causality. The laws which governed the relations between mind and matter were imperfectly understood. Alleged suspensions of well-established physical laws could not practically be established by mere testimony; but we ought not too hastily to assume that events of the kind commonly called miraculous were impossible because they were unusual in character, or because they could not be accounted for by laws of the mechanical kind which were commonly understood by the phrase "uniformity of nature." Recent psychological research had widened our conception of the possibilities of the modification of physical phenomena by psychical influences, and might widen them still further. Many of the so-called miracles of religious history might, therefore, have happened. A recorded event of an abnormal character ought, therefore, to be accepted or rejected, partly according to the amount of direct historical testimony for it, partly according to the amount of analogy which existed between the alleged event and other events for which there was good evidence. Dr. Rashdall concluded by touching upon the position which, on this view, the belief in such events would occupy in religious beliefs. It was, he held, out of the question that the religion of the future should rest in any considerable degree upon such events. If they were not regarded as exceptions to the laws of nature properly understood, they could not prove the truth of the doctrine connected with them. At the same time the discovery that there was more truth in the traditional Christian story than was supposed at the first outburst of criticism would tend to bridge over the gulf between the religion of the past or the present and the religion of the future; while the wider conception of the possible influence of mind over matter which the recognition of this fact implied was by no means without religious value. The whole tendency of recent extensions of our psycho-physical knowledge was in an anti-materialistic direction.

HELLENIC.—*Nov.* 7.—Mr. S. H. Butcher in the chair.—Prof. E. A. Gardner read a paper on the Atalanta of Tegea. He pointed out that the heads from the Tegean pediments, which had been hitherto regarded as the most important evidence for the style of Scopas, had recently been supplemented by the most interesting discoveries made in the excavations of M. Mendel, of the French School at Athens. Chief among these was a torso of a female figure in amazonian costume, which could hardly be anything but the Atalanta from the hunt of the Calydonian boar in the eastern pediment. This figure was in Parian marble, not in the local Doliana marble of which the other pedimental figures were made; and a head in Parian marble and on the same scale, which was found with the other fragments, almost certainly belonged to the torso. The use of Parian marble, because of its appropriateness for rendering the nude parts of female figures, in compositions otherwise of inferior material, could be paralleled in the later Selinus metopes and in the Demeter of Cnidus. The style of the head was much simpler and less passionate in character than that of the male heads; but this might be explained by the desire of the artist to distinguish the heroine-goddess from her human companions. If these conclusions be accepted, we have new and valuable data for our study of the style of Scopas. — In the discussion which followed Mr. G. F. Hill, Prof. Percy Gardner, the Rev. G. C. Richards, Prof. W. C. F. Anderson, and Mr. J. Baker-Penoyre took part.—Mr. G. F. Hill read a note on a bronze coin of Asine, in Messenia, representing the head of Apollo and the figure of his son Dryops, the eponymous hero of the Dryopians. The Asinæans were particularly proud of their Dryopian descent; besides their temple of Apollo, they had, Pausanias tells us, a shrine and an ancient agalma of Dryops. On the coin the hero is represented enthroned, holding a kantharos; the type is obviously copied from an archaic relief similar to the "ancestor-reliefs," which are almost entirely of Laconian origin. The existence, proved by this coin, of a Laconian style of relief on this Messenian site is interesting in view of the historical relations between Asine and Sparta. The Asinæans, while still inhabiting Asine, in Argolis, had given assistance to Sparta against Argos; expelled from their home by the Argives, they received the Messenian site from the Spartans. —The paper was discussed by Prof. P. Gardner, Mr. A. H. Smith, and Prof. E. Gardner; and Mr. Hill was complimented on his successful attribution of this difficult coin.

FARADAY.—*Oct.* 31.—Lord Kelvin, President, in the chair.—Prof. Ernest Wilson gave a résumé of his paper on 'Alternate Current Electrolysis.'—Mr. W. R. Cooper read an abstract of his paper on 'Alternate Current Electrolysis as shown by Oscillograph Records,' illustrating his remarks by projecting on the screen a selection of his photographic records.—Prof. A. K. Huntington contributed a 'Note on the Crystalline Structure of Electro-deposited Copper,' which was illustrated by photomicrographs of sections of the deposits.—Mr. W. Pollard Digby's paper on 'Some Observations respecting the Relation of Stability to Electrochemical Efficiency in Hypochlorite Production' was taken as read.

MEETINGS NEXT WEEK.

MON. Royal Academy, 4.—'The Lower Limb,' Lecture II., Prof. A. Thomson.
— London Institution, 5. — 'Submarines,' Sir W. H. White. (Travers Lecture.)
— Surveyors' Institution, 7.—Junior Meeting.
— Sociological, 8.—'The Origin and Function of Religion,' Mr. E. Crawley.
— Geographical, 8½.—'First Exploration of the Hoh-Lumba and Sobson Glaciers (Himalaya),' Mrs. F. Bullock Workman.
TUES. Institution of Civil Engineers, 8.—Discussion on 'Waterways in Great Britain.'
WED. Geological, 8.—'On a New Specimen of the Chimæroid Fish *Myriacanthus paradoxus*, Ag., from the Lower Lias of Lyme Regis,' Dr A. Smith-Woodward; 'The Rocks of the Cataracts of the River Madeira and the Adjoining Portions of the Beni and the Mamoré,' Dr. J. W. Evans; 'The Doncaster Earthquake of April 23rd, 1905,' Dr. C. Davison.
— Society of Arts, 8.—'The Cinematograph and its Applications,' Mr. F. Martin-Duncan.
THURS. Royal Academy, 4.—'The Head and Neck,' Lecture I., Prof. A. Thomson.
— Sociological, 4.—'The Study of the Individual,' Dr. J. L. Taylor.
— Royal, 4½.
— London Institution, 6.—'Geographical Botany interpreted by Direct Response to the Conditions of Life,' Rev. G. Henslow.
— Institution of Electrical Engineers, 8.—'The Applications of Electricity in the Royal Gun Factory, Woolwich Arsenal,' Col. H. C. L. Holden.
FRI. Physical, 5.—'The Dielectric Strength of Air,' Mr. A. Russell; 'On the Electrical Conductivity of Flames containing Salt Vapours for Rapidly Alternating Current,' Dr. H. A. Wilson; 'On the Lateral Vibration of Loaded and Unloaded Bars,' Mr. J. Morrow.

Science Gossip.

A NEW small planet, previously overlooked, has been found by Herr P. Götz, registered on a photographic plate taken by Herr Dugan at the Königstuhl Observatory, Heidelberg, on September 22nd, 1903, and afterwards, the planet being at the time in the immediate neighbourhood of Devosa, No. 337.

NO fewer than twenty-two new discoveries are announced from the same observatory: one by Prof. Max Wolf and one by Herr Kopff (the latter, however, somewhat doubtful) on the 20th ult.; one by Herr Kopff on the 23rd, which may be identical with Jolanda, No. 509; two by Prof. Wolf on the 24th, one of which may be identical with Italia, No. 477; three by Prof. Wolf on the 25th; five by Prof. Wolf and one by Herr Kopff on the 26th; three by Prof. Wolf on the 1st inst.; and four by him and one by Herr Kopff on the 3rd. Prof. Berberich has found that one stated to have been detected by Herr Götz on September 18th is in fact identical with No. 429, which was discovered by M. Charlois at Nice on November 23rd, 1897.

NOVA AQUILÆ (var. 104, 1905) has continued to diminish in brightness. Prof. Max Wolf found its magnitude on September 29th only 9·6 or 9·7, and on the 18th ult. considerably below 10. It had the appearance of being surrounded by an unsymmetrical halo from 1′ to 2′ in diameter.

FINE ARTS

OUR LIBRARY TABLE.

Raphael. By Julia Cartwright (Mrs. Ady). "The Popular Library of Art." (Duckworth & Co.)—Like other writers for this series of miniature books on art, Mrs. Ady seems to have been helped by the rigid limitations of space to give us her very best. The essential facts of Raphael's life and art could not have been stated more concisely. Nor has the necessary compression of the material made for dullness: it is no mere précis, or catalogue of facts, but an eminently interesting and readable life. Mrs. Ady's knowledge of the period is so intimate that she can fill in her outline at any point with vivid local colour. The men and women who come into Raphael's life are for her not mere names, but old acquaintances whose relations and past history are always present to her mind. She succeeds, therefore, by means of a hundred slight allusions and reminiscences which naturally recur to her mind, in imparting actuality to her accounts of the time. She has, too, an eye for what is picturesque and striking in the narrative, and, being widely read also in the literature of Raphael's work, she has produced as well an excellent account of his art. She is conversant with all the latest writings upon particular points in Raphael's career, and uses their results with understanding. It would be difficult to fulfil the aims of a popular book, in the best sense of the term, better than she has done.

A word of praise must be awarded to the illustrations. On the small scale of this book it would have been futile to repeat once more the whole compositions of Raphael's larger work, and Mrs. Ady has accordingly used her small page to the best possible purpose by reproducing detached heads. There are few advantages which photography has afforded to the study of art greater than this of isolating particular passages, and focussing attention on them in a manner impossible, and perhaps undesirable, when the whole is before us. In this way we get an intimate notion of the artist's drawing in the actual process of execution, just as the sketch presents his attitude at the moment of conception. Probably to many who are fairly familiar with Raphael's art such a detail as the head of Savonarola from the 'Disputà' will come with something of a shock of surprise. When it is seen isolated as here, we realize the painter's virility and feeling for character more easily than when the balanced perfection of the whole design fascinates and delights us. We are glad, also, to have two little-known portraits at Budapest reproduced: one of a youth by Raphael, and the other Sebastiano's portrait of Raphael himself.

Claude. By Edward Dillon. "Little Books on Art." (Methuen & Co.)—It is not often that the reviewer of popular books on art experiences the particular kind of pleasure which this unpretentious little work arouses. They are often excellent, and of late years the standard has certainly risen, but they are rarely the outcome of such leisurely and refined scholarship, such genuine love of knowledge for its own sake, as in the present instance Mr. Dillon has bestowed. It is, of course, to Lady Dilke more than to any one else that we are indebted for our information about an artist whose uneventful life made for obscurity, and Mr. Dillon constantly records his indebtedness to her researches. But in going over once more the same ground he has found a good deal to

add and some few things to correct. It is in the study of Claude's actual work—above all, in the drawings—rather than in documents and archives, that Mr. Dillon has added to our knowledge. In the drawings particularly he has been able to identify a number of sites, and these identifications are sometimes of real historical interest, as, for instance, in the drawing of St. Peter's at Rome now in the British Museum, in which we see a great tower at one end of the façade. This is a precious record of the tower built by Bernini to complete Maderno's façade. Unfortunately, in 1644 Urban VIII., Bernini's patron, died, and the tower was sacrificed to professional jealousy. One cannot help believing, from what we know of Bernini's work, that it must have been a great improvement on the façade as we now see it. Then, again, Mr. Dillon has been able to correct all previously received ideas as to Claude's house in Rome, and to place it definitely in the Babuino, then officially known as the Via Paolina. He also has found, by the evidence of the drawings, the probable site of Claude's villa in the Campagna.

His account of the artistic society in Rome in Claude's day is full of interest, and for this he has drawn upon a wide acquaintance with contemporary literature. It is evident that at that time was formed the particular kind of jovial Bohemian circle, made up largely of foreign artists, the tradition of which continued unbroken almost until the fall of the Papal States. The picture of Claude's expeditions with Pieter de Laar and Poussin might almost stand for an account of Mason and his circle in Rome in the nineteenth century. There is the same happy-go-lucky joviality, the same simplicity and good nature—only, we suspect, with the plodding Claude and the severe Poussin there was a good deal more hard work.

Mr. Dillon's estimate of Claude's art is marked by sound good sense. He does not conceal his defects; he admits the actual validity of Ruskin's criticisms, but rightly shows their inapplicability. He gives a remarkable summary of the history of landscape art before Claude, and shows how much he derived from the art of the Netherlands. Indeed, he traces the genealogy of the modern landscape rather through Elsheimer and Patinir to the primitive Franco-Flemings than through the Caracci and Titian to Bellini. There is much to be said for this view, though the final result of Claude's art, as also of Poussin's and Dughet's, is Southern in its strong feeling for regularity and balance, its avoidance of accident, and its fine decorative quality. What we think Mr. Dillon hardly enforces enough is the overwhelming influence of Claude in modern landscape, particularly on the Romanticists, and on Corot especially. He talks of Claude's uniformity; but whatever motives Claude took up he gave to them so final and definitive a form that they have haunted landscape painting ever since.

The book contains an admirable summary of Claude's more important pictures, and of some of the chief collections of drawings. The drawings are, indeed, treated here for the first time with a full sense of their extraordinary merit, and they have been largely utilized in the illustrations. Mr. Dillon's is, in fact, an excellent work, full of well-digested information and unobtrusive scholarship, and enlightened by a real sentiment for the beauty of style in landscape art.

Bethlehem to Olivet. Text by J. R. Miller. (Hodder & Stoughton.)—This is a series of reproductions of modern religious pictures. They are effectively done, but the choice of pictures, to judge by this part, shows that it is intended to appeal to those whose devotional feelings are best aroused by the worst form of sentimental art. With one exception—Burne-Jones's design for the Merton tapestry—there is nothing here which has any pretensions to serious art. The text is inspired by a religiosity even less to be commended than that of Dagnan-Bouveret's and Leempoels's pictures.

Puvis de Chavannes. "Newnes Art Library."—Both the greatness and the fertility of Puvis de Chavannes's invention come out vividly as one turns over the pages of this collection. It is by no means complete, but there are a number of little-known works which it is a pleasure to see here. There is the so-called 'Peace,' a figure of a woman standing in front of a snow-covered Paris, and warding off a hawk from the dove she holds to her breast. The figure is in black, and is rendered by perfectly flat silhouette of an amazing perfection and purity of line. The whole design is certainly one of the most wonderful inventions of the nineteenth century, worthy to be placed beside some of the greatest of the primitives for its extraordinary directness of statement and spontaneity of conception. Then we have some of the Durand Ruel collection, such as the magnificent 'Toilet,' with its reminiscence of Titian, and the two marvellous 'Hopes,' one here wrongly called 'Innocence.' Then there is the 'Pastoral,' now at Bayonne. Besides these, we find, of course, most of the great decorations at Lyons, Rouen, the Sorbonne, Amiens, and Marseilles. Some of these are wrongly described, several of the Amiens designs being given to Rouen. Of a good many the provenance is not shown; and there are such misprints as "Chassèrian" for "Chassériau," which occurs twice.

M. Arsène Alexandre's introduction has some interesting passages on Puvis's habits and character; and altogether the book, in spite of a certain carelessness in execution, is a welcome addition to our knowledge of a great artist.

Canterbury: a Historical and Topographical Account of the City. By J. Charles Cox. (Methuen & Co.)—Dr. Cox's book on Canterbury is one of a series of descriptions of "Ancient Cities." The writing of it was suggested, as long ago as 1884, by Dr. Benson on his translation from Truro to the primacy, and that fact was no less an earnest of the author's fitness for the task than an incentive to him to do his best with it. As a result the book has been written with great care and with a reasoned enthusiasm which makes it a model for the better class of guide-book. The history of Canterbury is presented mostly in extracts from contemporary records, but the selection, except in the earlier periods, where documentary evidence is rarer than in more modern times, gives no impression of patchiness; and the comparative omission of mere legend, while detracting to some extent from the romantic interest, leaves an impression of trustworthiness which is in strong contrast to the descriptive style of historical narration so frequent in guide-books. The pages in which Dr. Cox relates, from his own observation, the incidents accompanying the funeral of Archbishop Benson, and in which his regard for the dead prelate is allowed full play, are a credit no less to his head than to his heart. The rest of the book is filled with a description of Canterbury's monumental and other remains which may be commended to those who wish to take their Canterbury seriously, as the author does. That this seriousness sometimes leads to High-Toryism is hardly a fault in dealing with a home of ancient precedents, and the hint that Canterbury should be approached by road to appreciate its full beauty is good; but the suggestion, "Surely motorists might be induced to leave their cars (throbbing, noisy, evil-smelling machines) outside the city, for their presence is a vulgar and irreverent anachronism," strikes us as rather intolerant. Canterbury is sufficiently modern already in many ways. We have even heard of a factory there which turns out "antiques."

Mr. B. C. Boulter's illustrations, which Dr. Cox modestly describes as more likely to win favour than the letterpress, by no means appeal to us as perfect. The smaller ones, especially the head-pieces and tail-pieces of the chapters, are felicitous, but in handling masses of architectural detail the artist is hardly so successful, though he has necessarily had to work on a small scale.

The Magazine of Fine Arts (Newnes), the first number of which is just out, begins well with a study of the development of the art of Jakob Jordaens by that fine critic Max Rooses. Sir James D. Linton writes an interesting article on Richard Wilson, who is not so neglected, perhaps, as he seems to think. There are also articles on woven fabrics and pottery, with coloured illustrations. Lord Ronald Gower writes on Gainsborough's drawings in the British Museum, two of which are reproduced in red—in fact, the illustrations are a feature of the magazine. It promises to lay stress on the best art, and employ experts. We hope this ideal may be maintained; but it is difficult to be sanguine in view of popular taste, the abundance of mediocre writing claiming to be expert because it is fluent, and the forces of advertisement.

THE SOCIETY OF TWELVE AT OBACH'S GALLERY.

The Twelve have reappeared, and although the novelty of the idea and of the brilliantly non-committal title has worn off, the exhibition has such solid merits that it is likely to increase the Society's reputation. The ballot by which the members decide the position of their works upon the walls has this year placed Mr. Strang in the front. We wish we could be more enthusiastic over the drawings he shows, for Mr. Strang has done such serious and distinguished work that we cannot but regret the exhibition of such a drawing as the *Portrait of Mrs. Nairn* (No. 5). It is not, we need scarcely say, without accomplishment in the execution, though the modelling is unpleasantly slurred and indefinite; but the intention seems to us very far below what Mr. Strang's talent should allow. It is frankly, undeniably, ostentatiously pretty. Prettiness is an artistic fault which can hardly have occurred easily to Mr. Strang's rude and vigorous hand, and one wonders what can have induced him to acquire a quality at once so opposed and so inferior to his natural gift. The nude study (6), where the exigencies of portraiture can hardly be pleaded, is scarcely better in this respect. But the portrait of *Richard Garnett, Esq.* (4), has something of his finer qualities—his blunt directness of statement and frankness of vision.

Mr. Ricketts comes next with some fine studies of draperies for the *Wise and Foolish Virgins* (7 and 9), and a nude (10) in the great tradition of Raphael, Ingres, and Puvis. Indeed, its likeness to some of Puvis's drawings is remarkable.—Mr. Muirhead Bone's work is so similar to itself, both in quality and intention, that it is difficult to do more than repeat what we have already said of his drawings at the New English Art Club. *The Two Scaffolds* (13) has the same grandiose sentiment, the same strenuous workmanship, that distinguished his 'St. James's Hall.'—There is nothing really new to be said of Mr. C. H. Shannon's delightful sanguines, or of Prof. Legros's drawings, of which *Sur le Chemin près du Village de S. Paul* (31) is perhaps the most beautiful. — Mr. Conder's *Fountains* (39) is a delightful invention; and Mr. John sends some extraordinarily powerful work. The two nude studies should convince even those who find his inventions repellent that it is not from any lack of power that he draws what no one but himself has yet seen in nature. For our part, we find things like the *Family in the Lane* (57) profound and sympathetic visions of life.

We have not space to discuss at length the prints of various kinds in the inner gallery. We may mention, however, Mr. Conder's *Gossip* (63) as not only the best of his lithographs here (which are for the most part hardly up to his level), but also one of his most complete and delightful compositions.—Mr. Nicholson's *Queen Victoria's Coachman* (65) and *Waterman* (67) show his extraordinary ingenuity in fitting his humorous interpretations into the limited decorative scheme of his medium. The touches of colour in the latter work are extremely felicitous. — Mr. Shannon has developed a process of lithograph in chiaroscuro with very beautiful results. The *Morning* (72) is an elaboration of, and a great improvement on, one of his earliest designs; and the *Idyll* (74) and the *Millpond* (71) are both finely-thought-out compositions. — Mr. Bone's *Ayr Prison* (77) is perhaps the most perfect in style of all his work.

Mr. Ricketts sends nothing quite so beautiful as some of his woodcuts in this gallery last year, but a comparison of the early *Faith* (94) and the *Parable of the Lost Piece of Silver* (92) gives a measure of the remarkable growth of his talent, the immensely increased ease and elasticity of his expression.—Mr. Sturge Moore's woodcuts have, as always, the charm of an unexpected and curious fancy, so fertile and resourceful that it almost cheats one out of a sense of the limits of his power of execution.

THE PORTRAIT PAINTERS AT THE NEW GALLERY.

Portraiture is the one really living form of painting in England—the only kind of painting that is ever really wanted. People come to admire or disparage landscape and heroic art; to portraits alone they come with a sense of the possibility that one day or another their own features may pay this debt to posterity. But the very thing that creates a real demand for this form of art also violates some of the conditions for the production of works of fine art, and the desire for portraiture is as often as not a broken reed to the art it supports. It reflects too closely the average taste of the wealthy, and in consequence it is burdened with many false ideals of the beautiful—ideals which have no doubt their appropriate place in social life, but which have nothing to do with the life of the imagination. It is well enough, for instance, for ladies to aim at something of the distinction of eighteenth-century life; but they cannot impose on us the sense of their achievement by the short cut Mr. Ellis Roberts supplies. The result is unfortunately both pretentious and false.

One might, indeed, expect that for an art that answered a real demand there would be at least a high standard of accomplishment, however commercial and practical its aims; but what inevitably strikes one about the present exhibition is the low standard of mere accomplishment, the number of clumsy and crude endeavours, not at greatness of style, but at mere commonplace effectiveness. One wonders, in fact, that really capable though prosaic portraiture like Mr. Bowie's is not more universal; but, as things are, his work stands out by its successful assertion of the obvious. Nor is the exhibition raised from this level of low mediocrity by any works of supreme importance or interest. There are, of course, enough really good and serious pieces to make a single small gallery delightful; but they are scattered about among a mass which they scarcely have power to leaven.

Among the best of these we must place Mr. Orchardson's finely observed head of *The Rev. B. H. Alford* (No. 6), which is painted with the utmost discretion and reserve, and yet, as mere relief, holds its own against Signor Mancini's *Madame Marchesi* (11), where everything in the nature of quality has been sacrificed just to this effect of salience. Not that it, too, has not real artistic merit. It is, indeed, one of the best pictures the artist has shown here: the colour scheme of cold whites, cold blacks, and dull green is personal and new, and is at least logically complete, if not entirely agreeable; the figure is really observed, and the indications of movement, if slightly caricatured, are at least firmly given. The arms have that curious rigidity — that appearance of coming from some point outside the shoulder—which is typical of the singer; and the face has character, though the interpretation is rather forcible than subtle.

M. Besnard is not an artist whose work often gives us much pleasure; as a colourist he seems to us crude and uncertain, but it is impossible not to recognize the definite achievement of his two portraits in this room. *M. Frantz Jourdain* (43) has the advantage of being almost in monochrome; and in *Madame Nocard* (19), though the colour of pale brick-red and dull blue is unpleasant, it is not so emphatic as to prevent one from admiring the astonishing power of drawing and modelling displayed in the neck and arms. M. Blanche's portraits have little to redeem the essential commonness of their conception.

Mr. C. H. Shannon's portraits are both of them excellent. *Lady Louisa Fielding* (25) is really too low in tone, too completely effaced, but for all that a most delicate and sensitive interpretation, full of a fine compunction. The other, the *Lady in a Black Jacket* (33), is one of the most interesting portraits he has ever done. The face has much more in it than mere portraiture often gives; it is a definite creation, and haunts one as only creatures of the poetical imagination can. The placing of the figure in the canvas and the choice of the accessories have a rare nobility of style. Even here, however, one wishes that Mr. Shannon would enunciate a little more definitely and would drop a little of his reserve.—Even Whistler's late and slight *Brun et Or* (30) has a quality of substantial relief which makes Mr. Shannon's picture look, by comparison, elusive and vague.

Mr. Rothenstein has rarely done better than in his *Francis Darwin* (47), which is a presentation portrait for the Cambridge Laboratory. It has a bare simplicity of style, a broad, rough-hewn construction, which will fit it admirably for its severely utilitarian, but by no means ugly surroundings. His other portrait of *Dr. and Mrs. Redcliffe Salaman* (40) is less successful, for, though the man's head is a very vivid piece of character-drawing, the composition is forced and insufficiently explained.—Mr. Orpen contributes a large number of brilliantly executed paintings, of which much the best seems to us *The Earl of Scarbrough* (88); but, as usual, we miss in his work any definite artistic intention.

The exhibition is enlivened by a few retrospective works, including two very quaint and early Corots, representing the artist's father and mother, which have a curious suggestion of the daguerreotype, not merely due, we think, to the fashion of the clothes; and in the South Room some large charcoal heads by J. F. Millet, which have extraordinary force of character and dignity of style. The *Diaz* (147) in particular might almost pass for a Titian in its suggestion of colour and its poetical mood.

We ought to have mentioned in the North Room La Gandara's *Comtesse de Noailles* (60), a brilliant piece of actuality. It suggests a social situation far more intricate, more self-conscious, and more subtle in its ambitions and ideals than anything we can produce, and as a comedy of contemporary manners it should be a wonderful record to the future historian. But it is rather as a document than as a work of art that it should win immortality.

THE REMBRANDT GALLERY.

A small collection of original etchings and dry-points at this gallery contains some interesting pieces. There is much that we are, perhaps, too familiar with at the Painter-Etchers', but the etchings of M. Lepère are really remarkable. By means of his practice in coloured woodcuts he has acquired great economy in expression, and in his etchings, such as the *Notre Dame* (33) and the *Bords de l'Amstel* (38), he has turned this power to good purpose, giving in a few open lines a sense of atmosphere and light and shade which is really extraordinary. His more elaborate *Peasant's Funeral* (9) is still very restricted in means, when one considers how complete an impression results. No one who looked at M. Lepère's early woodcuts—a few of which are shown in the central case here—could have foreseen that from such clever but commonplace work he would arrive at the sense of style and quality displayed in these etchings.—Mr. Oliver Hall sends some good work; his etching is rather thin and laboured, and his design might be broader, but refinement and scrupulosity mark his observation.—Sir Charles Holroyd's *Shepherd* (24)—Legros-like in design, but with something original in the values of light and shade—is one of the best things he has ever shown.—Col. Goff's *Florentine Villa* (36) and *Old Road to Fiesole* (42) are forcible and direct in workmanship.

Fine-Art Gossip.

At the Ryder Gallery paintings and studies of horses by Miss Mabel Holmes are on private view to-day.

Messrs. Marchant & Co. are holding to-day also a private view of a collection of jewellery, enamels, and art metal work by Mr. Nelson Dawson.

Mr. Lawson Wood has at the Doré Gallery a show of drawings which he entitles 'Humorosity.' The word is not ours, and we hope no future dictionary will represent it as having our approval.

At the Mendoza Gallery five large oil paintings, executed in South Africa from drawings on the spot by Mr. E. H. Holder, are on view, representing the Victoria Falls on the Zambesi from different points of view.

The private view will be held at the Modern Gallery, next Tuesday, of an exhibition of sculpture by Mrs. Bernard Jenkin, figure subjects in oil by Miss Mabel Young, a set of decorative fantasies (mostly on old vellum), &c., by Mr. W. J. Neatby, and portraits in oil by Mr. Reginald Waud. The exhibition remains open until December 2nd.

The death is announced of the Belgian artist Léon Eugène Auguste Abry, at Antwerp, where he was born on March 6th, 1857. He had been an exhibitor at the Salon for several years, usually of military scenes, but sometimes of portraits of Belgian and other celebrities. He obtained a medal in 1901. This year he was represented by the picture of 'S.M. le Roi Léopold aux Manœuvres de l'Armée Belge.' He was an excellent writer on art, and a frequent contributor to the *Journal des Arts*, for which he wrote under the signature of "A. de Fallays."

MUSIC

THE WEEK.

Royal Italian Opera.—*Andrea Chenier. Rigoletto.*

Two years ago Umberto Giordano's opera 'Andrea Chenier' was performed in English

by the Carl Rosa Company at Camden Town. We heard it again last Saturday at Covent Garden in the original language, but see, however, no reason to modify our first impressions. The third and fourth acts sufficiently prove that the composer possesses dramatic power, but the first two acts, with few exceptions, are not strong. To a certain—indeed to a large—extent, this may be the fault of the book. In the last two acts, even without a knowledge of the libretto, it would be easy to grasp the general meaning of what is taking place on the stage, and therefore to appreciate the spirit of the music. In the earlier acts, however, there are details which may help to develope the story of the rise and fall of the famous French poet, but which do not yearn for music; hence the latter has not the requisite emotional power. In the third act the situation is intensely dramatic, while in the last the love duet is broad and truly impassioned. The composer has achieved success with two operas, 'Fédora' and 'Siberia,' and it would certainly have been interesting to hear either of these later works in place of the one in question.

The performance at Covent Garden was very good. Signor Zenatello appeared in the title-rôle, Signora Strakosch was the Maddalena, and Signor Sammarco the Gérard. Signor Mugnone is an able conductor; but he should not allow, as was frequently the case, the orchestra to overpower the vocalists.

On Wednesday evening Signor Battistini impersonated Rigoletto in Verdi's familiar opera. The artist has a fine, well-trained baritone voice, and is a most accomplished actor. His success was deservedly great. Signor Battistini appeared in London fifteen or sixteen years ago. He now ranks among the best stage vocalists of the day.

ÆOLIAN HALL. — *Mr. Richard Buhlig's Pianoforte Recital.*

MR. RICHARD BUHLIG gave the first of four pianoforte recitals at the Æolian Hall on Tuesday afternoon. His programme began with three preludes and fugues from Bach's 'Well-tempered Clavier,' and the pianist deserves all praise for selecting these in place of the usual transcription of an organ work. As regards *tempo* and expression of the clavier fugues each interpreter does what appears to him right; but Mr. Buhlig's rendering of the third, in E major, from the second set of the "48," seemed to us unduly sentimental. Anything, however, is better than those cold mechanical readings of Bach which help to perpetuate the absurd opinion that the composer's chief merit was that of being a learned contrapuntist. The pianist's rendering of Beethoven's Sonata in A flat, Op. 110, was disappointing: technically it was very good, but the higher qualities of the music were only partially revealed.

BECHSTEIN HALL. — *Mr. York Bowen's Pianoforte Recital.*

MR. YORK BOWEN gave a pianoforte recital at Bechstein Hall on Tuesday evening. His programme — rather a severe one — contained three sonatas: two by British composers, the third by the Russian A. Glazounoff. The first, by Mr. J. B. McEwen, opens with an Allegro of strenuous and somewhat rhapsodical character. The slow movement is earnest and dignified, and the Scherzo, cleverly written, is effective. The Finale is the weakest section of the work. The second sonata, by B. J. Dale, has a bold Allegro, a slow movement consisting of some clever variations, a not very interesting Scherzo, and a Finale long and rambling. The whole work is written in a style scarcely appropriate to a sonata, and we think that Mr. Dale would appear to far better advantage in works of freer form and shorter compass. Glazounoff's First Pianoforte Sonata in B flat minor is a work clear in form, and full of engaging melody and of writing grateful to pianists. The movements, three in number, are of reasonable length; the middle one, an Andante, is particularly charming. Mr. York Bowen played the three works with great skill and entrain. Miss Ethel Lister sang two groups of songs with taste and refinement.

Musical Gossip.

AN unpublished waltz of Chopin was included in the recital given by Mr. H. Köhler last Saturday at Bechstein Hall. Some sections of the piece did not seem to have the true Chopin ring; the latter part, however, sounded genuine. Some information might have been given as to the history of the autograph or manuscript from which the music was obtained. Mr. Köhler's programme also included the first two sections of Schubert's 'Wanderer' Fantasia, but this was most inartistic: there is no real break at the end of the slow section; and, further, all four sections of the fantasia are more or less connected with one another. The pianist's reading of Beethoven's 'Waldstein' Sonata was not strong technically, while his conception of the work generally was far from satisfactory.

AT a concert yesterday week at the Æolian Hall performances were given on the Metrostyle Pianola and the Æolian Pipe Organ. The difference between the ordinary pianola and the one in question is that while the former reproduces only the harmony and melody, the latter reproduces in addition the composer's *tempo* and changes of *tempo*. The instrument is really a wonderful invention, and the effect produced by Mr. Max Schulz in solos from Grieg and Thomé was striking. The Æolian Pipe Organ is no less wonderful; it was heard alone, and it also served as accompaniment, together with an ordinary pianoforte, to Thomé's Andante Religioso, the violin solo of which was admirably played by M. Johannes Wolff.

MADAME ADELINA PATTI gave a concert at the Albert Hall on November 10th, assisted by Madame Kirkby Lunn and Messrs. William Green, Mark Hambourg, and Fritz Kreisler. Madame Patti's voice may have lost some of its freshness, but she can still charm an audience, and her vocalization remains unrivalled.

THE Sunday Orchestral Society—to which, and not to the older Sunday Concert Society, our comments of the 4th inst. were intended to apply—has had a brief existence. After two concerts the series, through lack of support, has been suspended. The latter society gives a special concert to-morrow to commemorate the anniversary of Schubert's death (November 19th, 1828), the last number in the programme being, however, Beethoven's 'Leonora' Overture, which was played at the production of Beethoven's 'Fidelio' at Vienna, November 20th, 1805.

NEXT Monday is the 210th anniversary of the death of Henry Purcell, and, so far as we are aware, the sole commemoration in London of that event will be the concert given on the following day at the King's Hall, Messrs. Broadwood's, by Miss Grace Sunderland and Mr. Frank Thistleton, whose programme will be devoted to the music of England's great genius. He will, however, only be represented by his chamber music, yet he excelled in many branches of his art.

'MIARKA,' a lyric comedy in three acts and a prologue, libretto by M. Jean Richepin, music by M. Alexandre Georges, was produced at the Paris Opéra Comique on the 7th inst. More than twenty years ago M. Richepin published his novel 'Miarka, la Fille à l'Ourse,' in which were fourteen *chansons*, which M. Georges set to music and published. They proved successful, so that it occurred to the composer to ask the novelist to evolve a libretto from his book. The story is a romantic one, and the opera, which naturally includes the above-mentioned *chansons*, has been received with marked favour.

Le Ménestrel of November 12th believes that M. Gailhard is thinking of giving next year the 'Iphigénie en Tauride' not only of Gluck, but also that of his contemporary and rival Piccinni. The works were produced, one in 1779, the other in 1781. The revival would, indeed, prove highly interesting.

PERFORMANCES NEXT WEEK.

SUN.	Sunday Society Concert, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
MON.	Joachim Quartet, 8, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
TUES.	Joachim Quartet, 3, Bechstein Hall.
—	Mr. Albert Spalding's Orchestral Concert, 3.15, Queen's Hall.
—	Mr. R. Buhlig's Pianoforte Recital, 8.30, Æolian Hall.
—	Miss Grace Sunderland and Mr. Thistleton's Concert, 8.30 Broadwood's, Conduit Street.
—	Royal Italian Opera, Covent Garden.

DRAMA

THE WEEK.

HAYMARKET. — *Lucky Miss Dean: a Play in Three Acts.* By Sidney Bowkett.

IN Yorkshire folk-speech an instance is advanced how, when other temptations had failed, a mutinous little miscreant was persuaded to return to the maternal roof by a promise that he should "break a pot." A similar inducement has apparently prevailed with Mr. Charles Hawtrey in taking the part of Frederick Ware in 'Lucky Miss Dean,' a three-act farce produced in August last at the Criterion. Mr. H. Marsh Allen was at that time the hero, and played the part with the irresponsible touch of youth which is necessary if a story of deliberately practised and continuous fraud is not to be repellent. Mr. Hawtrey imparts to the character a measure of his own peculiar method, and is in his way inimitable. He is much more responsible than his predecessor, and we feel some disposition to resent his iniquities. By way of relieving this feeling, it may be, or for some reason or other, he breaks pots with considerable assiduity. Whether this proceeding is inherently comic we doubt. Executed as it is by Mr. Hawtrey, it is comic, though the suggestion arises that it will seem funnier still five weeks hence.

Miss Jessie Bateman plays the lucky heroine, whose good fortune is, however,

XUM

in nubibus, and she imparts to the character that species of youth which reconciles us to her delinquencies. With the exception of Mr. Holman Clark, who reappears as a hide-bound official, the cast is entirely changed. The slight but amusing bill thus constituted is strengthened by the retention of 'A Privy Council.'

GREAT QUEEN STREET.—*Ein Fallissement: Schauspiel in 5 [sic] Aufzügen.* Von Björnstjerne Björnson.—*Sappho.* Von Grillparzer.

IN England at least no such wave of popularity as swept over Ibsen, and has since retired, has attended his kinsman Björnson, whose dramatic masterpieces (for as such they are held in Germany and Scandinavia) still await the recognition to which they are entitled. 'Beyond Human Power' has indeed been seen in both Paris and London. 'Bankruptcy,' however, if we may so translate 'Fallissement,' has not proceeded further than Paris. There is, accordingly, cause for gratification in witnessing it in the German rendering of Herr Wilhelm Lange, in which, eleven years ago, it was seen at the Schiller Theater, Berlin. Far less of a mystic and far more of a fanatic than Ibsen is Björnson, and his theories with regard to morality and kindred subjects are inflexible enough for the most advanced of vigilance committees. In 'Ein Fallissement,' so far as the main action is concerned, he goes no further than we can gladly accompany him, and the moral he inculcates is practical as well as defensible. It amounts to no more than the lesson, enforced among others by Sancho Panza, that "honesty is the best policy." With this it couples a commonplace experience that the dread of calamity is not seldom worse than the calamity itself. Prosaic as seems to Englishmen the general treatment, the piece reaches in the interviews between Tjälde, the timber merchant, with whose failure the whole is occupied, and Advocat Berent, acting on behalf of the bank, a pitch of remarkable intensity. That the love interest throughout is uninteresting or inanimate is of little moment. It may, however, be maintained that Walburg, the eldest daughter of the bankrupt timber merchant, is the most uncomfortable specimen of Scandinavian womanhood with which Norwegian dramatists have supplied us. She is nevertheless acute enough to secure a lover by whose side she all but shines. The performance was creditable, and in many respects excellent. Herr Hans Andresen has done better things than the Advocat Berent, but his performance was good. Herr Richard Starnburg was also good as the timber merchant; and Herr Otto Collott, Herr Willy Klein, and Fräulein Margarete Russ were welcome.

On Monday Fräulein Else Gademann reappeared as the heroine of Grillparzer's 'Sappho,' Dr. Ingo Krauss playing Phaon, and Fräulein Russ, Melitta.

IMPERIAL.—*The Temptation of Samuel Burge: a Farce.* By W. W. Jacobs and Frederick Fenn.

THE new curtain-raiser at the Imperial is drawn, with the aid of Mr. Frederick Fenn, by Mr. Jacobs from one of his characteristic stories, contributed, as we are told, to *The Charing Cross Magazine*. It is so far a farce that its action is amusingly extravagant, but it exhibits a distinctly satirical purpose. A jeweller belonging to the Society of Primitive Converts entertains to supper and bed a travelling Boanerges of the order, and finds, to his dismay, that he has admitted into his treasury a converted burglar, a terror of the police, whose visit is for the purpose of testing how far, when easy access is furnished to the most portable and valuable form of property, his desire for amendment will triumph over his customary cravings. When the police appear on the scene the assumption of moral regeneration is easily dismissed, and the self-proclaimed burglar—who is in fact no burglar at all, but an area sneak seeking to trade on a reputation to which he is no wise entitled—is, with the man to whom his introduction is due, unjustly, but unfalteringly lugged off to jail. The characters in an amusing and well-conceived play are ably presented. Mr. A. E. George is specially good as the self-reputed burglar.

Dramatic Gossip.

HIS MAJESTY'S is now occupied with preparations for the production of Mr. Stephen Phillips's 'Nero,' which is to be given early in the new year. Mr. Tree will, as has been said, be Nero, and Mrs. Tree, reappearing in her husband's theatre, will be Agrippina, while Miss Constance Collier will play Poppæa. What are said to have been Nero's last words, "Qualis artifex pereo," supply the basis of the plot, which rehabilitates the emperor.

THE performance at the Scala had to be postponed, and the production of 'Mrs. Grundy' did not take place until Thursday evening. The cause for delay appears to have been the compulsory withdrawal from the cast of Mrs. Beerbohm Tree, who, as mentioned above, is required at His Majesty's for 'Nero,' and the consequent necessity of rehearsal for her successor.

MR. JOSEPH HATTON is writing for Messrs. Hutchinson an unconventional biography under the title of 'Sir Henry Irving: his Romantic Career on and off the Stage.' Much of the earlier part of it was written with the authorization and assistance of the great actor.

ON Monday 'The Correct Thing' of Mr. Sutro, which does not seem to have caught on at the Shaftesbury, was replaced as *lever de rideau* by 'The Factory Fire,' as is now called the piece hitherto known as 'A Case of Arson,' in which Mr. Henry de Vries plays seven characters.

SATURDAY next has been fixed for the production at the Adelphi of 'A Midsummer Night's Dream.'

'BERTRADE,' a four-act comedy by M. Jules Lemaître, produced at the Renaissance, satirizes severely the decadent nobility of France, is unworthy of its author's reputation, and has a painful ending. M. Guitry gave a powerful rendering of a *déclassé* duke, and M. Dieudonné was amusing as a count who incidentally is also a cardsharper. Mlle. Brandes played a not very sympathetic heroine.

'DIE HEILIGE SACHE' is the title of a three-act comedy by Herr Lothar Schmidt, produced at the Lustspielhaus, Berlin. It is a satire upon the dishonest proceedings to which an impoverished section of the German aristocracy has occasional resort.

TO CORRESPONDENTS.—E. D. R.—J. W.—C. C.—W. J. T.—received.
E. P.—Already allotted. F. C. N.—Many thanks.
No notice can be taken of anonymous communications.

LITERATURE

The Empire and the Century: Essays on Imperial Problems. With an Introduction by Charles Sydney Goldman. (John Murray.)

MR. GOLDMAN, who was praised by us for his book on the cavalry in the South African war, has (working as it seems with Mr. Garvin, the editor of a weekly contemporary) induced a great number of gentlemen, mostly of distinction, to contribute, to a thick volume, essays of varying length and importance dealing with Imperial questions. The result can hardly be called a book. There is no common principle. The essays often contradict one another, and the whole is somewhat in the nature of a collection of magazine articles. On the other hand, some of the contributions are full of interest and well worthy of attentive consideration. Almost the only general remark which can be made as to the volume is that the Chancellor of the Exchequer of any Government will read it with despair. The cost to the mother country of many of the suggestions that are made by writers of all sorts is hardly ever taken into account. Mr. Goldman in his introduction has tried to discover a common purpose among the writers; but the Treasury will find it only in a desire to plunder the taxpayer or the public purse. Mr. Goldman, indeed, does his best to suggest high aims by proclaiming the spiritual kinship of Cromwell and Rhodes, both of whom, according to him, "sought the glory of God." The prosaic reader, if he has the patriotism to attempt to grasp the Imperial ideal of the ablest among the writers in the volume, will seek for teaching of a more mundane description.

The dominant strain is Chamberlainite or preferential, but the other opinion is strongly represented. While Mr. Garvin contributes a long essay on the one side, Mr. St. Loe Strachey, also an editor, replies, as it were, at one-fifth the length. Mr. Monypenny, Mr. Amery, Mr. Wise, Sir John Cockburn, Mr. Parkin, and many others maintain views more or less in accord with those of Mr. Garvin, and their contributions are hardly matched by equal essays from the writers, considerable as they are, who oppose them.

An essay which is of value is by Mr. Bernard Holland, and follows the lines of his well-known volume. Substantially he may be represented as belonging to the school of Sir Frederick Pollock and Mr. Haldane, of whom the latter contributes to the volume, but only on the subject of education. The views of Sir F. Pollock and his friends are roughly handled by Mr. Richard Jebb and others of the writers. Mr. Jebb, however, as will be remembered by readers of our criticism of his recent volume, is far from supporting in its entirety what may be called the Chamberlain view, and may be regarded as holding an Australian view, independent of the two schools, and in part intermediate. He states again that the independence of the various executives in the Empire

"I take to be permanent.....since I cannot detect the slightest indication, either here or beyond the seas, of any widespread disposition to surrender any part of that independence. On the contrary, there seems to be a pronounced and popular tendency in the opposite direction. The Premier of the Dominion, who commonly is reckoned an Imperialist, apparently thinks it consistent with sound Imperialism to talk about 'treaties' being negotiated between Canada and England."

Mr. Jebb goes on to declare that as regards defence, also, it

"can be organized only on the basis of allowing each nation to keep entire control of its own naval and military forces. Canada, the leader of the younger nations, seems to have made it clear that she cannot be induced by any offer of representation to surrender any portion of her control to a joint authority."

Mr. Jebb, while damaging Sir Frederick Pollock's Advisory Council, supports what we think was an earlier suggestion of Sir F. Pollock and his friends, namely, "co-operative action by.....heads of States, who alone have the advantage of power and the restraint of responsibility."

The editor of *The Outlook* in his essay hits a real difficulty in all the schemes: that "of reconciling the interests of the mother country with those of the three great self-governing colonial groups and of India." The fact that the mother country controls the Crown Colonies and Protectorates, and, in great matters, India, causes an enormous preponderance in the Empire of these "Downing Street" interests over those of the Dominion, the Commonwealth, and New Zealand. Mr. Garvin also gives valuable reminders of the extent to which the Empire is handicapped by debt as compared with her American and German trade rivals. To read Mr. Amery, however, one would think that we were rich indeed.

Another interesting reminder of difficulties comes from Lady Lugard, who writes with great truth that it is not easy either to find or to foresee

"the unity of the Empire. In the matter of its labour supply it has not yet been regarded as one. The self-governing colonies generally dislike the idea of so regarding it. They have not been able to face the fact that we are not a white Empire, but a white and coloured Empire."

The editor of the admirable '*Times* History of the War in South Africa' does not please us so much by his article on 'Imperial Defence' as by his volumes. He seems to wish to produce an enormous army for India or for the Canadian frontier, supporting his view by arguments which, if they prove his case, would in fact also demonstrate that we should expect to have to use both these armies at the same time. In other words, the tendency of his essay is to suggest that our life as an empire cannot be permanent unless we are prepared at one and the same moment to put half a million of men in Afghanistan and another half million on the American frontier. The alarmed reader will be inclined to give up the defence problem as useless. He will shake his head and declare, "Then it is too much; it cannot be done; it is no use trying." If we are to contemplate as a serious probability a solid defence of the Canadian Dominion with its present frontier, then it is impossible to suppose that an American Government determined upon its conquest would not put across the western frontier of Canada a larger army than we could possibly transport thither to defend it. Mr. Amery's ideal army, "capable of indefinite extension," would, we fear, be found one of "indefinite" cost. In all he says about South Africa he confirms what has already been told us in his history:—

"The attitude of the army was as unwarlike in its essence as the attitude of the nation. The absurd fear of casualties, the hysterical excitement about the Boer artillery, the exaggeration of the depth of rivers and steepness of mountains, which were so conspicuous features in the reports of press correspondents, were but the reflection of the attitude of the officers from whom those correspondents derived their impressions, and who censored their dispatches."

Mr. Amery tries to set up again his training-army in South Africa, which has been killed by its cost and unpopularity with the soldier. There will be many who will fail to agree with his political statement that the South African "war was in its essence a war of secession."

The writers of the various essays in the volume are so competent on their respective subjects that hardly any question can be raised with them as regards mere matters of fact. We do not agree with one of the most able in the Indian and Eastern section that we owe the friendship of Japan to Sir Harry Parkes, concerning whom "the makers of modern Japan soon realized that they had no more sincere and enlightened well-wisher than the plain-spoken British Minister." Sir Harry Parkes was, indeed, too "plain spoken" to be a *persona grata* among the creators of the new Japan.

Mrs. Fitzherbert and George IV. By W. H. Wilkins. 2 vols. Illustrated. (Longmans & Co.)

THE long-debated question as to the exact relations between George IV. and Mrs. Fitzherbert is finally set at rest by Mr. Wilkins in this book. The author, in response to a direct appeal to the King, has been allowed to see and print material extracts from the documents deposited at Coutts's Bank in 1833, the most important of which are the mutilated marriage certificate and the letter from the Prince of Wales (written just before the second period of cohabitation) referring to the witnesses of the ceremony. Another document of almost equal importance, in view of the prevalent notion that, if there had been a ceremony at all, it was performed by a Roman Catholic priest, is the letter asking for preferment addressed to the Prince by the Rev. Robert Burt, then vicar of Twickenham, with Mrs. Fitzherbert's memorandum specifying him as the officiating clergyman. Moreover, this last paper (which Mr. Wilkins prints entire) finally disposes, as he observes, of claims set up from time to time by certain persons to be the children of the alleged marriage; for the proof of the paternity was said to be contained in it, and to be the real reason why these documents were withheld from publication. The truth, of course, is that Mrs. Fitzherbert never had a child by any of her three marriages.

Whether the Duke of Wellington was not justified in thinking that substantially Mrs. Fitzherbert suffered no injury by his refusal, on public grounds, to allow the sealed documents to be used for the purpose of a justificatory memoir, is at least arguable. Notwithstanding the denials on two occasions in the House of Commons that there had been any marriage, and the obloquy cast upon the lady by an ill-informed press and a still more ignorant mob, there is ample evidence of the great consideration with which she was treated by the whole royal family and by the best society of the day. Queen Caroline herself spoke of her as "the real wife"; and William IV., when she refused his offer of a peerage (having "no wish to be a second Duchess of Kendal"), insisted upon her assuming the royal liveries, besides always receiving her *en famille*.

However, it must be allowed that Mr. Langdale (who had to write the vindicatory memoir without the help of the sealed papers) was amply justified in holding that the statements in Lord Holland's book published in 1854 called for speedy repudiation; and the fact that even he, the accredited biographer, was unable, with the material at his command, to give the correct date of the ceremony, is enough to prove the necessity (if only in the interests of historical truth) of an appeal to the most authoritative sources.

Mr. Wilkins displays his usual lucidity in narrative and firm grasp of his subject. He does full justice to the injured lady, showing how her real devotion to her husband personally, as well as a sense of his interests as sovereign, influenced her in refusing to take any step in vindication of her honour so long as George IV. lived. It is clear that Mrs. Fitzherbert thought that her position might have been established on the accession of his successor; but William IV.'s own wishes were overruled by Wellington, and she agreed to the compromise by which, when the bulk of her correspondence with George IV. was destroyed, certain documents were reserved for her and deposited under seal, with the proviso that no one was to have access to them without the "knowledge" (afterwards interpreted as consent) of the late King's representatives. It is clear that, so far from influencing the Prince or any one else in the political interests of those who shared her religious faith, she scarcely ever intervened in politics. The only occasion on which she could be charged with anything of the kind was during the agitation of the Regency question at the time of George III.'s first illness in 1788-9, when her activity, we agree with the author in thinking, was a mistake, however excusable. When appealed to somewhat strangely, twenty years later, by the man who had thrown her over for Lady Hertford, Mrs. Fitzherbert seems to have advised the Regent-designate to employ his old friends, the Whigs, "if only for six weeks" — a curious piece of counsel, which was doubtless well meant. She never forgave Fox for his speech in the House, and was credited with having had something to do with his estrangement from the Prince, which coincided with her own period of greatest influence; and she seems to have fallen completely under the spell which the social charm of Sheridan enabled that featherweight of a politician to cast over every one with whom he came in contact. Yet probably he did her more real injury than even "dear Charles." The veritable hero of the debates in which Mrs. Fitzherbert was so cruelly injured, in which Fox, Sheridan, Grey, and Pitt played no creditable part (though the real culprit was in the background), was he of 'The Rolliad,' who was at least an honest partisan.

We do not find our author convincing as the half-hearted apologist of George IV., more especially in his attempts to throw upon Fox the chief blame for the public repudiation. Fox, forsooth, "exceeded his instructions!" Perhaps his refusal to give up the letter (he said it was lost) on which he based his speech is against him; but there might be reasons for his reluctance to part with it. We agree, however, that Mr. Wilkins, in estimating George's character, is entitled to make the most of the opinion of a contemporary such as Scott, as against the literary fulminations of Thackeray, who certainly gave a distorted account of the Jockey of Norfolk incident at Brighton. One may also allow the plea of the unfortunate upbringing of the Prince. Yet, to our mind, the perusal of this book fails to remove the established view of George IV. as the least estimable of his family, whatever the promise of his youth and his admitted possession, during much of his life, of social charm and a measure of intellectual cultivation. The relation between Queen Charlotte and Lady Jersey here revealed seems almost incredible; but it is difficult to explain it away. Mr. Wilkins does not attempt to adjudicate between the various estimates of Knighton's character held by Mrs. Fitzherbert and Wellington respectively, but contents himself with printing a diverting anecdote on the subject. Probably the lady was right in suspecting a man whose devotion to George IV. she had reason to know was extreme; and the Duke, on his side, knew enough of the sterling business qualities of his co-executor to inspire him with respect.

There is naturally much about Brighton in the book. Mr. Wilkins does not believe that the Pavilion (whatever Carlton House may have been) was such a nest of iniquity, after all; and he is sceptical about the supposed secret passage between Mrs. Fitzherbert's house on the Steine and the Prince's palace. He prints communications from a gentleman still living who worked as an upholsterer for the Roman Catholic lady who did so much for the town's prosperity. As for Lady Hertford, who drove Mrs. Fitzherbert from Brighton for a time, our author believes that her relations with the Regent amounted only to "intellectual adultery"; and he also expresses the view that her successor, Lady Conyngham, who finally got the King away from the Pavilion, was equally innocent so far as legal criminality went. The Dukes of York and Kent (there are curiously intimate letters from the latter to Mrs. Fitzherbert in the book) come out very well here, as does Sir Henry Halford, the physician, through whom was delivered to George IV. on his death-bed his true wife's last message.

We will conclude our review of these handsome volumes by noting a few errors which should be remedied in a future issue. Besides errors as to Grey and the French kings which are obvious, we note that the madwoman who attempted the life of George III. was Margaret (not "Mary") Nicholson. Mr. Wilkins once (i. 261) writes Sir "George" instead of Sir Gilbert Elliot. November, 1789 (i. 231), should be amended to 1788; and 1796 should replace "1786" (ii. 136). Plombières, Lille, and Montargis are spelt incorrectly. One cannot "reck" a danger; and when it is said of a person that she was "doubly forsworn" (i. 257), the implication is certainly not that such a person is betrayed, which is what the author wishes to convey. Mr. Wilkins's foot-notes are usually informing and adequate, but those relating to Burke ("orator and politician"), Horne Tooke (no mention of philology), and Francis leave something to be desired. As in a former work, he still employs the name "Act of Settlement" contrary to usage. The note concerning "Fox's Administration" (i. 247) appears superfluous: Lord Stourton's meaning is quite clear. These things do not detract materially from the merit of Mr. Wilkins's well-written and historically important work.

There are no fewer than six portraits of Mrs. Fitzherbert in the first volume, the most interesting of which is, perhaps, the reproduction of the unfinished Reynolds. The paintings by Gainsborough and Romney afford fine frontispieces. Amongst the other illustrations there is a quaint picture of William IV. "attending divine service at the Chapel Royal, Brighton," and a curious reproduction of a drawing of the old Chain Pier, giving a glimpse of Brighton in the days of the Regent.

Harvard Lectures on Greek Subjects. By S. H. Butcher. (Macmillan & Co.)

To all who have read and used Dr. Butcher's 'Some Aspects of the Greek Genius'—whether professed students of the classics or general readers—the publication of another book of similar character will have been most welcome. In this volume of lectures, delivered at Harvard University last year in connexion with the benefaction of Mr. Gardiner Martin Lane, Dr. Butcher once more shows himself peculiarly fitted to act as the interpreter of Greek ideas for an Anglo-Saxon audience which is possibly, but not necessarily, acquainted with the Greek language. He does not attempt to make a special subject appear simple or easy out of consideration for the less Greek among his hearers: rather, with an incidental subtlety which bespeaks the accomplished teacher, he stimulates one and all to a clearer, more conscious appreciation of the peculiar and wonderful part which Greek thought has played in human history.

In these six lectures the originality of Greece is examined from several points of view—(i.) the contrast between Greece and Israel, (ii.) between Greece and Phœnicia; (iii.) the Greek love of knowledge; (iv.) art and inspiration in Greek poetry; (v. and vi.) Greek literary criticism.

The first lecture demonstrates how the influence of Greeks and of Jews, alike in a certain "spirit of exclusiveness," has lived by death, by the sacrifice of the national to the universal:—

"Through humiliation and loss of independence they each entered on a career of world-wide empire, till at length the principles of Hellenism became those of civilisation itself, and the religion of Judæa that of civilised humanity."

The Hebrew was dominated by a single idea, the devotion of man to the one supreme God; the Greek aimed at the perfection of the whole human nature. And this fundamental difference permeated the life and thought of each people: the sublimity of poetry, the purpose of philosophy, the meaning of history, are seen to be different in each case. Eternity, we may say, was the watchword of the Jews, humanity of the Greeks.

"Each people is at once the historical counterpart and the supplement of the other. Each element, by contributing its own portion to our common Christianity, has added to the inalienable treasure of the world."

In their never-failing sense of life as a whole the Greeks were able to correct the merely commercial impression which the Phœnicians had set upon the material side of human existence. Each Greek colony was an outpost of Hellenism, a focus towards which all local diversities of thought and custom were drawn, to be touched in turn with something of higher humanity. And the unrestricted interchange that existed between mother-city and colony, between colony and colony, at once strengthened the Hellenic sense, and saved it from self-centralization and undue exclusiveness—enabled the ideal ever to control the real, the moral to control the material. Work was looked at in its relation to leisure; social intercourse found its natural outcome in friendship; education came to see aright; life became capable of heroism.

"From the dawn of history *to know* seemed to the Greeks to be in itself a good thing, apart from all results." Yet their love of knowledge—as we learn in the third lecture—was restrained by the instinct of a true humanity, a σωφροσύνη which made man conscious of his own shortcomings and insignificance:—

"The Greeks dared to ask the question 'Why?' The fact was not enough; they sought out the cause (τὸ διότι) behind the fact (τὸ ὅτι)."

And the lesson of history as they read it, the basis of political philosophy, was that "the true causes of events lie deep in character." Mere erudition is nothing; true education (παιδεία) is based on human sympathy, and more important in process than in product. "As Life is something beyond Literature, so Personality is something beyond Learning."

The lecture on 'Art and Inspiration in Greek Poetry' is introduced by the frank avowal that "Greek literature is the one entirely original literature of Europe." And a little later the case is put again:—

"Greece presents a phenomenon unique in literary history—namely, the creation of fixed types, governed by a rigid code of rules, yet working in harmony with the spontaneous play of native faculty."

It is made clear, by instances from poetry and prose, that according to the Greek conception, as the author of the Περὶ ὕψους has observed, "even in the revels of the imagination sobriety is required." "Sophocles the conscious artist is none the less an inspired poet"; in fact, he represents exactly the Greek sense of balance—nay more, of alliance—between reason and intuition, art and inspiration, creation and criticism. And as in poetry, so in the earlier philosophy, there is the same complexity of character: religion and science, the mystical and the logical, are ever engaged in a "warfare" upon which progress itself depends. And Dr. Butcher points out, in the last paragraphs of the section, that in the conscious effort to harmonize the contraries of nature lies the secret of the Greek temperament, the essence of Greek originality.

It is not difficult, then, to understand that it was as natural to the Greeks to criticize as to create. And in a certain sense literary criticism existed among them from the first. A public which listens, not reads, is sure to acquire an "instinct for language," but it is not necessarily unbiassed in its criticism of literature; and it was left for Plato to enunciate, if not to discover, the law of internal unity "as a primary condition of literary art." Aristotle did not, perhaps, duly appreciate, though he did not ignore, the "ecstatic" element in poetry; but he alone of the ancients understood and emphasized the interdependence between unity of form and universality of content; and he realized that "the aim of poetry is pleasure, not edification or moral instruction." In Alexandria the flower of literary criticism ran to seed, and produced "πολυμαθεῖς, not φιλόλογοι," an encyclopædic erudition which had no longer eyes to see nor ears to hear.

And upon prose no less than upon poetry the Greek theory of style set its mark. The purity of the Attic prose idiom remains to-day the marvel and the despair of all true students of literature; and here again the secret is proved to be contained in a union of contrasts, a balance between the too much and the too little, a sense of the right thought expressed by the right word in the right place. Phrase-making is not style (as Lucian showed with all the force of his satire), nor is rhetoric the sole canon of speech. Only by long endeavour of interpretation can criticism attain to a true judgment. Translations cannot adequately interpret Greek literature, for they do not present in its vital beauty that harmony of form and meaning which is what we owe to the Greeks.

We have dwelt upon the several lectures at some length in the hope of showing the importance of the subject-matter. The style throughout is admirable, for, as every classical scholar knows, Dr. Butcher is not merely master of his subject, but he has also the gift of exposition, the genius of the teacher. And indeed it would be difficult to say too much in praise of this most scholarly book, which presents, at a time when the value of Greek thought and speech seems somewhat likely to be misunderstood, if not denied, a fresh and suggestive view of the influence exercised by the Greeks upon the civilization of the world, upon the history of humanity.

London Films. By W. D. Howells. (Harper & Brothers)

Since the Declaration of Independence it has been customary for visiting citizens of Great Britain and the United States to express their frank opinions on each other's country. Nations are sensitive to criticism, but particularly so if the criticism issues from a rival, and more particularly if the rival be agnate. Our American cousins like to contrast and to compare, and to note their divergences from the parent stock; and when they have set out to do this in earnest they have usually done it very well. Emerson's 'English Traits' will remain a classical analysis of a kindred people; and since Emerson no one has observed with such acuteness and written with such insight as Mr. Howells. This volume, in which he embodies his impressions of London and London life, reveals him in quite another mood from that in which many of us have known him. It is as if the seventh visit had, by the association of that mystical number, revolutionized his outlook. His Americanism, though he would not be Mr. Howells or a right good patriot if he lacked it, is never so pronounced—so overbalancing, one may say—here as we have noticed it elsewhere. He came, it must be conceived, in the mood to enjoy and philosophize, and he was able to do both. His first acquaintance with London dates back to 1861, and since then he has visited our metropolis at intervals. His latest and longest stay was in 1904, and that has enabled him to disengage and summarize his ideas, or, following his own metaphor, to develope his films.

The one thing which seems to have

XUM

marred our traveller's pleasure throughout is the English climate, coupled with the English fireplace. Constantly we hear how cold he was, as indeed it is open to us to hear from any Transatlantic visitor; but his summary is at once philosophical, just, and whimsical:—

"At the end it is a question of whether you would rather be warm and well, or cold and well; we choose the first course, and they choose the last."

Mr. Howells's depreciation of our climate does not affect his appreciation of our town. Is it not even our climate that lends beauty to our town? This passage is striking at once in its vividness and its truth:—

"As the shadow momently thickens or thins in the absence or the presence of the yellowish-green light, the massive structures are shown or hid, and the meaner houses render the rifts between more impressively chasmal. The tremendous volume of life that flows through the narrow and winding channels, past the dim cliffs and pinnacles, and the lower banks which the lesser buildings form, is such that the highest tide of Broadway or Fifth Avenue seems a scanty ebb beside it. The swelling and towering omnibuses, the huge trucks and wagons and carriages, the impetuous hansoms and the more sobered four-wheelers, the pony-carts, donkey-carts, handcarts, and bicycles which fearlessly find their way amid the turmoil, with foot passengers winding in and out, and covering the side-walks with their multitude, give the effect of a single monstrous organism, which writhes swiftly along the channel where it had run in the figure of a flood till you were tired of that metaphor. You are now a molecule of that vast organism, as you sit under your umbrella on your omnibus-top.....and feel in supreme degree the insensate exultation of being part of the largest thing of its kind in the world, or perhaps the universe."

And in the National Portrait Gallery Mr. Howells rises again to a pitch of eloquent enthusiasm which cannot but affect English readers:—

"It is in these rooms that the grandeur of England, historically, resides. You may, if you are so envious, consider it in that point and this, and at some point find her less great than the greatest of her over-grown or over-growing daughters, but from the presence of that tremendous collectivity, that populous commonwealth of famous citizens whose census can hardly be taken, you must come away and own, in the welcome obscurity to which you plunge among the millions of her capital, that in all-round greatness we have hardly even the imagination of her transcendence."

But Mr. Howells did not come to London to see sights, although he has some brilliant remarks to make on old scenes revisited. He is interested rather in people, and it is his version of "English traits" that interests us. We do not know how all his opinions will be received by his own countrymen and countrywomen. For they display, surely, at times the cloven hoof of heresy. The Englishwoman's dress, he says, "expresses sentiment."

"Under correction of those countrywomen of ours who will not allow that the Englishwomen know how to dress, I will venture to say that their expression of sentiment in dress is charming, but how charming it comparatively is I shall be far from saying. I will only make so bold as to affirm that it seems more adapted to the slender fluency of youth than some realizations of the American ideal; and that after the azaleas and rhododendrons in the Park there is nothing in nature more suggestive of girlish sweetness and loveliness than the costumes in which the wearers flow by the flowery expanses in carriage or on foot."

There is one of the handsomest compliments ever paid to the English girl; and even of young Englishmen our dispassionate author writes: "They were mostly young giants, who had great beauty of complexion, of course, and as great beauty of feature." Yet he seems to estimate the American woman as taller than her English cousin, "which may mean that with the English nobility is a masculine distinction." The high average of distinction in the appearance of men Mr. Howells notes, and adds a characteristic exegetical foot-note:—

"Distinction is the one thing for which I think humanity certainly pays too much; only in America we pay too much for too many other things to take any great comfort in our want of distinction."

The impartiality with which Mr. Howells holds the scales may be seen in his statement that he "cannot claim to have seen more drunken men in London than in New York"; while as for poverty, he is bound to say that he "met more of it in New York than ever I met during my sojourns in London."

These films do not amount to so comprehensive or extensive a survey as Emerson achieved. They are more personal—the dressing of a traveller's note-book. But they are very fascinating, and are written with the clarity and richness of style which constitute Mr. Howells one of our foremost writers of English to-day. Nor would it be Mr. Howells if he did not grope with more or less success for a large unifying theory. He finds the explanation of much of the English spirit in the prevailing "sentiment of family," and he ingeniously elaborates this theory, for which there is much to be said. And his statement of the relations of English and Americans is admirable in its shrewdness and good humour. Americans want to be taken "nationally, and not personally, by foreigners," and English people persist in liking them for their individual qualities; and says Mr. Howells, with his ever-present flick of humour, "I do not like *all* the Americans myself." We can part from him in this amiable mood, or in one still more indulgent, reiterating homage to our countrywomen apropos of the charm of *his* countrywomen:—

"The most ardent of their votaries must flush in generous deprecation when those orphic inquiries flow from lips quite as divine as their own."

NEW NOVELS.

The House of Mirth. By Edith Wharton. (Macmillan & Co.)

To describe in a few words such a novel as Mrs. Wharton's is not easy. There is a great deal in it, and it differs from her others. Society as it is in New York and the various degrees of its "smartness" form the principal theme of the book, but it is particularly concerned with the fortunes of a beautiful girl suffering from want of dollars, the malady most difficult to cure in such a *milieu*. The girl is more attractive than her surroundings. Good work is shown in her characterization and in her external circumstances, and there is more in the picture of the mixed condition of her emotions and morals. Her unfortunate upbringing has given her small chance of rising above a circle where luxury and pleasure dominate, yet there are in her indestructible germs of nobler impulses. It is a pitiful story, told with restraint and insight and not a little subtlety.

Wild Wheat: a Dorset Romance. By M. E. Francis. (Longmans & Co.)

This is a very readable story of country life, though it is not equal to 'The Manor Farm' (which was an idyll of exceptional merit) in construction or detail or human interest. The plot is a little thin; the two brothers who are the principal male characters are not so natural or convincing as the poorer farm folk, of whom we would gladly have heard more; the comic lady with the faddist remedies is rather a bore; and the failure of the hero's first love affair is as certain from the moment we meet the young lady as her unworthiness to secure him is undoubted. Still the heroine is a charming and natural girl, well drawn and not exaggerated; the curious mixture of sentiment—real sentiment, if to more blasé minds distinctly crude—with the unromantic and utterly prosaic view of marriage is absolutely true of the class from which she is drawn. No reader can fail to like Prue, or to smile at her garrulous mother. Those who know country folk as well as the author will fully appreciate the skill and insight displayed in their drawing.

The Missourian. By Eugene P. Lyle, Jun. (Heinemann.)

We are not at all sure about Mr. Lyle's book or about his heroine. Jacqueline is introduced to us as mistress of Maximilian of Mexico, for those are the times and that is the scene of the story. But in effect it is difficult for the innocent reader to reconcile this character with a fitting mate for the hero of a strenuous romance. The fact is Mr. Lyle has been absorbed by his material, instead of absorbing it. He has "got-up" the Mexico of those troublous times, and romps through his pictures boisterously. The illustrations are in keeping with the tale, leaning often to the grotesque. High spirits must have dictated both, and the author and the artist are having their little joke together. But it would be blindness not to see the talent of the narrator, and not to recognize that he will do much better work when he has learnt to digest his material and discovered the art of proportion. There are over five hundred pages here, which makes for heavy reading; and we have the inevitable Daniel Boone dragged into the story, which he does not enhance.

In the Hands of the Czar. By Garrett Mill. (Blackwood & Sons.)

This well-written novel is full of interest. The heroine, after some desultory experiences at home and abroad, finds at the age of three-and-twenty that she had better do something. This takes the form

of chaperoning a plebeian family to France, an arrangement good so long as it lasts, which is precisely until the lady of the family discovers that Miss Raphael is too pretty for the place. Then she thinks of her assets, a few Paris frocks and a few hundred pounds, decides she must marry, and forthwith sets off for Montreux, where marvellous adventures befall her. What these are, and how diplomatists plot and settle matters concerning Persia, Kurdistan, Afghanistan, and Tibet, all contrary to English interests, and how they are confounded by an astute Englishman, is veraciously related. In addition we are introduced to a revolution in Russia, a morganatic marriage, and the inevitable dispelling of illusion. All is well told and ends well.

The Tower of Siloam. By Mrs. Henry Graham. (Alston Rivers.)

A NUMBER of writers of novels and plays, mostly women, have lately appeared who have this advantage, that they know something of the world they write about. The present is a story by a new writer which tells of the rush and turmoil of the existence led by what is called "the leisured class." The ways, speech, and manners of the people described are not unlifelike; but the story is in great want of "knitting up." The fabric is loose, almost amorphous, and threads which appear to be essential are allowed to drop out unnoted. Yet there is evidence of observation, feeling, and reflection in sundry places.

The Spider's Eye. By William Le Queux. (Cassell & Co.)

SOME astonishing incidents and a good deal of unabashed sensationalism are provided by Mr. Le Queux for his readers. Those who peruse his work for pleasure or duty's sake are conscious of a devouring desire to be at the bottom—or at least the end—of the imbroglios presented by him. Yet the end of the unwinding of the mystery often brings disappointment. The knot is better tied, as it were, than untied. The explanation, in 'The Spider's Eye' at any rate, removes much of the dark and dangerous atmosphere in which the characters appear to live. Whilst the story is in progress the author has certainly a knack of keeping his readers on tenter-hooks.

Richard Hartley, Prospector. By Douglas Blackburn. (Blackwood & Sons.)

THIS is the second colonial novel of the present season to exhibit the distinction of good workmanship and original observation. Mr. Satchell's 'The Toll of the Bush' represented New Zealand; Mr. Blackburn's story reproduces for us the veld of South Africa. It remains for some other writer to present us with a novel of equal merit from Canada. The things which tend to establish familiarity with the outposts of the Empire are best learnt, perhaps, from such fiction as this. The present volume, apart from its very interesting story, achieves two things well and thoroughly. It presents an admirable picture of Rand society, and of the lives of those who fight for fortune on the outskirts of the circle of mining magnates in South Africa; and it includes a really able and thoughtful analysis in brief of the Boer character. Mr. Blackburn's English is sound, his style simple, direct, and workmanlike.

ECONOMIC AND SOCIAL PROBLEMS.

Essays and Addresses on Economic Questions (1865–93). With Introductory Notes (1905). By Viscount Goschen. (Arnold.)—In this volume Lord Goschen republishes three essays from *The Edinburgh Review* of 1865, 1868, and 1876, together with four speeches now some twenty years old and two more from the early nineties. A substantial note gives us his present views upon each topic, so that the reader has much more than a mere reprint of old material. The articles from the *Edinburgh* give an analytic description of the "boom" of 1864 and the crisis of 1866, and a careful account of the fall in the value of silver which began in the seventies. With these is placed a speech of 1891 upon the Baring crisis. Currency and banking are unusually forbidding topics, but no one more ably than Lord Goschen can overcome their technicality and lay bare their common-sense business meaning. Attacks upon the Bank Charter Act and its restriction of the issue of bank notes are not now so common nor so plausible as in the sixties. But the "Bank rate of discount" is as mystical and important as ever, and "cheap money" and "dear money" are always with us. The student, too, still reads Bagehot's 'Lombard Street,' and will add these essays as a worthy supplement, illustrating more clearly than has been done before the working of our credit system in these days of joint-stock enterprise. In 1864 the new Companies Act was subjecting the loanable capital of the country to "a searching system of drainage," and it was the object of the most prominent companies to pour this capital out to borrowers abroad. This raised the rate of interest to 7 per cent. amid loud complaints and much uneasiness, and led Lord Goschen, as he now admits, to exaggerate the influence of foreign upon home rates of interest. Not all the forces which annihilate distance and the rawer forms of patriotism have made it safe to forget one's Adam Smith. When the Overend & Gurney crisis brought the speculative edifice to ruins and the Bank rate to 2 per cent., Lord Goschen is again upon the scene. What does the Bank rate mean? Does "2 per cent." mean that money can be had in plenty for trading purposes, for public works, for Government loans? Not at all. Capital is cheap in one quarter merely because in another it refuses to be hired at any price. It is the rate for first-class bills and for loans for short terms on the very safest kind of stocks. To other borrowers it exhibits, but does not offer, its charms.

Of the speeches in this volume which are not concerned with banking those on the 'Prospects of Trade' (1885) and the 'Increase of Moderate Incomes' (1887) are the most remarkable. The latter is brought up to date in a supplemental study of some twenty pages. If it be true that moderate incomes are taking an increasingly large share of the national income, it is a fact of happy augury and enormous importance. The later figures seem indecisive, and it is to be hoped that Lord Goschen's challenge to the statisticians will not remain unaccepted. Though written twenty years ago, the address on the 'Prospects of Trade' reads, as the author says, like a chapter of the present fiscal controversy. In 1885, as now, the Income Tax returns showed a continuous increase, while every manufacturer and merchant was complaining of the absence of profits. Two things in this address arrest attention at once — the stress laid upon our growing colonial trade as compared with our foreign trade, which was progressing very little; and the bold question as to which of our advantages in competing with the foreigner are likely to remain to us. This last topic has become the very dancing plot of economic champions, but two opinions stated by Lord Goschen in 1885 are surely significant beyond the reach of controversy:—

"As complexity of trade increases, so you will find that it tells against this country."

"Sea-carriage is now so cheap that we are annihilating distance, and the annihilation of distance seems to me somewhat disadvantageous to this country with its splendid geographical position."

Riches and Poverty. By L. G. Chiozza Money. (Methuen & Co.) — Mr. Money's thesis is that nearly one-half of the entire income of the United Kingdom is enjoyed by but one-ninth of its population, and more than one-third by less than one-thirtieth; that this "error of distribution" should be corrected by a graduated Income Tax and a more severely graduated scheme of Death Duties; and that ample funds could by these means be obtained to set on foot an "organized" society of the Social Reformer's type. A great number of social evils are discussed, and the simple remedy of public control, public expenditure, public enterprise, is applied to each from the standpoint that we are a people with a magnificent income: "We see lying to our hand the Golden Key to a hundred difficulties."

Apart from any objections which may be urged against the general Socialist position —which objections Mr. Money answers for the most part in a manner hardly more convincing than usual—we look in vain for that careful sifting of ethical assumptions which alone can give merit to a volume upon such lines. The book is built not upon statistics, though there is a great mass of them, but upon opinion: "to travel on the London, Chatham, and Dover railway is a martyrdom, while to travel on a L.C.C. tram is a pleasure"; the greater part of the houses of the country are of small intrinsic value, "their economic value being only produced by the sheer necessities of those who needs must find a roof." A list of companies paying the most fabulous dividends —twenty, forty, sixteen, ten, twenty-five per cent—is, we are blandly told, representative rather than exceptional. We hear of "policies of insurance, those typical documents of a community of prey," and "business ability, which is the lowest attribute of mankind." Had Mr. Money kept to his original plan "simply to examine the Error of Distribution in relation to the incidence of taxation," he might at least have afforded us a clear view of an important truth and some sidelights on its consequences. He has chosen to bury what he has to say in his "social policy" of the "golden key" variety.

Temperance Progress of the Century, by J. R. Woolley and W. E. Johnson (W. & R. Chambers), is a recent volume of "The Nineteenth Century Series." The bulk of it is occupied with the history of temperance agitation and legislation in America, from the founding of the first total abstinence society in 1818 at Hector, New York (the preliminary gathering being held in a bar-room), to the present variegated laws and systems which make the liquor legislation of the American States such a fruitful field for temperance experiment. The authors, however, are not content with the narrow limits of the nineteenth century, and devote the earlier part of their narrative to a hasty but sweeping survey of drinking habits since the beginning of history. They trace a Chaldaic origin for the

term "alcohol"; expatiate on the drinking habits of the ancient Egyptians; and diversify their indictment with quotations from Euripides and the prophet Amos. A later chapter traces the development of the public-house from the teetotal rest-houses of the ancient Druids to the introduction of alcoholic liquors, when, as they announce with some fervour, "Rome sowed the dragon's teeth of appetite, the harvest of which the world is reaping even now." To the English reader the most valuable part of the book is the history of the American anti-saloon campaign since the Civil War, with the parallel struggle towards prohibition or strict regulation in Canada. The section devoted to European systems is less detailed. The authors comment unfavourably upon the system adopted both in Norway and (as modified) in Sweden, and appear to hold that some form of prohibition is the only satisfactory remedy for the evils of intemperance. A series of appendixes provides details concerning "the horror of drink amongst the Egyptians," Father Mathew's pledge, and a variety of allied topics.

In *Socialism and Society*, by Mr. J. R. Macdonald (Independent Labour Party), the editor of the "Socialist Library" offers his own contribution to the literature of the Socialist movement. There is little new in its treatment of the fundamental problem of society's future adjustment. But in the coming changes of politics the writer occupies a special position of interest as secretary of the Labour Representation Committee, through whose energies the Labour party is coming into being. The present volume may be accepted as a moderate and (in some respects) an authoritative statement of the exact meaning of Socialism and Socialistic legislation as it appears to the more thoughtful of these parliamentary candidates. It is emphatically modelled on English rather than on continental traditions. The keystones of that enormous edifice which Karl Marx raised upon the foundations of the Hegelian philosophy are frankly abandoned. Mr. Macdonald will have nothing to say to the conception of the "Class War," the deliberate affirmation of a materialistic philosophy, or the anticipation of revolutionary change which still form the gospel of the organized Social Democracy of Germany and Italy. It is not to Hegel, but to Darwin—not to a priori philosophy, but to empirical science—that the modern political Socialists look for the basis of their visions of coming change. Mr. Macdonald here is far more in accord with such a thinker as M. Ferri, whose 'Socialism and Positive Science' furnished (in translation) the first volume of the series. But the attack on the Church and on the family, and all that proclamation of a breaking-up of ancient custom and tradition with which such writers startle the "bourgeois," find no echo in the work of so cautious an English (or Scottish) observer of contemporary affairs. Socialism for Mr. Macdonald is a programme of gradual reform effected by the recognized political machinery: it springs in part from the necessities of economic change, in part from the revolt against the chaos and injustice of present conditions which is destined to become more and more influential not only amongst the labouring peoples, but also in all classes of society; it may act through a definite and coherent "Socialist" party in the State, but it will also act in effecting legislation (almost unconsciously) advocated and realized by the older historic Liberals and Conservatives. It is based fundamentally upon the conception of society as an organism, with individuals as cells in that organism—on a definite repudiation of the atomistic view of society which was the prevailing creed behind the disintegrating political changes of the nineteenth century.

But Mr. Macdonald in attempting to translate this analogy into severe scientific statement is compelled to fall back upon such forlorn evidence as that of Binet, pointing "to a fullness of cell life which foreshadows many of the characteristics of the highest animals—such as memory, will, fear, &c." This is somewhat in the tone of Haeckel's reference of atomic change to the loves and hatreds of the elements, and neglects the fundamental and ultimate divergence between material and mental change. A cell may be found to manifest memory, will, &c.; such a discovery, were it possible, would render no easier the task of resolving memory and will into cell change: the one is a mode of motion, the other of consciousness. Mr. Macdonald's study may be recommended to all who are desirous of familiarity with political controversies in to-morrow's politics.

The Queen's Poor, by M. Loane (Edward Arnold), the title of which was a felicitous anticipation of current events, provides a series of articles dealing with certain aspects of the life and ideals of those living in poverty, especially in the great cities of England. Miss Loane has obvious qualifications for a task which many have essayed, and few essayed successfully. She possesses the wide experience derived from an intimate knowledge of a life which is difficult to understand, divorced, as it remains to-day, so completely from the "other nation" whose experience alone enters the region of literature. District nursing has given her access to the poor in their most communicative moods; she has sympathy and pity combined with a robust common sense; above all, that lively sense of humour without which the existence of these folk must remain for ever incomprehensible. The result is one of the most healthy, true, and satisfying pictures of their standard of life and comfort, their outlook on this world and a world beyond, which have recently been issued.

The examination groups itself round such topics as 'Husband and Wife amongst the Poor,' 'The Religion of the Respectable Poor' (all are classed by Miss Loane as "respectable" who possess anything in the nature of a home, and these are endowed in her experience with a real if vague religion), 'The Children of the Poor,' 'State-spread Tables' (an almost passionate impeachment of the cry for the free feeding of "underfed" children), 'A Day with a District Nurse,' 'The Inconvenience of being Poor,' and the like. The book is a perfect mine of good stories and quaint and diverting sayings.

Miss Loane is not blind, however, to the other side of sadness—the disabilities under which is lived at the present the life of the labourer in the city. She is even prepared to find "in the certain hope of death" a sustaining force making tolerable a life spent in "long-drawn-out struggles against weakness, poverty, ill-health, and sin." This is probably a view exaggerated by the special experience of the district nurse. Hope, far less than acquiescence, represents the attitude of the majority of the poor to the mystery of death: their tranquillity at its contemplation and advent is but part of that astonishing patience and acceptance of life's worst as well as life's best which provides an almost Eastern apathy and fatalism in confronting the changes of life. But she recognizes in full "the inconveniences" of being poor: she is impressed by the reality of the tragedy of mere physical ruin.

The tone, on the whole, is almost exultingly optimistic, and everywhere Miss Loane finds a steady advance in comfort and civilization. Those familiar with the life depicted will find much here expressed with which they may disagree; but they will welcome also the experience of one who has a justification for writing on this life which is largely lacking in those who to-day unfold its secrets and criticize its ideals.

JUVENILE BOOKS.

MESSRS. A. & C. BLACK.

The Schoolboy Abroad, by Ascott R. Hope, is not, as the writer hastens to confess in his preface, a fictitious story, but "a collection of sketches illustrating the school-life of Europe," mainly founded on "autobiographies in different languages," and containing much to instruct, to interest, and even to amuse the world of boys. Ascott Hope carries his readers to France, Italy, Spain, Switzerland, Denmark, Germany, Austria, and Russia—a grand tour indeed; and he ends by promising that if this "survey of the schoolboy in relation to space" finds favour with his readers, he will some day give them another volume dealing with "the schoolboy in time."—Punch is the hero of a romance by the same writer which the seniors of the nursery will appreciate. *The Adventures of Punch*, strikingly illustrated by S. B. De La Bere, is a life-history of this model husband and his faithful Toby, narrated by himself to his "dearest Judy."

MESSRS. BLACKIE & SON.

In *The Adventures of Harry Rochester* Herbert Strang has written one of the best stories of a military and historical type we have seen for many a day. The date is that of Marlborough and Eugene, and the hero well earns his promotion in the Dutch and Austrian services. There are excellent fighting and characterization, while the author shows knowledge both of his period and of the rustic speech and thought of the West Country.—Capt. F. S. Brereton's *A Knight of St. John* has no lack of sensational warfare. The siege of Havre and that of Malta in Elizabethan days are well described. The conversation is a little verbose, and people of that day did not talk about "foodstuffs"; but this is not a book to be cavilled at. Mr. W. Rainey illustrates this and the preceding volume.—*A Soldier's Daughter, and other Stories*, by the late G. A. Henty, is notable for brave girls. Nita, the soldier's daughter, takes great part in the defence of an outpost on the North-West Frontier of India, and has a wonderful escape from the Afridis; while in another story an Australian girl saves her father's station from the blacks. Miss Frances Ewan is the illustrator.—Herbert Strang may be congratulated on another first-rate book, this time concerned with the Russo-Japanese war. *Brown of Moukden* tells of a young merchant who, when his father is arrested by the Russians, throws in his lot with the Chunchuses, and sees plenty of adventure. Characterization is a strong feature of the book, and Ah Lum, the literary chief of the brigands, is a memorable type. Of a "censored" war report a fifteen-year-old boy aptly remarks: "By gum, don't I wish old Cæsar's despatches had been blacked out like this!" Maps and Mr. Rainey's illustrations improve the text.—Miss Eliza F. Pollard has an undoubted gift for the writing of historical tales, and *The Old Moat Farm: a Story of Queen Elizabeth's Days*, is one of her happiest efforts. The scene opens in the Tower of London, from which gloomy prison-house are escaping two fair children of royal blood, Derward and Rosamund, children of the Earl of Hertford and his wife Katherine Grey (the legal descendant of Mary Tudor, daughter of his Majesty King Henry VII.). The bairns are too near to the throne to find favour with Elizabeth; the jealous wrath of the great queen pursues them for many a long day, and the story of their adventures is well worth reading.—Two unusually lively and attractive books for girls

are *A Daughter of the Ranges*, by Bessie Marchant, and *Molly and her Brothers*, by Mabel Earle, both dealing with life and adventure in the Wild West.—*In the Summer Holidays*, by Jennett Humphreys, is "a children's story" of merit, though rather trivial.

MESSRS. W. & R. CHAMBERS.

Mr. G. Manville Fenn in *Shoulder Arms* tells how two soldiers' sons, sent to India to join their fathers' regiment, are betrayed on the march up country (these are the days of Brown Bess and no railways) by one of their guides, and with the escorting company fall into the hands of a hostile maharajah. There are some good characters, and a faithful Goorkha is the benevolent genius of the piece. Mr. W. H. C. Groome is the illustrator.—Buster Brown and his famous dog have become the classic heroes of American infancy, and their latest adventures, told in *Buster Brown: his Dog Tige, and their Troubles*, scarcely call for criticism on this side of the Atlantic. It may be mentioned in passing, however, that the humorous sense is differently cultivated in English nurseries, and a higher value seems set upon the development of imagination than is the case with our more practical cousins. Possibly the jokes are a little too obvious and the illustrations a little too forcible to satisfy the taste of the older world; but it is certain that, whatever appreciation may be felt for the comedy of their many adventures, this imp of mischief and his dog Tige will remain as aliens amongst us.—L. T. Meade's *Dumps: a Plain Girl* is the story of the good stepmother and the naughty stepdaughter, and is rather amusing; while *A Bevy of Girls*, by the same author, chronicles the everyday doings of some very tiresome young people.

MESSRS. DENT & CO.

Told rather baldly, but illustrated with sufficient grace, there comes from the crowd of Christmas gift-books *Una and the Red-Cross Knight*, by N. G. Royde Smith, a story from 'The Faerie Queene.' Here and there the original poem is quoted, and on the whole the book gives a mild feeling of satisfaction to the (adult) reader.—But the *Stories of King Arthur and the Round Table*, by Beatrice Clay, is an arid production. The 'Mabinogion' has been used, but to no special avail; and an abridged edition of the 'Morte d'Arthur' and 'The Joyous History' would have given more pleasure than the rather stilted periods of the present adapter.—*To The Children's Christmas Treasury*, edited by Edward Hutton, no such exception can be taken: no book could be dull that includes examples of Hans Andersen, Lamb, Hawthorne, Mr. E. V. Lucas, and E. Nesbit. There have been better fairy tales written than 'The King with the Ugly Face'; but there is a real laugh to be found between the first and last paragraphs of 'The Dyer's Dog' and 'The Persian Cat'; and the precious stone of fancy is in a little poem called 'Goblins' Gifts.' The illustrations leave something to be desired.

MESSRS. WELLS GARDNER, DARTON & CO.

The Happy-go-Luckies, by M. H. Cornwall-Legh, is the story of an unconventional family who live uncomfortably in a boat, and have no adventures worth speaking of.—*Old-Fashioned Tales*, edited by E. V. Lucas and admirably illustrated by F. D. Bedford, whose drawing perhaps deserved more outlay upon colour, will please old-fashioned people, and, we fancy, will be popular in the nursery. There is a sternness of didacticism in such tales as Miss Edgeworth's 'Purple Jar' which may surprise some of our too knowing youngsters, but on the whole we agree with the wisdom of the editor, and hold that our rude forefathers had a gift of telling a story unknown to the moderns. After all, in spite of Mr. Barlow, is there a much better boys' book than 'Sandford and Merton'?

MR. W. HEINEMANN.

In *Kingdoms Curious*, by Myra Hamilton, the seeker after fancy and humour will not be disappointed. Each story has its own lesson, conveyed in the shape neither of powder nor of pill, but produced by the deeds and words of the characters as simply and surely as the berry is produced by the bramble. And the lessons are as sweet and wholesome as ripe blackberries, too. The good children are not maudlin, and the bad people are not morbid. In 'The Royal Laundry' we have an excellently humorous situation well worked out; in 'The Lost Sound' the makings of a poem; and to two of the sixteen fairy tales, 'The Lucky Horse' and 'The Story of Little Luck,' we can give as high praise as was given to 'The Story of a Puppet' and 'Caliph Stork.' Miss Hamilton has the gift: let her continue to exercise it. There are thousands of fairy tales waiting to be written; and it is not on May Eve alone that one can see and hear the "Little People."

MESSRS. HODDER & STOUGHTON.

In *Bridget's Quarter-Deck*, by Amy Le Feuvre, two worthy Devonshire families are made to assume the relative position of Capulet and Montague, while a singularly unimpassioned Romeo and Juliet enact the drama that ultimately brings about a reconciliation. In spite of its somewhat restricted scope, the story is well put together and freshly told. It will probably interest the elder girls, for whom it is obviously intended.—*Sonny*, by Ruth McEmery Stuart, is a study of child life, hailing from the other side of the Atlantic, and written in dialect.

MESSRS. T. C. & E. C. JACK.

"Oh! sweet Fancy, let her loose!" But that is exactly what Mr. W. D. Orcutt in his book of fairy tales has not done. *The Princess Kallisto* is solemn in intention and stodgy in achievement. The opening narrative is scarcely a story at all, and one has to wait until the fifth fairy tale before the page shows any light of imagination whatever. Here, in 'The Princess of the Rainbow,' a pretty idea is worked out with sufficient rapidity and clarity to satisfy the critical childish public to which it appeals; but nothing else in the volume can be praised. The 'Foreword to Elder Folk' is a triumphant example of how not to do it.—Quite one of the best of gift-books is called *The Man in the Moon*, by Ray M. Steward, illustrated by L. J. Bridgman. Little folk will follow with deep interest his remarkable tour over land and sea through the air, and will hail with fresh delight such old friends as Santa Claus, Robinson Crusoe, Cinderella, and other celebrities who become his travelling companions.

MESSRS. TREHERNE.

Many a deputy Santa Claus will be grateful for the plentiful choice provided in the deservedly popular *Humpty Dumpty* and *Stump Book* series. These little volumes are as attractive as they are inexpensive. Mr. Punch's contribution to the children's Christmas has been entrusted to Mr. E. V. Lucas and Olga Morgan, whose clever pen and brush respectively have produced an interesting potpourri entitled *Mr. Punch's Children's Book*.

MESSRS. WARD & LOCK.

Ethel Turner's Australian studies of child life have a charm of their own, and are justly popular. *A White Roof-Tree* is a collection of stories, grave and gay. The first, which gives its name to the volume, is a delightful tale of camping out; while 'Sketches in Drought Time,' drawn by a strong hand, give a vivid picture of "the battle in long dry years," fought far away and in silence by so many of our blood.—*The Story of the Gravelys: a Tale for Girls*, by Marshall Saunders, has a curious Transatlantic flavour about it, though it professes to deal with life in an English provincial town. Berty Gravely has the poor at her heart, and her devoted labours for the children of the slums are the chief theme. Old Madam Travers, Berty's gracious and gentle little "grandma," who kept the family together, is the saint of the story. Her death scene is somewhat theatrical, and Berty's efforts at match-making, which supply the comic element, are a little incongruous. Nevertheless, 'The Story of the Gravelys' is readable.—*For Muriel's Sake*, by Lucie E. Jackson, and *Andy*, by Lucile Lovell, are alike in that they both deal with a family feud and the healing thereof; but there the likeness ends. Miss Jackson's little hero, Nigel D'Eyncourt, is a brave British lad; while Andy is a true-born American. In setting and sentiment the stories are also wide apart; both are pleasantly written and are worth reading, but we find the American version the more attractive.—Dr. Gordon Stables needs no introduction and no commendation. Many boy and girl readers know and enjoy his breezy tales, and will hasten to possess themselves of *The Sauciest Boy in the Service*, whose marvellous adventures by sea and land make a thrilling tale.

OUR LIBRARY TABLE.

MR. WERNER LAURIE publishes *With John Bull and Jonathan*, by Mr. Morgan Richards, a well-known American resident in London, and the organizer of American methods of advertisement in the United Kingdom. It appears from his reminiscences that the cabalistic signs with which the Rocky Mountains were covered from the Canadian to the Mexican frontier shortly after the Civil War were of his invention. The particular form which he gives as the first was somewhat earlier, but generations of travellers still living remember the disfigurement of fine rocks (for example, even in the neighbourhood of the Great Cañon of the Colorado river) by such giant inscriptions as

"O.K. 1860. X.
TRY DRAKE'S PLANTATION BITTERS."

We are far from alleging that the story that Mr. Morgan Richards has to tell is without interest. He has not, however, the literary art of his brilliant and accomplished daughter, and mixes trivialities not worth publication with the more solid portions of his narrative. By condensation, which one may make for himself in skipping, the wheat can be separated from the chaff, and the general reader will find value for his money. An observation which is sound reveals the fact that the easy detection of the thoroughgoing American by Britons is not matched by a similar capacity in the United States. The author tells us that in thirty-eight years in England he has never once been mistaken for an Englishman, but that in his visits to the United States he has invariably been taken for an Englishman by at least a great majority of his countrymen. The full account given of American methods of advertising as applied to recent publishing ventures in London is somewhat new. It appears that two Bostonians "stood behind the screen"; and their names and methods are revealed. The simplicity of Mr. Morgan Richards disarms criticism, and so far as we have been able to test his facts they are accurate, while the volume is disfigured by but few slips. We take issue with Mr. Richards about his statement that "iced champagne is an American innovation; no one in England served wine iced twenty years ago." There is in the volume a great deal which will be found of interest by members of certain churches, in

the full account of the friendship which united the author to Henry Ward Beecher and to Dr. Parker of the City Temple.

The publisher is to be congratulated upon the type and appearance of the book; and the illustrations are also excellent. There are admirable portraits of Henry Ward Beecher and of Mrs. Craigie.

ANY work which helps to make the English public more familiar with native character and customs in India is sure to be regarded with interest. In one respect, at least, *Village, Town, and Jungle Life in India*, by A. C. Newcombe (Blackwood & Sons), justifies this condition. The illustrations are excellent, and may convey to those who have never been in India a truthful conception of the people and scenery of that vast and varied continent. They are especially valuable because they emphasize the important fact how vast and varied it is. We have a view of 'A Village in Beloochistan' and another of 'Tippoo Sultan's Watch-Tower (Trichinopoli),' and so we pass from the India of the frontier and of the mountains to the true India of the plains. In the village in Beloochistan a few rough houses nestle beneath a barren hill—you are a century away from civilized life. The two fine pictures of 'Border Tribesmen' and 'A Pathan (Afghan Frontier)' cause us to realize the men we have to deal with on our northern marches:—

"These tribesmen are strong and manly, with a self-reliant character much to be admired. Unfortunately they have scant respect for human life; and their raids on the villages under British protection and on one another, and their readiness to use knives in quarrels, make it necessary to be careful in dealing with them."

India is a land of contrasts. We have the railway station at Bombay, which would do credit to any European capital, and we have stations in the Bolan Pass where,

"as the train rolled up to the platform, there was a row of native soldiers standing one at every few yards where the train would stop; for the lawless tribes in the vicinity were quite willing to loot the passengers if they saw the opportunity. At one place this had happened and the station-master had been killed."

And from Bombay to Beloochistan,

"of the India Civil Service there is only one official for every quarter of a million of the population, and each is responsible for the administration of, on an average, a thousand square miles."

Mr. Newcombe belonged for twenty-eight years to a branch of the public service whose work can never be too highly estimated. There is no other body of men who can look upon so much good bestowed upon their kind as the engineers who construct the railways and canals in India. Those who read Mr. Newcombe's unaffected account of what he really saw and did in India will realize that there can be no more interesting life than that of an engineer. But at the same time there are few lives more trying. It is a lonely career, it is a career of incessant hard work, and many an Indian engineer has sacrificed health and even life to promote the welfare of his fellow-creatures.

On literary grounds the book is open to criticism, but its charm is due to a purer and more pleasing source of inspiration than conscious art. Besides the really instructive no less than pleasant glimpses of little-known phases of Indian life, it has the genuine, manly tone which belongs to the district officer who is the backbone of our Indian Empire.

MR. H. G. WELLS, whose literary reputation stands even higher in France than it does here, returns some of the favour which he has received at French hands by contributing a preface to Mr. Cloudesley Brereton's translation of a work by the late Prof. Gabriel Tarde. *Underground Man*, published by Messrs. Duckworth & Co., is well translated. It is a fanciful sketch of the Utopian order, but, though scholarly—as might be expected from Tarde, a light of the well-known "Passy set"—cannot compare with similar work by Mr. Wells himself and many others.

Horace. By the Rev. W. Tuckwell. "Miniature Series of Great Writers." (Bell & Sons.)—There is, perhaps, no more modern figure among the great writers of antiquity than Horace. The spiritual affinities of his friend Virgil are with the mysticism of the Middle Ages, but Horace, one fancies, were he to return to life amongst us to-day, would be hardly less at home than in his own age and environment. His genial and balanced philosophy of life, teaching that to enjoy is better than to have, and that true enjoyment is impossible without moderation, corrects the grossness of materialism without convicting it of the crimes philosophy would discover, and is equally removed from both kinds of heartlessness—that which is the characteristic of an earlier and ruder time, and that which is the inevitable product of a later and more corrupt one. His poetry appeals to all sorts and conditions of men, the exquisite craftsmanship of the Odes (and of the Epistles too in their own way) attracting those whom the limited range of his thought and feeling might repel; while this very restriction of range, this unflagging enthusiasm for the commonplace, is calculated to win over "the man in the street," on whom technique and transcendentalism are alike wasted. Every effort, therefore, to popularize Horace, and to extend the circle of readers of this most friendly of poets, is not only to be welcomed, but is also, one would think, predestined to success. That not a few such efforts have been made recently, the names of Conington, Sir Theodore Martin, and Wickham remind us; but we see no reason why Mr. Tuckwell's little book should not, within its limits, do as good a work as they. He is in no uncertainty as to his public. He does not address himself to the scholar, nor even mainly to the not inconsiderable class of persons who, loving students (in spite of Byron) of the original in their youth, have let slip in after life too much of their Latin to read it with the necessary ease and pleasure; but he turns boldly to those (a constantly increasing number in these days of science and commercial curricula) who have not, and never have had, any acquaintance with the original, but yet desire to make the great writers of antiquity something more than a shadow of a name to themselves. Mr. Tuckwell boasts that he has not introduced a single Latin word into his pages; but for all that he has managed to give a picture of the man and the poet at once faithful and striking. Not every good scholar would have succeeded in this task, but no one save a scholar could have succeeded. The portraits of Brutus and Mæcenas are particularly happy, and the consistent dignity and independence of Horace in his relations with the latter and Augustus are sympathetically emphasized. Once, in a foot-note, Mr. Tuckwell permits himself a piece of egoism, which in a book about the most egoistic of poets seems perfectly in place. He is familiar with the actual ground of Horace's villa, a fact which has lent vividness to his account of it. A short and brightly written survey of Horace's poems follows the account of his life. The little book is embellished with some excellent photographs. On p. 19 Menander is by a slip described as a philosopher; and on p. 31 the names of Dante and Boccaccio should be transposed. "Hincksey" on p. 23, and "grow" in line 5, p. 25, require correction in a second edition. We all have our favourites among the Odes, and the present writer regrets that room could not be found among the translations given for the noble tale of Regulus with its passionate patriotism and perfect end. Mr. Tuckwell does not put the patriotic Odes so high as we have in previous notices, and he does not like the Fourth Book of the Odes so well as the earlier ones.

The Garden of Nuts, by W. Robertson Nicoll (Hodder & Stoughton), is the title given to a brief series of articles dealing in detail with some texts in the Old Testament. The method of Dr. Nicoll's interpretation is to allow Scripture to be the commentary on Scripture. Without deprecating modern criticism, he claims that his exposition moves in a region which criticism does not touch: "The great passages in the Word of God are timeless." These pages should commend themselves to many who have been struck by the sterility of much of the historical handling of the Bible which is now in vogue.

The Age of Transition (1400-1580). By F. J. Snell.—Vol. I. *The Poets.*—Vol. II. *The Dramatists and Prose Writers.* (Bell & Sons.)—The two new volumes of Prof. Hales's useful series of "Handbooks of English Literature" are concerned with the least interesting period of our literary history, and it is not wholly Mr. Snell's fault if they are not themselves very interesting. Still, if we compare them with the volume called 'The Transition Period,' written by Mr. Gregory Smith in Prof. Saintsbury's more comprehensive series "Periods of European Literature," we cannot but see how much can be made out of the same material by a writer who is more of a critic and more of a man of letters. Mr. Snell gives a great deal of information, and his facts are sound, his ideas reasonable; but he is a painful writer, and he seems to have no really fine critical sense. Thus he can write appreciatively enough of Malory without so much as intimating that his style, which he calls "in the best and truest sense, poetical prose," is a new thing, the beginning of vital English prose. He can give a fair account of Dunbar, and not mention 'The Dance of the Sevin Deidly Synnis' or 'The Testament of Mr. Andro Kennedy.' He goes out of his way to refer to Thomas Watson, one of the most tedious of the Elizabethan sonneteers, as "that sadly neglected genius." After supplying a good and concise account of the introduction of blank verse into England, he adds this needless and inept comment:—

"Surrey's translation.....runs rather like heroic couplets with the rhymes taken out. Still, this does not lessen the important consequences of an example imitated by Shakespeare and Milton, and flowering again, most beautifully, in the 'Idylls of the King.'"

He calls a sparrow a "poor biped," and finds in Dante an "ever-recurring thrill of theatrical curiosity." Books written in such a manner are not calculated to teach English literature in the way it should be taught. They have their uses. From Mr. Snell's careful accounts of books and writers one may correct many errors in the more enlivening work of less minutely exact historians.

The Little Farm. By "Home Counties." (Lane.)—This is the twelfth volume of "The Country Handbook Series," and its modest aim is to give the townsman who desires to work a small place of his own in the country some idea of the conditions he must face in the attempt to make such a homestead self-supporting. In these days, when we hear much windy talk on the "Back to the Land" text, without very much sound practical information, such a little book is needed. This one cannot, of course, teach a man how to farm. It may well be doubted if any book ever penned or to be penned could do that. But it certainly does present a faithful and informing picture (for the discerning reader) of present-day small-farming conditions, and should serve to save the would-be small farmer from various pitfalls. With every desire, and a sincere hope, to see the extension in England of the small-holding

system, with the check it should bring to the "rural exodus," and the impetus it should give to English agriculture and the formation of an independent yeoman class, the reviewer would particularly draw attention to such passages in this little book as 'A True Tale of Twelve Acres,' on pp. 41-5. The "Back-to-the-Lander," as he is here called, should study these notes with thoughtful care. The reviewer can answer for their fidelity to oft-repeated fact. The "Back-to-the-Lander" only too often adds to his inexperience impatience, impulsiveness, and lack of perseverance, and these are fatal qualities on the "land." This interesting little book should find many readers.

MESSRS. METHUEN have taken over the publication of Mr. E. V. Lucas's successful anthology *The Open Road*, which appears in a revised and enlarged form. With it they now publish, in a uniform style, *The Friendly Town*, by the same compiler, who as a learned student of Lamb naturally appreciates the fascination of London. Authors and publishers have been generous to Mr. Lucas in the matter of copyrights, and he has made excellent use of his opportunities. There is abundance of old-fashioned extracts, "choicely good" as old Izaak Walton says, and we are pleased to find that the moderns cut so creditable a figure. Occasional verse has, we think, within the last fifty years reached a higher average than ever before, and Mr. Lucas's good taste fortifies this opinion. It is a mistake, perhaps, to include well-known poems like Shirley's 'The Glories of our Blood and State,' Lovelace's 'To Althea,' Waller's 'On a Girdle,' and Mrs. Barbauld's 'Life, I Know not what Thou Art,' for they have all been available for years in 'The Golden Treasury,' which is now published in several editions, not to speak of other excellent collections. These poems, charming as they are, have nothing special to do with the town. The wisely bold anthologist would omit all well-known things which did not illuminate his special subject, and this, indeed, Mr. Lucas has done, in the main with advantage. He begins with winter and Christmas poems. Sections follow with such characteristic headings as 'Friends and the Fire,' 'Four-footed Friends,' 'The Play,' 'The Tavern,' 'Good Townsmen,' and 'The Post.' We find, *inter alia*, prose of Pepys, Boswell, Lamb, George Meredith; verse sentimental by Thackeray, cheerful by Henley, and the grace of the 'Greek Anthology' as retained by the skill of Mr. Mackail. We turn the last page, in fact, in an excellent humour. Then we wish to revisit certain glimpses of London, to re-read at once some poems new to us, and we find that there is actually no index, either of authors or of first lines, in either book. It seems to us sheer folly to omit so obvious an aid to pleasurable use, and we hope this matter may be looked to in future editions. We would not cavil at omissions in such a selection of "urbane" things, but we are a little surprised to see so little of Lamb's friend, who has represented to us for many years the very genius of the fireside, Leigh Hunt. On 'Christmas,' on 'Old Kensington Palace,' and on that common sight to Londoners, 'A Spider running across the Room,' he is happy in verse, though his prose is better known. The exigencies of copyright have led to some omissions in 'The Open Road,' but the additions more than compensate for this. Here, too, we find selections from the 'Greek Anthology.' Both volumes contain end-papers by that remarkable artist Mr. William Hyde.

CICERO in his famous eulogy of books says that "they are no impediment abroad—travel with us, ruralize with us." Most true is this to-day, when we have such neat and handy editions as the *Little Quarto Shakespeare*, a complete set of which, in forty volumes, Messrs. Methuen have just sent us. It is the most charming of small editions of the poet known to us. The books are as small as is consistent with legibility; they are bound in a tasteful blue, which is now rare enough to be almost a discovery; and they offer notes at the bottom of the page, and introductions by Mr. W. J. Craig, who is both capable himself, as befits the editor of the 'Oxford Shakespeare,' and makes judicious use of the work of other specialists. The true man of taste likes the privilege of choice to fit his mood when he is abroad, and he can have it with this edition, slipping two or three plays into his pocket without inconvenience. He has the Sonnets and poems in the last three volumes.

The Way, by Ethel Ashton, with illustrations by Lilian Bell, is published by the Universities' Mission to Central Africa. It is a pretty little story of how a small boy led his friend and tutor to go out and work for the cause in Africa. Miss Ashton writes easily and well, and her boy is refreshingly human—indeed, the whole story is the more effective for not being of an oppressively "improving" character. The illustrations are attractive.

THE first number of *Bausteine* (Berlin, Langenscheidt) is of solid merit as a contribution to the study of English, but not very interesting. It opens with an article on 'Suggest, Suggestion, Suggestive,' which is well fortified by references showing various usages, but which refines on meanings far too much. Many of the various sections are covered by the meaning involved in the phrase "hint a fault and hesitate dislike," or to say half of a whole to which you do not wish to pledge yourself. This meaning of a hint covers some passages in which "suggestion" is certainly not equal to "contents" (*Inhalt*), as the author supposes. We find further a careful study of Chatterton's Rowley vocabulary, several notes on English idioms obscure to a foreign mind, and a review of a German version of 'The Egoist.'

WITH a selection of indoor games Messrs. C. W. Faulkner & Co. send a variety of beautiful Calendars and Christmas Cards which fully maintain a high level of excellence as regards design and execution, though it could be wished that the lines and phrases chosen to express the season's greetings were more worthy of the setting provided for them. With the wealth of our literature to draw upon, there should be no difficulty in selecting something better.

WE have received a packet of Diaries published for Letts's Diary Company by Messrs. Cassell. The diaries are of all sizes, and seem to us admirably practical and well arranged. The 'Daily Health Diary,' by Eustace Miles, is a new idea, and gives copious instructions as to food and exercise. The 'Rough Diary,' with a week in an opening and blotting-paper between the leaves, is strongly to be commended, and to be had in various styles, all of which are moderate in price.

WE have on our table *The Idol of the King*, by Capt. Curties (Hutchinson),—*The Marrying of Gwendoline Jane*, by Mrs. Tom Godfrey (Hutchinson),—*A Heart's Harmony*, by Ethel M. Forbes (Melrose),—*The Selling Plater*, by Nat Gould (John Long),—*Bobbie Guthrie*, by A. N. Simpson (Paisley, Gardner),—*The Ladder of Pain*, by G. H. R. Dabbs (Deacon),—*How's that, Umpire?* by Chilosa (F. V. White),—*An Outlander in England*, by J. H. M. Abbott (Methuen),—*Under Guiding Stars*, by A. B. Poor (Putnam),—*Our Best Society* (Putnam),—*The Story of Stella*, by Caroline B. M'Lean (Sonnenschein),—*After his Kind*, by M. S. Henderson (Duckworth),—*Pole Baker*, by W. N. Harben (Harper),—*The Chosen*, by J. T. Findlay (Hodder & Stoughton),—*The Making of Michael*, by Mrs. F. Reynolds (Allen),—*Sir Raoul*, by J. M. Ludlow (Oliphant, Anderson & Ferrier),—*Mr. Lion of London*, by J. J. Bell (Hodder & Stoughton),—*Three Little Conspirators*, by H. Beaumont (Wells Gardner),—*A Soldier of Japan*, by Capt. F. S. Brereton (Blackie),—*The Redfords*, by Mrs. G. Cupples (Blackie),—*The Zoo*, by A. T. Elwes and Rev. T. Wood (Wells Gardner),—*River and Forest*, by E. S. Ellis (Cassell),—*Crab Cottage*, by R. Jacberns (W. & R. Chambers),—*Stories from Shakespeare*, by Jeanie Lang (Jack),—*Nursery Rhymes*, selected by Louey Chisholm (Jack),—*With Nelson in Command*, by R. Leighton (Melrose),—*Fairy Tales Every Child Should Know*, by H. W. Mabie (Heinemann),—*In Wild Maratha Battle*, by M. Macmillan (Blackie),—*Thimblekin, Tom, and the Showman*, by M. E. Murray (S.S.U.),—*How Things went Wrong*, by R. Jacberns (Wells Gardner),—*The Knight of the Cave*, by W. L. O'Byrne (Blackie),—*Kings of the Quarterdeck*, by A. Temple (S.S.U.),—*Squire and Page*, by G. I. Whitham (Blackie),—*Le Capitole Romain, Antique et Moderne*, by E. Rodocanachi (Paris, Hachette),—*Profils Anglais*, by C. A. Sainte-Beuve, with a Preface by A. Turquet (Dent),—*Le Carte d' America di Giacomo Gastaldi*, by Stefano Grande (Turin, Clausen),—*L'Occupation Allemande du Vénézuéla* and *Les Origines Vénézuéliennes*, by J. Humbert (Paris, Fontemoing),—*Christianisme en Orient*, by Père Antoine Rabbath (Luzac),—*L'Expédition de Chine de 1860*, by Henri Cordier (Paris, Alcan),—*Analecta Comica Græca* and *Sophoclis Antigone*, edited by F. H. M. Blaydes (Williams & Norgate),—*Abschaffung des britischen Sklavenhandels im Jahre 1806-1807*, by F. Hochstetter (Leipsic, Duncker & Humblot),—and *Deux Études sur la Grèce Moderne*, by Comte de Gobineau (Paris, Plon-Nourrit).

AMONG New Editions we have *Handbook of Metallurgy*, by Dr. C. Schnabel and H. Louis, Vol. I. (Macmillan),—*The Pharsalia of Lucan*, translated into Blank Verse by Sir E. Ridley (Longman),—*The Dog Crusoe*, by R. M. Ballantyne (Blackie),—*The Heiress of Courtleroy* (Blackie),—*Historic Boys*, by E. S. Brooks (Blackie),—*Red Pottage*, by Mary Cholmondeley (Arnold),—*The Brig "Audacious,"* by A. Cole (Blackie),—*Silas Marner*, by George Eliot (Dent),—*Dick o' the Fens*, by G. M. Fenn (Blackie),—*In Freedom's Cause, The Lion of the North*, and *The Young Carthaginian*, by G. A. Henty (Blackie),—*Afloat at Last*, by J. C. Hutcheson (Blackie),—*Children of the New Forest*, by Capt. Marryat (Blackie),—*Two Gallant Rebels* and *A Stout English Bowman*, by E. Pickering (Blackie),—*Westward with Columbus*, by Gordon Stables (Blackie),—*A Waif of the Sea*, by Kate Wood (Blackie),—*Elements of Law*, by Sir W. Markby (Oxford, Clarendon Press),—*Historical Geography of the British Colonies*, by C. P. Lucas (Oxford, Clarendon Press),—*In Bohemia*, by Mrs. T. S. Hunt (Gay & Bird),—*A Guide to the Fossil Reptiles, Amphibians, and Fishes in the British Museum* (The Trustees),—*History of India*, by C. F. De La Fosse (Macmillan),—and *A Harmony of the Gospels for Historical Study*, by W. A. Stevens and E. D. Burton (Hodder & Stoughton).

HENRY FIELDING'S FAMILY.

THE biographers of Henry Fielding appear to have accepted the tradition which ascribes to his friend and benefactor Ralph Allen the chief credit for the maintenance and education of Fielding's destitute widow and children. This version of the matter was obviously very probable; but as long ago as February 1st, 1890, the publication by Mr. G. A. Aitken in this journal of the probate of Henry Fielding's will threw a new light upon the family dispositions. From these documents we learnt that, Ralph Allen having renounced execution and administration of the will, Sir John Fielding acted as guardian and trustee of his half-brother's family. This arrangement was certainly both natural and convenient, for Sir John had for some time past been acting as his brother's "understudy" at Bow Street, he had succeeded to his position there, and being in need of domestic attentions owing to his blindness, he was already installed as a member of his brother's household. The actual position of affairs, as described by Sir John Fielding in the following letter to Viscount Barrington, may therefore be accepted without much difficulty, although the acceptance involves the correction of an important omission in the existing biographies.

It may be suggested that Lord Barrington's interest in the Fieldings was due to the close official relations which existed between the War Office and the magistracy in connexion with the execution of the law in the case of deserters, militiamen, &c. It will be noted in connexion with Horace Walpole's well-known travesty of the Fielding *ménage* that the Barringtons had opposed Sir Robert Walpole's policy. The reference in this letter to Fielding's children is interesting, as it enables us to place the death of the surviving daughter by his first marriage, as well as that of his younger daughter Louisa, before December, 1758. The letter itself is preserved amongst the War Office records in the series officially described as "In-Letters, Miscellanies."

Sir John Fielding to [*Lord Barrington*].

Bow Street, Dec. 16th, 1758.

.....Before I conclude this letter I must beg leave to mention a circumstance that has given me some concern. I find that my late Brother's widow has applied to your Lordship for a thing which I have told her myself was irregular and could not be granted; but I assure you she did it without either my knowledge or consent; least therefore your Lordship's humanity should suffer from a supposition of her being in distress at present, I thought it my duty to say a word or two on that subject. When my brother died he left little more than would answer his just debts and left a widow and four children, one of which is since dead. This family I have taken to myself and hope from my own labours so long as I shall live to support them handsomly: and I do assure your Lordship that the tenderest regard is paid to their healths, the exactest care taken of their educations and the most unwearied diligence used by me to make her forget the loss of a husband, them of a father: nor has she or them been deny'd one earthly thing in my power since my brother's death; but on the contrary I have told her, her friends and all my acquaintance that so long as I have one shilling in the world they shall have the same share of it as if she was my own wife, they my own children. Doubtless as life is precarious and as their subsistence depends on mine it would make me very happy if she could obtain some certain establishment for her own life, but I should be glad to be acquainted with the nature of her applications. I hope your Lordship will excuse this little piece of family history from one who will always take a particular pride in approving himself, my Lord, your &c.

J. FIELDING.

THE SWINTON CHARTERS.

November 16th, 1905.

IN reviewing Sir Archibald Lawrie's excellent compendium of 'Early Scottish Charters' I expressed the opinion that, however salutary scepticism may be in measure, Sir Archibald had pushed it too far in regard to certain documents, the authenticity of which had never been impugned before. I had specially in mind the doubt thrown by the author upon the origin of 'The Book of Deer' and of the two charters preserved at Durham purporting to be grants of the lands of Swinton by David I. to Arnulf or Hernulf in, or shortly after, the year 1136. "I suspect," says Sir Archibald, "that they were forged by the monks to support the claims of the Church on the lands of Swinton."

At the time I wrote, I entertained no doubt that Sir Archibald's suspicion had been strengthened by inspection of the originals; but, since then, I have seen a letter from a correspondent in the July number of *The*

Scottish Historical Review, from which it appears that Sir Archibald had never seen the originals when he wrote, but based his opinion solely upon the internal evidence of the documents.

I desire to say that, had I been aware of this at the time I wrote the review, I should have commented upon the degree in which this fact lessens the weight of Sir Archibald's suspicion. Surely the parchment, seals, and handwriting must be taken into account as indications of date and origin. Sir Archibald's volume will remain for long—perhaps for ever—the standard compilation of early Scottish charters. It is of great importance that the question he has raised about the Swinton charters should be settled one way or other, if possible, by the scrutiny of palæographers and other experts.

THE REVIEWER.

COVERDALE'S BIBLE OF 1535.

Trinity College, Cambridge, November 19th, 1905.

I REGRET that in my edition of Bishop Westcott's 'History of the English Bible' (p. 57, note) I have attributed to the authorities of the British Museum an approval which they have never given to the theory that Coverdale's Bible of 1535 was printed at Antwerp by Jacob van Meteren. For this error I most sincerely apologize. The note was written away from books, a most unsafe proceeding, and what I had in my mind was the Catalogue of the Caxton Exhibition, in which the statement with regard to the printer and place of printing occurs seven times without any warning that it is purely conjectural. If for "British Museum" the words *Caxton Exhibition* be substituted, the note will be correct. W. ALDIS WRIGHT.

SWIFT AND LEMUEL GULLIVER.

Muniments Room, Westminster Abbey.

BY the kind permission of the Very Rev. the Dean of Westminster, I am enabled to publish in your columns a very curious discovery, of great literary interest, which I have lately made among the Westminster Chapter archives. Out of a box whose contents were labelled on the inside of the cover as "Miscellaneous Documents" my assistant brought me a packet of papers which he asked me to give him the date of, as he was about to arrange the contents of the box, then in no sort of order. I found the papers (about a dozen in number) to be the proceedings in actions brought by Lemuel Gulliver, of Westminster, against Peter Swift for ejecting him from premises in St. John's parish, Westminster, which were leased to him by the Dean and Chapter on October 1st, 7 Geo. II. (A.D. 1733), and from premises in St. Margaret's, Westminster, similarly leased on December 26th, 11 Geo. II. (A.D. 1737), and again on December 25th, 17 Geo. II. (A.D. 1743); and also from premises in St. Martin's-le-Grand, London, similarly leased on October 1st, 22 Geo. II. (A.D. 1748).

Another set of papers in the same box contained the proceedings in a like action brought by Lemuel Gulliver against Peter Swift, yeoman, late of Longdon, co. Worcester, for ejecting him from the rectory of Longdon, the chapels of Moreton Castle and Chaddesley, co. Worc., and their appurtenances, leased to the said Lemuel by the Dean and Chapter of Westminster on April 1st, 14 Geo. II. (A.D. 1741).

Accompanying the above actions are bills of costs dated 8, 14, and 22 Geo. II.

The above Peter Swift lived at Longdon, a place not far removed from Goderich, co. Hereford, of which Thomas Swift, grandfather of Jonathan Swift, Dean of St. Patrick's, Dublin, was vicar.

Curiously enough, in the Dean's work 'Gulliver's Travels,' Lemuel Gulliver, in Part II. chap. vi., seems to allude to the above actions, where he tells the King of Brobdingnag that he was the better able to satisfy him in several points in relation to the English courts of justice, having been formerly almost ruined by a long suit in Chancery, which was decreed for him with costs.

I have traced the Gulliver family as tenants of the Dean and Chapter of Westminster back to the time of Queen Elizabeth, when they spelt their name "Collyver."

EDWARD J. L. SCOTT, D.Litt.

Literary Gossip.

IN the December *Cornhill* 'Austerlitz,' by Lieut.-Col. Picquart, is a centenary study which gives the French military view not only of Napoleon's most famous battle, but also of its military and political lessons for the present day. Appropriate also to December 10th, the twenty-eighth anniversary of the battle of Plevna, is 'Plevna Revisited,' by Capt. W. von Herbert, who when a lad served as an officer in the besieged Turkish army. Canon Beeching contributes 'An Examination in English Literature, with some Select Blunders,' and Mr. Joseph Shaylor writes as an expert on the history of 'The Christmas Book.' The penultimate chapter of 'Reminiscences of a Diplomatist in St. Petersburg before the Crimean War' touches, among other subjects, upon the treasures of the Hermitage collection. Mr. Frederick Boyle writes of 'The Fascination of Orchids,' and Mr. Alfred Cochrane has a poem, 'The Sweeper of the Leaves.'

MR. CHARLES WHIBLEY contributes to the December *Blackwood* a second article on the life of William Pitt, and the author of 'A Retrograde Admiralty' a paper on 'The Naval Officer, Past and Future.' Dr. Mair, ex-Moderator of the Church of Scotland, discusses the present and future of the Scottish Churches; Col. de la Poer Beresford, late military attaché at St. Petersburg, describes the situation and his journeys in the Caucasus; and there is a poem by Mr. Alfred Noyes, entitled 'Slumber Songs of the Madonna.' There are also articles on 'The Tweed,' by Mr. Andrew Lang, and on 'The Second Earl Granville.'

WE are reluctant to credit France with those solid qualities of statesmanship that we think are peculiarly English. We accept our Burleighs, Walsinghams, and Cromwells as something very natural to us, though foreign to continental neighbours; and Voltaire has given us authority for the decision. There are, however, such figures in France, and we are glad to hear that the Oxford University Press is publishing a book by the Rev. A. E. Shaw on Michel de l'Hospital, who is little known to English readers, and deserves more than passing attention. His long career covered a large and interesting period of the sixteenth century.

MESSRS. SONNENSCHEIN are publishing shortly 'A Dictionary of Indian Biography' from 1750 to the present day, by Mr. C. E. Buckland, for whom, it may be remembered, we inserted lists of names for additions. The work will notice about 2,600 persons, will be in one volume of moderate size, and will contain a copious bibliography, so that altogether it is likely to be a very useful book of reference.

DR. B. P. GRENFELL and Dr. A. S. Hunt have left for Egypt to resume their excavations at Oxyrhynchus. Part I. of the Hibeh Papyri is now being printed, and will be issued in June next. The volume consists of papyri of the third century B.C. from mummy cartonnage, including many classical fragments.

PROF. GOLLANCZ, the Secretary of the British Academy, who during the past two years has been holding the Chair of English at King's College, London, has accepted a proposal of the Council of the College which will necessitate his retirement from Cambridge. He has decided to relinquish his work at the end of the present term. During the past eighteen years he has borne the main burden of the English teaching in the University. The University Lectureship in English, which he has held since its foundation in 1896, will shortly be filled up. Candidates are invited to send applications to the Vice-Chancellor, with or without testimonials, not later than December 2nd.

A VOLUME of plays and poems, entitled 'The Two Arcadias,' shortly to be issued by Messrs. Brimley Johnson & Ince, is the work of a new writer, Miss Rosalind Travers, who is introduced to the public by Dr. Richard Garnett.

THE first series of twelve volumes of the writings of early English dramatists are now being printed. The series is chronologically arranged, with occasional "extra" volumes or earlier moralities, interludes, masques, entertainments, &c. Each volume is furnished with a note-book and word-list in one alphabet, in dictionary form, containing various notes and a glossary. The series is being privately printed for subscribers by the Early English Drama Society, 18, Bury Street, Bloomsbury.

THE King Alfred School Society held a conference yesterday on 'Co-Education' at University College, Gower Street.

LOUEY CHISHOLM is preparing for publication a 'Book of Poetry for Children,' and invites from those interested suggestions of pieces contained in no existing anthology. Communications should be addressed to Messrs. T. C. & E. C. Jack, Causewayside, Edinburgh.

THE publication of Mrs. Paget Toynbee's edition of Horace Walpole's Letters will be completed on December 11th, when the sixteenth volume will be issued from the Oxford University Press. It will consist of indexes of persons, places, and subjects, including matters of art and art criticism, prepared with the assistance of the Rev. Andrew Clark, Mr. C. F. Bell, and other scholars. The subscription list will close on the publication of the final volume. The Letters are to be had, we may remind our readers, in three editions.

MR. BODLEY is to give two lectures on 'The Church in France' at the Royal Institution on Saturday afternoons, January 20th and 27th. Mr. Bodley was invited to inaugurate the last winter session in

Albemarle Street with two lectures on this subject, but was then too ill to accept.

A CORRESPONDENT writes:—

"In the review of the 'Dialect Dictionary,' p. 639, col. 1, the difficulty of expressing the *sound* of dialect words, in print, is forcibly expressed; and the presence of that difficulty is readily understood by every one. Local dialects are being gradually — and rather quickly—submerged. On p. 648 of the same issue I see a notice that Messrs. Heffer, of Cambridge, have introduced a system of teaching the pronunciation of foreign languages by means of the phonograph. Could not the same means serve towards conveying the sound, accent, &c., of dialect words as now spoken, for future reference?"

The idea is excellent. The use of the phonograph did not originate with Messrs. Heffer. It was employed, we think, for records of foreign languages some while ago.

MR. JAMES T. CLARK has tendered his resignation of the office of Keeper of the Advocates' Library, Edinburgh, which he has held for upwards of thirty years.

MR. CHARLES P. SISLEY is resigning the editorship of the *London Magazine* in the new year.

MR. GEORGE TANCRED, of Weens, author of 'Annals of a Border Club,' has nearly ready for publication 'The Chronicles of a Border Parish: being a Family History of Rulewater,' in Roxburghshire.

MESSRS. PUTTICK & SIMPSON'S book sale of December 4th and following day is notable as comprising several rare and early editions of the Bible, in various languages, including a selection from the library of the late Francis Fry. Amongst the more important items may be mentioned the first editions of the Scriptures in Welsh, Polish, Swedish, Danish, and the Romance languages; Biblia Latina, Basil., 1475; Biblia Latina, Venet., 1475; Biblia Germanica, Nuremberg, 1483; and Cranmer's Bible, 1540. Other important lots in the sale are Beauchasteau, 'La Lyre du Jeune Apollon,' Louis XIV.'s copy, with arms, an exceedingly rare book with portraits; Dibdin's bibliographical works, fine copies; 'Paradise Lost,' 1668, and 'Paradise Regained,' 1671; 'Plinii Historia Naturalis,' 1470; Carey's 'Life in Paris,' large-paper copy in the original parts as issued; and some very fine Spanish illuminated manuscripts.

Temple Bar for December contains a second series of extracts from Lady Sarah Lyttelton's letters and diaries, edited by the Hon. Maud Lyttelton. In this instance Lady Sarah writes from Russia, 1813–14, and often refers to Napoleon's invasion. She describes many notabilities, and among her experiences is an attack of frost-bite in the streets of St. Petersburg. Mr. R. O. Winstedt gives an account of a Malay Court ceremony presided over by the Sultan of Perak, with his deposed predecessor as a guest. 'Japanese Ghosts' records several quaint and poetic superstitions, told to an English resident. Mrs. Antrobus contributes a North-Country portrait of Eli Grimshaw, 'Th' Fiddler.'

A MEMORIAL to the late Bishop Ellicott is to be placed in Gloucester Cathedral. Donations are asked for the purpose, and may be sent to Lloyd's Bank or the Capital and Counties Bank at Gloucester.

M. L. BRANDIN will on Tuesday, in connexion with the Alliance Franco-Britannique, deliver a lecture on 'Parnassiens et Symbolistes' at the Society of Arts.

THE Methodist Publishing House have just issued a complete edition of their new Methodist Hymn-Book, containing about 1,000 hymns, printed in the Braille type for the use of the blind. It makes eight large quarto volumes. This is said to be the first complete hymn-book that has been published in the Braille type.

THE Imprimerie Nationale publish at Paris for the Ministry of Commerce a report, by M. Briat, "in the name of" the Conseil Supérieur du Travail, on 'L'Enseignement Professionnel.' It deals chiefly with apprenticeship and the technical education of persons under eighteen, and calls for legislation to make the latter free and compulsory. The United Kingdom is named as being in this matter behind Germany, Austria, Denmark, Hungary, Switzerland, and Norway. Our progress since the Acts of 1889 and 1891 is, however, set forth. The report contains a draft Bill, and the debates upon it between employers and workmen.

WE regret to hear of the death of M. Georges Charpentier, the well-known publisher of Paris, in the fifty-ninth year of his age. He was the son of Gervais Charpentier, who founded the business, and published for many famous writers, including the brothers De Goncourt, Gautier, Zola, Flaubert, and Daudet. Before entering his father's firm Charpentier did a good deal of journalistic work, and kept up intimate friendships to the end of his life with nearly all the leading authors of Paris. The business is being carried on by his partner and successor, M. Eugène Fasquelle.

READERS of Russian newspapers note the rise of a new word, a transliteration of "Hooligans." Difficulties in the Russian alphabet cause it to be written "Kuligans" in the south and "Guligans" in the north. The Russian use of the term is for the Church and King mob.

THE death, in his sixty-ninth year, is announced from Karlsruhe of Dr. Friedrich Weech, Director of the Archives, and author of 'Geschichte Badens,' 'Die Deutschen seit der Reformation,' 'Geschichte der Residenz Karlsruhe,' and other valuable historical and biographical works.

SCIENCE

The Secret of the Totem. By Andrew Lang. (Longmans & Co.)

IN our review of Mr. Lang's 'Social Origins' (No. 3947) we were obliged to take exception to both method and conclusions. In the present book Mr. Lang is most careful to state as clearly and categorically as his difficult subject allows each stage of his conclusions, and we are bound to say that he makes out a good case, not exactly for the theory he propounded in his earlier book, but for a more considered exposition, and a consequent modification, of that theory, which is virtually the object of his second book.

Every student of early man must reckon with Mr. Lang's views. If he differs from them, it will be necessary to state to what extent and on what grounds. If he agrees, it will be necessary to state how he fits on his new material to the formula propounded by Mr. Lang. It will be gathered from this way of putting the case that though Mr. Lang has not convinced us that his view is as yet entirely proved, he has converted us to a position of hesitancy with regard to the relative merits of his own and his opponents' views on the earliest social organization of man. So far as his own views are concerned we have an explicit and clear statement both of evidence and conclusions, and we do not have to meet difficulties of definition as to the family or other groups in which early man lived. Everything is much clearer, therefore. Mr. Lang is particularly strong, when he is discussing origins, in making it quite clear that conjecture only is possible in such a case; and he claims—and claims rightly—that the only admissible conjecture is one based upon the evidence supplied by the most primitive examples of human social forms, and capable of carrying the largest possible number of known conditions belonging to those examples. So far as the views of his opponents are concerned, Mr. Lang, always a searching and powerful critic, goes direct to the weak places in their argument, and thereby helps the cause of science materially. Where he fails, in our judgment, is in the assumption that in stating his own logically considered conclusions he is also stating the logic of primitive man, and that because he succeeds in proving that his opponents have stated their case in terms which admit of his crushing objections to them, he is disposing of the whole of it.

Mr. Lang relies for his examples of the most primitive types of man upon the Australian natives, who have been the subject of such splendid investigation by Messrs. Spencer and Gillen, Dr. Howitt, Mr. Fison, Dr. Roth, and others. He takes upon himself the determination of which of the tribes that have come under investigation are the most primitive and which are more advanced; and he rules out of court—by implication, if not actually—evidence to be derived from anywhere else. This surely is an "immense" beginning. He settles that the Arunta group of Australians, claimed by Messrs. Spencer and Gillen as the most primitive, are in fact the most advanced; and the rest of his conclusions are based upon this settlement of the case. He has Mr. Hartland among modern scholars on his side in this matter, but he has opposed to him Mr. Spencer, Dr. Howitt, and Mr. Frazer. And in not admitting evidence from America and elsewhere he is putting aside the whole doctrine of survival in culture, which we had always thought to be one of the fundamental bases of anthropological science.

Perhaps within the limit of his present study this course was necessary; but there is nothing to show that it is not an essential part of Mr. Lang's argument. And we think it leads him astray. Thus, in discussing Mr. Frazer's theory of totemism, he objects to the Arunta system of ignoring altogether the intercourse of the sexes as the

cause of offspring as evidence of Arunta primitiveness, because "tribes much more primitive, the south-eastern tribes.....are perfectly well aware of all that the more advanced Arunta do not know," which is of course using his own conclusions to prove his own conclusions. And throughout it appears to us that the presumed advance of the Arunta type is used for more than it can bear. For if further research confirms Mr. Spencer's opinion that the Arunta are on the whole the more primitive type of Australian social grouping, in spite of Mr. Lang's most able arguments to the contrary; and if further it is shown that it is impossible to take all the elements of any one type to be evidence of one level line of culture advance, instead of affording evidence of an irregular line of advance and non-advance side by side, then the largest part of his theory has no basis upon which to rest. Again, we believe that survivals of totem beliefs elsewhere are not on one plane of advancement. There are strata here as everywhere else in the culture structure; and when we can note, as among the Melanesians for instance, the dual division into exogamous classes; the absence of tribes, and in their place purely local groups; a naming system by which it seems as though the residence of the local group where a particular fish is abundant had given rise to a belief in a connexion with the fish and to a name derived from it; a system of totem beliefs, and yet not totemism, something is needed to justify the exclusion of such evidence beyond the fact that in other respects the Melanesian people are higher in culture than the Australian.

Mr. Lang has admittedly not studied the economic side of the question, the side which is most favoured by an authority of the standing of Dr. Haddon. He accepts Darwin's biological conclusions as to the social beginnings of man, though he rejects in a foot-note the corollary to this in Dr. Westermarck's evidence for a human pairing season. But a wider question opens up even at this commencing stage. Man was, from the time when he became man, always something more than animal. His inheritance from animal ancestors was being checked by his intellect, and above all things he had the precious gift of being able to use his experience in the intensity of his struggle for improvement. Mr. Wallace puts it very strongly thus:—

"That he acted upon his experience consciously seems to be one of the results of his superior mental endowments, and therefore one of the causes of his superior range of development. Thus the history of economics may be said to begin with the adaptation of the social unit to the productive powers of its food supply, and to have ended with the adaptation of the productive powers of food supply to the social unit."

It is during these first stages, when the pressure from without the human group determined largely the course of development within it, that the secret of the totem will be found, and we are not therefore prepared to give a verdict in Mr. Lang's favour while he attempts to raise on a basis too narrow for the purpose the magnificent structure of man's social origins.

We have been critical. Mr. Lang will be the first to acknowledge that this is serving a more useful purpose on behalf of the study which he loves so well than merely cataloguing those points in his book with which we are in agreement. But it would be unfair if we omitted to say that he has made a distinct advance towards the solution of many difficult problems. In particular he has succeeded in proving that the tribal system is not primitive, and that local groupings came first. The importance of this conclusion, supported as it is by cogent reasoning, cannot be overrated, and probably it will get rid of much loose talk by writers who have hitherto not discriminated overmuch in the terms they use. It makes clear much that has not hitherto been clear in anthropological study, and we dare to suggest that some passages in 'Social Origins' would be rewritten by Mr. Lang in consequence. He brings out, too, the important fact that the study of savage man (we do not like the adjective, but perhaps its use is inevitable) is not the same as the study of earliest man. We have to project ourselves behind savage man to the conditions from which he advanced. This is taking up the same line as McLennan adopted, but taking it up with all the added advantages which present research allows. Mr. Lang has no delusions on this point, and it is refreshing to have such an authoritative statement on the subject.

Finally, Mr. Lang's method of dealing with his argument is altogether admirable. It is clear, consistent, and logical, and when one bears in mind the intricacy of the problems which he has discussed, one cannot be too thankful for a treatise which makes plain as it proceeds not only the meaning of obscure facts, but also the position which these facts are to occupy in the argument under consideration.

Smiles's *Physical Education of the Young* has been edited, with additions, by Sir Hugh Beevor (Walter Scott Publishing Company). So long ago as 1838, in reviewing this book, we said: "We particularly recommend his [Smiles's] observations on premature efforts at intellectual education, precocious acquirement, and the order of development which nature requires in the rearing of children." The book remains sound on this side, but it is on the physical side of rearing children that its teaching is, perhaps, most pertinent to-day. Sir Hugh Beevor has supplied abundant proofs of the degeneration of present England, due largely to the crowding in towns, and he has judiciously added contemporary information which is sufficiently startling to those who think. Smiles, as we said the other day, hardly appeals to the young man of to-day, but he was an admirable popularizer, and we hope his occasionally old-fashioned phraseology will not prevent his book from being read. It deals with a vital problem of to-day, and may dissipate ignorance to which many lives are yearly sacrificed. The editing has been well done, being brief, but to the point. Section 5 of chap. v. is described as an ideal picture not realized, but surely nature study, as now taught, is one of its chief points. 'The School out of Doors' is the title of one of the season's books.

All astronomers and those interested in astronomy will heartily welcome the new edition of Miss Clerke's *System of the Stars*, which has recently appeared (A. & C. Black). This important work was originally published in 1890, and fifteen years in these days count as a long spell of time in sidereal research. Extensive modifications have therefore been introduced, new chapters inserted, and the whole has been thoroughly revised and brought up to date. Most of the illustrations have been specially prepared for this volume, and acknowledgments for the use of photographs and drawings are made to Sir David Gill, Profs. Hale, E. C. Pickering, and Campbell, and others.

SOCIETIES.

Geological.—*Nov.* 8.—Dr. J. E. Marr, President, in the chair.—Mr. E. J. Beer and Mr. J. Shaw Frith were elected Fellows.—The President announced that the Council at their meeting on June 28th last had passed the following resolutions: 1. "The Council desire to record on their minutes an expression of their deep regret at the death of their distinguished Treasurer, and of their grateful recognition of the loyal and effective services which for so long a series of years he has given to the Geological Society as Secretary, President, Treasurer, and Member of Council." 2. "That a copy of this resolution be forwarded to Mrs. Blanford, with an expression of the deep sympathy of the Council with herself and family."—The following communications were read: 'The Coast-Ledges in the South-West of the Cape Colony,' by Prof. E. H. L. Schwarz,—and 'The Glacial Period in Aberdeenshire and the Southern Border of the Moray Firth,' by Mr. T. F. Jamieson.

Asiatic.—*Nov.* 14.—Sir Charles Lyall, V.P., in the chair.—Mr. Robert Sewell gave, with limelight illustrations, an account of the antiquarian results of his tour in the East during last winter. He began with Java, where the great Buddhist structure at Boro-Būdūr is the most striking monument. Several photographs were shown, amongst others a sculptured representation of a shrine, the pillars of the porch closely resembling the ancient Pallava-Chola type of Southern India. Boro-Būdūr is said to have been built between A.D. 750 and 900. Photographs of the great temples at Brambanan, Chandi S'ewu, and other places were shown. The Javanese *nandi*-bull, the vehicle of S'iva, is different in attitude from those in India, the former having a bent head with a look of servility, in contrast to the latter, which always have the head proudly raised. The sculptures of the temples appear at first sight far more Brahmanical than Buddhist, and afford an illuminating insight into Mahāyānist beliefs. Mr. Sewell also showed by photographs the strong Far-Eastern influence observable in Javanese sculpture, the god S'iva being in many cases a purely Cambodian or Chinese figure, and the lotus-leaf decorations of others being of Chinese or Japanese type. Mr. Sewell then turned to Burma, and showed several photographs of the remains at Pagān. As to the glazed-tile decorations of the Ananda temple he differed from the views of the Government Archæologist, holding these to represent not stories of Buddha's former lives, but merely the demons of Mārā, the Evil One. The interior of the U Bali Thein chapel somewhat resembles the Spanish chapel at Florence. Interesting views of the Kyankū temple, which dates from about 1000 A.D., were shown. The true voussoir arch was extensively used at Pagān. Passing to Ceylon, the lecturer showed a Mahāyānist sculpture at Anuradhapura of a four-armed Hindu goddess, as well as a S'iva-nandi, both from the Vijayārāma monastery; and a granite coffin shaped exactly like the abbots' coffins in Europe. But Mr. Sewell's most interesting exhibits were three marble sculptures, one of which bears part of a very clear inscription of the early fourth century A.D., and which he was convinced had been brought over to Ceylon from Amarāvati, in India. The inscription being in Singhalese, it must have been engraved after its arrival in the island. And since one of the sculptures belongs to the older period of Amarāvati art, and probably to a building dismantled about the beginning of the fourth century, it is possible (though not proved) that these three marbles all came together to Ceylon. The celebrated tooth-relic was first brought to the island from Kalinga, according to Singhalese chronicles, in the ninth year of King Kīrttis'rī Mēghavaṇṇa, which corresponds to the period above mentioned; and it is quite possible that the inscribed fragment (part of a pillar) was engraved by that king. Only the ends of lines are seen, but it is just possible that this may be his edict commanding the annual observance of a festival and procession in honour of the relic. Fāh-Hiān mentions the presence of the tooth at Anuradhapura in A.D. 410, and the 'Dāṭhāvaṃsa' (written at a later

date) states that King Kīrttis'rī Mēghavarṇa had caused a record to be written. It would be very interesting if it should turn out that this was the very record referred to. It is to be hoped that the other portion of the pillar may be searched for and found.—A discussion followed, in which Dr. Hoey, General Gosset, Mr. Sturdy, Mr. Thomas, and Dr. Grierson took part.

BRITISH ARCHÆOLOGICAL ASSOCIATION.—*Nov.* 15.—Mr. R. H. Forster, Treasurer, in the chair.—An interesting paper was read by Mr. Emanuel Green on 'The Roman Channel Fleet, with Notes on Clausentum and the Isle of Ictis.' After tracing the journey to Britain by sea and land of the Emperor Claudius and his return home, where he received a grand ovation as having girdled the earth with a Roman ocean, Mr. Green showed that from this time the military movements on land were supported by the Classis Britannica, guarding the Fretum Britannicum, the narrow sea. This important fleet, which existed for four hundred years, has hitherto been entirely overlooked. Many finds and evidences were noticed. Thus at Boulogne there is an inscription in honour of a trierarch, or captain, who was a known contemporary of Claudius; and tiles and bricks have been found there as well as in Britain bearing the letters CL. BR. The revolt and success of Carausius were commented on, and especially a naval fight off the Isle of Wight, when the victors, the imperial galleys, continued their course to Clausentum, our Southampton. Clausentum has not received the notice it deserved as the western port of the narrow sea, as Richborough was the eastern, and so the guardian against the pirates of the North. From Clausentum the voyage to Gaul would be safe and well protected by the fleet. It was, in fact, the chief western port, and may be traced as the place for the shipment of lead from the Mendip mines. Another point not unconnected with this, the supposed large export of tin from Britain, was next minutely noticed, especially in connexion with the supposed tin islands, the Cassiterides and the Isle of Ictis. The old writers were examined and criticized chronologically, particularly the documents of Cæsar and Diodorus. The conclusion was that the early statements were written from hearsay, not from personal knowledge, and that there was no such early tin traffic with Britain. The mention of Britain in the story arose from the current belief that its western end was opposite Spain, and so in the ocean just outside or beyond the Cassiterides, and the isle of that group called Ictis. One writer was bold enough to assert that Britain was in full view from the Spanish coast. As to Cornwall, tin is not mentioned in the Domesday for that county. No tin was worked there until after that date. The story of a certain block of tin, now in the museum at Truro, said to have been found in Falmouth Harbour, and claimed as belonging to the early export, was sharply criticized, and declared to be one more myth in this mythical story. — Mr. Compton, Mr. Gould, the Chairman, and others joined in the discussion.

ROYAL NUMISMATIC.—*Nov.* 16.—Sir John Evans, President, in the chair.—Messrs. Edward Francklin, J. Mavrogordato, E. T. Newell, Evelyn W. Rashleigh, Robert Scott, and A. J. B. Wace were elected Fellows. — Mr. T. Bearman exhibited a quarter bawbee of James V. of Scotland, this denomination being unpublished.—Mr. J. B. Colson showed a bronze Anglo-Saxon brooch, the centre ornament of which was copied from a coin of Edward the Elder. — Mr. F. A. Walters exhibited two bronze Roman sestertii of Scantilla, wife of Didius Julianus, and Geta, in very fine condition; and an Anglo-Gallic salute of Henry VI.—Sir Augustus Prevost showed a medal struck in copper taken from the Victory, and distributed at a dinner given by the British and Foreign Sailors' Society; and Mr. W. Webster a half-groat of Aquitaine of Edward III., with the Irish title "Dux Hibernie" in place of "Dux Aquitanie." — A note by the late Mr. R. W. Cochran-Patrick on 'Some Original Documents relating to Touch-Pieces' was read by the Secretary. Amongst them was an order of James I. directing the Wardens of the Mint to strike some new angels for his use at the ceremony of touching, this being the coin then used for that purpose; and directions to the Treasurer and Under-Treasurer to pay for the same. Some interesting particulars were given relating to the touch-pieces issued after the Restoration.—Mr. J. G. Milne communicated a paper on Roman coin-moulds from Egypt, in which he described the use of these moulds and the manner in which coins were cast in them. This process appears to have been a *cire perdue* one. The moulds were made from coins of the beginning of the fourth century, mostly struck at the mint of Alexandria. In the course of recent excavations at Oxyrhynchus it was ascertained that the proportion of cast coins discovered there was one in five.—In connexion with the paper the President and Mr. G. F. Hill exhibited a series of similar moulds, some of which had been found in England, the others coming from Egypt.

ENTOMOLOGICAL.—*Nov.* 15. — Mr. F. Merrifield, President, in the chair.—Mr. W. R. Dewar, Mr. W. G. Sheldon, and Mr. F. C. Woodbridge were elected Fellows.—Mr. Arrow exhibited a flower-frequenting beetle from the Transvaal, illustrating a remarkable device for the cross-fertilization of flowers, one of the front feet being tightly clasped by the curiously formed pollinia of an Asclepias.—Mr. W. J. Kaye showed a remarkable specimen of *Agrotis tritici*, bearing a close resemblance to *A. agathina*. It had been taken this year at Oxshott, flying over heather in company with *agathina*, and was a good example of syncryptic resemblance brought about by the common habit of resting on heather.—Mr. W. J. Lucas exhibited a specimen of *Forficula auricularia* taken by Mr. R. A. R. Priske at Deal in September, having the left cercus normal, while the right was that of var. *forcipata*.—Dr. F. A. Dixey, who showed wet and dry season forms of South African pierine butterflies taken by him this year in Natal and Rhodesia, said that the exhibit illustrated the fact that these forms varied with the meteorological conditions prevailing at the different seasons.—Mr. E. Harris exhibited a long series of *Hemerophila abruptaria* to illustrate the proportion of light and melanic forms in a single brood.—Mr. Selwyn Image exhibited a male specimen of *Tortrix pronubana*, Hübner, new to Britain, taken at Eastbourne either at the end of September or the beginning of October, and sent to him on October 12th.—Commander J. J. Walker communicated a continuation of the paper entitled 'Hymenoptera-Aculeata collected in Algeria,' Part III., 'Diploptera,' by Mr. E. Saunders.

MICROSCOPICAL. — *Nov.* 15. — Mr. G. C. Karop, V.P., in the chair.—The Curator explained the lucernal and solar microscopes by Adams presented to the Society by Mr. Wynne E. Baxter. They were described by the maker in his 'Essays on the Microscope,' published in 1787.—Dr. Hebb exhibited a focussing magnifier made by Messrs. Taylor, Taylor & Hobson. Dr. Hebb said it was a small photographic auxiliary intended for focussing purposes, being placed against the ground-glass screen of the camera to magnify the image and examine its definition. It had a draw-tube with a screw ring to limit its withdrawal to suit the sight of the user. Dr. Hebb also exhibited a turntable, the joint invention of Mr. Flatters and Mr. W. Bradley. It was driven by clockwork, and was designed for turning oval cells and ringing oval mounts. By using this instrument it was also possible to run a ring round a needle point, strike a straight line, or turn circles.—A Nernst lamp, for use in enlarging photographs and also for use with the microscope, was sent for exhibition by Mr. R. W. Paul.—Mr. Watson-Baker, in addition to slides illustrating the anatomy of the tsetse fly, exhibited a specimen of the larva of Ochromgia, also from Africa, together with the perfect insect. The larva lives in the sandy earth, and attaches itself to the flesh and sucks the blood of the natives, causing very troublesome wounds. There was likewise a specimen of the ova of *Schistosoma sinensis*. This parasite had been recently discovered in the body of a Chinaman who died at Singapore.

HISTORICAL.—*Nov.* 16.—The Rev. W. Hunt, President, in the chair.—The following were elected Fellows: Lady Burghclere, the Rev. M. W. Paterson, Sir Harry Poland, Miss MacLehose, Mr. A. L. Artus, the Rev. J. H. Cooper, the Rev. C. E. Bolam, Mr. W. A. Phillips, Mr. H. W. V. Phillips, and Mr. A. W. Whitehead. Twenty-five libraries were admitted as Subscribing Libraries.—Papers were read by Sir Harry Poland, on 'Canning's Rhyming Despatch,' and by Dr. Holland Rose upon 'Canning and the Secret Intelligence from Tilsit, July, 1807.'—A short discussion followed, in which Col. Lloyd and Mr. H. E. Malden took part.

MEETINGS NEXT WEEK.

MON. Royal Academy, 4.—'The Head and Neck,' Lecture II., Prof. A. Thomson.
— Institute of Actuaries, 5.—'Valuation by Select Tables,' Messrs. T. G. Ackland, O. F. Diver, and G. King.
— London Institution, 5. — 'The Upper Nile,' Sir C. Elliot. (Travers Lecture.)
— Society of Arts, 8. — 'The Measurement of High-Frequency Currents and Electric Waves,' Lecture I., Mr. J. A. Fleming. (Cantor Lecture.)
— Surveyors' Institution, 8.—Discussion on 'The Licensing Act, 1904.'
TUES. Colonial, 4½.—'Sierra Leone and its Undeveloped Products,' Mr. T. J. Alldridge.
TUES. Institution of Civil Engineers, 8.—Discussion on 'Waterways in Great Britain.' Paper on 'The Steam Turbine,' Hon. C. A. Parsons and Mr. G. G. Stoney.
— Society of Arts, 8½. — 'Parnassiens et Symbolistes,' M. L. Brandin.
— Zoological, 8½.
WED. British Academy, 5.—'The Romanization of Roman Britain,' Mr. F. Haverfield.
— Society of Arts, 8.—'The British Association in South Africa,' Sir W. H. Preece.
THURS. London Institution, 6.—'The Birth of Britain over Seas,' Major Martin Hume.
— British Numismatic, 8.—Annual Meeting; 'A Numismatic History of the Reigns of William I. and II.,' Mr. P. W. P. Carlyon-Britton.
— Antiquaries, 8½.
FRI. Geologists' Association, 8.—'Gazella davisoni,' Mr. M. A. C. Hinton; 'Sections of the Holocene Alluvium of the Thames,' Messrs. A. S. Kennard and B. B. Woodward.
— Institution of Civil Engineers, 8.—'An Installation for the Bacterial Treatment of Sewage at Neath,' Mr. W. L. Jenkins. (Students' Meeting.)
— Philological, 8.—'The Study of Old French at English Universities,' Dr. H. Oelsner.

Science Gossip.

THE Council of the Royal Meteorological Society have awarded the Symons Gold Medal to Lieut.-General Sir Richard Strachey in recognition of the valuable work which he has done in connexion with meteorological science. The medal will be presented at the annual meeting of the Society on January 17th.

AFTER a course of six years the periodical *Climate* has ceased to be published in its present form, and will in future be amalgamated with *The Journal of Tropical Medicine*.

A QUARTERLY periodical, to be called *The Journal of Tropical Veterinary Science*, has been founded at Lahore by some officers of the Indian Civil Veterinary Department. Major H. T. Pearse, Principal of the Lahore Veterinary College, Capt. Baldrey, of the same college, and Mr. R. E. Montgomery, of the Bacteriological Laboratory at Muktesar, are the joint editors. It is hoped by its promoters that its sphere of utility will not be limited to India, and that those engaged in similar researches in other countries will make contributions.

MR. STANLEY WILLIAMS, of Hove, has discovered that a star in the constellation Cygnus is a variable of the type of β Lyræ. Its magnitude at the maximum brightness is 9·85, at the principal minimum 10·75, and at the secondary minimum 10·15. The star is B.D.+38°.4262; and its designation will be var. 107, 1905, Cygni. Dr. Götz, of the Königstuhl Observatory, has detected the variability of a star in Capricornus, which is probably of the Algol type. The magnitude changed between July 10th and August 3rd from 9·2 to 10·0. This will be reckoned as var. 108, 1905, Capricorni.

A NEW comet (*b*, 1905) was discovered at Geneva on the 17th inst. near the North Pole, but moving rapidly southwards towards the constellation Cassiopeia.

THE announcement by Prof. Ceraski, of Moscow, that a star in the constellation Cepheus, designated var. 79, 1905, Cephei, is a variable of the Algol type, has led Mr. L. Campbell, of Harvard College Observatory, to keep a careful watch upon it. He has found that its whole period is about 12·5 days, longer (with one exception, that of UZ Cygni, which is 31·3 days) than that of any other Algol variable as yet discovered. The range of change of brightness is about 1·7 magnitude, and the star remains at minimum for four or five hours. Its place for 1900 is R.A. $4^h\ 48^m\ 34^s$, N.P.D. 9° 54′·2.

THE small planets numbered 406, 520, 522, 542, 544, 565, 566, and 568 have received the names Erna, Franziska, Helga, Susanna, Jetta, Marbachia, Stereoscopia, and Cheruska respectively. The last was photographed by Prof. Max Wolf so long ago as November 28th, 1891, but its elliptic orbit could not be determined until it had been again photographed by Herr P. Götz on July 27th in the present year. The name of No. 569 (Misa) has already been announced.

THE ninth number of vol. xxxiv. of the *Memorie della Società degli Spettroscopisti Italiani*, which we have just received, contains a note by Signor V. Cerulli on corrections of

the orbits of planets, and a continuation of the diagrams of spectroscopic images of the sun's limb to the end of September, 1903.

FINE ARTS

Pisanello. By G. F. Hill. (Duckworth & Co.)

TIME has treated very differently the two halves of Pisanello's achievement. Of his medals a sufficient number exist—twenty-four, according to the list of M. Alois Heiss—to show how incontestable was his supremacy in the art. Of his paintings, two frescoes at Verona and the four small panels in the Louvre, at Bergamo, and in the National Gallery are all that survive. The work at Venice in the Doge's palace, in St. John Lateran at Rome, and in the castles of Mantua, Ferrara, and Pavia has perished. He had probably passed his fiftieth year when he executed his earliest extant medal, that of the Greek Emperor John Palæologus, made at Ferrara in 1438, and it had few, if any, predecessors; yet within a few years the record of his activity passes almost completely from the one art to the other. Were it not for the evidence of the drawings and the fact that he always signed his medals as "painter," the disintegrating tendency of latter-day criticism might conceivably have led to an attempt to dissociate the two personalities.

In treating of his work in painting Mr. Hill's scholarly monograph shows an admirable admixture of enthusiasm and restraint. All the evidence of contemporary record which research has revealed is carefully weighed and tested by that of the drawings in the 'Recueil Vallardi' and elsewhere, these being indispensable in any survey of Pisanello's work. The conclusions are stated simply and straightforwardly, and there is a noteworthy absence of dogmatism in what are matters of opinion.

Of Pisanello's early life very little is known. Guarino of Verona, in a poem which he addressed to him, claimed him as a compatriot, and this is borne out by Vasari. The works of Altichiero and Avanzo and their immediate followers at Verona and Padua certainly exercised a considerable influence upon his art. His picture at Venice representing Frederick Barbarossa, with Otto kneeling as a suppliant on behalf of the republic, was probably executed between 1409 and 1414; the importance of the commission argues that he had already attained to some eminence in painting. Vasari's attempt to write two lives in one is no doubt responsible for his confusing Pisanello with Gentile da Fabriano when he says that the former went to Rome with Martin V.; and Mr. Hill shows that his account of Pisanello's relations with Andrea del Castagno cannot be accepted, though this does not entirely preclude the possibility of some temporary association between the two painters. Vasari's statement that, according to some persons, Pisanello, when as a young man he was learning his art in Florence, painted the legend of the Pilgrim in the old church of the Temple, is discredited, on rather general grounds, by Mr. Hill, who prefers to assign this work to the years 1432–8, as a period in which we know very little of the artist's movements. This, however, is equally true of his earlier years if we reject Vasari's statement as to his having spent part of them in Florence. There seems some slight indirect support for Vasari's statement in the fact that his earliest existing work, the 'Annunciation' at St. Fermo, in the refinement and fragility of the figures has a faint suggestion of the manner of Orcagna and Lorenzo Monaco. The influence of the latter may also account for those characteristics in his art which have given rise to the suggestion that he had a training as an illuminator. They are seen as late as the masterpiece in St. Anastasia in the trappings of the horses, the treatment of the robes, and of the foliage which forms the background to St. George and the princess. Of this fresco and of the various drawings connected with it, as also of that at St. Fermo, Mr. Hill's description is at once sympathetic and succinct. The pilgrim in the Pellegrini shield at St. Anastasia he attributes to the pupil Bono da Ferrara, whose 'St. Jerome' is in the National Gallery.

Pisanello's portrait of a princess in the Louvre is identified by Mr. Hill as that of Ginevra d'Este. The *impresa* on the scarf of the robe—a two-handled crystal vase in which is a leafless branch with buds—occurs on the medals of Leonello, and shows the sitter to be a member of the house of Este; and the sprig of juniper in the dress suggests Ginevra, daughter of Niccolo III., who became the wife of Sigismondo Malatesta in 1434, being then aged fifteen. The subject of the portrait is somewhat older; it was presumably painted about two years after her marriage, and the absence of any Malatesta badge is met by the suggestion that it was painted for the Este picture gallery. The evidence is not wholly conclusive, but the theory has much to recommend it. In 1441, according to a contemporary sonneteer, Ulisse, Pisanello painted a portrait of Leonello d'Este in competition with Jacopo Bellini. The picture now at Bergamo Mr. Hill suggests to be so much the ripest product of Pisanello's brush as probably to be of somewhat later date, and in his chronological summary he places it between 1443 and 1448. In default of any evidence that Pisanello painted Leonello a second time, it would seem to us more natural to regard the picture at Bergamo as that which he painted in 1441. Pisanello was then over fifty years of age, and his art had probably already reached its full maturity. Moreover, Leonello was born in 1407, and the portrait appears to represent him when nearer thirty than forty. His employment of Pisanello after his succession to the marquisate seems to have been principally as medallist. The result of the competition referred to, in which he had been surpassed by Jacopo Bellini, may have had some influence in this change of occupation. In the one field he was adjudged second. Another lay open to him, and in that he had no equal.

Of his work as medallist we cannot speak in detail; indeed, Mr. Hill's erudition almost forbids discussion. In treating of the art pre-eminently connected with Pisanello's name he takes occasion to consider also the work of his contemporaries, and discusses the relation of the earliest Renaissance medals to those of antiquity, the various methods of casting and striking, and the causes of their popularity during the Renaissance, the last being summed up in the idea of the importance of the individual. The circumstances of the production of each of Pisanello's medals are discussed very fully, so that they form a record of the later years of his life down to his service under Alfonso of Naples. The illustrations are taken from plaster casts, by which means the delicate effects of modelling are extremely well rendered. The peculiar luxuriance of fancy and naturalism, which in the paintings tends on occasion to produce a certain lack of unity, is wholly fascinating within the narrower limits of his work in medals. Among the allegories of exquisite beauty which the reverses contain we may mention that of the marriage medal of Leonello d'Este, showing a lion before whom a cupid unfolds a roll of music; that of Malatesta Novello, who is represented as dismounted from his horse and kneeling before a crucifix; and what is perhaps Pisanello's masterpiece, the medal of Cecilia Gonzaga, where innocence is personified by a figure seated "in maiden meditation," with a unicorn lying beside her, a rocky landscape and a cippus in the background, and above the crescent of the moon. To these and to others wherein the artist's meaning is less readily to be discerned Mr. Hill supplies an admirable interpretative comment. No theory is pushed *à outrance*; few rational hypotheses are left unconsidered.

ILLUSTRATED BOOKS.

In the Track of the Moors. By Sybil Fitzgerald. (J. M. Dent.)—This is one of the most sumptuous of the many recent books of travel. It is illustrated liberally in colour by Mr. Augustin Fitzgerald. The paper is thick and of fine quality; and the binding, type, and general get-up are all good. The artist shows real feeling for the picturesque in nature and history, and has a talent for expression and an eye for colour.

If the author displays here no great erudition, she certainly shows a real and sympathetic acquaintance with the lands in question, considerable powers of observation, and a pretty taste in the literature of travel. Her treatment of Morocco and Algiers is impressionist, yet by no means without charm. But her handling of Andalusia and its people is more than mere impressionism, and deserves unqualified praise. Her conclusions regarding the Spanish character are thoughtful and penetrating.

Beautiful Wales. Painted by Robert Fowler; described by Edward Thomas. (A. & C. Black.)—This delightful colour-book is not quite accurately intituled. Of the seventy-four illustrations only eight deal with South Wales, and a more exact title would be 'Beautiful North Wales'; even in the land of Gwynedd Mr. Fowler has very seldom deviated from the well-worn tourist track, with the result that quite two-thirds of the beauties of Wales are not depicted. The reproductions of the scenery "done" so conscientiously, summer after summer, by the visitors to the multitudinous lodging-houses which skirt the coast from Flintshire to Cardiganshire are certainly beautiful; but few will be ready to concede the claim made for the painter in an appreciation by Mr. A. J. Finberg, thoughtfully included as an appendix by the publishers, that

"the whole merit of his work springs from his initial, his fundamental determination to see true and to paint things in their actual relationship..... In his landscapes he has given up—so far as it may be—the desire to

add the gleam,
The light that never was on sea or land."

His work suggests that Wales is a blaze of colour, by the side of which the "gorgeous East" is drab, which is far from being the case. He loves reds and purples and crimsons too much to succeed always in his avowed aim of actually reproducing nature in paint. The pictures in which he best fulfils his purpose are, we think, those which deal with the Conway and Barmouth estuaries.

Between the illustrations and the letterpress there is absolutely no connexion. Mr. Edward Thomas makes a boast of having never been to the places to which the painter confines his attention. But he knows thoroughly the real Wales, of which not one tourist in a thousand catches a glimpse—even "infernal Landore" and the unlovely colliery villages.

Rip Van Winkle. By Washington Irving. Illustrated by Arthur Rackham. (Heinemann.)—In the minds of many the story of Rip Van Winkle is identified not so much with Irving the author as with "Joe" Jefferson the actor. Jefferson's marvellous impersonation of the cheerful vagabond has become the authentic portrait of Rip, and hence it is inevitable that all other alleged portraits should wear an appearance of doubtful authenticity. Mr. Rackham's drawings, which constitute the real reason for the existence of this beautiful edition of Irving's story, are of remarkable merit, both in conception and execution. Especially is this true of the pictures representing the supernatural features of the story. That much-overworked adjective "weird" faithfully describes many of them, and they cannot be other than a delight to all lovers of true art. Yet it must be said that Mr. Rackham's conception of Rip Van Winkle will somewhat disappoint those who know him as presented by Jefferson. Mr. Rackham's Rip is a silly, even a weak-minded person, whereas the true Jeffersonian Rip was conspicuous for his shrewdness. But to seem to find fault with admirable work merely because it does not entirely correspond with certain other admirable work is hardly fair. Mr. Rackham has demonstrated in these drawings that he is not only a master of the pencil, but also an artist of real power. This will not be news to those who have been familiar with his work, but not every one has had that privilege, and to those who have not, his drawings will come as a delightful surprise.

TWO BOOKS ON ROME.

Rome. Painted by Alberto Pisa; Text by M. A. R. Tuker and Hope Malleson. (A. & C. Black.)—In this book an attempt is made to indicate, with pen and brush, something of the fascination which hangs ever about the Eternal City. It is not in any sense a guide-book, not a tabulated vade-mecum for the hurrying, much-doing traveller, but something more valuable and companionable—a leisurely, artistic appreciation of the curious continuity, the ever-shifting sameness, of the place and the people. For the reader who has been to Rome it is sure to awaken many a deep-set reminiscence; in the uninitiated it may well intensify the desire to go and see. The illustrations, seventy in number, are veritable triumphs of reproduction, by the Hentschel colourtype process, from the remarkably beautiful water-colour drawings of Signor Pisa. They are so good that one offers them instinctively for the inspection of friends who would know what Rome and the Campagna are like. Here you shall see, almost feel, the Roman atmosphere: some of the landscapes and out-of-door scenes have an April air of Easter about them, some are bright with the dancing brilliance of summer sunshine, some are touched with the solemnity of sunset; the interiors are instinct with warmth and colour; and the figures are characteristic in pose and feature.

The twelve chapters of the text, each the work of one of the two authors, deal with various phases of Roman life and history, the characteristics and circumstances which have made the city of vicissitudes one of the greatest attractions—to many minds the greatest—in the world. It is shown how, "of all the despoilers to which Rome has fallen a victim, none have been so assiduous in their destruction as her own rulers and people" (p. 39). The connexion between the early basilicas and St. Peter's, between the Christianity of the catacombs and the Catholicism of the Vatican, is thoughtfully treated; and the whole question of development, architectural and religious, personal and political, is abundantly illustrated in the chapters describing the fashions and fancies of the Roman people. Thus it is shown that the democratic instincts of Rome lasted on through the centuries in the "Regions" and guilds, which might be influences of union or disunion, according to the mood of the moment; that the aristocratic instincts are perpetuated in the patriarchal life of the princely families; and that the imperial instincts are embodied in the Papacy. Round all the restlessness of Rome stretches the broad girdle of the Campagna, itself characteristically Roman in its strange attractions of vastness and isolation, in its fusion of the clear and the mystical, the light and shade of things.

The chapters (vi. and vii.) which deal with the life that Romans live to-day, and with the essential differences in Roman and Italian temperament, are full of shrewd observation and lively experience. The writers know what they are talking about, and appreciate at every turn the points of resemblance and dissimilarity between the Roman and the rest of us. Your Roman is too proud to work, but not to beg; genuine even to roughness; talented, but not cultured; *sconclusionato*, inconsequent; artistic, but without taste; a born critic, but without a real sense of proportion—in fact, an inexplicable, inexhaustible contrast: that is the conclusion of the matter. And the complexity of Roman individuality is writ large in "the Roman question," which is carefully discussed in the last two chapters, with reference to the time before and since 1870.

Altogether, it is a book to be read, for breadth of view and depth of sympathy. There is but little complaint to make on the score of inaccuracies. Sometimes the punctuation, or lack of it, is a little surprising; and it is hard to pass without exclamation by *balnæ* (p. 20), "*domui*, or houses of the rich" (p. 23), and "the wave-lashing triad of Neptune" (p. 182).

Rome as an Art City. By Albert Zacher. "The Langham Series of Art Monographs." (A. Siegle.)—One of the first impressions of the visitor to Rome is, undoubtedly, the confusion of it all: the monuments, the pictures, the very atmosphere, are reminiscent of ages so many and so different that the mind waits awhile, until the first intensity of fascination gives place to a calmer desire to learn something of the many lessons which this "City of Marvels" has to teach. This little book gives a rapid but comprehensive survey of the art of Rome, piloting the reader with considerable skill through the successive phases—classical, Christian, Renaissance—down to the present day, and leaving him at least in a position "to distinguish the characteristic note in her art, and to divine the secret of its world-wide reputation." The general tone is modest, and the treatment of the subject is likely to be helpful and encouraging to many persons who wish to remedy the uncomfortable want of connexion that guide-books often leave behind them, and yet shrink from the perusal of exhaustive works. The scheme of the book is suitably assisted by a few photographs of typical buildings and pictures.

THE SULLEY GALLERIES.

ANOTHER sensation has been provided for art lovers at these galleries, which, if it does not rival the Velasquez at Messrs. Agnew's, is at least a notable event. This is the exhibition of the Jan Vermeer from the Secretan Collection. It is one of his less usual compositions, for instead of the figures being silhouetted in dark or flooded with light against a light background, they are seen in lights and half-lights upon an entirely dark ground. The design is magnificently broad, the divisions large and well marked, and treated with that peculiar flat, decorative effect which yet takes nothing from our sense of the reality of the scene. The colour scheme is delicious: a pale saffron-yellow with white fur and one note of pale orange-scarlet is opposed to a tablecloth of Vermeer's peculiar and characteristic grey-blue, and behind this we get the suggestion of a stronger note of blue in the servant's apron, and a mass of grey-browns and brownish greys in her dress. There are passages—such as the rendering of the faint greyish bloom on the Chinese lacquer box or the lady's pearl earring—which are miracles of technical skill at the service of an exquisite and recondite taste. One gets everywhere the sense of brilliant local colour shimmering behind a veil of the tenderest grey atmosphere. The technical skill required to produce this effect is really more remarkable, and its methods are more obscure, than that displayed by Vermeer's contemporaries, however minute and brilliant their delineation of form; indeed, for sheer perfection of taste, for exquisite delicacy of perception of the purely material beauties of objects, such a painting as this could hardly be surpassed. Vermeer, like Terborgh and Metsu, attempts no criticism of life, he accepts things literally and perhaps prosaically; but his vision has a breadth and his design an ease which might befit a deeper significance, and which, in the absence of that, still give to his work a rare nobility and distinction.

On one side of this hangs a fine Rembrandt, *Portrait of an Old Man* (No. 3), of the artist's later period, extremely strong and unusually definite in its light and shade. It is not, perhaps, so interesting in its psychological interpretation, so richly imaginative, as most of the works of this period, but the colour harmony of deep greenish browns and reds is magnificent. — On the other side of the Vermeer is a fascinating portrait of *Señora Dona Maria Martiner de Puga* (5), by Goya—a very late work, slight and thin in its handling, but intensely vital, and for once almost attractive. Here, more even than usual, is Goya the forerunner of certain phases of modern art. It is not only seen, but almost painted, as Manet might have done it.

A good and careful work by a little-known painter, François Xavier Fabre, is the portrait of *Elizabeth Fabbiola Mascagni* (7). — The Romney which hangs next, *The Hon. Lucy Stanley* (8), is an altogether exceptional work. It has a classic simplicity of design, a distinction of movement, and a grace of handling which Romney achieved at only rare intervals.

A portrait of an *Old Lady* (11) is a vigorous rendering of an old woman with astonishing force of character. The ascription to Vandyke does not at first sight strike one as inevitable, in spite of the pose of the hand, which is typical. Indeed, in the present condition of the picture, which has suffered from neglect, though fortunately not from repainting, it is difficult to say more than that the attribution is certainly possible. In his Genoese

period Vandyke undoubtedly showed a feeling for the frank rendering of character which he lost in after years, but at the same time his handling had a mastery and finish that the present work scarcely shows.

Two little pieces by Teniers, with elaborate borders by J. van Kessel, represent scenes from the life of Antonio Moncada. In spite of great brilliance of execution, they are in Teniers's less interesting style. His decorative feeling was hardly of a fine enough order for heroic compositions, even on so small a scale, and his colour sense failed him in proportion as he was bound to introduce positive local tints.

Finally, there is a remarkable portrait of *John Julius Angerstein* (14) by Reynolds. It is a most elaborately finished and careful work, extremely tender in its modulations — too elegant, perhaps, and too stylistic to count as one of his finest interpretations of character, but a masterpiece for its technique and its measured suavity of style. It should hang, one thinks, beside the pictures which he collected, and which became the nucleus of our National Gallery.

THE ROYAL SOCIETY OF PAINTERS IN WATER COLOURS.

As usual at this exhibition, the Society's oldest member, Mr. Callow, sets a standard in the treatment of the medium which puts to shame the laboured and uncertain efforts of younger rivals. It is true that this year the disparity is more marked than ever, as Mr. Callow exhibits works done more than half a century ago, at a time when the great tradition of water-colour draughtsmanship was still alive, though already rash experimentalists were being made in new and, as it turned out, unfortunate directions. Here, in his splendid drawing of *Durham* (No. 122), which the hanging committee have done their best to hide away below the line, he announces triumphantly the true method—the use of pure wash in well-ordained masses of tone, the effect of colour being given rather by the mutual intensification of almost neutral tints than by the assertion of unassimilated positive colours. Time brings its revenges, however, and Mr. Callow's 'Durham' would be less isolated among Mr. Steer's and Mr. Rich's drawings at the New English Art Club than it is here. Another admirable drawing, astonishingly complete in its suggestion of atmospheric colour, and finely built up in its design, is the *Trarbach on the Moselle* (138). Another, the *Street in Innsbruck* (182), is somewhat Prout-like in its treatment of architecture, but really more subtle in its delineation and more intentional in its choice of colour than Prout's work.

There is little here to bear Mr. Callow company—little in which any sense of delicacy or scruple with regard to the medium is displayed. Mr. Alexander's slight but keen studies of animals and plants come, perhaps, nearest. —Mr. Albert Goodwin's *When the Day's Work is Done* (137) has delicacy and subtle observation, but he seems to have been too much absorbed in the sentimental associations to work out the essentially pictorial aspects of his subject. — Mr. Clarence Whaite's *Carnarvon Bay* (148) is sound and unpretentious. — On the other hand, we find a number of exhibitors who show great skill and accomplishment in making water colour do the work of something else, and this, indeed, is clearly the most general ambition. Mr. Paterson treats it quite brilliantly in his portrait (215) as a kind of pastel, but really with such reserve and economy that one ought not to complain. Mr. D. Y. Cameron, in his immense *Citadel* (225), makes water colour do duty for the crumbled impasto of oil. The effect of his large spacing and elementary block-like forms is imposing at a first glance, but the impression is based on too slight and too purely scenic an imagination to last. The longer one looks, the less one is convinced, the more one is conscious of the ambition to impose.

Mr. T. M. Rooke's series of drawings of the *Manor House of Faulin* (259) show great skill in topographical and architectural draughtsmanship; but one cannot help feeling that the brilliance and completeness of his realization of full sunlit colour (in itself, no doubt, a desirable and difficult thing to accomplish) introduce a contradictory aim. We should feel the beauty of the architecture and the situation more, if the expression of these had predominated over all other considerations.

Mr. Walter Crane's *Hammock* (256) is excellent in the simplicity and directness of its expression and the firmness of its design; and Mr. Walter Bayes is an artist who seems to be serious in his search for self-expression. He has not as yet found his style, or fitted his love for certain aspects of nature into any definite framework of design; but his study on the Lido (231) is worked out with real feeling.

SALE.

Messrs. Christie sold on the 16th inst. the following engravings. After Peters: Tantalizing, and The Charmers, by C. Knight, 51*l.* After J. Ward: A Vegetable Market, by W. Ward, 42*l.*; A Poultry Market, by J. Ward, 43*l.* After Westall: Lady Townshend and Child, by T. Cheesman, 29*l.* After Reynolds: Lady Smyth and Children, by Bartolozzi, 65*l.*; The Snake in the Grass, by W. Ward, 34*l.* After Romney: Il Penseroso and l'Allegro, by Keating, 33*l.* After Morland: Sunset, a View in Leicestershire, by J. Ward, 27*l.*; How Sweet 's the Love, and The Lass of Livingstone, by T. Gaugain, 54*l.*; Children Bird's-nesting, by W. Ward, 31*l.*; Blind Man's Buff, by the same, 31*l.*; Guinea-Pigs, and Dancing Dogs, by T. Gaugain (a pair), 60*l.*; A Visit to the Boarding-School, and A Visit to the Child at Nurse, by W. Ward, 63*l.*; St. James's Park, and A Tea-Garden, by F. D. Soiron, 79*l.*; Inside of a Country Alehouse, by W. Ward, 37*l.*; The Farmer's Stable, by W. Ward, 43*l.* After H. Bunbury: The Mouse's Petition, and Marian, by F. Bartolozzi (a pair), 50*l.*

Fine-Art Gossip.

At the Chenil Gallery, King's Road, Chelsea, there was a press view yesterday of drawings by Mr. Augustus John and Mr. William Orpen.

The Fine-Art Society have open in New Bond Street an exhibition of engravings after Mr. Joseph Farquharson, A.R.A., and Mr. Archibald Thorburn.

The Fine-Art Society have also on view the 'Flower Book' of Burne-Jones, and a series of reproductions from this well-known volume.

Water-colour drawings of Oxford and Cambridge colleges and other places, by Miss Helen Thornycroft, are open to private view to-day at Mr. McLean's Gallery.

At the Little Gallery, 40A, Victoria Street, Mr. W. Alister Macdonald opened on Wednesday last to private view water-colours of Cambridge, Tewkesbury, Grasmere, Scotland, Holland, &c.

Mr. Herbert J. Finn has a press view next Monday, at 108, New Bond Street, of his water-colour drawings of Cornwall and Devon.

Next Tuesday is the private view, at the Doré Gallery, of water-colour drawings and sketches by Mrs. Raufe Hussey Freke and Miss F. M. Duke.

Messrs. Dickinson hold on Thursday the private view of tinsel pictures by Miss Birkenruth, and next Saturday that of their second exhibition of artistic handicrafts.

An exhibition of the works of Arthur Melville will be held during the months of January and February in the Institute Galleries, Piccadilly.

At 5, Old Bond Street, Mr. W. B. Paterson has an exhibition of French furniture of the period of Henri II.

The most important article for students in the December number of *The Burlington Magazine* is that by Mr. Herbert Horne on Il Graffione, in which a full account is given of this hitherto almost unknown painter. The number opens with the first of two articles by Prof. Baldwin Brown on Greek female dress of the classical period, with a large number of illustrations. Miss Lina Eckenstein contributes an article on 'The Purpose and Value of Ancient Egyptian Art'; and Prof. C. J. Holmes writes on 'The Landscapes of Richard Wilson,' with particular reference to the numerous imitators of that painter. Mr. Ingleby Wood contributes a short paper on 'Architectural Refinements of the Middle Ages,' and Mr. Egerton Beck continues his series of articles on 'Ecclesiastical Dress in Art.' The miscellaneous contributions include Part II. of 'The Classification of Oriental Carpets,' an important note by Mr. A. J. Wauters on a portrait by Vermeer in the Brussels Museum, a note on the new Morris tapestries at Eton, and an article from America on the proposed Union of Artists in New York.

The death, in his fifty-seventh year, is reported from Nuremberg of Hans Bösch, second director of the Germanische Museum. He was the author of a number of valuable works, among them 'Geschnitzte Holzstöcke vom 15 bis 18 Jahrhundert,' 'Bronze-Epitaphien der Nürnberger Friedhöfe,' &c.

The death, in his seventy-eighth year, is also announced from Vienna of the distinguished painter Prof. Michael Rieser. Among his important works is the 'Holy Family' in the Spitalskirche at Trier.

At the meeting of the British Academy at the rooms of the Society of Antiquaries on Wednesday next, Mr F. Haverfield, Fellow of the Academy, will read a paper on 'The Romanization of Roman Britain.'

The Antiquary for December will contain, among others, the following articles: 'The Tower of the Abbey Church of Shrewsbury' (illustrated), by the Rev. W. G. D. Fletcher; 'Naseby Fight,' by Mr. W. G. Blaikie Murdoch; 'The London Signs and their Associations' (continued), by Mr. J. H. MacMichael; 'Whitgift Hospital of the Holy Trinity' (illustrated), by Mr. A. C. Jonas; and 'Count Tallard's English Exile: a Bicentenary Note,' by A. Stapleton.

During recent excavations the remains of a small Roman bath were found at a depth of about 17 feet below the level of Cannon Street. The centre portion of the bath had been cut into and broken at the time of the erection of the buildings which have been demolished to make way for the new fire station. Some of the fragments of this part of the bath were found in the concrete floor of the old building, and have been preserved. On the same level as the bath, in what appears to have been a cesspit, a small vase and a fragment of pottery were found, which may be Samian ware. The London County Council has had drawings and descriptions made, having a commendably zealous eye for the historic and archæological features of its great domain.

MUSIC

BEETHOVEN'S 'LEONORE.'

'Leonore oder Fidelio' was the title of an article published by Otto Jahn in 1863. Owing evidently to a slip of the pen, Stephan von

Breuning, in a letter of 1806, gave the first name as that under which Beethoven's opera was performed, and hence arose misunderstanding. Jahn explained that though the composer wished it to be known as 'Leonore,' the managers of the Theater an der Wien, where the work was produced on November 20th, 1805, decided to announce it as 'Fidelio oder Die eheliche Liebe.' Their reason for not complying with Beethoven's wish was a very natural one; in the previous year (October 3rd) Ferdinand Paër at Dresden had produced, and with very considerable success, an opera entitled 'Leonora ossia l'Amor conjugale.' The confusion was set right in Jahn's article, but his title will now serve another purpose. On Monday, November 20th, at the Royal Opera, Berlin, the hundredth anniversary of the production of Beethoven's opera at Vienna was celebrated, by giving a performance of it under the title 'Leonore,' and, further, in its original form. Now the question we naturally ask is, Which is the greater, 'Leonore' or 'Fidelio'? using the second name to represent the opera as it is usually given. There are three versions of the work—the first, that of 1805; the second, that of the following year, when the opera was revived; and the third, that of 1814, when considerable alterations were made both in the text and in the music. The three performances (November 20th, 21st, 22nd) of 1805 were not successful. The French army occupied the city, and the chief part of the audiences consisted of French officers, who probably did not take interest in music so far above the level of the light, conventional opera of the day. The principal critics, too, considered that Beethoven, though aiming after originality, had merely produced a work devoid of real invention and often of beauty. The composer's best friends and patrons proposed to him to make many cuts—in certain cases whole numbers. To this Beethoven finally consented, but under strong protest; and thus 'Fidelio' was given in 1806. It was only played twice, for the composer imagined that he was being cheated, and that he was not receiving his due share of the receipts. When angry he would never listen to reason. Baron Braun explained to him that in time, when he hoped the cheaper parts of the house would fill, the receipts would naturally increase. "I do not write for the gallery," shouted Beethoven. "Mozart did not disdain to do so," replied the baron. That brought matters to a head: the composer demanded back his score, and no more was heard of the opera for eight years.

It is, of course, interesting to read about the cuts made in 1806. For the moment, however, we are concerned with the original version, and how it stands comparison with the final version.

But first of all a word or two must be said about the way in which the original score has been obtained. Beethoven, as is well known, was very careless, and the sheets of the score during his lifetime were all mixed up with other music. Before his death he asked Schindler to find them, and to take special care of a work on which he himself set great store. We cannot now enter into full details, however interesting; it must suffice to say that only a part of the autograph passed into the possession of Schindler; the rest became scattered. Otto Jahn, though with incomplete material, published in 1851 an edition of the work, showing portions of the first and second versions. Dr. Erich Prieger, of Bonn, whose name in connexion with Beethoven is well known, determined to search everywhere for the missing pages. He finally, after twenty-five years of research, succeeded, as he states in a preface to a vocal score of 'Leonore' which has just been published by Messrs. Breitkopf & Härtel. That preface is most valuable, but we must refrain from any quotation from it.

Remarkable was the development of Beethoven's genius from the time when he was under the strong influence of Mozart and Haydn to the period when he produced his 'Eroica' and C minor symphonies, the period in which he wrote his 'Leonore.' In the 'Fidelio,' eight years later, there are manifest improvements, and some wonderful additions, such as the prisoners' chorus, "Leb' wohl, du warmes Sonnenlicht," and portions of the great Finale of the second act. But in the original 'Leonore' there are some wonderful pages. There are many small touches in it to which reference, even if space permitted, could not be made without music type. We must, therefore, note only what is most striking. The introduction to the 'Invocation to Hope' aria is quite different, and of intense dramatic effect. Then, in place of the final Allegro section, "Und spür ich nicht linde," of Florestan's aria, Beethoven originally wrote an Andante of extraordinary pathos. Radichi, the Italian singer, who impersonated Florestan in 1814, wished to have something which would show off his singing to greater advantage, and for him Beethoven wrote the Allegro named above; but even then, in order to prevent any disturbing applause at the close of the vocal part, he added the very soft coda leading to the grave-digging scene. The instrumental introduction to the "Nur hurtig fort, nur frisch gegraben," is more than twice the length of the one in 'Fidelio,' and it is of weird, powerful effect. Then the duet, "O namenlose Freude," does not start suddenly, but has an introductory recitative in Beethoven's grandest, most impassioned style. And the duet itself is more developed, more intense. In the Finale the section "O Gott! o welch ein Augenblick!" is twice as long as the one in 'Fidelio,' and twice as impressive.

Words seem feeble to express the effect of this oldest form of the work. It is of much more than historical interest. Beethoven's whole heart was in his music. 'Leonore' is not a preparatory work to 'Fidelio,' but—especially as regards the finale of what is now the second, though originally the third act—a really different one. A terzet, most delightful as music, between Marzelline, Jacquino, and Rocco, also a duet between Leonore and Marzelline of far less interest, are not in the 'Fidelio' score. From a modern dramatic point of view they may be open to criticism, but Beethoven must be judged not from a Wagner but from a Mozart standard. In 'Leonore' the extended light marriage music of the first act sets off in stronger relief the development of the drama in the second, and the tragic scenes of the closing act.

Concerning the performance at Berlin we must be very brief. Frau Plaichinger impersonated Leonore; and Herr Kraus, Florestan; Frau Herzog, Marzelline; Herr Hoffmann, Pizarro; and Herr Griswold, Don Fernando. It would be easy to point out certain shortcomings, but some of the vocal music, especially that for Leonore, is most trying; and after all the matter of chief moment to us was the production of the work, not the way in which it was rendered. Every one concerned was undoubtedly most anxious to do the very best, and at times the effect was highly impressive. The scenery and costumes were all new. The performance was under the direction of Dr. Richard Strauss, who laid full stress upon the most prominent dramatic passages.

It is to be hoped that some day this first version will find its way to London. With regard to London, it is curious to note that in 1817 Beethoven wrote to Charles Neate, saying that "It is possible the opera, in its original form, is in London: if so, it was stolen." Did a copy really find its way here? If so, it may one day be brought to light.

Musical Gossip.

THE programme of the Queen's Hall Symphony Concert last Saturday afternoon was mainly devoted to Mozart and Beethoven. Mr. Henry Wood and his band took special pains with the performance of the overtures to 'Le Nozze di Figaro' and 'Don Giovanni'; and subsequently Beethoven's 'Eroica' Symphony was played with scrupulous care and commendable finish. Herr Fritz Kreisler dealt in his usual artistic and engaging manner with the solo portions of Mozart's Violin Concerto in A major and Viotti's seldom-heard Concerto in A minor.

DR. JOACHIM and his colleagues, Messrs. Halir, Wirth, and Hausmann, began at Bechstein Hall last Monday evening a series of concerts. The five programmes are entirely devoted to Beethoven, and include the whole of his sixteen quartets. On Monday were heard the early work in F major (Op. 18, No. 1), the second of the Rasoumowsky set, and the posthumous Quartet in E flat major (Op. 127). We cannot enter into details, but generally the performances were of dignified character, and the execution, apart from a few blemishes, such as is expected from artists of high rank.

MISS RUTH CLARKSON, a violinist who studied with Mr. Émile Sauret at both the Royal Academy of Music in London and the Chicago Musical College, made a successful *début* at Queen's Hall on Wednesday evening, when she had the assistance of Mr. Henry Wood and the Queen's Hall Orchestra. The new-comer has a sound, if not brilliant technique, and her performance of Max Bruch's Concerto in G minor was notable for intelligence. Of Lalo's 'Symphonie Espagnole' she also gave a bright and tasteful rendering. As vocalist Madame Elizabeth O'Callaghan created a favourable impression.

MR. MARK HAMBOURG offers three prizes—of twenty, ten, and five guineas respectively—for works in the form of a fantasia, sonata, ballade, scherzo, or set of variations, to occupy from ten to fifteen minutes in performance. The copyright of the successful work is to remain the property of the composer.

ANXIETY with regard to the safety of their families compelled the St. Petersburg String Quartet to return to Russia from Berlin, instead of proceeding to London to give the concert at Bechstein Hall last Wednesday which had been arranged.

PERFORMANCES NEXT WEEK.

SUN.	Sunday Society Concert, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
MON.	Bohemian Concert, 8, Queen's Hall.
—	Mr. E. Kreuz's Orchestral Concert, 8, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
TUES.	Mr. Richard Buhlig's Pianoforte Recital, 3, Æolian Hall.
—	Miss Grace Smith's Pianoforte Recital, 3, Bechstein Hall.
—	Mr. Newlandsmith's Concert, 3.30, Steinway Hall.
—	German Male Choir, 8, Queen's Hall.
—	Miss Ella Pollock's Vocal Recital, 8, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
WED.	Ballad Concert, 3, Bechstein Hall.
—	Wessely Quartet, 8, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.

—	The Misses Sassard's Vocal Recital, 3, Æolian Hall.
—	Chamber Concert, 4.30, Leighton House.
—	Annual Scotch Concert, 7.30, Queen's Hall.
—	Miss Helen M. Egerton's Violin Recital, 8, Bechstein Hall.
—	Mr. Percy Brier's Pianoforte Recital, 8.30, Steinway Hall.
—	Royal Italian Opera, Covent Garden.
FRI.	London Ballad Concert, 3, Queen's Hall.
SAT.	Symphony Concert, 3, Queen's Hall.

DRAMA

Beaumont and Fletcher: The Maids Tragedy; Philaster; A King, and no King; The Scornful Lady; The Custom of the Country. The Text edited by Arnold Glover. Vol. I. (Cambridge, University Press.)

THE inclusion in the "Cambridge English Classics" of an edition of Beaumont and Fletcher subjects to a crucial test the conditions under which the series has been

and is to be issued. A main object in all the works included in it is to supply a text which, in the matter of spelling, punctuation, and the use of capitals and italics, follows undeviatingly the edition employed as base, and to give as an appendix the variant readings of all the early editions. In the case of Crashaw, Cowley, Butler, and other writers but a few pages are occupied by variants, notes, &c., and the only result of the process adopted is to convey to the reader an agreeably antiquarian flavour and a corresponding sense of security. It is otherwise with Beaumont and Fletcher. Here the variant readings are numerous, covering in the first volume some seventy closely printed pages. Students of Beaumont and Fletcher in the early editions are few; the general reader is accustomed to an eclectic and sophisticated text, such as is supplied in the reprints of Weber, Dyce, and Mr. Bullen, and is scarcely prepared to accept the readings — rugged and sometimes bungling—given by each and all of the early editions. The departures from customary renderings here encountered are important as well as numerous; and a certain familiarity with the structure and mechanism of blank verse in general, especially with that of Fletcher — who, though one of the most delightful of poets, is not seldom the most undisciplined of versifiers—is necessary if the perusal is to be a gratification instead of a task. Pre-eminently, then, this new edition, of which the first volume before us contains five plays, is an edition for scholars.

The five plays in question are those which stand first in the second or complete folio, and consist of 'The Maids Tragedy,' 'Philaster: or, Love lies a Bleeding,' 'A King, and no King,' 'The Scornful Lady,' and 'The Custom of the Country.' Precisely the order now adopted is followed in Mr. Bullen's edition (of which one volume, containing the same five plays, has appeared), and in the edition of Moxon, 1840, in two royal octavo volumes, the text of which is printed from that — sufficiently discredited — of Weber. Dyce — in an edition in eleven volumes, 1843, which, after being sold as a remainder, became authoritative and almost inaccessible—follows another arrangement, which aims, not very successfully, at a chronological order. Dyce's first volume opens with 'The Woman Hater,' which appears to have been played May 20th, 1607, and contains in addition 'Thierry and Theodoret,' 'Philaster,' and 'The Maid's Tragedy.'

From all these editions that now issued differs, so far as regards the text. A divergence less wide, but still notable, prevails among them all. All, moreover, present, as the latest editors say, "an eclectic text," formed partly by a collation of the various old editions and partly by the adoption of conjectural emendations. In accordance with the scheme of the series, one text—that, as it happens, of the second folio, 1679—has been taken, nothing being corrected but obvious printers' errors, which are "recorded in the Appendix, and indicated in the text by the insertion of square brackets." The same appendix, meanwhile, contains the texts of all the early editions, or, in other words, the editions prior to the second folio. Quite adequate seem the reasons advanced for the choice, as the basis of the text, of the second folio; and should there be found those who advocate a more liberal construction of rules it can only be said, in view of the aims of the series, "Cadit quæstio."

In some cases the reading of the text is clearly wrong, as when, in 'The Maid's Tragedy,' Act IV., addressing Evadne, Amintor says:—

> Though I am tame and bred up with my wrongs,
> Which are my foster-brothers, I may leap
> Like a hand-wolf into my natural wilderness,
> And do an out-rage: pray thee do not mock me.

For "wilderness" other texts read rightly *wildness*.

The ordinary departure consists in printing as prose passages which in the eclectic texts are given as verse. In the opening scene of 'The Maid's Tragedy,' the second folio, followed by the Cambridge edition, prints as prose two passages of dialogue between Lysippus and Melantius which Mr. P. A. Daniel, in the Bullen edition, and Dyce both give as blank verse. No great change, it will be seen, is necessary, and a reader familiar with versification is likely enough to make the accepted alteration for himself.

> *Lys.* Noble *Melantius!* [*Enter Melantius.*
> The Land by me welcomes thy vertues home to *Rhodes*, thou that with blood abroad buyest us our peace; the breath of Kings is like the breath of Gods; My brother wisht thee here, and thou art here; he will be too kind, and weary thee with often welcomes; but the time doth give thee a welcome above this or all the worlds.
> *Mel.* My Lord, my thanks; but these scratcht limbs of mine have spoke my love and truth unto my friends, more than my tongue ere could: my mind 's the same it ever was to you; where I find worth, I love the keeper, till he let it go,
> And then I follow it.

In a later speech of Melantius in the same scene the whole is printed as verse, but the division of the words admits two lines, such as

> But I am sad, my speech bears so unfortunate a sound

and

> Of his neglected daughter: holds he still his greatness with the King?

on which the elastic muse of Fletcher would scarcely venture. That these eccentricities are due to the compositor or the shaper of the page does not admit of question. In turning into verse other passages the modern editor makes both omissions and additions. Sometimes inconvenient or redundant syllables are cast out, or the conversion of the word "through" into "thorough" makes up a halting line. In the fine speech of Aspasia in the second act of 'The Maid's Tragedy,' which also is printed as prose, the task of versification is so easy that the temptation is with difficulty resisted:—

> Then my good Girles, be more than Women, wise. At least be more than I was; and be sure you credit any thing the light gives light to, before a man; rather believe the Sea weeps for the ruin'd Merchant when he roars; rather the wind courts but the pregnant sails when the strong cordage cracks; rather the Sun comes but to kiss the Fruit in wealthy Autumn, when all falls blasted; if you needs must love (foro'd by ill fate) take to your maiden bosoms two dead cold aspicks, and of them make Lovers, they cannot flatter nor forswear; one kiss makes a long peace for all; but man, Oh that beast man! Come lets be sad my Girles.

These things will enable the reader to judge for himself of the significance of the rule observed. Though not quite a facsimile of the second folio, the present text serves virtually as such. It will necessarily commend itself to all but the general reader, for whom in such a case we are not very specially concerned. Much has been written of late about the share that other playwrights — such as Massinger, Field, and the like—have in the dramas of Fletcher, and more will have to be written before the question is finally dismissed. One of the most interesting problems in connexion with the Tudor drama is that of the share in it of various writers—a matter on which the last word is far from having been said.

In 'A King, and no King,' the character of Arbaces, King of Iberia, might well have been conceived in a spirit of prophecy, so closely is it fitted in some respects to a demonstrative monarch of to-day. In 'The Scornful Lady,' Act III. sc. i., occurs a phrase which, when employed by Bismarck, gave rise to much comment: "By my troth the Gentleman has stew'd him in his own Sawce, I shall love him for't."

The responsibility for the conception of this edition belongs to Arnold Glover, an excellent scholar who did not live to see the first volume through the press. Its completion has devolved upon Mr. A. R. Waller, a well-known, painstaking, and important contributor to the series to which it belongs. As regards the success of the book, we need only say that a critical edition of Beaumont and Fletcher at a moderate price has long been a desideratum in the world of letters. Each volume is issued separately.

THE WEEK.

SCALA.—*Mrs. Grundy: a Domestic Play in Four Acts.* By Madeleine Lucette Ryley.

IF Mrs. Ryley's new comedy comes short of the anticipated success and encounters some show of opposition, the responsibility for comparative failure rests rather upon faults of interpretation than upon inherent weaknesses of conception or construction. Thin 'Mrs. Grundy' undoubtedly is. With the exception of the gloomy and repellent studies to which the Independent Theatre seeks to reconcile us, few modern plays are otherwise. Mrs. Ryley's piece is, however, moderately sympathetic in story, preaches a blameless moral, and furnishes an ideal of Christian conduct so lofty that it is necessary, in order to render it comprehensible or acceptable, to present the hero as a clergyman. Mrs. Ryley scarcely ventures, indeed, to demand serious acceptance of the rule of conduct she lays down, and spares her hero the penalties of his rash and chivalrous action.

On taking possession of his new benefice, situated in a Midland shire, the Rev. Edward Sotheby finds his flock puritanical, lip-reverent, narrow, and bigoted. Accident brings him into immediate conflict with what is lowest in their nature. A nursery governess is on the point of elopement with a youth whom she loves. Though inadequate to restrain, the vicar's influence is powerful enough to bring the culprit back before any serious evil has befallen her. She has, however, been twenty-four

hours away from home, and every door is shut against her. His efforts—indiscreet enough, it must be owned—to provide for her a shelter under his own roof diminish his sphere of influence, embroil him with his parishioners, and compromise so gravely his newly installed guest that he sees no chance for her except a proposal of marriage, which she instantly accepts. This quixotic conduct is the more heroic and self-denying since a woman in every way suited to him, and one for whom he has conceived a sudden passion, is waiting for him to speak. In the end the nursery governess relents and sets him free, fading away herself into her congenial obscurity.

So flimsy is this that wonder is begotten how any one could dream of extending it over four acts. What is most intrusive, however, is most entertaining, and the environment supplies attractions not to be found in the story. Many of the subordinate characters are happily conceived and well drawn; and a soldier servant of the clergyman (at one time an army chaplain) is the most interesting personage in the play. An Australian heiress posing as a grass widow, for the apparent purpose of keeping lovers at a distance, is pleasing, but extravagant. In the latter character Miss Gertrude Elliott acted with customary charm; in the former Mr. Sydney Brough revealed a pleasant vein of comedy. In some parts, however, the entire effect of the play was damaged by slowness, the result of apparent want of preparation. The breath of the prompter was constantly and vainly expended, and the good things with which not seldom Mrs. Ryley had provided the characters passed unappreciated and unheard. Mr. Forbes Robertson as the clergyman showed himself for moments at his best. Miss June van Buskirk was seen to advantage in a not very intelligible or sympathetic rôle.

COMEDY.—*The Little Father of the Wilderness: Comedy in One Act.* By Lloyd Osbourne and Austin Strong.—*The Mountain Climber: a Farce in Three Acts.* From the German of Curt Kraatz.

IN 'The Little Father of the Wilderness' Mr. Huntley Wright has stepped out of the line of musical comedy, in which he enjoyed a species of supremacy, and given a chastened, artistic, and infinitely touching presentation of a French missionary priest, stamping himself in so doing an actor of high—perhaps of highest—mark. In a commonplace translation of 'Der Hochtourist,' in the original a musical farce of Herren Kraatz and Neal, produced at the Thalia Theater, Berlin, on August 29th, 1903, he has revealed a species of comic energy which should, if necessary, secure him a place as clown in some forthcoming Christmas pantomime. In contemplating the two contrasted performances the lover of dramatic art experiences a shock. To use a Shakspearean phrase, we see the transformation of "Hyperion to a satyr." So unworthy is the later performance that it forces us to regret having seen the earlier. Very far are we from condemning the actor who is guilty of these things. The responsibility is found in the rank, inherent, indescribable vulgarity of the English playgoer, gentle and simple. To a Père Marlotte—a species of Abbé Constantin, a character as simple, gentle, and lovable as Rip Van Winkle, a Vicar of Wakefield, or Noel in 'La Joie fait Peur,' with an added touch of the saint, almost the martyr—a section of the public awards a rather startled recognition. Montague Sibsey meanwhile—in the German Mylius—a sort of Tartarin of Tarascon without the vitality, the fantasy, or the colour, is greeted with yells of delight, and for a repetition of such performances the gaping public offers Mr. Wright fame and fortune. "Inde fortuna et libertas" Scribe in his book-plate put on a scroll around a pen. No less a price than Scribe obtained the public is prepared to pay, in the case of Mr. Wright, for the conversion of the artist into the clown.

Dramatic Gossip.

The North American Review for the 15th inst. contains an article of which the description is startling: "Sir Henry Irving, by L. F. Austin." The late Louis Austin had exceptional advantages for appreciating the career of Irving; and his death, followed almost immediately by that of Irving, gives a strange interest to this appreciation.

'THE LILY OF FRANCE' is the title bestowed by Mr. L. N. Parker upon his new play on the subject of Joan of Arc, in which Miss Tree will appear at His Majesty's.

SO much success has attended 'Man and Superman' at the Court that the piece will remain in the bills until the end of the year.

IN the production at the St. James's on December 21st of 'Beside the Bonnie Brier Bush,' Miss Lilian Braithwaite will play the heroine. Parts are also assigned Mr. Charles Groves, Mr. Frank Cooper, and Mr. Sydney Brough.

'THE FIREFLY,' by Mr. William Toynbee, will be the chief attraction in the first performance of the society known as the Pioneers. It will be given at the Scala Theatre on December 17th.

THE first appearance of Herr Hugo Waldeck was made on Tuesday night at the Great Queen Street Theatre in Gutzkow's 'Uriel Acosta.'

AFTER a run of over twelve months 'The Walls of Jericho' of Mr. Alfred Sutro will be performed at the Shaftesbury for the last time this evening.

'LES OBERLÉ,' which has been given by M. Coquelin at the Gaîté, furnishes a picture of Alsatian life as exact as that in 'L'Ami Fritz,' but less bucolic and jovial. What, indeed, more directly appealed to the audience was political, the story resting on the devotion to France of some of those under German rule. M. Coquelin played the part of Uncle Ulrich, a patriot whose end is triumph, since, though fatally wounded, he is borne into France to die. The drama is drawn by M. Edmond Haraucourt from a novel by M. René Bazin.

'VOLCAN D'AMOUR,' a three-act play given at the Folies Dramatiques, is more noteworthy for the circumstances attendant on its production than for its own merits, which are slight. The theatre being under the interdict of the dramatic authors' society, the name of M. Michel Carré could not appear to the piece. The nominal author is accordingly the journal *Le Matin*, which has espoused the cause of the minor dramatists. Interesting complications are expected from this state of affairs.

TO CORRESPONDENTS.—J. H. R.—F. J. A.—J. C. K.—P. A. V.—received.
G. H. P.—We prefer to say nothing of such books.
T. H.—Many thanks.

LITERATURE

A Staff Officer's Scrap-Book during the Russo-Japanese War. By Lieut.-General Sir Ian Hamilton. (Edward Arnold.)

THE officers of high rank and of high standing—for the two things are not at all the same—who represented in chief the United Kingdom and the Empire of India respectively with the Japanese army, have both taken, doubtless with War Office leave, the unusual course of writing for publication. Sir William Nicholson contributed to a recent book a preface of which we have already given a notice, and Sir Ian Hamilton now puts forth a volume of his own. In both cases there is, of course, an avowed absence of a general view of the operations of our allies. We should have been inclined to doubt whether publication would improve the chance of gaining during future Japanese operations a greater confidence in us than was shown by the Japanese army in the recent war. Sir Ian Hamilton, however, like Sir William Nicholson, writes in a good spirit, and it is to be hoped that with the lapse of years there will come freer intercommunication, such as may not be checked by a publicity which at present Japanese superior officers cannot be expected to understand.

Sir Ian Hamilton's book is of great interest, though the volume forms but a fragment and breaks off suddenly — as children say, "in the middle." Many years ago, when *The Athenæum* criticized, we think more favourably than some other journals, an earlier literary venture of the author, there were conspicuous gaps in his equipment. In recent times Sir Ian Hamilton's references to South African politics in his military speeches called down upon him many attacks from political papers. With those *The Athenæum* was not concerned. He has had his chance as a commander of large columns, as Chief of the Staff in South Africa, as a high official in the War Office, and now commands the second in importance of our military districts. In these posts he has fully shown his worth, and the book before us will augment his reputation.

It is painfully clear—not only from this volume and from that by the Military Correspondent of *The Times*, but also from all the newer books upon the war which now begin to reach us—that the Japanese army failed more conspicuously to find a general than did the Russian army itself. The reputation of the Russian Commander-in-Chief in the field, which at one time not unnaturally fell, has again risen, and in military opinion Kuropatkin (thoroughly beaten) stands higher than do any of the general officers who were opposed to him. The extraordinary military virtues of the Japanese—the patriotism and devotion of all ranks, the perfection with which every one worked with every one else, and the combination of the courage of a dervish with the science of a German—could not but produce success unless a heaven-sent general on the Russian side had been found, and, after discovery, trusted by St. Petersburg. Sir Ian Hamilton quotes a comment on the Japanese army made to him by an officer:—

"Nos officiers sont très bien instruits tandis que nos soldats ont encore les mœurs rudes et primitives. Cet amalgame constitue un instrument de guerre de premier ordre."

If the Russians had found a Bonaparte to lead them he could hardly have made much way on the field of battle itself against men who combine the spirit of our Ghoorkas with the ardent nationalism of the conscripts of Montmirail or of the army of Sambre-et-Meuse, and are led by non-commissioned and regimental officers who appear to have reached as near perfection as is given to mortals. The generals are of the pre-revolutionary days, and belong by nature to the bow-and-arrow period. The marvel is, not that a Moltke should be wanting among them, but rather that they should have been able to conduct at all operations over a front of a length unknown in "the great wars." The skill with which Galliffet, a cavalry leader of the Middle Ages, became after 1870 a considerable modern general, commanding in manœuvres an army of the modern type so efficiently as to suggest that he would not have failed in war, is almost matched in the respectable direction of the Japanese armies by the survivors of the Japanese old school.

The comments of Sir Ian Hamilton confirm at every point suggestions which have been made in *The Athenæum* in reviews of books upon the Japanese war against China and upon the allied operations at Tientsin and during the march to Pekin. He points out that close resemblance of the Japanese private to our Ghoorkas to which we called attention. He states that the Japanese army, regiment for regiment, "surpasses any European army, excepting only the British army at its best (not at its second best, which is the state in which it usually finds itself)." *The Athenæum* has frequently been driven, by the indiscriminate praises heaped by correspondents upon the conduct of the British army in South Africa, to point out the falling-off which is to be noted if it is compared with our performances in the Indian Mutiny, at Badajos, or at Albuera. Referring again to South Africa, Sir Ian Hamilton relates the surprise of a Japanese outpost and the self-sacrifice of the thirty-six men who by holding out checked a force of 1,000 Russians, and adds that some might have thought that after losing "three or four men the smaller force would have felt justified in surrendering." Discussing the question of surrenders, this great South African general writes that it ought to be clearly understood that "the surrender type of army may expect to be handsomely thrashed by the no-surrender type whenever and wherever they may meet." These are terribly bitter words for a patriotic Briton to have to write, and for patriotic Britons to have to read. The surrenders of modern war—British in South Africa, and, in a less degree, French in 1870—force upon us the conclusion that success in the arts of peace is fatal to the military spirit in the majority of men. Britons (and, having no other term, we must be understood to include in marked fashion Irishmen), "colonials," and Americans, as well as naval seamen, still show that in the most modern of nations the highest military virtues may be found among individuals, and even among classes when inspired by *esprit de corps;* but no such country is able now to display as an ordinary rule the courage of Soudanese, of Ghoorkas, or of Japanese.

Points of interest which we notice before we put down this volume are many. In one attack the Russian corpse nearest to the Japanese position bore pinned on the breast a "slip of paper, on which was written, in English, 'Brave Japanese, bury our dead.'" The Japanese, though they burnt their own dead, were at pains to dig, often in frozen ground, to bury the bodies of Russians, as they knew the repulsion with which uncultivated believers in a material resurrection regard incineration.

Sir Ian Hamilton records the sharpness of the pang with which he saw for the first time Russian "white men the prisoners of Asiatics." He thinks that this "deeply rooted, instinctive feeling" is inherited from the time of the Crusades or some even earlier epoch. We fear that the possession of India, where Sir Ian Hamilton long served with distinction, is a more natural explanation.

The smallness of the Japanese headquarters staff is noted. That of the First Army consisted of fifteen officers, with about the same number of grooms, and five military police for escort. Even this is a larger staff than Lord Wellesley had with him in many marches in the Peninsula. As Sir Ian Hamilton points out, it offers a contrast with our "unwieldy" staff in South Africa.

Our War Office has never been famous for concealing secrets. We therefore note that an early telegram (to whom addressed the author does not state, so that we may be wrong in our suggestion), "by an irony of fate, got into the press.....as 'General Hamilton's criticism on the battle.'"

A general reader in search of mere amusement will be pleased by such anecdotes as that which relates the knowingness of the Japanese in receiving Sir Ian Hamil-

ton at headquarters with a band playing 'The Garb of Old Gaul,' the regimental march of his pet Gordons. Another remark, by the way, may attract attention: "After all, what is a woman's abuse so long as she is not your wife?" It is pointed out in another passage that while the cleanliness of the Japanese, even in war, makes their battalions a marvellous contrast, from the nasal point of view, to those of all other countries,

"we are by no means equally inoffensive to the Japanese.....Our habit of devouring great quantities of meat gives us a carnivorous aroma. .....It is dreadful to suspect that when we think ourselves fascinating we may only succeed in reminding our pretty Geisha friends of a zoological garden on a hot afternoon."

Charles Lamb: sa Vie et ses Œuvres. Par Jules Derocquigny. (Lille, M. Tallandier.)

The Life of Charles Lamb. By E. V. Lucas. 2 vols. (Methuen & Co.)

Charles Lamb. By Walter Jerrold. (Bell & Sons.)

M. Derocquigny displays a knowledge of his subject at once wide and intimate. His essay on the life and writings of Charles Lamb, as befits a thesis composed for a doctorship of letters, is sound and conscientious rather than notably brilliant or original, its merit lying less in the striking presentment or the novel interpretation of the facts than in minute accuracy and an implicit adherence to authorities. The raw material of the life, amassed from over a hundred printed sources, is fused into a lucid, well-ordered narrative occupying two-thirds of the volume. Six chapters follow, in which the man himself and certain constituents of his genius—sentiment, observation, humour, wit, literary craftsmanship—are severally discussed in the order here indicated. A seventh and final chapter is devoted to an estimate of the genius in its totality.

Lamb has from time to time been the subject of much occasional and partial criticism, but, so far as we are aware, no reasoned analysis and inventory of his powers has heretofore been attempted. In these seven chapters M. Derocquigny resumes the leading points of the earlier critics, incorporating and co-ordinating their scattered judgments in a systematized survey and appraisal. Nor does he disdain to utilize such modest aids as Messrs. Hallward and Hill's school edition of 'Elia,' from the notes of which several apt illustrations of phrase or idiom have been silently transferred, we observe, to his pages. M. Derocquigny has enriched his text with many examples of Lamb's refined and genial art, alike in the choice and the rendering of which he shows fine literary tact. Both the letters and the essays have been freely ransacked for this purpose.

In a careful perusal of the essay we have noted but one misprint—"*Soulb* Sea House" (p. 40). Two errors of a graver kind may be rectified here. It was not Fenwick (p. 128), but Fenwick's son-in-law, Rutherford, whom Lamb, writing to Stoddart in August, 1827, stigmatized as "a living scoundrel lurking about the pothouses of Little Russell Street." John Fenwick appears to have been in England in August, 1817 (see 'Letters,' ed. Lucas, i. 500). Later he emigrated to America, and died, Mr. Lucas tells us, in 1820. The confusion is partly due to the loose wording of the letter to Stoddart. For another mistake M. Derocquigny himself must be held solely accountable. Writing to Gillman (May 2nd, 1821) to secure beds for Mary and himself against the night of Gillman's dinner (May 5th) to Charles Mathews, Lamb slyly adds: "I would write to Coleridge, but cannot think of troubling a dying man with such a request." M. Derocquigny takes the little jest seriously; he will perceive his error on turning to the letter of the day before (May 1st, 1821), in which, after promising Coleridge to dine at the Gillmans' on the 5th, the wicked wag continues:—

"Extract from a MS. note of S. T. C. in my Beaumont and Fletcher, dated April 17, 1807. '*Midnight.* God bless you, dear Charles Lamb, I am dying. I feel I have not many weeks left.'"

M. Derocquigny's implicit faith in Ainger has led him into a few mistakes in the dating of the letters. His thesis appears to have been written late in 1903, when Ainger's edition of the letters, which abounds in false chronology, still held the field. Yet M. Derocquigny cannot be acquitted of all blame in this matter, since an hour's search amongst the recent files of *Notes and Queries*—a journal which figures in his 'Liste des Ouvrages Consultés'—would have saved him from his mistakes in this kind.

One other trivial blunder shall be recorded here, as it affords an amusing illustration of the inextinguishable vitality and Protean multiformity of such microscopic forms of error—though, happily, we may exonerate M. Derocquigny from all responsibility in connexion with it. On p. 45 the name under which Coleridge enlisted is given as "Silas Titus Comberback." For one ("Titus") of the two mistakes here perpetuated Sara Coleridge ('Biographia,' 1847, ii. 337) is primarily accountable; but M. Derocquigny, who apparently knows the 'Biographia' in Messrs. Bell's reprint only, must have found the name either in Ainger ('Elia,' 1883, p. 384) or in Lucas ('Elia,' 1903, p. 325). Gillman, who gives the surname only, spells it "Comberbach" ('Life of S. T. Coleridge,' i. 59), though in a subsequent note he gives the correct spelling, Comberbacke. That incorrigible blunderer Joseph Cottle ('Reminiscences,' p. 279) reports the pseudonym in full as "Silas Tomken Cumberbatch—*not* Comberback," he expressly adds. Mr. Ernest Hartley Coleridge (*Illustrated London News*, April 15th, 1893) prints it, with "an excrescent *p*," as "Silas Tompkyn Comberbacke"; and yet other variants may be extant. The question is not of capital importance, yet one is pleased to have it solved beyond dispute by the publication in facsimile of a letter from the reluctant recruit to his brother, "the Colonel," in which the following passage occurs: "My assumed name is Silas Tomkyn Comberbacke, 15th or King's Reg. of Light Dragoons, G. Troop." "My number," he characteristically adds, "I do not know: it is of no importance."

To turn from M. Derocquigny's orderly thesis to Mr. Lucas's two bulky volumes is to pass from cosmos to seeming chaos. Our first impression of the 'Life' is that of a vast fortuitous medley (800 pp.) of quotations, in which one might be puzzled to find the "forty pages of hard biography" for which, in the interests of Joseph Fawcett (destined later to find a stern chronicler in Wordsworth), Lamb once stipulated with William Hazlitt. It looks at first as though Mr. Lucas had thrown together at haphazard a huge cairn or monumental pile of extracts—from Lamb himself, and from all who ever put on paper an impression or a reminiscence of him. Order, method, or proportion there seems to be none—save, indeed, that the extracts are printed in a roughly chronological series.

But the oftener we return to the 'Life,' the more reason we find to doubt the soundness of our first impressions. We begin to discern a purpose underlying the show of disorder. The extracts, when read consecutively, are found to interlace, forming a variegated tissue of narrative and description from which, as from a puzzle-picture, there presently emerges into distinctness the figure of Charles Lamb. The plain truth is that Mr. Lucas, instead of telling his story in his own words, has "by his sopotent art" compelled Elia and his friends to tell it for him—a *tour de force* possible only to one who, by dint of close conversance and daily rehandling, has learnt how to mould his material according to his will. Of the man Charles Lamb—the "human mortal," as distinguished from the thinker and the writer—Mr. Lucas's pages reflect a true and lively image. He is less successful in reproducing the intellectual features of his subject; while his portraits of certain of Lamb's contemporaries—notably that of Coleridge—are not far removed from travesty. But if he cannot be said to understand the microcosm Elia "in his quiddity," he must at least be allowed to have apprehended and depicted the man on his human side; and to have done this as Mr. Lucas has done it—faithfully, forcibly, and lovingly—is to have earned the gratitude of a wide and ever-spreading circle of readers.

Mr. Lucas has prosecuted a zealous quest for fresh details, but his gains are few and of slight account. His extracts from Crabb Robinson's papers, taken directly from the MSS. in the Williams Library, constitute the largest and most valuable part of his acquisitions. Robinson had the gifts of observation and insight, though he was by no means in complete sympathy with Elia. "Irving ought not to like Lamb, whose levity and want of serious thought is incurable." What blindness to the true secret of Elia's laughter does not such a criticism imply! How much wiser the saying of Leigh Hunt! "Lamb's was a levity that relieved the gravity of his thoughts, and kept them from falling too heavily earthwards." "Lamb," says Mr. Lucas, "once observed that 'Elia' formed the anagram of 'a lie.' Possibly," he adds,

"in the circumstance that the pseudonym of Elia was adopted at all we may find a reason for the difference between the comparative thinness of Lamb's pre-Elian writings and the Elian richness and colour. There are some writers..... who can never express themselves so freely as

when, adopting a dramatic standpoint, they affect to be some one else. The innocent imposture confers courage, disarms diffidence."

In a subtle analysis of Lamb's literary genius, printed in the November number of *The Monthly Review*, Mr. Arthur Symons says much the same thing. It is curious to see how this "matter-of-lie" instinct sometimes leads to a double assumption of character—a twofold make-believe—as where, writing over the signature of Elia, Lamb, in describing the loneliness of the poor, friendless Blue Coat boy, borrows for the nonce the mask of his schoolmate Coleridge.

Mr. Lucas has unearthed some vigorous letters upon the Corn Laws of 1815, addressed by John Lamb the younger to *The Examiner*. Like Charles and Mary, John was ever "the friend of the unfriended poor"; but "the two brothers used different weapons: Charles bringing sweet reasonableness and humorous irony to his task, John brandishing a club." Miss Kelly, it appears, had "a passion for little frogs," and Tom Westwood acted as "Miss Kelly's frog-catcher." One wonders whether his duties included fly-catching (for the frogs' larder) as well. M. de Luc, Queen Charlotte's Swiss geologist, used to act in the latter capacity for the Schwellenberg's batrachian pets. But perhaps the best thing Mr. Lucas has given us in these volumes is Lamb's couplet on a brother official of the India House:—

> What Wawd knows Gawd knows;
> But Gawd knows *what* Wawd knows.

Mr. Jerrold's little book is as full and as informing as a sketch on such a limited scale can be. It is tastefully got up, and has two portraits of Lamb (Meyer's and Joseph's), two views of Christ's Hospital, and a reduced facsimile of Lamb's letter to John Clare. It should serve as a lure to the more extended study of Lamb in the works of M. Derocquigny and Mr. Lucas, and, above all, in Lamb's own exquisite, humane, and truly wholesome pages.

Lectures on Early Kingship. By J. G. Frazer. (Macmillan & Co.)

The famous author of 'The Golden Bough' prints in these lectures additional matter which he will incorporate in the third edition of that work. The style of the present volume will probably be pruned a little, for it has the familiarity of viva voce exposition to an extent not usual in a solemn treatise. But this makes the book pleasant reading, and shows how easily the author carries his vast anthropological learning about with him. His conclusions are, indeed, mostly tentative; there is, as there must be in anthropology, a great deal of guessing, and the constant *perhaps*, or *may be*, or *suggests*, introducing a conclusion, becomes somewhat tedious. But the problem discussed—the origin of kingship—is highly interesting, and all the digressions from it (and they are many) afford curious sidelights on the habits of primitive man, and the many survivals of early culture in our civilized societies.

Mr. Frazer makes too much, in our opinion, of the idea, which he almost heralds as a discovery, that the earliest kings grew out of magicians. The general fact is that in any tribe the man who was exceptional naturally came to be a leader. Sometimes he was the strongest or the swiftest, sometimes the most persuasive, sometimes the benefactor who came with some discovery from foreign parts, sometimes the magician who controlled unseen powers, and brought rain or averted pestilence by his influence with these powers. Aristotle's statement that the oldest kings were benefactors covers most of these cases, and that of magic, which produced imaginary benefits or warded off evils, is only one of the phases of this broad principle. That the king should often be a foreigner—as, indeed, almost all the famous legendary kings in Greece were held to be—and not one of the tribe, arose not only from the possession on his part of secrets unknown to the subjects who adopted him, but also from the prevalence all over the world of *Mutter-recht*, that condition of things when polyandry was not disliked, and when, therefore, paternity was uncertain. Thus the royalty went in the female line, and to marry the heiress, or the widow of the last king, was the natural title to the throne. How persistent this idea was in some races is shown by the case of Egypt, where the marriage with the crown princess or queen was the regular legitimation of a new king. Thus many adventurers mounted the throne of Egypt, and even as late as the Ptolemies we find the marriage of the heir with the princess royal was so vital as to authorize the union of full brother and sister. What appear as shocking vagaries in that dynasty may only be adherences to an old national sentiment derived from the obsolete *Mutter-recht*.

Mr. Frazer is quite familiar with the fact that the Pharaohs were identified with the god Amon (or Ra), and that their marriages were consummated in the garb and under the guise of that deity. He regards this as only one example of many in which the king is identified with the deity, the human and superhuman not being separated in primitive religions by an impassable boundary. The prompt assumption of divine honours by Alexander and his successors, and the ready acquiescence therein, in a very modern and sceptical age and among many nationalities, seem to be a remarkable survival of the same kind. All the pomp and circumstance of mediæval royalty, the fiction of divine right, and the claim to be above the laws—all these things are only echoes of the old endowment of royalty with superhuman attributes.

In answer to the question how far the earliest sovereignties were hereditary, and how far elective, Mr. Frazer rightly says that both principles were always at work. The clan or tribe chose from the natural heirs, thus combining selection with heredity. He might have added to his examples taken from backward races that of the Irish *Tanist*, or heir to the chiefdom, chosen by the clan from among the sons and brothers of the chief, to which choice bastardy was no bar. We might add from the sister island an illustration of the admiration of size and of fatness, as a proof of prosperity, and hence a sign of beauty, which prevails among African races. There is now no more usual compliment to a married woman among the Irish people than to tell her that her husband is "growing a fine gross man" or that he is "well mended"; for this implies that he is well kept, well fed, and comfortable at home.

There is another very strange feature in many of the primitive kingships which habitually bring in a husband from without for the queen or goddess. It is this, that he holds his place for only a limited time, sometimes as short as a single year, at the end of which he is either put to death or exiled, or has to fight for his throne with any new claimant that presents himself. An isolated survival from the Roman legions on the Danube in the fourth century shows us the setting up of a mock king with every licence for a period of thirty days, when he was obliged to commit suicide on the altar of the god (Saturn) whom he personated. We will add that the Spaniards found in Mexico a practice which affords another example. A fair youth was selected to live the life of a god with all luxury and wantonness, supplied with a harem and the like. But at the end of a year he was laid on an altar, cut open with a stone knife, and his heart was torn from his body.

What is the meaning of this tragic *peripeteia?* Mr. Frazer gives us no light even by his conjectures. He attributes it to the dread of age and decay in the man-god or king, "whereas, by putting him to death in his vigour, they hoped to catch his sacred spirit uncorrupted by decay, and to transfer it in that state to his successor." But he gives not a tittle of evidence that there was ever any symbolical transference of this kind. It seems to us far more likely, if we may venture an additional guess, that this overthrow of the man brought in and set up as a king, and even a god, arose from a desire to appease the vengeance of some rival or hostile deity. The jealousy of the gods was an almost universal belief—*φθόνερον γὰρ τὸ θεῖον* in Herodotus, "The Lord thy God is a jealous God" in the Old Testament—and the raising of a man far above his fellows into a quasi-divine position would naturally be atoned for by overthrowing the idol that had been set up.

The curious feature in all these researches is the recurrence of the same ideas in primitive men of all kinds and races, in all zones and climates over the earth. We might almost set it down as an axiom that similar circumstances will engender similar ideas and practices among the whole human race. Even the highest races are not free from these influences, and if Mr. Frazer quotes some learned men who have denied that *Mutter-recht*, for example, ever existed among Aryan races, surely these people fail to realize that the dominant races have occupied not an empty, but a pre-inhabited land, and with their new wives, and in their new surroundings, have always taken over many of the beliefs and the ceremonies already long established around them. Who shall say that the Greeks or the Celts did not inherit many ideas from prehistoric inhabitants, who were forgotten till recent researches have shown unmistakable traces of their influence?

We have occupied ourselves rather with discussing problems than with merely rehearsing the contents of Mr. Frazer's lec-

tures. On the legends of the early kings of Rome he has many curious, fascinating speculations, which we would gladly summarize. But it is the effect of a good book not only to teach, but also to stimulate and to suggest, and we think this the best and highest quality, and one that will recommend these lectures to all intelligent readers, as well as to the learned.

NEW NOVELS.

The Lake. By George Moore. (Heinemann.)

We hardly know where to place the new George Moore, who has nevertheless still some of the old Adam in him. But it is a metamorphosed—in a way, almost a transfigured—George Moore. All the old weaknesses of omission and commission which characterized 'Esther Waters' and 'The Mummer's Wife' are present here also, but the virtues are radically different. What charm there is in 'The Lake' resides in Mr. Moore's acquired feeling for nature. He is at his best, not, as he was, in discussing human relationships and setting forth in painful detail the furniture of a soul, but in communing with the stars or recording his affinity with inanimate things. We note a certain romance and passion in his attitude to nature which were never before observable. And it is herein that one sees a transfiguration. On the other hand, the human episodes suffer materially from this emergence of the dreamer—so materially that it is difficult to believe 'The Lake' is a successor to 'Sister Theresa.' Mr. Moore always showed a distaste for form and a contempt of plot, so that we do not look to him for either. But one has a right to expect "realism" from him. In this book his realism is as near to idealism as it can be. It does not convince any more than a fairy tale. The whole affair is oddly rambling and inconsequent. It is independent of observation, which was Mr. Moore's mainstay. Nothing is visualized here, except the growing revolt of a young priest against celibacy. Father Oliver revolts, we understand, because he has fallen in love with a young woman who has "gone wrong" in his parish. We find him on a May day, proper to the passion, turning over the thought of Rose Leicester in his mind. He had driven her from the parish by his severity, and he wonders what became of her. Did she drown herself? To him, in the midst of these misgivings, comes news of the girl, who secures a place as secretary to an exponent of Biblical exegesis. Mr. Moore dedicates his story to M. Dujardin, author of 'La Source du Fleuve Chrétien,' a title which he regards as so beautiful that he candidly steals it for the name of a work by Mr. Ellis, Rose's employer. Apparently Rose is Ellis's mistress, but we are left to gather what we may from a series of letters which pass between the priest and the girl. The two do not meet, but she writes him long and not very interesting accounts of her experiences at Bayreuth and elsewhere with the Ellises, and he keeps up his end of the correspondence with misgivings. Finally he doffs his vestments and starts for America to begin a new life, leaving the impression that he has perished in the lake. We suppose that Mr. Moore's object has been to trace the development of the priest's character as acted upon by his sensual attraction for this woman. It is such a theme as was wont to appeal to him. But it is not satisfactory; it is all too cloudy. And the girl herself is not in the least convincing. The form of the book is also difficult; and, indeed, the natural descriptions and the sensitive and vivid style are the only things that can be praised without reserve. The latter is a mark of the new Mr. Moore.

Soprano: a Portrait. By F. Marion Crawford. (Macmillan & Co.)

Mr. Marion Crawford, forsaking Italy for once, has laid the scene of his new story in Paris. His heroine is an English girl with a wonderful voice, and a great career before her on the operatic stage. Neither Margaret Donne nor her melancholy English lover is, however, so convincing as some other of Mr. Crawford's characters. Undoubtedly the most vivid and lasting portrait in this latest gallery is that of Madame Bonanni, the famous *prima donna*, Edward Lushington's mother, for whose past he so persistently blushes. With her large heart, her shrewd sense, and her shocking manners, she is an altogether delightful creation, who knows well how to guard her young rival from the dangers that beset her path, especially from the picturesque Greek financier who is so anxious to become Miss Donne's protector. The story, if it does not rank with this popular author's best work, is none the less very readable, and upon the last page there is a surprise of a racy and entertaining nature.

The Man from America. By Mrs. Henry de la Pasture. (Smith, Elder & Co.)

We must confess that, for this once, Mrs. de la Pasture has disappointed us. After Deborah of Tod's and Catherine of Calais, we are inclined to resent being put off with conventional types like the elderly French nobleman of simple habits and unworldly aspirations, and the spoilt American heiress with a heart of gold under her pretty wilfulness. Having said so much in dispraise, we hasten to add that the interest of the story is never allowed to flag, and that the characterization is redeemed by charming touches of humour and originality. The atmosphere of masculine wealth and feminine beauty is perhaps a little cloying. We are perverse enough to feel less sympathy with the two adorable damsels who carry all before them than with their poor butt of a stepsister who is always left out in the cold; and the millionaire hero's doctrine that for the advancement of the kingdom of Heaven, as for other great enterprises, we must look to "the plutocrat of to-day," strikes us as curious. Still, the author's girls are really very nice, and the millionaire is a thorough "good sort."

Barbara Rebell. By Mrs. Belloc Lowndes. (Heinemann.)

'Barbara Rebell' is written with ability and a good sense of style, but we could desire something more of originality in the incidents. The characters verge more or less on the upper ten thousand, have sufficiently good manners, and are credited by the author with strong feelings and various other fascinations. They dance and hunt and play cards, fall in and out of love, get into Parliament, and address public meetings. Still they do not interest the present reviewer, though he is ready to believe that in a book above the average it ought to be otherwise.

The Life of Sir Aglovaile de Galis. By Clemence Housman. (Methuen & Co.)

It is with something of a shock that we realize that we have before us in this book a story which Malory would not have found unworthy of inclusion in the Bible of romance, in which a fifteenth-century reader would not have found too much, nor a man of our own time too little. Miss Housman combines with the spiritual insight of our days a full portion of the power of the "French book," not perhaps that of Mapes and the 'Lancelot,' but of the author of the 'Quest,' more feminine in his qualities—psychological, devotional. Aglovaile is one who erred grievously, whose punishment seems the greater in that no reader feels as he does the justice of the unmerited, unreasoning contempt his misdeeds and good deeds alike brought on him. Lancelot alone knew him for the true man he was, and the last sport of fate was to throw him almost alone against Lancelot in the great day of the queen's burning. His historian has achieved a triumph of art in this simple and natural telling of a soul's tragedy, common in all times and conditions of life, but here once more "something new and strange."

The Resurrection of Cynthia Day. By Florence Morse Kingsley. (Hodder & Stoughton.)

Admirers of Miss Mary Wilkins's careful studies of New England life will be sure to like Miss Kingsley's clever and pleasant tale. It is the story of a typical New England old maid—severe in manners, and not a little penurious—who is suddenly informed by a physician that she has only a year to live. With the near prospect of death she begins to feel the need of love, and gradually learns that love can be bought only with love. Before the end of the year has come, she is transformed into a gentle, generous woman. The men and women to whom Miss Kingsley introduces us are wonderfully true to life, or rather to what passes for life in a grim, Calvinistic New England village. The author has not merely caught to perfection the peculiarities of the New England dialect, but has also thoroughly comprehended the peculiarities of New England character. The exception to this veracity is the extremely disagreeable deacon. He is rather a caricature than a portrait, and in point of fact he belongs to Wendell Holmes, and made his first appearance in 'Elsie Venner.' This is, however, comparatively a small matter. The "twins" who bring the atmosphere of joyous childishness into

Miss Cynthia's grey life are as attractive in their way as "Helen's babies."

The Pursuit of Mr. Faviel. By R. E. Vernède. (Alston Rivers.)

Mr. Vernède's story anticipates the joviality and indulgence induced by the cheerful associations of the season. Such a mood is, indeed, necessary to a thorough appreciation of the rollicking chase after the happy-go-lucky Mr. Faviel through the ups and downs of his perilous wager. The probabilities and even possibilities of ordinary English life are cheerfully disregarded, and the vigorous conduct of the story has to atone for some looseness in its construction. That it does so satisfactorily is greatly to the credit of the author, since the interest of the book is made to depend entirely upon the movement of the plot, and individual character is hardly more than indicated. Two pairs of lovers as a conclusion, however, should satisfy the largest and at the same time the most conventional demands.

BOOKS OF TRAVEL.

In Search of Eldorado: a Wanderer's Experiences. By Alexander Macdonald. Illustrated. (Fisher Unwin.)—Rarely has the "auri sacra fames" led its victims through a more exciting series of adventures than those recorded in this delightful book. Yet, except in his opening statement that the racy dialogues, of which his pages are full, owe nothing to his imagination, the author makes no great demand on our credulity; and in spite of his highly developed dramatic faculty, the whole narrative wears an air of truth which goes far to disarm criticism. There is no lack of variety of scene. In Part I. Mr. Macdonald describes his share in the mad rush to Klondike. His unexpected success caused him to be chosen by the miners as their leader when frost and famine compelled them to face a disastrous retreat. Part II. finds him, with the same doughty companions, in the West Australian goldfields, participating in similar, but less dangerous, stampedes after wealth; and as he met with only moderate success in this quarter, he carried out a prospecting expedition into the waterless interior, from which his party barely escaped with their lives. After this the scene shifts with bewildering rapidity from the back-blocks and opal fields of Queensland to the wilds of New Guinea, and thence to the resin-deposits of New Zealand and the pearl fisheries of the Australian coast.

The chief merit of the work lies in its graphic pictures of life in the mining camps and of the quaint humours of their inmates, whom the author portrays in the most kindly spirit. About his own exploits he is modestly reticent; and the foremost personage is his companion the irrepressible "Mac," a perfervid Scot—very partial, like most of his countrymen, to his own wit, but bold and fertile in resource—who figures in all but the last two episodes of travel. We forbear to give extracts, because the book, which is well illustrated from photographs, should be read through to be fully appreciated.

As Mr. Macdonald in his preface lays claim to entire accuracy in geographical detail, we may mention one or two points on which his memory seems to be at fault. The distance on the Chilkoot trail to Dawson, between White Horse Rapids and Big Salmon River, is not 40 miles, as he states, but 103. In one of his chapters, entitled 'The Finding of Gold Bottom Creek,' he relates that a chief of the Throndiuck—corrupted by the miners into "Klondike"—Indians first revealed the riches of this creek to himself and four companions in the winter of 1897. But Dr. Ogilvie states in his official report that "Gold Bottom Creek" was first prospected by Robert Henderson in July, 1896, and that claims had been staked there by the end of that year. It is scarcely possible that there can be two "Gold Bottom Creeks" in the same district, so that there must be some mistake in the name.

The book as a whole deserves the praise accorded to it by Admiral Moresby in a pleasant, though rather grandiloquent, introduction.

Everyday Life among the Head-Hunters. By Dorothy Cator. (Longmans & Co.)—Much has been written about the head-hunters of Borneo, and Mrs. Cator would no doubt be the first to admit that she has nothing very new to tell us. She writes pleasantly, however, of a primitive life which few white women ever happen to see, and her narrative has sufficient charm and vivacity to justify its publication. Mrs. Cator is the wife of an official, a certain Dick, who plays a part not unlike that of the famous Man of Wrath in another wifely chronicle. "Dick" has had the incredible ill-luck to be stationed first in Borneo and then in West Africa, and his wife has accompanied him to both of these eminently undesirable regions. She describes with considerable humour the routine of life in the European colony of Sandakan, varied by trips to such spots as the edible birds'-nest caves of Gomanton, or into the leech-haunted depths of the forest. She made acquaintance with the head-hunters in the course of her husband's official visit to try a case of murder. The jungle people (their material culture is indicated by the fact that they still use fire sticks and poisoned arrows, and their spiritual culture by the practice of head-hunting) had never seen a white woman before, and testified their interest in the novel spectacle in many embarrassing ways. Mrs. Cator rather feared that a nice white head with long fair hair might prove an irresistible temptation. The hospitality of the village long house was not without its attendant drawbacks. Mrs. Cator slept at the end of the line of sleepers, her husband next, and then the men in a long row. Hers was the place of honour, but unfortunately it was at the far end of the house, away from the staircase, and at night it was very hot. It was like some absurd nightmare to pick one's way over "all those sleeping and never-ending men's legs whenever one wanted to get into the air," occasionally in the darkness putting groping hands on a string of heads dangling from the walls or roof. The West African station was in the hinterland of Sierra Leone, also in the jungle country. We wish Mrs. Cator had recorded at greater length her impressions of the difference between the two. The book will serve to while away a leisure hour very pleasantly.

FOLK-LORE.

The Shade of the Balkans: being a Collection of Bulgarian Folk-songs and Proverbs, with an Essay on Bulgarian Popular Poetry, and on the Origin of the Bulgars. By Henry Bernard, Pencho Slaveikoff, and E. J. Dillon. (Nutt.)—Mr. Bernard has been fortunate alike in his subject, an almost untouched part of European literature, and in his fellow-workers, who are thoroughly at home in it. Dr. Dillon's essay on the origin and language of the primitive Bulgars traces the history of the race as far as facts are known or conjecture can be carried. Their language he, like Shishmanov, considers to be of Turko-Tartar origin of the South-Turkish group, the name Bulgar meaning "Volga man," though the Bulgars must have originally come from warmer lands. When one of the five branches of the race conquered and settled in the Balkan peninsula in historic times, the Slavs absorbed and civilized their new masters. From this union grew the race whose characteristics and environment are eloquently described by the Bulgarian poet to whom, in collaboration with Mr. Bernard, the greater part of this book is due. Its title is an indication of what they consider the main influence in the national life of the Bulgars—not, it is true, during the period of their rule, but after, when evil days had fallen on them.

The work before us presents to English readers for the first time a collection of a hundred folk-songs and as many proverbs of this people, selected, translated, and annotated in collaboration by Messrs. Bernard and Slaveikoff. The latter is the son of that Petko Slaveikoff to whom, more than any other, is due the creation of the present Bulgarian literary language. In the course of a long life he got together a vast mass of unprinted folk-songs in addition to those issued under his own supervision, and his collection of some seventeen thousand proverbs, published in 1889-97, embodies the individuality of the Bulgarian spirit.

The Christianity of the Bulgarian peasant, as represented in the popular poetry, is not of a very elevated character, but it is, even now, the sole outlet for his religious sentiments:—

"When he has been paying a visit to Heaven, whether it was a matter of business that sent him, or whether he called in a casual way, we have him telling his fellow-mortals of all the sights as if he had been to some neighbouring village, while God is the local mayor, conducting his office in a good-natured and kindly manner. Once upon a time, a careless Bulgar knocked against Heaven with his head, and it came through; he saw the 'little gods' (the angels) sitting on the bare earth and stirring a large bowl of odds and ends for supper."

The Old Testament saints with Peter and John are the only Biblical ones he knows, though he has many local ones unknown to the rest of Christianity; their stories are linked, as a rule, to holiday customs which have nothing Christian about them. The mythology of his folk-songs deals with Samovilas, sisters of heroes and choosers of the slain; Youdas, or earth-sprites; and Smeyes, cave-dwelling spirits of the Balkans. The old legend of the Swan-Maiden is told amongst the legends of the Samovilas. The hero-songs centre round Kralj Marco (killed in 1394), a renegade lieutenant of the Turks, none of them going back to the time of Bulgarian rule. Abominations, tortures, crucifixions, wholesale burnings, are the incidents of these hero-songs, hardly represented in this collection except for one legend, 'Nicholas the Tartar.' The "heiduck" or freebooter songs celebrate the Robin Hoods of the Balkans: they are good, and express the sympathies of the people for the gallant and open-handed robber; but the gems of the collection are the peasant love-songs:—

"In his love the Bulgar [it is a Bulgar who writes] is no egoist like the Serb, no declaimer like the Greek, no slave like the Rouman: he is less uncurbed than the Italian, less coldly sentimental than the German."

However that may be, the love songs have a special savour of their own—an intimate, tender idealism apart from the songs of other Slav nations.

The collection of Bulgarian proverbs contains much mother-wisdom. Here are a few at random:—

One does not go to hell to light a cigarette.
Strangers forgive, parents forget.
If an ass is angry, he runs as fast as a horse.
The smaller saints will be the ruin of God.
God will give, but won't carry home for you.

Mr. Slaveikoff's criticism of 'The Bard of the Dimbovitza' is certainly not wanting in directness—we wait the reply of its author with some interest. Mr. Bernard's introduction likewise contains home truths for a well-known writer. Among the anecdotes told in it is one of a certain Bulgarian Minister of State, who was engaged—being still in office—in a plot to assassinate his sovereign. The prince got hold of the papers in time, and took his revenge—by selling them to the editor of an evening newspaper. The thanks of the public are due to Mr. Bernard for his interesting and sympathetic book, which throws much light on the character of a little-known people.

Panjabi Lyrics and Proverbs. Translations in Verse and Prose by C. F. Usborne, I.C.S. (Lahore, 'Civil and Military Gazette' Press.)—This book represents an attempt to collect some of the ballads and proverbs current among the Panjabi peasantry—an attempt rendered exceptionally difficult by reason of the little esteem in which such literature is held by the educated native. It is not claimed for this collection that it is representative; but whether it be so or not, it forms a book of unusual interest. Mr. Usborne is needlessly apologetic in his preface; his verse translations are excellent. He has sound poetical taste, together with a fine sense of rhythm. The following 'Lullaby' is delightful:—

Where does the Cuckoo sleep, Baby? Down by the great stone tank,
Where the lizards bask in the sunshine, and the monkeys play on the bank.
Where does the peacock sleep, Baby? Out in the jungle grass,
Where the jackals howl in the evening, and parrots scream as they pass.

What does the peacock drink, Baby? Cream from somebody's cup:
And if somebody isn't careful, the peacock will drink it all up.
What does the Cuckoo drink, Baby? Milk from somebody's pan:
So run and stop the rascal as quick as ever you can.

What does the Cuckoo eat, Baby? Candy and all that's nice,
And great round balls of brown sugar speckled with silver and spice.
What does the peacock eat, Baby? Lollipops all day long:
But Baby must go to sleep now, for this is the end of the song.

In the 'Ballad of Ranjha and Hir' we come in one stanza very close to Omar Khayyam in the form in which he is known to most of us; but this is no doubt principally due to the similarities of Oriental thought, and the irresistible influence of the quatrain will account for the rest. 'Poppy Songs,' 'The Ballad of Laila,' and 'The Water-Carriers' are gems in their way, whatever may have been the crudities of the Panjabi originals.

The prose translations are naturally not so attractive, but they are certainly interesting, particularly the 'Song of Plague,' with its enigmatical comments on English rule. Not the least pleasant feature of the book is the collection of native proverbs at the end. These, though less subtle than those of the Arab, have all the cynicism proper to their species:—

"The jackal was born in August. In September he saw a flood, and said, 'Never in my life have I seen such a flood.'"

"Even Satan prays for protection from girls."

Many, such as "A dog is a lion in his own lane," have their counterparts in English; while here and there is a home-thrust, as in the following:—

"A demon took a monkey to wife. The result, by the grace of God, was the English."

It is to be hoped that Mr. Usborne will see his way to extend his collection.

OUR LIBRARY TABLE.

Mr. Lionel Phillips's book on *Transvaal Problems* (John Murray) can, at least, claim the merit of being up to date. Just as the time between the death of some great man and the appearance of his biography is often the period in which least is known about him, so the history which has for the moment exhausted the notice of newspapers, but is not yet embodied in books, is only vaguely apprehended by the general public. The appendixes, which reprint the proceedings at the Boer Congress at Pretoria of May, 1904, the statutes of "Het Volk," and the new Transvaal Constitution, together with Mr. A. Lyttelton's covering dispatch, are by themselves sufficient to justify the appearance of the volume.

Mr. Phillips, however, has himself much to say, concerning the burning topics dealt with, which deserves a fair hearing. A South African capitalist pleading in favour of Chinese labour has an uphill task to convert an opponent, but there is one point made by Mr. Phillips which has not perhaps obtained sufficient notice from English labour leaders. He asserts that large numbers of Europeans from foreign countries were offered to the mine-owners under contract at incredibly low rates of pay, and that the only reason that the latter steadfastly refrained from making an experiment in that direction was that "they desired to see the Transvaal developed upon lines which they considered consistent with the true prosperity of the country, in accordance with which the white and black men respectively are kept in their proper spheres." It is clear that such an immigration of foreign labour would have gravely imperilled the position of British skilled workmen and overseers.

Mr. Phillips touches less controversial ground in his chapter on 'The Mining Industry,' which is singularly vivid and lucid. On the subject of "the native problem" he pleads strongly in favour of a common South African policy, but is prepared to accept generally the conclusions of the South African Native Affairs Commission of 1903. To be willing to give natives, in however modified a form, a right to vote is to risk unpopularity amongst both Boers and Britons in the Transvaal. In this connexion the pages on the Ethiopian movement should be noted. On the general question of the future of the colony and the relations to each other of the Boers and the British, Mr. Phillips's opinions can be anticipated. According to him, the Boer understands being boss, and understands being under, but does not understand that equality which is the ideal of English constitutionalism. It is from the next generation, which will have been brought up in common schools and been thrown together at an impressionable age, that the hope of a better state of things between the two races must arise. Mr. Phillips, like most successful business men, is an optimist; but it is impossible to read his book without recognizing the dangers ahead. Responsible government, all are agreed, cannot be for many years postponed; but responsible government has hitherto started with the assumption, which has proved correct, that the great majority of the people are in favour of the Imperial connexion. Neither "the Responsible Government Association" of Johannesburg, nor Mr. Lyttelton on the other side, can use to much purpose the Canadian analogy. There is a curious historical blunder in Mr. Lyttelton's dispatch which we have not seen noticed. He says:—

"It is also the fact that in the United Colony of Upper and Lower Canada, during the period 1840 to 1867, parties were formed mainly upon the lines of race, and that, as the representatives of the races were in numbers nearly balanced, stability of government was not attained."

The fact is that the political history of Canada, in the years in question, is largely the record of the La Fontaine-Baldwin Liberal Ministry and of the Cartier-Macdonald Conservative Ministry, both French-English, with French-English majorities, so no statement could be more incorrect. It was the need for the double majority, from both provinces, which caused the deadlock which was remedied by Confederation. But this only indirectly concerns Mr. Phillips's volume.

Mr. Percy Martin gives us *Through Five Republics of South America* (Heinemann), a book which will be found of some value by commercial men and possibly by politicians. It may be read together with the more historical volumes of Mr. Thomas Dawson, of which the second was published by Messrs. Putnam's Sons last year. As we are naming Mr. Dawson's book we should add that its illustrations, though in some cases interesting, are inferior to those which adorn the volume now before us. We remember that, when reading Mr. Dawson with admiration, we were struck with amazement at finding a brig sailing uphill at the 'Entrance of Puerta Cabello.' Mr. Martin takes the same view of the resources of South America as do all who know it. He states among other facts that the Argentine Republic will soon become the first wheat-producing country in the world, and adds: "At one time it was thought that Canada would possess this distinction, but the Argentine will for many reasons beat her in the race for supremacy." He also points out clearly the amazing influence of British capital and energy in the development of South America, where they take the place occupied in Mexico by those of the United States. The author says of the position of the British in South America: "Our capital and our trade have brought about this magic influence, and upon their continuance and expansion it must for ever depend." He negatives from figures the suggestion that Germany is a serious rival to us in South America. Mr. Dawson, as an American, takes the view that the making of the Isthmus Canal will throw Peru and Chile into the hands of the traders of the United States; but the making of the canal now seems a long way off.

In matters apart from trade and figures Mr. Martin is hardly a safe guide. He seems prejudiced against republics in general, though he somewhat contradicts himself. A similar contradiction may be observed in what he tells us about arbitration. In the preface he notes that, since the sale of the navies of the States affected by the King's award, these governments have voted special credits for new fleets, and he elsewhere throws doubt upon the value of arbitration. But at the beginning of the eleventh chapter he vaunts its virtues, and states that it has eased the pressure upon the republics to spend their revenues upon maintaining expensive navies. A point upon which Mr. Martin may be useful concerns our consular system and the Foreign Office consular reports. Observations upon the subject are frequently made which are in the nature of mere grumbling and are easy to answer. Mr. Martin writes with knowledge of particular cases, and carries more weight than do more general critics. He calls attention to the report in a recent inquiry as to the jobbing of consular appointments, and appears to show that it continues. Not only are the wrong men often brought in by "patronage," but even when the right men are found in the service they are not encouraged by promotion to the best posts. A weak point with Mr. Martin, as with many travellers who write upon particular countries, is a tendency to treat as peculiar facts which are general, or at least not confined to the country to which they are credited. He mentions that he has been travelling for ten years and has been four times round the world; but his knowledge of the United

States and of France, to refer to republics for example, does not seem thorough. He names, as though it were distinctive of the Argentine Republic, the boarding of trains by vendors of newspapers, who travel with the passengers for a considerable distance, plying their trade in the corridors. This custom, however, is general in the United States. He treats as remarkable the fact that in a country professing the Roman Catholic religion—the Argentine Republic—the schools are secular "except after hours and by special request." In France, however, the schools are secular, with no provision for "entry after hours"; and France is, on the whole, as Catholic as the Argentine Republic, which is by no means typically representative of South America as a whole. He notes concerning the republics the difference between the smaller sum spent on education and justice and the enormously larger amount upon army and navy; but the contrast is also striking in our own case.

There are minor inaccuracies scattered throughout the volume. It is not easy to feel sure that the dates given for what is called by exaggeration "revolution" in Argentina are correct. In a table in the preface 1905 is given, as it is at p. 21; but on this page there is a reference to "the revolution of February, 1904," as well as to "February, 1905." At p. 90 the exact days of 1905 are named, and at p. 92 we find "the revolution of February, 1904." The military rising of this year lasted so short a time and was put down so easily that it hardly deserves the big name; but civil warfare naturally impresses those who witness it, and this was the case with Mr. Martin. In his comparison of the military forces of the republics "regiments" of artillery have no importance, unless we know of how many batteries they are composed; and this is not alike in all cases. In the British Empire until recently the regular artillery formed one "regiment," and we have now nothing in our artillery which can be called a really regimental system similar to that which exists among the continental Powers. We cannot understand another of Mr. Martin's tables which professes to state the proportion of "expenditure to revenue," showing, for example, for Venezuela, "proportion to revenue" 12 per cent. Mr. Martin, dealing with Britons in South America, many of whom now regard it as home, and after visiting the old country prefer to return to Argentina, adds that he never knew any person born abroad of British parents who did not insist that he or she was British. We believe this to be true as a general principle, but a startling exception is noted in the books on our South African war. Great numbers of Transvaal and Orange State burghers of British parentage, many of them of pure English or Scotch race, fought for the republics against us. In several cases young men who had been distinguished students of our universities, and who spoke English perfectly, fought as Dutch patriots for the Dutch side. The author's statement that Brazil is the third largest country in the world, coming next to Russia and the United States, seems a little disrespectful towards the British Empire with its Dominion and its Commonwealth. There is exaggeration in his belief that South American governments are more frightened of the United States and of Germany than of us, and right the wrongs of subjects of those States where they would refuse to meet the representations of Great Britain. Venezuela is instanced, but the Venezuelan case is hardly in point. The influence of the United States, which at one time was growing in South America, has diminished in the principal republics, and that of Germany has not of late increased. The appeal to King Edward to settle the difference between Argentina and Chile was a recognition of our position in South America, and in the case of disputes between our subjects and countries in which we have interests so enormous there is much to be said for a prudent and waiting policy. M. Jaurès is not "the President of the French Chamber of Deputies." We have not identified the "Chesterfieldian warrior Fontenoy": perhaps the word "at" has dropped out. Neither can we understand the reference in the preface to "the various German-speaking peoples of Switzerland and Austria leaving the German *Bund*."

A Study of the Russo-Japanese War, by Chasseur (Blackwood & Sons), is a meritorious attempt to construct for the general reader a complete survey of the operations. We have reviewed so many books upon the subject that it is only necessary to say of this one that it is difficult for an author at present to avoid a certain confusion in the account of a complicated matter in which the policy of one side is as yet inexplicable, and of the other somewhat carefully concealed. The description of the fighting is necessarily less vivid in the general books than in those which come from correspondents who deal only with the fortunes of a single one of the Japanese armies.

We note the appearance in the series "English Men of Action" (Macmillan & Co.) of *Captain John Smith*, by Mr. A. G. Bradley. Capt. John Smith is called on the print of 1616 which forms the frontispiece "Admiral of New England," but is better known in colonial history as the life and soul of the settlement of Virginia. The volume is to be commended.

We have read with eager anticipation *La France et l'Italie: Histoire des Années Troubles, 1881-1899*, by M. Billot, the former ambassador of France at the Quirinal. It contains no revelations. We are not even told anything about the contents or the form of the declaration of common interest with Italy in the Mediterranean by which, it has often been asserted, Lord Salisbury contracted a virtual though limited temporary alliance with Italy at the moment when Crispi had made the world believe that Italy was likely to be attacked by France. While, however, the two volumes (Paris, Plon-Nourrit) have nothing in them that can surprise, they contain much to interest the cultivated student of modern history. They confirm at every point the usual view, but add greatly to our information. It will be remembered that from 1866 to about 1900 Italy, except in the Red Sea, took her foreign policy from Germany, while during a long portion of that period France had in Italy no friends except the dying set of old republican Garibaldians. Gambetta was firmly persuaded, as any French statesman must be, of the vital importance to France of a good understanding with Italy. He was hopeless of attaining it except by coercive or revolutionary means, and during his possession of power, before he took political office, he fostered in Italy, with painful care, the growth of a newer republican party. It was not, perhaps, intended that the monarchy should be upset, but rather that such division should be produced in the counsels of Italy as to paralyze her in the event of a Franco-German war. When the predecessor of M. Billot, M. Mariani, was sent by France to Rome (where he forthwith died), he was chosen as a friend of Italy who was to do his best to charm the peninsula into good humour. At that time he could not have been successful. When M. Barrère, who possessed far greater ability than either Mariani or the excellent diplomatist who gives us this book, was dispatched on the same embassy, circumstances had changed. The present ambassador at the Quirinal was helped also by a gross blunder on our own part, which, however, by our customary luck, has turned accidentally to our advantage. Propitious as was the change, the marvellous success which has recently attended the new French policy at Rome is as much owing to the talent of M. Barrère as to any other cause. The recent volume of the Military Correspondent of *The Times*, as we showed in our review, points out that the new understanding, first with Italy and then with Great Britain, has, without any alliance, strengthened the French forces against Germany by half a million of men.

M. Joseph Reinach publishes through the house of Charpentier, of which the regretted head has just been conducted to the tomb by literary France, the fifth volume of his *Histoire de l'Affaire Dreyfus*, which has for its special title *Rennes*. Without the sensational interest of the second volume, 'Esterhazy,' it is, on the whole, the best of the series. M. Reinach's extraordinary power as a delineator of character and historian obtains full play in a book which is in fact a complete survey of France during the period with which it deals. When we take into consideration the ferocity of the attacks which have been made upon him, and his own remarkable combination of violent pro-Jewish sentiment with French patriotism, it is almost startling to find the impartiality with which he writes. Even when he is dealing with the attitude of the Roman Catholic Church towards Dreyfus, he is scrupulously fair, and not only blesses Leo XIII. for the statesmanship and moderation of his advice, but even puts the Jesuit side, as expounded by the great working head of the order in Paris, in such a way as to be just towards one who was admittedly using public excitement about a startling trial for the purpose of producing a military rising in favour of a monarchy. The sketches of historical personages may be blamed for their frankness, when regard is had to the fact that the men are living, and are even, in some cases, personal friends of the author. It is difficult for us on this side the Channel to realize the difference which exists between French and British conceptions upon this subject. The Bismarck volumes caused us to make similar reflections. The true test, however, should be, not our practice here, but the conformity of an author to the ideas of the best people in his own country. The picture of Galliffet is the finest. It has already been quoted in *Le Temps* and other well-known papers as a model of insight and of style. That of M. Delcassé is almost as good. Of Jaurès there are two: one personal, and one where the individuality of the leader is merged in a general survey of the Socialist position. All these will take their place by the side of the sketch of Thiers in the first volume of M. Hanotaux, and of Gambetta in his second, lately reviewed by us. The characters of "the villains in the play"—that of Cassagnac, for example, or that of Cavaignac—are perhaps too closely modelled upon Cicero. The story of the interview between the author and Père Du Lac is of high interest, but is, of course, not new. M. Reinach has a wonderful passage upon the contrasts which the French genius presents, combining as it does the qualities of the plain and of the mountain, those of the fogs and of the sun, those of the monarchic and of the republican State, those of the Catholic and those of the Huguenot and the Voltairean traditions.

It may be noted that M. Reinach tells at length the story of the negotiations for the first entrance of Socialists into the Cabinet of the Third Republic, and this portion of the volume will have special interest for the friends and foes of M. Millerand.

The reader's highest sympathy will be reserved for the brother of Dreyfus, the patient believer against all odds, called, though M. Reinach objects to the last four words, in a

letter published by M. Clemenceau, "the admirable brother—true hero, that one."

The imminence of a dissolution of Parliament gives interest to *Elections and how to Fight Them*, by Mr. Seymour Lloyd, published by Mr. Vacher, with an introduction by the Secretary of the National Union of Conservative Associations. It follows the usual lines, and is pleasantly written, as may be seen from this quotation: "An experienced Election Agent, like a bibliophile, prefers wide margins, since in a contest nothing can be foreseen with absolute certainty save the entirely unforeseen."

The second issue of the *Liberal Year-Book*, published by the Liberal Publication Department, of which Mr. Birrell is chairman, and Mr. Geake, the secretary, responsible for the volume, is as good as the first issue, being carefully revised and accurate. It does not profess to be impartial, and is written from the Liberal point of view, mainly for circulation among Liberals; but its poll-book, showing the numbers at all elections for every constituency since 1885 inclusive, is of general utility, and is brought up to the middle of November. There are a few references to public questions—among others, of course, the fiscal controversy. In the part which deals with Mr. Chamberlain's speeches the recent articles in the commercial supplement of *The Times* on the tinplate trade might have been useful. They appeared probably too late for inclusion.

Apart from nursery-tale and rhyme, comparatively little has been written in English about the cat, that strange dweller on the threshold of domestic life, so mysteriously with us, but not of us. The literature of the dog is far more voluminous and is of a greater simplicity; for the dog is merely one of ourselves, with most of our finer qualities and but few of our failings. He is frankly devoted, deeply sentimental, wholly unsecretive. It is a commonplace that a dog will come when he is called, while the cat will walk away. Ruffle puss and you find a panther, while at any time after dark your serene sphinx of the hearthrug will cast off civilization and gentility at one bound to rave outdoors like a Mænad. For the cat it is but one step from the parlour to Walpurgis. The very subtlety of the subject renders it one not easy to handle; Baudelaire, Gautier, Pierre Loti, furnish successful instances that come to mind. Poe had the temperament and the needful skill, but he threw his opportunity away. And now comes Miss Violet Hunt with her excellent contribution, *The Cat* (A. & C. Black), to a series of "Animal Autobiographies," a task performed with sympathy and insight, and much vivacity. Miss Hunt undoubtedly understands cats as well as women, and she uses her intimate knowledge with discretion; she chastens her revelations of feline inwardness with a commendable economy and sense of fitness. Loki, the smoke-blue Persian who unfolds the tale, is distinctly attractive. Towards the close, indeed, the story almost rises to a problem novel. We find, on the one hand, a lovely lady who lives mainly for her high-born cats, and on the other an aspirant who seeks her hand, but not her pets, being physically overcome even by the unsuspected neighbourhood of a feline presence. One cannot but suspect Miss Hunt of having offered up her own artistic conception of the case on the shrine of a "happy ending." The volume is charmingly illustrated by Mr. Birkenrath.

Mr. Murray has reissued in one volume *The Creevey Papers*, which was the success of the season of 1903. No book of reminiscences has been equal to it since as an intimate revelation of a long period of English politics, and the volume, well supplied with portraits, should further establish the posthumous reputation of one whose rich fund of vivacity made him welcome in spite of his own want of means.

Messrs. Routledge have sent us several volumes of "The Photogravure and Colour Series." Well printed and handsomely produced, with striking illustrations, this new venture is likely to be popular. Mr. Gilbert James has done pictures for *The Books of Ruth and Esther*, *Matthew Arnold's Poems*, and Adlington's *Cupid and Psyche*. He has imagination and a personal style, and may in time become a good illustrator. But he seems to lack a sense of humour, otherwise he would hardly have pictured Arnold with educated whisker in a frock-coat among enormous candles and what we suppose are Carthusian monks. His beauties seem modern in type, and he overuses, too, masses of black. Miss Jessie M. King has grace, but we do not think her style (strongly reminiscent of Aubrey Beardsley) is suited to *Comus*. Miss Florence Castle has made pretty plates to *Herrick's Flower Poems*. *Blair's Grave*, with Blake's inspired designs, is welcome, and almost a novelty to the present age. The spirit and colour of old times are well given in the plates to *The Christmas Book of Carols and Songs*, by Mr. Alan Wright and Mr. Vernon Stokes.

The same firm send us the first two volumes of a reissue of Mr. Aitken's annotated *Spectator*, an admirable edition which it is a pleasure to see in a cheap form. This, Leopardi's *Essays and Dialogues*, and Burke on *The Present Discontents* are excellent as well as enterprising additions to the "New Universal Library," which deserves success, and will surely attain it.

Mr. Ernest Nister, who is justly celebrated for colour printing, sends us a capital packet of Calendars. This year they are very varied, and some of the new shapes introduced are decidedly attractive. The Calendars entitled 'Roses' and 'Proverbs' are sure to be popular, and those in book form are ingenious.

The Christmas number of *Black and White* has four bright presentation plates, and a host of the short stories which are generally associated with the season. They are by well-known writers, but not of permanent value.

Messrs. Hatchard's Christmas number of *Books of To-day* is a sound, yet amusing guide to the bewildering mass of books now before the public.

We have on our table *Manual of the Church Question in Scotland*, edited by Hew Morrison (Edinburgh, Keith & Co.),—*The Grace of Episcopacy*, by Canon H. C. Beeching (Nisbet),—*Old Testament History*, by George Carter (Relfe Brothers),—*A Sinner's Prayer*, by Samuel Stevenson (Marshall Brothers),—*Christian Prayer*, by the Rev. W. A. Reid (Blackwood),—*The Inward Light*, by Amory H. Bradford (Clarke),—*The Church of Christ*, by A. H. Charteris (Macmillan),—*Lex Levitarum*, by the Rev. J. C. Hedley (Art and Book Company),—*Social Aspects of Christian Morality*, by the Rev. W. S. Bruce (Hodder & Stoughton),—*A Drummond Treasury*, by E. C. B. (Burleigh),—*The Foundations of Religion*, by J. B. Kinnear (Smith & Elder),—*The Parables of Jesus*, by the Bishop of Stepney (Pitman),—*God's Image in Man*, by J. Orr (Hodder & Stoughton),—*The Hidden God*, by R. F. Horton (Brown & Langham),—*Animals of the Bible*, by Margaret R. Thomson (S.S.U.),—*Christ's Pathway to the Cross*, by J. D. Jones (Clarke),—*The Crucible of Experience*, by F. A. Russell (Clarke),—*The Pilot: a Book of Daily Guidance* (Clarke),—*The Interpretation of Nature*, by C. L. Morgan (Macmillan),—*Theological Encyclopædia*, by E. O. Davies, Introduction by A. M. Fairbairn (Hodder & Stoughton),—*The Upright Life*, by Charles Wagner (Hodder & Stoughton),—*Sermons by Unitarian Ministers* (Green),—*Conversations with Christ*, by the Author of 'The Faith of a Christian' (Macmillan),—*Difficulties of our Day*, by W. M. Sinclair (F. Griffiths),—*Broken Ideals*, by James Thew (Allenson),—*Man's Spiritual Enemies*, by the Rev. F. D. Bruce (Stockwell),—*Creed and Civilisation*, by T. Gordon (F. Griffiths),—*Our own English Bible*, by W. J. Heaton (F. Griffiths),—*What shall I tell the Children?* by G. V. Reichel (Allenson),—*Letters to a Godson: Old Testament and Christian Doctrine*, by C. Bickersteth (Mowbray),—*For Those who Seek*, by S. Stevenson (Marshall Brothers),—*Nature and Origin of Living Matter*, by H. C. Bastian (Fisher Unwin),—*Hugh Miller*, by W. M. Mackenzie (Hodder & Stoughton),—*George Rundle Prynne*, by A. Clifton Kelway (Longman),—*Constable*, by M. S. Henderson (Duckworth),—*Peter Paul Rubens*, by Hope Rea (Bell),—*Sir Lawrence Alma-Tadema*, by P. C. Standing (Cassell),—*Edward Macdowell*, by L. Gilman (Lane),—*Sir Henry Irving*, by H. Macfall (Foulis),—*Giordano Bruno*, by Alois Riehl, translated by Agnes Fry (Foulis),—*Giordano Bruno*, by M. Adams (Green),—*Henrietta Rae* (*Mrs. Ernest Normand*), by A. Fish (Cassell),—*Verdi*, by A. Visetti (Bell),—*Annales de la Société Jean-Jacques Rousseau*, Vol. I. (Genève, A. Jullien),—*Bacon's Nova Resuscitatio*, Vols. I. and II., by W. Begley (Gay & Bird),—*Drawings of A. von Menzel* (Newnes),—*Studies from Court and Cloister*, by J. M. Stone (Sands),—*Volume and Surface Integrals used in Physics*, by J. G. Leathem (Cambridge, University Press),—*University College of North Wales, Calendar, 1905-6* (Manchester, Cornish),—*Solid Geometry*, by C. Davidson (Cambridge, University Press),—*First Stage Physiography*, Section I., edited by R. W. Stewart (University Tutorial Press),—*Xenophon's Anabasis*, Book I., translated by J. H. Elstob (Brown & Langham),—and *Stories from Greek History*, by H. L. Havell (Harrap).

THE ITALIAN CATALOGUE OF BOOKS, 1847-99.

The "Catalogo Generale della Libreria Italiana dall' Anno 1847 a tutto il 1899," compiled with great industry by Prof. Attilio Pagliaini, the Librarian at the Genoa University, is at length completed. The first part appeared in October, 1900, and the last (double) part was issued this autumn. It has therefore been in progress just five years. It forms three volumes, and is printed in exceedingly small but clear type, on thin but good paper. As each page notes an average of about 100 works, the 2,595 pages record the publication of a quarter of a million titles or editions. Each entry gives in a severely condensed form the name of author, title of work, the format, the number of pages, the publisher, and the price.

It will be seen, therefore, that the work is planned on a most comprehensive basis; and it is only by the use of small type, and by confining each entry to one or two lines, that it has been possible to compress such a vast amount of matter into three volumes. Prof. Pagliaini probably had no idea of the stupendous character of the work when he began it, but, having carried out his great task to the bitter end, he has undoubtedly earned the gratitude of bibliographers all over the world. It is one of the reference books which every public library, European and American, should possess. It is indispensable because there is no series of publications answering to our 'English Catalogue' from which the same particulars can be obtained.

Prof. Pagliaini's great compilation is not of the same bibliographical and biographical value as the French work of Lorenz, for it entirely omits any biographical data; but then Lorenz's task, not being retrospective, was child's play compared with this, for the compiler has not confined himself to Italian books issued in Italy between 1847 and 1899; he has gone so far as to include most books printed abroad in Italian, and the translations into Italian of books born, so to speak, in other countries, but printed (and, let us hope, acclimatized) in Italy. The Professor has, it will be seen, not taken a parochial view of the task to which he set himself, and so his *magnum opus* possesses undeniable importance to bibliographers and students in countries other than Italy. With it one may, for instance, obtain a fairly complete list of the Italian editions of Dickens and other English authors. Very few of these translations ever find their way into this country, and the particulars given in this work will serve for bibliographical purposes where the Italian versions themselves are not available.

The very large number of English authors who have been rendered into Italian is flattering to us as a literary nation, and compares favourably with those of other countries, even France. Nearly every one of Dickens's stories has been translated, several more than once, and the low prices at which they were published indicate that they were issued in large quantities. Dickens must be one of the most difficult of English writers to turn into Italian, and is only possible to a translator who has an intimate knowledge of the domestic life of England, such, for instance, as is possessed by M. Marcel Prévost. It is difficult to recognize Dickens in many of the titles of books here given, and we note some exceedingly free renderings. Contrasted with Dickens, Thackeray makes a poor show in these pages, for only one of his works has apparently been done into Italian since 1847. Of this the identity is obvious enough, 'La Fiera della Vanità: Romanzo senza Eroe,' translated by Signor B. Martelli, and published at ten lire in 1880. One would have thought that Thackeray appealed to Italians—at least to the cultured classes—far more than Dickens; but here we have evidence which points to the contrary.

Even Robert Browning, who was so saturated with Italian history and legend, and who utilized them to such a degree in his poetry, is sparsely represented here by two very small trifles: 'Andrea del Sarto, il Pittore senza Errori,' 7 pp., and 'Una Macchia sullo Scudo,' 23 pp. Shelley has nineteen entries, one of which is 'The Sensitive Plant' in English, with explanatory notes by S. Silvagni in 1888. Shakspeare makes quite a formidable appearance, nearly 1½ columns being devoted to him; in many cases the entries are of single plays. Of 'Othello' there are nine different versions or editions, and of 'Hamlet' seven, one of the latter running into seven editions; of 'Julius Cæsar' there are five editions, one being in English. Of more or less complete translations of Shakspeare's plays there are several, but the most popular is that of Carlo Rusconi, which has appeared in eleven editions.

Four of the novels by "Beniamino" Disraeli are here recorded: 'Alroy,' 'Contarini Fleming,' 'Lothair,' and 'Sybil'; but they did not enjoy the popularity accorded to Lytton's romances, of which nine have been translated, several going into two or more editions, whilst 'Rienzi,' which naturally appealed to the Italians, has been translated several times, one version reaching four editions.

Of all the authors registered in these volumes, Dante Alighieri naturally comes first, with over eight columns; whilst a few entries, apparently omitted under Alighieri, are included under Dante. This entry is obviously the result of great labour and research. Every edition or part of an edition, every pamphlet relating to him or to his work, has been included. Italian editions issued outside the land of his birth and in other tongues than his own also find a place here. Ariosto is still in considerable demand, as is shown by the 1½ columns under his name. Balzac does not seem to have become at all acclimatized in Italy, for only a few of his stories have been done into Italian during the last fifty years, the latest being dated 1894. Victor Hugo, on the other hand, extends to nearly two columns.

It was said, I think of Horne Tooke, that he was a parson whose library did not contain a single edition of the Bible. Something of the same sort might be said of Italian publishing

during 1847-99, regard being had to the vast literature in England and Germany concerning the Bible. The 'Bibbia' entries here do not much exceed a column, whilst several of the entries under this title are either of the New or Old Testament in Latin or Italian not published in Italy. Alfieri, indeed, occupies considerably more space.

The English proper names are as a rule fairly well rendered; but it would not be difficult to point out blunders. The author of 'The Capitoline Museum of Sculpture,' 1872, is given as Shakespeare Vood. In several cases the Professor has found a stumbling-block in his transcript of the English preposition "with," which more than once appears as "whit." On the whole, however, Prof. Pagliaini has performed a very great service to international bibliography. It may be added that his work is published by Signor Ulrico Hoepli for the Associazione Tipografico-Libraria Italiana of Milan. W. Roberts.

A PERSONAL EXPLANATION.

I regret to learn indirectly that certain words of mine in the last volume of *The Ancestor* are resented by Mr. W. H. B. Bird, who strangely imagines them to apply to himself, although they not only did not, but, it will be seen, could not do so. As the volume of *The Ancestor* which it was hoped to produce at Christmas cannot appear at present, owing to stress of work, I crave the hospitality of your columns to show that this is so, and to set Mr. Bird's mind at rest.

Writing on 'The Trafford Legend,' and attacking me personally, Mr. Bird in his closing paragraph taunted me with not having deprived 'Burke's Peerage' of any subscribers by my criticisms on the accuracy of certain fantastic pedigrees—criticisms far exceeded in vigour by Mr. Freeman's famous article on 'Pedigrees and Pedigree Makers.' In my reply, appended to his article, I made, in my closing paragraph, the obvious retort that the rejection of such pedigrees was more likely to offend subscribers than their acceptance, a truth with which practical genealogists, surely, are familiar.

I append, from vol. xii. of *The Ancestor*, Mr. Bird's words and my reply:—

"Mr. Round.....is a voice crying in the wilderness. How long shall 'Burke' continue in iniquity? In such a case remonstrance is no doubt thrown away, or one might ask whether, after all, the clamorous method is the most effective. For a quarter of a century or so he has lifted up his voice, yet the editor of that standard publication remains serene in his sins, conscious perhaps that subscribers have not fallen away. Is it not time that saner councils prevailed?"—P. 51.

"Remembering that, as Lord Beaconsfield observed, the critical investigation of pedigrees does not tend to popularity, while, as Mr. Bird unguardedly reminds us, spurious genealogies bring prosperity, I have often been surprised that my sturdy denunciation of their wilful and persistent repetition should have met with such widespread approval."—P. 55.

My words are a direct reply to Mr. Bird's taunt as to the failure of my criticisms to produce any effect on the prosperity of 'Burke.' I was not even aware that he himself enjoyed prosperity—I am glad to learn it—and as to suspecting him of spurious genealogies, nothing could be further from the thoughts of any one who knows his work; indeed, I expressly repeated on the opposite page that I had "no wish to question" his Trafford pedigree in *The Ancestor*, and urged that our views on the subject are "much less far apart than he imagines and represents." As I have fully and repeatedly explained, my quarrel was not with Mr. Bird's pedigree, but with the absurd legend (which he does not defend) that the Traffords' ancestor "Randolphus de Trafford" flourished in King Canute's time, as persistently repeated in 'Burke.' So ancient a pedigree would indeed be a marvel—if true. J. H. Round.

LETTERS OF HORACE WALPOLE: INDEX.

Fiveways, Burnham, Bucks, November 25th, 1905.

As the paragraph relating to the index volume of my edition of the 'Letters of Horace Walpole' which appears in to-day's issue of *The Athenæum* (p. 725) conveys the impression that the indices have been prepared by myself with the assistance of the gentlemen named, I beg to state that this is not the case.

Owing to circumstances over which I had no control, I was unfortunately prevented from completing the indices in time for the publication of the index volume at the date announced by the Delegates of the Clarendon Press. I was myself desirous that the issue of the index volume should be postponed for a few months, in order that I might fulfil the promise of the prospectus and title-page as to the preparation of the indices by the editor of the work. The Delegates, however, considered it of paramount importance that the volume should be issued at the date originally announced, and I was therefore reluctantly compelled to accede to their request that I should hand over the indices to them for completion by other hands. My MS. material, which covered the whole of the first eight volumes, and part of the ninth, for the index of persons (with the exception of the article Horace Walpole), and the first two volumes for the indices of places and subjects, was sent to the Press on the understanding that it should be printed in its entirety, and should serve as a model for the completion of the index on the same plan.

When, however, the proofs of the index reached me (which I was requested to correct, though the copy was withheld from me), I found that my plan had been changed, and that numerous alterations, excisions, and interpolations had been made, without my consent, in the portions completed by myself, so that I was no longer able to recognize my own work.

In these circumstances I could not consent to correct the proofs, nor can I accept any responsibility for the indices now announced for publication. Helen Toynbee.

LORD ROSEBERY, KEATS, SHELLEY, AND BYRON.

A correspondent whose letter was published in *The Pall Mall Gazette* of Tuesday may be said, in the language of the "penny-a-liners," to have "achieved a record." He quotes Byron's letter stating that Shelley has written an Elegy on the death of Keats, and mentions Byron's well-known satirical lines as though they were by Shelley and formed the Elegy. We should have thought that 'Adonais,' although no doubt it did not find circulation at the moment of its publication, was now sufficiently known to any who could take part in the controversy caused by Lord Rosebery's recent slip in naming the *Edinburgh* for the *Quarterly* to make it impossible that such a letter should be written. Not only are the allusions in the 'Adonais' to the famous article against Keats numerous in themselves, as, for example, "Envy and calumny and hate and pain," but it will also be remembered that the prose preface to the poem, contained in nearly all the editions, gives an account of the whole transaction.

'WAYS OF VERSE.'

Chorleywood, Herts.

My attention has just been called to a review of my little book 'Ways of Verse' in your columns, in which your reviewer takes me to task for using the word "ago" as a noun substantive. But did not Burns do the same in writing "for the sake of old lang syne"? Of course, as your reviewer says, a thing can be done "by the hands of a master" that should not be attempted by an ordinary, unknown individual, and I ask pardon for the licence. But I feel I must draw attention to the fact that I had a worthy model for my abuse of the English tongue. Arthur Lewis.

Literary Gossip.

The Countess of Strafford has edited a fourth and final volume of 'Leaves from the Diary of Henry Greville,' and the book will be published on Monday next by Messrs. Smith, Elder & Co. The first entry in the volume is dated December 17th, 1861, and the last September 1st, 1871. The Countess has decided to bring the journals to a close at that point, as, although carried on in a desultory manner as far as April, 1872, the entries are of less public interest, and many passages are of too private a nature for publication. The volume contains a comprehensive index covering the four volumes of the series.

Mr. Eveleigh Nash has purchased the English rights of the autobiography of the Crown Princess of Saxony, and will publish the book early in the new year. It will be entitled 'Confessions of a Princess.'

Mr. George A. Morton will publish early in the spring the authorized English translation of M. Louis Elbé's 'La Vie Future'—a work which, when published in Paris a short time ago, created a stir in scientific and religious circles.

The annual meeting of the Henry Bradshaw Society took place on November 24th at the Society of Antiquaries. From the Report submitted by the Council it appeared that the two volumes issued by the Society for the current year are now ready, and in process of distribution to the members. These are an edition of an eleventh-century Mozarabic Psalter from Silos, now in the British Museum (MS. Add. 30,851), and a new edition of the 'Martyrology of Oengus the Culdee,' by Mr. Whitley Stokes. For 1906 the Council propose to issue Dr. Warner's edition of the Stowe Missal, in which the facsimile of the MS. will form one volume, and the printed text, with the editor's notes and introduction, another.

In the "Bibliothèque Charpentier" the first part of M. Waldeck-Rousseau's 'L'État et la Liberté' is about to appear. It deals with the period 1879-83.

The publication of Mr. A. E. Housman's 'A Shropshire Lad' has been transferred to E. Grant Richards.

At Balliol on December 15th a presentation is to be made to Mr. R. L. Poole on the occasion of the coming of age of *The English Historical Review*.

There are many interesting literary documents in the sale which Messrs. Sotheby, Wilkinson & Hodge will begin on Wednesday next. Several of the Dickens letters are characteristic examples. The Chatterton holograph MS., extending to 12½ pages quarto, appears to be the first draft of 'Ælla,' and differs in many respects from that work as published. The Charles Lamb manuscript of 'Hercules Pacificatus,' on six pages octavo, closely written, differs slightly from the version which first

appeared in *The Englishman's Magazine* in 1831. With this lot there are included three short letters from Lamb unknown to Ainger when he edited Lamb's letters in 1897. One lot consists of a volume containing about 120 interesting autograph letters, chiefly addressed to Southey by Coleridge, Walter Scott, Lockhart, Lamb, and other literary celebrities of the earlier half of the last century; and yet another consists of the original manuscript of Thackeray's lectures on Congreve and Addison, not in his autograph, but with additions by him.

The publication of the new volume by Mr. G. H. S. Beveridge on the Sobieski Stuarts, which we announced as in preparation, has been delayed in order to include a fresh batch of letters which the author has found in the Highlands.

Last week we noted the spread of the word "Hooligans" in Russia. We now have to record the rise of the new Australian word for a small farmer, which has been the subject of inquiry in a London daily paper. "Cocky" is short for "cockatoo farmer." The term of reproach has now been accepted as a pleasant nickname by the farmers themselves. In its origin it expressed the contempt of the great squatter for the little man who settled on a small patch, and was said to scratch the surface as does the Australian cockatoo.

Messrs. Bradbury & Agnew may be congratulated on the success of the special feature of the new issue of *Punch's Almanac*. It is a coloured plate entitled 'A Medley of Modes,' in which are represented the modifications in feminine costume in this country from the foundation of *Punch* to the present time. The earliest exemplars of fashion belong to the Keepsake type, but we soon come to the crinolines and porkpies and other fashions remembered by those still living. The difficulty which all find in recalling, as a possibility rather than as a fact, the extent to which the lovelier side of creation have made guys of themselves strikes the observer not only in the picture by Mr. Bernard Partridge, but also in any gallery of modern portraits. The ladies, however, may reply that their costume meets from time to time with the approbation of critics, whereas that of the males is uniformly horrible. The "intense" lady of the Grosvenor Gallery period stands out as a contrast to the otherwise unbroken healthiness of the English type depicted.

A feature of the Quatercentenary celebrations of Aberdeen University, at which the King has consented to be present next September, will be a large number of "University Studies." In preparation are: 'Studies in the History and Art of the Eastern Roman Provinces by Graduates of Aberdeen University,' edited by Prof. W. M. Ramsay; a *Festschrift* in honour of Prof. D. J. Hamilton, by his pupils, edited by Dr. William Bulloch; a new series of 'Flosculi Græci Borealis,' edited by Prof. J. Harrower; 'The Roll of Graduates of the University of Aberdeen, 1860-1900,' edited by Col. William Johnston, C.B.; 'Studies in the History and Development of the University of Aberdeen,' edited by the Convener of the Publications Committee; a revised edition of Neil Maclean's 'Life at a Northern University,' edited by Mr. W. K. Leask, which will be the contribution of the Students' Representative Council; a 'Handbook to the City and University of Aberdeen'; and a 'Record of the Quatercentenary,' to be issued at a subsequent date. The publication of so many volumes has been rendered possible by the munificence of Mr. J. E. Crombie.

The bust of the late John Nugent, C.S.I., senior member of the Council of the Governor of Bombay, the execution of which was entrusted to Mr. Brock, R.A., by the English and Indian subscribers towards a memorial to that distinguished Anglo-Indian, is now finished. Mr. Jehangeer Dosabhoy Framjee, of the Bombay service, who is at present in London, is arranging for the early dispatch of the bust to Bombay on behalf of his fellow-subscribers. It is hoped that the Government of Bombay will give it a place in the Secretariat building.

The Senate and Council of Prague have sent the great silver medal "for services to the city," with an illuminated diploma on vellum, to Mr. James Baker for his numerous books and articles on Bohemia, written during the last twenty years.

Mlle. Dosne, sister-in-law and heiress of Thiers, has bequeathed the statesman's beautiful residence, Place St. Georges, to the French Institut, apparently without any restrictions. The house itself was originally constructed by M. Dosne, one of whose daughters Thiers married; it was partly destroyed during the Commune, but was subsequently reconstructed at the cost of the State. Mlle. Dosne devoted the later years of her life to editing a section of Thiers's correspondence and his 'Notes et Souvenirs'; and it was under her auspices that the "Fondation Thiers" was established. It will be interesting to see how the Institut will dispose of its new present.

We have to note the publication of the Thirty-Fourth Annual Report of the Local Government Board, 1904-5, which deals with the usual subjects. The price is 4*s.* 10*d.*

SCIENCE

AN EXPLANATION OF MAGNETISM.

At the beginning of the last century Ampère asserted that every molecule of a magnet was the seat of an electric current, and that these molecular currents were free to move about their centres. So long as the substance of which the magnet was composed remained unmagnetized, the currents were supposed to point in every direction. The effect of magnetization was, according to him, to arrange them all in parallel, when the limit of magnetization was reached; while the difference between the permanent or ferromagnetism of steel and the temporary or paramagnetism of soft iron was accounted for by Weber's assumption of a greater rigidity of the molecules in the first-named case than in the second. Then came Faraday, who showed that all known substances, including gases, were either attracted or repelled by a magnet, those which, like bismuth, are repelled being called diamagnetic; and Prof. Ewing, whose experiments demonstrated that many of the remaining phenomena of magnetism could be explained by the action of the Amperian currents upon each other. Meanwhile, it has been established by many different observers that every electric current produces a flow of magnetism in a direction perpendicular to its producer, and vice versâ; to which the experiments of Zeeman enable us to add that the spectrum of an incandescent substance placed between the poles of a very powerful electromagnet becomes thereby split up into a greater number of lines than it possesses apart from them.

Even from this necessarily brief and imperfect sketch, it is plain that there is a certain connexion between these at first sight unrelated facts. As the Zeeman effect is, so far as yet ascertained, universal, and Faraday's experiments leave no doubt that almost all substances, except iron, steel, and their relations among the elements, will, if free to move, strive to set themselves across a magnetic field, it seems fair to conclude that diamagnetism is the normal or fundamental condition of all bodies, and that both the other kinds of magnetism are but modifications somehow superinduced upon it. This view is also confirmed by the recent discovery of M. Curie that, while a rise of temperature will make a magnet pass from the ferromagnetic to the paramagnetic state, and the paramagnetic state itself may be described as varying inversely to the absolute temperature, the diamagnetism of a body remains entirely unaffected by either heat or cold. But then it is plain that electricity, which not only gives us the most powerful magnets known, but can itself also be, alternately, both the cause and the product of magnetism, must have something to say to the superinduced modifications, although iron, in which they are most generally exhibited, has no special qualities in the electrical sense, being neither a very good nor a very bad conductor. Hence even Clerk Maxwell failed in determining the relationship between magnetism and electricity, and we have been content hitherto to make use of our practical knowledge of it for the production of light and power without any attempt to understand its real nature.

In these circumstances M. Paul Langevin has come forward, as mentioned more than once in 'Research Notes' (see *The Athenæum*, Nos. 4041 and 4069), with the proposition that the whole series of phenomena can be explained on the electronic hypothesis. Matter, he says, is an agglomeration of electrons, and electrons are merely electrified centres in movement, like a kink in a rope, within the universal medium of the immobile ether. These electrons perpetually revolving in closed circuits he likens to the Amperian currents, and points out that their displacement must produce in the surrounding ether a magnetic field, in each case of an intensity proportional at once to the charge of the electron and to its velocity. The creation of these fields at the moment when the electron begins to move implies, on the same authority, an expenditure of energy proportional to the square of the velocity, and this energy is kinetic in form, and equivalent to the energy of self-induction or inertia of the current it produces. Every electrified centre or electron possesses, he declares, a certain inertia by virtue of its charge, and the inertia of a molecule of matter is, therefore, only the sum of the electromagnetic inertias of its component electrons. Arguing from these premises — which few partisans of the electronic theory will be unwilling to grant him—M. Langevin seeks to show that the nature of the magnetism of a molecule really depends upon the symmetry with which it is constructed. The molecule contains as many of these elementary currents as it has electrons in motion, and as each of these produces an equivalent magnetic field,

these fields should all cancel each other if the molecule be perfectly symmetrical. But if "the molecular edifice" is dissymmetrical to the extent of a revolving cylinder — and M. Langevin quotes the demonstration by M. Curie that a magnetic field possessing only the symmetry of a revolving cylinder has but one plane perpendicular to its direction — the molecule will be a small magnet.

There remains to be seen what happens if a molecule of either of the degrees of symmetry noticed, and, a fortiori, any body consisting of a great number of such molecules, be brought within the action of a magnetic field created by exterior causes. In the first place, the electric field which, as we have seen, always accompanies the creation of a magnetic field, will modify the motion within their orbits of all the electrons composing the molecule. This modification is always extremely feeble, and the strongest magnetic field that can be produced will only alter the magnetic effect of the elementary currents by a ten-thousandth part. This, however, is sufficient to cause the appearance of the phenomenon of diamagnetism, always the first to manifest itself in the presence of an external field. If the molecule is sufficiently symmetrical for the total strength of the poles multiplied by the length—or, in a word, the magnetic moment of its composing magnets—to be zero, no other result will follow, and the molecule or body will remain diamagnetic. If, on the other hand, the want of perfect symmetry within the molecule compels the electrons to have a resulting or total moment which is not zero, the external field, after rendering them diamagnetic, will try to turn their magnetic axes parallel with its own, and will thus make them paramagnetic. Matters will stop here if the molecule is so composed that the action of the molecular magnets upon each other is negligible, as it is in the cases of gases and solutions. Should, however, its interior constitution be such that the action of these internal currents on each other produces its full effect, the body will become ferromagnetic, although M. Langevin does not express himself very clearly on this point. He promises to return to it later, after study of the directive actions of magnetized particles upon each other, which he thinks will be peculiarly well exemplified in the magnetic action of crystals.

So far, then, M. Langevin accounts for the artificial production of diamagnetism and paramagnetism only, and shows for the first time the relation between the two. Into the thermodynamic argument by which he illustrates this we do not propose to enter here, and there seems no occasion to reproduce the equations and other formulas of his analysis, which the reader will find set out at length in a translation of his paper which appeared in our contemporary *The Electrician* of the 3rd and 10th of November. But to his remarks on the Zeeman effect M. Langevin adds as an *obiter dictum* that whenever an electron changes speed, either an electromagnetic or luminous ray is emitted, and in this he sees the origin of the rays of the spectrum. The period of the vibrations of the light rays, which he puts as in the neighbourhood of 10^{-15} seconds, should be, he declares, of the same order as the duration in time of the revolutions of the electrons in their orbits. This, which was shadowed forth in a somewhat different form by Prof. Lorentz before the experimental demonstration of the Zeeman effect, is a most pregnant hint, and may go far to clear up what is still obscure in the relations between electricity, magnetism, and light.

Generally, it may be said that, while M. Langevin's theory is yet incomplete, it marks a distinct step in advance, and may, perhaps, succeed in bringing all the known phenomena of magnetism within the range of the electronic hypothesis. Yet there seems no reason to reconsider at present what has already been said in 'Research Notes,' to wit, that M. Villard's alleged discovery of particles of magnetism, or "magnetons," seems to be left out of account by it, and that it is only by actual experiment that it can be established to the satisfaction of all. Finally, the whole electronic hypothesis will probably remain in doubt until it can furnish us with some explanation of the phenomena of gravitation.

ANTHROPOLOGICAL NOTES.

The School of Anthropology of Paris has now begun its winter courses. M. Capitan, Professor of Prehistoric Anthropology, takes for subject the bases of "la préhistoire"; M. Hervé, Professor of Ethnology, the negro problem in the United States; M. Mahoudeau, Professor of Zoological Anthropology, the origin of man; and M. Papillault, Professor of Sociology, associations among primitive peoples. M. Verneau gives a complementary course on human palæontology, dealing with the primitive races of Europe, the race of Spy and its probable origin and the negroid race of Grimaldi. Among the courses of lectures are ten by M. Dussand on pre-Hellenic Crete and its civilization, and five by Dr. Marie on the morbid psychology of crowds, mental contagion, "folie communiquée," &c. Other subjects are proposed for discussion by professors and teachers. These arrangements are made by the Association for Instruction in the Anthropological Sciences, which is recognized as an establishment of superior education and public utility.

The publishing house of Fritz Lehmann, of Stuttgart, announces a forthcoming work on the types of heads and faces of the East Asiatic and Melanesian peoples, with explanatory text (in German or in English) by Dr. Hagen. They are taken from Tamils of Madras, the southern provinces of China, the Malayan islands, and German New Guinea, and include an African negro.

M. Dharvent, of Béthune (Pas-de-Calais), has published in a local paper a "report" presented by him to the recent Prehistoric Congress on a flint discovered by him at Fouquières, in that neighbourhood, roughly resembling a human head, and bearing hollows to represent the eyes and mouth, made, as he thinks, intentionally with the view of emphasizing the likeness to humanity shown in the natural configuration of the flint. Curious as such objects are, great hesitation will be felt before accepting them as conclusive evidence of human workmanship.

The proceedings of the Fourth International Congress of Actuaries, held at New York in 1903, have just been published in two large volumes by the Actuarial Society of America. They contain a discussion of a question of some interest to anthropologists, that of the presumed increase in the average duration of human life during the nineteenth century. A strong impression prevails that there has been such an improvement in longevity, and there is some evidence of it; but that evidence, when brought to the test of statistical investigation, does not appear to be conclusive. Mr. S. G. Warner was the author of the paper on this question relating to Great Britain, and he showed that while the Registrar-General's returns indicate a steady decrease in the rate of mortality during the century, the weight of that improvement falls on the early years of life. After age 34–44 the tendency is the other way. The average age at death of the deaths registered in 1840, 1870, 1890, shows an increase, which is especially marked in the second interval. The experiences of insurance companies, as tabulated in 1893, show a slight improvement throughout on those tabulated in 1863; but as they relate to selected lives, this may be due to more careful medical supervision. A table furnished by Mr. George King indicates an improvement of about 5 per cent. in the number of survivors at given ages during these thirty years. Diagrams show a steady increase in the expectation of life and the numbers living, according to seven successive mortality tables published in the Netherlands. In other countries not much evidence was available.

'THE SECRET OF THE TOTEM.'

Alleyne House, St. Andrews, November 26th, 1905.

May I be permitted to point out a fundamental misapprehension on the part of the courteous reviewer of my 'Secret of the Totem' last week? He writes:—

"Mr. Lang relies for his examples of the most primitive types of man upon.....Australian natives. .....He takes upon himself the determination of which of the tribes that have come under investigation are the most primitive and which are more advanced; and he rules out of court—by implication, if not actually—evidence to be derived from anywhere else. This surely is an 'immense' beginning. He settles that the Arunta group of Australians, claimed by Messrs. Spencer and Gillen as the most primitive, are in fact the most advanced; and the rest of his conclusions are based upon this settlement of the case. He has Mr. Hartland among modern scholars on his side in this matter, but he has opposed to him Mr. Spencer, Dr. Howitt, and Mr. Frazer. And in not admitting evidence from America and elsewhere he is putting aside the whole doctrine of survival in culture."

Later the critic remarks that I "use my own conclusions to prove my own conclusions."

If all these things were "not otherwise but thus," my whole argument would, of course, be one flagrant *petitio principii*, and not, as the reviewer says with benevolent inconsistency, "clear, consistent, and logical." The fact is that I do *not* "take upon myself the determination of which of the tribes.....are the most primitive" as regards social organization, and, far from having Dr. Howitt opposed to me on this point, I use his own tests of primitiveness, which I had reason to suppose to be universally accepted by all British students of any authority. I wrote (p. 7):—

"We begin with what all inquirers (except one or two [such as Starcke and Cunow] who wrote before the recent great contributions to knowledge appeared) recognize as the most pristine type extant."

Thus I did not take upon myself to determine which types of organization "are the most primitive," but I merely followed Dr. Howitt and general consent on this point. "The common assumption" (as Mr. Frazer wrote in the September number of *The Fortnightly Review*) has been "that inheritance of the totem through the mother always preceded inheritance of it through the father." On no arbitrary decision of my own, but on "the common assumption," I chose the reckoning of descent on the mother's side as one test of primitiveness. Dr. Howitt does the same thing: I could produce columns of proofs from his work, but it is enough to refer to his 'Native Tribes of South-Eastern Australia,' p. 500. I cited Mr. E. B. Tylor, Dr. Durkheim, and Messrs. Spencer and Gillen as being of the same mind here as Dr. Howitt, and also Mr. Frazer (cf. 'Totemism,' 1887) "till recently," that is, till September, 1905, when he wrote, after my book was printed, that "the common assumption need not hold good."

The other test of social primitiveness which I accepted from Dr. Howitt and general assent was the increasing number of tribal divisions, from two to four, and thence to eight "classes," within which marriage is prohibited. On this point I have never heard that any difference of opinion exists among British authorities. Thus, I took no power of "determination of which tribes are most primitive" upon myself. On the other hand, in my preface (p. x) I quoted Mr. Frazer's recent remark, adding that, if he be right, "much of my argument is shaken, and

of this it is necessary to warn the reader." I made no *petitio principii*.

As regards Mr. Baldwin Spencer, I was not aware of, and so had not read, his most recent statement of his case, in the *Proceedings* of an Australian scientific society. But I quoted from his 'Central Tribes,' p. 211, his opinion that Arunta society is relatively advanced; and for his opinion that their rites and ceremonies are advanced I cited 'Central Tribes,' p. 227, 'Northern Tribes,' p. 329; and I can add other examples.

Mr. Spencer, however, appears to hold that, in their alleged absence of religion, in their nescience of the facts of procreation, in the magical character of their totemic guilds, and in their casual manner of acquiring totems, *not* by inheritance, the Arunta and kindred tribes retain very primitive traits. Now I do not combat this theory simply on the ground of conclusions which, as I prove, I am most erroneously said to have "determined" for myself. I argue, indeed, that tribes with eight "classes" (confessedly not primitive, but most advanced), and with inheritance of totemic rites through *males*, are, by "the common assumption," not primitive. These institutions of the Arunta, with their great solidarity and *local* government, raise a presumption against the primitiveness of their anomalous totemism. Local institutions and male descent, indeed, are among Dr. Howitt's tests—the usually accepted tests—of advance out of primitiveness (cf. 'Native Tribes of South-Eastern Australia,' p. 500).

However, I do not rely on this presumption alone, because these tribes, though advanced to the extent indicated, might, none the less, conceivably retain traits very primitive. I therefore adduce new arguments of quite another character to prove that the Arunta nescience of procreation is a corollary from their system of philosophy; while their totemic peculiarities are not primitive, but the consequence of a confessedly isolated superstition of theirs, for which I suggest a hypothetical origin (pp. 62-89). My arguments may be erroneous, but they are not a case of "using my own conclusions to prove my own conclusions," which, according to the reviewer, is my method, while, none the less, my "method of dealing with my argument is altogether admirable."

Dr. Howitt remarked many years ago that when descent comes to be reckoned in the male line, he always finds totemic aberrancies and eccentricities. But I was not content to reckon the Arunta totemism among these aberrancies. I endeavoured to give a rational account of its evolution out of its confessedly essential factor, the *churinga nanja* superstition. As to "not admitting American evidence," the anxious reader may consult my discussion of some American evidence in the Appendix, pp. 202-15.

A. Lang.

SIR JOHN BURDON-SANDERSON.

Oxford mourns the loss of a great and good man. The Regius Professor of Medicine, who died there on Thursday week last, for more than a score of years stood for the symbol and embodiment of the life of research in the eyes of all Oxford students. Not only his scientific record, but also his very mien and presence, encouraged the fancy. Some may remember a good-natured cartoon of Spy's in *Vanity Fair* which renders with passable fidelity the long spare form, the stooping shoulders, the heavy brow, the brooding, abstracted air. Let Oxford be forgiven if in days gone by she was sentimental to the point of wishing to shut her gates to a physiology founded on vivisection. It is hardly too much to say that, if she has since come to acquiesce in a strictly limited infliction of pain on lower organisms in the interest of our own race, it is because Prof. Burdon-Sanderson's personal character could be taken as a guarantee for the absolute good faith of science in regard to this matter.

The history of his highly original and important researches in physiology and pathology is associated perhaps somewhat more closely with London than with Oxford, for he was for fifteen years medical officer of health for Paddington, and also on the staff of two hospitals. Here he made a name by his researches on infectious diseases and tuberculosis, and was Professor of Physiology at University College, 1874-82. Yet Oxford, where he was Waynflete Professor of Physiology (1882-95) before he took the Regius Professorship, at least enjoyed in fullest measure the benefit of his ripe experience, as her flourishing physiological laboratory and medical school attest.

His numerous scattered papers will, it is hoped, be published in a collected form, that the world may be the better able to appreciate the fine quality of his researches, which were recognized by abundant honours. Meanwhile, in Oxford his work will primarily be known, not as it survives in the "cold obstruction" of the printed page, but rather as it continues to grow and expand under the hands of the many disciples whom he has taught to revere high aims and a devoted spirit.

SOCIETIES.

Linnean.—*Nov.* 16.—Mr. C. B. Clarke, V.P., in the chair.—The following resolution was put and adopted: "The Fellows of the Linnean Society of London in general meeting assembled, 16th November, 1905, congratulate the University of Liverpool on the approaching inauguration of the new Zoological Department, and request their President, Prof. Herdman, to convey the expression of their good will and good wishes to the Chancellor, Council, and Senate of the University on that occasion."—Messrs. H. and J. Groves exhibited a number of specimens of British water Ranunculi, with the purpose of showing the modifications in the form of the leaves. They pointed out that the species might be roughly grouped under three headings: (1) those in which only broadly lobed aerial leaves were produced; (2) those in which submersed multifid leaves with capillary segments were also produced; and (3) those with multifid leaves only; that although the plants of the first group as a rule occurred only on mud or in shallow water, those of the second and third groups frequently occurred together; and they suggested therefore that it required something more than the "direct response to the conditions of life" to account for the different behaviour of closely allied plants growing under precisely the same conditions.—The Rev. T. R. R. Stebbing exhibited a photograph showing the otoliths (natural size) from thirty-five species of fishes, a collection made by the late David Robertson, "the Naturalist of Cumbrae."—Mr. E. M. Holmes exhibited a leaf and seed of *Macrozamia spiralis* from Queensland, where it is stated to cause symptoms of paralysis of the hind quarters of cattle eating the leaves. The chemical nature of the constituents of the plant appears to be unknown.—A paper entitled 'Contributions to the Embryology of the Amentiferæ: Part II. *Carpinus betulus*,' by Miss M. Benson, Miss E. Sanday, and Miss E. Berridge, was read by the last named.—A discussion followed, in which the Chairman, Miss Thomas, Prof. F. W. Oliver, and Dr. D. H. Scott took part.—Prof. C. Stewart read a paper on the membranous labyrinth of five sharks, that he believed had not been previously figured, viz., the labyrinth of *Notidanus griseus*, *Læmargus borealis*, *Lamna cornubica*, *Alopecias vulpes*, and *Carcharias lamia*.—Dr. Smith Woodward added some observations.

Zoological.—*Nov.* 14.—Mr. G. A. Boulenger, V.P., in the chair.—The Secretary read a report on the additions to the menagerie from June to October.—Col. W. H. Broun exhibited the mounted head and skin of a white water-buck (*Kobus ellipsiprymnus*) from British East Africa; and two mounted heads of the rhinoceros, one of which showed abnormal growth of the anterior horn, whilst the other bore four horns, viz., two on the nose, one between the ears, and one nearly at the back of the head.—The Hon. Walter Rothschild exhibited specimens of a very interesting marsupial, hitherto unique, in the Paris Museum, viz., *Dactylopsila palpator*, Milne-Edw., which differed from *D. trivirgata* by the extremely thin prolonged second finger. Mr. Rothschild also exhibited two tusks which had been obtained by Baron Maurice de Rothschild during his recent expedition to Abyssinia. They were so unlike the normal tusks of any known animal that Mr. Rothschild was of opinion they might belong to some new form.—Mr. A. S. Hirst exhibited microscopic preparations of a new Hæmosporidian from the blood of an African stork (*Leptoptilus crumeniferus*). He pointed out that this parasite belonged to the genus Halteridium, but differed from *H. danilewskyi* in its greater size and also in its method of sporulation. The name *Halteridium crumenium* was proposed for the new species.—Dr. P. L. Sclater read a letter from Mr. William Rodier, of Tambua Station, Cobar, N.S.W., concerning the continued success of Mr. Rodier's plan for counteracting the rabbit-pest, and explained the plan, which consisted simply in catching the rabbits alive and killing the females only, letting the males go free.—Mr. H. Scherren made some remarks, illustrated by lantern-slides, on the *Satyrus indicus* of Tulpius, said to be the type of the genus Simia, with the view of showing that the animal was a gorilla, and was recognized before the middle of the eighteenth century as differing from a chimpanzee. The distinction between the *tschego* and the *ngina* was, he said, known in England in the first quarter of the nineteenth century.—Dr. Walter Kidd read a paper, illustrated by lantern-slides, 'On the Papillary Ridges in Mammals, chiefly Primates.' The arrangements of the ridges on the hand and foot of twenty-four species were shown and described, and their functions discussed. Arguments were brought forward to show that their primary function was to increase the delicacy of the sense of touch.—Mr. J. L. Bonhote communicated a paper on the mammals brought back by the Tibet Mission. The collection was very small, containing examples of only some eight species, three of which were described as new, viz., *Vulpes vulpes waddelli*, subsp. n.; *Cricetulus lama*, sp. n.; and *Microtus* (*Phacomys*) *waltoni*, sp. n.—Dr. Einar Lönnberg sent notes on the geographical distribution of the okapi, and Major G. F. Evans notes on observations he had made on the goral (*Cemas goral*) in Burma.—A paper by Miss D. M. A. Bate contained an account of a collection of the mammals of Crete. Examples of sixteen forms, of which six were described as new subspecies, were contained in the collection, and these were enumerated and remarked upon.

Anthropological Institute.—*Nov.* 21.—The following were elected Fellows:—Mr. E. M. Andrewe, Mr. C. Arnold, Mr. G. J. Atkinson, Lieut. T. T. Behrens, Mr. A. Dence, Mr. T. W. Edge-Partington, Sir Charles Eliot, Dr. Th. Gollier, Mr. W. A. Graham, the Rev. J. Hastings, Prof. M. Hay, Mr. H. Marshall Hole, Mr. R. E. Large, Mr. R. H. Martin, Mr. T. E. Smurthwaite, Miss M. F. A. Tench, and Dr. E. B. Walker.—Mr. J. Smeaton Chase exhibited a large collection of photographs from Arizona. These included typical types of the natives, and also illustrated the Mogui snake dance and other ceremonies.—Mr. Maurice Bidder exhibited a collection of objects from Siam, including weapons, pottery, and musical instruments.—Mr. N. W. Thomas read a paper on 'Boomerangs.' He explained the difference between the return and non-return boomerang, and showed the reasons for the peculiarity of the former kind. Diagrams of the different flights were exhibited as well as a large collection of Australian boomerangs and African throwing knives.

MEETINGS NEXT WEEK.

Mon.	Royal Academy, 4.—'The Head and Neck,' Lecture III., Prof. A. Thomson.	
—	London Institution, 5.—'Variation in Man and Woman,' Prof. K. Pearson.	
—	Society of Engineers, 7½.—'The Grindleford Stone Quarries and their Working,' Mr. B. L. Bradley	
—	Aristotelian, 8.—'Teleology,' Mr. Shadworth H. Hodgson.	
—	Society of Arts, 8.—'The Measurement of High-Frequency Currents and Electric Waves,' Lecture II., Mr. J. A. Fleming. (Cantor Lecture.)	
—	Geographical, 8½.—'Exploration in the Abai Basin, Abyssinia,' Mr. R. Weld Blundell.	
Tues.	Institution of Civil Engineers, 8.—'The Steam Turbine,' Hon. C. A. Parsons and Mr. G. G. Stoney.	
Wed.	Archæological Institute, 4.—'The Nuraghs of Sardinia,' Mr. W. Churchill.	
—	Entomological, 8.—'Descriptions of New Genera and Species of African Galerucidæ and Halticidæ,' Mr. M. Jacoby.	
—	Geological, 8.—'The Physical History of the Great Pleistocene Lake of Portugal,' Prof. E. Hull: 'The Geological Structure of the Sgurr of Eigg,' Mr. A. Harker; 'The Buttermere and Ennerdale Granophyre,' Mr. R. Heron Rastall.	
—	Society of Arts, 8.—'The Manufacture of Sugar from British-Grown Beet,' Mr. Sigmund Stein	
Thurs.	Society of Arts, 4½.—'The Partition of Bengal,' Sir J. Bourdillon. (Indian Section.)	
—	Royal, 4½.	
—	London Institution, 6.—'Ice-Breakers and their Services,' Mr. A. Gulston. (Travers Lecture.)	
—	Institution of Electrical Engineers, 8.—'The Charing Cross Company's City of London Works,' Mr. W. H. Patchell.	
—	Linnean, 8.—'The Ætiology of Leprosy,' Dr. J. Hutchinson; 'Some Notes on the Life-History of *Margaritifera pancras*,' Mr. A. W. Allen.	

Thurs. Antiquaries, 8½.—'Some Leaden Burial Crosses from the Site of the Grey Friars, London,' Mr. F. G. Hilton Price; 'Silver Spoons of Provincial Make, and some Further Examples of Death's-Head Spoons,' Mr. H. D. Ellis; 'The Treatment of the Monuments in Westminster Abbey Church,' Mr. A. Hartshorne.
— Chemical, 8½.—'The Constitution of Nitrites: Part I. Two Varieties of Silver Nitrite,' Messrs. P. C. Ray and A. C. Ganguli; 'The Products of heating Silver Nitrite,' Mr. E. Divers; 'Ethyl Piperonylacetate,' Messrs. W. H. Perkin, Jun., and R. Robinson; 'A Contribution to the Chemistry of Saccharin,' Mr. F. D. Chattaway; and other Papers.
Fri. Astronomical, 5.

Science Gossip.

Mr. F. W. Dyson, F.R.S., Chief Assistant at the Royal Observatory, Greenwich, since 1894, has been appointed Astronomer Royal for Scotland, in succession to the late Dr. Copeland.

The First Report on Fishery and Hydrographical Investigations in the North Sea and adjacent waters has just been published as a Parliamentary Paper (price 8s. 9d.). The volume deals chiefly with the Dogger Bank and the Channel.

The winter solstice this year occurs on the 22nd inst., the sun being furthest south about an hour after noon (Greenwich time) on that day. The moon will be full half an hour before Greenwich midnight on the 11th, and new about 4 o'clock on the afternoon of the 26th; she will be nearest the earth on the night of the 23rd. The star γ Tauri will be occulted from 4h. 58m. to 5h. 56m. on the evening of the 10th; Aldebaran from 2h. 52m. to 3h. 53m. on the morning of the 11th. The planet Mercury will be at inferior conjunction with the sun on the 15th, but may be seen in the morning at the end of the month, not far from Antares. Venus rises later each morning, moving from Libra into Scorpio, and passing due north of Antares on the 14th. Mars, now in Capricornus, enters Aquarius towards the end of the month, setting at Greenwich between 8 and 9 o'clock in the evening. Jupiter is still brilliant during the greater part of the night, situated to the south-east of the Pleiades; he will be near the moon on the 9th, and due south at 10 o'clock in the evening on the 18th. Saturn is in Aquarius, and will be in conjunction with Mars on the 26th; at the end of the month he will set about half-past 8 o'clock in the evening.

Comet *b*, 1905, was discovered by Herr E. Schaer, assistant at the Geneva Observatory, on the 17th ult., about 6 o'clock in the evening, between the constellations Ursa Minor and Cepheus, only about 4° degrees from the Pole, and equal in brightness to a star of the seventh magnitude. It was observed on the following night by Prof. Hartwig at Bamberg and by Mr. Aitken on Mount Hamilton, moving rapidly towards Cassiopeia; the former described it as round, about 10′ in diameter, magnitude 7½. The orbit has been computed by Herr Ebell, of Kiel, who finds that the comet passed its perihelion on October 27th at a distance from the sun about the same as the earth's mean distance. When it was discovered its position was only about one-fifth of the sun's distance from us, but it has since receded to about half the sun's distance. Its brightness therefore is rapidly diminishing, and is now less than a quarter what it was at the time of discovery. Its motion has been almost due south, slightly westerly, and after traversing the western parts of the constellations Cassiopeia and Andromeda, and the eastern portion of Pegasus, the comet is now passing the equator in the constellation Pisces, visible, but only as a faint object, to observers in the southern hemisphere.

Prof. Max Wolf and Herr G. Wolf, of Heidelberg, have discovered that seven small stars in the neighbourhood of γ Aquilæ are subject to changes of brightness; these will therefore be reckoned as var. 109–115, 1905, Aquilæ. They have also detected that a star in the constellation Aries (which may be a Nova) is variable, so that its designation will be var. 116, 1905, Arietis. It was first noticed on two photographic plates taken on the 6th ult.; its brightness then was below the twelfth magnitude, and it has considerably diminished since.

FINE ARTS

The Royal Collection of Paintings. Published by command of His Majesty King Edward VII. With Introduction and Descriptive Text by Lionel Cust, Surveyor of the King's Pictures and Works of Art. — Vol. I. *Buckingham Palace.* (Heinemann.)

Mr. Lionel Cust has already done such excellent work in his previous publications, especially the sumptuous edition of the Bridgewater Gallery, that we are not surprised to find the present work entirely admirable. The hundred pictures are chosen so as to typify all aspects of the collection at Buckingham Palace, from Duccio down to Winterhalter, whose work is rightly included on historical grounds, and, as wisely, confined to a single example.

The reproductions in photogravure are very good, excelling perhaps rather in sharpness of definition than in beauty of tone, as a comparison of the Rembrandts with the reproductions of the same pictures in Hofstede de Groot's publication shows. To each reproduction is attached Mr. Cust's descriptive text. These notices are done with all the thoroughness, the sound scholarship, and the tact to which Mr. Cust's past work has accustomed us.

In the introduction he gives an excellent summary of the history of the Royal collections from Henry VIII.'s time to the present day. Without going into details, he touches upon Charles I.'s extraordinary feeling for beauty and his unique connoisseurship. From Charles I. to George IV. the history of our Royal family does not shine in the matter of art patronage, but Mr. Cust rightly pays a tribute to the taste and understanding of George IV. The man who bought so seriously and intensely dramatic a picture as Rembrandt's 'Noli Me Tangere' must have been inspired by something more than dandyism or pretentious affectation. Finally, we come to the events of the late reign, in which the Prince Consort distinguished himself by an admiration for primitive art which was altogether remarkable, when one considers the time and the circumstances in which it was displayed. It is to him that the collection owes the few examples of the Italian and Flemish primitives which it possesses. Unfortunately, his perception of quality was not so acute as that of Charles I., who could detect repaints and alterations with a professional eye, and the Prince Consort allowed his pictures to be cleaned and restored in a deplorable manner.

It is in discussing these primitive pictures that Mr. Cust brings to light some of the newest and most interesting matter in the volume. The 'Madonna' ascribed to Fra Angelico is (or rather once was) a lovely work, but Mr. Cust rightly places it among the better school pieces, associating it very plausibly with the 'Annunciation' in the National Gallery. The Gentile da Fabriano, also a terribly repainted picture, which might perhaps be restored to a more primitive condition, is an undoubted and important work by that master. Mr. Cust has embodied in his notice the results of Mr. H. P. Horne's researches on the history of the picture, published in *The Burlington Magazine.* To Mr. Horne also, we believe, is due the discovery of the interesting connexion between the two saints by Pesellino and the 'Trinity' in the National Gallery, of which it formed one of the wings. Mr. Cust does not seem to be aware that both pictures, and possibly the other wing, were together in the Young Ottley Collection, and are superficially described in Waagen's first edition, so that the separation of the panels was subsequent to Young Ottley's death.

Of the two Titians, the 'Landscape' is not only the finer, but is also a very rare and exceptional piece among Titian's work. The other, 'The Lovers,' is in its present condition a most puzzling and disquieting picture. Mr. Cust appears to accept the attribution to Titian with less hesitation than we should have expected.

Of the German pictures the most important is the great altarpiece by Lucas Cranach, formerly attributed to Grünewald, and first recognized as Cranach's by Mr. Claude Phillips. The other and smaller Cranach, a most idyllic and charming piece, is not included in the present volume.

Coming down to the seventeenth century, we find a mass of material of the first quality, too large to discuss in detail. We can only allude to the Rembrandts—'The Shipbuilder and his Wife'; the much less satisfactory 'Rembrandt and Saskia,' before which Mr. Cust rightly hints at Bol; the superb 'Lady with a Fan'; and the two marvellous religious pieces, the 'Noli Me Tangere' and 'Adoration of the Magi,' which give us Rembrandt at his highest point of imaginative concentration and dramatic sincerity.

The collection is immensely rich in masterpieces of the Dutch School, Terborgh, Jan Steen, Slingelandt, Metsu, Cuyp, Hobbema, and Ruysdael being represented by works of the finest and most typical quality. All these are due to the perspicuous extravagance of George IV. when Prince of Wales, and it is to him rather than to any one else that the collection at Buckingham Palace owes its exceptional character.

Of the Flemish School, the Teniers, 'Le Tambour Battant,' is of extraordinary merit. It gives one the idea of an artist with much greater gifts than Teniers usually allowed to appear. It has an almost heroic grandeur of style and sobriety in the disposition of great triangular masses.

Of the Rubenses, the sketch for 'The Assumption of the Virgin' was made after the picture for Bolswaert's engraving—a fact which is suspicious for its authenticity, but, in spite of that, Mr. Cust considers its quality justifies the attribution. The 'St. George and the Dragon' is much less open to doubt, and is one of the pictures which originally belonged to Charles I., and were restored to the Royal collection as recently as 1814 by the Prince Regent. The so-called Memlinc is, as Mr. Cust frankly admits, the work of a second-rate,

but very charming master of the Bruges School, by whom there were several pieces at the Bruges Exhibition. He was not, we should imagine, so much an "immediate pupil and imitator of Memlinc," as Mr. Cust surmises, as an independent and collateral painter whose style suggests a designer for tapestries rather than one who was pre-eminently a painter.

In the English School, among much that is not of the first importance, are a few masterpieces; for instance, Reynolds's 'Duchess of Gloucester' and Gainsborough's dazzling 'Duchess of Cumberland,' the two ladies who married secretly into the Royal family with such conspicuous success that an Act of Parliament was passed to prevent the recurrence of these happy accidents. Then there is Gainsborough's splendid 'Johann Christian Fischer'; and among the later masters, Watts's 'Mary Augusta, Lady Holland,' an early work, is of surpassing beauty.

It will be seen from this brief summary what a wealth of masterpieces little known to art-lovers is now made accessible to the public, which is certain to be grateful that the Royal commands have been so thoroughly and adequately executed by Mr. Lionel Cust.

THE BURLINGTON FINE-ARTS CLUB.

As usual, the winter exhibition of the Club has brought forth some very interesting and little-known works of art. Some of these have lately been reproduced by the Arundel Club, but no photograph could quite have prepared one for the full splendour of the Antonio More belonging to Mr. Bischoffsheim. It is a portrait of Elizabeth of Valois, Queen of Spain. She is represented in magnificent robes of crimson and white satin elaborately cut and slashed. The painting of the sleeve is a masterpiece of minute delineation which never fails of breadth and coherence of effect. The face is scarcely pleasing, but it has extraordinary force of character and a strange simplicity and directness of expression, as though More had carried into the period of full-blown and self-conscious art something of mediæval sincerity and purity of vision. One cannot help feeling before such a portrait as this that More still awaits his full recognition. Even the sensuous charm and glowing colour of the celebrated *Lovers*, lent for the first time by His Majesty from Buckingham Palace, scarcely eclipses More's work. This is, however, a picture of great interest, for Vandyke sketched it as a Titian, and as such it hung in Charles I.'s collection. Later, in James II.'s reign, it bore the attribution of Giorgione, which Mr. Cook has endeavoured to sustain.

Mr. Bischoffsheim contributes another extremely fine work in the Reynolds of *Kitty Fisher*. For him it is unusually blonde in colour, with a pale luminous sky and roses for a background reminiscent of eighteenth-century French portraiture, and less in the grand Italian manner than usual. The dress, for which he accepted contemporary fashion, is admirably painted.

Even if the sceptical critic finds it difficult to believe that the small room here contains, as the catalogue has it, no less than four pictures by so rare a master as Giorgione, he may still wonder that no fewer than three Lottos are shown. Here, at all events, we are on sure ground. No one has ever doubted that Sir Martin Conway's so-called *Danaë* is not only the earliest existing work by Lotto, but also in many ways the most entirely enjoyable of all his paintings. For Lotto was an artist of exquisite sensibility, if imperfect talent, and, in consequence, he promised more than he could ever perform. Here in this early work, which breathes the fine earnestness and illusion of youth, he is really greater in what he suggests than in the imperfect accomplishment of his maturity. Another picture, Mr. Benson's *Susannah and the Elders*, shows him at the best of his maturer powers, but charming and original as it is, it lacks the poetical intensity of the 'Danaë.' Here certain extravagances and uncertainties of taste, which were inherent in Lotto's genius, make themselves apparent alongside of the originality which could go so far from the beaten track of Venetian painting, and could even take over something not only in technique, but also in feeling, from the art of the Netherlands, from Memlinc and David. Mr. Benson contributes yet another picture, a large *Madonna and Donors*, in which Lotto is seen in the more ordinary routine-work of his profession. We find here no fresh and delicate fancy, no odd conceit, to distract us from a sense of the essential weakness of Lotto's design.

Returning once more to that curiously prolific and various master, Mr. Cook's Giorgione, we may note that the picture which comes most near to the character given him by other writers is the *Portrait of a Gentleman*, lent by Col. George Kemp, M.P. This was described by Mr. Berenson as a copy of a lost Giorgione, so closely did it seem to that writer to adhere to his canon. That it is intensely Giorgionesque is evident, but the actual forms are clumsy and the mood almost caricatured. The dull, leaden greys, both in background and flesh, and something in the spacing of the design, suggest to us the probability that it is one of Bassiti's later Giorgionesque portraits.

There remain the two small scenes from the story of Paris lent by Sir Martin Conway, which are described as "probably the earliest works of Giorgione, done about the age of 16." There is much, one may admit, in the actual forms of the figures that recalls the early works in the Uffizi; indeed, it is probable that the lost Giorgione of which a partial copy remains at Budapest was laid under contribution by the second-rate provincial artist—Previtali, perhaps—who put together these delightfully naïve, but dissipated compositions.

Of the Flemish School there are but two small paintings: one a *Salutation*, ascribed to the now resuscitated Jan Mostaert, but evidently belonging to the school of Gerard David; the other, a *Virgin Reading*, in a delicately rendered landscape, which is by a perfectly recognizable artist who followed precisely in the footsteps of Adriaen Ysenbrandt.

Of the Dutch School there are several important examples: Mr. Alfred Beit's disagreeable, but intensely powerful portrait of a young man, an attempt by Rembrandt in his later years to deny his supreme poetical power, and to compete with the popular portraiture of the day, but fortunately, from that point of view, a failure; an exquisitely beautiful and original Cuyp, *Sunset after Rain*; a Gerard Dou, the *Housewife*, which almost persuades one that he was, after all, an artist; and two Franz Hals, which are rather of average than extraordinary merit.

Of the English School the finest is the Reynolds already mentioned; then there is a charming and very French portrait ascribed (wrongly, we think) to Hogarth, which is lent by Sir Hickman Bacon. There is a large and wooden portrait by Romney, which is more interesting for the subject—Lady Craven, afterwards Margravine of Anspach—than for anything Romney has to say of her. The portrait of *Mrs. Hodges*, ascribed to Gainsborough, looks to us more like a Cotes.

There are a few water-colour drawings of the Early English School, among which Cozens's *Isola Bella* and Girtin's *Bolton Abbey* are the best.

Besides the pictures, the exhibition includes a number of *objets d'art* which deserve a more detailed notice than can be given here. The Chinese *cloisonné* from Sir Trevor Lawrence's collection includes a few fine and early pieces, but is for the most part of the Khang-he and Kien-Lung periods, when elaboration and richness of effect were sought at the expense of greater qualities of design.

Sir Charles Robinson lends two exhibits which deserve notice—one a splendid helmet in steel repoussé and gilt which is supposed to have been Andrea Doria's "casque de parade"—on what grounds do not appear. This is, however, a matter of small importance compared with the superb quality of the workmanship and the breadth and freedom of the design. The other exhibit from the same collection is a terra cotta model of a *Dead Christ*, which is described as an original model by Michael Angelo. This ascription is supported by a drawing in the Louvre which has a vague general likeness to the terra cotta. The likeness is, however, not sufficient to make one overlook the essential differences in conception and manner. Sir Charles Robinson's is a most interesting and beautiful work of Michael Angelo's school, which we are inclined to attribute to Pierino da Vinci, the nephew of Leonardo, and one of the most intelligent and sympathetic of Michael Angelo's imitators.

THE STAFFORD GALLERY.

A small collection of water-colour drawings by Mr. Nicholson at this gallery merits attention. They are executed with all Mr. Nicholson's decision and certainty of effect, and lend themselves admirably to the process of reproduction which has been successfully carried out. They often show original methods of approach to familiar and oft-repeated scenes, and on all the personality of the artist is strongly impressed. We confess to finding in them the solution to a problem which has long puzzled us. We have always admired Mr. Nicholson's work for its deliberate artistic purpose, but with a reserve, the nature of which we could never quite explain. We have, in fact, wondered why, being so good and so accomplished, he never appeared to us really first-rate. Here, where we find him face to face with scenes of singular and refined beauty, we feel a certain want of respect and reverence. He seems too much concerned from the first with the effect he is going to produce, too little passive to the beauty of the object. While he treated commonplace or undistinguished things in this way, or interpreted them ostensibly in a half-humorous vein, one could not complain, even if one was not entirely satisfied; but when he approaches the grandiose and venerable architecture of Oxford with the same light and facile effectiveness, one becomes conscious of the inadequacy of the ideas suggested to his mind.

In his aim at broad summary effects he misses the refinement, the intensely civilized aspect, of Oxford architecture. Such a drawing as the *Worcester*, for instance, lacks the elegance, the subtlety of relief, which come out so perfectly in Turner's early drawing of the same subject. Again, by his spacing of such buildings as the *St. John's*, the *Radcliffe*, and the *Christchurch Library* he tends to belittle their effect on the imagination. They fill so small a space in the angle of vision that they seem rather to have been fitted into an arbitrary scheme of design than to have been the starting-points for one. The drawing of *Trinity* seems to us to be the most sensitive, and to arouse less than any other the idea of indifference to the peculiarly civilized and wrought-out beauty of Oxford buildings.

We should be inclined to admit that our detraction from these drawings is hypercritical.

Mr. Nicholson has certainly achieved something definite and personal, and his use of means to his own ends is masterly, and perhaps, after all, the critic is straining his function in taking objection to the end the artist proposes to himself.

SALES.

Messrs. Christie sold on the 25th ult. the following pictures:—G. Morland, A Rocky Coast Scene, with a group of sailors watching the approach of two cutters, 283*l.*; A Coast Scene, with fishermen, soldiers, dogs, and boats, 157*l.*; Richard Boyle, first Earl of Cork, 451*l.*; Portrait Group of Gentlemen in Hunting Costume, 110*l.* B. van der Helst, Portrait of a Lady, in black brocaded dress, with large white ruff, lace cap and cuffs, 231*l.* Holbein, Portrait of a Gentleman, in black dress with crimson sleeves, wearing a red-and-black cap, a gold chain round his neck, 115*l.* Hoppner, Edmund, eighth Earl of Cork and Orrery, 162*l.* Lely, Mary, Lady Broghill, wife of Roger, second Earl of Orrery, 141*l.* A. Pond, Countess of Coventry, as a market-girl, carrying a basket of eggs, 189*l.* Reynolds, Richard Boyle, Earl of Shannon, 682*l.* S. Slaughter, Juliana, Viscountess Skerrin, as a shepherdess, in blue dress, with a dog, 315*l.* P. di Cosimo, Portrait of a Young Man, in dark dress and cap, 120*l.* Romney, Head of Lady Hamilton, in white dress and hat, 168*l.* Vandyke, Mary Villiers, Duchess of Lennox and Richmond, 157*l.* A. Cuyp, A Group of Cattle and Milkmaid, in a hilly landscape, 346*l.*

The same firm sold on the 28th ult. the following etchings and engravings. After Meissonier: The Sergeant's Portrait, by J. Jacquet, 32*l.*; another copy, 31*l.*; La Rixe, by F. Bracquemond, 107*l.*; Piquet, by A. Boulard, 31*l.*; 1807, by J. Jacquet, 89*l.* After Vandyke: Beatrice Cousance, by Laguillermie, 26*l.* By A. H. Haig: Interior of Burgos Cathedral, 44*l.*; The Quiet Hour, 26*l.*; Mont St. Michel, 33*l.*

The collection of pictures and objects of art formed by M. Jules Jaluzot (the ci-devant "sugar king") was dispersed on Monday last at the Hôtel Drouot, Paris, and formed the first sale of importance in Paris this season. The total amounted to 104,000fr. of which 76,708fr. was received for the pictures. The result hardly seems to have come up to what had been expected by the Jaluzot creditors. The highest price was paid for a fine example of Roybet, Les Joyeux Convives, a picture of soldiers roistering in an *auberge, temp.* Louis XIII., which realized 16 000fr. It is stated that twenty-two years ago the artist received 25,000fr. for this work. There were several examples of Ziem, the most important being Venise, a view of the Grand Canal *au crépuscule*, 14,000fr.; Les Barques, 6,150fr.; La Gondole, 4,450fr.; and a view in Holland, a sketch, 3,260fr. The picture which attracted the most attention was La Mort de Marceau, by Jean Paul Laurens, one of this artist's best works; it obtained for him a *médaille d'honneur* at the Salon of 1877, and was at the Exhibition of 1900; but it realized only 13,000fr.

Fine-Art Gossip.

Messrs. Carfax opened to private view last Thursday water-colour drawings by Mr. Arthur Ponsonby and Mrs. J. E. Talbot.

Messrs. Dowdeswell held yesterday a private view of etchings by Armand Mathey after well-known artists.

The Harpignies Exhibition at the Leicester Galleries closes to-day, and will be followed by an exhibition of paintings by M. Jacques E. Blanche, and pictures and water-colours by Mr. Charles Conder. The private view is on Thursday next.

At the Goupil Gallery to-day there is a private view of drawings, by Mr. H. B. Brabazon, of Venice, the Italian lakes, &c.

Mr. Bonner announces from December 4th to 23rd an exhibition of enamel and other jewellery, leather work, silver and copper repoussé work, &c.

The Alpine Club are showing at the Club rooms from next Tuesday till December 23rd Alpine paintings by the late Alfred Williams.

At Leighton House there is on view a loan exhibition of paintings, sculpture, stained glass, enamels, &c., with cartoons and studies, by Mr. Henry Holiday; also some embroidery by Mrs. Holiday.

An exhibition and sale of water-colours, prints, engravings, miniatures, and enamels will be opened by the Duchess of Albany next Wednesday at Messrs. Graves's Galleries in Pall Mall. The whole proceeds of the sale will be devoted to the rebuilding fund of Lower Brixham Parish Church.

Mr. James Paterson writes:—

"In the notice of the exhibition of the Royal Society of Painters in Water Colours in last week's *Athenæum* there is a curious slip. Referring to my drawing in red and black crayon, your critic, mingling praise and blame, treats it as a water-colour imitating pastel. One cannot but sympathize with the overburdened reviewer of so many exhibitions at this time, but surely a very cursory examination would reveal the nature of the medium in my drawing."

We are sorry to have made the mistake. We can only plead that the quality of the light in London lately has been at best mediocre.

Mr. Baillie has left Princes Terrace, and is opening a new gallery at 54, Baker Street, next Friday, with an exhibition of the work of Simeon Solomon.

The celebrations in connexion with the tercentenary of Rembrandt will begin at Amsterdam on July 15th, 1906, and a number of books dealing with the life and works of the great artist are in preparation on the Continent. Commemorative plaques will be placed on the various houses in which he lived. That in which he died in the Joden-Breestraat has been purchased by the city authorities, and will be transformed into a Rembrandt Museum.

The Antwerp Museum has acquired two works by Jordaens which figured at the recent "Exposition Rétrospective" of the works of that master. They are the 'Méléagre et Atalante,' the property of a collector at Copenhagen; and 'Le Roi Boit,' a drawing which was purchased from a Munich amateur. The same museum has also lately purchased two portraits by Cornelis de Vos.

M. Gustave A. D. Crauk, whose death in Paris was announced last week, enjoyed an extraordinary popularity as a sculptor under the Second Empire, and after he executed a bust of the Empress Eugénie there was a long-continued scramble among the ladies and gentlemen of the Court for the honour of sitting to him. He dictated his own terms, which were "acceptées d'avance." The Maréchal Baraguay d'Hilliers, the Maréchal Pélissier, Madame Favart, Madame Patti, Madame Nilsson, Edmond About, and Francisque Sarcey were a few of his most celebrated sitters. The Empire fell, and Crauk "s'effaça," but he kept on working in his own studio up to the time of his death; he claimed that for fifteen years he had not set foot in the street. He was born at Valenciennes in 1827, and studied under Ramey, Dumont, and Pradier, obtaining the Prix de Rome in 1851, and various medals between 1847 and 1878. There are two of his works at the Luxembourg: a child's bust, and 'La Jeunesse et l'Amour,' a group, both in marble. One of the most important of his public works is the monument to Gaspard de Coligny in the Rue de Rivoli.

The statue of John Knox for St. Giles's Cathedral, Edinburgh, by Mr. Pittendrigh Macgillivray, R.S.A., has been finished in clay, and it is hoped that it will be ready to be unveiled next May.

MUSIC

THE WEEK.

Royal Italian Opera. — *Faust. Don Giovanni.*

The opera season at Covent Garden is over. Last week in 'Faust' Signor Zenatello impersonated Valentine, his fine singing and acting in the farewell and in the death scenes proving special features of the performance.

Mozart's 'Don Giovanni' was given on Thursday week, but it must be confessed that justice was not rendered to this master work. Of the three ladies, Signore Strakosch, Gilibert-Lejeune, and Clasenti, the Donna Anna, Donna Elvira, and Zerlina respectively, the second was the best, although her voice is not well suited to the part. Signor Battistini, as the Don, sang well; his voice, however, had not its accustomed resonance, while in his assumption of the part certain touches of nobility were wanting. Neither Signor Wigley nor Signor Didur, the one as Masetto, the other as Leporello, seemed quite to understand that any attempt to be funny is fatal. The orchestra was again often too loud, and some of the *tempi* hurried. However, the opera has been performed, and that is something for which one may be thankful. The great success of the season has undoubtedly been Puccini's 'Madama Butterfly.' It seems a pity that Giordano's 'Siberia' was not given in place of his earlier opera 'Andrea Chénier.'

Bechstein Hall.—*Joachim Quartet Concert.*

The series of the Joachim Quartet Concerts at Bechstein Hall came to an end yesterday week. The audiences were very large; on more than one occasion, indeed, many had to stand. The programme of the final concert included three Beethoven quartets, representative of the three periods into which the composer's artwork has been divided. In the last one, in C sharp minor, the intonation was now and then doubtful, but, taken as a whole, Dr. Joachim's playing, and that also of his able colleagues, was remarkably fine. As to the readings of the three works, it would be difficult to hear anything purer, nobler, more truly classic. All four players seem imbued with the same spirit.

Queen's Hall. — *Concert by the London Symphony Orchestra.*

Herr Peter Raabe, conductor of the Kaim Orchestra, Munich, took the place of Herr Arthur Nikisch at the second concert of the London Symphony Orchestra at the Queen's Hall last Saturday afternoon. In olden days conductors, both British and German, were more or less mechanical, so that they were often spoken of as mere time-beaters. With Bülow, Richter, Levi, and others a new and higher order of conductor arose; music, both classical and modern, was interpreted with greater life, greater soul. Herr Raabe, however, shows a tendency to exaggerate lights and shades; he seldom leaves the music to speak for itself. He is highly intelligent and talented as a conductor, and in the course of time he may acquire something of the calm confidence and dignity of Dr. Richter, who with little gesture achieves great results.

Æolian Hall.—*Mr. Richard Buhlig's Pianoforte Recital.*

The programme of Mr. Richard Buhlig's third pianoforte recital at the Æolian Hall on Tuesday afternoon included the third of

the three sonatas composed by Schubert shortly before his death—the one in B flat. The Andante is an exquisite movement, though the pianoforte cannot do justice to the music, and the Scherzo is a little gem; but in the first section of the work the charm and poetry of the thematic material are at times seriously marred by weak and trivial workmanship. It is no wonder that the composer's sonatas are so seldom performed; an exception ought, however, to be made for the admirable one in A minor, Op. 42. Mr. Buhlig, who played extremely well, deserves all credit for reviving a sonata in which, at any rate, there is much to admire. This work was followed by a very modern piece, César Franck's 'Prélude, Choral, et Fugue,' but the reading of the music was for the most part singularly unsatisfactory. The themes, around which the composer has entwined a network of curious figuration and chromatic harmony, were either lost or overmarked, while the jerky playing of the middle section robbed it of its poetry. Franck's delicately constructed music can easily be spoilt. Mr. Buhlig is a gifted artist, but in this particular case he rendered justice neither to the composer nor to himself.

Musical Gossip.

Next Thursday a performance will be given at His Majesty's Theatre of Mozart's 'Figaro' by the students of the Royal College of Music, under the direction of Sir Charles Villiers Stanford.

Dr. Joachim and his colleagues will give a new series of five concerts of chamber music at Bechstein Hall on the following dates: Monday evenings, April 23rd and 30th, and May 7th; Thursday evenings, April 26th and May 3rd—also two concerts at Queen's Hall (Saturday afternoons, April 28th and May 12th) for performances of works for strings and wind, in which Herr Richard Mühlfeld, of Meiningen, and other excellent artists will take part.

A new volume on voice cultivation is announced by Mr. Elliot Stock, entitled 'Singing; or, Method of Song and Speech,' by "A Singer." The work contains practical instructions and hints on the art of singing and voice production, founded on practical experience.

The second volume of Grove's 'Dictionary of Music and Musicians,' revised by Mr. J. A. Fuller-Maitland, is on the eve of publication.

"The unnatural mania for arranging pianoforte music for strings might well cease." Thus wrote Beethoven to Breitkopf & Härtel in 1802. And he went on to say that only composers such as Haydn and Mozart could properly transcribe their own music, "and without associating myself with those two great men, I assert the same thing of my pianoforte sonatas." He adds that he actually had thus arranged one of them, and therefore knew positively what a tough job it was. The sonata in question was the one in E, Op. 14, No. 1. The interesting transcription was actually published, but appears to have attracted little notice. Prof. Dr. Wilhelm Altman has described it in *Die Musik* (November 15th), and given the Finale in score, with, for comparison, the pianoforte part below. The whole work will shortly appear in the new supplement to Messrs. Breitkopf & Härtel's critical edition of Beethoven's works.

At Prague were produced Mozart's two great operas, 'Figaro' in 1786, and 'Don Juan' in 1787, and for many years the Mozart Society has been trying to obtain from the city corporation a site for the erection of a monument to the composer. As, however, there seemed no immediate prospect of such a site being granted, the Society has determined to erect a monument in the *loggia* of the old German national theatre, and the foundation-stone will be laid in January on the occasion of the 150th anniversary of the composer's birth. The sculptor Franz Metzner, of Vienna, has been commissioned to execute the monument.

The violinist Charles Bouvet is organizing four interesting séances at the Salle Pleyel, Paris. The "Fondation J. S. Bach," as the scheme is entitled, is now in its fourth year. Bach will be largely represented, but the programmes will include music by composers of the seventeenth and eighteenth centuries. Bach rose above all his predecessors, but he owed much to them; a knowledge therefore of their music, in itself often of high interest, helps musicians to appreciate more fully the grandeur of Bach's art-work. M. Bouvet's first séance takes place on December 15th.

The production of Dr. Richard Strauss's 'Salome' at Dresden is now definitely fixed for December 9th. The composer requires so large an orchestra (120 performers) that two rows of the stalls will have to be sacrificed.

Performances next week.

Sun.	Sunday Society Concert, 3, Queen's Hall.
—	National Sunday League Concert, 7.30, Queen's Hall.
Tues.	Miss Marjorie Sherwin's Concert, 8, Queen's Hall.
—	Mr. Richard Buhlig's Pianoforte Recital, 8.30, Æolian Hall.
Wed.	Stock Exchange Orchestral Concert, 8, Queen's Hall.
Thurs.	Miss Katharine Goodson's Pianoforte Recital, 3, Æolian Hall.
—	Royal Choral Society, 8, Albert Hall.
Sat.	Chappell's Ballad Concert, 3, Queen's Hall.
—	Orchestral Concert, 3.30, Crystal Palace.

DRAMA

THE WEEK.

Adelphi.—*A Midsummer Night's Dream.* Played in Four Acts.

Among Shakspearean comedies 'A Midsummer Night's Dream' lends itself most readily to musical and spectacular accompaniment. The nuptials of Theseus and Hippolyta are happily blended with the fairy revels of Oberon and Titania, for which they furnish occasion; and the burlesque entertainment of Bottom and his "crew of patches, rude mechanicals," fits in well with the fantastic observance of the solemnity. That Shakspeare would have welcomed such additions as modern science, art, and taste have invented is more than probable; and musical accessories such as are now ordinarily tolerated constitute, with all but sticklers for archaic observances, an enhancement of delight. These are in the present instance a little over-elaborate and burdensome, assigning to the whole something of the character of opera, which, of course, in Shakspeare's time had not been invented. The decorations introduced are in the main helpful and acceptable. In the opening scene, however, the crudity of some of the colours employed—especially the reds in the dresses of the warriors of Theseus—jarred somewhat. As performance the whole was bright and acceptable, and was a distinct advance upon that of 'The Taming of the Shrew.' Miss Lily Brayton was an intelligent as well as a superbly handsome Helena, charging the part with more passion and romance than is ordinarily assigned it. She was well paired by Miss Frances Dillon as Hermia. Hippolyta and Titania found stately exponents. Miss Beatrice Ferrar made an agile Puck, and Mr. Walter Hampden a warlike Oberon. Among the clowns Mr. Oscar Asche as Bottom the Weaver and Mr. E. Lyall Swete as Quince the Carpenter were prominent. The humour of Bottom was grave and reflective, a reading which we will not challenge; that of Quince amusingly pragmatical. A heavy responsibility was thrust upon the singing fairies, Misses Elizabeth Parkina, Ethel James, and Pattie Hornsby, all of them skilled musicians. No previous performance of 'A Midsummer Night's Dream' in which so much stress was laid upon music is, indeed, to be recalled. The entire entertainment is pleasurable, and to a certain extent seasonable.

St. George's Hall.—*Performances of the National Theatre Society.*

The conditions attending the performances of the National Theatre Society are scarcely favourable to a calm estimate of its merits. No fewer than eight new plays were presented during the first two days of the week—a period already heavily charged with theatrical novelty. It is obviously all but impossible to follow the whole of these, and the majority of the pieces remain unseen. In the collected dramas of Mr. W. B. Yeats and in other forms most of the plays are accessible, and on the merits of some of these — as, for instance, 'On Baile's Strand,' the Sohrab and Rustum episode of the Cuchullain legend, and on 'Kathleen Ni Houlihan,' a patriotic (from the Irish standpoint) piece dealing with Irish revolt in 1798 upon the arrival of the French in Killala Bay—eulogy has already been passed. 'Spreading the News,' by Lady Gregory, is a humorous little comedy showing the manner in which a baseless rumour, originated and repeated at a village fair, attains such proportions that a man innocent of all blame gets arrested for a murder, and cannot even obtain his freedom when his supposed victim is his partner in captivity.

Being in three acts, 'The Well of the Saints' of Mr. J. M. Synge may be regarded as the most important of the first day's productions. It also is a humorous work, the idea of which may be found in one of the punning songs of Thomas Hood. An Irish couple, aged and blind, recover their sight by miraculous means, and are no wise contented with the result, each finding the other plainer and less attractive than had been surmised. When, in punishment for wantonness or profanity, their divinely endowed vision is taken away, their quarrels cease, the happy state of affairs previously existing is renewed, and both experience the truth of the consolatory lesson preached by Dalila to Samson—that,

> Though sight be lost,
> Life yet hath many solaces, enjoyed
> Where other senses want not their delights.

At any rate, the offer of the strolling priest to repeat the miracle is received, not with indifference, but with resentment and violence, and the happy couple, restored to their former blindness, shake the dust off their feet, and quit a country in which priestly functions are discharged with so much superfluous zeal, and the lay population is disposed to resent the slight put upon sacerdotal ministration by the recalcitrant blind.

In a slow and rather sluggish fashion the acting was good. It was in the hands of actors bearing names such as Proinsias Mac Siubhlaigh, Maire Ni Gharbhaigh, and others that might indeed

Have made Quintilian stare and gasp.

Beside these the appellations that shocked Milton—

Gordon,
Colkitto, or Macdonald, or Galasp—

sink into insignificance.

COURT.—*Major Barbara: a "Discussion, in Three Acts."* By Bernard Shaw.

IN defining his play as "a discussion" Mr. Shaw has been less humorous and self-derisive than is his wont. It is that, and nothing more. How witty or convincing it is will not probably be ascertained until the printed rendering is in the hands of the public, which we trust it may soon be. Dramatic, however, it is not. Original and well-devised characters abound. There are scenes moving, touching, amusing, appalling, the fidelity of which it is not permitted to question; there is abundance—superfluity, indeed—of clever and paradoxical dialogue; but there is no dramatic fable, hardly any movement. So clever is Mr. Shaw throughout, and with so many brilliant flashes does he illumine his work, that we cannot find it in our hearts to chide him for continuing to preach after he has gained his point, and substituting boredom for delight.

One thing he has in common with Ibsen, his teacher, if Mr. Shaw was ever addicted *jurare in verba magistri*. He furnishes fine opportunities to his actors, and many of the characters in his new "discussion" were admirably presented by their exponents. The part of the Salvation Lass, his heroine, known as Major Barbara, was played with indescribable tenderness and earnestness by Miss Annie Russell, who drew from the public a warm tribute of tears. Quainter, but scarcely less admirable pictures were supplied by Miss Rosina Filippi, Mr. Dawson Milward, Mr. Louis Calvert, Mr. Granville Barker, Mr. Oswald Yorke, and others; and the whole performance, but for its verbosity and length, would have been exhilarating. The relations between husband and wife in 'Major Barbara' recall those in 'You Never Can Tell,' but the fun is less recklessly extravagant.

Whitewashing Julia: an Original Comedy in Three Acts and an Epilogue. By Henry Arthur Jones. (New York, the Macmillan Company.)—The latest addition to the printed dramas of Mr. Henry Arthur Jones consists of 'Whitewashing Julia,' a piece first produced on March 2nd, 1903. Built on lines similar to 'The Liars,' the play is neither less amusing nor less saucy than that masterpiece. That its popularity was less was attributable to the constant reference to a "powder puff," the recurrent mention of which became annoying and even exasperating. In one respect the play is unique. Three acts serve for the development of the plot. An epilogue—which is omitted in action and superfluous in perusal, since it serves only to impress upon the reader what he already knows—is added, with an explanation that its stage production is inexpedient. Though agreeable and amusing, the play does not rank with its author's best workmanship.

Dramatic Gossip.

IT proves with how little intelligence things dramatic are arranged in London, owing to the absence of any species of combination among managers, that while the latter portion of this week was all but wholly unoccupied, over a dozen novelties or changes were fixed for Monday and Tuesday—more, that is, than could by any chance be seen by the best-disposed critic or reporter.

THE three-act adaptation of Mr. E. F. Benson's 'Dodo,' produced on Monday afternoon at the Scala, was chiefly noticeable for the admirable interpretation of the heroine by Miss Sarah Brooke. The version is, however, scarcely happy, and the whole proved, indeed, depressing. Not much more successful or inspiriting was 'Jimmy's Mother,' by Mrs. Leonard Merrick, a one-act study of life dealing with the faith-healers. Among the productions of the Incorporated Stage Society a high place will scarcely be claimed for the latest.

THE opening piece during the week at the Waldorf Theatre has been 'The Factory Fire,' in which Mr. Henri de Vries played his customary round of parts.

MRS. CHARLES SUGDEN has appeared at Bournemouth in 'The Woman who was Bored,' her adaptation of 'Une Femme qui s'ennuie' of M. Paul Charles Bilhaud.

ONE more experiment in melodrama is to be essayed at the Princess's, which house, after undergoing structural alteration, will open under the management of Mr. Edward Dagnall with a play by Messrs. George R. Sims and Arthur Shirley.

THE Royalty is after all to be opened by Madame Réjane as a French theatre in London. Madame Réjane will herself begin the ball on January 4th, appearing in 'La Rafale.'

'THE INDECISION OF MR. KINGSBURY,' an adaptation from the French of M. Georges Berr by Mr. Cosmo Gordon Lennox, will be given at the Haymarket next Wednesday, with the adapter, Mr. Charles Hawtrey, Mr. Sydney Valentine, Mr. Wilfred Draycott, Mr. Holman Clark, Miss Nina Boucicault, and Miss Fanny Brough in the principal parts.

MR. WILLIAM POEL, a strong advocate of "the advantages of producing Shakspeare without scenery," is in America. We hear that his lectures are being warmly received there, for the Americans appreciated highly his rendering of 'Everyman,' which was represented in the States last year, and sympathize with his views in regard to the full understanding of Shakspearean drama.

THE rarest of the three early Shakspeare quartos which Messrs. Sotheby, Wilkinson & Hodge will sell on Saturday next is the imperfect copy of 'Titus Andronicus,' 1600. The copy of the 1594 discovered in Sweden last year, and described in *The Athenæum*, is "the first existing edition," whilst the 1600 issue is the second. Hitherto only two copies of the latter have apparently come to light—the Ellesmere and the Edinburgh University—and there is no record of one ever having been sold at auction. The present example unfortunately is imperfect, wanting the title-page. The other two quartos—curiously enough, all three were issued in 1600—are perfect, and it is difficult to say which is the rarer. The 'Much Adoe about Nothing' is the first edition, of which Mr. Gaisford's copy realized 130*l.* in 1890; and the 'Midsommer Nights Dreame' is one of two editions printed in the same year, one by James Roberts and the other by Thomas Fisher. The copy about to be sold bears the Roberts imprint, and this Halliwell considered to have the better claim to be regarded as the earlier.

TO CORRESPONDENTS.—C. C. S.—H. J. E.—W. M. F.—G. G. H.—G. R. P.—G. B. W.—received.

LITERATURE

Further Memoirs of the Whig Party, 1807–1821. By Henry Richard Vassall, third Lord Holland. Edited by Lord Stavordale. (John Murray.)

STUDENTS of political history must have awaited the sequel to Lord Holland's entertaining and authoritative 'Memoirs of the Whig Party' with the liveliest interest, and the volume published under the competent editorship of Lord Stavordale, who is now entitled to another name, will prove no disappointment. It is true that the nephew of Charles James Fox chronicles in these pages no incident so affecting as his uncle's death, and adds but little to our knowledge of General Fitzpatrick, Whitbread, and Erskine when he comes to reflect on their deaths; while those who look for fresh specimens of Frere's wit will discover only his familiar eulogy of the Spanish Peninsula as a country "where God Almighty kept large portions of land in his own hands." In matters of opinion, again, the amused contempt with which the Whig patrician regarded Queen Caroline's draggle-tailed Odysseys has been anticipated in the original 'Memoirs,' and his championship of the captive Napoleon in the 'Foreign Reminiscences.' Still, we get in these pages an intimate running commentary on the internal history of a great political party during momentous times. Sufficiently serious though the 'Further Memoirs' are, they supply touches of light comedy in refreshing contrast to the buffoonery of Creevey. They are valuable, above all, from their evidence of the extent to which aristocratic Whiggism had been permeated by the French Revolution. The monarchy and the clergy are never allowed to pass without a gibe being directed at them by Lord Holland, though the theoretical Republican and Anti-Clerical would have recoiled in dismay, no doubt, from the translation of his views into practice.

The subject-matter of the 'Further Memoirs' falls naturally into two divisions: the negotiations for the return of the Whigs to office on and after the establishment of the Regency, and, secondly, the trial of Queen Caroline. Lord Holland gives a most animated picture of the goings and comings between Carlton House and Grey and Grenville, with Lord Moira as a well-meaning marplot and Sheridan as a much more deliberate spoiler of sport. He writes with a bitterness which is easily intelligible, and by a hint that the General's intellect was failing disposes of Fitzpatrick's explanation that the Prince of Wales could not, in the first instance, have got rid of the King's advisers "without exposing himself to the most odious imputations of destroying the sanguine hopes of his father's recovery, and even endangering his life." Still, that is exactly the conclusion to which the public would have come had a change of Ministry occurred. At every stage of the prolonged haggle the Opposition were much hampered, in Lord Holland's happy phrase, by Grenville's "passion for pen and ink, which outweighed every other consideration." The laboured remonstrances which Grey was induced to sign alienated a prince who loved his ease, and who, being as finished a diplomatist as his father and a far abler comedian, completely foiled the two serious statesmen. Of the other negotiators-in-chief, Moira had the collar of St. George thrown round his neck by his royal patron with an outburst of those tears which the Regent had "the prerogative of shedding at pleasure," and was appointed Governor-General of India, while Sheridan died in indigence. Lord Holland censures Moore for the reproaches he addressed to the opulent and titled companions of the dramatist's happier days because they had refrained from coming to his assistance in the hour of his necessity. The defence of those grandees who did not scruple to be Sheridan's pall-bearers, though they failed as his Samaritans, is more specious than conclusive. We are told, in the first place, that,

"to my knowledge, some aid of that nature was offered, and more was possibly accepted than his biographer relates or than his benefactors ever wished to have recorded."

Secondly, we are asked to believe that Sheridan belonged to that class of debtor which it is impossible to help, because he would neither give information, nor consent to any arrangement, nor speak the truth, even had he been willing to co-operate. The latter argument weakens rather than fortifies its predecessor.

Lord Holland took Queen Caroline's trial very lightly:—

"During the inquiry itself, I was for the most part employed in writing nonsensical puns and epigrams on the various indecencies which occurred, and tossing them across the table to the Chancellor for his diversion, and I believe I was the only Lord practised in public speaking who asked not a single question during the inquiry."

Lord Stavordale might have noticed that one of Lord Holland's jests on this somewhat formidable crisis is preserved in the vivacious correspondence of Harriet, Lady Granville; it smacks of the Regency. To Creevey, an assiduous party man, the trial was a mere bludgeon wherewith to belabour the Government; the responsible Whigs looked at it with other eyes:—

"Most of our party, and all who had been of Cabinet [*sic*] in 1806, were, in truth, at first very unwilling to espouse the cause of the Queen. We had no confidence in her merit and none whatever in her character; and we thought such a line of conduct would expose us to the charge of faction or revenge. On the other hand, we were as little disposed, after the treatment we had received, to identify ourselves with the King, and to brave unpopularity by encouraging him in an ungenerous and unnecessary vexation of a half-crazy woman."

If Lord Holland did not love Queen Caroline, neither did he waste any admiration on Princess Charlotte. He gives an unflattering sketch of her disposition which, without substantiating the scandals that prompted Byron's scathing lampoon on Dr. Nott, represents her as a good deal worse than the hoyden of Lord Albemarle's reminiscences.

The supplementary chapter of 'Miscellaneous Recollections' is chiefly concerned with men of letters, and most diverting it is. But little is added to our knowledge of Porson; Lord Holland's stories, in fact, have obviously filtered to him through Rogers. But the great Samuel Parr stands before us in his habit as he lived, now terrorizing high tables and undergraduates during visits to Oxford, or again surveying Pitt, whom he suspected of a settled intention of subverting the idiom of the language, from the gallery of the House of Commons. He brought his "whole grammatical mind" to bear on the orator, and — "The dog caught my eye, and chastised his faulty phraseology." The worst punishment that could have been inflicted on Pitt would have been the perusal of the turgidities and involutions which made up Parr's own prose style. Excellent, too, are the brief appreciations of Roscoe and "Monk" Lewis, while characteristic of Whig habits of thought is a vigorous onslaught on the Lake school, wherein Southey is represented as having been perverted by "the touch of Treasury gold," and Coleridge as "the hireling of every illiberal publication in its turn." Coleridge was no hireling. He explained his change of political standpoint with absolute sincerity: how, disgusted with the excesses of the French Revolution, he knew not which way to turn until in the uprising of Spain against Napoleon he discovered a genuinely popular cause. Lord Holland's sympathies were all with the insurgents, but he allows that the feeling was by no means unanimous among the Opposition, and Coleridge had reason on his side when he quitted such half-hearted supporters of freedom.

Lord Stavordale's editing of these 'Further Recollections' is much to the point. He might possibly have been more liberal with his illustrative matter. Thus an elaborated version of Sheridan's sneer at Whitbread's "Address" on the rebuilding of Drury Lane Theatre — that he wrote of the Phœnix like a poulterer—has been preserved by Moore. Still, it would have been a mistake to encumber the pages with too many foot-

notes, and on the political side Lord Stavordale leaves little to be desired. His introductions to the various chapters supply just the right kind of information that Lord Holland's somewhat discursive and allusive style requires by way of commentary.

TWO BOOKS ON JAPAN.

Great Japan: a Study in National Efficiency. By Alfred Stead. (John Lane.)

The Risen Sun. By Baron Suyematsu. (Constable & Co.)

Mr. Stead's book largely repeats his work 'Japan by the Japanese,' published last year and reviewed by us on September 3rd, 1904; and what we then said of that bulky volume might be again, in great part, said of this still more bulky tome of 700 pages, in which Great Japan is presented as the proof and illustration of the righteousness of the doctrine of efficiency as expounded by Lord Rosebery in his interesting 'Foreword.' There is the same indiscriminate laudation of all that the Japanese have said, thought, or done from the seventh century B.C. to the twentieth century A.D., based upon uncriticized statements of Japanese writers, upon totally false history, and upon the platitudinarian and extremely commonplace utterances of Japanese statesmen in relation to ethical, social, and political philosophy. "Since 661 B.C., when the Japanese empire was established by Jimmu, whose descendants in an unbroken line have occupied the throne of Japan until to-day," writes the most enlightened and liberal of Japanese statesmen, Count Okuma, whose genius as a financier was revealed as long ago as 1873 — "Japan has only twice invaded another country." This is the sort of history which finds acceptance in Japan, with Count Okuma and Mr. Stead. Mr. Shimada, "the well-known Japanese politician," writes that "the peoples belonging to this [Caucasian] race consider themselves seriously wronged whenever they see others trying to gain ground as a strong and wealthy nation."

To say the least, such utterances as these are ungrateful in face of the praise of Japan which has kept the press of Europe busy for the last twenty years or more. But the sentence is a key to Japanese thought — the Japanese too often tease themselves into resentment against fancied injury. What criticism they have to endure they provoke by their own unhistorical statements and pretentious platitudes. What is the use of telling the West that "from the earliest dawn of history women have enjoyed equal rights with men," &c. (p. 372), while a line or two above we find a recent Imperial rescript declaring that "females heretofore have had no position socially because it was considered they were without understanding"; or that slavery never existed in Japan, in spite of its continual mention in the 'Nihongi' (in the index to Dr. Aston's valuable translation there are some sixteen references to it); or that "under no circumstances have they [the Japanese] lost sight of these two great principles [a sense of justice and true national interests]" in relation to conquest, when the entire history of old Japan, an aggregate of principalities rather than a nation, refutes the statement, which in modern times has been contradicted by the Formosan expedition, by Korean experiences, and by the Chinese war (in part) of 1894?

In Mr. Stead's last chapter, 'Quo Vadis?' Baron Kaneko is quoted as saying, "We feel it our duty to do our utmost to extend these blessings [of Western civilization] to other Oriental nations." Why not let the West itself extend its own blessings directly, benefactions which, Count Okuma admits, Japan only accepted for the purpose of preserving her independence from the foreigner? If the truth be told, the foreigner, with all his ways, good and bad, is as little liked in Japan now as he was in the sixties.

With Baron Suyematsu's volume we must deal shortly. It is a reprint of various articles contributed to *The Nineteenth Century and After* and other periodicals — all of them interesting and instructive, if read with a sense of the usual Japanese notion that the author is on his defence.

In his criticism of the relations between Japan and France, Baron Suyematsu is not less outspoken than just. He properly characterizes the correspondence of a certain French journal from Japan as a bullying attempt to bring her into contempt. To speak of the Japanese as "barbarians and savages," as a French diplomat did so recently as last June in the *Deutsche Revue*, is foolish. Loti's 'Madame Prune' is a mere libel that needs no serious notice. Baron Suyematsu scouts the "Yellow Peril," justly enough; but such utterances as those of Baron Kaneko, already referred to, are not wise. If the "Yellow Peril" should ever assume substance, it will be due to such a policy as he advocates, or to the replacement of military by commercial war, or to Anglo-Saxon contempt for colour. In the last respect the Latin races are the more liberal. The sudden attack on Port Arthur is skilfully defended; the general verdict is that it was "smart." In view of the Treaty of Portsmouth our author must wish he had not written the chapter on a war indemnity. It is no use making large demands that you do not intend or are unable to enforce. The treaty was, no doubt, comparatively a fiasco from a territorial point of view, for as much of what had become Japanese territory was ceded to Russia as was handed over to Japan by that country.

Altogether Baron Suyematsu's book is a valuable contribution to history; his account of the origin of the war, though *ex parte*, is as just, probably, as available information renders possible. But he might write still better books than this, if he could get rid of the notion that most people are more than superficially interested in his country and its ways, and are desirous of criticizing these from Manchurian campaigns down to chopsticks—which, by the way, are awkward things enough, as any one may judge who watches the Japanese shovelling rice into their mouth from a bowl with them.

A History of the Hyderabad Contingent. By Major Reginald George Burton, 1st Infantry, Hyderabad Contingent (94th Russell's Infantry). (Calcutta, Office of the Superintendent of Government Printing.)

The origin and development of our Indian armies, closely connected as their history is with that of the administration of the country, are necessarily of great interest. It is, of course, generally known that the armies of Bengal, Madras, and Bombay were raised from very modest beginnings in the seventeenth century till they reached their present proportions at the beginning of the twentieth. But besides these regular troops, there have been enrolled, as occasion required, irregular forces, originally for special and local purposes, but now available for general service, each of which has its history, often remarkable, but usually buried in official records. Conspicuous among these, by its strength and composition as well as by its services, was the Punjab Frontier Force, the guardians of our most exposed marches. Next, perhaps, in importance was the Hyderabad Contingent, whose history is told in the volume before us; and there are, besides, many smaller corps, such as the Central India Horse, various Bheel corps, &c., whose records for the most part still await their historian.

The Hyderabad Contingent was developed from the Nizam's army, a numerous, undisciplined rabble of good fighting men, collected to hold the Deccan when it became virtually independent of the Mughal Empire. In 1790 a treaty between the British, the Nizam, and the Marathas was concluded, in which provision was made for the supply of 10,000 cavalry to the British forces in case of need, and two years later a mixed body of men did join our army. The Nizam's regiments were disciplined by Raymond, Perron, Baptiste, and others, French influence for a time overshadowing British interests. Then the Marquis Wellesley appeared, the French corps were disbanded, and the British Subsidiary Force, into which the best of the dispersed corps entered, was increased, forming a body of some 6,000 cavalry and 3,600 infantry, known till 1854 as the Nizam's Contingent. They served under Arthur Wellesley in the campaign against Tipu Sultan, who was killed at the capture of Seringapatam, and afterwards in 1803 in the Maratha war, but failed to escape severe criticism. From this time they were for some years employed in conjunction with the Subsidiary Force against the Pindaris in Berar, but apparently without gaining distinction. This was far from remarkable, for the men were neglected, kept long in arrears of pay, and so put to straits incompatible with discipline. Wellesley, however, quickly saw the need for reforms, which, after considerable opposition, were in the main adopted, with beneficial results.

But the chief reform is identified with the administration of Henry Russell, who held the high post of Resident from 1811 to 1820. That his measures were sound was proved in the various battles and sieges during the campaign undertaken by the Marquis of Hastings for the destruction of

the Pindaris and for the reduction of the Marathas. These objects were effected so thoroughly that the Pindaris are now remembered only by tradition and in history, whilst security from Maratha raids and plunder has ever since been the portion of the villagers of Southern India. For these services the troops from Hyderabad were commended by the generals under whom they served, and received the entire approbation of the Governor-General in Council.

No sooner was this campaign over than further employment for the force was found in suppressing the banditti who infested the State of Hyderabad, in reducing the forts they occupied, and generally in establishing order. These duties were successfully performed, and as a rule were suitably acknowledged, though occasional failure on the part of authority to distinguish clearly the relative merits of one engagement from another called forth caustic criticism. Thus an officer who took part in the operations remarked:—

"The services of the Russell Brigade have of late been very distinguished; and the siege and reduction of the fort of Nowah.....stands perhaps unparalleled by any similar affair during the whole of the late war.....Yet we have never seen any public acknowledgment of that service, not that it was deemed unworthy of due praise, but perhaps because the corps by which it was achieved did not belong to the regular army. Such a service, however, performed under the direction and at the example of British officers, certainly merited some public testimony, and infinitely more so than the reduction of Mundelah and Chanda, where we verily believe there was more paper consumed in the compliments on those occasions than was expended in the cartridges discharged," &c.

That is, we think, a happy expression of wholesome opinion, applicable to many other cases in which effusion of sentiment exceeds that of blood.

The State of Hyderabad and its province Berar were peculiarly liable to disturbance, partly because of their neighbours, but more on account of the presence of some 40,000 undisciplined and mischievous troops there employed. To them the Contingent, improved by careful attention, formed a counterpoise, and therefore British interest in its welfare and efficiency was assured; but it did not follow that the Nizam or his ministers would be equally solicitous. Hence we read of constant reform and reorganization of the Contingent on one hand, and of failure to pay the force and increasing debt to the Government of India on the other. This led to the assignment in 1853 of the revenues of Berar on account of the debt and to provide for regular payment in future, the balance being handed over to the Nizam. The arrangement seems to have worked well, for in the mutiny of 1857 the ruler and his great minister Salar Jung, in spite of considerable temptation, remained loyal, and materially assisted in keeping the peace of Southern India; whilst the Contingent did good service against the mutineers, and acquired the confidence of their English commanders, conspicuous amongst whom were Henry Marion Durand and Sir Hugh Rose. Both attested the valour and fine qualities of officers and men, and it is agreeable to note the numerous promotions and rewards given to the native ranks. Prominent among these was Risaldar-Major Ahmad Bakhsh Khan, who was admitted, as a special mark of distinction, to the first class of the Order of British India, with the title of Sirdar Bahadur. Of him it is recorded that in time of war he was to be found where fighting was fiercest, whilst in peace he was a fine sportsman, having speared many a boar and bear:—

"When over 90 years old he accompanied the officers of the cavalry out pigsticking at Mominabad, where he still resides, and is now about 94 years of age. He was granted the title of Nawab on retirement in 1883."

After the Mutiny the Contingent did not see much service till 1886, when they were sent to Burma; one regiment, indeed, joined our army in Afghanistan, where it was employed on the line of communications and had no fighting; but in Burma their training in the Deccan qualified them for jungle warfare,

"and the skill acquired in the chase of wild beasts was found of great service in the pursuit of dacoits through the dense and wild jungles....."

The Contingent took part in thirty-seven engagements or encounters with dacoits and insurgents, and materially assisted in the pacification of the country, thus upholding their distinguished reputation.

Since then peace and security in Hyderabad have become so fully established that the special occupation of the Contingent is gone; but it was clearly undesirable to lose the services of such a body. Consequently they were put on the same footing as other native troops in arms, equipment, &c., and, instead of being solely under the orders of the Government of India, were placed directly under those of the Commander-in-Chief. In Tirah and China they have maintained their good name, and since 1903 have been amalgamated with the regular Indian Army.

Such, in brief, is the story Major Burton has to tell; those who desire further information respecting our policy with the State, and military details, should consult his book. It has evidently been prepared with care, and has, we imagine, been a labour of love. Like most works based on official records, it bears traces of official style and of repetition. Many native words are used which may be additions to the Anglo-Indian glossary; but these, though unintelligible to a general reader, are familiar to the majority of persons likely to consult this book.

NEW NOVELS.

The King's Revoke. By Margaret L. Woods. (Smith, Elder & Co.)

If we may judge from the prefatory note to this novel, Mrs. Woods has had the advantage of the assistance of some experts, with the result that the historical texture of her book is no doubt accurate. It purports to be "an episode in the life of Patrick Dillon," who, Irishman as he was, served the King of Spain *de jure* during the usurpation of Joseph Bonaparte. Dillon, in combination with others, and with the co-operation of England, designed to rescue Ferdinand VII. from his prison in Valençay, and this is the story of their failure. They failed because of the incredible cowardice of the King, who, to curry favour with Napoleon, denounced his own partisans. The King is depicted vividly as a miserable creature; and the remaining historical portraits, which include Talleyrand, are well drawn. Perhaps the best character is that of the denationalized Irishman D'Haguerty, an adventurer who strikes us as extremely natural in his unscrupulousness, his greed, his capacity, and his good-humour. Dillon is not so successful, but he keeps faithful to his character as a wild Irishman. The women are all good, and are of various types, from the loyal and virtuous Marquesa de Santa Coloma to the infamous Suédoise. The story abounds with episode, and is a very taking piece of intrigue and adventure. There is too great a profusion of people in the drama, but that gives it the effect of life, if not of art. Mrs. Woods has had the courage to ignore the love interest, for the relation between the Marquesa and Dillon is platonic, and it may be that the popularity of the novel will suffer from this. It is, for all that, a sound, painstaking piece of work, deserving of high praise.

The Travelling Thirds. By Gertrude Atherton. (Harper & Brothers.)

There are certain things that Mrs. Atherton can do extremely well. One of these is the portrayal of the different types of her own countrywomen. She has a hearty dislike of their faults, and a vigorous contempt for their weaknesses, and she expresses herself with much freedom. At the same time she is in many things an ardent American, and she really loves the women whom she condemns. In the present volume she undertakes to tell the adventures of a party of Americans who make a tour in Spain, travelling in third-class railway carriages. Her descriptions of Spanish scenery, Spanish customs, and, of course, the Alhambra, are brought in so naturally that they do not in the least suggest the guide-book. Two love stories run through the work. One is of a somewhat conventional type, while the other is broadly melodramatic, but thoroughly amusing. Mrs. Atherton's chief success here is her heroine Catalina, a Californian girl who is full of exuberant life, utterly contemptuous of the conventions of society, and at the same time thoroughly lovable. The author has done nothing better than this portrait. The final chapter, in which Catalina, by a curious athletic feat, overcomes a brigand in single combat, is too grotesque to command the sympathy of the reader, but with this exception the girl is consistent from first to last. Of the other characters in the book, a professional invalid and her two daughters will be recognized as faithful portraits by all who are familiar with the various types of American tourists. The hero, a British guardsman, cannot be said to be a success. It is odd that Mrs. Atherton, with her evident dislike of the conventional, should have drawn so conventional and artificial a portrait as that of Capt. Over.

The Secret Kingdom. By Frank Richardson. (Duckworth & Co.)

Mr. Richardson has written a clever satire upon the ways of modern society, in which

he manages to convey the impression that he is laughing at his own wit as well as at the whole universe. His vitality is, however, sufficient to sustain his trenchant humour, which ranges over a wide area, from Piccadilly to Numania. The latter might stand as a skit either upon Servia or one of those little imaginary states on the borders of Germany which are now fashionable in modern fiction. Hither the hero finds himself suddenly transported as Crown Prince, with an ex-waiter for a parent, and accompanied by the four ladies who love him, chief of whom is naturally an American heiress. The book is a good farce, but one that calls for a steady brain on the part of the reader.

The Splendid Knight. By H. A. Hinkson. (F. V. White & Co.)

The splendid knight is Sir Walter Raleigh, and this is a story of his search for Eldorado, which he does not succeed in finding, but into which the hero of the tale, for whom Sir Walter forms an unaccountable affection, almost blunders. At least Owen Burke manages to reach the Inca's Court somewhere in the hinterland of the Spanish Main. It is only a portion of his numerous adventures, in which he is incredibly lucky. But for a ruby ring he would have been shot by a cruel Spanish governor, who has, of course, a beautiful daughter. Every one takes a fancy to the wild Irishman, even his jailer; and that the daughter also should is a foregone conclusion. Sir Walter was probably not altogether the mirror of clemency which modern ideas of humanity would make him out, but he would hardly have sacked and burnt a town and threatened to hang every one for the sake of Owen Burke, particularly when he was assured, on the honour of a Spanish gentleman, that his protégé was safe. However, it is best to consider this story as food for the young, who will find it packed with incident, and will not object to its well-worn material.

A House Divided. By E. M. Jameson. (Hodder & Stoughton.)

The author of 'A House Divided' has a natural manner of writing which might carry the reader unquestioningly through more improbable circumstances than those connected with Hester Percival. Mrs. Percival is not a pleasant parent, but it is conceivable that a woman of this type might prefer to keep her young daughter in ignorance of the disgrace overshadowing their lives. Cynthia, the other daughter, who deserts her home at the crisis, is mainly of importance as a contrast to Hester's unselfish loyalty, which finds its match in Roden's love for her, and his faith, which is undimmed by the mysterious shadow in which she is enveloped. There is no straining after effect, but a delightful ring of sincerity, in the love-making of this young couple, who are greatly helped by a nice and wholly natural child and a fairy godmother, to meet whom is a pleasure which would in itself make the book worth reading.

The Wandering of Joyce. By E. M. Devenish. (Duckworth & Co.)

The foundation of the plot of this novel is the superstition of the "sin-eater," who by eating the bread from the corpse's breast takes from the departed soul its burden of sin. There is a certain picturesqueness and promise in this grim notion, and the author at the outset appears to be getting it well into working order. The atmosphere is murky, and the action agitated; and altogether the reader is prepared for the enjoyment of weird elements and strange mysteries. But presently the author begins to meander in unnecessary ways, chiefly in America. A husband who disappears is the object of Joyce's pilgrimage, but he is not her husband. The wife considers herself at liberty to marry some one else after seven years' desertion, and Joyce, who loves the missing Considine, starts on her self-imposed journey. There is nothing at all rational about the tale, but that would not matter if it hung together properly. This it does not, and the explanation lies in the author's inexperience. There is plenty of good material here, but inability to apply it to the best advantage. The style is pleasant and vivid, and the pictures are graphic. But the fabric of the tale is too immaterial—as unsubstantial as air—to carry one through three hundred pages.

The Sands of Pleasure. By Filson Young. (E. Grant Richards.)

Mr. Filson Young has a better sense of style than sense of life. His work bears the hall-mark of youth and inexperience. It is over-full of talk, and much of that talk is of literature and philosophy, the inevitable pitfall of the tyro. Such a character as Lauder, the cynical painter, would only be possible to youth. Moreover, the author in a set preface introduces himself as a delineator of the unconventional. The world is his oyster, and he is resolved to open it, willy-nilly, and in despite of Mrs. Grundy. Therefore he gives us a long and somewhat prolix interlude in Paris in the company of unmitigated *cocottes*. *Cocottes* are not new to life, as Mr. Young points out; nor are they to literature. Yet it may be said that he deals with his skilfully. "Toni" is admirably depicted, but we must confess to wearying of the atmosphere of Montmartre, more particularly as Mr. Young has no definite backbone to his novel. It is in three parts, the first of which presents the hero, a builder of lighthouses on the Cornish coast; the second relates his sad experiences in Paris; while the third brings him back disillusionized to his work. Probably many young men have undergone similar experiences; but there was needed something to bind the novel into a unity. Mr. Young's observation is keen, and his wit is playful. He has, moreover, a broad outlook and an interest in humanity. These qualities should equip him as a novelist in due course. Meanwhile he has made a clever experiment, in which the best point is his unusual care and judgment in language. He writes thoroughly well, and frequently with distinction, which is not a common virtue in these, or indeed any other, days.

The King's Achievement. By Robert Hugh Benson. (Pitman & Sons.)

Mr. Benson has made an exhaustive study of that period of English history when Henry VIII. saw fit to dissolve the monasteries, and to make himself supreme in the Church of England. The story, which is long, is mainly used as a vehicle for expressing the author's decided views upon the religious and political matters of the day, and is rather overweighted by the historical detail, which obtrudes itself too persistently in the foreground. The brothers Torridon are a good contrast—the one a devout monk, and the other, as assistant to Thomas Cromwell, Earl of Essex, an active agent in the persecutions to which the religious orders were subjected; whilst the portraits of Henry VIII. and Sir Thomas More are certainly vivid. The author cannot be denied the dramatic sense; indeed, we wish that his enthusiasm had not led him to dwell with so much realism upon martyrdoms and executions.

The Fair Maid of Graystones. By Beulah Marie Dix. (New York, the Macmillan Company.)

This charming story, which belongs to the historical-romantic order of fiction still fashionable among us, has considerably more of romance than history in its composition, and can boast the attraction—not altogether usual in novels of this class—of a real live heroine. The scene is laid in England, and the period is that of the Civil Wars, but neither Rupert nor Cromwell is dragged upon the stage. Few allusions are made, indeed, to contemporary events, yet that mysterious something which many nowadays agree to call atmosphere is admirably suggested, and all the characters, male and female, seem in the picture. The plot, which hinges on a case of mistaken identity, is ingenious, if scarcely probable, and the interest fresh and well sustained. A mistake in the binding has defrauded us of some sixteen pages, and that, too, in the very crisis of a thrilling passage.

As Dust in the Balance. By Mrs. H. H. Penrose. (Alston Rivers.)

It is a daring experiment on the part of Mrs. Penrose to create a heroine who, from first to last, is of complete unimportance to her surroundings. On the whole, the experiment is successful, for, in spite of her lack of intelligence and perception, Rose Warden, with her great simplicity and her consequent blunders, has a lovable personality. In any case, the reader's sympathy is aroused and sustained in her pitiful story, which begins with the coldness and contempt of her sisters, and ends with her flight from the impossible prig whom she has married and the spiteful gossip of a vulgar neighbourhood. There is an almost painful consistency in the steady development of her misfortunes, but the pathos with which she is invested atones for the lack of original interest.

Nigel Thomson. By V. Taubman-Goldie. (Heinemann.)

The hero of this unpleasant story of 'Varsity life is an undergraduate whom weakness rather than wickedness has placed in a bad set. He becomes engaged to a girl of good family, and resolves to break with the old life—gradually. He has, however, made

the acquaintance of the granddaughter of a small dealer in "faked" curiosities, a pretty innocent, scarcely more than a child. An unhappy chance works the undoing of them both, and Thomson magnanimously marries the girl. Their subsequent history is as disastrous as might be expected. The author needs an ounce of civet to sweeten his imagination. Doubtless "these things are life," for even undergraduate life has its seamy side, "and life, some think, is worthy of the Muse." But the author lacks the art which is required to present a sordid and harrowing subject without offence. The realism which introduces into a work of fiction the names of actual people is in questionable taste, and fails to achieve its purpose where the characters themselves are lifeless and uninteresting.

Alkibiades: a Tale of the Great Athenian War. By Charles Hamilton Bromby. (Clifton, Baker & Son.)

The Great Athenian War is of course the Peloponnesian War, in which Alcibiades played an important and, as most people think, a disastrous part. Mr. Bromby, however, is by no means inclined to lay the blame on his hero, and is determined to find justification, or at least palliation, for his conduct on all occasions. Apart from this personal attitude towards Alcibiades he follows history closely, and rarely permits himself to invent or even embroider. This causes a certain lack of suppleness in his narrative, which never seems to kindle into independent life. We have a dialogue between Socrates and Alcibiades carefully modelled on Plato; Xenophon is laid under contribution on several occasions; a description of the plague at Athens is taken straight from Thucydides; and Alcibiades's two great speeches are faithfully adapted from the last author. Of course all this is legitimate enough, but it is rather a dangerous method for a writer of romance: he is apt to become dry and a trifle dull, and Mr. Bromby has not escaped these faults. Still the book bears witness to a mind of much refinement and some scholarship, and we regret that we shall have no more from the same source.

TWO BOOKS OF MEMOIRS.

Mr. William O'Brien publishes, through Messrs. Macmillan, *Recollections*, a volume which is to be recommended to our readers as a pleasant companion for some hours. It is not, as some might anticipate, a book of political revelations. Political importance it has; for its account, from the extreme Nationalist side (to which at that time Mr. O'Brien as a boy belonged), of the Fenian movement of 1866 has great historical and political value. Ending with 1883, this instalment of Mr. O'Brien's autobiography does not cover the most interesting period dealt with in Mr. Barry O'Brien's two volumes on Parnell. There is nothing about the conception in 1884 of the National Council scheme, and nothing, of course, of the Randolph Churchill-Carnarvon negotiations of 1885, nor of the birth of the larger Home Rule Bill. The time selected covers, indeed, "the Kilmainham Treaty," but on this there are no revelations, and there was not much room for them, after the full account from the Parnell side in the volumes mentioned above.

The public appreciation of Mr. O'Brien will be improved by the perusal of his volume. In controversies which have arisen with the prevailing British sentiment on the one side and with the extreme friends of Parnell on the other, and in recent divisions between Mr. O'Brien and the parliamentary Nationalist majority, Mr. O'Brien has often been held up to ridicule. It is impossible to end the reading of his book without being conscious of a high level in the tone of personal dignity. Some of the autobiographical touches are excellent, and are also truthful; for example, this: "I have no more ambition than an earthworm." Mr. O'Brien avoids allusions detrimental to Parnell. But we note his statement that at the beginning of Parnell's parliamentary struggle against Butt, which led to the formation of the existing Nationalist party, "the election fund of the Carlton Club had actually to be resorted to for payment of his own election expenses in Cork City." We should be inclined to doubt the fact. Such statements are often believed when they are made with every appearance of authority; but it is possible that Mr. O'Brien, although possessed of exceptional sources of information in Cork city, is mistaken. Our author's experience as a Parnellite editor was a strange one:—

"Messrs. Parnell and Egan had agreed to buy Mr. Richard Pigott's good-will, or rather, to buy off his ill-will, for a sum of 3,000*l*. Except on the basis of a blackmailing transaction, the price was a ridiculous one.....Pigott had been keeping the establishment going by methods worthy of his subsequent performances of Parnell Commission fame. It was suspected that the Secret Service Fund was at the bottom of his attacks on the Land League from the high-souled Fenian point of view."

We do not quite understand the statement, "Parnell was equally ready to take his allies from the Liberal or the Tory benches, and from either side of Westminster Hall." The last words are not new to history, but they used to mean the House of Commons and the Bar, and date, of course, from days before Mr. Shaw Lefevre's destruction of the Law Courts, long styled "Westminster Hall," after the still remaining building, of which for centuries they were an excrescence. Mr. O'Brien follows many writers in suggesting too modern an origin for obstruction:—

"There is some doubt whether Biggar was not the actual inventor of parliamentary obstruction, and consequently the author of an immortal chapter in the parliamentary history of every European State."

The readers of *Punch's* imitation of Pepys, adorned by the drawings of "Dicky" Doyle, will remember that obstruction received its name and first fame during the life of "the Pope's brass band." Mr. O'Brien writes as a rule in scholarly fashion; but there are some passages which fail conspicuously when so considered. We do not know what meaning he ascribes to "Hallali" in the words, "A fighting song of his own, which was chorussed at many a secret Fenian Hallali in the South." But, although this use of the word is unusual, we believe it to be correct. The same cannot be said of phrases such as "the second last time in my life."

We have not always been able to speak favourably of the work of Mr. Robert Sherard, and it is accordingly with the more pleasure that we welcome an excellent volume, *Twenty Years in Paris: being some Recollections of a Literary Life* (Hutchinson & Co.). Mr. Sherard was for a long time the correspondent in Paris of American newspapers, as well as a writer in *The Pall Mall Gazette* and *The Westminster Gazette*. Although some things that he gives us may have been anticipated by what he has published in the United States, they will, like the rest of his book, be fresh to readers in this country, and are of literary and journalistic interest. We are struck by the truth, in his account of the French newspaper world, of Mr. Sherard's statement that the best professor of journalism is the press censor. The great newspaper writers of modern France were, as he says, brought up under the Second Empire, when the press legislation forced them to avoid hurry and to think, not, as Confucius pronounced sufficient, "twice," and his rival "thrice," but "seven times before writing down an opinion." They had to make their readers understand, without getting their proprietors fined or consigning themselves to jail. The result was the truest journalistic style. The volume is full of good anecdotes which strike us as new, though it is, of course, possible that some of them may have been used by Mr. Sherard in his correspondence. Renan is asked by a red-haired baronet what he thinks of the descent of the English from the lost tribes. The reply is evidently authentic: "It is, perhaps, a theory which is unworthy of investigation." Another bit of Renan is the following: "The title of Academician is less a literary than a social honour." Given the stupendous fame, at all events in France, of Massenet as a composer, it may startle some to hear

"of his great admiration for Gounod. He played the cymbals in the orchestra at the Opera on the first night of 'Faust,' and when it was hissed he felt so indignant....."

We had forgotten that Edison was a count, but the reception of the dignity by the inventor has been the subject of comment in the United States. We are more pleased with his first sight of shrimps. After having asked whether they grew larger, by which question Mr. Sherard inferred that Edison took them for small lobsters, the inventor finally remarked that "they give a great deal of trouble for very small results." We are also pleased with the direction given to Mr. Sherard, when he went to Norway to see the King of Sweden, that he would easily find him in the streets, inasmuch as he was, except Ibsen, the only man in Norway who wore "a top-hat." We fear that now there will be only one, if, indeed, the great author survives his illness. Perhaps the new minister at our Court, Nansen, will take to one.

Australians will be interested by the question asked by President Carnot after tasting all their good wines, namely, whether "they were within their legal rights in giving" to them such names as Burgundy and Chablis. The Australians would do better to conquer the desire to obtain a European market by the use of such names, which are misleading. In the long run their wines can stand alone. Mr. Sherard had the honour of being locked up with another former President of the Republic, namely, "the Marshal," who was "run in" in the days of Boulangism for undue delay in obeying a police order to "circulate"—that is, "move on." In his account of the Marquis de Morès Mr. Sherard is, we think, misled by friendship. He describes the means by which this famous duellist increased the strength of his arm. He tells us that he was "as gentle as he was brave." In a somewhat full account of many incidents in his career Mr. Sherard makes no allusion to the deliberate and brutal provocation given to the Jewish officers of the French army and to the duel in which Capt. Mayer was killed. We believe that we are right in the recollection that this brave Jewish officer directed his seconds to agree to any conditions, and forced them to accept, against their duty, the private rapiers of M. de Morès. These, being double the weight of any which Capt. Mayer had ever seen, were usable only by their owner; and the result was that the finer was killed by the less-good fencer. The case has always been regarded in the fencing world as one of murder; and, if there is any doubt about the facts, the other side should have been put on record. Neither can we accept Mr. Sherard's account of the unpopularity of Zola in this

country, accompanied as it is by some suppression of the cause of the temporary unpopularity which existed. The attitude of *The Athenæum* towards Zola was that common to the literary world of Great Britain. We were in advance of France itself in proclaiming the merit of much of Zola's work, and, although there were pages in nearly all his books which were in themselves disgusting, we recognized the marvellous poetic charm of 'La Faute de l'Abbé Mouret,' and the extraordinary power of 'Germinal.' On the other hand, 'L'Assommoir' was, on the whole, condemned, and one later novel was the subject of unreserved horror—now shared by literary France. Mr. Sherard several times uses the words "the Third Empire" for what is more correctly termed the Second Empire. He sometimes drops into French idiom, as, for example, in the phrase "rich charges at Court," which will be unintelligible to any reader who knows only the English tongue. There is also a sentence as to eating the wheat in the grass, which is a literal translation of a French proverb, but will form a crux. Mr. Sherard rightly puts "Clémenceau" when he is describing the novel (though the accent is omitted in one place), but wrongly gives the accent to the name of the politician.

JUVENILE BOOKS.

MESSRS. CASSELL & CO.

The Little Folk's Sunday Book, by S. H. Hamer, is a comprehensive selection, excellently adapted from both Testaments, and generously illustrated by reproductions from the paintings of well-known artists.

MR. T. SEALEY CLARK.

Living Toys is the title of an adaptation from the French of Montorgueil by Mrs. Harold Neill. If this be a fair sample of modern Gallic nursery fare, we need not be inordinately envious. The illustrations are gorgeous, but the subject is somewhat stilted and too long drawn out.

DE LA MORE PRESS.

Humpty Dumpty, and other Songs, set to music by Joseph Moorat, illustrated by Paul Woodroffe, is attractive in every way. The musical setting of the rhymes is good, and not likely to overtax the powers of many mothers, while the illustrations show distinct whimsicality. Altogether this is a welcome improvement on the commonplace production which often serves as an introduction to the youngest of the arts.

MESSRS. GALL & INGLIS.

In *Cast Away among the Filipinos*, by Mr. William Seatter, we have what professes to be a true story of the adventures of an Orkneyman in the Spanish-American war. It is certainly unvarnished in style, and its great merit is the circumstantial setting forth of most harrowing experiences at the hands of the half-Spanish inhabitants of Luzon and elsewhere, who insist that their victim is an American. Mr. W. B. Wollen illustrates the book.

MESSRS. WELLS GARDNER & CO.

The Blue Veil, by Florence Montgomery, has long been a favourite with nursery folk, and a fresh edition will probably find many new readers; but we must protest against old stories masquerading as new. Publishers should indicate such facts. A batch of reviews by the ignorant ought not to compensate for the lack of confidence aroused by such dealing.

MESSRS. GAY & BIRD.

A Trip to Santa Claus Land, by Vivian Phillipps, illustrated by Patten Wilson, bears a family likeness to 'Alice in Wonderland.' Brightly and fluently written, it is absolutely devoid of any dull paragraphs—a thing much to be desired in stories destined to be read aloud. The language is simple, and the author shows a sympathetic understanding of the needs and capacities of the child mind.

MR. W. HEINEMANN.

We regret that we cannot enrol ourselves amongst admirers of *A Gay Dog*, pictured by Cecil Aldin. No display of cleverness quite compensates for unsuitability in the choice of subject-matter.

MESSRS. HUTCHINSON & CO.

In the Days of Elizabeth, by Eva March Tappan, is a pleasant little historical work, well suited to girls, especially in America. The style is good, but distinctly Transatlantic in the use of words like "claim," the reduction of English sums to dollars, and a strange economy in spelling. The magnificence of the Court naturally strikes an American. It is rather odd, in giving a glimpse of Queen Mary Stuart's misfortunes, to omit such a cardinal point as the murder of Riccio, and we are sorry to see stereotyped the modern error that the Howard of Effingham of 1588 was a Roman Catholic.

MR. JOHN LANE.

Lilliput Revels and *Innocent's Island*, by W. B. Rands, edited by R. Brimley Johnson, and illustrated by Griselda Wedderburn, is a reprinted collection of fantastic verse for children. Inconsequence and petty conceits are not necessarily faults in work designed for young minds, but the present reviewer finds some of the ideas merely silly, not even excellent nonsense. Any one who did not previously know Rands's verse would easily gather that he was, as the editor remarks, "always pressed for time, and had seldom an opportunity of finally revising his work." The educational value of amusing reading in the best style cannot be over-estimated, and much of Rands's verse is so clever in form, and so amusing in matter, that it is a thousand pities it is, here and there, so slipshod and banal.

MESSRS. LONGMAN & CO.

The Plain Princess, and other Stories, by I. Maunder, illustrated by M. W. Taylor and M. D. Baxter, rejoices in the distinction conferred by a preface from the pen of Mr. Andrew Lang. In it he says, "The most timid child will not find anything in this to make him dream horrid things." For this we are deeply thankful. Few grown-ups, however impressionable, realize the intense vividness of a child's imagination. None of the stories in this collection has been "conveyed" from the classics of nurserydom, and the book will therefore be welcomed as "something new" in even the best-stocked of cupboards.

MESSRS. MACMILLAN & CO.

Micky, by Evelyn Sharp, illustrated by H. M. Brock, is sure to be one of the successes of the season. Micky and his elder brother Tristram are delightfully real. The author has both an excellent grasp of the childish mind, and a capital way of putting on paper its humours, limitations, and sincerity.

MR. MELROSE.

Mr. Robert Leighton, in *The Green Painted Ship*, should earn the gratitude of boys for a stirring story of the sea. A wicked shipowner sends out a rotten hulk, which is disguised in green paint among other decorations. The wonderful escape of three boys from the "coffin," their adventures among the mutineers (including the villain suborned by the owner to scuttle the ship), and their casting away on the St. Kilda group, furnish forth an excellent narrative. There are some good nautical characters. Mr. J. W. Charlton is the illustrator.

MESSRS. NISBET & CO.

The scene of *Brown*, by Dorothea Moore, a pleasantly told "story of Waterloo year," is laid in the Essex fen country, where the inhabitants, supplanted in their net-making industry by French prisoners, have been driven to illicit practices. Smugglers and preventive men are constantly at war, while the benign and sagacious old rector endeavours to allay the strife. His godson, Brown, the gallant child-hero of the book, becomes involved in the general conflict, and is finally congratulated by the Duke of Wellington. We hear so much of the little fellow's pride in the surname of Holland that the combination with his Christian name would seem unfortunate. The alarums and excursions in which the boy plays a part do not, somehow, disturb us greatly. We feel sure that everything, including the romantic episode, is going to end rightly, and are not surprised when a long-lost sister, supposed to have been drowned, stands revealed in a village maiden. Within its limitations, the story is good, and may appeal to adult as well as younger readers.

MR. ERNEST NISTER.

Jumbo Crusoe is a laughable parody of the famous Robinson's adventures. Mr. Clifton Bingham is responsible for the funny verses, and the pictures are by C. H. Thompson.—Stories by various writers contribute to the success of *The Little People's Book of Wild Animals*.—*Funny Rhymes and Stories* amply justifies its title; but even the less expensive of the many children's books published by Mr. Nister, such as *Our Dog Friends*, *The Old Woman who rode on a Broom*, and *The Train Scrap Book*, are quite devoid of anything vulgar or crude; while many, such as the "Model Books" series, not only serve as books, but also provide endless amusement for busy fingers helped by scissors and paste.—*The Play-time Book* is a bright collection of pictures and animals and rhymes which is admirably fitted for the nursery.—There is *Nister's Holiday Annual*, too, edited and arranged by A. C. Playne, with stories by the most approved authors.—*Pictures and Plums for Fingers and Thumbs* offers both verse and prose, and most enlivening illustrations. The same may be said of *Wee Folk's Story Book* and of *Little Folk's Spice*—in fact, Mr. Nister offers such a variety of good things that the difficulty of choice will be the only problem to the buyer. The books just mentioned are for the beginners in the nursery. The older Olympians will rejoice in *Natural History for Young People*, by the Rev. Theodore Wood, most liberally illustrated, and excellently adapted in style for its public.—We doubt the wisdom of anticipating a great treat of later years by retelling the story of *Child Characters from Dickens*, as Mr. L. L. Weedon has done. He has, however, taken pains, and his illustrator, Mr. A. A. Dixon, has distributed good looks to everybody with the facility of a fairy of the olden time at a christening.

MR. DAVID NUTT.

Mr. Ubbledejub and the House Fairies, by A. Thorburn, illustrations by May Faraday and Dorothy Newill, is as beautifully fantastic as any fairy tale should be, and, moreover, all the little mortals who read of them will learn many good things about these fairies. Mr. Ubbledejub is "just the size of a teaspoon." His work is to make the children of the house good, and whenever one of them is naughty he cries, so that some days his poor little eyes are "quite red and sore." His bride the Princess Sleepwell has a gown made of rose-leaves; and in the cold weather "the fairies

who live in warm countries over the sea, where roses always bloom, sent her fresh rose-leaves every day." These and such like are the touches which make fairyland so real a world to little folk. — *Rhymes of Real Children*, by Betty Sage, with pictures by Jessie Willcox Smith, seems to have been inspired under the shadow of the stars and stripes. The originals may be real, but their relationship to us is as to cousins many times removed.

MR. ALSTON RIVERS.

The Stoat Pack, by G. G. Desmond, is the life story of one of the less familiar studies in natural history, graphically told by a wise and helpful teacher. As Mr. Desmond himself suggests, very tender-hearted little people will feel too sensitively the tragedy of this true presentment of life in the field; but for them, doubtless, a little judicious skipping or paraphrasing may be arranged. The pictures by Ivor J. Symes admirably illustrate the narrative.

MESSRS. SMITH & ELDER.

In the charming story called *The Sparrow with One White Feather*, by Lady Ridley, a real child goes into a real fairyland, and sees and hears just what one who remembered the pathos and power that went to the making of 'The Story of Aline' hoped that she might be permitted to see and hear, even without the touch of fairy ointment on her eyes or the intrusion of fairy earwigs into her ears. Any one who reads this book will know why babies laugh without reason and cry without cause, how the magpie got a bad name, how and where fairies sleep and eat and take baths, and how it happens that happy thoughts come into perplexed minds, and pleasant dreams visit people's pillows.

MESSRS. WARD & LOCK.

When in doubt, choose an annual, is safe advice to those who are harassed by the wealth of possible selection put before them. *The Wonder Book* contains something of everything in stories, pictures, and verse, and makes excellent reading for young people.

MESSRS. WARNE & CO.

Only those who spend a great number of hours in the nursery will fully appreciate the easy suggestiveness and delightful humour of the illustrations by Leslie Brooke which adorn *The Golden Goose*, *The Three Bears*, *Three Little Pigs*, and *Tom Thumb*, infant classics which never fail to hold the attention of the restless denizens of the nursery.

OUR LIBRARY TABLE.

The Words of Garrison: a Centennial Selection (1805-1905) of Characteristic Sentiments from the Writings of William Lloyd Garrison. With a Biographical Sketch, List of Portraits, Bibliography, and Chronology. (Houghton, Mifflin & Co.)—Many of our cousins in the United States will to-morrow be observing the centenary of one of the greatest, if not the greatest, of their philanthropists, and in England there should be no lack of sharers in the honour paid to the pioneer of the anti-slavery movement and a leader in other good causes. Born on December 10th, 1805, Garrison had been apprenticed first to a shoemaker, and then to a cabinet-maker, before becoming a printer's boy in his eleventh year; and he made such good use of his opportunities that he began to contribute to his master's newspaper before he was seventeen, and was editor and publisher of a newspaper of his own before he was twenty-one. In that weekly, rightly named *The Free Press*, with the young Whittier for one of his writers, he started on the bold denunciation of slavery which, leading to his imprisonment for libel and other troubles in which he gloried, had fuller expression in *The Liberator*, begun on January 1st, 1831, "without a subscriber, in borrowed type, and set by the partners (in hours snatched from journeymen's work, by which they got their living), worked off on the press and mailed by them." *The Liberator* had for its motto, "Our Country is the World, Our Countrymen are Mankind," and Garrison's connexion lasted till he discontinued the paper at the end of 1865, having a few months earlier resigned the presidentship of the American Anti-Slavery Society, of which he had been the life and soul for more than twenty years. He lived twelve years longer to watch and help forward the development of his splendid work, and, perhaps without clear apprehension of the difficulties yet to be overcome, he had ample reason for thankfulness at the measure of success he had achieved.

About half of the timely little volume before us contains an interesting biographical summary, compiled from the monumental memoir of Garrison which was issued by his children some twenty years ago. In the opening section of the book we have a still more interesting selection of brief extracts from his own writings in prose and verse, so classified as to show how consistent and catholic was his resistance to all forms of oppression. "I know," he said, "that the cause of my enslaved countrymen cannot possibly be injured by my advocacy of the rights of all men, or by my opposition to all tyranny." So zealous was he in his upholding of "women's rights," on the ground that "the natural rights of one human being are those of every other, in all cases equally sacred and inalienable,.....neither affected by, nor dependent upon, sex or condition," that in 1840, when he came to London to attend a World's Anti-Slavery Convention, he refused to take his seat as a delegate on finding that women delegates were excluded. In his doctrine of non-resistance he went beyond the views of most Quakers, and as far as Tolstoy has since done. He avowed himself "a radical free trader, even to the extent of desiring the abolition of all custom-houses, as now constituted, throughout the world." He held with Herbert Spencer that "he is the most sagacious political economist who contends for the highest justice, the most far-reaching equality, a close adherence to natural laws, and the removal of all those restrictions which foster national pride and selfishness." His life was a noble example of pacific heroism, and for such apostleship as his there is no less need in our day than there was in the last century.

The difficulty about describing India, whether by literary or pictorial means, is that the cold-weather impression and the hot-weather impression differ too much to make either completely representative. India in the cold weather is such a paradise that travellers naturally prefer that season. The India of the hot weather is terrible, but more real. Travel is all but impossible; the jotting down of a diary torture; the views of scenery distorted by dust or by steaming reek. The best Indian photographs give a more truthful impression of the beauties of the peninsula than do any pictures. The shadows, for example, which come out grandly in photographs, are hardly ever sufficiently indicated in painting or in water-colour. The great Russian series of pictures of the tour in India of our present King was less unsatisfactory than were Val. Prinsep's efforts. But the difficulties in the artist's way are, we admit, stupendous. Mr. Hallam Murray, in *The High-Road of Empire* (John Murray), has produced a volume of which the text is perfect for its easy common sense. The black-and-white drawings are excellent. The colour plates are sometimes very good, but the majority of them are not like India. In other words, they are like India in certain aspects only of the cold weather prevalent during the shorter period of the year. There would be no difficulty in colonizing the India of most of Mr. Hallam Murray's coloured sketches. The sole wonder to the untravelled reader lies in the fact that the Aryan Hindu conquerors should have turned half black in such a climate. Agra is, on the whole, the finest thing in the world. Its red walls are better than the medieval fortifications which remain to us at Constantinople or at Rome, built as these are on the classical foundations. Moscow, compared with Agra, is a mere stucco vulgar imitation. Mr. Hallam Murray pleases us better with his distant Taj than with his Agra walls. The view called 'The Taj from the Fort' exactly recalls the most perfect aspect of the most perfect of all buildings. Perhaps we should say the most perfect aspect except one—that view from the garden during the full moon which defies pictorial representation.

In a few of the coloured drawings there is some trace of the atmosphere of the hot weather. Mr. Hallam Murray states that he was at Fatehpur Sikri in the "delightful..... cloudless days.....of an Indian winter." But his sunset view of the mosque is truly Indian in its light. The tolerance and the wide cultivation of its founder, Akbar, are recalled in the inscription on the Gate of Victory giving entrance to the mosque: "Said Jesus, on whom be peace, The world is a bridge; pass!" Even in the cold weather, sunrise and sunset in India, as in Egypt and in Provence, have in them something which recalls the hot weather of the past and of the future. Mr. Hallam Murray's coloured drawing of the great mosque at Delhi is also a sunset view, and also characteristically Indian. Some of the hill drawings are true to Indian nature; and when Mr. Hallam Murray comes to Ceylon we can accord unrestricted praise to the view called 'A Tropical Shower.' The charm of Kandy is one that cannot be realized except at the place itself; but the pen-and-ink drawing of the lake comes nearer to it, from being in black and white, than do the coloured illustrations. The Golden Tank Temple at Amritsar has never been brought before the distant reader. It is almost impossible to say in what exactly consists its power of striking the imagination and remaining imperishably in the memory of all who see it. If every one has failed and every one will fail, it has been and will be with the feeling that success is not possible. As Mr. Hallam Murray writes: "Nothing.....can compare with the Golden Temple.....and it is as impossible to describe its.....precincts, as it would be to describe a beautiful dream."

Mr. Carruthers Gould publishes, through Mr. Edward Arnold, *Political Caricatures, 1905*, which are so familiar, by means of *The Westminster Gazette* and the many repetitions in the papers which reproduce the cartoons eagerly sought for in that periodical, that it is unnecessary to attempt to describe them. Some of the drawings in the volume are, we think, new, but the great majority are well-known friends. It is hard to pick out a favourite. The typically English, but idyllic scene which represents Mr. Jesse Collings as a "clod" reposing with his back against a tree, a ploughed field behind him, and whistling through his pipe, like the rustic who has the stage to himself in the opening of a famous act in a Wagner opera, pleases us the most. Mr. Jesse Collings had written to a Nottinghamshire farmer to point out that Protection cannot possibly be of any use to the farmer under a landlord system: "My remedy is.....to turn the tenant farmer into the yeoman owner of his farm." The drawing is called 'Back to the Land and the Old Time.' "Back to the land," however, is the

phrase of the Russian revolutionary reformer; and "the Old Time" is perhaps older than that of F. C. G.'s figure. Mr. Jesse Collings is drawn in the smock of the labourer rather than in the costume of the yeoman. It is not more than thirty years since in large parts of England the labourer had his weekday smock and his embroidered smock for Sunday, the latter worn, however, as a rule, not with the low felt-hat here found on the head of Mr. Jesse Collings, but with a top-hat of the tallest and most uncompromising type. The total disappearance of the embroidered and almost complete disappearance of the plain smock constitute thus one of the most painful cases of loss of the picturesque.

The Children of Good Fortune, by C. H. Henderson (Constable & Co.), is described on the title-page as an essay in morals. It forms one of a class far more common in America than in this country, in which an appeal is made, along a certain level of thought, to a public more intelligent than profound. There would appear to be a large public created by the new education who, without being specialists in ethics, theology, metaphysic, or charitable effort, are prepared to welcome a serious attempt to discuss the practical business of life from a serious standpoint of social interest. The problem here is the problem of good in human affairs, sharply divided into two sections—the subjective ideal of the desirable being classified as the idea of "good fortune," the objective ideal as the idea of social welfare:—

"In a very few average individuals the two ideals may pretty nearly coincide, but in the majority there is some divergence. Society has always been intolerant of any wide divergence, and quite as intolerant of a divergence above her own standard as below it."

The individual, with his personal conceptions of right and wrong, the object of life, the meaning of success, is first analyzed. The author's tone is strenuous, a little austere, demanding effort and the bracing of the accepted ideal. He has but scanty toleration for "those hundreds of thousands of commonplace, immoral people who lose the best of life by accepting the least that is even tolerable." The second half of the volume discusses the social welfare, without an ideal of which "individual good fortune becomes a curiously fantastic thing." With the columns of a normal daily newspaper as text, in much the same fashion as Bellamy in 'Looking Backward' or Ruskin in the 'Fors,' the author preaches his judgment of the raw disorder of to-day's civilization, witnessed by the evidence of murders, commercial dishonesty, social upheaval. He examines four essential social institutions — the family, the school, the Church, the State: institutions, as he terms them, of affection, opportunity, duty, right; and, with mingled criticism of their present usefulness and exhortation concerning their future development, pleads for "the one moral view of an institution" as a "means which must always serve and never obstruct the true end, individual good fortune." The final appeal identifies religion with an enlightened morality, and pleads for its identification with life to make it "individual and human."

Red Fox, by C. G. D. Roberts (Duckworth & Co.), is the best book of an interesting series from the pen of the same writer. It is the story of the adventurous career of a certain red fox in the wilds of the far North-West, and it has the fascination of a real jungle story, without owing any apparent debt to Mr. Kipling. The last decade has certainly seen a great advance, not alone in the popularity, but also in the quality, of fiction dealing with animal life. We have reached a stage—remote indeed from the day of "Black Beauty"—at which the psychology of such life is treated with the same close and subtle analysis as is applied to human character. To be sure, the writer draws a good deal upon our common knowledge of human motives in setting forth the individuality of his animal characters. But, as we are all animals, however great the gap between beast and man, this method is justifiable, since it is based upon really intimate first-hand observation of the ways of wild nature. Mr. Charles L. Bull, whose drawings illustrate this book, is equally expert. There are scores of touches of real nature—touches only possible as the result of close and patient watching—in the story of Red Fox's puppyhood, and in such incidents as his captivity and hunting methods.

Madame, will You Walk? By Beth Ellis. (Blackwood & Sons.)—This quaint title, taken from an old song, fits this volume very well. It contains a batch of eighteenth-century stories partaking of the air of light comedy. In all the same set of gallants and ladies figure more or less, and the atmosphere is redolent of pretty intrigue and daring wagers as to the course of true love, or *bonnes fortunes*. The book is mostly, in fact, a light-handed, deftly conducted duel between the sexes, and forms a pleasant enough contrast to the argumentative attitude of the modern lover.

The Web of the Past. By the Countess of Cromartie. (Eveleigh Nash.) — The Celtic renaissance is, we presume, responsible for these pages. It must be admitted that, as in the author's previous work 'The End of the Song,' both style and subject-matter seem of their very nature to arouse an unholy spirit of parody. Carping critics may also object that the manners and the dialect (rather an ungrammatical one) of the despised twentieth century are sometimes attributed to knights and ladies of virtually prehistoric times. But all this does not alter the fact that we have read the stories with interest, and that the characters do, rather to our surprise, command our sympathies.

A Child's Garden of Verses has appeared with illustrations by Jessie Willcox Smith (Longmans), beautifully printed on a large page. Stevenson's delicate cameos of childhood have found a most apt interpreter, who has a style of her own with a curious charm. The pictures include full-page designs in colour as well as black-and-white sketches, and the illustrator has, we should say, gone to living models for her designs. We have looked forward to her work with pleasure since we noted it last year in a charming story by Frances Hodgson Burnett.

MESSRS. KEGAN PAUL send us *Proverbs in Porcelain, with Au Revoir*, by Austin Dobson, illustrated by Bernard Partridge. We are always delighted to see new issues of the author's gracious and delicate work. Our private edition of 'Old-World Idylls,' which contains the 'Proverbs,' is the tenth, and we doubt not that the present volume will lie on many a table this Christmas. Mr. Partridge is a little scratchy and indefinite in his detail, but on the whole an effective illustrator.

WE do not think that Mrs. Katharine Burrill is entitled as yet to rank prominently as a stylist, but her essays, *Shell Gatherers* (Dent), are likely to please a great many people, being bright, and full of humour and literary allusion. The author plays prettily with some of the characters of Dickens and Thackeray. She shows good sense, and the morals she inculcates are sound; but are they not common property by this time? These pages are pleasant talk, good journalism, but they lack the distinction and the original outlook which endow essays with permanent value.

MR. GEORGE G. HARRAP sends us *Golden Wings*, by William Morris, in a series entitled "The King's Treasury of Literary Masterpieces." It is a most luxurious and charming form of booklet, bound in green leather and beautifully printed.

Love in the Eighteenth Century. Translated from Edmond et Jules de Goncourt. (A. L. Humphreys.)—This translation of what is perhaps the most brilliant chapter in 'La Femme au XVIII. Siècle' seems to us curiously unequal. The task of rendering into idiomatic English the carefully elaborated periods of the brothers Goncourt is attended by enormous difficulties, and in surmounting these the translator gives frequent evidence both of industry and originality. On the other hand, we are often jarred, sometimes by slipshod colloquialisms out of place in dealing with a literary classic, and sometimes by grave misrepresentations of the original meaning. A little more care would have made this a really useful work of its kind.

WE reviewed *More Queer Things about Japan*, by Douglas Sladen and Norma Lorimer (Treherne), at length in April last, and have only to note, in reference to the new "Peace Edition," that a sketch of the Russo-Japanese war and a digest of the Peace terms have been added to the book.

LEVER'S *Jack Hinton*, with illustrations by H. K. Browne, published by Messrs. Macmillan, is one of the most attractive new editions of the day. There is gaiety and sparkle about Lever which is delightfully Irish, and puts him among the authors we can always turn to with pleasure.

WE have just received the first number of *The Layman*, which is described as "a newspaper for the laity of the Church of England." We wish the paper, which makes a good start, all success, for it is high time that the large class for which it is meant had a special organ.

MESSRS. DE LA RUE send us a packet of excellent Calendars and Diaries, which show first-rate printing and arrangement. Some of the leather Diaries are models of convenience and elegance. The Calendars in red and black, which show a month at a time, are always a special feature of Messrs. De La Rue's output, and this year they give a few days of the next month in smaller figures—a capital idea.

WE have on our table *A History of English Philanthropy*, by B. K. Gray (King), — *Boys and their Management in School*, by H. B. Smith (Longman),—*Persian Poets*, Nos. 1 and 2, translated by FitzGerald (Foulis),—*Smailholm Tower*, by G. W. Hick (Glasgow, Hodge), —*The Life of the Ages*, by Florence Verinder (Elliot Stock),—*Plays and Poems*, by P. Hookham (Kegan Paul),—*Sayings of Tolstoy* (Fifield), —*The Year's Horoscope*, by Ethel Wheeler (Fifield),—*Flowers from Upland and Valley*, by Elizabeth Gibson (Fifield),—*Clyde Songs*, by J. J. B. (Scots Pictorial Publishing Company),—*Footpaths through the Veld*, by F. C. Slater (Blackwood),—*The City*, by A. Upson (Macmillan),—*Godfrey's Quest*, by Lady Lindsay (Kegan Paul),—*Poems and Plays*, by C. W. Wynne (Kegan Paul),—*The Cloud Kingdom*, by I. H. Wallis (Lane),—*Bacon's Essays*, edited by E. H. Blakeney (Blackie),—*Outlines of English Literature from* A.D. *600 to* A.D. *1905*, by H. E. Evans (Relfe Brothers), —*English Composition Simplified*, by J. Logan (Murby),—*The Companionship of Books*, by F. R. Marvin (Putnam),—*How to Speak Effectively*, by C. Seymour (Routledge),—*Singing and Voice Production*, by Annie E. White (Murby),—*Stories from Wagner*, by J. W. McSpadden (Harrap),—*The Story of Organ Music*, by C. F. Abdy Williams (Walter Scott),—*Great Composers*, by Anna, Comtesse de Brémont (Hutchinson), — *Imperialism*, by J. A. Hobson (Constable),—*The Land We Love*, by Vivian Grey (Oxford, Alden), — *East Africa and Uganda*,

by J. C. Wason (F. Griffiths), — *Through Corsica with a Camera*, by Margaret d'Este (Putnam),—*Handbook of Commercial Law*, by F. G. Neave (Effingham Wilson),—*The Philosophy of Proof*, by J. R. Gulson (Routledge),—*Supplementary Chapter to Norway and the Union with Sweden*, by Fridtjof Nansen (Macmillan), — *Through Brittany in a Motor Car*, by H. R. Maxsted (Treherne),—*Book-keeping and Accounts*, by G. Johnson (Effingham Wilson),—*The Scandinavian Question*, by W. B. Steveni (Fisher Unwin), — *Old France in the New World*, by J. Douglas (Burrows Brothers),—*Famous British Admirals*, by A. Lee (Melrose), — *Nelsonian Reminiscences*, by G. S. Parsons, edited by W. H. Long (Gibbings),—*Savouries Simplified* and *Still-Room Cookery*, by Mrs. C. S. Peel (Constable), —*What Foods Feed Us*, by E. Miles (Newnes), —*Health Building*, by J. Ralph (Fowler),—*Woman's Kingdom*, by Mrs. W. Wallace Constable),—*Surgical Nursing*, by R. Howard (Arnold),—*King Lear* and *King John*, retold by Alice S. Hoffman (Dent),—*A Fishing Catechism*, by R. F. Meysey-Thompson (Arnold),—*The Showman*, by the Author of 'The Views of Christopher' (Hurst & Blackett), —*The Heritage of the Free*, by D. Lyall (Hodder & Stoughton),—*A Lame Dog's Diary*, by S. Macnaughtan (Heinemann), — *The Pilot at Swan Creek*, by R. Connor (Hodder & Stoughton), — *Dan the Dollar*, by S. F. Bullock (Dublin, Maunsel), — *A Case of Dementia*, by Lucy Fenwick (Burleigh), — *Princess Joyce*, by K. Snowden (Pitman), — and *Cloth versus Silk*, by Dorothea Conyers (Hutchinson).

Among Reprints and New Editions we have *Ships and Shipping*, by R. Dowling (De La More Press), — *A Glossary of Botanic Terms*, by B. D. Jackson (Duckworth), — *Letters from the Dead to the Dead*, by O. Lector (Quaritch),—*John Wilhelm Rowntree: Essays and Addresses*, edited by J. Rowntree (Headley Brothers), — *Our Criminal Justice*, by H. Crompton (Fisher Unwin),—*Lectures on Heroes*, by T. Carlyle (Allenson),—*The Guide to South Africa*, edited by A. S. Brown and G. G. Brown (Sampson Low), — and *Cecilia*, by F. M. Crawford (Macmillan).

NOTES FROM CAMBRIDGE.

It is not easy to write a Cambridge newsletter at the close of an uneventful term. The epithet really means a term during which people have been hard at work; for the "events" which make an academic term interesting generally encourage a *strenua inertia*, duties being neglected in order that time may be given to promoting a cause or a reform, or, if need be, a job. Personally I am always grateful to the Council of the Senate for providing some sport of the kind; for to appreciate a university it is necessary to follow in the steps of the merry monarch who used to delight in "sauntering." Of course, the education of the dull youth, the craft from which we get our modest pittance, suffers; but lives there a man with soul so dead as to allow mere duty to interfere with a Cause? Having no Cause to advocate this term, many of us have had to be content with doing our duty; and a good conscience combined with a sense of boredom is the result.

But while the mere Don has abstained from excitement, our young friends the undergraduates have not been so self-restrained. It is a remarkable fact that I do not remember a single "fly-sheet" to have appeared this term; and the absence of these stormy petrels is a sure sign that Dondom is at peace. But youthful energy is not expended in carefully worded satire; and when persons *in statu pupillari* lose their heads, something is generally broken. It is to be regretted that there has been an epidemic of rowdyism this term, culminating in the disturbance on November 9th, the King's

birthday, and also the day on which the University team acquitted itself rather more creditably than most football clubs against the formidable New Zealanders. The University journals have rightly protested against the foolish and rather contemptible conduct of the mixed mob of undergraduates and "lewd fellows of the baser sort," who did some damage to property, and seriously injured a policeman, in their endeavours to construct a bonfire. It is to the credit of the University that the leading athletes organized a subscription to pay for the damage done; but such scenes are unworthy of our age. It is true that the riots, or, as they are now called, "rags," are mild affairs in comparison with those of earlier days; but the folly displayed in them gives occasion for the enemy to blaspheme, and ought not to be tolerated. The difficulty is how to punish offenders. In the first place, it is almost invariably the least guilty who are caught; and in the second, imprisonment inflicts too serious a stigma for any magistrate to resort to such a remedy. It is almost a pity that the Vice-Chancellor has not the power to sentence an undergraduate to a durance which would carry with it no permanent degradation, and there are not wanting among us men of real eminence whose lectures, delivered with some frequency to the unhappy captives, would make them long for the robuster toil of the revolving wheel or the obdurate oakum.

The Heads of Houses have this term chosen a professor who would be totally unfit for the employment of a penal lecturer. The new occupant of the Norrisian Chair is a lively speaker as well as an original thinker. We understand that the field was strong, and that the great and wide learning of one of the rejected candidates, combined with his amazing versatility, would have given much-needed support to the professoriate. But the Heads felt—and I am bound to add, justly—that the Theological School required strengthening by the addition of a professor whose studies in criticism had gained a European reputation; and the selection of Mr. Burkitt is generally approved. That a layman should have been chosen without a protest is a significant sign of the times.

No one can say that the bishops neglect the universities in these days; and Cambridge men have been given opportunities of hearing exhortations from some of the most prominent ornaments of the bench. The fervour of London, the eloquence of Ripon, and the scholarly zeal of Birmingham have been equally successful in attracting large and interested audiences; the C.I.C.C.U. (I have never discovered what these mystic letters mean) has been most active; and Father Bull held a successful mission and has been in personal contact with over 700 men. Some of the seniors are beginning to wonder if so much spiritual excitement is good for sound learning and religious education; and it is greatly to be hoped that now we have a Bishop of Ely so much in touch with Cambridge life as Dr. Chase, his lordship's advice in these matters may frequently be sought and followed.

The agitation for the abolition of compulsory Greek is only dormant. Rumours are afloat that the Syndicate is about to report in favour of granting special degrees to science men, and to dispense with Greek in their case only. But will the History and Law Schools allow this? Their leaders find that for the "weak brother" Greek is just as much a difficulty as for the rising man of science, and on his behalf they claim relief. The friends of the Syndicate see much trouble in store for that unhappy body, whatever is proposed. Perhaps its members may yet regret that it was not allowed to die a natural death last May term.

The General Election does not as yet excite much interest; and the prospects of the candidates for the University are not very often discussed. The illness of Sir Richard Jebb is a cause of regret to everybody; and this has naturally delayed any action on the part of his colleague, Mr. J. F. P. Rawlinson, the Commissary of the University. Sir John Gorst, whom the Conservative party has rejected, will probably fight pluckily, as he has done most of his life, "for his own hand"; and he will have a good deal of support among the residents, who appear to like the sort of independence which makes a politician formidable to his own friends. It is outside Cambridge that his fate will be decided.

Two books have appeared which are attracting some attention. The 'Cambridge Theological Essays' are the product of fourteen more or less known Cambridge divines, whose work is introduced by the Regius Professor of Divinity, and concludes with a sort of benediction by the Master of Trinity. Dr. McTaggart has in *The Cambridge Review* dealt with seven of the essayists in much the same fashion as Fusbos did with Bombastes in the play. Approaching his adversary with the greatest courtesy, he has saluted, and after a few preliminary flourishes run him through, and then proceeded with equal politeness to demolish the next comer. He can be easily imagined standing over the corpse of a rival metaphysician, ready to acknowledge the talents of the defunct, and to raise a monument alike to the merits of the vanquished and the prowess of the victor:

> Here lies Bombastes, strong in wind and limb,
> Who conquered all but Fusbos: Fusbos him.

However, a youthful champion has appeared who may yet give the doctor trouble; and by next term all the slain will arise and be ready for the fray.

The other work is Mr. J. W. Clark's reproductions of Loggan's plates in 'Cantabrigia Illustrata,' and of it there is but one opinion. What a delightful place Cambridge must have been with hardly any town, no trains, no electric cars, peaceful colleges, and not too many undergraduates! It is, however, some consolation that, despite the gloomy predictions of the Philistines that if we refused to surrender Greek culture we should be deserted, more men than ever have entered in 1905. J.

ELIZABETHAN PLAGIARISM.

108A, Lexham Gardens, Kensington, W.

In the October number of *Modern Philology*, a Chicago periodical, I printed in parallel columns the poem by George Chapman entitled 'The Amorous Zodiacke,' which was published in 1595, and the French poem by Gilles Durant entitled 'Le Zodiaque Amoureux,' which was first published in 1587. The presentation of the two poems side by side proved that Chapman's work was a literal translation from the French. I was unable to discover any acknowledgment on Chapman's part of indebtedness to any preceding writer. Chapman's preface to the volume in which 'The Amorous Zodiacke' first appeared seemed to me to claim for his verse the merit of complete originality. I therefore thought myself justified in describing this performance of Chapman as "an unblushing act of piracy."

The publication of this discovery of mine has brought me much interesting correspondence. I am glad to find that importance is attached by scholars to this fruit of my researches, which I lighted upon quite accidentally some time ago. But two or three of my recent correspondents complain with more or less warmth that in applying to Chapman's action such words as "piracy," or even "plagiarism," I employ language that is unjustifiably strong. The argument of these critics runs to the effect that throughout the early periods of European literature the right of authors to borrow literally from foreign contemporaries without specific acknowledgment was generally recognized, and was not held to constitute any offence. I quite agree that the practice was habitual among Elizabethan writers, though the full extent of its operation seems to have hitherto eluded the notice of literary critics and historians. But I am disposed to deny the allegation that the standard of literary ethics in Elizabethan England permitted without reproach the publication, in the avowed guise of an original production, of a literal rendering—not an adaptation—of a poem by a foreign contemporary. The chances of detection seem to have been small, and most of such literal renderings escaped discovery. But, as far as I can learn, the temper of the times exposed to no halting condemnation any known endeavour to mislead the reading public respecting a native poet's indebtedness to a foreign contemporary. It was certainly held to be no sufficient answer, as some of my critics urge to-day, that the foreign poet's work was widely known, and that specific acknowledgment became on that account superfluous.

Puttenham's 'Arte of English Poesie' (1589) is an authentic record of the conditions governing the production of Elizabethan literature. Of one who published without acknowledgment renderings of Ronsard's far-famed and popular verse (which, as a matter of fact, were far from being quite literal), Puttenham wrote thus:—

> "This man deserues to be endited of pety *larceny* for pilfering other mens deuises from them [and conuerting them to his own vse, for in deede as I would wish euery inuentour, which is the very Poet, to receaue the prayses of his inuention, so would I not haue a translatour to be ashamed to be acknowen of his translation."

The word "larceny" is italicized in the original edition. Michael Drayton, in the dedication of his sonnets in 1594, uses language which no less plainly demonstrates that the prevalent habit of literal borrowing was currently held to be discreditable. Drayton charged the literal borrowers with "filching," and declared himself guiltless of any such accusation:—

> Yet these mine owne: I wrong not other men,
> Nor trafique further than thys happy clyme,
> Nor filch from [*Des-*]*Portes*, nor from *Petrarch's* pen,
> A fault too common in thys latter tyme.
> Divine Syr Phillip, I auouch thy writ,
> "I am no Pickpurse of anothers wit."

The point of these lines is no wise blunted by the fact that Drayton was himself suspected of the sin which he here condemned. Edward Guilpin writes apologetically in his 'Skialetheia,' 1598 (ed. Grosart, p. 64, Satyre vi.):—

> Drayton 's condemn'd of some for imitation,
> But others say 'twas the best Poets' fashion.

Again, Daniel, a poet who, despite his great gifts, depended very largely on the literal inspiration of foreign verse, was forcibly rebuked by a discerning contemporary for yielding to a practice which was declared without any qualification to be "base." In the play of 'The Returne from Parnassus' (Part II. Act I. sc. ii.) this warning is addressed to Daniel:—

> Only let him more sparingly make use
> Of others wit, and use his own the more,
> That well may scorn base imitation.

To the same effect runs Sir John Harington's ironical epigram, 1618 (Bk. II. No. 30), headed "Of honest theft. To my good friend Master Samuel Daniel," which concludes thus:—

> Then, fellow-Thiefe, let 's shake together hands,
> Sith both our wares are fiicht from forren lands.
> You 'l spoile the Spaniards, by your writ of Mart:
> And I the Romans rob by wit and Art.

The extravagant character of the denunciation in which some contemporary critics of the plagiarizing habit indulged is well illustrated by another of Harington's epigrams (Bk. II. No. 77), which is headed "Of a censurer of English writers"; it opens thus:—

> That Englishmen haue small or no invention,
> Old *Guillam* saith, and all our works are barren,
> But for the stuffe we get from Authors forren.

It should be borne in mind that the question at issue is not the assimilation of poetic ideas and phraseology by Elizabethan poets, which is an immutable law of literature, and is no more open to censure than any other law of nature. It is literal translation, without acknowledg-

ment, from foreign contemporary poetry with which I have been dealing of late. It is to examples of this method of literary work alone that I have applied terms which my critics judge to be needlessly opprobrious. I think the quotations that I give above will show—and they are far from exhausting my stock—that my terminology is warranted by the example of Elizabethan criticism.

I should like to add that, if I use terms implying some moral censure, it it because I know no others that fit the case. But it is not the moral aspect of the situation, which my researches are revealing to me, that is to my mind the point to be accentuated. I am chiefly impressed by the proofs I am accumulating of the closeness of the relations between Elizabethan literary effort and that of contemporary France and Italy, and of the community of literary taste and feeling, which almost rendered literary Europe at the end of the sixteenth century a single commonwealth of letters.

SIDNEY LEE.

COLERIDGE'S NOM DE GUERRE.

YOUR reviewer in his notice of books on Lamb last week charges me with an "excrescent *p*" in S. T. Coleridge's *nom de guerre*, Silas Tomkyn Comberbacke, as printed in *The Illustrated London News*, April 15th, 1893. He is quite right, but in my edition of 'The Letters of S. T. Coleridge,' 1895, i. 62, I cut off the excrescence and cast it from the "Tompkyn." Nevertheless, I was without excuse at the first, for Prof. Brandl, who first printed the letter of February 20th, 1794, in which the name occurs, though he leaves out the *e* in "Comberbacke" (he spells it "Comberbach"), prints "Tomkyn" correctly, and I had seen the autograph MS.

I cannot, however, admit that the publication of a facsimile of this letter in Lord Coleridge's 'Story of a Devonshire House' solves the entire problem. I have looked at the surname under a magnifying-glass (my own, not your reviewer's), and I must confess that I do not know whether S. T. Coleridge wrote "Comberbache" or "Comberbacke." The rest of the letter is as clear as daylight, but in this one word the repentant dragoon, with kindly foresight, left the penultimate letter of his "assumed name" an open question. It may be a *k*, but I think it is an *h*.

ERNEST HARTLEY COLERIDGE.

THE HISTORY OF KENT COUNTY CRICKET.

6, Middle New Street, E.C., December 5th, 1905.

LORD HARRIS has asked me to assist him in preparing material for an important volume dealing with the history of Kent county cricket, amongst the prominent contributors being Lord Harris himself, the Hon. H. Knatchbull Hugessen, Mr. Frank Marchant, Mr. J. R. Mason, Mr. W. South Norton, and Mr. W. H. Patterson.

As we are anxious to make this work complete in every respect, may I be allowed through your columns to express the hope that, should any of your readers possess any interesting records, either in the form of old scores, advertisements of matches, prints, or original drawings of prominent cricketers identified with Kent, old engravings of various important cricket grounds in the county, &c., they would very kindly send me particulars to the above address, and also say whether they would be willing to lend them to us with a view to their possible reproduction?

I need hardly say that the greatest care will be taken of whatever may be sent, and, should we be able to use anything, an acknowledgment of the lender's courtesy will appear in the work.

W. HUGH SPOTTISWOODE.

SALES.

MESSRS. PUTTICK & SIMPSON sold on Monday and Tuesday a selection from the library of the late Francis Fry and the library of a collector. The following were the chief prices: Biblia Latina, Basil., 1475, 25*l.*; Biblia Latina, Venet., 1475, 11*l.* 10*s.*; another, Nuremberg, 1478, 10*l.* 5*s.*; another, Strasburg, 1480, 28*l.*; Biblia Germanica, 1483, 32*l.* 10*s.*; Matthew Bible, 1549, 12*l.* 12*s.*; Coverdale Bible, 1550, 15*l.*; Biblia Polonica, 1561, 11*l.* 2*s.* 6*d.*; first Welsh Bible, 1588, 23*l.* 5*s.* Horæ ad Usum Sarum, Paris, 1520 (very imperfect), 20*l.* Paradise Lost, sixth title-page, 1668, 17*l.* 10*s.*; Paradise Lost, seventh title-page, 1669, 13*l.* 10*s.*; Paradise Regained, first edition, 15*l.* 15*s.* Plinii Historia Naturalis, 1470, 11*l.* 2*s.* 6*d.* Carey's Life in Paris, large paper, in the original parts, 46*l.* 10*s.* Sketches by Boz, three series, first editions, 20*l.* Freer's Works, 19 vols., first editions, 20*l.* 5*s.* Lever's Works, 37 vols., 13*l.* 10*s.* Pope, Miscellaneous Poems, 1712, 10*l.* 5*s.* Stevenson's Works and Life, 30 vols., 29*l.* 10*s.* Surtees, Jorrocks's Jaunts and Jollities, 1843, 31*l.* 10*s.* Romanoff, Mémoires sur les Lépidoptères, 11*l.* 10*s.* Ben Jonson's Works, 2 vols., 1616-40 (no portrait), 21*l.* The total for the two days was 1,246*l.*

The valuable library of 4,000 books formed by the late Sir Joseph Hawley at Leybourne Grange was sold last week by Messrs. Hampton & Sons, and the following prices were obtained: Ashmole's Berkshire, 9*l.* 10*s.* Dibdin's Bibliotheca Spenceriana, 12*l.* 15*s.* Eyton's Shropshire, 29*l.* 10*s.* Britton's Architectural and Cathedral Antiquities, 16*l.* 16*s.* Holinshed's Chronicles of England, 11*l.* 16*s.* Berry's County Genealogies, 12*l.* 12*s.* Buck's Castles and Abbeys, &c., 25*l.* 4*s.* Dugdale's Warwickshire, 11*l.*; Monasticon Anglicanum, 14*l.* 3*s.* Hasted's Kent, 27*l.* 6*s.* Second Fruites of Florie, 15*l.* 15*s.* Froissart's Chronicles, 13*l.* 2*s.* Grose's Antiquities, 11*l.* Hoare's Wiltshire, 33*l.* 12*s.* Manning and Bray's Surrey, 13*l.* 2*s.* Lipscomb's Buckingham, 14*l.* 14*s.* Peter Martyr's Decades of the Newe Worlde of West India, 44*l.* Strutt's Works, 21*l.* History of Devonshire, 10*l.* 10*s.* Prince's Worthies of Devon, 50*l.* Shaw's Staffordshire, 24*l.* 13*s.* Smith's Generall Historie of Virginia, 127*l.* Surtees's Durham, 17*l.* 6*s.*

Literary Gossip.

MR. MURRAY has been entrusted with the publication of the Life of the late Duke of Argyll which has been edited by the Dowager Duchess. The first part consists of a full and carefully prepared autobiography. In this are recorded the Duke's early years: his parentage and childhood, his surroundings and studies, especially in science and natural history. Succeeding to the title in 1847, he at once began to take an active part in politics, and in 1853 was admitted to Lord Aberdeen's Cabinet as Lord Privy Seal. The record of what passed in the Cabinet both before and during the Crimean War and the Indian Mutiny will afford much new light on these events. With the Mutiny the autobiography, which was written from 1897 to 1900, ends, and the remainder of the Life is derived from the Duke's diaries and correspondence.

MR. FISHER UNWIN will publish early next year a work by Mr. Frederic C. Howe, entitled 'The City, the Hope of Democracy.' It strenuously advocates municipal ownership, and deals with such problems as tenements, taxation, reformatories, and "The City Beautiful." It is based upon the author's personal administrative experience, and a study of the conditions prevailing in the large cities of Great Britain and the United States.

'A HISTORY OF THE FAMILY OF CAIRNES OR CAIRNS,' by Mr. Henry Cairnes Lawlor, is in preparation, and will be published by Mr. Elliot Stock shortly. It covers a period beginning with 1300 and coming down to the present time. The work will contain many important genealogical tables, portraits, ancient charters, seals, and illustrations of localities, and will be published by subscription.

NEXT week's number will contain our 'Notes from Oxford,' giving a record of the term's events.

WE are sorry to hear of the death on Sunday last, at his home at Cambridge, Mass., of Mr. John Bartlett, the compiler of 'Familiar Quotations,' probably the most popular book of its kind in existence. Mr. Bartlett's compilation was first published nearly forty years ago. The earliest English issue which we have seen was issued by Messrs. Routledge in 1869, and a thoroughly revised and greatly augmented edition was issued a few years since. Mr. Bartlett also compiled a concordance to Shakespeare's dramatic works and poems. He was eighty-five at the time of his death, and was descended from Robert Bartlett, who landed at Plymouth, Mass., from England in 1632.

THE case this week concerning letters of Lamb between Messrs. Macmillan and Messrs. Smith & Elder on the one hand, and Mr. Dent on the other, is rather complicated, but the decision seems to declare that the copyright in letters published after the death of their author belongs in no way to the author's legal personal representatives, but solely to the owners for the time being of the actual MSS. This judgment seems to us surprising, and we hope that, as is likely, the matter may be argued in a higher court.

A PROVINCIAL journal has been publishing a "children's page," purporting to be conducted by "Rita." This is, of course, the familiar pen-name of Mrs. W. Desmond Humphreys, who was not the author of the page in question, and objected to the use of her name by another writer. The solicitors of the Society of Authors have secured the withdrawal of this use, and *The Author* for December publishes counsel's opinion that Mrs. Humphreys could restrain another writer from using her pen-name. The opinion mentions two American decisions at law that Mr. Clemens was entitled to prevent publication of matter purporting to be by Mark Twain which he did not write. A "reasonable probability of deception," it is further pointed out, has to be shown in cases of trade names, which literary cases would naturally follow. So far as we know, the invention of the word "Rita" is due to Mrs. Humphreys. The right to monopolize initials or a single letter, such as "Q," would, we think, be more difficult to sustain.

THE volume of *Proceedings* recently issued by Mr. Murray for the Classical Association shows that it has already done good work. The annual meeting of this body will be held at King's College, London, on Friday and Saturday, January 5th and 6th, including a conversazione.

MR. H. OELSNER, Ph.D., has been appointed to the newly created Taylorian Lectureship in Romance, Philology, and Old French, in the University of Oxford. Dr. G. Fiedler, Professor of German in the University of Birmingham, has been elected to a similar post in German Philology.

Dr. J. H. Dickinson has translated from the Russian a new work on the battle of the Sea of Japan by Capt. Klado, Admiral Rozjestvensky, and many other officers who took part in the naval engagement. It will be published shortly by Messrs. Hodder & Stoughton, and will contain more than fifty original illustrations.

The *Journal of the African Society* for January will include an article by M. Émile Baillaud, of the French Colonial Office, on 'The Commercial Development of West Africa,' which is an English version of the lecture to be delivered by him at the United Service Institution next Monday. M. Baillaud has studied the conditions of agriculture in Senegambia, French Guinea, and the Western Soudan, and has recently spent some time, for the same purpose, in the Protectorate of Lower Nigeria. Another item in the January number of the *Journal* is an abridged translation of a very extensive ethnographical study by Dr. Johannes Weissenborn, 'Tierkult in Afrika.'

As we have many notices of seasonable books still to appear, we shall next week give four extra pages. The advertisement space has been allowed hitherto to encroach on the editorial, so that the latter has been sometimes limited to fifty-three columns. In future the paper, apart from advertisements, will occupy at least six columns more than the amount just mentioned.

The latest Report of the National Library of Ireland gives a remarkable account of the progress of an institution which is doing splendidly successful work in spite of insufficient endowment and accommodation. The daily attendance of readers reaches an average of 677, and the total for the year is 198,274. The great and steady increase in the number of readers, which puts to shame the records of some of the best-equipped English libraries, has for years past rendered the present Reading-Room totally inadequate. In 1902 the Trustees (under the chairmanship of Prof. Dowden) were already urging its enlargement, and at that time the daily attendance was less than it is now by an average of 159. The very moderate requests made year by year by the Trustees might with advantage to the library meet with more prompt response from the Treasury. The statistics of the evening attendance of men form an interesting feature of the Report. From 6 to 10 P.M. the daily average is over 176: the British Museum Reading-Room cannot obtain a sufficient number of readers after 7 P.M. to make it worth while to keep open.

The Athenæum has lost a constant reader in the dowager Mrs. Dundas of Carronhall, in Stirlingshire, who died recently at an advanced age. Born Margaret Moir, she used to say that she had taken it ever since she was sixteen (she was an heiress), and she hoped that when she died it would have a notice of her. Her health was so broken down for the last two or three years, partly owing to her insisting on trying one of the new systems for curing rheumatism left by influenza, that she may not have been able to keep up with it to the last. Mrs. Dundas was a most agreeable and cultivated woman. Her husband, Major Joseph Dundas, who died many years ago, was a well-known member of the Scottish Society of Antiquaries, and probably her artistic and antiquarian tastes conduced to his; and also the discovery on his property of the remains of a large drystone underground house, which attracted much attention at the time, and, occurring in a fully inhabited Lowland district, gave an impulse to investigation of similar remains.

Major Butterworth writes:—

"Will you permit me to point out a slip made by the writer of a paragraph in 'Literary Gossip' in connexion with Sotheby's sale? He states that the lot of which 'Hercules Pacificatus' is the principal item contains three letters written by Lamb. Two are by the latter, but the third is from Elliston to Lamb, in answer, apparently, to the request that Elliston should produce a farce — probably 'The Pawnbroker's Daughter'—at the Surrey Theatre."

More than one daily paper is speaking, we notice, of the works of Socrates. We shall be glad to see them, but thought that they did not exist, because, as a flippant humorist explained, Xanthippe did.

Instead of describing Thiers's residence in the Place St. Georges, as we did last week, as having been "bequeathed" by the historian's sister-in-law, Mlle. Dosne, we should have said "given," as Mlle. Dosne is, we are glad to know, still living, and is to receive the thanks of the Institut from the lips of MM. Édouard Detaille and Georges Picot. Not only is the historic house to become the property of the Institut, but also the furniture, pictures, books, works of art, &c., which it at present contains. In addition to all these things, an income of 45,000 francs goes with the gift, to defray the cost of maintenance, and salaries of librarians and other officers.

Dr. A. Schroeter, the librarian of the Royal Library in Berlin, whose death in his fifty-fifth year is announced, was well known both as an original writer and as a translator of the best English authors. Among his works are several novels and dramas.

SCIENCE

LOGIC AND MATHEMATICS.

A Primer of Logic. By E. E. Constance Jones, Principal of Girton College, Cambridge. (John Murray.)—We have no hesitation in recommending this handy little manual to students preparing for the ordinary examinations in elementary logic. They will find in it nearly all they need for satisfying the conservative examiners of the present day. Miss Jones's mind has evidently undergone the orthodox kind of training. On all fundamental questions in logic her views coincide with those held by the majority of living authorities, and she generally expresses those views with laudable clearness. Having said this much in favour of her work, we feel ourselves more at liberty to point out some serious defects, less in this little book itself than in the traditional system of logic of which it is the outcome.

However much advocates of conflicting schemes of education may differ upon other matters, there is one point upon which they are unanimous, namely, that, next to the training of moral character, the great object of education should be the cultivation of the intellect—of the power of reasoning. For this some recommend the study of the classics; others, more utilitarian, press the claims of modern languages; many give the preference to mathematics; while not a few would give the palm to natural science. But—and this is really curious—no one appears to have a word to say in behalf of logic, though it is the one and only science expressly constructed to secure the object aimed at. Logic, indeed, occupies the attention of a few students at our universities, but as a rival to classics or mathematics or any other subject in ordinary school instruction it finds no advocates. Why is this? One has only to open any elementary work on logic, such as the one before us, to find an answer—several answers. The kind of logic now taught is too abstruse for ordinary schoolboys. Unlike elementary mathematics, it presents no easy problems to interest the young, no neat formulæ that can be verified by measurement or calculation.

It bristles with uncouth names and technicalities (*enthymeme, epicheirema, subalternant*, &c.), which, being for the most part useless, burden the memory without any corresponding advantage. What would be thought of an algebraic treatise which had special and in general foreign-looking names, not only for symbolic expressions of frequent occurrence, like $x+y$, $x-y$, xy, x^2, and for "laws" or formulæ often appealed to, like $x^m x^n = x^{m+n}$, but also for comparatively rare expressions, such as $x^4+x^2y^2+y^4$, and for laws or formulæ seldom appealed to, as, for example, the law that for all values of x and y the numerical number or fraction represented by $x^4+x^2y^2+y^4$ is always equal to the product of the numbers or fractions represented respectively by x^2+xy+y^2 and x^2-xy+y^2? Yet this is the kind of absurdity found in every text-book on logic, because the evil of a needless and encumbering multiplicity of names having once crept in, each author feels himself bound to explain all the technicalities which he finds already existing. And the evil is on the increase, because some logicians appear to imagine that they advance the science by continuing this eternal process of dividing and subdividing and inventing new terms. Take the three so-called "primary laws of thought," respectively known in logic as "the law of identity," the "law of contradiction," and the "law of excluded middle." These, in Mr. MacColl's notation (see his article on 'Symbolic Logic' in *The Athenæum*, No. 3958), correspond to the three certainties $(A=A)$, $(AA')^\eta$, and $(A+A')^\epsilon$. Now, where is the necessity of giving these laws special names apart from their simple symbolic representations? Do not the symbolic expressions appeal immediately to the understanding, and imprint themselves readily on the memory? Again, why call the laws "primary"? An author is, of course, within his rights if he decides to place them first on a list of formulæ, just as he would be within his rights if he chose for that honour the three formulæ $(AB:A)$, $(A^\epsilon+A^\eta+A^\theta)^\epsilon$, $(A^\eta:A^\iota)$, or any other three out of the many hundreds which present themselves in logical researches, and for which no special names are needed. To determine the particular *order* in which logical truths have entered any individual mind is an insoluble psychological problem, for the simple reason that no two minds have passed through exactly the same stages of experience. The "primary laws" of the person A are seldom the primary laws of the person B.

Another grave defect of the common logic is that (in its customary form) the syllogistic rule for drawing correct inference is untrustworthy—glaringly so. Miss Jones, in perfect agreement with nearly all logicians, says (pp. 41, 170) that the syllogism *All M is P and all S is M, therefore all S is P*, holds, "no matter what words or symbols we put in the place of M, P, and S." A single concrete example will show

that this is an error. Let M, P, S respectively denote *married men, paupers, sailors.* Is it not grotesquely fallacious to argue that "*Since* all married men are paupers, and all sailors are married men, *therefore* all sailors are paupers"? It is true that our prefatory *since* is not usually expressed in text-books, but it is clearly implied in the invariably expressed *therefore.* With examples like this procurable in abundance, what becomes of the dictum that the fundamental syllogism is valid "no matter what words or symbols we put in the place of M, P, and S"? To make it really valid we must substitute the modest and cautious words *If* and *then* for the bold and confident *Since* and *therefore.* (See the article 'Symbolic Logic' in *The Athenæum*, No. 3989). Thus amended, the syllogism will be always true, whether its premises be true or false. A little reflection will show that our objection to this time-honoured syllogistic form is not hypercritical. Is it not a well-known fact that the most plausible fallacies are those due to false assumptions too readily accepted? Why, then, encourage this natural tendency to deceit or error by a false wording of the syllogism? The necessity of attending to the caution enjoined by this little conjunction *If* is exemplified by another error into which Miss Jones has fallen, in company with the majority of logicians. On p. 22 of her primer she says that "A Conditional is always expressible in the form, If any E is F, that E (=EF) is K," and that "this can always be transformed into: All EF is K, a Categorical with a composite Subject." The equivalence here affirmed between the conditional and the categorical fails when E, F, K are three real but mutually exclusive classes; for in that case the categorical statement is false, while the conditional is not. To fix our ideas, let E, F, K respectively denote *elephant, fox, kangaroo.* The categorical asserts, with over-confident rashness, that the *unreal* class EF (a class every member of which is assumed to be both elephant and fox) is either a part or the whole of the *real* class of kangaroos, an assertion which is plainly false, since realities and unrealities form mutually exclusive classes. The conditional asserts, with commendable caution, that *if* any elephant is a fox, that elephant is also a kangaroo—an assertion which cannot be proved false till we find an elephant that *is* a fox and is *not* a kangaroo. Elephants satisfying the second condition are numerous enough, but where are we to find any that will satisfy *both* conditions?

So far we have been criticizing not a book, but a system—pointing out errors which Miss Jones, in common with the generality of living logicians, has inherited from distinguished authorities of the past, including Mill, Boole, Jevons, and Schröder, to say nothing of the great Aristotle. It only remains to indicate one or two small errors, or, it may be, obscurities, for which, we think, she alone is responsible, and to which we draw her attention solely for the benefit of her next edition. We cannot agree with what she says on p. 32, that "*Few S are P* means Most S are not P." The two statements are *not* synonymous—at least in ordinary speech. It is certainly true, for example, that *Most men are not Chinese*, but it is not the general opinion that *Few men are Chinese*; else whence comes the dread of the Yellow Peril? Again, on p. 59 she says, speaking of the common syllogism, that "one premiss, or both, may be wider than the conclusion, but the conclusion can never be wider than the narrowest of the premisses." If by the second statement she means that the conclusion can never be stronger than, that is to say, can never give more information than, the weakest of the premises, she is mistaken. Take the following syllogism, which we will express in the orthodox form: *All bachelors are unmarried, and all the gentlemen on board are bachelors; therefore, all the gentlemen on board are unmarried.* Here the weakest premise is the statement that "all bachelors are unmarried," which gives little information—none in fact that was not known before. The conclusion, on the contrary, that "all the gentlemen on board are unmarried," may convey very important information—especially to the lady passengers.

The First Book of Euclid's Elements, with a Commentary based principally upon that of Proclus Diadochus. By William Barrett Frankland. (Cambridge, University Press.)—As may be gathered from its title, this work is intended neither as a text-book for students nor for the amusement of general readers; but its construction has evidently been a labour of love, which the few who are interested in the history of mathematical and especially geometrical speculations will warmly appreciate. These, we are sure, will feel sympathetically drawn towards the author, even when they do not share his views. On fundamental points he is in agreement with the modern non-Euclideans, as the following quotation will show:—

"That a straight line should return into itself and so in itself constitute a figure is a conception alien to Greek Geometry. Such a possibility seems never to have been entertained even by the subtle, restless Greek intellect.....Yet the possibility of the re-entrant character of the straight line, if rejected, should certainly be rejected openly, and not merely tacitly ignored. Further, two straight lines may conceivably form a figure; and that without intersecting in more than one point, if the straight line is of finite length and returns into itself."

Now what is it exactly that this quotation means? It all depends upon the significations given to the words *straight, possibility, conceivably,* and *figure.* These words suggest different mental pictures to different persons, with the result that controversialists fence round and round in a circle, dealing each other imaginary blows with arguments which never really clash. The "straight line" of the Greek geometry was a different line from the "straight line" of modern non-Euclideans. What is "possible" on one assumption may be *impossible* on another. What is "conceivable" to the mind of A, to whom the words used convey one meaning, may appear *absurd* to B. Insensibly and almost unconsciously some modern mathematicians change the primary meanings of words in order to give universal validity to their formulæ; then they rather unreasonably expect that the new meanings which they find convenient for their purpose should be accepted by others for whose researches the primary meanings are much more suitable. In the given quotation Mr. Frankland appears to restrict the word *figure* to a closed area. This we think an arbitrary and inconvenient limitation. Nor can we without reservation accept his dictum that the possibility of a re-entrant straight line "should, if rejected, be rejected openly, and not merely ignored." The Greek writers whom he criticizes were writing for readers who understood the word *straight* in the same sense as they did themselves, and for these no express rejection was necessary. All arguments contain, and must contain, tacit assumptions. The reasoning of Euclid is full of them; the reasoning of modern mathematicians fuller still. With all his modern views, however, Mr. Frankland is a great admirer of Euclid's 'Elements,' as Euclid himself left the work; but he does not approve of several additions which were made afterwards, and for which Euclid is wrongly held responsible. "Thus Euclid marks out for himself," he says,

"with entire validity the middle path of the parabolic hypothesis, which (tested empirically) cannot be much wrong so far as present knowledge goes, and (tested theoretically) is simplest and best so long as only one hypothesis is to be learned, taught, and studied."

There is a short but interesting supplement which specially treats of one of the fundamental conceptions of the modern non-Euclidean geometry.

'THE SECRET OF THE TOTEM.'

Mr. Lang's criticism of the review of his 'Secret of the Totem' is not very discriminating. He objects to our statement that "he takes upon himself" the determination of which of the tribes under consideration are primitive and which more advanced. Against this view he alleges that certain characteristics prove that the Arunta group are of the more advanced type, the proof being the opinions of all students of any authority. But it is the opinions of these very students in their general conclusions on totemism which Mr. Lang attacks in his book; and if he relies upon their support on points which suit him, and rejects their support when it does not suit him, it is equivalent, we think, to "taking upon himself" to determine the position. His independent arguments on this point are valuable, but they are based upon his previous definition of the advanced characteristics.

The Arunta group is composed of elements claimed by Mr. Lang to be advanced, and of elements claimed by other authorities, and not disproved by Mr. Lang, to be primitive. The relative importance of these two different sets of elements must be determined before it can be granted that the Arunta group on the whole represent the advanced and not the primitive type of Australian native culture.

Mr. Lang introduces our charge of *petitio principii* in places where it does not and cannot apply, and he gently turns to our general approval of his methods as evidence of inconsistency. We should admit his right so to reply to this criticism were it made against his general argument. But it was limited to one particular and special part of his book, namely, his criticism of Mr. Frazer's theory, which, "by the irony of fortune," was written after Mr. Lang had seen the rest of his book in print (see his preface, p. ix), and is thus separated from the other portions of his book. If Mr. Lang will re-read pp. 190–1, he will, we think, see that our opinion is justified.

We are not prepared to give up our approval of Mr. Lang's methods and appreciation of his lucidity of statement, which are the chief features of his book, simply because on one point, which does not affect the general argument, he uses methods which we cannot approve.

The Reviewer.

SOCIETIES.

Society of Antiquaries.—*Nov.* 30.—Mr. P. Norman, Treasurer, in the chair.—Mr. H. F. Bidder read a paper upon a burying-ground of the early Anglo-Saxon period in process of excavation at Mitcham, Surrey. He said that there were few known Anglo-Saxon burying-grounds in Surrey, the Mitcham one being the fourth of any importance: of these three were on the Wandle. At Mitcham the remains are found close to this river, and at present 67 graves have been opened, varying in depth from 18 in. to 3 ft. The bodies are mostly laid east and west, with the feet to the east. Of the last 19 graves excavated, 17 were orientated, with an average direction 11° N. of true E. A knife is sometimes found at the waist, and a spear or javelin at the shoulder. Two swords have been found, accompanied in each case by a shield boss; also four bronze saucer brooches (gilt), the fittings of a belt, amber and pottery beads, a tumbler and vase of glass, and two earthenware jars. In several cases a second skull has been placed in the grave, between the hands or across the ankles. In one or two cases two skeletons have been buried together—the one carefully laid out, the other carelessly buried on its face. In one of the most important graves a rude earthenware pot was laid on the knees; the contents of a

pouch (including a key) were at the waist; while at the left side was a short sword, or perhaps a wand of office, of a well-known type. Between the knees a length of material had hung down, with three pairs of short bronze rods attached to it, one below the other. On the heel-bone was a straight piece of iron—perhaps a spur of a new type. In another grave a small coin of Constantius III. (*circa* 350 A.D.) was found. Of two north-and-south burials, one was definitely above an east-and-west interment. The other was the grave of a small woman who had been carelessly thrown in on her face between two warriors. The latter were laid east and west, one with shield boss and sword, the other with a spear. Dr. Duckworth, of Cambridge, considered that skulls from this cemetery submitted to him resembled the Anglian type.—Mr. Reginald Smith commented on the marked absence of the characteristic Anglo-Saxon animal-ornament in this cemetery, and compared the design on some of the brooches with the Roman *Keilschnitt* of the fourth century. The saucer brooch, of which four examples were shown, was confined to this country and to a definite area, mostly in the Thames valley. While there were indications of contact with Roman civilization, the presence of arms in the graves of men suggested a Teutonic origin; and the most likely date was the first half of the fifth century. East-and-west orientation was here the rule, and was evidently previous to the coming of Augustine: the compass-bearings showed a tendency north of east for the feet, and this had more than once been taken to show that deaths were more frequent in the summer, when the sun rose in that quarter. A variation south of east seemed, however, to be the rule; but in either case the head may have been laid towards the setting sun, and no safe conclusions could be drawn from these variations. One grave was of special interest, containing a short tanged blade of iron that probably had had a tang-like continuation at the point, and belonged to a small series, of which four examples were known from Kent and the Isle of Wight, and one from the Charente. There was sufficient evidence in most cases that these burials were of women, and there seemed a special connexion between these iron blades and the crystal spheres that were usually found lying in spoons with perforated bowls. The Mitcham cemetery afforded very good evidence of the date of more than one type of relic, and added to our scanty knowledge of post-Roman Surrey.—Dr. Garson stated that he had watched the excavation of these graves from the beginning with great interest. He was inclined to think that the closeness of the bodies to each other in some parts of the ground pointed to many of the interments having taken place at the same time, perhaps in a trench. All the bones he had examined were those of males, except in one case. He remembered one instance in which a flint flake was embedded in the backbone; he believed it to have been the cause of death.

ZOOLOGICAL.—*Nov.* 28.—Dr. H. Woodward, V.P., in the chair.—Mr. J. T. Cunningham exhibited some photographs of a horse bearing incipient horns. They were about three-quarters of an inch in length, the left being slightly larger than the right, and there could be no doubt that they were outgrowths of the frontal bone. The growths were covered with normal skin and hair.—Mr. F. Slade exhibited photographs (taken in the Horniman Museum at Forest Hill) of a sea-anemone (*Anemonia sulcata*) in the process of division.—Mr. Douglas English exhibited and made remarks upon a living albino specimen of the field-vole (*Microtus agrestis*), captured last July in Wales.—Mr. G. A. Boulenger exhibited a living lizard (*Lacerta muralis*) from Brozzi, province of Florence, which he had received from Dr. A. Banchi. The lizard belonged to the typical form of the wall-lizard, but was remarkable for its black coloration, above and below. Melanistic forms of the wall-lizard were well known on small islands in the Mediterranean, but, so far as Mr. Boulenger was aware, no black specimen had ever been recorded from the mainland.—Capt. A. Pam made some remarks on a living specimen of the violet-cheeked humming-bird (*Petasophora iolota*) which he had recently brought from Venezuela and presented to the Society's menagerie. He also gave a general account of the habits of these birds, as observed by him, in a wild and captive state, and notes on their management and feeding while in confinement.—Mr. W. R. Ogilvie-Grant sent for exhibition a named set of the birds collected in Japan by Mr. M. P. Anderson in connexion with the Duke of Bedford's exploration in Eastern Asia. No new species were obtained, but several of the specimens were of special interest as illustrating stages of plumage not represented in the British Museum.—Mr. R. Lydekker contributed a paper in which he described a transition in the general type of colouring from the wholly black *Colobus guereza* in one direction, through several intermediate forms, towards the black-and-white *C. caudatus*, and in another direction towards *C. vellerosus*. Mr. Lydekker also described a mounted specimen of the white-maned serow (*Nemorhædus argyrochætes*, Heude) of Szechuen, the first example of the species ever received in England, and perhaps in Europe.—Mr. Oldfield Thomas read a paper on the mammals collected in Japan by Mr. Anderson for the Duke of Bedford, and presented by the latter to the National Museum. The collection was one of the most valuable for scientific purposes ever received from any one region. Over 600 specimens had been obtained, belonging to 50 species and sub-species, of which several were described as new. But the chief value of the collection lay in the fine series of properly localized specimens of species which had not been sent to Europe since the time of Temminck's 'Fauna Japonica.' By the help of these specimens the distribution of the species was fairly well shown, while the Museum would now possess examples of all the older known species suitable for comparison with their allies from other parts of Eastern Asia, such specimens having been hitherto conspicuous by their absence. Of the new forms special attention was directed to *Evotomys bedfordiæ*, a Craseomys allied to *E. rufocanus*, but coloured more like *E. glareolus*, and with a longer, less hairy tail; *E. andersoni*, allied to *E. bedfordiæ*, but with longer tail and conspicuously less powerful teeth; *E. mikado*, a true Evotomys, coloured very like the European *E. glareolus*, though more strongly rufous; and *Sorex shinto*, a small species allied to *S. minutus*, but with an unusually long tail.—Mr. C. Tate Regan read a paper entitled 'A Revision of the Fishes of the Family Galaxiidæ.' Two genera were recognized, Galaxias and Neochanna, the latter consisting of a single species only. Twenty-eight species of Galaxias were described, five being new to science.—Mr. J. L. Bonhote communicated the first of a series of papers dealing with the mammalian fauna of China. The present part dealt with the Murinæ, containing the genera Mus and Micromys. Two species were described as new: *Mus huang*, similar to *M. confucianus*, but general colour much brighter and tail without white tip; and *M. ling*, smaller than *M. huang* and paler in general coloration; very similar to *M. cremoriventer*, Mill., but with bicolour instead of unicolour tail.—Mr. F. E. Beddard read a paper entitled 'Some Additions to the Knowledge of the Anatomy, principally of the Vascular System, of Hatteria, Crocodilus, and Certain Lacertilia.'—A communication from Mr. Martin Jacoby contained descriptions of 111 new species of Phytophagous Coleoptera of the family Halticidæ.

PHILOLOGICAL.—*Dec.* 1.—Prof. I. Gollancz in the chair.—Dr. H. Oelsner read a paper on 'The Study of Old French at English Universities,' with the object of demonstrating that particular stress should in England (more than in other countries, including even France) be laid on the mass of medieval French literature that was produced in England, or bears on the study of English literature, history, life, and manners. From the purely philological standpoint it is recognized that the English language cannot be taught without constant reference to Early French. In literature, too, the value of Anglo-Norman has been recognized, though perhaps not so fully as it might be. There is at present no history specially devoted to this branch of Old French literature; but this want could easily be supplied by courses of lectures. A more pressing need is that of a *chrestomathie* containing extracts from all the principal texts in question. Every serious student of Old French knows the numerous important works that have too long been undeservedly neglected by scholars whose special business it is to have some knowledge of everything relating to medieval England. It is clearly not always possible to study everything at first hand, and the more general student of the English Middle Ages has every right to expect aid from specialists in various branches of the subject. English students of Old French should regard it as one of their special missions to make generally accessible, and diffuse the knowledge of, early French works relating to England. As it was impossible to treat the whole field in detail in a single paper, the various sections were only lightly sketched, while special attention was devoted to history, each of the following works being considered in detail: (1) Gaimar's chronicle; (2) Wace's 'Brut' and his 'Rou'; (3) Beneeit's chronicle; (4) chronicle of the war between the English and the Scots in 1173–4 by Jordan Fantosme; (5) a poem on the conquest of Ireland in 1172 ('The Song of Dermot and the Earl'); (6) the poem on the Third Crusade by Ambroise, dealing largely with Richard I.; (7) 'L'Histoire de Guillaume le Maréchal'; (8) Garnier's life of St. Thomas à Becket; (9) various prose chronicles; (10) the chronicle of Peter of Langtoft; (11) a number of historical and political *dits*; (12) the various groups of 'Brut' books, only one of which has so far been printed; (13) 'Le Prince Noir, Poème du Héraut d'Armes Chandos'; (14) 'Chronicque de la Traïson et Mort de Richart Deux, Roy d'Engleterre.' This list, though by no means complete, serves to show that it is possible to study the entire history of England between 1100 and 1400 in documents written in contemporary French; and an examination of the other sections of this early Anglo-French literature would yield results equally interesting and important.

INSTITUTION OF CIVIL ENGINEERS.—*Dec.* 5.—Sir Alexander Binnie, President, in the chair.—The paper read was 'The Steam Turbine,' by the Hon. C. A. Parsons and Mr. G. G. Stoney.—It was announced that 151 candidates had been admitted as Students.—The monthly ballot resulted in the election of 11 Members, 110 Associate Members, and 4 Associates.

ROYAL INSTITUTION.—*Dec.* 4.—Sir James Crichton-Browne, Treasurer and V.P., in the chair.—Lieut. E. P. C. Amphlett, Mr. F. Bailey, Mr. H. Behrens, Mr. J. Kennedy, Mr. J. N. Kerr, and Dr. E. M. Modi were elected Members.—It was announced that Prof. William Stirling had been appointed Fullerian Professor of Physiology.

SOCIETY OF ENGINEERS.—*Dec.* 4.—Mr. Maurice Wilson, V.P., in the chair.—A paper was read on 'The Grindleford Stone Quarries and their Working,' by Mr. Benjamin L. Bradley.

PHYSICAL.—*Nov.* 24.—Prof. J. H. Poynting, President, in the chair.—A paper on 'The Dielectric Strength of Air' was read by Mr. A. Russell.—A paper by Dr. H. A. Wilson and Mr. E. Gold, 'On the Electrical Conductivity of Flames for Rapidly Alternating Currents,' was read by Dr. Wilson.—A paper 'On the Lateral Vibrations of Loaded and Unloaded Bars' was read by Mr. J. Morrow.

BRITISH NUMISMATIC.—*Nov.* 30.—*Annual Meeting.*—Mr. Carlyon-Britton, President, in the chair.—His Excellency M. D. G. Metaxas was proposed as an Honorary Member; and Lieut.-Col. Sir Horatio D. Davies and Messrs. F. Ellison, W. R. Gregson, E. Gunson, T. L. Roberts, and J. Summers were elected Members.—The Report of the Council was read, showing that the limit of 500 ordinary members had been maintained, the total, including 16 Royal and 18 Honorary Members, being 534. The Treasurer's accounts carried forward a surplus of 389*l.* 3*s.* on capital account.—The following were elected officers for the forthcoming year: *President*, Mr. Carlyon-Britton; *Vice-Presidents*, the Marquess of Ailesbury, the Earl of Powis, Earl Egerton of Tatton, Lord Grantley, Sir F. D. Dixon-Hartland, and Mr. Bernard Roth; *Director*, Mr. L. A. Lawrence; *Treasurer*, Mr. R. H. Wood; *Librarian*, Lieut.-Col. H. W. Morrieson; and *Secretary*, Mr. W. J. Andrew.—The President read a synopsis of the first part of his 'Numismatic History of the Reigns of William I. and II.,' a treatise upon the effect of the Conquest on the coinage of England as viewed in a strictly historical light, and containing full details of the money then issued from some seventy of the principal towns throughout England and Wales. The author commences with a description of the silver penny, which, with its mechanically divided half pence and *fourthings*, was the only denomination of money then in currency, and discusses its manual production from the dies, its purchasing power, the various historical references to it as a coin and to its dies, the status of the moneyers, and the position and powers of the numerous mints. In chap. ii. he reviews the particulars of the many discoveries of hoards of these coins during the last two centuries, and from these deduces much support to his rearrangement of the successive coinages. Chap. iii. is devoted to the history of the two kings and their Great Seals, with the analogy between the latter and the contemporary money. But it is in the next chapter that Mr. Carlyon-Britton is able to correct all previous writers on the subject by methods purely his own. It was the custom of the Norman kings to change the type or device of the money every three years, and therefore we have eight types of William I. and five of William II. The order of some of these has already been ascertained by the evidence of finds and the existence of "mule" coins, which bear one type for their obverse and the succeeding type for their reverse. There are, however, others to which these guides cannot be

applied, and these have consequently been misplaced, and one has been assigned to the wrong king. The writer, however, assuming that when the old money was called in, some of it would be restruck and issued as new, has searched not only his own collection, but also the principal public and private collections in the country, for specimens bearing traces of a previous type. This has resulted in his being able to correct and prove the chronological sequence of the whole series of the coinage of these two kings. He is thus enabled to date the types and to bring them into accord with the passing historical and political events of the day. As an instance of the astronomical superstition of the period, it is curious to note that, coincident with the record in the 'Anglo-Saxon Chronicle' of an extraordinary star shining in the evening, which men supposed was a comet, a star is added to the coinage then current, although the same type had previously been issued without it.

MEETINGS NEXT WEEK.

Mon. Surveyors' Institution, 4.—'Valuations of Mortgage,' Mr. J. J. Done.
— London Institution, 5.—'With Pen and Pencil and a Sense of Humour,' Mr. E. T. Reed.
— Society of Arts, 8.—'The Measurement of High-Frequency Currents and Electric Waves,' Lecture III., Mr. J. A. Fleming. (Cantor Lecture.)
Tues. Asiatic, 4.—'The History of the "Logos,"' Mr. H. Baynes.
— Colonial, 8.—'The Future of Western Canada,' Mr. E. B. Osborn.
— Faraday, 8.—'The Physics of Ore Flotation,' Messrs. J. Swinburne and G. Rudorf; 'The Concentration of Metalliferous Sulphides by the Flotation Process,' Prof. A. K. Huntington; 'The Ions of Pure Water,' Prof. J. Walker.
— Institution of Civil Engineers, 8.—Discussion on 'The Steam Turbine.'
— Society of Arts, 8.—'Historical Pageants,' Mr. L. N. Parker.
— Zoological, 8½.—'The Habits and Reactions of Crabs bearing Actinians in their Claws,' Dr. J. E. Duerden; 'Notes on a Collection of Snakes from Japan and the Loo Choo Islands,' Capt. F. Wall; 'Some Spiders of the Family Lycosidæ from South Australia,' Mr. H. E. Hogg; 'A Collection of Mammals from Persia and Armenia presented to the British Museum by Col. A. C. Bailward,' Mr. O. Thomas.
Wed. Society of Arts, 8.—'The Commerce and Industries of Japan,' Mr. W. F. Mitchell.
Thurs. Royal, 4½.
— Society of Arts, 4½.—'Glimpses of French Canada,' Hon. Rodolphe Lemieux. (Colonial Section.)
— Historical, 5.—'The Northern Policy of George I.,' Mr. J. F. Chance.
— London Institution, 6.—'English Folk-Song,' Mr. C. J. Sharp.
— Institution of Electrical Engineers, 8.—Discussion on 'The Charing Cross Company's City of London Works.'
— Society of Antiquaries, 8½.—'A New Palæolithic Locality in Herts, a Gold Inscribed Ring found in Herts, and an Anglo-Saxon Brooch found in Notts,' Sir J. Evans; 'The Character and Forms of Implements of the Palæolithic Age from the Neighbourhood of Southampton,' Mr. W. Dale.
Fri. Physical, 7.—Exhibition of Electrical, Optical, and other Physical Apparatus.
— Institution of Civil Engineers, 8.—'Tests of Street Illumination in Westminster,' Mr. E. B. Mann. (Students' Meeting.)
— Institution of Mechanical Engineers, 8.—Discussion on 'The Properties of a Series of Iron-Nickel-Manganese-Carbon Alloys.' Paper on 'Behaviour of Materials of Construction under Pure Shear,' Mr. E. G. Izod.

Science Gossip.

M. Christian Garnier (son of Charles Garnier, the architect of the Paris Opéra), who died at the early age of twenty-six, has bequeathed to the Sorbonne an important collection of geographical documents. Christian Garnier, who in 1898 won the Prix Volney for his remarkable method of "transcription des noms géographiques," formed a unique collection of grammars and dictionaries of every known language, and these, with a very fine collection of maps, &c., will form the Collection Christian Garnier, which will shortly be inaugurated at the Library of the Sorbonne.

We have received Appendix I. to Vol. IV. of the Second Series of the *Publications* of the United States Naval Observatory, containing the reports of the expeditions to observe the total solar eclipses of May 28th, 1900, and May 17th, 1901, the first to Barnesville and Griffin, Georgia, and the second to Solok, Fort de Kock, and Sawah Leonto, Sumatra. They are accompanied by some excellent photographs of the eclipsed sun. The duration of the totality in 1900 (which took place shortly after a minimum period of the solar spots) nowhere exceeded one and a half minutes; that of 1901 amounted to about six and a half minutes; but at many of the stations (including those at Sumatra) intermittent clouds somewhat interfered with the complete success of the observations.

Bulletins No. 2 and 3 of the Kodaikanal Observatory have been received from Prof. Michie Smith. The former contains a list, with notes, of the prominences on the sun which were observed between September 1st, 1903, and December 31st, 1904, the observations during the first five months being under the direction of Mr. C. P. Butler. *Bulletin* No. 3 gives a number of observations of D_3 as a dark line in the solar spectrum. This phenomenon is usually held to be a rarer occurrence than it would really seem to be from the Kodaikanal observations, which were obtained by Messrs. Sitarama and Nagaraja Iyer, and in many cases checked by the Director.

The Star Calendar for 1906 (Hirschfeld Brothers) contains a series of four compendious maps of the constellations in the northern hemisphere, as they will appear in the evening in the successive quarters of the year, the centre of each map representing the zenith. The days of the week corresponding to those of the month, and the constellations in which the planets, from Mercury to Neptune, are situated during the quarter depicted in each map, are also indicated. The initials of the author, being those of a well-known member of the staff of the Royal Observatory, Greenwich, are a guarantee for the accuracy of this handy guide to the heavens.

We have received the tenth number of vol. xxxiv. of the *Memorie della Società degli Spettroscopisti Italiani*, the principal contents of which are a note by Signor Bemporad on the theory of astronomical refraction, and a continuation of the diagrams of spectroscopical images of the sun's limb to the end of November, 1903.

FINE ARTS

HISTORIES OF ENGRAVING.

Kupferstich und Holzschnitt in vier Jahrhunderten. Von Paul Kristeller. (Berlin, Cassirer.)

Der Kupferstich. Von Friedrich Lippmann. Dritte Auflage. (Berlin, Reimer.)

A book of more than five hundred pages dealing with the history of engraving on wood and copper from the invention of the art to the end of the eighteenth century is no easy thing to write or to read. In these days of specialization few writers are courageous enough to make the attempt, or qualified to treat of every process and every period in an impartial and authoritative way. It would be difficult to find an historian of engraving better equipped for the task by study, travel, and all-round experience than Dr. Kristeller, who is equally at home in Germany and Italy, and has an extensive knowledge of the collections of other countries. He is more closely identified, it is true, with the study of early Italian engraving and illustration than with that of Northern art, and he writes of the woodcuts in Italian books, not only of the fifteenth, but even of the less familiar sixteenth century, with greater fullness and accuracy than of any other branch of his subject. Indeed, we remember no single book in which illustration at all the leading printing centres is so well described, or in which so much attention is given to the continued existence or sporadic revival of wood-engraving in countries or at periods when it had nearly fallen into disuse.

From the reader's point of view it is questionable whether Dr. Kristeller was well advised in adopting the method of criticizing the merits of almost every engraver whom he has occasion to name. It is a method which must have added largely to the labour of composition, as it does to the bulk of the book, and the student's needs would be better supplied if more facts were substituted for adjectives. The book, however, is intended for the laity rather than for specialists, and the text is not burdened, in the usual German manner, with foot-notes or citation of authorities for every statement, their place being supplied by the excellent bibliography at the end of the volume, which serves as a guide to the literature on special subjects. Controversy is avoided, though the initiated may read between the lines allusions to such burning questions of a year or two ago as the early history of wood-engraving in France, or the originality of the 'Ars Moriendi' block-book.

It is no easy matter to decide which came first, the Flemish woodcuts of the 'Ars Moriendi' in the British Museum, which rank in any case among the highest achievements of that art in the fifteenth century, or the engravings of the same compositions by the Master E. S., preserved at Oxford. Prof. Lehrs, with his unrivalled knowledge of early engravings and those of this master in particular, has pronounced that E. S. has never been found in any single case to have copied an original by another hand, and that in this case, too, he must be credited with the invention. Dr. Kristeller regards the engravings as school-works, at the most engraved in the studio of E. S., and he presses to the utmost such arguments as their inferiority in perspective to the woodcuts and the absence of decorative scrolls. He might have added that in the 'Temptatio de Avaricia' subject, the fourth cask, from which a servant is drawing wine, does not occur in the engraving, and that this would be an unlikely addition for a copyist to make; and that in the last scene of all, where the engraving and the woodcut give the composition from opposite points of view, whereas in other subjects they take the same standpoint, it would be more natural to suppose that the original composition, as shown in the woodcut, had been reversed by a copyist in the engraving, for in the latter the Blessed Virgin and St. John take their wrong places at the side of the Cross, and the dying man is left-handed. This might, however, be an oversight on the part of the engraver, which was subsequently corrected by the draughtsman of the blockbook. It would be misleading, in any case, to speak of the latter as an ordinary copyist; he was an artist of genius, and if he was a copyist, his work is the exception which proves the almost universal rule that the copy is inferior to the original. It would be premature to sum up without waiting for the reply which Prof. Lehrs may be expected to publish in his forthcoming work on early engraving in the North. Meanwhile we would urge against Dr. Kristeller's view the difficulty of accounting for the presence in the blockbook of characteristic E. S. types of countenance.

Dr. Kristeller knows, it need hardly be said, all the recent literature of his subject, and this is the first general work in which advantage is taken of certain fortunate discoveries of the last few years. We read, for instance, of Georges Reverdy, of Lyons, who used to pass as an Italian under the name of Gasparo or Cesare Reverdino; and Hans Weiditz, of Augsburg and Strassburg, takes his proper place among the leading illustrators of the early sixteenth century. On the other hand, Dr. Kristeller still admits the possibility that Hans von Kulmbach may be the author of the 'St. John on Patmos' signed H.K., although it has been conclusively proved (*Burlington Magazine*, iii. 44) that the initials are those of the Strassburg printer Johann or Hans Knoblouch.

In the chapter on engraving in England we have noticed a few trifling slips. The first name of the stipple engraver Tomkins was Peltro, not Peter; and Clennell, not Chennell, was the name of Bewick's pupil. Dr. Kristeller dismisses William Faithorne somewhat too contemptuously in less than two lines. Ploos van Amstel did not survive till 1890.

The book is fully and judiciously illustrated, and when an engraving is chosen which is too

large for complete reproduction on the page, a portion of it is given in facsimile, a far better notion of the technique being conveyed in this manner than by a reduced illustration of the whole. The latest illustration supplied is one of Goya's etchings, and the account of this artist involves the only mention in the book of lithography, a process excluded from treatment by the limits fixed for the history.

The late Dr. Lippmann's short handbook on engraving, an official publication of the Royal Museums at Berlin, is unrivalled in its clearness and concision. Its scope is restricted to engraving and etching on copper. The third edition, just issued, has had the advantage of revision by Prof. Lehrs, who has modified the section devoted to fifteenth-century engraving. 'Der Kupferstich,' like Dr. Kristeller's history, closes with the eighteenth century, and it is well illustrated on the same principles as that work.

THE ARUNDEL CLUB AND VASARI SOCIETY.

The second year's publication of the Arundel Club has reached us. It will be remembered that the object of this society is the reproduction of little-known pictures of Old Masters. This year a change has been made in the manner of reproduction. Instead of the silver-prints of the first year's issue, which were printed on too thin paper and curled up in a disconcerting manner, the pictures are now reproduced in photogravure. The advantage of silver-prints was supposed to be in their greater precision and more exact detail, but we are bound to say that these photogravures are so well executed that they leave little to be desired in this respect, while in every other they are incomparably better. They are much pleasanter to look at both as regards surface and tone, and they are permanent and do not require mounting. The change is, in fact, a great improvement. The pictures are on the whole well selected. There are the beautiful Bronzino from the collection of the late J. E. Taylor, Sir James Knowles's wonderful Reynolds landscape done in emulation of Titian, an exquisite Watteau, Mr. Wernher's *St. Michael* by the recently discovered Spanish painter Bartolomé Vermejo, and an exceedingly interesting little Lotto from Mr. Benson's collection. The weakest part in the series is the large triptych called *The Stream of Life*, ascribed to Hogarth. The tradition is that he painted it for an inn in Fenchurch Street, and it is only by assuming that he bore the landlord a grudge or wished to wipe out a debt expeditiously that we can allow him any hand in such a mediocre performance.

The first instalment of the first year's publications of the Vasari Society is also published. From the beginning the undertaking has been received with such interest, and has attracted so many subscribers, that the Society is able to issue a surprising number of reproductions to its members.

The present part contains no fewer than twenty drawings, and ten more are promised for this year. The extremely careful and often brilliant reproductions fully justify the anticipations which were formed when it was known that the work would be placed in the hands of the Clarendon Press. As in the work they have done for Mr. Sidney Colvin's 'Oxford Drawings,' no pains have been spared to give an exact facsimile of the originals. The drawings are accompanied by short notes by various writers. Mr. McCurdy has annotated the Leonardos, of which there are four examples from the British Museum, including the well-known 'Warrior's Head' of the Malcolm collection. Mr. Sidney Colvin, whose advice and assistance have materially helped the undertaking, discusses the Piero di Cosimo (a drawing which we believe he discovered, and acquired for the Museum); the two Raphaels, one from Chatsworth of extraordinary grandeur and beauty; and two heads by Timoteo Viti. Three drawings by Pisanello and his school—perhaps the least satisfactory as reproductions, owing to the faintness of the originals—are described by Mr. Ricketts and Mr. G. F. Hill. A superb pen drawing by Titian, and a very pretty, but sophisticated Veronese, on which Mr. Binyon contributes notes, complete the Italian drawings.

The German drawings, which are all annotated by Mr. Campbell Dodgson, are of fine quality, and include examples of the elder Holbein, of Hans, and of his brother Ambrosius. Even more imposing and unusual is the large chalk drawing by Lucas van Leyden, which reveals qualities one hardly suspects from his paintings. Finally, there is a Rubens, 'The Boar Hunt,' delightful, but not of the highest excellence.

It will be seen from this what a varied and interesting selection has been provided from material which, with a few exceptions, has never been properly reproduced before. Mr. Hill, the secretary, who originated the idea of the Society, deserves the greatest credit for the admirable way in which he has edited its first publication.

AMATEUR DRAWINGS.

Several small exhibitions open at present call one's attention forcibly to the position of the amateur. We must apologize for using the word in its derived and least satisfactory meaning. "Amateurish" has come to have a bad significance; but there is a type of work done by artists who have missed the full professional training and who exercise their talent for their own pleasure. This kind of work has a distinct stamp, even when it happens that others find sufficient pleasure in it to buy it. Of such artists Mr. Brabazon is the most striking contemporary example, and the collection of his water-colours at the Goupil Gallery is by far the most remarkable of the exhibitions of water-colours now on view. It must be understood, then, that in speaking of Mr. Brabazon as an amateur we are only calling attention to an aspect of his art, without any idea of disparagement. It so happens, however, that the present exhibition shows very clearly what British art has missed by the fact that Mr. Brabazon did not go through the professional training of an artist. All Mr. Brabazon's sketches here have some distinctive and personal charm, but there are a few interpretations of pictures by older masters which strike us as standing out from the rest by reason of a certain constructive unity and forcefulness of design which we miss in his studies from nature. They are in no sense copies: they are interpretations, translations of the originals in which Mr. Brabazon has emphasized just what belonged to him personally in the originals. The *Guardi* (No. 65) is one of the most marvellous pieces of colour we have ever seen. The whole thing is expressed in tones of grey going to an inscrutable pinkish note in the sky; but the greys are superb in their transparent elusiveness. Beautiful as Mr. Brabazon's own versions of Venice are—and *The Church of the Jesuits* (38), with its unfaltering touches of frank black upon orange violet, is one of the best we have ever seen—they none of them have the solidity of effect, the unity in tone design, that this dream memory of a Guardi possesses. Even more striking, in a way, though by no means so perfect, are the versions of *Dordrecht* (77), after James Holland, and the seapiece (81) after Müller, because both of them have qualities of colour and of feeling which far surpass anything that those artists could boast. The translations have beauty of an altogether higher order than the originals, and yet they are, we think, both of them better, more solid, more logical, and more genuinely pictorial than anything Mr. Brabazon has done by himself. Here, then, we find what it is that Mr. Brabazon lacks for want of a professional training. His gifts are extraordinary, but they lie in the direction of the ultimate beauties, the last perfections of painting, and as an amateur he never had to acquire the substructure of pictorial design. It is only when this is given that we see him at his very best. Mr. Brabazon was no doubt perfectly right in the circumstances to exercise only the talent which was most distinct, and he has done it with great singleness of purpose.

But something the amateur is bound to leave out, if he is to attain what is the *raison d'être* of his accomplishment, some degree of personal expression. Mr. Ponsonby, who shows at the Carfax's Gallery, has left out in another direction. He has left on one side all the complexities of naturalistic colour, and confined himself to a deliberate and easy rendering of the main divisions of his subject, planning them with considerable skill and a distinct poetical feeling for their pictorial values. His colour schemes are in consequence arbitrary and somewhat tentative, but they are carried through successfully; the unity may be somewhat obvious, but it is definitely assured, and this is by no means a usual result, even in the majority of professional water-colour drawings. Mr Ponsonby's work, therefore, has a distinct decorative quality, and expresses, moreover, a refined and delicate reaction to natural beauty.

Most amateurs make the mistake of striving for dexterity and accomplishment, instead of accepting the limitations which the lack of these imposes, and using their intelligence and good feeling to get from the talent they possess its utmost expressive power. What strikes us so agreeably in Mr. Ponsonby's work is just this—that he has used what lay to his hand so intelligently and so tastefully that his work has a distinction lacking in many more skilful performances. Mrs. Talbot, who shows in the same gallery, is perhaps cleverer, but she is not so wise. Having set herself no definite limitations, she allows the thing seen to have too much influence, and there are not a few notes of colour which can claim no better right to their position than that something like them caught her eye at the moment.

Sketching in water colours has long been recognized abroad as one of our national vices, and there is no doubt that it has eaten into the heart of our social life. It may, however, be palliated when its effects are turned to charitable objects. The amateur always claims some consideration at the hands of critics, but never more than when he, or more usually she, comes before the public as a philanthropist. The little exhibition at Messrs. Graves's Gallery, in which the works of peers and peeresses figure largely, no doubt justifies itself by the excellence of its object. Miss Kemp Welch sends a skilful drawing of a horse's head. Mr. Hallam Murray contributes some very graceful little topographical scenes. Mr. Jack Yeats's *Cyder* is cleverly treated; and Miss Adeane's *Nice* shows a genuine feeling for colour. But to our thinking much the best drawing here is one of *Ludlow Castle*, by Mr. J. M. Heathcote, a pupil of Peter de Windt. In this the real science of wash-drawing is shown. It is interesting to think that this sound tradition has still lived on, unknown to professional artists, until in the revolutions of time it is once more appealing to the good sense and right feeling for the medium of the younger draughtsmen of to-day.

We might, perhaps, without unduly straining the word, include among amateur drawings the series illustrating the names of flowers by Burne-Jones which are now on view at the Fine-Art Society. For these drawings were done in the truest spirit of amateur workmanship: they were the solace and amusement of the artist's spare hours. Done in the evenings

while he was listening to music or conversation, they represent the almost unconscious and instinctive trend of his hand rather than any deliberate and concentrated effort, and they have as a result a certain easy grace which is admirable. There is, moreover, scarcely any effort at accomplished realization of form; the simplest poses that came to his mind were always accepted, together with the least intricate compositions which would at all express his ideas. As a result, many of them are really remarkable inventions, and we are not sure that these little rounds—the designs are all inscribed in circles about six inches in diameter—will not hold their own among Burne-Jones's more ambitious work. For it was always in the invention, in the poetical idea of situation or pose, that Burne-Jones's real talent appeared, rather than in anything consummate or elaborate in the execution; and here we have invention at its purest. Such ideas as the *Saturn's Loathing*, armed men fighting in a field of waving corn, has an æsthetic value in the mere idea conveyed verbally; so, too, has the *Arbor Tristis*, where the towers and houses of Jerusalem are seen at twilight behind the foot of the Cross, though here we must add that much of the beauty is due to a certain Byzantine rigidity in the forms. Some of them have an odd beauty of colour: it is colour so sophisticated, so decadent, as to have become, by very excess of refinement, naïve and almost barbaric. Such drawings as the *Jacob's Ladder*, for instance, remind us of certain early Christian mosaics in which effeteness has passed over into a second youth. Some are more in Burne-Jones's ordinary key, merely sad and tender harmonies of effaced greens and browns; but one such, the *Venus's Mirror*, strikes us as having an extraordinary charm as a composition within the round, with its convolved and re-entering curves.

The book has been reproduced in colours in a strictly limited edition. The work is evidently not one of exact facsimile, and sometimes the gaiety of the originals—and some of them are curiously gay—is lost; but, on the whole, the renderings of most exacting and difficult originals must be considered remarkable, since the technique employed by Burne-Jones almost defies analysis, not so much for its subtlety as for the somewhat promiscuous mingling of different methods and qualities.

ARCHÆOLOGICAL NOTES.

The general meeting of the Egypt Exploration Fund last month did not pass off without some significant incidents. Although the Chairman, Sir John Evans, hoped in his address that the separation from Prof. Petrie was only temporary, and that the Fund would soon find itself again in a position to retain his services, Prof. Petrie himself seemed to insist on regarding it as permanent, and symbolically left the platform to seat himself among the audience. Before the meeting was over, also, a telegram from the American Committee was received, to the effect that they resigned in a body—a move which is perhaps explained by an article in the current *Biblia* in which Dr. Winslow, the former secretary of the Fund in America, calls upon all true Americans, until they can start an Exploration Society on their own account, to subscribe to Prof. Petrie's new venture, the Egyptian Research Account, rather than to the Fund over which Sir John Evans has hitherto presided. The folly of crying peace when there is no peace was never more dramatically illustrated.

Apart from this, however, the Fund's accounts show that its affairs are by no means in a flourishing condition, and the successor of Sir John Evans—whose retirement from the presidency on account of age is a real loss—will have to be a strong man if matters are not to grow worse. There is again a large increase of expenditure in excess of income, and although the English subscriptions keep up fairly, the American, which four years ago exceeded them in amount, may henceforth be taken as a negligible quantity. Moreover, the accounts show that, while one of the excavators employed by the Fund was in receipt of a regular salary, the others were content with their expenses only; and it is at least doubtful whether explorers at once so zealous and so disinterested will be found in future. The fact is that the Fund has been suffering for some time past at once from divided counsels and from the frame of mind which the Scotch call "sinning one's mercies." The recent expeditions to Ahnas and Sinai have produced, in spite of much blowing of trumpets, no results at all commensurate with the money expended on them, while more solid work has been neglected, and the unexampled opportunity afforded by the large American subscriptions and the simultaneous windfalls of special donations from England has been allowed to let slip. Yet it would be a national calamity if the Fund's long and, on the whole, brilliant career of work were now to be closed; and it is to be hoped that the subscribers will insist, first, on a thorough reorganization of the management, and, next, on a consistent and straightforward policy being laid down and adhered to in future.

In this connexion, it may be as well to read M. Maspero's review of Capt. Raymond Weil's 'Recueil des Inscriptions Égyptiennes de Sinai' in the *Revue Critique* of a few weeks back. In this the head of the Service des Antiquités shows clearly enough the state to which the Sinaitic inscriptions have been reduced by weather and the depredations of the Bedouin, and that the transport to the Cairo Museum of such of them as could still be saved had already been begun by the Service before the expedition of last winter. He further explains how carefully the Sinaitic peninsula was surveyed when its Egyptian monuments were in a far better state than they are now—first by Palmer and Wilson, then by M. Bénédite, and more recently by Dr. Borchardt. Could the Fund expect to reap anything from their late expedition other than a theory as to Semitic worship which, as a contemporary's survey of the archæological work of the year maintains, is believed in by nobody but its author?

Mr. Campbell Thompson, whose exposure of the theory aforesaid in *Man* has been often alluded to in *The Athenæum's* 'Anthropological Notes,' has received an appointment in the Soudan service, and leaves England this week. During the few years that he has been an assistant in the Assyriological Department of the British Museum, his publications on the 'Reports of the Magicians and Astrologers' and on 'The Devils and Evil Spirits of Babylonia' have established his place among Assyriologists, and have a great deal more than justified his appointment, while his recent visit to the East on behalf of the Museum has given him some insight into the practice of exploration. It is to be hoped that he will not lose sight of these accomplishments in helping to maintain English supremacy in the Soudan.

M. Pottier, reviewing in the *Journal des Savants* M. P. Paris's essay on primitive Spanish art, takes occasion to express himself as to the origin of the prehistoric monuments sometimes called Iberian. He claims that the decoration on the Iberian vases is nothing but a provincial copy of the Mycenæan, and that this last is in itself a degradation of the Cretan. That the Cretans or their Greek pupils, both, like all islanders, seafaring peoples, may have cruised as far west as Spain, and may have there introduced their civilization, is probable enough; but the theory leaves the problem of the origin of Cretan art as insoluble as ever. Those who agree with M. Pottier's reasoning will at any rate admit that if this peculiar style began, so far as Europe is concerned, in Crete, it must have been imported thither, and could not have been indigenous, as some have thought, to the Mediterranean. Was it Babylonian, or Egyptian?

A remarkable article by Mr. W. S. Ferguson appears in the *Beiträge zur alten Geschichte* of Profs. Lehmann and Kornemann. In it the author seeks to show that Athens revolted from Demetrius Poliorcetes the year before, and not after, this worthy lost the kingdom of Macedonia. His principal proof is the decree of the Athenians in honour of Democharcs of Leukonoë, wherein his exile is alluded to, from which Mr. Ferguson is able to show by other evidence that he did not return till B.C. 289. This was the year when Ptolemy, Seleucus, Lysimachus, and Pyrrhus formed the coalition against the City-Taker which ended in his downfall; Mr. Ferguson's theory being that he was too busy with the preparations for his Asiatic campaign to attend to so small a matter as an Athenian revolt. This is in direct opposition to the statement of Plutarch, but on the whole it may be said that Mr. Ferguson makes out a good case, and this is the opinion of Prof. Eduard Meyer, who contributes to the essay an approving 'Nachwort.' Mr. Ferguson's other theory, that from Alexander's death down to at least the overthrow of King Demetrius the Athenians were divided into regular parties, the oligarchists leaning towards Macedon and the democrats opposing her, while political opinions passed by descent much as they do now, is also very interesting, though hardly proved.

Another notable article is that entitled 'Tsade and Sampi,' by Mr. F. W. G. Foat, in the current number of *The Journal of Hellenic Studies*. Mr. Foat's conclusions on the matter are that the Ionic alphabet is Semitic in origin, and related to the Phœnician, though not necessarily by direct derivation; also that there is evidence of a distant relationship between the forms of these alphabets and the Egyptian, "though affinity between the languages is improbable." The use of the Greek alphabet for numeration he puts as late as the sixth century B.C., and that of the Hebrew for the same purpose not earlier than the fourth century—a healing judgment which, if accepted, would put an end to many silly cabalisms.

THE CRONIER SALE.

M. Ernest Cronier is one of the many commercial magnates of the last half-century whose financial careers have been as complete failures as their picture collections have been admirable. It may be that M. Cronier availed himself of the best expert knowledge in forming his collection, regarding price as a secondary consideration; if so, he acted wisely, for at his sale at the Galerie Georges Petit in Paris on Monday and Tuesday, under M. F. Lair-Dubreuil, nearly every picture showed a handsome profit. The prices, indeed, were far in excess of what had been anticipated. A total of 2,475,401 francs was realized by the sale of seventy-four lots of pictures and drawings.

The sensation of the sale was the picture by Fragonard, 'Le Billet Doux,' a whole-length figure of a young woman, seated in front of a window at her writing-desk holding a love-letter. Fragonard exhibited at the Salon only in 1765 and 1767, and this picture was not among his exhibits in either of those years. It has been exhibited but once, viz., at the "Alsaciens-Lorrains" in 1874. It was acquired for a few hundred francs by the Baron Feuillet de Conches, from whom it was inherited by his daughter, Madame Jagerschmidt, who sold it to Cronier for 110,000fr. It now realized 420,000fr., by far the highest price ever paid at auction for an example by Fragonard. The other important picture by this artist was 'La Liseuse,' a three-quarter figure of a young woman reading. This beautiful work was at one time in the collection of the Marquis de Cypierre, and afterwards in that of the Comte de Kergorlay; in 1815 it realized 310fr., and now changed hands at 182,000fr. The drawing by

Fragonard, 'Le Taureau Echappé,' was in the St. Hubert sale, when it realized 1,300 livres; in that of M. de Namur it brought 1,200 livres; it passed into the cabinet of Le Brun, and at the Josse sale, in 1894, sold for 11,000fr.; it was acquired on Monday last by the Duc de Decazes for 35,500fr. An oval miniature on ivory, also by Fragonard, 'L'Enfant Blond,' sold for 4,200fr.

The Cronier sale was almost as great a triumph for Chardin as for Fragonard. The principal work by the former was 'Le Volant,' a three-quarter-length figure of a young girl, holding in her right hand a racket and in the left a shuttlecock. The picture is signed and dated "Chardin, 1751," and has frequently been engraved. It was exhibited at the "Alsaciens-Lorrains" in 1874, and is doubtless the picture mentioned by the De Goncourts ('L'Art du XVIII. Siècle,' Première Série, p. 178) under the title 'La Fille à la Raquette.' It was sold in 1875 for 5,000fr. M. Cronier gave 75,000fr. for it, and it was purchased on Monday by Baron Henri de Rothschild for 140,000fr. Another picture by Chardin, 'Les Osselets,' a half figure of a young girl, is signed in full, and was engraved by Lépicié in 1742, so that it is an unusually early work of this master. It sold for 180,000fr.

There were two important pictures by a French artist of the early eighteenth century, 'Le Concert dans le Parc' and 'La Collation à la Fontaine,' which, it is stated, M. Cronier purchased as by Fragonard for 600,000fr. It is known, however, that they realized only 12,000fr. at the Ivry sale in 1884; the two together were sold for 180,000fr. Another picture by an artist of the French School, 'La Promenade Galante,' fetched 15,600fr. The fine Watteau, 'Les Amants Endormis,' two lovers asleep on the bank of a stream, was in the collection of the Duc de Narbonne, and sold in 1851 for 600fr.; it now brought 152,000fr. A beautiful example of Nattier, a portrait of a lady, believed to be Madame Tocqué, signed and dated "Nattier px., 1740," sold for 65,000fr.

The pictures by artists of the Early English School, some of which were of more than doubtful authenticity, included Gainsborough's half-length portrait of a man (believed to be Sir John Campbell) in blue dress, 65,000fr.; Lawrence's half-length portrait of Miss Day, 43,000fr.; two by Reynolds (a half-length portrait of a gentleman in green dress, 33,000fr.; and a half-length sketch for the portrait of Lady Stanhope, 10,000fr.); and a picture ascribed to Romney, with the title 'La Jeune Laitière,' said to represent Lady Hamilton, 30,000fr. There was also a portrait in *gouache*, catalogued as by Gainsborough, but sold as by an artist of the English School, called 'Méditation,' a nearly whole-length of a lady in yellowish dress, seated in a woody landscape, wearing a large black "Gainsborough" hat with feathers and yellow ribbons. This realized 65,000fr.

The most important of the four portraits in pastel by La Tour was that of the engraver Schmidt, a half-length. This was engraved by L. Monziès, and at the sale of the Collection Laperlier in 1879 realized 4,150fr.; it now fetched 77,000fr. A half-length of the artist himself, strongly reminiscent of those at St. Quentin and in the Louvre, brought 70,100fr. It may be the same "très beau pastel, portrait de La Tour, par lui-même," which was sold for 15fr. 95c. at the sale of the collection of Maurice (himself painter to the Empresses Elizabeth and Catherine of Russia) in 1820. The half-length portraits of the Countess of Coventry and of 'Milord Comte de Coventry' fetched 72,000fr. and 36,000fr. respectively. Three pastels were by J. B. Perronneau: portrait of Marie L. C. F. Colette de Villiers, 10,600fr.; portrait of a gentleman, half length, in grey dress, 20,000fr.; and portrait of a lady in a *costume du bal* of blue muslin, with a blue mantle over her shoulders, 26,000fr.

Pictures by modern French artists formed an important feature of the sale. There were two of Corot: 'Le Pâtre,' from the Sanmarcelli sale of 1895, when it was called 'Le Chevrier,' and realized 25,000fr.; it now sold for 47,000fr.; and 'Etaples,' 31,000fr. H. Daumier's 'Les Amateurs' sold for 15,300fr. in the Georges Feydeau sale, 1901, and now advanced to 17,100fr. E. Delacroix's 'Hercule et Alceste,' signed and dated 1862, which fetched only 8,000fr. when it was sold in 1888, now brought 17,400fr. The seven by Diaz de la Pena included 'Le Printemps,' 1863, 50,000fr.; 'L'Automne dans la Forêt,' 1866, 45,000fr.; 'La Mare aux Chênes,' 35,500fr.; 'La Clairière dans la Forêt,' 16,100fr.; and 'La Sœur Aînée,' 12,000fr. Jules Dupré's 'La Mare' fetched 60,100fr., and 'Le Troupeau au bord de la Mare,' 34,000fr. Th. Rousseau's fine 'La Mare dans la Forêt,' sold by M. F. Petit in 1875 to M. Vince for 2,500fr., now realized 110,500fr.; and C. Troyon's 'Vaches à la Lisière d'un Bois,' 40,100fr.

The most important of the water-colours was 'Les Enfants' by Decamps. This advanced from 7,000fr. in the Moreau-Nelaton sale of 1900 to 10,600fr.

The sale on Tuesday produced a total of 2,722,630fr., the whole sale thus showing the heroic figures of 5,198,031fr. for 177 lots. A few only of the principal articles on the second day can be mentioned. A panel of old Beauvais tapestry, 'Les Sœurs de Psyché,' with subjects after François Boucher, 3 mètres 55 cent. by 4 mètres, realized 300,000fr.; the two companion panels, of the same height, but narrower, 'L'Abandon' and 'Le Vannier,' together realized 158,000fr. Two panels of Gobelins tapestry, with designs after Berain, Gillot, and Watteau, 'La Diseuse de Bonne Aventure' and 'Le Jaloux,' each about 3 mètres 60 cent. by 3 mètres 25 cent., brought 158,000fr. Four panels of old Beauvais tapestry, with subjects from 'Don Quixote,' went for 200,000fr. Among the furniture the finest piece was a Régence bureau in marqueterie of satin-wood, with rich bronze mounts, which went for 115,000fr.; in 1894 it was bought at the Josse sale for 50,000fr. High prices were also paid for Chinese porcelain, old furniture, and objects of art generally.

W. Roberts.

SALES.

Messrs. Christie sold on the 2nd inst. the following. Drawings: H. More, Rough Weather in the Mediterranean, 78*l.*; A Sunny Afternoon in the Solent, 75*l.* Sir J. Gilbert, Ready, 78*l.* Pictures: J. W. Godward, Venus at the Bath, 178*l.* G. Stubbs, Two Gentlemen going out Shooting, 105*l.* Benjamin Constant, Salome, 115*l.*

The same firm sold on the 4th inst. the following Drawings: T. S. Cooper, Five Cows by a Stream, 85*l.*; A Cow and a Group of Sheep near a Pool, 65*l.* C. Fielding, Loch Awe, 69*l.*; A Storm at Sea, with a wreck, 60*l.* J. Holland, The Market-place, Verona, 65*l.* W. J. Müller, Wick Church, 54*l.* J. M. W. Turner, Washbourne, 99*l.*

Fine-Art Gossip.

To-day the distribution of prizes to the students takes place at the Royal Academy.

At the Leicester Galleries last Thursday there was a private view of landscape notes and sketches by Mrs. Edmund Davis, and paintings by M. Jacques E. Blanche.

At the Dutch Gallery, 39, Old Bond Street, oil paintings of Dutch landscapes by Mr. P. J. C. Gabriel are on view till December 30th.

Messrs. Dickinson have on view at 114, New Bond Street, water-colour drawings and oil sketches of Old Paris and Brittany by Mr. James Bolivar Manson.

The first exhibition of sketches, &c., by members of the Arts and Crafts Club will be held at the Modern Gallery, 61, New Bond Street, and will include over 200 works. The private view is to-day, and the exhibition will remain open until January 7th.

The exhibition of the works of G. F. Watts in Edinburgh will close on the 16th. Ninety-six of the best pictures are to go to Dublin, and will be exhibited in the galleries of the Royal Hibernian Academy, opening on January 1st. Sir Walter Armstrong and Mr. Catterson Smith have made the selection.

Messrs. Frost & Reed are showing at their Bristol Art Gallery drawings of the Highlands of Scotland by Mr. C. E. Britton.

At the instance of the International Society of Sculptors, Painters, and Gravers, who organized the recent successful Whistler Exhibition, a special committee has been formed, which has decided that the best memorial to Whistler would be a public monument in Chelsea. It is also proposed that, should funds allow, replicas should be erected in Paris and in the United States. The memorial will be the work of Rodin. Subscriptions may be sent to Mr. T. Stirling Lee, New Gallery, Regent Street.

The death is announced of Henry Hugh Armstead, the well-known sculptor, who was made R.A. in 1879. He executed several of the figures round the Albert Memorial, the Tennyson Vase, the Packington Shield, and the Outram Shield. His designs include the large fountain in the forecourt of King's College, Cambridge, which is more attractive than his London decorations at the Colonial Office and elsewhere.

On Saturday last Bouguereau's successor at the Institut was elected. There were ten candidates, and it was not until after five ballotings that the choice fell on M. François Flameng, his nearest rival being M. Tony Robert-Fleury. The new member is a son of the well-known engraver M. Léopold Flameng, and received a medal at the Salon of 1879. At the same meeting it was announced that the Prix Doublemard, of the value of 1,800 francs, had been awarded to M. Ponsard, the young sculptor; the second prize going to M. Moncassin.

The want of space at the Luxembourg Museum has for some years prevented the whole of its pictures being hung at the same time, and the question of the transference of the contents to some other quarter is being discussed by the fine-art authorities. The expulsion of the "congrégations" has resulted in the Séminaire of St. Sulpice becoming vacant, and it is possible that this place will be converted into a municipal museum, with the Luxembourg pictures as a nucleus. But the building will have to undergo very considerable alterations before it can be adapted to the requirements of a picture gallery.

Miss Betham-Edwards writes from Villa Julia, Hastings, concerning the late M. Crauk:—

"French municipalities never lose an opportunity of enriching their museums with native art, often founding, indeed, special museums in commemoration of gifted townsmen. Such is the magnificent David Musée at Angers, and on a smaller scale the collection of Max Claudel's works at Salins, in the Jura. Valenciennes, the birthplace of Gustave Crauk, has not been slow to follow this excellent example. The Musée Crauk of that city, founded some years since, contains no fewer than 200 works of this distinguished pupil of Pradier—groups, busts, replicas, casts, and studies; and others are to be added. When complete, this museum will be a marvellous record of artistic labours, commencing with the Prix de Rome in 1851, and not terminating in the tombal monument of Cardinal Lavigerie in 1899. English frequenters of Paris will remember the lovely group in the Luxembourg, 'La Jeunesse et l'Amour,' and 'Le Faune et l'Amphore' in the beautiful old gardens of that palace. The best known of his statues to insular visitors is of course the fine figure of Coligny in front of the Temple de l'Oratoire, Rue de Rivoli. It is not surprising to learn that only in 1889 was the statue of the great Huguenot inaugurated. During the Ultramontane *régime* of the Second Empire and the reactionary years of the MacMahon Presidency no such commemoration was possible. This work is certainly one of the finest of the many modern statues now meeting the eye at every turn. With intellectual vigour unimpaired, Crauk worked in his Paris studio till within a few days of his death.

"During last September I frequently enjoyed the hospitality of the sculptor and his accomplished wife at Meudon, where we were near neighbours. I was, indeed, to have been honoured by sitting to him for a bust in the spring; and hardly was I settled at Hastings for the winter when I heard that he had passed away, happily dying in his sleep and after no prolonged suffering."

The deaths have been announced during the last few days of several well-known French artists. M. Lionel Bonnemère (son of the author of the 'Histoire des Paysans') was born at Angers in 1842, and was an artist of merit, a dramatic author, and a collector; he studied under Barye, and frequently exhibited; he wrote much on folk-lore subjects, founded the Société Artistique et Littéraire de l'Ouest, and was President of the Société Préhistorique.—M. Martial Thabard, who died at Clamart at the age of seventy-four, was a well-known Limousin sculptor; he studied under Duret, and is represented by a marble statue in the garden of the Palais Royal.—M. Joseph Caraud, who died at the age of eighty-five, was a native of Cluny (Saône-et-Loire), studied under Abel de Pujol, and received medals at the Salon in 1859 and 1861; he was a constant exhibitor at the Salon of scenes from domestic life.

The now famous 'Pietà' of Villeneuve-lez-Avignon, which figured at the Exposition des Primitifs Français in 1904, has recently been hung in the Louvre, where it is to remain. It was attributed in the catalogue to Nicolas Froment d'Uzes, who also painted the 'Buisson Ardent' which was borrowed for the same exhibition from the cathedral of Aix-en-Provence, and the date was approximately fixed at 1470. M. Henri Bouchot has lately made an interesting discovery on the frame of the 'Pietà,' the name of the donor, "Honorat Raousset," of whose family there are still representatives.

We refer in our 'Literary Gossip' to the gift of M. Thiers's furnished house to the Institut of France; and during the last few days another noble gift of a similar nature has been announced. Madame J. Comte (better known, perhaps, as Madame Armand Hayem) has given to the Société des Artistes Français a spacious house and a large park at Montlignon as a retreat for old artists. M. Tony Robert-Fleury has examined the place, and speaks in the highest terms of the gift.

The membership of the Society of Antiquaries of Scotland now numbers 706. The next volume of the *Proceedings* will contain the results of the Society's excavations upon four prehistoric forts in Argyllshire and of the Roman fort of Rough Castle, on the Antonine Wall. The excavations at the Roman fort of Barhill, also on the Antonine Wall, will be described in the next volume of the *Proceedings*. The military station at Newstead, Melrose, is the largest known in Scotland, and the excavations there, under the superintendence of Mr. James Curle, have yielded surprising results. A public appeal is to be made for funds to complete the researches here.

MUSIC

THE WEEK.

Queen's Hall.—*Symphony Concert.*

Mr. Henry J. Wood remains faithful to Mozart. At the head of the programme of last Saturday's Symphony Concert stood an Adagio and Fugue in C minor by that composer. Mozart and Beethoven were both worshippers of Bach, and they both understood how emotion gained in power when backed by intellect; but they must have felt how impossible it was to beat their predecessor in his own particular line. Yet how they profited by his teaching is shown in the finale of the 'Jupiter' Symphony and the 'Zauberflöte' Overture of the one, and in some of the fugatos and fugal movements of the other. In the C minor Fugue in question there is undoubted skill and strength, yet it is not exempt from a certain dryness. But the introductory Adagio, though full of scientific harmonies, is also full of feeling and poetry—one of many movements which create wonder as to how the development of Beethoven's genius would have been affected had Mozart lived and laboured another ten or twenty years. The fugue was originally written by Mozart in 1783 as a duet for two pianofortes, but he transcribed it for strings and added the Adagio in 1788. We may add that the autograph of the transcription of the fugue is in the British Museum, and it is one of no small interest, for it shows how carefully the composer worked. With the exception of a bass note doubled or a chord or two in the coda, the piano duet was strictly in four parts. These were written out by some one in open score, and underneath Mozart wrote his score, altering especially the semiquaver passages near the close, so as to make them suitable for strings. Near the end, too, he added a fifth part for double-basses, indicating that the first notes of the groups of semiquavers should be held by those instruments as crotchets.

The performance of Dvorák's 'New World' Symphony was a triumph for Mr. Wood; it testified to the immense trouble he must have taken with his new men. Signor Busoni was the pianist; but notwithstanding all his fine playing, he could not convince us that Liszt's A major Concerto is an interesting work.

Bechstein Hall.—*Miss Fanny Davies's Brahms Concert.*

Miss Fanny Davies gave a Brahms concert at the Bechstein Hall on Monday evening. The question has often been mooted as to whether it is wise to devote a whole programme to the works of one composer. As a rule we regard it as a mistake. In the present instance, however, Miss Davies had secured the services of Herr Mühlfeld, the well-known Meiningen clarinettist, and it was therefore natural enough that the two Sonatas in F minor and E flat for clarinet and pianoforte should be included; also that the pianoforte solos should be by Brahms. The two sonatas, first performed in London by the same two artists at St. James's Hall, June 24th, 1895, are characteristic works. The Allegretto of the first represents the composer in a genial mood; for the rest the music is somewhat austere. The second is on the whole far more genial. Herr Mühlfeld is not only an able performer, but also a most sympathetic interpreter of the music of Brahms, while of Miss Davies the same may be said. The opportunity, therefore, of hearing the music under such conditions was an exceptional one. The rendering was excellent, though, owing to the lid of the pianoforte being raised, the balance of tone between the two instruments was not always quite satisfactory. Miss Davies played as solos the Variations on an Original Theme, Op. 21, and a group of short solos beginning with the Ballade in D, Op. 10, No. 2, one of Brahms's most lovely creations. All were rendered with skill and devotion.

The Life of Johannes Brahms. By Florence May. 2 vols. (Edward Arnold.)—*Johannes Brahms als Mensch und Freund.* Von Rudolf von der Leyen. (Düsseldorf and Leipsic, K. R. Langewiesche.)—A short time ago we reviewed the first volume of a biography of Brahms by Max Kalbeck, and now we have a complete 'Life' in two volumes. Both authors in their enthusiasm for the composer are apt to forget that too little is better than too much. In the English volumes under notice there are many unnecessary details about "successful" performances, enthusiastic audiences, &c., also anecdotes which could easily have been compressed. On the whole, however, they form an interesting work. There is nothing really new either in the relation of Brahms's life or in the accounts of his art-work. The author's acquaintance with the composer began when she was a student, and in an introductory chapter she has given particulars of her own acquaintance with him. These are welcome in that they are told naturally; moreover, they afford genuine glimpses of the man Brahms. There is one pleasing feature in this 'Life.' The author's admiration for the composer is naturally great, otherwise she would not have written these volumes; she sees no necessity, however, to malign the founders of the New-German School. In writing about Brahms's compositions she states that "my aim has not been a technical one," yet what she has to say is none the worse on that account. There are certainly too many superlatives, and there is an occasional tendency to exaggerate. Brahms's First Symphony, we read, "remains unsurpassed in workmanship and sustained loftiness of idea." Hanslick greatly admired the composer, yet in criticizing this same work he is more careful; no composer, he remarks, approached "so nearly" to the works of Beethoven as Brahms. The name of Beethoven reminds us that in an ably written appendix—an essay, in fact, on 'Absolute Music and Programme-Music'—that composer is said to have "sketched a purely instrumental tenth symphony." Beethoven intended to write such a work, and in one of his latest sketch-books there are twenty bars marked *presto* and five of a theme, both fragments, according to Schindler, referring to a tenth symphony. But of any actually sketched symphony there is no trace.

The booklet by Rudolf von der Leyen offers another private view, if it may be so called, of Brahms. The latter often visited Crefeld, where he went to conduct his music, and he was the guest of Rudolf von Beckerath, uncle of the author of this book, in which are recorded many worthy sayings and doings of Brahms. Here are two of the former. Schumann was often the subject of conversation, and Brahms related how when in the asylum at Endenich he asked for a Bible, but the physicians, thinking this a clear symptom of brain disease, refused the request. Brahms added, "Those fellows did not know that we North Germans want the Bible every day, and never let a day pass without it." Again, Brahms was once at Roveredo, and, pointing to a statue, inquired whose it was. "Rosmini, a theologian and a philosopher," replied a friend; but Brahms mumbled, "To be both is impossible: a theologian can never be a philosopher."

Musical Gossip.

Miss Nora McKay, a native of Queensland, gave a violin recital at Bechstein Hall yesterday week. There are now many clever violinists before the public, and it is difficult to render justice to all. This young lady, who has studied under M. Ovide Musin at the Liège Conservatoire, deserves, however, mention. Her tone and technique are excellent. Her rendering of Max Bruch's 'Scotch' Fantasy showed good taste, while in Bach's G minor Sonata there was something more than mere skill. Miss McKay ought to take high rank as a serious artist.

Miss Maud MacCarthy, the Irish violinist, will make a first appearance in Germany at Cologne, at the Musikalische Gesellschaft concert to be given this afternoon under the direction of Herr Fritz Steinbach.

As a commemoration of the 150th anniversary of the birth of Mozart, Messrs. Breitkopf & Härtel will publish a second edition of the splendid Köchel thematic catalogue of the composer's works, which has been revised and augmented by Paul Graf von Waldersee. A fourth edition of the first part of the standard biography of Mozart by W. A. Otto Jahn, under the editorship of Hermann Deiters, will also be issued.

M. Raoul Pugno, the French pianist, has been giving recitals at New York and Boston with marked success.

A "Tschaïkowsky" Concert in aid of the suffering Jews in Russia will be given at Queen's Hall on Wednesday afternoon, the 13th inst. Mr. Mark Hambourg and his two brothers, Boris and Jan Hambourg, and also Mr. Landon Ronald, have kindly offered their services.

PERFORMANCES NEXT WEEK.

Sun.	Sunday Society Concert, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
Mon.	Mr. H. Brockbank's Vocal Recital, 3, Steinway Hall.
—	Mr. Karl Klein's Violin Recital, 3, Bechstein Hall.
—	London Choral Society's Concert, 8, Queen's Hall.
—	Miss Dorothy Bridson's Violin Recital, 8.30, Æolian Hall.
Tues.	Miss G. Sunderland and Mr. F. Thistleton's Concert, 8.30, Broadwood's.
Wed.	Tschaikowsky Concert, 2.45, Queen's Hall.
—	Royal Amateur Orchestral Concert, 8.30, Queen's Hall.
Thurs.	London Symphony Concert, 3, Queen's Hall.
—	Chamber Concert, 4.30, Leighton House.
—	Broadwood Concert, 8.30, Æolian Hall.
—	Strolling Players' Concert, 8.30, Queen's Hall.
Fri.	Royal Academy of Music (Students' Concert), 3, Tenterden Street.
—	Mr. Plunket Greene's Vocal Recital, 3.30, Æolian Hall.
—	North London Orchestral Concert, 8, Portman Rooms.
—	Mr. Charles Norman's Concert, 8.30, Æolian Hall.
Sat.	Mr. A. Hetts's Vocal Recital, 3, Æolian Hall.
—	Mosart Society, 3, Portman Rooms.
—	Orchestral Concert, 3, Queen's Hall.
—	London Symphony Orchestral Concert, 3.30, Crystal Palace.

DRAMA

Dramatic Gossip.

The death of Mr. W. H. Vernon removes from the stage at an advanced age an actor of some note. His appearances in London have been incidental rather than constant, and absences in America, Australia, South Africa, and elsewhere, have diminished public knowledge concerning him. His first appearance was made, it is said, at the Adelphi, Liverpool, in 1864. In London he was seen at the Globe Theatre, formerly in Newcastle Street, on November 28th, 1868, as the hero of Byron's 'Cyril's Success.' He played at many different houses in London, attaining, perhaps, his high-water mark as Sir Geoffrey in 'Mammon,' Mr. Sydney Grundy's adaptation of the 'Montjoie' of Octave Feuillet, given at the Strand on April 7th, 1877; and subsequently as Sir Horace Welby in Grove and Merivale's 'Forget-Me-Not,' in which he succeeded Mr. Forbes Robertson, supporting Miss Geneviève Ward as Stéphanie de Mohrivart. An old-fashioned actor, he played in London and the country an indefinite number of parts in tragedy, comedy, and farce. Those who had seen him recently were scarcely surprised at the news of his demise.

Almost at the moment when Mr. Frederick Harrison is producing his latest novelty at the Haymarket, his former partner in management is mourning the destruction of the Avenue Theatre, which he expected to open early in the new year. It is a curious circumstance that the Avenue—which, according to popular report (in this case, we believe, trustworthy enough), was run up in haste in order to be forced upon the constructors of the Charing Cross station—should owe its collapse to the accident to that edifice.

Schiller's 'Robbers' has been revived by the German company at the Great Queen Street Theatre, with Herr Hugo Waldeck as the hero. It is played in a style more conventional than that to which the company has accustomed us, and inspires but moderate interest.

Shakspearean performances have been arranged by Mr. Tree at His Majesty's Theatre for Christmastide. They will consist of 'The Tempest' (in which Mr. Tree will reappear as Caliban, Miss Tree as Ariel, and Mr. Lionel Brough, who has recovered from his illness, as Trinculo) and 'The Merry Wives of Windsor,' for which Miss Ellen Terry has been re-engaged. A single evening performance of 'An Enemy of the People' is also to be given.

An adaptation by Mr. Louis N. Parker of the 'Harlequin King' of Herr Lothar will supply Mr. Lewis Waller with his next novelty, when such is required. Herr Lothar will, it is anticipated, superintend the rehearsals of a piece which has enjoyed much popularity in Germany and at various continental centres.

'Noah's Ark' is the title of a Christmas novelty to be given at afternoon representations at the Waldorf Theatre. Miss Madge Lessing and Mr. H. Paulton will play the principal parts.

The notion of producing a Christmas piece at the Garrick has been abandoned, its place being taken by afternoon presentations of 'The Merchant of Venice.'

Mr. Gillette will, it is announced, turn his back upon London. Such resolutions are not always maintained, and we hope that Mr. Gillette, when he is provided with a piece worthy of his talents, may relent.

'A Midsummer Night's Dream' now concludes at the Adelphi at a reasonable hour. How much money and prestige are lost by the necessity of similar announcements managers seem unable to realize. The majority of new performances suffer from the inability of managers, authors, and actors to grasp the fact that enough is better than a feast.

Mr. Durward Lely is, it is announced, associated with Mr. William Mollison in the forthcoming management of the St. James's.

Mr. Fred Terry and Miss Julia Neilson will open the New Theatre on Boxing Day with a revival of 'The Scarlet Pimpernel.'

Mr. Martin Harvey has appeared at the Coronet Theatre, playing in course of the week 'The Only Way,' 'A Cigarette-Maker's Romance,' and 'The Breed of the Treshams.'

To Correspondents.—W. M. R.—C. H.—C. A.—received.
J. W.—Many thanks.
W. A. P. M.—Better suited for 'N. & Q.'
No notice can be taken of anonymous communications.

LITERATURE

NORMAN ENGLAND.

The Political History of England.—Vol. II. *1066-1216.* By G. B. Adams. (Longmans & Co.)

England under the Normans and Angevins. By H. W. C. Davis. (Methuen & Co.)

THE trend of historical study in the mediæval period has been so largely, of late years, towards institutional, financial, social, and economic subjects that it almost savours of reaction when a return is deliberately made to Freeman's conception of true history, and when the lines of construction adopted are apparently those of Lingard; for his is the work which, we read, the advance of historical knowledge has now rendered obsolete.

That the first volume before us should have been entrusted to an American professor is a fitting compliment to the remarkable and somewhat unexpected development of the study of mediæval history among younger American scholars. Nor is there anything to suggest that the author is other than an Englishman, except such not unwelcome comparisons as impart freshness to the point of view. We read, for instance, of the important charter granted by Henry I. at his coronation:—

> "It opens a long list of similar constitutional documents which very possibly is not yet complete, and it is in form and spirit worthy of the best of its descendants.....It is as businesslike and clean cut as the Bill of Rights, or as the American Declaration of Independence when this last gets to the business in hand."

The period from the Conquest to the death of John presented to a new writer at once an advantage and a difficulty: an advantage in that it admits of being treated as a consistent whole, and a difficulty in that "a continuous history of the whole age," as Prof. Adams observes, has been given us recently by Sir James Ramsay, while Miss Norgate has similarly written "a continuous history" of the larger portion of it, both of them at considerable length. And, of course, the first forty years are fully covered by the bulky, but already antiquated tomes of Freeman.

The author's conception of his period is seen in his agreement with Delolme that "the explanation of English liberty is to be found in the absolute power of her early kings," a statement which, in his opinion, "the most careful modern student can do no more than amplify." Norman centralization is to him a great fact of the Conquest, and proved "of the utmost importance in its bearing" on the future history of England. Again, for him the Great Charter marks, at the termination of his period, the opening of a new age, the close of that development towards absolutism, since the accession of Henry II., which had been dangerously accelerated under Richard I. and John. It is not in these pages for the first time that he discusses the struggle for the Charter, and insists that its importance must be found in the underlying principle that the king must keep the law, the old existing law. Mr. McKechnie's monograph on the Charter was probably published too late for consideration by Prof. Adams, whose own special point is that the law of the Charter was the feudal law, that its provisions were absolutely just and the barons wholly in the right. Of popular misconceptions of its nature he naturally makes short work. We do not propose to institute comparisons between his work and that of his predecessors; his own brief comments on their books are just, and to the point. It can hardly, however, be denied that the fullness of their references and notes gives them for the student a peculiar value, which the scheme of the present work precludes. Only in exceptional cases are references added, the bulk of the statements, it appears, being "common knowledge." The result is that we are left to wonder what is the "good evidence" on which Hugh of Grantmesnil is known to have been established in his Hampshire "possessions" in 1067, and who is the chronicler who alleges that Walter Giffard was Earl of Berkshire. Doubtless, however, the author has been extremely careful in avoiding errors, or even slips.

The outspoken criticism of Freeman's work, with its "very serious faults" and its "personal bias," prepares us for the author's acceptance of the most recent theories on the very important question of feudalism and its introduction at the Conquest. Distinguishing between the political and economic aspects of feudalism, he pronounces the former, without hesitation, to have been "introduced fully formed" at the Conquest, and he rightly rejects Freeman's strongly-held belief that the oath of allegiance at Salisbury in 1086 was "an act of new legislation of great institutional importance." The influence of the Norman Conquest on the Church receives at his hands great attention, and he holds its insular tendencies to have been very sharply checked by its consequent close incorporation in Western Christendom. We are glad to see that he accepts the now growing view that the importance of the reign of Henry I. has been unduly obscured by our lack of full knowledge, and that Henry II., as is certainly the case, did but develope his grandfather's work. Indeed, he carries very far the reaction visible of late years against excessive admiration of the latter king's achievements.

In the author's treatment of his theme the most prominent feature is his sobriety of style—a sobriety which, it must be confessed, imparts a certain dullness. He possesses, however, the merit of a sane and broad outlook, viewing, for instance, together the accessions of Henry I., Stephen, and John as illustrating constitutional theory and practice. As an example of suggestive comment we may cite his remark that

> "in Ranulf Flambard we have an instance of the constantly recurring historical fact that the holders of absolute power are always able to find in the lower grades of society the ministers of their designs, who serve them with a completeness of devotion and fidelity which the master rarely shows in his own interest and often with a genius which he does not himself possess."

The book, excellent in paper and print, is equipped with an adequate index and a table of contents, but has no preface and only two maps. The appendix on authorities, primary and secondary, will be found distinctly helpful, and we are glad to see the work of Stubbs ranked "first and foremost" among that of modern scholars.

Mr. Davis's is the second of the six volumes in which the new history of England under Mr. Oman's editorship is to be completed. Appearing as it does immediately after the volume just noticed, it is difficult not to institute some comparison between them; and it may be well, in any case, to explain that Mr. Davis's volume is less exclusively political; that it carries the narrative further down by including the long reign of Henry III.; and that, unlike the other volume, it contains copious foot-notes and an elaborate bibliography. The central idea, however, of both works is the same, namely, the careful incorporation in a continuous history of England of all the results of recent research, and the provision, as Mr. Oman puts it, of something "between school manuals at one end of the scale and minute monographs at the other." The same idea of a *via media* is seen in the "dividing up English history into periods that are neither too long to be dealt with by a single competent specialist, nor so short as to tempt the writer to indulge in that over-abundance of unimportant detail which repels the general reader." We think that under present conditions the plan is sound, and that there is much justice in Prof. Oman's plea.

In our opinion he has been singularly fortunate in entrusting to Mr. Davis the volume dealing with the years 1066–1272. Those who have made a study of the period must be well aware of the extreme difficulty of keeping in touch with all the work bestowed on it of recent years, not only in this country, but in France and Germany as well. Prof. Liebermann in Germany and Dr. Gross in America have, it is true, done splendid service in providing guides to this literature, but the reader will be struck by

the wide grasp that Mr. Davis shows of these scattered studies and by his thorough assimilation of their contents. Nor does he confine himself to repeating the conclusions arrived at by their authors: he weighs them, and where he differs, does so without hesitation. He dismisses, for instance, the absurd view of Rössler in his 'Kaiserin Mathilde,' that "Dominus" meant Regent, and describes his defence of the Empress's character as based "upon the flimsiest arguments." The bibliography alone would make his work of real value: at once copious and concise, it is rendered the more helpful by the few words on the character and the merits of a work. Thus we are rightly told that Madox's 'Exchequer' is "valuable for the many citations from unpublished Exchequer records," and that Wace's 'Roman' is "drawn chiefly from extant sources, and has been over-rated." Palgrave's work is "learned and suggestive, but often fanciful and uncritical." It is characteristic, perhaps, of an Oxford history tutor to shrink from any comment on Freeman's volumes while wholly rejecting his views, as Mr. Davis does, for instance, in his remarks on Harold and the monarchy, and on that "Mickle Gemot indeed," as Freeman loved to term it, in 1086, at Salisbury.

To the author's mastery of his sources as well as of the literature on his subject is added the gift of writing in a bright and interesting fashion; while the excellent table of contents and the marginal headings will be found useful pilots by the teacher and the student. Art and architecture, law and learning, industry and social subjects, are all touched upon to good purpose, and in our opinion the book does credit to the Oxford school of history, and more especially to Balliol, where Mr. Davis is tutor. In a very brief preface he gives unity to his theme by pointing out its salient features and the developments that took place within its limits. Seven appendixes on special points and eleven maps complete the volume, save for two awkwardly constructed chart pedigrees in which the sainted Edward appears as the offspring of parthenogenesis, while good Queen Maude lingers on for seventy years beyond her death.

It is because we think that further editions of this book may be called for that we would draw attention to a few points calling for amendment or correction. The statements that "William landed at Hastings" and that the first Earl of Warwick was "Hugh" instead of Henry, are, no doubt, mere slips; but there are other matters of more consequence. Foot-note references are to be commended, but when, for the calculation of "140 hides, or 16,800 acres," being afforested in the New Forest, we are referred to the 'Victoria History of Hampshire,' it is disquieting to find that work alleging no acreage, and even warning the reader against the obsolete view that the Domesday hide had a fixed area. Mr. Davis, we observe, dwells on the harrying of "Yorkshire," between the Ouse and Tees, in 1069; and the "example" he unluckily selects is the "district of Amunderness." Prof. Oman laments that large historical atlases "are not to be discovered in every private library," but it is almost inconceivable that a writer on this period should not know that Amounderness was the projecting district on the west coast between the Ribble and the Lune. More serious is the definite statement that "the first extant charter conceding to a town the privilege of electing its own magistrate is that which the [Hubert Walter] granted to Lincoln in the year 1194," and the endeavour to connect with Hubert the policy of such grant. The statement may be based on Stubbs's 'Select Charters,' and seems to be Miss Norgate's view; but it ought to be known nowadays that this privilege was granted by Richard I. to Colchester in 1189, and by his brother to Nottingham about the same time. On names Mr. Davis appears to be curiously weak. We read that Richard "commissioned for his own use a vessel called the *Esnecca*," though, as in his father's time, the *esnecca regis* was simply, as we should now say, the king's yacht. We have "Æthelwig" of Evesham, but "Ægelwine" of Durham; and where two of a family bore the same name they are distinguished as "Ralph" and "Ranulf," as "Giselbert" and "Gilbert." Hugh of Avranches, Hugh the Fat, was Hugh "Lupus" to heralds only; and Robert of "Mellent" was of Meulan. In spite of exigencies of space, room should have been found to mention Henry's forest fines in 1175–6 and Mr. Round's demonstration of the vast dominion assured by Henry to Stephen's son William, as a potent means of securing his own succession to the throne.

The very useful bibliography would be improved by adding the published Pipe Rolls of Richard I. and 3 John, which are strangely overlooked, and by including Miss Bateson's monograph on the Laws of Breteuil and Blaauw's work on the Barons' War. Mr. Birch's book on Domesday might be replaced by 'Domesday Studies,' and Turner rather than Manwood is now the authority for forests; Clark's 'Military Architecture' should certainly not be mentioned without a reference to recent destructive criticism of his views.

We have reserved to the last the author's discovery that in the year of the Assize of Clarendon the rolls show "that there was much building of new gallows and blessing of them by priests," from which we learn that gallows were needed, that their name was "polis," and that priests were called in to bless them! There are still, it would seem, some strange things taught at Oxford.

My Travels in China, Japan, and Java, 1903. By H.H. the Raja-i-Rajgan Jagatjit Singh of Kapurthala. With Illustration and Map. (Hutchinson & Co.)

The Raja of Kapurthala, in North-Western India, left Bombay on October 18th, 1903, and returned to the same port towards the end of the following January, after a journey by sea and land of over twenty-five thousand miles through the more important portions of Mr. Archibald Little's "Far East." In this excellently printed and well-illustrated volume he has recorded his impressions (always well worth recording) after a straightforward fashion of his own, peculiarly refreshing in these days of monstrous travel-books padded out with triviality, sentiment, and pretentious philosophy. The Raja is never dull; his descriptions are terse, lively, and accurate; his opinions are marked by candour, good sense, and liberality; and the quality of humour is by no means absent from these pages. The volume has the additional recommendation of freedom from *Tendenz;* it is, in fine, the honest expression of an Indian prince who goes forth to see the more or less Europeanized Oriental world beyond his own, and does see it clearly and without bias or prejudice.

He complains at the outset, and with reason, of the stiffness of the P. and O. management which compelled him to travel by French or German boats. After a cursory look at Colombo and Singapore our author arrived at Saigon, where he was officially entertained. There he found the hotels dirty and the cuisine poor, but "beautifully laid-out boulevards and well-kept roads and squares." Most of the residents he found to be "Government officials of sorts"; life was rendered tolerable by a theatre said to have cost a million of francs, where during six months of the year a French company played operatic pieces. "Every Frenchman.....was dressed in white duck.....all day and in the evening." Speaking of the privileges enjoyed by Indian princes under the British *raj*, he was told "Ça n'entre pas dans l'esprit français." The Raja had an interview with the Governor, M. Beau, but found "his manner distinctly reserved."

Shanghai has a population of 700,000, inclusive of some 8,000 Europeans and Americans. It is governed by a curiously mixed municipality, and tribunals where a Chinese judge sits with a foreign colleague, by rotation English, German, French, and so forth. A very interesting account is given of the Jesuit Orphanage at Zikawei, some five miles from Shanghai, where Chinese youth of both sexes are taught various crafts by the fathers in full Chinese dress, including the tail. At Tientsin the Raja saw the German and American barracks: the German soldiers had a serviceable look, the American marines rather that of uniformed civilians. The native Indian officers had a high opinion of the Japanese, a very poor one of the Russians. What struck the Raja more particularly was the conspicuous absence of the Chinese uniform amid the motley of the foreign soldiery.

A capital account is given of a visit to the most remarkable of modern Chinese statesmen, Yuanshihkai, who manages to introduce progressive ideas without offending the conservatism of the Dowager-Empress—to a very astonishing extent, if recent news from the Middle Kingdom be correct. In Manchuria—this was just before the war—the Raja found the Russians pleasant fellows enough, but complains that at the hotels at Dalny and elsewhere the use of a bath was not clearly understood. At Port Arthur the garrison of 50,000 men was constantly exercised—some proof that the Russian plea of being taken unawares by the Japanese was unsound.

Crossing over to Nagasaki, the Indian prince was officially received by the Governor, attired in a gorgeous uniform covered with decorations. His nervousness —not a Japanese defect usually—was so

marked that he forgot his English and had to use an interpreter. On the railway journey to Shimonoseki the Raja noticed that even Japan was not free from the horror of ugly advertisements dotted about the fields bordering the line. Everywhere on the journey he was received with the utmost respect; the officials bowed profoundly, and remained motionless and uncovered till the train was out of the station. At a garden party at the British Legation at Tokyo he was introduced to a number of Japanese ladies, who did not shine in European costume, for which their squat figures and singularly awkward gait are not well adapted. The ladies were very shy, said "Oui" or "Yes," giggled, and bowed. Among themselves there was no familiarity; they were distant and ceremonious. The same may be said of the men; the Japanese are curiously distrustful of each other, and, with some exceptions, they dislike the foreigner probably more than under the old *régime*, principally because they find his ways, which they suppose themselves bound to adopt more or less, uncomfortable and constraining. If the Japanese would only be natural, as the foreigner for the most part is, friendly intercourse, instead of being regrettably rare, would become a more frequent pleasure in Far-Eastern life. At a ball given at Yokohama not a single Japanese lady, other than the wife of the Governor, was present, but the Raja did "not notice any disposition on the part of Europeans to be exclusive in Japan." He went to the usual autumn Imperial garden-party, and was presented to the Empress, "solemn in manner, and in face absolutely expressionless." There he met the Chinese Minister, who, on being asked how China would view the recent occupation of Mukden by the Russians, "gave a broad grin and offered a cup of tea and some of Wills's cigarettes." Who that has been in the East does not remember with some amusement and more distaste the "Chinese grin" and the "Japanese smile," which is not Æginetan exactly? At a party given by Lady Macdonald the Raja had the honour of dancing with the Princess Nashimoto (Under the Pear-Tree), who is said to be the fairest lady in Dai Nippon. We can well believe it, for two portraits of her—one in Japanese and one in European costume—are alike charming.

Space does not allow of any comment on the author's record of what he saw in Malaya and in Java—his experiences in the latter island were especially novel and interesting—but we cannot refrain from giving an item in his portraiture of the Sultan of Johore. This "horsey" potentate lost most of his teeth through a kick from one of his steeds; "a false set is now worn, and, curious to relate, two of the upper and two of the lower front teeth have diamonds set in them, which, when he opens his mouth to laugh or to speak, shine brilliantly."

The Raja's English is throughout good—more than good, for it is as simple and idiomatic as that of a well-educated English gentleman should be, and the illustrations as excellent as reproductions of photographs can be. Among the best are the photogravure of the Raja himself and that of 'His Highness and Party,' in which appears the charming figure of H.H. the Rani Sahiba.

Scotland and the Union. By William Law Mathieson. (Glasgow, MacLehose & Sons).

Mr. Mathieson continues his book, 'Politics and Religion in Scotland,' from 1695 to 1747. He deals with a topic in which readers who desire moving incident find little to interest them, except the Jacobite risings and the Porteous riot. Mr. Mathieson, however, works with his habitual steadiness through the commercial condition of Scotland up to the East India Company, and the Darien disaster. He supposes Paterson, invited to form an East India Company, to have shown zeal, but really to have brought things round to his romantic Darien project. His subscribers—at least the directors—certainly fell in with his idea, and we do not perceive that a Scottish East India scheme would have been permitted to be more successful. Darien proved that England and Scotland must be united, or must fight, and beneath all the intrigues for and against the Union this idea lay, and potently acted for the acceptation of the treaty. These intrigues make dull reading; the debates were "disorderly" indeed, despite the eloquence of the impracticable Fletcher of Saltoun. Simon Fraser (Lovat) adds amusing points, which Mr. Mathieson has not space enough to unfold in their humorous aspect. The stories of bribery in the cause of union have, we think, the flimsiest basis, but, as Mr. Mathieson says, the Kirk behaved very well on the whole, thanks to the sagacity of Carstares and other leaders. He traces the rise of heresies and parties within the Kirk clearly, though we might be told more about the Macmillanites and their singular founder. In short, the book is sensible and lucid, if it "does not overstimulate."

The rest of our brief space must be devoted to rebutting a charge of extreme folly and base perfidy made against the Chevalier de St. George. Berwick says in his 'Memoirs' (Petitot et Monmerqué, lvi. 246) that Mar, in *September*, 1715, received a secret order from James "to go at once into Scotland and take up arms." This is nonsense: Mar left London for the Highlands on *August 2nd*, 1715, and took up arms on September 6th. Mr. Mathieson remarks that "Berwick's very explicit evidence is inconsistent with James's letter to Bolingbroke of September 23rd.....but this letter was probably intended to deceive." Now Berwick knew at the time what passed. As he says (*op. cit.*, p. 231), James, deceived by false news from Father Callaghan, appointed a day (August 10th) for a rising, and meant to go on July 30th to Dieppe: Berwick says Havre, which is wrong. By July 25th James knew that he had been deceived, and on July 26th bade Bolingbroke countermand "Lord John Drummond's message to Scotland." That, said James, was the very first thing to be done. Bolingbroke (who communicated everything to Berwick) instantly dispatched Allan Cameron to Scotland. Bolingbroke and Berwick knew all about the matter by the end of July, and James could not, therefore, write a lying letter "to deceive" them on this point on September 23rd. A messenger leaving France for London on July 19th would reach Mar presently; and Mar left for Scotland on August 2nd. But he might easily have had time enough to receive James's countermanding order before raising the standard on September 6th. There was a mystery always, as Hill Burton remarks, concerning his original commission. We now know that he had none. Even that which was made out for him by James on September 7th, and received on October 8th, was blank where the names of his council should have been inserted, "not to be filled up till there is absolute necessity for it" (Hill Burton, viii. 284). James acted hastily in his message to Mar of mid-July, 1715; but Berwick had been urging him to make all haste, telling De Torcy that, if he did not, he "might be a cardinal, but never a king." On discovering his error, James did not conceal it from Berwick or Bolingbroke: he did his best to repair it, and he wrote a perfectly truthful letter on September 23rd. All the facts may be studied in 'The Stuart Papers' (Historical MSS. Commission, 1902, vol. i. 372-426), a work very little cited by Mr. Mathieson, but indispensable to the historian of 1715.

English Men of Letters. — Sir Thomas Browne. By Edmund Gosse. (Macmillan & Co.)

It is not altogether surprising that the recent celebration of the tercentenary of Sir Thomas Browne's birth has called forth less general enthusiasm than his fame warrants. In the minds of his numerous admirers Browne excites a feeling akin to personal affection; but it must be admitted that neither his themes nor his treatment of them make a universal appeal. His recondite matter, his roving speculations, his fantastic perspective of events, his "enigmatical epithets," are all alike disconcerting to the plain man. That "great beast," the multitude, which he despised and feared, instinctively resents Browne's imperturbable aloofness from the common affairs of life, and his personality is not of the positive type which takes the public imagination captive. If it be too harsh to say that he was not of the stuff of which martyrs are made, it is at least certain that he ran no risks in support of views which he professed to hold. The gentle egoist found the world a most comfortable place for a successful physician, and speaks with pious petulance of attempts to remould the social conditions in which he himself had greatly prospered:—

"Statists that labour to contrive a Commonwealth without poverty, take away the object of charity, not understanding the Common-wealth of a Christian, but forgetting the prophecie of Christ."

This may, or may not, be sound sense, but it is eminently characteristic, and at the same time eminently unpopular. In things spiritual and temporal Browne's whole attitude is one of compromise. He could

never hear the Ave-Mary bell without an elevation; yet he remained in the Anglican fold, and endured the Puritan supremacy without serious discomfort. So far as he could be convinced of anything, he was a convinced royalist; yet his spirit of sacrifice stopped short at refusing to subscribe to the funds of the Parliamentary party, and he lost no opportunity of flaunting his indifference, like a trophy. At the beginning of the Civil War Browne issued the authorized edition of the 'Religio Medici' as unconcernedly as though the drums and tramplings of battle had never reached him. Soon after the surrender of the king to the Scots, Browne thought it an opportune moment to ask how the camels of Bactria came to have two bunches on their backs, and whether a hedgehog's left eye fried in oil was really a specific against insomnia—a point which "requireth circumspection"; and a few months before Cromwell's death a discourse on "the quincuncial ordination of the ancients" occurred to Browne as particularly timely. By his own account of the matter he had a genius for romantic friendship, and certainly he appears to have been a most affectionate father; yet his friendships are not quixotic, and when he forgets the precise number of his children and their respective ages, his detachment from earthly affections becomes provoking. As Hazlitt said, "the Antipodes are next-door neighbours to him, and Doomsday is not far off." This is a great privilege, but it seems to imply a want of common humanity, for which an occasional *O altitudo!* is no substitute. And the Philistine finally quotes Browne's candid admission:—

"The world that I regard is myself; it is the microcosm of my own frame that I cast my eye on; for the other, I use it but like my globe, and turn it around for my recreation."

This description is not inaccurate, so far as it goes, but it is incomplete, and therefore misleading. In Mr. Gosse's brilliant monograph, the baffling, elusive individuality of Sir Thomas Browne is most skilfully revealed, and the learned physician proves to be as subject to personal likes and dislikes as ordinary mortals. The scanty record of his early years is enriched by vivid sketches of university life at Montpellier, Padua, and Leyden during the seventeenth century, and the more ample material of the later period is fused into a lifelike portrait. With all his affectation of indifference, Browne is decidedly human in the warmth with which he repudiates the notion that the 'Religio Medici' was to some extent inspired by Montaigne: "whereas, to deal clearly, when I penned that piece, I had never read three leaves of that author, and scarcely any more ever since." Though this statement is perhaps substantially correct, it may easily be too sweeping in form, for, as Mr. Gosse notes, Browne's memory was not always clear as to the extent of his obligations to predecessors: his recognition of indebtedness to Aldrovandi and to Kirchmann is decidedly inadequate. Such collateral lapses, as he would say, are not to be too strictly sifted; nevertheless he had a keen eye for them in others, and, though he made no public protest, he hesitatingly confided to his 'Common Place Book' that Thomas Philipot (whose name, by the way, is wrongly given in Wilkin's edition of the 'Works,' vol. iv. p. 386) had "transcribed half a side" of the 'Urn Burial' in his 'Villare Cantianum,' without mentioning the author. Another amusing instance of Browne's interest in mundane things is found in four ingratiating letters discovered by Mr. Gosse, and addressed to Oldenburg, the Secretary of the Royal Society. These are not printed at length, but enough is quoted to prove that the writer was exceedingly eager to belong to the Society of which his eldest son was a prominent member. This ambition was not gratified, owing, Mr. Gosse thinks, to the fact that Browne had become notorious as a dabbler in astrology. The explanation is plausible, for Browne was on intimate terms with Arthur Dee, a brother-practitioner at Norwich, whose egregious tales he swallowed without hesitation; but it seems just as likely that the chief stumbling-block in the way of Browne's election was the splendour of his style. Passages in Sprat's 'History of the Royal Society' appear almost as though they were directed against Browne personally. If Browne had read Sprat's semi-official condemnation of "luxury and redundance of speech," "amplifications, digressions and swellings of style," when it first appeared in 1667, his letters to Oldenburg in 1669 would probably have been couched in less obsequious language. He could not have failed to see that his election was hopeless.

Mr. Gosse's appreciation of Browne's achievement is at once generous and discriminating. He frankly abandons Browne's claim to be regarded as an original thinker, and his analysis of the 'Religio Medici' is a good example of sympathetic and searching criticism. We are not, however, tempted to accept his theory that "religion and science in water-tight compartments, with no possibility of interchange between them," was Browne's ideal (p. 29). Mr. Gosse returns to the point on pp. 65-7, developing his view at considerable length, and citing the parallel cases (as he considers them to be) of Pascal and Faraday. His thesis is "important, if true," and it is argued so adroitly that it deserves careful examination. It would be rash to deny positively that examples of such intellectual insulation may occur, and it is possible that Faraday's is one of these rare cases; still, all Mr. Gosse's ingenuity fails to persuade us that either Pascal or Browne ever separated faith from reason in the absolute fashion suggested. As no man is precisely what he was ten or twelve years earlier, it is true that the Pascal of the 'Pensées' is not in every respect identical with the Pascal of the 'Préface d'un Traité du Vide'; but the differences between the youth of twenty-five and the man of thirty-seven are, we think, much less radical than Mr. Gosse assumes. In the 'Pensées' Pascal does, no doubt, contend scornfully enough that reason is impotent in dealing with metaphysical and transcendental problems; but this is nothing new, for, in the 'Préface d'un Traité du Vide,' he had already admitted that the methods of reason do not apply to theology. There is a difference, but it is a difference of tone and phrasing: the change is far more apparent than real. And with regard to the theory of water-tight compartments, though Pascal would limit the exercise of reason to judging the "apparences du milieu des choses," he nowhere asserts that reason cannot apprehend the Divine Idea in these "apparences." Moreover, his reservations must be read in connexion with the momentous admission in the last of the 'Provinciales' that reason is free to decide questions of fact: as the Scriptures and miracles are facts, it follows that reason is free to exercise itself upon them, and to disengage their elements—natural or supernatural. But, however this may be with respect to Pascal, and granted that water-tight compartments do exist in some few minds, it seems to us that Sir Thomas Browne's mind was not so constructed. His intellect was too mobile to submit to any rigid system, and when he piques himself on believing "a thing not only above, but contrary to reason, and against the arguments of our proper senses," this is less a deliberate personal act of faith than a reminiscence of Tertullian. When he speaks more directly for himself, the regurgitation from one compartment to another is distinctly audible:—

"Thus we are men, and we know not how; there is something in us that cannot be without us, and will be after us, though it is strange that it hath no history what it was before us, nor cannot tell how it entered us."

It will hardly be disputed that, in this impressive passage, the supposed barrier has given way.

In matters of philosophy, theology, and science, Browne is often but a confused echo of far-off voices. He is now, as Mr. Gosse justly says, "interesting almost exclusively to the student and lover of style," and no praise can be too high for him at his best. But it is as well to bear in mind that as a master of style he is not so isolated as he is frequently represented. Might not the following be a rejected paragraph from the 'Urn-Burial'?—

"Time hath his revolution, there must be a period and an end of all temporal things—*finis rerum*—an end of Names and Dignities, and whatsoever is terrene, and why not of De Vere? For where is Bohun? where's Mowbray? where's Mortimer? Nay, which is more and most of all, where is Plantagenet? they are intombed in the Urnes and Sepulchres of Mortality. And yet let the Name and Dignity of De Vere stand so long as it pleaseth God!"

This is from Sir Ranulphe Crewe's judgment in the Oxford peerage case, delivered while Browne was still an undergraduate at Broadgates Hall. Mr. Gosse, enthusiastic admirer as he is, has no tolerance for the verbal eccentricities which Browne affected—"pensile," "paralogical," "piaculous," "illaqueation," "ambilevous," "sopition," and so forth. With this weakness for repulsive learned inventions Browne combined a curious and rather unaccountable liking for provincial forms, some of which he could scarcely have heard much before he was forty years of age. One of these is "leucomb," a puzzling word which Mr. Gosse elucidates with the help of Mr. Austin Dobson; it is still current in Norfolk and Suffolk, and will be found, *s.v.* "lucam," in Prof. Wright's 'English Dialect Dictionary.' It would be strange to find that what has hitherto passed for one of Browne's happy phrases was merely

a printer's error, and this actually seems to be the case in the sentence: "To be knaved out of our graves, to have our skulls made drinking bowls.....are tragical abominations escaped in burning burials." So it runs in the three earliest editions of the 'Urn-Burial,' and in subsequent reprints; unluckily the list of errata in the third edition, printed during the author's lifetime, bids us read "gnawed" for the more picturesque "knaved."

When all deductions are made, Browne remains one of the most curious and attractive figures in the history of English literature. He was not a great intellectual force; he was more interested in books than in men, and infinitely more interested in himself than in all the rest the sun goes round. Nevertheless, he was an incomparable artist, a virtuoso in whose hands words produce all the emotional effects of symphonic music. To the master of exquisite expression Mr. Gosse does complete justice in the last and best chapter of a book which deserves warm praise for its judicial temper and fine insight.

One or two slight slips should be corrected when the volume is reprinted. Guy Patin's letter, quoted on p. 59, was written not to Belin, but to Charles Spon, a physician in practice at Lyons; in the last line of the verses quoted on p. 117 the correct reading is "ignis lambens"; the reference on p. 165 should be to 'A Letter to a Friend.' We should have liked to know if Mr. Gosse accepts the 'Fragment on Mummies' as authentic, or whether he rejects it as a clever hoax by Crossley. But it is manifestly impossible to discuss every minute point in the compass of two hundred pages.

NEW NOVELS.

The First Mrs. Mollivar. By Edith Ayrton Zangwill. (Smith, Elder & Co.)

Mrs. Zangwill is to be congratulated alike upon her choice of a subject and its treatment. For a twice-married man to make respect for the first wife's memory his guiding rule in all relations with the second is certainly, as the experience of many stepchildren shows, anything but usual. But the theme gains in originality what it loses in verisimilitude, and although we are half inclined to think that the modish touch of supernaturalism introduced gives rather too palpable a turn to the pervading sense of inevitableness, we admire the tact and humour displayed in avoiding anything *outré* or inhuman. The heroine, the second Mrs. Mollivar, is a modern woman of the most sympathetic type, such as we have all known and liked. Her husband, ponderous and thick-witted though he be, is as natural and lovable a specimen of that frequently lovable class, the British Philistine, as we could desire—occasionally—to meet. We are made so thoroughly to realize the mutual affection of this seemingly ill-assorted couple that the cruelty of the final catastrophe gives rise to a feeling almost of resentment, but from the artistic point of view it is doubtless much to be preferred to the conventional happy ending.

The Conquest of Canaan. By Booth Tarkington. (Harper & Brothers.)

Readers of Mr. Tarkington's new book should not be discouraged by the first chapter. It is laboured and artificial, and the conversation of the club of village cronies, which it reports at much length, is tiresome rather than humorous. But in the second chapter the author gets fairly into the swing of his story, and thenceforth is certain of holding the attention of the reader. The way in which "Joe Louden," the disreputable lawyer, and the associate of all the vagabonds and criminals of the village of Canaan, Indiana, gradually conquers the admiration and respect of his fellow-townsmen, is extremely well told. Exception might be taken to the apparent lack of a sense of morality on the part of Joe and his creator. We are expected to admire Joe, not only because of his bravery and cleverness, but also, as it will seem to most readers, because he preferred to be a drunken outcast rather than a sober, well-behaved citizen. So far as the story teaches any lesson, it is that all respectable people are narrow-minded and dishonest, and that all the really desirable virtues are to be found in the dissolute and disreputable. This gives a somewhat unpleasant flavour to the book, which is otherwise a thorough credit to the author.

Dick Pentreath. By Katharine Tynan. (Smith, Elder & Co.)

It is easier to make your hero win the universal admiration of his fellow-actors than the reader's. Dick Pentreath's attractions overwhelm us in the reading; but his "bonny" face and "ambrosial" curls are the lifelong admiration and envy of more than one woman. The truth of a well-known proverb is even vindicated by the attitude of many of them towards his dog. The course of true love does find earthly fulfilment here, but it is interrupted by a scene of drunkenness of a most perfunctory and amateurish description. The author can do better than this.

For Richer, for Poorer. By Edith Henrietta Fowler (Mrs. W. Robert Hamilton). (Hurst & Blackett.)

Some years ago Miss Edith Fowler wrote a story, 'The Professor's Children,' which met with great and well-deserved popularity. It is almost to be regretted that she ever strayed from her obvious sphere as a writer of child-literature. The heroine of 'For Richer, for Poorer,' might have been a charming child, but as a girl of over twenty, who thinks herself in love with a particularly weak-kneed curate, is almost captured by a wicked country squire, and by the sheer force of her own ingenuousness and ignorance works her will with a cross-grained old parson, she is not convincing. Miss Fowler's descriptions of nature are pretty, so are her reflections upon humanity; but the latter show no particular depth or insight.

MEMOIRS.

Mr. Fisher Unwin publishes in two handsome volumes *The Memoirs of Dr. Thomas W. Evans: Recollections of the Second French Empire*, edited by Dr. Edward Crane. Large extracts in the French language have already been published from the memoirs of the famous American dentist of the Emperor and Empress of the French. The account of the escape of the Empress has been freely quoted and has become familiar. There are some other passages of historical interest or importance in the book. Many of them deal with the proposed recognition either of the belligerency or of the diplomatic existence as a nation of the Southern States during the Civil War. We are sorry to say that we cannot acquit Dr. Evans of the charge of deliberately attempting to make mischief between the United States and the United Kingdom over this matter. The fact that Napoleon III. counted on the break-up of the Government of the United States is sufficiently proved by his engaging in the Mexican adventure, and tempting Maximilian, by the support of a French army, first to accept the throne, and then to remain in Mexico after the game was up. According to Dr. Evans, however, the British Government, "contemplating an intervention in American affairs," desired the co-operation of the Emperor, who declined it: "The Emperor never wholly gave up the thought that ultimately the North would succeed. In his opinion it would be a misfortune for the country to be divided." Dr. Evans tells us over and over again that he "could furnish, were it necessary to do so, innumerable proofs." He then states that the Emperor told him "that he had received a communication from London, in which he was seriously advised, urged, and even begged to recognise the Southern Confederacy." In another passage he writes: "Much pressure was brought to bear on him from several foreign Governments—especially the English—to induce him to recognise the Southern Confederacy." It will be observed that it is suggested that these were positive and official communications. The reader will draw a conclusion which is exactly opposite to the truth, namely, that the British Cabinet acceded to suggestions of the kind, while as a fact it negatived them. Dr. Evans becomes dithyrambic on the decision of the Emperor in favour of "a desire for the triumph of right and justice, and the advancement of civilisation and happiness among men." The fact remains that the success of the Mexican scheme, with which the very existence of his empire was bound up, depended absolutely on the triumph of the Confederacy, and was rendered impossible by the triumph of the North, which was that "triumph" to which the words just quoted from Dr. Evans allude in the contrary sense. The moment that the success of the Union became certain Napoleon III. received the orders of the American Secretary of State to withdraw from Mexico, and he withdrew.

Another historical point in which Dr. Evans goes wrong, but we think this time in good faith, concerns what he believes to have been an "understanding between France, Austria, and Italy.....immediately preceding the declaration of war, in 1870." Italy was never a party to any such understanding, as is abundantly proved by those papers of Prince Napoleon which have been published. Dr. Evans probably shared the curious delusions which he describes as having prevailed at the palace on September 4th, 1870. He complains "that no military force was used to protect the Legislative Body," and states that, though "warned by the Empress that an insurrectional movement would in all proba-

bility take place," General Trochu did not prevent it. It was recognized as absolutely certain by the French army in the field, by the Emperor (then a prisoner), by every one in London, by the press of the whole world, that the revolution of September 4th could not possibly have been prevented by military means. There were virtually no troops in Paris, and the few there were would not have fired on the National Guard. The National Guard were unanimously in favour of revolution. They only differed on the question of whether it should be a forced abdication or a declaration of the deposition of the dynasty. The majority of the fighting men in Paris were in favour of the latter course, and the moderate minority were not prepared to fight the majority of the battalions on the point. The defence of the Chamber was attempted. All the gendarmerie and any remnants of the depôts of the Guard on whom the slightest reliance could be placed were drawn up to resist mob violence in the neighbourhood of the Palais Bourbon. After some hours of parley it was found that these troops also sympathized with the general feeling.

There are some other interesting points contained in the volumes. A most curious early photograph of the lady called by Dr. Evans the Countess of Téba—in other words, the Empress Eugénie—is reproduced. The date given to it is 1852; but we should have thought that it was much earlier. It seems to represent the lady in her early life in Spain, rather than in her society life of the last year of the Presidency or first year of the Empire. Everything, of course, about the Second Empire was perfect in the eyes of Dr. Evans. He goes so far as to suggest that the society which surrounded the family of the Empress "from her earliest childhood.....was one of great intellectual breadth." Dr. Evans states that when the Emperor left France after Sedan "his personal fortune was no greater than it was when he came to France twenty-two years before." It is surely no secret that the "personal fortune" of the Prince President was a heavy minus quantity. There is a curious reference to the name of one subsequently connected with the Dreyfus case — Col. du Paty de Clam — as having been in Germany in 1870, "indicated to me, both by his fellow-officers and the German military authorities, as possessing their entire confidence."

Among odd mistakes we notice the statement that the marriage in January, 1853, of the Emperor to the Empress followed the ceremonial "employed at the marriage of Napoleon and Josephine." When we recall the circumstances in which the young General Bonaparte found his wife, the suggestion is, of course, ludicrous as regards the original wedding. But it also seems inappropriate if the allusion is to a later religious wedding secretly performed by Cardinal Fesch, which, as the curé of the parish was not present, even as witness, was held to lack full validity. Dr. Evans informs us that the Empress competed for the prize for the best design of the new Opera-House in Paris, and received "an 'honourable mention.'" There is a foot-note at p. 576 which calls the army of Bourbaki "the army of the Loire." We are unaware of any foundation for the use of the phrase in this connexion. The elements of which the army of Bourbaki was composed were drawn from all parts of France, and included some troops which at one time had formed part of the army of the Loire; but we do not think that they took with them the name of their former force. We do not know what Dr. Evans thought in later years had become of the Suez Canal, as he states that "this great work.....slipped for ever out of the feeble hands that held it." It is, of course, the fact that the Suez Canal is now in the hands which at all times "held it," the body of directors, chiefly French, and largely controlled by the old Lesseps group. By an arrangement to which the Company were freely consenting parties, a number of English directors, representing great shipping firms, were added to the Board; but there has been no change such as the words of Dr. Evans would suggest. The representation of the British Government by an official director, with some voting power, in respect of a portion of the Khedivial shares, has had little importance in connexion with the working of the Canal. Dr. Evans approves in the Second Empire even its restorations of the ancient monuments of France, a subject on which we should have thought that there were hardly now two opinions. He quotes to its conclusion Lord Malmesbury's praise of the treatment of Carcassonne by Viollet-le-Duc, under the Emperor's orders:—

"In every part of France he is making archæological restorations, and his active mind seems as much interested in this pursuit as it is in politics: but.....as far as I can observe, the French do not appreciate his efforts as they deserve."

There are a few slips in French, which in the event of a second edition should be corrected.

As a grandson of Lord Aberdeen and the son of a canon of Salisbury Cathedral, the anonymous author of *Fifty Years of Failure* (Smith & Elder) does not take much identifying. On p. 178, however, he considerately reveals himself in a foot-note as Mr. Douglas Gordon. Why he should have been at pains to write about well-known publishing institutions and familiar clubs under the thinnest of disguises we know not, unless he wishes to impress the more unsophisticated among his readers. In fact, his autobiography, even when viewed with the most charitable eye, must be looked upon as a somewhat otiose production. He has, no doubt, pursued several callings, but the Bohemianism in which he takes pride is of a mild description, and his stories are often *vieux jeu*. Let "Botticelli is not a wine, but a cheese," serve as a specimen. Cabmen's repartees and the jests of "my friend Barry Pain" appear at long intervals as the plums of this pudding. The Riviera earthquake seems to have been the most thrilling incident in a career embracing the British Museum, publishing, the secretaryship to the Arundel Society, and the chairmanship of a Board of Guardians; and Mr. Gordon has known various painters of repute.

Miss Laura Hain Friswell was inspired to write her reminiscences, *In the Sixties and Seventies* (Hutchinson), by H. D. Traill, and that kindly critic's advice cannot be called misplaced. As the daughter of a writer of some repute in his day, who devoted his scanty leisure to good works among the poor, she has known many interesting people, and has been present on important occasions like the farewell dinner to Dickens before his second visit to the United States. Cruikshank, Anthony Trollope, Tennyson, and Lytton are among the well-known characters who appear in her pages. As a girl she danced with Louis Blanc, who was hopelessly at fault in the lancers; and it was to her father's house that Irving, full of misgivings, went for encouragement after the first night of 'The Bells.' Miss Friswell's stage recollections were, indeed, well worth preserving, since she met the majestic Miss Glyn off the boards and was acquainted with Mr. Toole when he was a rising comedian, abounding in practical jokes. She also describes with faithful vivacity authors of the second rank like 'Orion' Horne, and Rice, Besant's collaborator. 'In the Sixties and Seventies' is unfortunately disfigured by a good deal of triviality; some egotism, for which, however, the author apologizes handsomely; and one or two indiscreet passages. Is it altogether seemly, for instance, to recall the nervousness of a living poet in a strange drawing-room a good many years ago, together with abundant details of his personal appearance? It is a pity that Mr. Traill could not have edited these reminiscences as well as prompted them. They would have shrunk considerably in bulk, we imagine, and the residuum would have been better worth reading.

LOCAL HISTORY.

A Calendar of the Lancashire Assize Rolls. By Col. John Parker. 2 vols. (Record Society of Lancashire and Cheshire.)—The Record Society of Lancashire and Cheshire has issued many works of great value to students of local history, and the volumes now under review will take a high place among these, for in editing a calendar of the existing remnants of the Assize Rolls from 1202 to 1285 Col. Parker has done good service in the cause of Lancashire archæology. The Calendar is very full, and although there may be a difference of opinion as to the best form of abstract to adopt in such circumstances, the plan which Col. Parker has chosen certainly has advantages. The abstracts seem to have been made with much care, but we do not like the translation of Latin names of trades into surnames without any warning. For instance, on p. 19 we find Gilbert Tailor de Holaund, where the original has Gilbertus sutor de Holaund. It is, of course, a slip that Col. Parker has translated this as "tailor" instead of *cobbler*; but the plan is misleading, and Col. Parker is not consistent, for on the opposite page he prints Hugh le Seriaunt, and, a few lines above, Thomas de la legh. Why should not these be also translated and appear as Hugh Sergeant and Thomas Legh, or at least Hugh the Sergeant and Thomas of the Legh? The retention of *de* before surnames has its advantages, but it loses all force when used indiscriminately. William de Ferrers, Earl of Derby, is permissible; but Litecock de Salford, where Salford is obviously used simply as the place of abode of an obscure hind, is a mistake. As 'The Lancashire Pipe Rolls' must have been of immense service to Col. Parker, it is a little surprising to find him spelling the name of its erudite editor, Mr. William Farrer, incorrectly.

The index is excellent, and Col. Parker has added very much to its value by grouping the various spellings of names under the modern form and adding cross-references where needed.

Ludlow and Stokesay. By Algernon Gissing. (Dent & Co.)—Mr. Gissing has made a book pleasant to read and full of interesting facts picturesquely told, but in his desire to avoid the form of the ordinary handbook much has been sacrificed. Although the visitor to Ludlow and Stokesay may drink deep of the spirit of these places when reading Mr. Gissing's delightful monograph, some will long for the simple and unadorned marshalling of facts to be found in the everyday guide. Judged solely on its merits as a literary performance, the book is a success, although Mr. Gissing occasionally is guilty of such phrases as "You have no great difficulty in getting lost in these woods to-day," and can speak of the murmur of the river "forming so inseparable a part of the landscape." There are indications that history is not Mr. Gissing's strong point, but he touches so lightly on the subject that he avoids committing himself at all seriously. Mr. New's illustrations are altogether delightful, and were it for nothing else, the book is worthy of a place on the shelves of all who love our old English towns, even though they may never have been in Shropshire.

Gretna Green and its Traditions. By Claverhouse. (Paisley, Gardner.)—There is much scattered information to be found here and there regarding Gretna Green weddings, but it is not easy to find anything of a satisfactory kind that is not a mere fragment. Something of this sort has been attempted in the little book before us, which in some respects will be found very useful. Fragments in the way of biography are given of the Gretna Green "priests," as they were called, and we believe the list to be nearly complete. A few of the runaway marriages have the adventures on the journey described in some detail—especially that of the Earl of Westmoreland with Miss Child, the banker's daughter. This is taken from the 'Memoirs' of Elliot, the most noteworthy of the Gretna "priests." He seems to have kept a register, but we are told that it was destroyed in whole or in part by an accidental fire. David Lang officiated from 1792 to 1827. The most important match with which he was concerned was that of Edward Gibbon Wakefield and Miss Turner, a girl of sixteen who was abducted from a boarding-school at Liverpool by means of a forged letter. The reason of this cruel fraud was that the young girl was the heiress to a large property. Wakefield was prosecuted and sentenced to three years' imprisonment, and an Act of Parliament annulled the marriage. The Scottish marriage law, differing as it does from that of England, is a stone of stumbling to many persons who live south of the Tweed, and we are not much better informed as to what was the English equivalent before the Marriage Act of 1754, which had the effect of introducing some amount of order. Even now lawyers are not agreed as to whether certain irregular marriages which took place before that time possessed legal validity. We know of an instance where a marriage was contracted in the early part of the seventeenth century, between two Yorkshire people of gentle blood, in a fell in the presence of "a popishe priest." There were witnesses who might have been produced to depose to the fact, but its legality does not seem to have been disputed. Had it been contested great difficulties might have arisen. A similar practice was followed in Scotland by some of the Roman Catholic families, in times when their religion was under the ban alike of Church and State; but no great care was taken to conceal them, for though they are said to have taken place at night, candles were burnt, so we may assume the full service was used. Writers of plays may not have had much knowledge of English law, but they were by no means ignorant of popular sentiment. The plot of Aphra Behn's 'Town Fop' indicates that the auditors were expected to understand that something like the Scotch marriage law existed in this country at the time when it was written. There can be no doubt that the Fleet marriages and those of a like character celebrated elsewhere, though unseemly and irregular, were good in law until the passing of the Act of 1754. The Gretna Green marriages and those of like character which took place intermittently all along the Border were not then legislated against. They therefore became much more common when the Fleet marriages were done away with; but they were scotched, though not absolutely killed, by the Act of 1856, by which a residence in Scotland of twenty-one days (since reduced to fifteen) by each of the contracting parties was made compulsory. There are still a few runaway marriages at Gretna Green, but these are mostly, the writer says, among people "who are attracted by the halo of ancient romance, or desire to keep up family traditions." We regard them, on the contrary, as mere childish frolics. There are also, we believe, a few poor people (commonly farm servants, and nearly all of them Scotch) who avail themselves of this manner of wedlock on account of its cheapness. That it was always the village blacksmith who acted as "priest" has become a matter of belief so firmly established that we do not think any amount of circumstantial evidence will ever destroy it. The author, however, regards it as a mere fable.

ORIENTAL LITERATURE.

The Tadhkiratu 'l-Awliyá (Memoirs of the Saints) of Muhammad ibn Ibráhím Farídu'ddín 'Attár. Edited in the Original Persian, with Preface, Indices, and Variants, by Reynold A. Nicholson. "Persian Historical Texts," Vol. III. (Luzac & Co.)—The two volumes that have already appeared in the series of "Persian Historical Texts," edited by Prof. E. G. Browne, have taught us to expect that high standard of excellence and that accuracy of scholarship characteristic of this eminent scholar's work. The present volume in no way disappoints such expectations. Mr. R. A. Nicholson, whose valuable contributions to the history of Sufiism are familiar to all Persian scholars, was admirably fitted to undertake an edition of such a collection of biographies of the Sufi saints as this by Farídu'ddín 'Attár. 'Attár was a prolific writer, and every student of Persian literature knows something of his writings; a little work of his, the 'Pand-náma,' is one of the first text-books placed in the hands of the beginner, and has been published and republished times without number; but his 'Tadhkiratu 'l-Awliyá,' which is of especial interest as being the earliest collection of the lives of the saints in the Persian language, is now printed in Europe for the first time, having hitherto been available only in one or two Indian lithographs. This edition will therefore be welcome to every lover of Persian literature, and, written as it is in an easy and simple style, the book is a very suitable text for the young student. Though the work is included in a series of "Historical Texts," the writing of history was by no means the intention of the author; his interest was not in dates, or even in the facts of the lives of his holy men; he sought rather to produce a work of edification, which by recording the pious utterances of the saints might incite to godly living and turn the thoughts of men to heavenly things. We have thus presented an aspect of the religious life of Islam which has received scant notice from European writers. Of the forty saints (belonging for the most part to the first three centuries of the Hijrah) whose biographies are given in this volume, few English readers are likely to be acquainted with any except Ibráhím ibn Adham, Leigh Hunt's Abou ben Adhem. The story on which this well-known poem is based may be quoted here as a specimen of the contents of this Muslim 'Vitæ Patrum':—

"One night I saw Gabriel, in a dream, come down from heaven to earth with a book in his hand. I asked him what he was about to do. He answered: 'I write the names of those who love God.' 'Then write my name,' I said. 'But thou art not one of them,' he answered. 'But I am one that loves those who love God.' He pondered awhile, then spake: 'The command of the Lord has come, saying, Set down first the name of Ibráhím.'"

One of the features that distinguish this series from previous editions is that each work is provided with a full index of names, persons, and places. Mr. Nicholson has introduced a novelty in this volume by giving the line as well as the page in each case. In a language like Persian, which knows no capital letters, this device makes the work of finding any particular reference much more rapid and easy. But the index could be made still clearer if two separate types were used to distinguish the number of a page from that of a line. As it is hoped that these editions will be welcomed in the East, it is desirable that the best possible model of an index should be given to those Oriental editors who may be desirous—as some certainly are—of following Western methods in such matters.

Mírzá Muhammad Qazwíní, a Persian scholar now residing in England, contributes a brief sketch of the life and writings of 'Attár and a critical introduction on the language and historical value of this particular work.

Elementary Arabic: a Grammar. By Frederic Du Pre Thornton. Edited by Reynold A. Nicholson. "Thornton's Arabic Series," Vol. I. (Cambridge, University Press.)—A new Arabic grammar requires an apology, since there are already nearly a dozen available in the English language, to say nothing of those written in French or German. But the present work has a character of its own. In the first place, it is intended as an introduction to the study of Wright's 'Arabic Grammar,' which every scholar of Arabic must read, but which, owing to its very completeness, is difficult and perplexing to a beginner. The numbers of the sections in Wright's 'Grammar' have been retained, so that the present abridgment serves as a table of contents and a means of ready reference to the larger work. In the second place, nearly all the examples, both words and phrases, are taken from the author's 'First Reading-Book,' which the student is intended to use side by side with the 'Grammar,' so that he may be saved some of the perplexity which he is apt to feel when begining the study of so unfamiliar a language. This grammar is the work of a very enthusiastic student of Arabic, the late Mr. F. Du Pre Thornton, who devoted many years to the preparation of it and planned three Reading-Books to complete his Arabic series. This work has now been entrusted to the able editorship of Mr. R. A. Nicholson. In the biographical notice of Mr. Thornton, which the editor has included in his preface to the present volume, it might have been mentioned that the University of Cambridge is indebted to Mr. Thornton for the copyright of Wright's 'Grammar,' which he purchased after the death of the author, and presented to the University.

STORIES, OLD AND NEW.

Gesta Romanorum. Translated by the Rev. Charles Swan. With Preface by E. A. Barker. (Routledge & Sons.)—Without ranking as a scarce book, Swan's rendering of the 'Gesta Romanorum' has not of late been commonly encountered; and without being an ideal translation, it is adequate to ordinary requirements. Its inclusion in a series which already comprises the 'Decameron,' the 'Heptameron,' and other works of kindred character is justifiable as well as acceptable, and a place will be gladly accorded it on the shelves of those who prefer bold speech to lurking impurity, and outspokenness to innuendo. Such omissions as have been made (and they are neither numerous nor significant) are in the moralizations or applications, and not in the tales, and affect accordingly portions which, quaint and original as they are, are apt to grow tedious in perusal. Far too well known is the 'Gesta Romanorum' for us to attempt either description or vindication. Its purpose is wholly and seriously for edification, and its aim is as a rule successful. Those familiar with the addresses of the French *prédicateurs* of the fifteenth and sixteenth centuries, such as Olivier Maillard and his kin, know with how much sincerity their least seemly attacks are informed, and perceive how easy it might be to a modern generation to regard as inculcators of immorality those who are its earnest as well as its ostensible repressors. It must not be concluded that

anything in the 'Gesta Romanorum' incurs moral condemnation. Its stories are the same, however, as inspired the sprightly imagination of Boccaccio, animated the pictures of manners which Macrobius interspersed with his antiquarian researches and critical discursions, came with Sir John Mandeville from the East, or lurk in Oriental romance or fairy fable. What most tends to irreverence, though intended to serve a purpose diametrically opposite, is the "application." When the stratagem is narrated by which, according to Ovid or the 'Boke of Troy,' Ulixes discovers Achilles in his female dress, it is not easy, with all our recollections of what has been said by Gladstone or Mr. Lang, to accept a comment such as :—

"My beloved, Paris represents the devil; Helen, the human soul, or all mankind. Troy is hell. Ulixes is Christ; and Achilles, the Holy Ghost. The arms signify the cross, keys, lance, crown, &c."

The notes are drawn largely from Thomas Warton (who, in spite of the vituperation of Ritson, is on the way to regain adequate recognition), Sir Frederic Madden, Douce, and so forth. No historical value—not even so much as attends mediæval chroniclers—attaches to the fables narrated. Not a few of the emperors mentioned are purely imaginary, and we find people associated in action who were in fact separated by centuries. It is needless in the case of a popular reprint to deal with questions of authorship and the like, interesting as these are. A compendious account — historical, bibliographical, and speculative — will be found in the introduction to Gustave Brunet's reprint in 1858 of 'Le Violier des Histoires Romaines.'

The Vrouw Grobelaar's Leading Cases. By Perceval Gibbon. (Blackwood & Sons.)—This book is not to be recommended as a soporific to the nervous; most of the stories contain an element of horror—some a very strong one, but hardly any that is not morally and artistically justifiable. Perhaps most readers will not assent to this statement, and possibly the episodes blackballed would in no two individual cases be the same. For ourselves, if we were inclined to bar one story as revolting it would be 'The King of the Baboons.' Some might choose 'The Hands of the Pitiful Woman'; but on us it does not produce the same sort of effect. The most successful of the stories are "impressions"—brief, sharply bitten, and full of colour. Such is 'Vasco's Sweetheart,' though we own we cannot quite see the connexion with the story of the particular bit of moralizing by which—like most of the others—it is prefaced. We have nothing, indeed, to say against these introductory remarks in themselves—they are, as a rule, admirably in character with the narrator—and the Vrouw Grobelaar herself, with all her prejudices and somewhat trying peculiarities, stands before us as a living, human, and lovable figure. Besides the enjoyment she affords for purely artistic reasons, she is a valuable object lesson on the relation between the Boers and the natives. It is too readily assumed in this country that the Boer practice is invariably and inexorably consistent with the theory as thus stated :—

"Kafirs are *not* men, whatever the German missionaries may say. I do not deny we have a duty to them, as to the beasts of the field; but as for being men, well, a baboon is as much a man as a Kafir is. Kafirs are made to work and ought to work. Did not the dear God make everything for a purpose, and what is the use of a Kafir if he is not made to work?.....Oh, I know the Kafirs. I have seen hundreds of them—yes, and, for the matter of that, thousands. Just beasts, they are—nothing else.....We must hold the Kafirs with a hand of iron, or they will destroy us."

This, no doubt, has sometimes been acted on; but we maintain that Mr. Gibbon is also true to life in describing the holder of these ferocious sentiments as one whose native tenants

"were born on the place and will surely die there, for, though the old lady is firmly convinced that she rules them with a rod of iron, the truth is that she spoils them atrociously; and were it not that there is an excellent headman to her kraals, the niggers would soon grow pot-bellied in idleness..... If punishment should come in question, as when a Kafir waylaid and slew a chicken of hers, she displays so prolific an invention in excuses, so generous a partiality for mercy, that not the most irate *induna* that ever laid down a law of his own could find a pretext for using the stick."

Noteworthy, too, is the feeling shown in 'The Avenger of Blood'—the terrible story of Van der Merwe—driven to his death by the "haunting" of the little native child he had killed—accidentally, it is true, but in brutal recklessness. "What I didn't like about him was his way with the Kafirs"—which she goes on to describe. Too many of us are apt to take for granted that it is the Boers' only way, and to forget that it is occasionally practised by others. Moreover, the Vrouw Grobelaar is by no means inclined to undervalue native opinion—in its place. "Well, you ask a Kafir what that means. Ask an old wise Kafir, not a young 'un that has forgotten the wisdom of the black people and learned the foolishness only of the white."

In 'Tagalash' effective use is made of a Zulu superstition, which Mr. Gibbon has handled very freely (as he had a perfect right to do) to suit his purpose; for the real *Tokolotshe*—at any rate, the *Tokolotshe* of the Umgeni Falls, in Natal—appears in the likeness of "a white child of three or four years." The peculiar blend of South African superstition which has probably grown up among the "coloured folk" of Cape Colony, with their mixed East Indian, Hottentot, Mozambique, Guinea, and Dutch antecedents, has never, so far as we are aware, been analyzed, though we get a few tantalizing fragments of folk-lore in Dr. Mansvelt's 'Kaapsch-Hollandsch Idiotikon,' such as the belief that in *goddeloose-mense-wear*—thunderstorms accompanied by violent hot wind—the souls of wicked men are being driven from the earth, or the equally weird notion (surely of Calvinistic origin) that the art of violin-playing can be learnt by sitting at the cross-roads on a Friday evening, and waiting till the Evil One appears to impart instruction. We fancy Mr. Gibbon must have drawn on this store in 'Counting the Colours,' 'The Peruvian,' and 'The Sacrifice,' though, in the last case, he may have imported his superstition direct, to suit his tale. This story is exceedingly striking in conception, but the working out, somehow, does not satisfy us. The same may be said of 'The Home Kraal'—there is either too much or too little of it; in episodes of this sort every stroke should tell, or the effect is lost.

Mr. Gibbon writes so well that he can treat criticisms with equanimity, and we have two more to make—of a minor character. Occasionally, he seems to forget that Vrouw Grobelaar is speaking, and puts sentences into her mouth which one can scarcely imagine her as using, *e.g.*, "It was a dirty little trade, and there was nothing about the man that streaked it with nobility." "They floundered and splashed, and Andreas half rose from his seat, *with lips clenched on a cry*," "When he reached the garden all was still, and he loosed his malediction upon the night air." Then he has probably (like most people at all proficient in that tongue) gained his acquaintance with the *Taal* by ear, and been misled by his knowledge of German, when writing it down, into the use of such forms as *morder* (*moord*, or is it meant for *moordenaar*?), *bijwohner*, *waapenschauw*, and the surname "Voss," which should surely be Vos.

The Pen of Brahmā: Peeps into Hindu Hearts and Homes, by Beatrice M. Harband (Oliphant, Anderson & Ferrier), is a collection of eighteen short stories, the scenes of seventeen being in the southern portion of the Indian peninsula, that of the last in London: all, as far as we can judge, viewed through the spectacles of a lady missionary, and appealing specially to readers interested in foreign mission schemes who are prepared to classify the worshippers of Buddha and Brahma as "poor benighted heathen." But the pictures of the sadder side of Indian life are not distorted, though their effect may be enhanced by the artist's skill. What is apt to be forgotten or ignored is that seventeen more miserable and degrading tales could be truthfully told of people at home, with an eighteenth to enliven them from sunny India. Miss Harband's work is unquestionably good; she has the gift of observation with sufficient power of expression. The title is thus explained :—

"One of the popular beliefs concerning Brahmā is that at birth he writes upon each child's head its future destiny. The joinings of the bones of the skull are called the letters of Brahmā. Because the writing of Brahmā's Pen is supposed to be unalterable, the Hindu becomes a thorough fatalist. His destiny is written upon his forehead, and nothing which he may do or leave undone can affect it."

The volume is well produced and appropriately illustrated.

JUVENILE BOOKS.

MESSRS. CASSELL & CO.

To renew acquaintance with old friends, who used maybe to present a demure and even sombre exterior, but who now appear adorned by beautiful binding and copious illustrations, is always a joy. *Robinson Crusoe* may no longer appeal to the grown-up people of to-day as being devoid of pathos and sentiment; but the interest of the goat, the parrot, the savages, the footprint, to youngsters is perennial. So, too, the strong human sympathy and pathos of *Uncle Tom's Cabin* are as absorbing to-day as they were several decades ago.—Archibald, the hero of *Archibald's Amazing Adventures*, by Harry Rountree and S. H. Hamer, is invited by Quackles junior to a great meeting, in a cave at dead of night, of the animal world. A story-telling competition is agreed upon as a merry pastime, and the hornbill, the racoon, the chinchilla, and others relate their thrilling personal experiences. The idea is cleverly exploited and makes excellent reading.

Amongst numerous books for the younger members of the nursery we note *Our Picture Book*, *Merry Hours*, and *Tiny Tales*, all collections of short stories and simple verses interspersed with brightly coloured pictures.—Some two dozen stories and accompanying illustrations are to be found between the covers of *The Little Folk's Fairy Book*, by S. H. Hamer. Here is a fresh store of stimulant for the receptive minds of little mortals by whom the warmest welcome is ever accorded to the dramatis personæ of fairyland.—*Surprising Adventures*, by J. R. Monsell, is a small volume for small folk.

CENTURY COMPANY (MACMILLAN).

St. Nicholas has been the close friend of generations of girls and boys. For it Mr. Kipling wrote the jungle stories; Bryant, Longfellow, Whittier, and Tennyson have contributed to its pages; 'Little Lord Fauntleroy' and 'Tom Sawyer Abroad' have been amongst its serials; and it was conducted for more than thirty years by a lady whose name is held in reverent esteem and honour, and whose death in August last left the children of two hemispheres greatly bereaved. *St. Nicholas* has a glorious past; we wish it an even brighter future, and hope that Santa Claus will be prodigal in the dis-

tribution of copies of the handsomely bound half-yearly volume which now makes its seasonable appearance.

DE LA MORE PRESS.

A gift-book of unusual interest is *The Little Black Princess*, by Jeannie Gunn, inasmuch as it deals with an absolutely fresh side of colonial life, and, despite its informativeness, is vastly amusing. It is really a triumph to have made the great totem question as interesting to children as to adults, and to present black-fellow folk-lore in so attractive a guise. Not that the book is all folk-lore—far otherwise; it is, as it claims to be, a true tale of life in the Never-Never Land. Bett-Bett, the little black princess herself, is portrayed with vivid sympathy together with a most lively wit, while the courageous, cheery spirit that pervades the volume gives ample answer to the question why the Briton is so admirable as colonist.

MESSRS. DEAN & SON.

The improvements recently made in the productions called rag-books are strikingly exemplified in *Dog Toby*. Absolutely untearable, even washable, the coloured illustrations by S. Berkeley and E. Richards are brighter and more varied than in many a book printed on paper. Those in search of something which will endure longer than a season in a boisterous nursery would do well to turn their attention to this canine history told in verse by Clifton Bingham.

MESSRS. DENT & CO.

Miss Caroline Brown's rendering of the mad adventures of *Bold Robin Hood and his Forest Rangers* is vivid and vigorous, and her green volume is one of the best Christmas books of the season.—*Bimbo*, by "Auntie Will," is called a "little real story for Jim and Molly." The enjoyment of Jims and Mollies in every home will probably be at least equalled by that of their parents if they read this little book aright. It should be most useful, helpful, and suggestive.—*The School for Donkeys, and other Stories*, by Mrs. Manners Lushington, illustrations by Margaret S. Dobson, displays so pretty a fancy that we wish it was just a little better, for even fairy-tales should have form. The title-story is the most complete, and contains an excellent moral lesson. If the author will train her imagination into shape and leave less to that of the youthful reader, she may become a good tale-teller.

MESSRS. WELLS GARDNER, DARTON & CO.

A few more of the effective pictures by Francis D. Bedford would have enlivened *Two are Company*, by Mrs. E. M. Field, but it is not so easy as it might seem to write an entrancing story in quite short words.—Quaintly pictured and prettily told, the story of *The Little Patched Quilt*, written and illustrated by Mary Gladwin, will assuredly find a welcome in the nursery, where the adventures of little Elizabeth and her patchwork quilt among the Brown Owls and the Sugarloaf Mountains in the Snow Country, ending with her thrilling escape from the Snow Man, should while away a pleasant hour.

MESSRS. GAY & BIRD.

Almost a score of popular stories are retold in simple language by Horace E. Scudder in the *Book of Legends*. It is a most desirable thing that the legendary lore which forms the basis of so much that is noblest in the realm of music and painting should become familiar in early childhood. Lessons may be taught in many ways, and great truths learnt by the reading of these elemental stories.

MESSRS. GREENING.

There is not much to be said in favour of *Blots and Titters*, by Aug. J. Ferreira, a collection of tales of the Wonderland type.

MESSRS. HUTCHINSON & CO.

The compiler of *Oriental Folk-Tales*, illustrated by R. C. Armour, has made a wise selection of typically gorgeous gems from the inexhaustible storehouse of Eastern folk-lore. The result is a volume which forms a fitting prelude to the stronger meat of 'The Arabian Nights.' It is a pity that the setting of these stories is not more attractive.

MESSRS. T. C. & E. C. JACK.

It is unfortunately all too rare to meet with so beautiful a book as *In God's Garden*, by Amy Steedman. What are sometimes called Sunday books are too often mawkish in sentiment, and glaringly crude in colour if illustrated at all. This, on the contrary, is good in matter and in manner. It tells in carefully chosen language the stories of SS. Ursula, Cecilia, Christopher, Martin, and others, and is illustrated by reproductions from masterpieces of Italian art.

MESSRS. LITTLE, BROWN & CO.

Miss Helen Leah Reed, the author of the popular "Brenda" books, provides us in *Amy in Acadia* with an enormous mass of information, historical and topographical. Amy and her mother and her friends spend a summer in Acadia, and as they journey they instruct each other in the history of that ancient and fascinating land. The travellers are not very attractive in themselves, but their conversation is often full of interest.

MR. ERNEST NISTER.

Washington Irving's *Christmas at Bracebridge Hall* is charming in every detail, and presents a most attractive appearance. We heartily welcome this seasonable evergreen. Where Christmas finds a new-comer in the home the dainty booklet entitled *Our Baby's History* forms an appropriate and acceptable gift.

MR. DAVID NUTT.

In *The Story of an Old-Fashioned Doll*, edited by J. Connolly and illustrated by Norman Ault, the latter-day child will find a pleasant, rambling story of Early Victorian times, sweet and fragrant, and touched with a quiet humour which is especially comely and reviving in this somewhat boisterously rollicking age of juvenile literature. You could almost think you had opened an old workbox perfumed with sandal-wood and attar of roses, where all manner of delightful faded trifles lay stored away in lavender. Did the illustrations but equal the letterpress, the book would be far more desirable. Even as it is, these memoirs of Molly should prove a kind of 'Fairchild Family' for the rising generation.—*Babes in Toyland*, by Glen MacDonough and Anna Alice Chapin, is attractive, and might be read aloud to nursery folk; while *Baby Bosh by the Sea* is a tiny volume which will amuse tiny tots.

MESSRS. WARNE & CO.

A Little Princess, by Frances Hodgson Burnett, is really an old friend, "being," as the author explains, "the whole story of Sara Crewe, now told for the first time." Princess Sara is evidently one of the most beloved of the author's dream-children. She has long been a favourite with children on both sides of the Atlantic, and she was the heroine of a play produced in New York. The play told a great deal more about the child than we learnt from the first sketch; the present volume tells us yet more. "All the things and people that had been left out before" come crowding up to us, and now we really know all that the author has been able to discover about the lovely luckless Princess Sara. It is unusual to tell a story three times over, but all three versions are charming, and we accept them with gratitude.—*The Pie and the Patty Pan* is not quite so fascinating a little book as its forerunners, 'Peter Rabbit,' 'Squirrel Nutkin,' and the rest; its less marked attractiveness is probably due to the author's choice of dramatis personæ. Here Miss Beatrice Potter, who is author and artist too, has forsaken her little woodland folk for a dog and a cat, both agreeable in their way, but better suited as subjects for her pleasant pen than her dainty pencil. One misses the peculiar, netsuke-like charm that informs her work when she deals with furry people of a smaller growth, and the *vie intime* of underwoods and wainscots. One would like, with all due respect, to suggest that there are still dormice and voles, all of the most charming description, to say nothing of guinea-pigs.

OUR LIBRARY TABLE.

Mr. Augustine Birrell's collection of papers, *In the Name of the Bodleian, and other Essays* (Elliot Stock), represents him favourably enough as a critic none the less stimulating because he touches his topics with a light hand. Occasionally, as in 'The Johnsonian Legend,' he merely flicks his subject, so to speak. But his appreciation of Tom Paine is most judiciously done, while for a specimen of subtle "roasting" commend us to 'Disraeli *ex Relatione* Sir William Fraser.' Mr. Birrell's most delicate miniature brings before us to the life his father-in-law, the late Frederick Locker. He was once in the witness-box, a dispute as to the price of a picture being before the court. "Do you think," snarled Mr. Justice Cave, "you could explain to *me* what is taste?" There came the mournful answer, "No, my lord; I should find it impossible." Mr. Birrell can discourse with edifying gaiety on a trite matter like epitaphs, and sympathize with such a derelict sect as the Non-Jurors. He is, perhaps, at his best when writing about the eighteenth century, but the modern librarian and book collector also come in for happy treatment from his pen. In these days of knowledge and literary recreation made easy it is a relief to hit upon the warning that "we must not let the babes and sucklings, or the weary seamstress or badgered clerk, or even the working-man, ride roughshod over Salmasius and Scaliger."

The Forest of Wild Thyme. By Alfred Noyes. (Blackwood & Sons.)—A taste for fairyland, suggestively encouraged, will, in the course of nature, lead on to a taste for poetry when the child has attained to years of discretion, and so help to keep alive the spirit of childhood, which is nowadays too apt to die young. In commending his volume to the notice of "children under ninety," Mr. Noyes has shown that he realizes this, and indeed 'The Forest of Wild Thyme' is full of real poetry, both of word and thought; yet not so as to be unintelligible to any child of ordinary capacity. It is impossible to speak too highly of the technical excellence of the book—the mastery of metre and the sense of the proper functions of words; and an equal measure of praise is due to the manner in which the tale itself is treated. The story of three small children (of the age which still finds the fact of death utterly incomprehensible) setting off in search of their little brother, who is dead, is one which in some hands would speedily become maudlin. But here there is nothing maudlin:—

He was once our cabin boy and cooked the sweets for tea:
And O, we've sailed around the world with laughing little Peterkin;
From nursery floor to pantry door we've roamed the mighty sea,
And come to port below the stairs in distant Caribee,
But wheresoe'er we sailed we took our little lubber Peterkin,
Because his wide gray eyes believed much more than ours could see,
And so we liked our Peterkin, our trusty little Peterkin.

Secretly the expedition started:—

Under the cloudy lilac-tree,
Out at the garden-gate,
We stole, a little band of three,
To tempt our fairy fate.
There was no human eye to see,
No voice to bid us wait;
The gardener had gone home to tea,
The hour was very late.

How they suddenly found themselves so diminished in stature that ladybirds looked like dragons, and the grass and wild thyme became a terrifying forest

Where many a hidden jungle-beast made noises like a gong;

the various personages of fairyland met with on the pilgrimage; the adventure of the "Hideous Hermit" in his grey web, and the rest, are set forth in various metres, sometimes swinging, sometimes plaintive, to suit the episode, with a periodical resumption of the particularly effective rhythm of the stanza first quoted. But besides all this, there are, scattered up and down the volume, songs of the true lyrical quality. There are many other passages which we should like to quote did space permit. Whether regarded as a fairy tale or as poetry true and unmistakable, the book is altogether delightful, and "children under ninety" owe a real debt of gratitude to its author.

From December to December: the Day Book of Melisande. (John Murray.)—This is a singularly feminine work, and, it must be confessed, a little dull. It consists of thoughts upon a variety of subjects more or less abstruse, ranged under such headings as 'March, 1904,' 'May, 1904,' and the like. But these, except in a few cases, have little bearing on the thoughts; they are inserted apparently at haphazard, to lend colour to the theory that this is some lady's 'Day Book.' The author's method of observing nature cannot be considered prudent if the following entry—under 'March, 1904'—is any criterion of her habits:

"The only reminder to me that winter has but just been shown the door is the penetrating damp of my earthen couch below the Scotch fir-tree."

Occasionally we get preciosity strongly developed, as in the following:—

"Have you ever *tasted* the scent of a flower? (I wonder if that is how the nuns thought of conserving violets—a brutal thing to do, I always said.) To-day, while my hands were occupied, I put a purple wild violet between my lips, and made, accidentally, a thrilling and ethereal meal of its scented soul (for its body, remember, was still uninjured)."

The author goes on to treat of souls—of the ordinary unscented variety—freedom, love, subconsciousness, and other abstract matters, with an occasional digression into literature and art. Scattered up and down the volume are poems, which seem to us more successful on the whole than the prose, though they suffer from a profusion of capital letters, a fine independence as regards metre, and some lack of a sense of the ridiculous. Yet, when she chooses, the author is capable both of simplicity and poetry, as in the verses called 'Playfellows,' which, with their suggestiveness and charm, form a pleasant contrast to the conscientious, but not very illuminating reflections of the Day Book proper.

John Chinaman at Home. By the Rev. E. J. Hardy, Chaplain to H.B.M. Forces. (Fisher Unwin.)—The author seems to take a delight in telling farcical anecdotes, nearly all of which have been long relegated to the region of bygone myths, and which only serve to discredit other portions of his book which are intended to be seriously descriptive. What can be said of a man who, writing on a presumably serious subject, says, in narrating an attack on his boat by pirates, "An old missionary is said to have dispersed a band of pirates by taking out his false teeth and shaking them at them"? Or again, "Does a Chinaman wish to explain foreign astronomy? He fastens a weight at the end of his queue and whirls it round his head to illustrate the revolution of the planets round the sun." In the midst of an intolerable deal of sack of this sort occasional morsels of bread are to be found. The author gives short sketches of Hongkong, Tientsin, Peking, Canton, and other treaty ports, which are more or less readable, though they are constantly disfigured by the attempt to be amusing. In describing how he was carried on the Peak at Hongkong in a sedan chair, he remarks:—

"It is a funny experience, being carried in a chair on the Peak. You only want a feeding-bottle and a rattle to be a baby once more, and when those who bear you talk you are reminded of Balaam's ass."

His references to the Bible are frequent, and not always in the best taste. On p. 134 he tells us that the thick soles of Chinamen's boots are sometimes padded with Bibles. "A man," he asserts,

"sent to several missionary societies to say that he could place to advantage any number of Bibles. Bales of these were sent for the good of souls, but it was soles that got them. Missionaries found them in the stuffing of boots and shoes."

Let those believe this who choose.

Jane Austen and her Times. By G. E. Mitton. (Methuen.)—Miss Mitton has here set out with the laudable intention of "showing up the background against which Jane Austen's figure may be seen, and of sketching from contemporary records the environment amid which she developed." It is maintained, with some justice, that "she is even more wonderful as a product of her times than considered as an isolated figure." The idea is comparatively new and ingenious; but the author, unfortunately, does not command a sufficiently charming style to execute it with any measure of success. The chapter-headings are attractive, their contents disappointing. The book is conspicuously lacking in balance and a sense of proportion; we cannot even find any isolated passages of sustained merit. We are grateful for certain quotations from contemporary personal estimates of Jane Austen and from the diarists and letter-writers of her times. These, together with a few charming illustrations, do undoubtedly depict vividly for the reader the fashions and manners on which the great novelist drew. But Miss Mitton's own comments and reflections upon this interesting material are commonplace and unconvincing; while her incidental criticisms on the novels themselves are inept.

Not the least interesting part of Mr. Arthur H. Patterson's *Nature in Eastern Norfolk* (Methuen) is the autobiographical introduction. Mr. Patterson frankly puts his record before us, and a creditable record it is. He is forty-eight, and was born in poor circumstances in Yarmouth. From an early age he manifested his strong bias towards natural history, and began to take observations. He was pupil-teacher, postman, draper's warehouseman, and keeper at a zoo. His notes date back to 1878, and he has from that time enlisted the aid of fishermen and others in securing rare specimens. The result is that he is able to place on record a full and particular account of the fauna in his locality. Outside the autobiographical note the book is divided into two parts, one comprising general observations on the fauna, which is the more attractive, and the other being a formal catalogue of birds, beasts, and fishes in Eastern Norfolk. The latter section has its value, as have all faithful compilations, but many of the entries are of no special interest. For example, it does not greatly enhance our information merely to learn regarding the spotted flycatcher:—

"I have observed this bird posted on a gravestone in Yarmouth Churchyard on the look-out for passing insects, at which it would suddenly dart, returning immediately to its post of observation to watch for others."

Mr. Patterson is of the old-fashioned school of naturalists, of whom Waterton was chief, and one feels his personal interest in all his records. There is an excellent index, besides some good illustrations in colour by Mr. Southgate, R.B.A.

Literary Celebrities of the English Lake District. By Frederick Sessions. (Stock.)—Now that Mr. Alfred Austin, following in the footsteps of other Laureates, has discovered the charms of the English Lakeland, there will doubtless be a yet greater influx than before of tourists into those "most awful scenes of mountains heaped upon mountains in every variety of horrid shape." So—in the days when the "blooming Elizabeth Smith, whom to know was to revere," lived and wrote and died at Hawkshead—our forbears described the district. Now with changing times we change those particular epithets—transfer them familiarly perhaps to the tourist himself, calling the tripper, not Miss Smith, "blooming," and the motorist, not the mountains, "horrid." But though, as J. K. S. ironically complained,

nobody as yet can go
By train to Buttermere,

the mountains and the lakes retain the fascination which for the last hundred years they have increasingly exercised over the imaginations of climbers, men of letters and the much-abused tourist alike. Among these and such as these, Mr. Sessions tells us, he has observed an increasing number who require food for the mind as well as for the body. For their sakes he has provided a volume of what we may perhaps best describe as literary pap. He moralizes over "Lile" Hartley, and tells his readers which of De Quincey's essays to read first. His appreciations and biographic sketches of the poets and writers who have sprung from or settled in the Lake District do not, indeed, profess to be anything more than condensations from larger biographies, but the book so composed bears internal evidence of the fact that the author has read most of the works of those whom he criticizes. And this, among critics, is to be counted for righteousness, even though it lead, as here, to such feeble appreciations as the essays on Wordsworth and De Quincey. Mr. Sessions has his own point of view, however, and his own theory of values, literary and theological, with which not all of his readers will feel bound to agree. But he is seldom so erratic as in the following curious estimate of Christopher North:—

"Wilson has been overshadowed by our Southeys, Coleridges, Wordsworths, and Ruskins, though he was greater, more interesting, more lovable as a mere human being, than any of them, and deserves to be as long remembered for his books."

John Wilson "greater" than William Wordsworth!

The chapter on James Spedding bears witness, incidentally, how little—thanks to his own dislike of publicity, and lack (shall we say?) of fellow-feeling for a biographer—is now known or remembered of that very wise and amiable man. Otherwise Mr. Sessions would hardly have sought to prove Spedding's fascination by reminding us that James Anthony Froude was one of his intimates. One may know one's first cousin without necessarily being charming. Mr. Sessions is a little misleading, too, when he says that Spedding, so conversant with all that Bacon ever wrote or did, never seems to have suspected for a moment any sort of literary copartnership between the philosopher and the actor William Shakspeare. On the contrary, Spedding definitely stated that, from his knowledge of Bacon's life and writings, he was sure that, whoever did write the plays, Bacon could not possibly have done so. These are minor points, which will not seriously interfere with the object of the book, any more than Mr. Sessions's occasional use of such strange phrases as "in the cue," or the belief which he apparently shares

with the popular novelists that a ship can plough the Western Main. The book is intended for the literary pilgrim, and he will be glad of it.

Howard Letters and Memories. By William Tallack. (Methuen & Co.)—The title of this work is somewhat misleading. The book does not contain the letters of John Howard, nor are there any memories of that famous philanthropist, who, indeed, is referred to only once by the author. As a matter of fact, the letters printed in this volume are, for the most part, addressed to Mr. Tallack, who for the long period of thirty-five years was secretary of the Howard Association—from its foundation in 1866 until 1901—when age and illness necessitated his resignation. Naturally, as secretary of a society founded "for the promotion of the best methods of the treatment and prevention of crime and pauperism," Mr. Tallack was brought into contact with a large number and variety of persons in Europe, America, and the British colonies; and the letters here printed include communications from John Bright, Gladstone, Victor Hugo, Cardinal Manning, Lords Derby, Shaftesbury, and Selborne, Westcott, James Martineau, Spurgeon, Matthew Arnold, W. E. Forster, Freeman, Max Müller, and Francis William Newman.

It must not be supposed, however, that the letters from these eminent men all relate to the special objects of the Howard Association. Mr. Tallack's tastes are varied; and we find him challenging Victor Hugo as to the truth of the statement (published in 'L'Homme qui Rit') that William Penn bought from the queen of James II. the widows and orphans of gentlemen executed after Monmouth's rebellion, and the great French writer replying that he will look further into the question. Again, he asks Freeman what connexion the Goths had with the island of Gothland, in the Baltic, and receives a letter stating that they had no connexion therewith — a reply which, apparently, does not satisfy him. The Earl of Derby writes to him regarding afforestation in the British Islands, Lord Lister as a fellow-invalid, William Morris deprecating the emigration of the Icelanders to America, Stafford Northcote on alleged cruelties to sledge-dogs in the Hudson's Bay Territory, and Matthew Arnold on education and religion in Germany. All these are in the chapter headed 'Miscellaneous Letters,' which also contain two interesting communications from F. W. Newman on his early connexion with J. N. Darby and the Plymouth Brethren, to which Mr. Tallack appends some elucidatory comments. Theological and allied subjects are dealt with in letters from Martineau, Dean Stanley, and other dignitaries of the Church. Among the letters on 'Crime Prevention' is a characteristic one from Dr. Alfred Russel Wallace, which ends:—

"Of course you will think these ideas dreadfully wild, impracticable, and socialistic. They are so, no doubt; but then I *am* a Socialist."

Mr. Tallack's comments on this letter show that he, at any rate, is not a Socialist.

In other chapters Mr. Tallack deals with the subjects of prisons and pauperism and its prevention, supplying incidentally his reminiscences of the many interesting personages with whom he had intercourse as secretary of the Howard Association, the foundation of which is sketched in the earlier part of the book. The author concludes with a lengthy chapter on the 'Actualities of Weak Humanity,' in which he dwells on the forces of heredity and environment, and expresses his belief in the "larger hope."

Though there is much in this book to challenge criticism, the author is so evidently sincere that the critic is disarmed. The general reader will find much to interest him and also to make him think, and social reformers will appreciate a fund of information on a variety of "burning" questions.

The Manual of the Christian Knight. By Erasmus. (Methuen.)—No more typical outcome of the spirit of the Northern Renaissance could be laid before English readers than this translation of the 'Enchiridion Militis Christiani.' It is a product of the mingling of the Mediæval and the classical spirits, the devotional and the sententious, the Christian and the philosophic. Tradition asserts that the translation before us was made by Tyndale, and though this is probably untrue, the book was a favourite with the party of reform, and Coverdale in later years published extracts from it. It is to be regretted that the plan of this edition prevented any discussion of the question of authorship, on which some light might have been thrown by the form of the numerous Scriptural quotations. Messrs. Methuen's reprint is from the rare Wynkyn de Worde edition of 1533, the spelling being modernized. One or two slight changes have been made in the text, not always to visible advantage, as, for example, on p. 132, where "and" is omitted in "But and if thou fear greater loss," &c. Slight blemishes of this kind, however, do not diminish the intrinsic value of the reprint. Here, rather than in the diatribes of controversy, is to be found the true spirit of the English reformers.

MESSRS. MACMILLAN have sent us *They*, Mr. Kipling's story from 'Traffics and Discoveries,' in an édition de luxe which is bound in white and beautifully produced. The type is printed on one side only of each page, so that the story becomes quite a small book. It well deserves typographical honours, for it is an exquisite thing, instinct with rare tenderness.

IN "Miranda's Library" Messrs. Dent & Co. publish Mrs. Jameson's well-known book on *Shakespeare's Heroines*. The form of the book is elegant, and it also contains striking illustrations by Mr. R. Anning Bell, yet it is to be procured at a very moderate price. In some ways Mrs. Jameson's work has become old-fashioned, as when she refers to Miss Edgeworth's tale of 'Eunice' and the intellectual Corinne for representative ladies, but she is generally sound and inspiriting.

THE Christmas *Publishers' Circular* (St. Dunstan's House, Fetter Lane) is a liberally illustrated guide to the mass of books available for the season.—The Christmas *Bookseller* (Whitaker & Sons) will be also very useful for the same purpose, as it notices some six hundred books.

WE have on our table *A Patriot's Mistake*, by Mrs. Monroe Dickenson (Hodges & Figgis),—*Venetian Sermons*, by Alexander Robertson (Allen),—*Dr. Liddon*, by G. W. E. Russell, (Mowbray),—*Four Biographical Sermons on John Wesley and Others*, by the late H. L. Thompson, with a Memoir by Catherine Thompson and S. Paget (Frowde),—*The Holy Christ-Child*, by A. C. Knowles (Masters & Co.),—*Sacred Literature*, by G. L. Hurst (Dent),—*A Hundred Years Hence*, by T. Baron Russell (Fisher Unwin),—*Mercantile Law*, by J. A. Slater (Pitman),—*Public Health Administration in Glasgow*, by J. B. Russell, edited by A. K. Chalmers (Glasgow, MacLehose & Sons),—*The Prevention of Senility and A Sanitary Outlook*, by Sir J. Crichton-Browne (Macmillan),—*Sociology* and *Psychology*, by C. W. Saleeby (Jack),—*The Laboratory Book of Dairy Analysis*, by H. D. Richmond (Griffin & Co.),—*Glue, Gelatine, and their Allied Products*, by T. Lambert (Griffin),—*Uniform International Dictionaries: French-English and English-French*, edited by P. Passy and G. Hempl (Jack),—*Acts of the Privy Council, 1599-1600*, edited by J. R. Dasent (Wyman),—*The Philippine Islands*, by F. W. Atkinson (Ginn),—*The Balkan Peninsula*, by L. W. Lyde and A. F. Mockler-Ferryman (A. & C. Black),—*Reminiscences of Many Lands*, by a Nomad (Drane),—*I Go A-Walking through the Lanes and Meadows*, by C. A. Johns and others (Foulis),—*The Memoirs of an American Citizen*, by R. Herrick (New York, Macmillan Company),—*When all the World was Young*, by W. St. Iven (Drane),—*A Naturalist's Holiday*, by E. Step (Nelson),—*Persons and Places*, by Joel Benton (New York, Broadway Publishing Company),—*Life and Speeches of Thomas Williams, 1806-72*, Vol. II., by B. A. Konkle, Introduction by P. C. Knox (Philadelphia, Campion & Co.),—*George MacDonald*, by J. Johnson (Pitman),—*J. F. Millet*, by R. Muther (Siegle), — *Whistler*, by H. W. Singer (Siegle),—*The Three-Term Arithmetic*, Book VII., by J. W. Iliffe (Jack),—*Revision Grammar*, by J. Hammond (Jack),—*Europe*, by W. Vere Mingard (Jack),—*Elegiac Selections from Ovid*, by R. B. Burnaby (Blackwood),—*The Little Mermaid*, by A. von Herder (Elkin Mathews),—*Laili and Majnun*, from the Persian of Nizami, by J. Atkinson, re-edited with Introduction by J. Cranmer Byng (Probsthain & Co.),—*Mental Art*, Vol. I., by S. George (Power Book Company),—*The Green Shay*, by G. S. Wasson (Constable),—*The Secret of the Turret*, by Ethel F. Heddle (Pitman),—*The Paramor Papers*, by Florence Popham (Bristol, Arrowsmith),—*In the Land of the Gods*, by Alice M. Bacon (Constable),—*Wolves in the Fold*, by L. Tempest (S.S.U.),—*In a Country Town*, by Charlotte Hunter (Elliot Stock),—*The God of this World*, by J. B. Middleton (Kegan Paul),—*The Deceiver*, by L. Keith (R.T.S.),—*The Vinland Champions*, by Ottilie A. Liljencrantz (Ward, Lock & Co.),—*Dick the Faithful*, by John Strange Winter (White & Co.)—*The Bravest Deed I Ever Saw*, edited by A. H. Miles (Hutchinson),—*The Pity of War*, by F. N. Connell (Glaisher),—*Heroes of Iceland*, by A. French (Nutt),—*The Wizards of Ryetown*, by A. Constance Smedley and L. A. Talbot (Hurst & Blackett),—*Les Grands Poètes Romantiques de la Pologne*, by Gabriel Sarrazin (Paris, Perrin et Cie.),—*Mitteilungen des Seminars für Orientalische Sprachen an der Königlichen Friedrich-Wilhelms-Universität zu Berlin*, edited by Eduard Sachau, Vol. VIII. (Berlin, Georg Reimer).

LIST OF NEW BOOKS.

SIR RICHARD CLAVERHOUSE JEBB, M.P.

By the death of Sir Richard Jebb on Saturday last at Cambridge we lose the finest Greek scholar of the day. It was his sense of public duty which led to his end, for in South Africa, whither he went for the meeting of the British Association, he contracted the dysentery which undermined his health. The world of letters and scholarship mourns his death at sixty-four, but it has a record before it in his career of wide and humanizing activity which is sufficiently rare to be widely inspiring. The average professor is not too productive of work of permanent value, nor can he usually plead that in non-academic ways he makes up for the brief or restricted character of his professional labours. Jebb was admirably many-sided, and to unquestioned pre-eminence in the labours and graces proper to his chair he added a felicity of speech and services in the cause of education which alone would have made him distinguished. Claims of this dual character imply, or are usually held to imply, in an ill-endowed age, mediocrity in one line or the other. Jebb was first-rate both as scholar and humanist and as a public servant. He could write things on Bentley and Erasmus charming for all to read, as well as critical work which appealed to a very small circle. The fine flower of scholarship justifies itself, if it ever needs justifying, in a man of such endowments so well employed. In view of his magnificent edition of Sophocles, recognized as masterly by continental as well as British scholars, we do not see how it is possible to refuse him the title of a great scholar. He has left his mark for ever on the Attic dramatists as no one has done, perhaps, in England since Porson.

Educated at St. Columba's College in Ireland and at Charterhouse, he early showed remarkable powers of Greek and Latin composition; and when he went to Trinity, it was certain that he would carry all before him. He was a Porson Prizeman in 1859, Craven Scholar in 1860, and Senior Classic in 1862. The next year he was appointed Fellow and Lecturer of his college, and was made Public Orator in 1869. To this period of his activity as a tutor belongs the volume of model translations in Greek and Latin which was brought out by him and two other Trinity scholars, Dr. Henry Jackson and Mr. W. E. Currey. He left Cambridge to be Professor of Greek at Glasgow from 1875 to 1889. In the latter year he returned to Cambridge as Regius Professor of Greek. From 1894 onwards he was an assiduous member of educational commissions. He had been M.P. for the University since 1891, and a Trustee of the British Museum since 1903. He went over to Johns Hopkins University to lecture in 1892, and joined the London University Commission in 1898. He received many distinctions from learned bodies besides a knighthood in 1900.

He was an admirable, if somewhat deliberate speaker: no one abated the claims of the fluent nonentity with greater ease and grace. His lectures always held excellent matter, but were not delivered in an inspiring style. The caution not seldom allied with exquisite taste made him sometimes slow to move, but when he did so, his judgment was felt to be sound and carried great weight. He had justly a reputation for wit, and his personality did not suggest, like that of some great scholars, any oddity or remoteness from the ordinary pleasures and duties of life. He was charmingly free from the superiority of the erudite. We remember his protesting at a dinner-table that both inside and outside the University he was far less famous than a prominent athlete of the day.

His first publications were small editions of the 'Electra' (1867) and 'Ajax' (1868) of Sophocles, which did not escape the eye of the Sophoclean expert as of rare quality. An edition of Theophrastus showed his skill in translation, which was established as unique in his 'Translations into Greek and Latin Verse' (1873). The last has been out of print for many years, and ought to be reissued. The translations are the despair and delight of classical students. They were no "sickly exotics," to use Macaulay's scornful phrase, but triumphs of idiom, grace, and conciseness. He took the English, and gave it line for line in Latin or Greek, preserving wonderfully the nuances of expression in consummate idiom. Many instances of this linger in our memory, of which we may give one. Brutus's well-known soliloquy in 'Julius Cæsar' contains the words,

> It must be by his death.

More than one good scholar has done this into an Iambic line: Jebb alone, with his ὀλᾷ τὸ πρᾶγμα, achieved the sinister vagueness of the original in less space.

> Fair things are slow to fade away,
> Bear witness you, that yesterday
> From out the Ghost of Pindar in you
> Roll'd an Olympian,

wrote Tennyson in dedicating to him 'Demeter and Persephone'; and his feats in that direction are equalled by his beautiful version of Wordsworth's Ode on Immortality in Greek hexameters, and other renderings.

Studies in the Attic orators (1876 and 1880) were a preparation for his splendid edition of Sophocles (7 vols., 1883–96, complete except for the Fragments), which it would be impertinent to praise. He could introduce unforgettable felicity even into critical notes; infuse, as Dr. S. H. Butcher has said, poetry into grammar, and clear archæology of all its arid quality. His gifts as an emendator are prominent in his recent edition of Bacchylides, but were always held in admirable restraint.

His archæological side alone needs an expert to appreciate it. He was a leading spirit in the foundation alike of the Society for the Promotion of Hellenic Studies and of the British School at Athens.

His 'Introduction to Homer' (1886) showed his powers of summarizing a complex subject. His Rede Lecture on 'Erasmus' and 'Bentley' in the "English Men of Letters" are delightful reading, written in that English which is easy, yet not slipshod—distinguished, yet devoid of preciosity. He was a great scholar and a great humanist, a combination which seems mediæval, yet he was a great modern too.

NOTES FROM OXFORD.

It has been a quiet term, and our sovereign body has enjoyed but one field-day. The occasion was—but how relate the tale so that solemn things become not a jest to the profane! The Curators of the Chest have by statute the superintendence of "the Bodleian quadrangle, and the open spaces in and about the said buildings." Relying on this mandate, they caused bicycle-stands to be set up in a certain air-swept passage known variously as the Pig-market, the Proscholium, and Bodley's "vaulted walke." The Bodleian Curators objected, but failed to take effective action. Then arose Bodley's Librarian, and *suis fretus viribus* cast forth the obnoxious stands, and, when they reappeared, cast them forth again. The Curators of the Chest appeal to Convocation to authorize the innovation. But Bodley's Librarian is a foe both powerful and resourceful. On the very eve of the contest he circulates a pamphlet entitled 'Pro Bodleio!!!' the peer of which was surely never seen before, so exquisite are the eleven plates which, relevantly or irrelevantly, illustrate the dignity and beauty of Bodley's building. (My copy at least shall never be reft from me by the Transatlantic dealer.) "Here at least," cried the member of Convocation, "is a man who is ready to back his opinion handsomely; but the Chest, it rises to nothing, not even to a distribution of cheap bicycles." Most of us—for has not every man his price?—attended with our minds made up. For a while we were regaled with legal subtleties touching the meaning of "open space." No counter-subtleties were forthcoming from the side of the innovators, though "bibliothecarius totius *interioris* administrationis curam habeat" offered a tempting theme. Then overwhelmingly the non-placets declared themselves, and the eleven plates had won the day.

No attempt has been made this term to introduce any root-and-branch reform into our examination system. Certain changes, however, impend. The Classical Association has recently appointed an influential committee to inquire into school curricula and suggest possible improvements. In this connexion proposals to reform Responsions will naturally be made, and, if Responsions alters its character more or less fundamentally, Pass Moderations will have to follow suit. Meanwhile, the controversy that has recently been raging in *The Oxford Magazine* over the shortcomings of the latter examination has mostly dealt with points of detail rather than of principle. For instance, it has been made pretty clear that the candidates are not allowed enough time to do themselves justice in the papers on prepared books. It is rumoured that steps are actually being taken to remedy these and allied defects.

The statute establishing a diploma in Anthropology is already in existence, and an examination will have to be held next summer if qualified candidates present themselves. Regulations, however, which indicate the precise nature of the ground to be covered have still to appear. It is understood that care will be taken not to overweight the course, so that a man of quite moderate ability may with a year's work aspire to pass, and a clever man to pass with distinction. It is to be hoped that persons not members of the University who for one reason or another are drawn to anthropological work of a special kind will take the opportunity offered them of becoming acquainted with the science in its general bearings. If they have already done special work, this will doubtless be accounted unto them for righteousness.

In this year's Civil Service competition the Scottish universities carried off the highest honours, taking nine places on the list, and amongst them the first, second, and third. Oxford, however, has no reason to be dissatisfied, as she can claim thirty-six names, as against the twenty-eight of Cambridge. This is the last examination to be held under the old conditions, which allowed an unlimited number of subjects to be offered. Unlimited subjects meant unlimited cram. Henceforth, however, our "Greats" men will need to supplement their University course with but one or two extra subjects at most. Wherefore the college tutor may even come to bless that mighty stimulus to hard work, now that the hard work is directed towards ends he can in the main approve. One good effect to be expected from the influence of the Civil Service examination on Oxford studies is the increased attention that is likely to be paid to psychology. Our psychological teaching is excellent of its kind, but there is very little of it. To encourage it, fuller recognition might be accorded to the subject in the Honour School of *Literæ Humaniores*. A pass "group" in Psychology might likewise be instituted. It would be of special service to those pass-men who intend to be teachers.

The 79 Rhodes Scholars who remain to us from last year have been reinforced by another 67. This brings the number in residence to something like 30 short of the total for whom provision is made under the terms of the will. South Africa and some of the Australian colonies have not hitherto been subjected to the Oxford Responsions test, but after this year must submit to it. On the other hand, the States of the American Union have from the first borne the brunt of that fiery ordeal; and, sad to relate, whilst only a couple failed in 1904, this year the victims, for the most part from the newer Western States, number half a score. Meanwhile, if it may be said without prejudice to the pioneer year, whose path was strewn with difficulties since removed, the fresh batch is, in the opinion of some college tutors, of superior intellectual calibre; whilst all the tutors are agreed that the new scholars have at any rate a much better idea of what line of study they wish to pursue. The Rhodesians are well spread out amongst the Colleges. Of the present year Christ Church takes 7; Balliol and Oriel, 5; Exeter, St. John's, Queen's and Magdalen, 4; and the other Colleges 3 or less. Ultimately the larger Colleges will have from 12 to 18 in residence, the smaller 9 or 10. They average about two years above the English undergraduates, most of them having had some previous experience of University life. Educationally, however, they find themselves pretty well on a par with the better class of public-school boy; and socially they are altogether a success, participating freely in the life of the place. Assuredly the dream of Cecil Rhodes is coming true.

Those who heard Lord Roberts lecture at the Union on the North-West Frontier of India and the Imperial responsibilities its existence implies are not likely to forget the experience. It takes a great man to speak straight from the heart and to the heart as he did. His object was not to advocate conscription, but, instead, a universal military training, having simply defence as its end. There was no militarism or jingoism, he said, in men preparing themselves to resist the invader. One wondered what was likely to be the practical outcome of this appeal. Perhaps the gain of a few recruits to the University corps. But surely it is not impossible — unless irremediable slackness and want of initiative make it impossible—that Oxford, or, better, Oxford and Cambridge acting together, should make some minimum of military training compulsory on all who are *in statu pupillari*, conscientious objectors and foreigners alone excepted. It cannot do any one any harm, moral or physical, to be taught how to form fours and manage a rifle. We have plenty of spare time, plenty of open ground. The cost need be next to nothing. The British parent would not be offended, but, on the contrary, we should gain credit in the eyes of all patriotic men. A great opportunity was lost in not launching the reform during the late war, when our blood was stirred. Still, the memory of those days is not dead in us, as one was quick to perceive in the presence of Lord Roberts, and we should be found ready enough to follow if some one in authority would lead the way.

Are we ever going to adopt a reasonable pronunciation of Latin? The Oxford Philological Society is to be warmly congratulated on having called together a conference to settle the question. Opinion was well-nigh unanimous in condemning our present barbarous practice—if it can truly be termed our present practice, since the younger generation decidedly tends to abandon it. There remained, however, the difficulty of determining the ideal substitute. French, Germans, Italians, Scotch, are at one as regards many sounds familiar once to Roman tongues, but never to ours. Nevertheless each nation allows itself certain comfortable laxities. Hence easygoing persons—those, for instance, who have not the elder Mr. Weller's fondness for a *wee*—might easily find grounds for defending some half-way measure. The prevailing desire, however, was to be scientific at all costs. But in what sense is the scheme that eventually carried the day scientific? Only in the sense that it embodies all that scholars are finally agreed about. On certain points, mostly arising in connexion with the diphthongs, the doctors still dispute. For example, it is anything but certain that the proposed pronunciation of *æ*—namely, as *ai* in "aisle"—can be shown to hold good for the period of the best literature. In regard to such disputed matters, the principle which has guided the philologists of Oxford and Cambridge primarily responsible for the scheme has been the practical one of providing the learner with the greatest number of well-differentiated sounds.

A branch of the Psychical Society has at last been formed in Oxford. To judge from the enormous concourse that flocked to hear the inaugural lecture delivered by Sir Oliver Lodge, amateurs of the subject are not scarce. It remains to be seen, however, whether those who have received a scientific training, and are consequently best qualified to apply thorough-going experimental tests to alleged supernormal phenomena, will take up the matter seriously. It was to these especially that Sir Oliver Lodge made appeal. Apparently, however, the Museum holds aloof, the pioneers of the movement being philosophers and such as Sir Oliver described—one might almost say "stigmatized"—as "literary men."

A donation of great interest has recently been made to Somerville College. Some 2,500 volumes of the library of John Stuart Mill have been presented by Miss Helen Taylor, his niece. Mr. John Morley is said to have suggested the gift, having been much struck by the appearance of the new Somerville Library when he opened it a year ago. The College is left perfectly free to deal with the books as it will; but it turns out that very little "weeding" will be necessary. The gems of the collection are a very full and complete set of Mill's own works, presentation copies from various authors (including Carlyle), some valuable first editions, and a few good Aldines. M.

SWIFT AND LEMUEL GULLIVER.

Heidelberg, Bergheimerstrasse 45, Nov. 28th, 1905.

It is a pity that the discovery announced so complacently by Dr. Scott is not more clearly described. The discoverer leaves us in doubt whether it was Peter Swift who ejected Lemuel Gulliver from the latter's several tenancies, or whether it was Gulliver who sought to eject Swift from them. A moderate exercise of the fancy will doubtless enable us to assign to each ambiguous pronoun its right significance; but surely it is too great an effort for even the most lively historical imagination to conceive how

Dean Swift, in a work published in 1726, could allude to actions which took place in various years between 1733 and 1748, more especially as the Dean was in his grave some years before the last of them was tried. It amounts only to a curious coincidence that the man who may have furnished the name of Dean Swift's hero should afterwards go through an experience something like that assigned to the Gulliver of fiction. Even if more particulars were vouchsafed to us, and it was elicited that the suits were in the Court of Chancery and were decreed for Lemuel Gulliver with costs, the chronology would still preclude the possibility of any allusion to the affair in "Brobdingnag." Though the literary interest of the discovery may thus be reduced to a minimum, the records of this persistent litigation will not fail to awaken the sympathy of all law-fearing citizens for the long-suffering namesake of the immortal traveller.

Lionel R. M. Strachan.

Dr. Scott's discovery of papers relating to a Lemuel Gulliver is very interesting, because it shows the probable origin of the name of the hero of 'Gulliver's Travels.' Hitherto it has seemed not unlikely that Swift based the name on that of Lawton Gilliver, the publisher. The Chancery suit mentioned in Part II. chap. vi. cannot, however, be the proceedings which Dr. Scott describes, because those proceedings relate to leases granted between 1733 and 1748, whereas 'Gulliver's Travels' appeared in 1726, and had been in preparation some years earlier.

G. A. Aitken.

SHAKSPEARE'S POEMS AND 'PERICLES': FACSIMILE.

Shakspearean scholarship is under further obligation to Mr. Sidney Lee, the author of the accepted 'Life of Shakespeare,' and the book-lover has to own an increasing indebtedness to the Delegates of the Clarendon Press. To their combined services is due the best existing facsimile of the famous First Folio Shakspeare, while Mr. Lee may perhaps be held accountable for the newly supplied supplement to that prized and serviceable volume. Comprehensive and authoritative as it is, the Folio of 1623 does not, as is known, contain the whole of Shakspeare. Its scope, as indicated in the title, does not extend beyond the comedies, histories, and tragedies, and takes no cognizance of the poems. For some reason, too, that almost baffles conjecture, 'Pericles, Prince of Tyre,' is excluded from the First and Second Folios, to appear in the Third, together with certain doubtful or spurious plays assigned, like it, but with less authority, to William Shakspeare or to W. S.

In the present volume—or volumes, for the work appears in more than one shape—are now given in quarto form facsimile reproductions of the original issues of 'Pericles,' 'Venus and Adonis,' 'Lucrece,' the 'Sonnets,' and 'The Passionate Pilgrim.' Once more, for the purpose of reproduction, the finest accessible copy has been in each case selected; the collotype process used for the First Folio reprint of 1902 has again been employed; and, allowance being made for the altered size, the later publication differs in no respect of typographical beauty and luxury from its predecessor. In bindings of spotless vellum, with ties of kid leather—the precise form of the originals—and on the paper of exceptional quality known as O. W., the five separate volumes constitute a noteworthy édition de luxe, and offer an almost irresistible bait to the bibliophile.

Facsimiles of the First Folio are familiar enough, and one, at least, is accessible at a moderate price; but facsimiles of the works now issued are unknown, at least in any shape such as they now assume. The original quartos are, moreover, rarer than the early folios, which were held of comparatively small account until they were scientifically "boomed" by a well-known bookseller in the middle of last century, through whose hands passed almost every copy that came into the market.

The services rendered by Mr. Sidney Lee in the case of the First Folio—those, namely, of supplying an introduction, biographical and bibliographical, together with a census of all known copies—have again been forthcoming. Their value is nowhere more perceptible than in the reissue of 'Venus and Adonis,' which for more than one reason takes precedence of the remaining works. As the avowed "first heir" of the poet's invention, and as the earliest to find its way to the press, 'Venus and Adonis' puts in special claims. In its dedication Mr. Lee finds a precise personal statement of the poet concerning its composition, a clue to the relation between his work and the great epiphany of Renaissance thought and feeling at home and abroad, and vivid and recent impressions of the country life of Warwickshire.

In no respect have Mr. Lee's labours been more illuminatory than in showing the influences exercised over literature generally, and over love lyrics in particular, by the writings of Italian, French, and Spanish amorists. Further revelations from the same sources are to be anticipated; and in view of the proofs afforded of the readiness of English poets of reputation to publish as original what were in fact close translations or servile imitations, it is impossible to say what may not be in store from a species of study which has been seriously taken up only in modern years. If not, as we are inclined to believe, the first to explore continental poets in search of precedents or analogies for Tudor love verses, Mr. Lee has at least worked with most success a vein previously all but unopened, and has obtained from it the most promising indications as well as the richest results. In his views as to the conventional significance of erotic phraseology we are unable to follow him so far as he leads. He has, however, broadened the base of comparative criticism, and cast a light upon the growth of the sonnet form.

In the introduction to 'Venus and Adonis' Mr. Lee has gone furthest in this direction. On the influence of Ovidian fable (for from Ovid, with certain departures, the story is drawn), and on that of Italian uses of it, stress is laid. Something had been taken by Shakspeare from Marlowe and Greene, and from incidental references in earlier poets. Among Englishmen, however, Shakspeare was the first to apply to the fable independent treatment, and to depart from Ovid in making the coyness and recalcitrancy of the son of Thelas and Smyrna the main feature, or, as Mr. Lee says, "the pivot of the tale." The coyness in question, not to be found in the Adonis of Ovid, may have been suggested by Hermaphroditus in his tale of Salmacis and Hermaphroditus (Ov., 'Met.,' iv. 285, &c.). It is indicated in Greene's 'Infida's Song' ('Works,' ed. Collins, ii. 289), with its exquisite French burden,

N'oserez-vous, mon bel ami!

and elsewhere in Greene's poems. Of the general use of the story of Adonis in Ovid and in Bion or Theocritus by continental poets a scholarly and deeply interesting account is given.

In the census—a valuable feature in all the reprinted volumes—it is pointed out, as a fact unique in bibliographical history, that of the six editions of 'Venus and Adonis' known to have been issued in the poet's lifetime, and of the seven published during the two generations following his death, only twenty-one copies can be traced. Out of 3,750 books which, at a moderate computation, saw the light in the sixteenth and seventeenth centuries, 3,729 have presumably perished. The first edition bears date 1593. In addition to the reprint of this, the title-pages of the editions of 1596, 1599, 1602, 1617, and 1620 are reproduced in facsimile. To the popularity and accessibility of the work Mr. Lee is disposed to attribute its all but entire disappearance. Puritan zeal, apt to regard the book as pornographic, may be held partly responsible for its suppression.

Thirteen months after the publication of 'Venus and Adonis,' 'Lucrece' was ready for the press. In this work—dedicated, like its predecessor, to the Earl of Southampton—Mr. Lee sees the "graver labour" which Shakspeare had promised. While continental use of this story was not less noteworthy than that of 'Venus and Adonis,' it had passed in England (apart from the serious employment of it by Chaucer and Gower) into ballad literature and such popular collections of stories as Painter's 'Palace of Pleasure.' Between 1568 and 1576 two, if not three, ballads were licensed by the Stationers' Company, and Lucrece had become, as Mr. Lee says, "a recognized heroine of English poetry." A statement likely to be received in some quarters with hesitation is that "there is little doubt that Ovid was accessible to Shakspeare in the original." Bandello's handling of the subject after Livy is held to approach nearly to Shakspeare; and Daniel's 'Complaynt of Rosamond,' drawn from 'The Mirror for Magistrates,' to have supplied machinery as well as suggestion. 'Lucrece' was less popular than 'Venus and Adonis,' and for that reason, perhaps, according to the theory previously advanced by Mr. Lee, more exemplars of the early editions exist. Recent discoveries have largely augmented the number of these. Among the title-pages, &c., reproduced in facsimile is the very interesting frontispiece by Faithorne to the eighth edition, 1655. This presents the suicide of Lucretia in presence of Collatinus. In the upper part of the page is a small oval portrait of Shakspeare from the Droeshout engraving in the First Folio.

Of the fourteen lyrical pieces contained in 'The Passionate Pilgrim,' five only can, it is held, be safely assigned to Shakspeare. Of these, three are to be found in 'Love's Labour's Lost'; while two sonnets—numbers cxxxviii. and cxliv. in the collection of 1609—did not appear in an authorized form until ten years later. The introduction is chiefly interesting for the light it casts upon the proceedings of publishers in Tudor times, and for curious information it supplies as to the circulation of poems in MS. and their occasional collection in commonplace books. Upon the general contents a not too favourable judgment is passed. Some have a "touch of that happy vallancy of rhythm and sentiment which is characteristic of the Elizabethan temper"; but others are "little more than pleasant jingles describing phases of the tender passion with a whimsical artificiality."

In the introduction to the Sonnets Mr. Lee adheres firmly to the views he has formerly expressed as to the non-autobiographical nature of the poem. Gladly as we would accept this view, we find ourselves unable to do so; and while receiving with gratitude the profoundly interesting information supplied concerning what Mr. Lee calls "the massive sonnet literature of the day," we cannot regard as imitative or conventional, utterances so personal and, in many respects, so characteristic as are furnished. Almost any key to the Sonnets is welcome, but none cracks their bones and enables us to suck the *substantifique moelle*. Far too wide is the subject to be opened out afresh, and the editor is careful to subordinate the personal significance of the Sonnets to their bibliographical history and the conditions of their publication. The introduction is a fine piece of literary craft, leaving little that is important unnoticed. What is said about "the eternizing faculty of verse" extends beyond Shakspeare and embraces Milton. It is drawn, like so much in Shakspeare's poems, from Ovid,

and is specially appropriated by Ronsard. Mr. Lee finds in the line

Gilding pale streams with heavenly alchemy

one of the most perfect utterances of the Sonnets, and links it in delight with the less picturesque, but more suggestive

When to the sessions of sweet silent thought,

The sun is not, however, the only thing that gilds pale streams. We have lost the precise reference to two lines embodying a similar conceit :—

Sometimes a lovely boy in Dian's shape
With hair that gilds the water as $\frac{\text{it}}{\text{he}}$ glides.

The idea is, indeed, common in Tudor poetry. In the way of critical estimate and bibliographical instruction Mr. Lee's notes form an equally important addition to our possessions.

Criticism, English, American, and German, has concerned itself actively of late with 'Pericles,' and its conclusions have been embodied in the 'Shakespeare's Pericles and Apollonius of Tyre' of Dr. Albert H. Smyth, a work Mr. Lee mentions with well-deserved praise. Of the plot Mr. Lee says severely, "The whole construction gives the impression of clumsy incoherence." He disputes also the implication of the title-page that Shakspeare is in the full sense the author of the play. One-third is the share assigned him. Coleridge's theory concerning Shakspeare's association with the piece is accepted. It is again said that "the play as a whole fills a secondary rank in any *catalogue raisonné* of dramatic literature"; while the assumption is favoured that George Wilkins, the author of 'The Miseries of Enforced Marriage,' supplied the draft on which Shakspeare worked. Be this as it may, the extreme popularity of the play, provocative as it was of sneers, is not undeserved. Few passages show the transcendent power of Shakspeare better than the shipwreck of the third act and the address of Pericles to his child, and subsequently to the supposed corpse of his wife, beginning,

A terrible child-bed hast thou had, my dear.

A boon more precious to the student and the bibliophile has not for a long period been conferred.

A PERSONAL EXPLANATION.

FOLLOWING the explanation which Mr. Horace Round has lately published in *The Athenæum* (December 2nd), I may be allowed, as editor of *The Ancestor*, to say that I am myself unable to construe the passage cited by him in any sense which could convey a reproach to Mr. W. H. B. Bird. It is with the deepest regret that I have learned that such an interpretation has been made of Mr. Round's words. Had a personal attack been aimed at Mr. Bird, it is unthinkable that it should take such a form. The scholarly and critical studies in genealogy which Mr. Bird has published but too infrequently are so notably unlike the work whereby the popular genealogist has his prosperity that the malice of such a suggestion would have been neutralized by its absurdity. OSWALD BARRON.

SALE.

MESSRS. SOTHEBY, WILKINSON & HODGE sold last week the following books and MSS.: Shakspeare's Much Ado about Nothing, First Quarto, 1600, 1,570*l.*; Midsummer Night's Dream, J. Roberts, 1600, 480*l.* Horæ B.V.M., illuminated MS., fifteenth century, 64*l.* Original Sketches, Engravings, Trial Proofs, &c., of W. Blake (61), 80*l.* Autograph Letters of Nelson, and other documents relating to him and Lady Hamilton (26), 285*l.* Autograph Letters of President Jefferson (11), 132*l.* Autograph Letters of Washington (5), 405*l.* Sir T. Hanmer's MS. Preface to his Shakespeare, 1743, 50*l.* Shakspeare, Fourth Folio, 1685, very large copy, 150*l.* The original MS. of Thackeray's lecture on Congreve and Addison, in the hand of Miss Trulock, used by him in the United States, with some autograph notes, 96*l.* Tyndale's New Testament (1552), 44*l.* Sporting Magazine, 1792-1870, 157 vols., 170*l.* Lilly's English Grammar, the earliest edition known (1512-13), 36*l.* Beaumont and Fletcher's Works, first folio edition, fine copy, 1647-52, 103*l.* Laborde, Chansons, finely bound, 4 vols., 30*l.* La Fontaine, Contes, 3 vols., Derome binding, 1762, 70*l.* "Unknown Portrait of Shakspeare," described in Walford's *Antiquarian*, October, 1885, 61*l.* Edward VI.'s First Prayer Book, 1549, 46*l.* Sarum Missal, 1357, 35*l.* MS. York Horæ, Sæc. XIV., 51*l.* S. Hieronymus, Vite de' Sancti Padre, woodcuts, Venet., 1494, 39*l.* Pat. Cockburn in Dominicam Orationem Pia Meditatio, St. Andrews, 1555, 89*l.* Bartholomæus de Glanville, De Proprietatibus Rerum (Colon., 1470-1), 60*l.* Lamb, Two Autograph Letters and MS. of poem 'Hercules Pacificatue,' 1831-3, and Letter from Elliston to Lamb, 98*l.* Sallustius, 1521, bound for Henry VIII., 36*l.* 10*s.* De Quincey, Holograph Letters to Messrs. Taylor & Hessey (24), 30*l.* 10*s.* Chatterton, Holograph MS., first draft of 'Ælla,' 12½ pp. 4to, 255*l.* Curtis's Botanical Magazine, 1793-1885, 80*l.* Dickens, Autograph Letters (21), 50*l.* Bonnart, Male and Female Costumes (177) of the Seventeenth Century (French), 39*l.* Calderon, Jornada de Judas Maccabeus, Comedia, original MS., 86*l.* Horæ, on vellum, French illuminated MS., fifteenth century, 51*l.*; another, Franco-Flemish, fifteenth century, 61*l.* Horologium Sapientiæ, MS. on vellum, fifteenth century, 67*l.* Laborde, Chansons Choisies, 4 vols., 1773, 45*l.* La Fontaine, Fables, plates by Oudry, 1755-9, 34*l.* B. Las Casas, Obras (Sobre los Indios), 1552-3, 25*l.* Ludolphus de Saxonia, Vita Christi, &c., Paris, Verard (1500), 50*l.* Los Tratados del Doctor Alonso Ortiz (the first book in Spanish which criticizes the discoveries of Columbus), Sevilla, 1493, 45*l.* Ptolemæus, Geographia, Argent., 1520, 32*l.* 10*s.*

Literary Gossip.

IN the January number of *The Cornhill Magazine* begins a new serial story by Mr. Stanley Weyman, the scene of which is laid in England at the time of the great Reform Bill. The Bristol riots form a principal episode, and Brougham, Sir Charles Wetherell, and other prominent politicians make their entry in the opening instalment. The outlook 'From a College Window' this month is turned upon 'Public-School Education.' In 'Mayfair and Thackeray' Sir Algernon West records the houses in that district famous in fact and fiction. Viscount St. Cyres contributes a paper on 'Judges Wut,' and Katharine Tynan 'A Memory' of a striking and attractive character. The 'Reminiscences of a Diplomatist' bring his St. Petersburg experiences to their close with the outbreak of the Crimean War. A. H. S. has some humorous verses, entitled 'An Early Victorian Tale'; and Mr. W. A. Shenstone, F.R.S., writes on 'Matter, Motion, and Molecules.'

IN the January *Independent Review* Sir Thomas Barclay will have an article on 'France and Germany in our Foreign Policy,' and Major Leonard Darwin one on 'Municipal Trade.' Mr. G. K. Chesterton is contributing a note on Mr. Bernard Shaw. Mr. Herbert Paul writes on William Cory, the author of 'Ionica,' and Mr. C. C. Michaelides on 'Mr. Swinburne and the Sea.' Among the other articles will be 'The Congo Problem,' by Mr. E. D. Morel; 'The Mothers of the Future,' by Mr. E. D. Marvin; 'Infant Mortality,' by Miss Mona Wilson; and 'Coercing the Sultan,' by Mr. H. N. Brailsford. Sir Spencer Walpole, Mr. Laurence Binyon, Mr. E. H. Coleridge, and Miss F. M. Stawell will contribute signed reviews.

MRS. MEYNELL will contribute a poem to the forthcoming number of *The Dublin Review*—the first issue under the editorship of Mr. Wilfrid Ward, and the first in the long history of the *Review* to print original verse.

IN his interesting dedication of the seventh edition of 'The Coming of Love' to "C. J. R.," Mr. Watts-Dunton throws some light upon the peculiar genesis of the poem. He says :—

"'The Coming of Love' is the expression of the heart-thought of my life. And yet, so long did I delay collecting its various sections—scattered through many old periodicals—that I often ask myself whether the idyl would ever have been published at all save for you—you who hunted out the lyrics and sonnets with such pertinacity, made a collection of them for yourself, and became so familiar with the entire poem that at last you knew it better than he who wrote it. Naturally, therefore, I have always desired to dedicate it to you; but its novelty of subject and of method made me dubious as to how it would be received by the critics and the public. It was not merely that the interest in Gypsydom in this country was then of the most languid nature, but the artistic method of my pictures of Romany life—the method, I mean, of depicting that life by separate dramatic flashes instead of by narrative—was experimental and new. This, however, is a subject which you have often heard me discuss in full with the beloved friend we both mourn, Frank Groome, in the happy rambles we three used to have together. I determined, therefore, that to you the poem must never be inscribed unless it should win a certain amount of success. Well, 'The Coming of Love' has passed now through six editions, and Mr. Lane is proposing to bring out a seventh. May I not hope then that the time is come for me to confer upon the poem what, according to my own feeling, is the greatest and the sweetest distinction with which any book of mine could ever be crowned—its dedication to you on your birthday?"

MR. MONTGOMERY CARMICHAEL'S 'In Tuscany,' 'Lady Poverty,' and 'J. W. Walshe: the Story of a Hidden Life,' hitherto on the lists of Mr. Murray, will henceforth be published by Messrs. Burns & Oates.

IN *Chambers's Journal* for January there will be a paper by the Duke of Argyll entitled 'Wild Times in the Highlands,' and Mr. Parr edits a series of 'Unpublished Letters to William Hunter,' including characteristic examples from Smollett, written at Nice; from Dr. Johnson, Lord Chatham, and Lord Suffolk. In one of his letters Smollett complains of a cursed ulcer in his forearm, "a judgment of God upon me for the ridiculous use I had made of that wretched member, in writing such a heap of absurdities in the course of my authorial probation."

THE Delegates of the Clarendon Press having annulled their agreement with Mrs. Paget Toynbee for an edition of the letters of Madame du Deffand to Horace Walpole (the originals of which, including 500 hitherto unprinted, were discovered by Mrs. Toynbee a few years ago), and having resumed the transcript of the letters, Mrs. Toynbee is prevented from publishing her edition in the form originally announced in *The Athenæum* (July 13th, 1901). As the owner has kindly placed the originals once more at her disposal, Mrs. Toynbee does

not propose to abandon her work on the letters.

The Delegates have also annulled their agreement with Dr. Toynbee for the publication of his 'Vocabulary of the Italian Works of Dante.' Dr. Toynbee hopes, however, to make other arrangements for the publication of this work.

Just as we go to press we learn that the well-known critical writer and author, Mr. William Sharp, died quietly on Tuesday, while on a visit at Castello di Maniace, Bronte, Sicily. Mr. Sharp's health had caused concern for a long time, and for the past six winters he had been abroad. It is now definitely disclosed that he was the author of all the works issued under the name of Fiona Macleod, who figures with a long list of publications in 'Who's Who' as an unmarried lady.

E. Grant Richards has arranged with Mr. Francis Brown, whose political caricatures over the signature of "The Office Boy" have attracted much attention in *The Westminster Gazette*, to publish immediately a book of political pictures and satire entitled 'The Big Tory Hash.' None of the work to be published in this volume will have appeared previously.

Under the title 'Cornish Notes and Queries,' Mr. Elliot Stock is about to publish by subscription a volume of Cornish antiquities gleaned from the columns of *The Cornish Telegraph* in past years.

It is seldom that such an extensive and interesting collection of military books appears for sale as that forming part of the library of the Royal Military College, Camberley, which Messrs. Hodgson will dispose of on Wednesday and Thursday next. The early treatises include Sir John Smythe's 'Discourses of Divers Sorts of Weapons,' 1590, with Sir Roger Williams's 'Briefe Discourse of Warre,' 1590: a reply to the former; also Clayton's 'Order of Martiall Discipline,' 1590, and Markham's 'Souldier's Grammar,' 1539. Perhaps the most interesting lot is that containing four volumes of MS. extracts of documents referring to the operations during the American War of Independence; while there is a complete set of the 'Historical Records of the British Army,' undertaken by command of William IV. The miscellaneous books include early editions and sets of the writings of the Elizabethan and Jacobean dramatists, amongst which are Samuel Ireland's copy of the folio edition of Sir William D'Avenant's works, 1673, with the rare portrait, and the collected edition of Lyly's 'Sixe Court Comedies,' 1632, in which the lyrics appeared for the first time.

A few friends were given last Saturday a pleasant opportunity of inspecting the new warehouses and publications of the Cambridge University Press in Fetter Lane, which were generally admired. Afterwards at lunch, with the Vice-Chancellor in the chair, the Master of Peterhouse gave a lucid account of the rapid modern advance of the Press.

Sir Arthur Mitchell presided at the annual meeting of the Scottish Text Society on Tuesday, when it was reported that the third and concluding volume of Murdoch Nisbet's Scots version of Wycliffe's New Testament had been issued to members, and that the first instalment of Prof. Gregory Smith's edition of the poems of Henryson had been sent to the printer. It has been arranged to issue the works of John of Ireland, edited by Mr. Adam Blyth Webster, and the Makculloch and Gray MSS. which Mr. George Stevenson has in hand. Sir Arthur Mitchell threw out the suggestions that a set of proclamations of the sixteenth century might be collected and edited for the Society: and that words which were in use in that century, and had now fallen out of the language, might also be included in a volume of miscellanies, along with fragments of old poetry and prose which had not yet appeared in print.

In our number of January 6th we shall pay special attention to the subject of education, reporting the meetings of the Classical Association in London, and reviewing a number of books for schoolmasters and schoolboys.

Mr. Fisher Unwin, whose publishing business has outgrown the capacity of his office in Paternoster Square, will remove on January 1st to 1, Adelphi Terrace, Strand.

At a recent dinner of the Correctors of the Press Prof. Gollancz described the proof-reader as the very eyes of men of letters, and said that hidden behind the walls of some printing offices were men worthy of a degree for their scholarship. To none could such terms be more fitly applied than to Mr. Frederick Adams, who died on the 6th inst. at the age of seventy-one, having been nearly fifty years in the employment of Messrs. Spottiswoode & Co. Mr. Adams read the final proofs of the whole of the 'Dictionary of National Biography,' and in the 'Statistical Account' prefixed to the sixty-third volume Mr. Sidney Lee paid a tribute to his services. Mr. Adams had a remarkable knowledge of old French, and contributed many learned articles to *Notes and Queries*.

M. Baillaud's lecture at the United Service Institution on Monday was of great interest. He exhibited some carefully worked-out diagrams illustrating the increase or decrease of the exports from British colonies in West Africa during the last twenty years. His estimate of our colonial administration, and also of the native character, was, on the whole, favourable; but the result of his investigations was disappointing as regards the fertility of the soil in most of the countries under consideration. Improved methods of cultivation are above all things necessary; but they must be applied with the greatest skill and discrimination, since the natives, with the very elementary procedure evolved by the experience of countless generations, frequently obtain better crops than those of the best plantations under European management. M. Aug. Chevalier's remarks were of a similar tenor, though he deprecated the unduly pessimistic views of his colleague with regard to the fertility of West Africa.

The Berlin Museum has acquired a valuable collection of medical papyri, recently found in Egypt. They are said to include letters of Hippocrates, and to bear testimony to the interest with which medicine was studied under the Emperors.

The death, in his eighty-fifth year, is announced from Düsseldorf of Kirchenrat Dr. Rocholl, the friend of Schelling and the author of a number of works, among them 'Beiträge zur Geschichte der Theosophie' and 'Die Philosophie der Geschichte.'

A new book by Jonas Lie, the veteran Norwegian author, with the quaint title 'East of the Sun, West of the Moon, and Behind the Tower of Babylon,' has just been published in Copenhagen.

Recent Parliamentary Papers include a Report to the Board of Education on Endowed Charities in the Administrative County of Stafford appropriated in whole or in part to Purposes of Elementary Education (1*s.* 3*d.*) and Statistics of Public Education, 1903-5 (2*s.*).

SCIENCE

ANTARCTIC EXPLORATION.

Two Years in the Antarctic. By Albert B. Armitage, Lieut. R.N.R. Illustrated. (Arnold.)—Coming so soon after Capt. Scott's great work, this narrative of the National Antarctic Expedition by the second in command runs some risk of being neglected. Yet those who feel an interest in exploration, but cannot afford the larger work, or have no time to read it, should find the present book a godsend. Lieut. Armitage calls it "a simple tale"; at any rate, it is charmingly told, and on some points—especially the account of the sledge-journeys under his own leadership and the list of stores supplied to the whole party—it forms a useful supplement to his captain's narrative. There is a prefatory note by Dr. Nansen, who pays a graceful tribute to his hospitable entertainers of 1896 in Franz Josef Land, of whom Lieut. Armitage was one. Indeed, his combination of Arctic and Antarctic service places the latter in an almost unique position. Except Dr. Koettlitz, who was his companion on both expeditions, no other man, living or dead, has passed two or more consecutive years in the vicinity of both Poles, in each case beyond the seventy-seventh degree. This circumstance lends special interest to the chapter in which he contrasts the conditions, physical and meteorological, of regions so widely separated. He thinks that rain is the worst kind of weather in Polar countries, and points out that, while it fell in 80° N. latitude even in winter, none was experienced in the South. The temperatures observed by the Discovery party were far lower, especially in summer, than those at Cape Flora, which is 130 miles nearer the Pole than McMurdo Sound. Lieut. Armitage thinks that the greater abundance of mammalian life in the Arctic regions makes them less monotonous than the Antarctic; and on second thoughts he also gives the palm to the former in respect of bird-life, for the penguins "hardly appeal to one as birds, but more as a strange kind of inhabitant of the solitary South." The Northern bird—whose name he has forgotten—which used all kinds of tricks to entice intruders from its nest, was, we fancy, the purple sandpiper. On the whole, he prefers the Arctic regions, because there "the beasts fight shy of men and resent being stroked." In one respect there was a wide difference between his two expeditions—he had six or seven times as many companions in the South as he had during his last two years in the North; and this book throws a very pleasant light on the social life of the Antarctic explorers. The illustrations

are plentiful and well chosen, and there is an excellent map by Lieut. Mulock.

The Siege of the South Pole. By Hugh R. Mill. Illustrated. "Story of Exploration Series." (Alston Rivers.)—This book deserves a large sale, for it is a marvel of cheapness, and its appearance is most opportune. The author is a man of science who has the rare gift of making difficult things clear to the unscientific mind, and nothing could be better than his explanations of the importance of observations in the Antarctic to a true theory of terrestrial magnetism. The "siege" of the South Pole has been less continuous than that of the North; and the half-century that succeeded the voyages of Wilkes, D'Urville, and Ross was only broken by the half-hearted attack of the Challenger in 1874. As a consequence the accounts of most of the earlier voyages are out of print and only to be found in great libraries; and Dr. Mill has done excellent service by relating these voyages in detail, and illustrating them copiously by maps and engravings. During the last eight years the "siege" has been renewed with vigour; indeed, five expeditions have returned since October, 1903, the last only six months ago. The present is therefore a favourable moment for registering the results of this latest incursion—a work which can, of course, be done in outline only.

Dr. Mill rightly begins *ab ovo*, with the views of the ancients as to the Southern hemisphere; but he is less explicit than could be wished as to the undoubtedly wide acceptance in the later Middle Ages of "Antipodes," to which both Dante and Petrarch bear witness. The most valuable part of the book is the lively and minute description of the voyages—some of them very little known—in the century between Cook and the Challenger; and that of the Russian Bellingshausen in 1819–21 is here for the first time fully recorded in English. Dr. Mill's final chapter on 'The Raising of the Siege' contains plans for future exploration, which, if they cannot be adopted in their entirety, may at least provoke discussion. He points out that the fringe of the unknown region is within a week's journey by steam—which his enthusiasm allows him to call "easy"—of the ports of our Southern colonies and of the Argentine Republic. As an example of work that is quite feasible we may mention the fact that Alexander Land, discovered by Bellingshausen in 1821, has been seen four times since that date, although no one has ever landed upon it. It is odd to find an oceanographer like Dr. Mill, contrary to the scientific views of the Discovery party, speaking of the Great Barrier as "sea-ice"; and we shall be curious to hear Capt. Scott's opinion of his proposal (since put forward by M. Arctowski, of the Belgica) that its surface should be traversed in light motor-cars at the rate of five miles an hour. Has Dr. Mill read the description of the soft snow met with by Capt. Scott in his march to the south?

The volume contains a bibliographical appendix and a superb South Polar Map by Mr. J. G. Bartholomew; but a pocket in the cover should be provided for a map of this size, instead of its being fastened to the last sheets of the work. Unfortunately the index is far from complete.

'THE SECRET OF THE TOTEM.'

St. Andrews, December 9th, 1905.

The reviewer and I are still at cross-purposes, I fear. If a man agrees with all students on some points, he is not logically bound to agree with some of these students on all points! The assumption on which my argument in pp. 190-1 is based is the assumption made throughout the whole book, namely, that the social organization of tribes which reckon descent in the female line, and have "phratries," but no "matrimonial classes," is, so far, more primitive than the social organization of tribes with male descent, no "phratries," and eight matrimonial classes. The assumption may be wrong, but it is that of Dr. Howitt, and, I thought, of everybody; it is not "my own invention." Whether the assumption is logically employed in the pages to which the reviewer draws my attention (190-1) is another question. I am not at all certain that my argument here is not fallacious, and will reconsider the point.

A. Lang.

*** Mr. Lang's book is a re-examination of the problem of totemism. That problem has reference to the earliest social organization of man, and Mr. Lang, in analyzing the evidence as to this, relies on (1) the arguments of authorities whom he is questioning severely in other respects, without explaining why he accepts their arguments unchallenged on this wider issue, and (2) arguments he himself adduces from conclusions based upon the arguments set out in No. 1. We do not think this is quite sufficient for the purpose, but we do not call it "his own invention." Nor are we prepared to reject it altogether. We think it requires further consideration, and we feel sure Mr. Lang will give this consideration.

SOCIETIES.

Society of Antiquaries.—*Dec.* 7.—Viscount Dillon, V.P., in the chair.—It having been reported to the Society that on Tuesday, the 12th inst., the Bristol City Council would be asked to decide the fate of the interesting old building known as the Dutch House, which stands at the corner of High Street and Wine Street, the following resolution was unanimously adopted: "The Society of Antiquaries of London hears that the Bristol City Council will be asked at its next meeting to determine the fate of the old Dutch House. The Society would point out that this building is unique in character in that it is the only known example of a dwelling brought from Holland and erected in this country. The building is a particularly interesting one, and the Society hopes the Council will hesitate before ordering its demolition."—Mr. F. G. Hilton Price, Director, read a paper 'On the Discovery of Leaden Crosses at the Grey Friars in Newgate Street.' He said that during July and August extensive excavations were carried out upon the site of Christ Church Hospital, which previous to the Reformation occupied the site of the property of the Friars Minors of London. It was situated in the north-western extremity of the City of London—of course, within the walls. It was bounded upon the north by the City wall, with the town ditch outside it; on the south by Newgate Street and the Flesh Shambles; on the west by the Swan Inn; and on the east by Foul or Stinking Lane, apparently a most unwholesome situation. On Ogilby's map of London, 1677, on the north side of the wall, a plot of ground is marked "Hospitall Churchyard," quite close to the town ditch; a gateway in the City wall led out of the great cloister of the Grey Friars into this burial-ground. Upon this site a great oblong pit was found, measuring 50 ft. by 20 ft. and about 20 ft. in depth. In this upwards of 400 skeletons were met with, reposing in eight layers. They had been carefully buried, that is to say, the lowest row were laid in narrow graves, all without coffins, and about 2 ft. of soil was found between each layer. It was clear that these burials were the result of a great epidemic of plague, as it must be presumed that all these people had died about the same time or within a few days of each other. The top row of skeletons was covered with about 8 ft. of earth. Upon the bodies of about 100 of these interments leaden crosses were found, presumably on their breasts; many were too decayed to be picked up, but 89 of them were exhibited, varying in size from 6½ to 2 in. in length. Most were very roughly and irregularly made, having been cut out of sheets of lead, either with a chisel or sheare, and then hammered. Mr. Hilton Price stated that he considered the skeletons which had the crosses upon them to have been those of the Grey Friars. It has been proved that this order of friars were in the habit of placing a cross of lead, inscribed with the usual formula of the absolution, upon the breasts of their dead brethren, and such have been found both in England and France. The crosses under consideration were quite plain, bearing no inscription or ornamentation upon them; it was evident they had been made in a great hurry, and some were formed out of fragments of lead hammered together, indicating that the metal had run short. This is the first recorded occasion on which these plain leaden crosses have been found in London, or even in England. Upon reference to the Grey Friars' chronicle, under date 23 Edward III., *i.e.*—1348-9, the following entry is met with: "Thys yere was a gret pestelens in Yengland." The "Black Death" appeared in London in November, 1348, and raged until Pentecost, 1349, carrying off an immense percentage of the population; the monasteries are said to have suffered very heavily. The author considered that these crosses belonged to Friars Minors who had died of the Black Death. He also exhibited some other antiquities from the same site.—Mr. H. D. Ellis exhibited two examples of death's-head spoons, made at York to commemorate members of the Strickland family in the latter half of the seventeenth century; also a number of other silver spoons with marks which he believed to indicate provincial make—as was undoubtedly the case in several instances.—Mr. Albert Hartshorne communicated a note on the careless treatment of certain of the monuments in the Abbey Church of Westminster at the hands of thoughtless vergers.

Entomological.—*Dec.* 6.—Mr. F. Merrifield President, in the chair.—Dr. O. M. Reuter, of Helsingfors, was elected an Honorary Fellow.—Mr. C. W. Mally and Mr. Harold Powell were elected Fellows.—Dr. K. Jordan exhibited a series of varieties of the Mediterranean *Carabus morbillosus*, showing all intergradations, and presenting a striking case of geographical variability.—Mr. H. St. J. Donisthorpe showed specimens of *Ptinus pusillus*, Stwem., recently discovered in a cornfactor's shop at Edmonton. The species, which is common in France and Germany, has not been recorded hitherto in Britain.—Mr. A. J. Chitty exhibited a hermaphrodite belonging to the Proctotrupidæ, probably one of the Spilomicrinæ (Aspm.); a sand-wasp without wings, taken by Mr. Poole; and the male *Apion semivittatum*, Gyll., taken many years ago by Mr. Walton near the Tivoli Gardens, Margate, together with a female specimen of the same species discovered while sweeping long grass near the Chequers Inn, Deal, on September 26th, 1904.—Mr. F. B. Jennings exhibited examples of the Dipteron *Helophilus transfugus*, L., taken from thistle-heads in the marshes at Edmonton last July, and a specimen of *Stenopteryx hirundinis*, a parasite on swallows and martins, found on Box Hill, Surrey, in August.—Mr. G. T. Porritt brought for exhibition specimens of *Odontopera bidentata* ab. *nigra*, and stated that the melanic form was rapidly increasing in the Wakefield district of South Yorkshire.—Dr. F. A. Dixey showed specimens of South African Pierine butterflies taken by him in the dry season this year, further illustrating the diverse forms, and, with them, for comparison, specimens taken by other collectors during the rains.—Mr. O. E. Janson exhibited specimens of *Ornithoptera chimæra*, Rothschild, and some remarkable species of Delias collected recently by Mr. A. S. Meek in the mountain region of British New Guinea.—Commander J. J. Walker, on behalf of Mr. A. M. Lea, Government Entomologist of Tasmania, showed a specimen of the buprestid beetle, *Cyria imperialis*, Don., having, in addition to the normal fore-leg on the left side, two supplementary fore-legs originating from separate coxæ.—Mr. G. C. Champion exhibited examples of *Tetropium crawshayi*, Sharp, bred by the Rev. G. A. Crawshay from eggs deposited in July last in the bark of larches at Leighton Buzzard.—Mr. E. R. Bankes showed the unique specimen of *Depressaria emeritella*, Stn., from an unknown locality, on which the species was added to the British list many years ago; and a specimen of *Cerostoma asperella*, L., discovered by Mrs. Hutchinson near Leominster on September 21st, 1881, and only taken, as regards Britain, in Dorset (formerly), and Herefordshire very rarely.—Mr. A. Bacot, who exhibited long series of *Tryphæna comes* bred through three generations, and brought together to test the relative proportions of melanic to nonmelanic forms and the possible range of variations to be obtained from a single pair of parents, announced that all the results of the second and third generations seemed to be capable of "Mendelian" explanation.—Mr. R. Shelford exhibited larvæ of *Collyris emarginatus*, Dej., from Borneo, and said that it was certainly unusual to find a predaceous larva with mouth-parts qualified to excavate burrows in wood. He also showed larvæ and pupæ of Mormolyce.—Prof. E. B. Poulton communicated a note by Mr. A. H. Hamm on observations tending to confirm the opinion that *Pieris rapæ* chooses for prolonged rest a surface on which it is concealed.—Mr. W. J. Lucas exhibited diagrams of the several instars, and also of the mouth-parts of the imago, to illustrate a paper read by him 'On the Emergence of *Myrmeleon formicarius*.'—Mr. Martin Jacoby communicated a paper entitled 'Descriptions of New Species of African Halticinæ and Gale-

rucinæ.'—Mr. Claude Morley communicated a paper 'On the Ichneumonidous Group *Tryphonides schizodonti*, Holmgr., with Descriptions of New Species.'

ANTHROPOLOGICAL INSTITUTE.—*Dec.* 5.—Prof. W. Gowland, President, in the chair.—The following were elected Fellows: the Rev. H. J. Dukinfield Astley, Mrs. Edward Davis, and Mr. P. A. Talbot.—Mr. R. Shelford exhibited a Dyak witch doctor's medicine chest.—Mr. D. Randall-MacIver gave a paper on 'Ruins in Rhodesia,' illustrated by lantern-slides. Mr. MacIver visited sites at Inyanya, Niekerk, N'Natali, Umtali, Dhlo-Dhlo, Kami, and Zimbabwe, views of all of which were shown. At Inyanya there are countless "pit dwellings," consisting of a pit and passage and hut platforms. The elucidation of the mystery of their use is assisted by a study of the Niekerk ruins, which are the most remarkable in the country. The area of these ruins is not less than fifty square miles, and within this area it is almost impossible to walk more than ten yards without coming upon a wall. The general principle appears to be that each hill constitutes a separate unit, complete with its own buildings, and divided at the bottom from its neighbour by a boundary wall, which is the first of a series of concentric lines. These lines cannot have been for purposes of irrigation, but must have been entrenchments. The buildings in the hill are of two types—one divided by successive stages from the pit dwelling, and the other the pit dwelling itself. The forts at Niekerk are also generally similar to or derived from those at Inyanya. The more advanced type of buildings, found at Umtali or elsewhere, are all derivatives of the pit dwelling; and Great Zimbabwe itself falls into line and was simply a royal kraal. Over the whole country there seems to be a regular progression with regard to these buildings, the northern region being the most fortified, and the defensive scheme becoming less rigorous towards the south. As to the builders of these dwellings, all the implements found are of the type used by the natives of the present day. As to the date, Mr. MacIver cut sections in the ruins. At Dhlo-Dhlo he made a most significant discovery. A trench was cut below the intact cement floor of a hut, and amongst other objects Mr. MacIver discovered fragments of Nankin china. Consequently no stone was laid at Dhlo-Dhlo before the time when Nankin china was imported from the East; experts fix this date as the sixteenth century. This find conclusively fixes the date for Dhlo-Dhlo, and as all the other remains exhibit similar characteristics it may be taken as proved that the ruins of Rhodesia are medieval or post medieval, that they cannot possibly be placed earlier than the eleventh century (probably the very oldest building was not erected before the fourteenth century), and that they were built by a native African race not differing to any great degree from the modern natives.

ARISTOTELIAN.—*Dec.* 4.—Mr. E. C. Benecke in the chair.—Prof. W. R. Boyce Gibson was elected Treasurer. Miss Graveson was elected a Member.—Mr. Shadworth H. Hodgson read a paper on 'Teleology.' The idea of end or final cause in nature is a common-sense idea founded on the conception of ourselves as agents, arising independently of the metaphysical analysis of that conception. The preferability of one purpose to another makes the pursuit of it rational. Teleology and rationality are ideas which are identical in their origin, teleology being the idea which brings the future into the account. And we seek for them in natures other than ourselves, because the seeking for them is an irresistible tendency in our own nature, being bound up with the very exercise of thought. In thinking of natures, whether our own or other than our own, we seek to discover the correspondence of part to part, factor to factor, element to element, aspect to aspect, and so on, so as to reduce our whole conspectus of the universe to harmony, comparative disorder to order, in which every part is for the sake of some other, and is adapted to realize it. The whole of nature other than consciousness is *for the sake* of consciousness as a whole. End, or final cause, or that for the sake of which anything exists, is a term of consciousness, indicating *value*—a term which has no meaning except as a term of consciousness, consciousness itself having nothing beyond itself, for the sake of which it is; but it is as distinguished from efficient agency that it is the universal final cause or end of all existence other than itself. But it may be asked, If the pursuit of desires of our own is the origin of our conception of rationality, is not the assumption of rationality in natures other than our own an unwarranted assumption? By no means. What would be unwarranted is that a reasoning analogous to our own is the efficient agency, affording *pro tanto* a theoretical explanation of that assumed rationality. The warrant for the assumption of rationality or teleology in universal nature is the fact that the assumption arises in, and is bound up with, the exercise of our reasoning power, the exercise of thought, from which it is shown by analysis to be inseparable. Its contrary, irrationality, which we may call chaos or chance, is in fact inconceivable—one of those attempts at thinking which fail, a thought which is literally unthinkable. Our own action from final causes can afford no explanation of rationality in the universe, because it is not an ultimate fact in our experience, but is always analyzable into two actions which are efficient simply—the motive (which is consciousness) acting on the conscious agent, and the conscious agent reacting on his own consciousness (in resolving on the action), the *modus operandi* in both cases being something which stands in need of explanation. Our result therefore is twofold. On the one hand, we must conceive the universe as a rational process from a worse state to a better, teleology being, so to speak, the dynamical aspect of rationality, involving a correspondence between its past, present, and future states, in which the future will be better than the past. On the other hand, we cannot treat this conception as a speculative explanation of the nature of the universe, because we have no knowledge of the nature either of the *modus operandi* of the process, or of the final future state of the whole towards which it tends. We have no speculative key to the nature of the totality of existence, but are left standing in a practical attitude in respect to it, that is to say, in an attitude of faith as distinguished from knowledge.—The paper was followed by a discussion.

MEETINGS NEXT WEEK.

MON. Institute of Actuaries, 5.—'Canadian Vital Statistics, with Particular Reference to the Province of Ontario,' Mr. M. D. Grant.
— Aristotelian, 8.—'The Nature and Reality of Objects of Perception,' Mr. G. E. Moore.
— Society of Arts, 8.—'The Measurement of High-Frequency Currents and Electric Waves,' Lecture IV., Mr. J. A. Fleming. (Cantor Lecture.)
— Sociological, 8.—'The Institut de Sociologie: its Equipment and Work,' M. Waxweiler.
— Geographical, 8½.—'Anthropo-geographical Investigations in British New Guinea,' Drs. C. G. Seligmann and W. Mersh Strong.

TUES. Sociological, 4.—'Biological Methods in Application to Social Problems,' M. Waxweiler.
— Statistical, 5.—'The Decline of Human Fertility in the United Kingdom and other Countries,' Drs. A. Newsholme and T. H. C. Stevenson; 'Changes in the Marriage- and Birth-Rates in England and Wales during the Past Half-Century,' Mr. G. Udny Yule.
— Institution of Civil Engineers, 8.—'Heat-Economy in Factories,' Mr. H. A. Mavor.
— Anthropological, 8½.—'The Origin of Eolithic Flints by Natural Causes,' Mr. S. Hazzledine Warren.

WED. Meteorological, 7½.—'Kite Observations from a Trawler in the North Sea,' Mr. G. C. Simpson; 'Investigation of the Upper Air in the West Indies by Means of Kites,' Messrs. C. J. P. Cave and W. H. Dines; 'Temperature Observations during the Partial Solar Eclipse, August 30th, 1905, Mr. W. H. Dines; and two other Papers.
— British Archæological Association, 8.—'Arbroath Abbey,' Mr. C. H. Compton.
— Folk-lore, 8.—'Backfooted Beings,' Mr. A. T. Crawford Cree.
— Geological, 8.—'The Clunian Series of the Ludlow District,' Miss G. L. Elles and Miss I. L. Slater; 'The Carboniferous Rocks of Rush, Co. Dublin,' Messrs. A. Matley and A. Vaughan.
— Microscopical, 8.—'A Fern Fructification from the Lower Coal Measures of Shore, Lancashire,' Mr. D. M. S. Watson.
— Society of Arts, 8.—'The Aerograph Method of distributing Colour,' Mr. C. L. Burdick.
— Sociological, 8.—'The Russian Revolution and its Consequences,' M. G. de Wesselitsky.

THURS. Royal, 4½.
— Linnean, 8.—'Report on the Vienna Botanical Congress,' Dr. A. B. Rendle; '*Cyrtandraceæ malayanæ novæ*,' Dr. F. Kränzlin; 'Characeæ from the Cape collected by Major A. H. Wolley-Dod,' Messrs. H. and J. Groves; 'Note on the Distribution of Shortia, Torr. and Gray,' Mr. B. Daydon Jackson.
— Chemical, 8½.—'The Relation of Position Isomerism to Optical Activity, Part V.,' Messrs. J. B. Cohen and I. H. Zortman; 'Azo-derivatives from α-naphtho-methylcoumarin,' Messrs. J. T. Hewitt and H. V. Mitchell; and two other Papers.

Science Gossip.

THE eminent pathologist Dr. E. Ziegler, whose death in his fifty-sixth year took place recently, was Professor of Pathological Anatomy at Freiburg, in Breisgau, and the author of a number of valuable scientific works.

THE Academy of Science in Berlin and the Royal Society of Sciences in Copenhagen have arranged to co-operate in the production of a catalogue of Greek and Roman medical MSS. A plan for a complete edition of the writings of the medical men of antiquity, based on this catalogue, is to be brought before the International Union of Academies, which will probably make known its decision at the general assembly to be held at Vienna in 1907.

THE Symons Gold Medal of the Royal Meteorological Society has been awarded to Lieut.-General Sir Richard Strachey, F.R.S., and will be presented on the 17th prox.

PROF. KREUTZ communicates to No. 4057 of the *Astronomische Nachrichten* the results of Herr Ebell's new investigation of the orbit of Schaer's comet (*b*, 1905), with an ephemeris carried back to a fortnight before the time of discovery, as he thinks it may yet be found registered earlier on photographic plates. When discovered on the 17th ult. it was nearest to the North Pole (distance about 4°), and also at its nearest approach to the earth, its distance from us being 0·25 in terms of the earth's mean distance from the sun, or about 23,000,000 miles. The perihelion passage took place on October 26th, when the distance from the sun was 1·05 on the above scale; the motion retrograde at an angle inclined about 39½° to the plane of the ecliptic. The comet is now situated in the southern part of the constellation Aquarius, and moving slightly to the east of south; but its brightness is only about the twentieth part of what it was at the time of discovery, so that it is out of the reach of any but very powerful telescopes.

The Allahabad Pioneer gives some interesting details of the sunspots photographed at the Dehra Dun Observatory during the present year. Dehra Dun is one of the three observatories in the British Empire at which the sun has been photographed daily since 1879. Astronomers had predicted that the year 1905 would be marked by a maximum of sunspots, and the great spot that became visible in February seemed to verify the prediction. But during the remainder of the year the sun remained in complete quiescence until the beginning of November, when a spot appeared rivalling in size that of February. About November 20th a whole chain of spots broke out across the sun, and could be seen encircling it like a belt. Such a phenomenon had never been witnessed before during the whole period of observation. This great outburst of sunspots had the immediate effect of disturbing all the magnetic instruments and needles in India. During a few days the intensity of the earth's magnetic force underwent great variations, and horizontal needles were observed to move widely in a few seconds. Curiously enough, the needles were less affected at the formation of the spot than at its disintegration.

FINE ARTS

THE LEICESTER GALLERY.

MR. CONDER is showing once more at this gallery. It is a testimony to his activity and his facile invention that in a single year he should have produced enough to fill one of these rooms, and this too, very largely, with oil paintings. We wish we could think that the quality of his work had improved in the same ratio with his productivity, but it is impossible not to recognize here signs of a desire to respond too readily to the public demand for his works. Last year his exhibits seemed to us as good as, if not better than, anything he had done before. This year, although the actual accomplishment is fully maintained, there is too much repetition of ideas and motives that have already done duty, and have lost their freshness and force.

No doubt this is largely due to the effort he has made to express himself in oil painting—an effort in which he has persisted with laudable pertinacity, but so far without conspicuous success. It is not merely a question of technique, though, with a greater knowledge of the subtleties possible to the medium, he might arrive at a quality which would more nearly express his particular feeling than the opaque and loaded touch which he affects. But we think his way of seeing and feeling is as perfectly suited to his washdrawings on silk as it is unsuited to the complete statement of solid relief which oil painting almost inevitably implies.

The usual criticism passed upon Mr. Conder is that he cannot draw, but that his colour is so beautiful that it does not matter. This, we think, is a misapprehension. Mr. Conder can draw—not correctly, indeed, but very expressively; he can convey the essentials of a pose, the gesture of an arm or the movement of the eyes, with surprising assurance, and he can design at times with great felicity and inventive power. But his drawing is not structural or searching: it has something of that superficiality which distinguishes the draughtsmanship of the eighteenth century, whence he has derived much of his inspiration, together with an oddity, an inclination to caricature, which the elegant society of that period would hardly have understood. Such a style of drawing, then, as he can master demands a fluid medium with a quickly moving touch; it must depend for its effect on the ease of the general contour, not upon any finely wrought silhouette or massive and scientific modelling. While he is working in water colour upon silk, two gradated tones, helped by the sheen of the material, are enough to set the imagination astir; the spectator accepts the form as sufficiently modelled for its purpose. But when forms no less summary in conception are rendered on a large scale with a brush that is entangled in the stiff matter of oil paint, by a hand that can no longer move rapidly and at ease over the surface, and when, instead of two delicately washed tones to give a limb or a torso, Mr. Conder builds up his form with many touches of solid paint, we miss altogether the illusion; the symbol, professing to do more for us, still yields no fuller statement of the fact, and at the same time hinders the spectator's imagination from lending its aid.

In the matter of beauty of surface there can be no comparison between the delicate and elusive hues of washed silk, with its half-hidden silvery sheen, and the heavy, clogged, and resisting surface of Mr. Conder's oils. If, indeed, the oil paintings expressed some profounder, more completely substantiated idea, and gratified the imagination at the expense of immediate pleasure to the eye, one might admit the necessity and forget the privation. But so far as we can see this is not the case; on the contrary, there is a tendency here and there to over-accentuate the expression of his faces, and to make this of a kind which is certainly not distinguished.

Among the best of these new paintings is, we think, the *Mademoiselle de Maupin* (No. 19), which has a new motive of composition with its repeated uprights. But in none is the colour scheme so original and so subtle as in the beautiful water-colour *In the Shadow of Pan* (41); while in freshness of feeling and a delightful unexpectedness in the composition *The Terrace Garden* (44), also in water colour, is unsurpassed.

M. Jacques Blanche, whose pictures fill the adjoining gallery, has certainly a great deal of the technical science which Mr. Conder lacks; and in this respect, at all events, his pictures have gone on steadily improving. If one compares the early portrait of *Aubrey Beardsley* (3) with such later pieces as *La Piquette and her Doll* (20) or the *Berenice and her Doll* (24), one notes a marked increase in the subtlety and methodical completeness of the method. The last-named, indeed, is a most remarkable example of a kind of painting which is rare in modern art: over a transparent brown monochrome on a smooth ground the artist has scumbled his half-tones with a delicate feeling for the value of semi-transparent warm greys, and has finally loaded his lights sufficiently to produce a fine enamelled firmness and brilliance of surface. M. Blanche has attained, in fact, such a mastery of his technique that he can express himself with something of the freedom of touch that most modern artists can attain only in drawings, and he has, moreover, a control of brilliant effects of contrast, of rich transparent darks and the glitter of silvery lights. More and more the difference between such methods and the crude, haphazard loading of opaque pigments which has been in vogue must become apparent. When we, however, consider the temper of M. Blanche's mind, the kind of ideas which inspire him, we find ourselves less in sympathy. His undoubted brilliance has something hard and unsympathetic in it; his observation of character is rather shrewd than profound. The larger, more central feelings seem to be wanting, and we are conscious of an acute, almost indifferent and disillusioned attitude to life, as of a satirist who lacks sufficient energy of indignation to fire his imagination. Still, of the subtlety and acuteness of his rendering of actual people and things of the day there can be no doubt; and if with the increase of his technical science his imagination were to deepen and broaden, he would strengthen his position as one of the most significant of contemporary French artists.

In the same gallery are some very clever sketches by Mrs. Edmund Davies, which show talent and an appreciative understanding of artistic quality. We like especially the *Recollections of Japan*.

THE THOUSAND AND ONE CHURCHES IN LYCAONIA.

This site, the Turkish Bin-Bir-Kilisse, has attracted increased attention since the publication of Strzygowski's 'Kleinasien ein Neuland der Kunstgeschichte,' reviewed in *The Athenæum*, November 14th, 1903 (p. 656). The work incorporates the description and rough plan by Mr. Crowfoot, as also a more detailed plan by Smirnov, and a study in considerable detail by Prof. Strzygowski, founded on these and older authorities. The account of the site given in this book is by far the best, though still only a very inadequate one. The whole argument of the book is founded on the belief that the site and buildings belong to a very early period, and that the methods of construction practised there may safely be taken as almost a starting-point in the history of Byzantine church architecture. As to the discriminating, but on the whole cordially laudatory review just mentioned, it seems to me, with the exception of one rather important detail described below, to be on the right lines, and I am in agreement with the views stated in it. But the assumption of an early date for the Thousand and One Churches as a whole, from which Strzygowski starts, must certainly be dismissed as erroneous. The results at which we arrived in 1905 as to the date of the churches and the checquered history of the city to which they belonged are so opposed to existing ideas and prepossessions that it seems useful to make them known as widely as possible—especially as they prove more clearly than ever that extremely important results, including probably a history of church construction in one city from about A.D. 350 to 1050, might be reached by a trained architect with means and leisure to examine the site. The historical sketch which I shall state rests on such objective and incontrovertible evidence that it seems likely to be regarded as forming the basis on which future exploration will work; I write purely as an epigraphist and historian, and not as presuming to state an opinion on architectural questions.

Bin-Bir-Kilisse lies about 74 kilometres (by the Bagdad Railway Survey) from Konia, in a hollow on the northern flank of Kara-Dagh, looking out direct to the north. In 1882 I spent part of a day on the site, when travelling in the company of Sir Charles Wilson, then Consul-General in Anatolia; but I was at that time a mere beginner in exploration, and had not learnt how to search for evidence; moreover, I had contracted an illness in Konia, and was hardly able to sit on a horse, much less to wander in the heat over those wide-spread ruins. This time, in May, 1905, we reached the site about sunset, having spent the day on the top of the mountain (Kara-Dagh) at a site called Daoulé or Devle, which is a sort of high-lying *annexe* to Bin-Bir-Kilisse. Rain began during the night, and expelled us from our couches on the house-top. I spent the hours from 4.30 to 7.30 A.M. in examining some of the churches; then we were driven away by the approach of a great thunderstorm, which had been long overdue, and which enveloped the mountain in mist and rain for three days. But we found enough to say with confidence that both sites belong mainly to the period when Byzantine power was reviving from the Saracen attack, and especially to the time after the Saracen invasions had ceased to be a constant danger. Daoulé probably belongs to the intermediate period, 650-900 A.D.; and Bin-Bir-Kilisse in its more exposed situation is at once the earlier and the later site. In the latter the churches belong for the most part to the tenth or eleventh century. In the upper site, at Daoulé, an inscription on one of the churches mentions that it was [built] or [renovated] (the serious doubt and difference are caused by a break in the stone) during the time when Leo was the metropolitan bishop (*i.e.* of Iconium), about 787 A.D.; a second was of similar date, and others may be earlier. The evidence, so far as it reaches, is absolute, certain, and incontrovertible, because it is epigraphic. Mr. Crowfoot speaks of the "paucity of inscriptions," and seems to imply that there are none, or next to none. But there are a fair number; in my two very brief visits I have copied above a dozen, and I have not examined more than a quarter of the site. Two, at least, which escaped me, have been copied: one by MM. Radet and Ouvré in 1885, and one by Miss Bell in 1905. Others I know to exist. The study of the architecture must be based on epigraphy, for this fixes the chronology and the historical circumstances in some degree.

As to the purpose of the two score churches in or above that town in the oval recess among the mountains, the epigraphic evidence shows that at least three were erected in memory of deceased persons, and one was built or renovated as a vow and an expiation by a presbyter who retired from the duties of the ministry; and probably several others will, as the epigraphy is more carefully studied, be proved similarly to be votive or mortuary. I am uncertain whether or not two other memorial inscriptions I copied belong to churches or only to graves.

The church at Daoulé, erected or renovated by the presbyter just mentioned, is one which will engage and reward the attention of architects, on account of the important inscription which gives the date of the work. In Konia this inscription was mentioned to me by Miss Bell as being of extreme importance as probably giving a date of construction, but as decayed and almost illegible. I spent the best part of five hours on it, and ought to have returned to it on the following day; but the storm made this impossible. Still, most of it is certain: it is engraved on two adjoining stones inside a complex of buildings on the northern side of the church. The building is so ruinous in this part that my memory of the locality was inaccurate, but I follow Miss Bell's account.

τήνου τοῦ ἁγιοτά|του μητροπολίτου ἔ-
τ(η) αν'(?)

"+ By the vow of Basil the presbyter was [renewed ?] the presbyterium under the rule of Leo the most holy metropolitan until Constantine the most holy metropolitan during 51 years (?)."

It is unnecessary and unsuitable to quote here the rest of this long and in some respects diffi-

cult inscription, which continues for thirteen lines, while the date [μηνὸς Σεπ]τεβρίου ἰν(δικτιῶνος) δ' is engraved on the next course of stones below. The number of years is extremely doubtful. The letters of the inscription are very much worn and difficult, but the date under Leo is fortunately clear and certain. The reference is indubitably to the bishop of the metropolis of the province, viz., Iconium: no other metropolitan could be taken into account on this site. Now Leo was metropolitan bishop of Iconium at the second Council of Nicæa, A.D. 787. The rude lettering and the detestable spelling show that the inscription is very late, and that no unknown earlier Leo, who might possibly have existed in the very defective list of Iconian bishops, can have been referred to. After stating the circumstances, the presbyter ends with a prayer for the pardon of the sins of himself and his wife Irene (spelt Ἠρίνις). Strzygowski points out ('Kleinasien,' pp. 105, 187, 207) that the enlargement of the presbyterion of a church is a common feature at Bin-Bir-Kilisse. The apse alone was originally the place for the presbyters, but afterwards the eastern part of the nave, with the first column on each side, was added. If my conjecture that this operation was performed by Basil is right, traces of the change ought to be evident, even in this ruinous church; and thus the conjecture should be proved or disproved. The date about A.D. 787 for this change would be typical, probably, for other cases. But in this and in numberless other points our brief examination of the ruins is only important as showing how much might be done by careful study by an architect and an epigraphist; and my chief purpose is to plead for the equipment of such an enterprise on a reasonable scale. A few hundred pounds—say 300*l.* or 350*l.*—with at least a month free on the spot, to measure, to dig, to move stones, &c., would result, if suitable persons can be found for the work, in a most valuable architectural and historical study. At the same time, it may be hoped that this paper will give sufficient proof, if any be needed, that neither the architect alone, nor the epigraphist alone, is sufficient: each can raise many questions, and indicate lines of search, which only the other can deal with and follow out.

The term "presbyterion," which is used in the dedication of the retired presbyter, must mean the part of the church appropriated to the *synedrion* or *collegium* of the presbyters; and the word *kollegi(o)n* in the interior inscription of another church (Crowfoot, No. III.) should be interpreted in this sense probably, and not in the way taken in the above-mentioned review of Strzygowski. That inscription of the kollegi(o)n is perhaps earlier in the form of lettering than any other of the inscriptions hitherto mentioned; but I have not seen it since 1882, and the letters are of such a character and so distant from the eye that the forms in my copy afford little criterion of date.

A stronger chronological argument is furnished by three inscriptions on three adjoining stones in the same course in the outer wall of the apse of this church. The first is hieratic; the letters are coarse, and the spelling abominable: αὕτη [ἡ] κατύκυσης μου ἡς ἑῶνα ἑῶνος, ὧδε κατυκύσο αὐτή[ν]: "This is my habitation for ever and ever: thus inhabit it." That this inscription is as late as the eighth or ninth, or even the tenth century seems certain; that it was engraved as a sort of consecration when the church was new I feel little doubt; but any one is free to consider that it was cut at a later date than the building of the church, and his opinion could not be directly disproved. On the next stone in the same course is another inscription cut by a different hand: "Here lies the daughter of Stephanus, who never showed perception or pleasure: on the tenth November....." I take this to record that the church commemorates the witless child of the dedicator, Stephanus; but here again the opinion may be maintained that this inscription, which also is indubitably very late, was engraved long after the church was built. Both are published by MM. Radet and Ouvré: the first in a copy nearly accurate, but without transcription; the second incomplete and transcribed incorrectly (reading Μῆγνος as name of the daughter, instead of *μὴ γνοῦσα*, *Bulletin de Correspondance Hellénique*, 1886, p. 512); but they have omitted the decisive evidence of date. The second inscription extends in part on to the stone adjoining on the right; and this stone already contained an epitaph before the church was built—in fact, it was a gravestone, which was cut to adapt it to its place in the church, and the original epitaph on it was mutilated. This epitaph was quite a late document, coarse and rude in lettering. Only a few letters remain of the first two lines; and they are faint, and thus escaped the notice of the two French explorers. This epitaph could not be earlier than the sixth or seventh century, and may be a good deal later; and some interval must have elapsed before it could be taken and cut to build the church. The interval lasted probably until the end of the Arab raids, when the city was rebuilt, and many new churches were constructed, in which old stones were often used.

I hope that I shall not be understood to imply that the two excellent explorers just mentioned showed carelessness in missing the letters of the older epitaph on the stone in the apse. I confess that I also omitted them at first, thinking that they contained an obliterated date, probably by indiction (as I saw N clearly), and therefore valueless for chronology, even if it had been decipherable; but afterwards, when I went on to the church mentioned below and found in its west wall three older inscribed stones, which the builders had used, I returned to church No. III., and re-examined the inscriptions on the outside of the apse, with the results already described.

Thus church No. III. contains both an interior inscription, which I copied in 1882, and three exterior inscriptions, which I copied in 1905. In each case I saw only what I copied: in 1905 I had no time to enter the church. Pridik copied part of the inner inscription, making no sense of it (Strzygowski, 'Kleinasien,' p. 58), and MM. Radet and Ouvré copied two of the exterior inscriptions. This is a typical example of the haphazard way in which the inscriptions of Asia Minor have been collected. Only when the work is completely done does the historical reasoning upon it become sure. But that calls for more time and more money. I cannot even guarantee that all these four inscriptions are in the same church. I can say only that the three exterior inscriptions are in the church marked III. on the published plan; and that Strzygowski attributes to this same church, on Pridik's authority, the interior inscription which I copied twenty-three years ago, without recording the position of the church that it belonged to. Considering how unsatisfactory all the plans and accounts of Bin-Bir-Kilisse are, we must wait for a fuller and more accurate description of it and of Daoulé. In the latter only one church has been noticed by Crowfoot (his No. II.). Smirnov did not see it, nor any other traveller except the indefatigable tourist Davis. I am glad to think that a full and trustworthy account of both sites may soon be supplied by Miss Bell, who has examined, photographed, and planned both places with a care and thoroughness that no one else has applied.

In another church—which is not mentioned on Crowfoot's plan, but which stands about two hundred yards north of the church at the south-west side of the village, marked "Octagon. Church" on the plan—there are three inscribed stones in the west wall. One is turned upside down and cut, and this mutilated inscription is dated between A.D. 962 and 970. The other two stones are also very late; both are cut, and one is turned sideways. This church must therefore be dated in the eleventh century, not later than A.D. 1071, but probably near that year. The Seljuk Turks conquered the country in 1072, and no churches can be dated later than the conquest.

I am convinced that an explorer trained in Byzantine architectural history would unhesitatingly assign to most of these plain, undecorated buildings a late origin; Strzygowski had never seen them, and depends on very imperfect descriptions, ground-plans with very few elevations or details; and he was evidently much influenced by Mr. Crowfoot's unhesitating opinion that "we may regard the ruins of Bin-Bir-Kilisse as the remains of a typical provincial town of the early Byzantine age." In place of this date we must now substitute "the ninth to eleventh centuries." But, while the churches for the most part belong to this late date, it does not follow that their designs are late. In that remote and sequestered spot, far from the centres of civilization, early forms and designs may have been preserved and repeated with little change, except a growing plainness and a decrease in care for and richness of ornament. But I lay no stress on my imperfect comprehension of architectural character. I depend on the epigraphic evidence that as a whole Bin-Bir-Kilisse is of late Byzantine time, but pure Byzantine, untouched by Seljuk work. It was abandoned about 1100 A.D.

It is not meant, however, that Bin-Bir-Kilisse is only a late site. It is an old site, but, being exposed to the full fury of Saracen raids, it is likely to have been completely destroyed during the three centuries of war 660-965 A.D. None of the churches on the lower site can safely be dated between 660 and 900. During that time the higher parts of the mountain alone were safe, and most of the churches at Daoulé may probably be assigned to that period. Before 650 we may look for buildings at the lower site; and such buildings are likely to have been destroyed by the Saracens, while those that belong to the tenth and eleventh centuries have suffered little from the hand of man, and have given way only to the gentle influences of nature. The explorer of Bin-Bir-Kilisse would do well to seek for some means of distinguishing buildings which have suffered intentional devastation; these may safely be dated before 660 A.D. Probably a careful examination would reveal much about the history of the city of Barata, and might show that churches of very similar plan were executed before 650 and after 900.

Epigraphic evidence of that older city, the Barata of the Roman and early Byzantine periods, is not wholly wanting. MM. Radet and Ouvré have fortunately copied and published the inscription on a sarcophagus, which I did not see. Although the text is incomplete and not restorable, it is expressed in an early class of formula, and can hardly be later than the fourth century. Also the inscriptions in the extreme north-western church, Crowfoot No. VI., may perhaps belong to an early period—the fifth century, possibly, if I may judge from my copies made in 1882; but the forms are not very distinctive, and one could not lay any stress on those hasty copies made so long ago. It is impossible to express any opinion without seeing the inscriptions again.

Daoulé, also, had probably a complicated history. It was perhaps begun as a monastery in a retired spot high among the mountains, about the end of the fourth century or during the fifth. This process of seeking retirement in mountains and deep glens was practised in Eastern Anatolia already by Basil and Gregory, soon after the middle of the fourth century. Then, during the times of unrest and constant raid, the centres of population were removed from exposed spots like Bin-Bir-Kilisse, near the level of the plain, to places high among the mountains of Kara-Dagh and Karadja-Dagh.

Then Daoulé probably came to be used as a town for residence, until the Byzantine power was reinvigorated during the tenth century, and the Saracen raids ceased.

If the views just expressed are right, it is more evident than ever that the proper exploration of Bin-Bir-Kilisse and Devle is urgently needed in the interests of Byzantine history and of Christian architecture. There remain there the ruins of nearly two score churches, belonging to all ages from the fourth or fifth century to the eleventh, not to mention one large monastery at Daoulé. It is not merely plans, drawings, photographs, of the architecture that are needed: almost more necessary is it to observe carefully and collect all the evidence, epigraphic and otherwise, bearing on the date of the different buildings and on the history of the city. With this should be united an exploration of four or five other remarkable Byzantine sites in Kara-Dagh and Karadja-Dagh, all still practically unknown and unexplored. To judge from some photographs made on one of the Karadja-Dagh sites by Prof. T. Callander, my travelling companion in 1904 and old pupil, the remains there seem earlier than anything that I have seen at Bin-Bir-Kilisse, and more like the ornate Syrian architecture. The ruins of Bin-Bir-Kilisse are probably those of the ancient city of Barata, a bishopric throughout the history of the Church in Lycaonia. The evidence is not complete and conclusive; but the only other possible supposition seems to be that Thebasa was situated here, Barata at Kara-Bunar, and Hyde at Emir-Ghazi; and that theory presents so many difficulties that, after inclining to it temporarily, I have had to abandon it. I need not here state the difficulties of the theory. The positive arguments which tend to prove that Barata was situated at Bin-Bir-Kilisse are stated in a very long article on Lycaonia, by the present writer, in the *Jahreshefte* of the Austrian Archæological Society, 1904, part i.; and they are pretty strong; but decisive epigraphic evidence is necessary before certainty can be attained. The direct Roman road from Iconium to Cybistra would pass across the plain on the north side of Kara-Dagh; and this route ought to be examined. The increase of the marshes due to the water of Tcharshamba Su has caused the route to fall into disuse.

Part of my purpose in visiting Daoulé was to get a series of geographical observations in order to fix the position of Bin-Bir-Kilisse more accurately. But during the day we spent there the air was so dark with the coming storm that nothing was visible beyond a distance of four or five miles out in the plain.

W. M. Ramsay.

SALES.

Messrs. Christie's sale last Saturday comprised pictures by old masters and works of the Early English School, the property of Mr. H. J. A. Eyre, of Shaw House, Newbury; also pictures and drawings formerly belonging to the late Mr. Willett L. Adye, and others from various sources.

Shaw House was for many years the seat of the Andrews family, one of whom was created a baronet, although the most famous member of it was James Pettit Andrews, the well-known antiquary and historian, who died in 1797. The place has also historical associations, inasmuch as it was here that Charles I. slept at the time of the great battle; a fracture in the wall of one of the rooms is still shown as the souvenir of a shot which only just escaped the king. Shaw House has been sold by Mr. Eyre, and in consequence the pictures have been dispersed. The collection was not important, and nothing of its past history or provenance is known. The principal attraction was a really fine example of P. de Koning, an extensive view over a landscape, with a church and figures in the foreground, and a river winding away in the distance; this realized 2,100gs., the highest price ever paid for work by this artist. The four Canalettos were Venetian scenes, a view looking down the Grand Canal, with the Dogana and the Church of Santa Maria della Salute, bringing 135gs. A pair of good examples of S. Scott, Old London Bridge with St. Paul's and the Tower, and Westminster from the River, realized 250gs. A Romney sketch of a head, said to be of Lady Hamilton, but more probably of Mrs. Crouch, and very similar to the picture engraved under the title of 'Euphrosyne,' sold for 105gs.

There were several portraits of members of the Andrews and Eyre families. The most important of these was by Reynolds, and was catalogued as of "a lady." She is in dark dress with red bodice, and has a white lace frill round her neck. There seems to be no reasonable doubt about this lady being Anne, daughter of the Rev. Thomas Penrose, rector of Newbury, and wife of James Pettit Andrews, the historian already mentioned; she died on September 15th, 1785. In Messrs. Graves and Cronin's great work on Reynolds there is a record of a Mr. and Mrs. Andrews having sat for their portraits in 1760, but beyond this fact the compilers were unable to discover anything, and the portrait of Mr. Andrews yet remains to be discovered. The 31 lots realized 3,594*l.* 4*s.*

Mr. Adye's property consisted exclusively of family portraits, the names and painters of which have unfortunately been lost. About one of the portraits classed among those by anonymous artists there was, however, no doubt whatever. The portrait of Ralph Willett (lot 137), the famous book-collector, was an undoubted Romney, and was painted in 1782; and this fetched 250gs. Another Romney was that described as of "J. W. Willett, Esq." At the time this was painted, about 1785, he sat to Romney as John Willett Adye, and it was not until the death of his maternal cousin, Ralph Willett of Merly, in 1795, that he took the additional surname of Willett, becoming John Willett-Willett. Under this name he sat for New Romney, Kent, from 1796 to 1806, and died at Bath on September 27th, 1815. This portrait realized 125gs. There were at one time several fine Romneys in the Willett collection, but these were sold privately some years ago, and their places taken by copies, which were also included in the sale on Saturday. A portrait in pastel and *gouache*, by D. Gardner, of Mrs. Willett, in yellow and white dress, sold for 65gs.

The miscellaneous properties included an example of that rare master J. F. van Douven, a violinist at a window, on copper, signed and dated 1683, 72gs.; a landscape by Gainsborough, a view on the Orwell, a peasant driving animals along a road in the foreground, mentioned in Fulcher's 'Life of Gainsborough' (p. 238) as one of two in the possession of the Rev. R. Longe, 420gs.; F. Hals, portrait of a gentleman in dark cloak and hat, white linen collar, on panel, 280gs.; and A. van der Neer, a river scene with buildings, boats and figures, sunset, on panel, 180gs.

The same firm sold on the 11th inst. the following engravings. After Reynolds: The Countess of Aylesford, by V. Green, 42*l.*; Lady Elizabeth Foster, by F. Bartolozzi, 126*l.*; The Duchess of Devonshire and her Daughter, by G. Keating, 94*l.*; Lady Taylor, by W. Dickinson, 105*l.* After Morland: Delia in Town, by J. R. Smith, 105*l.*; Rustic Employment and Rural Amusement, by J. R. Smith (a pair), 136*l.* After Cosway: Hon. Mrs. Bouverie, by J. Condé, 81*l.* After Russell: Maternal Affection (Mrs. Morgan and Child), by P. W. Tomkins, 68*l.* After Romney: Emma (Lady Hamilton), by J. Jones, 241*l.*; Nature (Lady Hamilton), by J. R. Smith, 220*l.*; Mrs. North, by the same, 100*l.* After Lawrence: Miss Farren, by F. Bartolozzi, 183*l.* After W. Ward: Hesitation, by W. Ward, 65*l.*; The Musing Charmer, by the same, 84*l.*

A drawing by Swebach-Desfontaines, La Promenade de Longchamps, fetched 450*l.*

Fine-Art Gossip.

Messrs. Henry Graves & Co. held a private view of landscapes in water colour by modern Dutch artists last Thursday; also of landscapes in Holland and Belgium by M. C. Jacquet, of Brussels.

Messrs. Dowdeswell have on view water-colours at home and abroad by Miss Winifred R. Roberts.

At the Whitechapel Art Gallery a Photographic Exhibition was opened last Monday, and will be on view till January 7th.

We have it on the authority of the *Intransigeant* that this year's autumn Salon has not been a financial success. The novelty has apparently worn off, for the money taken at the doors has only been about one-half as much as that taken last year, and the sale of pictures has been very small.

The death, in his seventy-seventh year, is announced from Berlin of the portrait painter Prof. Fritz Hummel.

An unknown phase of Puvis de Chavannes's career is being revealed by the publication of an album of his caricatures, to which Mlle. Marcelle Adam has contributed a preface. The great artist was, it seems, an inveterate caricaturist, but only for his own private amusement and that of his intimate friends. He attached no importance to these trifles, of which Madame Philippe Gille, widow of the well-known writer, possesses a large collection, and it is from this source that the album in question is derived. The caricatures cover a very wide field of imagination, but the artist possessed the unique merit of never caricaturing his friends.

The usual excursions of the German Archæological Institute of Athens will not take place next year, according to a recent announcement, but Prof. Dörpfeld will during April and May give lectures at Olympia and Troy.

MUSIC

OUR LIBRARY TABLE.

The Complete Petrie Collection of Ancient Irish Music. Edited by Charles Villiers Stanford. (Boosey & Co.)—The Society for the Preservation and Publication of the Melodies of Ireland, founded in 1851, published a volume of Irish melodies collected by Dr. George Petrie, and in a preliminary announcement it was stated that the Society had at its disposal material sufficient for five more such volumes. Sir Charles Stanford, who has given many proofs of his love for the wonderful folk-music of his native country, has traced the greater part of that hitherto unpublished material, and included it, together with the melodies of the printed volume, in the present collection. The editor has left Petrie's work untouched, noting, however, doubtful points as they occur; he has also reproduced *in extenso* Petrie's interesting introduction to the printed volume which bears the date 1855. The 'Dictionary of National Biography' states that "a second volume was projected, but never appeared." But part of such a volume was actually printed, and it contains songs not included in the present volume, while others which are included have slightly different texts. It would seem, therefore, that a Petrie manuscript has been lost, or has escaped the notice of Sir Charles Stanford. We may add that many of the 1,582 melodies have short but valuable editorial comments. Petrie himself wrote "a most interesting history and criticism" of each melody, but these it was found impossible to include in the present collection. Criticism has no place here; we have merely to record the appearance of the volume, which will be welcomed not only by Irishmen, but also by all musicians who understand, or rather feel the importance of, folk-music. The work is published by the Irish Literary Society of London.

Old Violins, by the Rev. H. R. Haweis, is now published by Mr. John Grant, of Edinburgh, in the "Collector Series." The present reviewer regrets that a book covering the ground which Mr. Haweis has here, in sketchy and somewhat rhapsodical fashion (why do writers on the violin so often fall into hysterics?), surveyed, is still to seek. It is doubtful if there is any immediate prospect of its being fittingly written. Even for one properly equipped with technical and literary skill the subject is too extensive to be satisfactorily treated in the compass usually assigned to a "handbook." What is wanted is a series of monographs upon the great makers and their schools conceived and carried out on the scale of Messrs. Hill's recent work on Stradivari. That, with all its shortcomings, Mr. Haweis's

book was not worth reprinting, may not be said. It has the merit of being eminently readable, and may serve as a pleasant introduction to the subject, though it cannot be safely recommended as a sufficient and trustworthy guide for collectors. Nor do we think that collectors, if they still exist, would make the mistake of trusting to book-lore in such a delicate feat as that of identifying and selecting old violins. Finally, we may say that here and there we have noticed awkward slips and errors suggestive of great haste, if not of carelessness, on the part of the author. Some of these were pointed out when the volume first appeared in 1899, and it is to be regretted that they are still left to disfigure its pages.

From the Associacio Wagneriana of Barcelona come translations into the Catalan tongue of two parts of *The Ring of the Nibelungs*, *The Flying Dutchman*, and *The Mastersingers*. We understand that the other two parts of the 'Ring' have been, or will be, published. The translation appears to fit the music admirably, and the idea of marking in the margin the name of the musical motive (illustrated by music type in an appendix) and of the orchestral instrument to which it is allotted is new to us, and might be of great assistance to those who wish to follow a musical work with a libretto giving some outline of the musical construction.

RICHARD STRAUSS'S 'SALOME' AT DRESDEN.

During the last twenty years, or even more, Dr. Richard Strauss has been producing a series of orchestral works which have caused much discussion. He is a musician possessed of great gifts, but of late he has shown a tendency to bizarre effects, or, to be fair to him, the attempt to extend his art beyond its natural limits has resulted in strange, and at times uncouth, sounds. In his latest instrumental work, 'The Domestic Symphony,' there are sudden changes of mood, also harsh discords and fits of noisy orchestration which are most unpleasant. As the music is of the programme order, there might be some explanation, if not justification of these peculiarities. But in this and former symphonic poems Strauss gives mere titles to his works, while he leaves to writers of various essays or analyses the task of explaining the "inner" meaning of the music, basing their opinions on statements more or less serious made by the composer, and the result is confusion worse confounded. To hear, therefore, a music drama, in which the text would at any rate make clear the aims and intentions of the composer, seemed to us an excellent opportunity of judging him.

But first something must be said about the subject selected. There is strong objection in this country to an opera or drama based on a Biblical story; and even in Germany, in the case of the very work under notice, objections in certain cities have been raised by the censorship. To persons liberally minded, Méhul's masterpiece, 'Joseph,' Goldmark's 'Queen of Sheba,' or Saint-Saëns's 'Samson et Dalila' might not appear objectionable. But if these were allowed, every new work on a Bible story would lead to unprofitable discussion; hence it has no doubt been found wisest and simplest to forbid anything of the kind. That Strauss—who has certainly not yet been recognized as a great writer for the stage—should have chosen not only a Biblical subject, but also one dealing with a dark, cruel page of Jewish history, is to be regretted, but he apparently takes pleasure in doing anything which will provoke criticism.

It seemed impossible to avoid reference to the source of the drama; but with regard to 'Salome,' which was produced at Dresden last Saturday evening, our comment will deal with it purely from an artistic point of view. The story presents two personages—the Tetrarch, a slave to his passions, and the voluptuous, cruel Salome—which enable Strauss to indulge in some of his wildest strains; but it must be conceded that Herod is depicted with considerable force, and Salome in an appropriately hysterical manner, except at the close, when music not lacking in charm, and of dramatic intensity, is weakened by the ignoble, indecorous scene with which it is connected.

Jochanaan stands out as the stern preacher of righteousness, and here was Strauss's opportunity for writing impressive music, making the repulsive elements of the story a dark background to set in striking relief the one noble figure of the tragedy. He is at first associated with music of a certain dignity; one special theme is, however, soon weakened by over-repetition. Moreover, the style of the music is not properly maintained; it finally becomes somewhat Wotanesque. What ought to have been the strongest turned out to be the weakest part of the work, not only musically, but also dramatically, for the stage presentation of the Preacher was undignified. Strauss did, we believe, attempt to give a certain solemnity to his utterances, and just here and there he gets the right atmosphere, the right colour; but there is not the true ring of sincerity about the music; the effect is theatrical, not really dramatic.

The orchestral music—and for the occasion there was a specially large orchestra—forms naturally an important feature of the work. The composer has built up his score on Wagnerian lines, *i.e.*, he has representative themes from which is evolved nearly the whole of the instrumental music. Now Strauss is master of the technique of his art, and a mere perusal of the vocal score shows with what skill he has dealt with his material, modifying it according to circumstances, combining one theme with another, and colouring the music, certain savage outbursts excepted, with no small skill. Wagner's methods have been used by many composers. There is a reasonableness about the system of representative themes which may justify the adoption of it in a moderate degree. But Strauss seems as if he wished to surpass Wagner himself. The boldness of his attempt deserves recognition, but with few exceptions the effect is in inverse proportion to the skill displayed. The art is everywhere visible, but the true spirit of inspiration is wanting: the music has body, but no true soul. Was Strauss hampered by his subject? or is it really that he lacks genuine creative power? With Wagner the system of representative themes was the means suggested to him from within as the best to express his thoughts and feelings; with Strauss the imitation is often mechanical. So is it with the classical forms, which by many moderns are considered exhausted; forms cannot be exhausted, but the race of composers able to fill them successfully may be.

One thing more. As in 'Heldenleben' and the 'Domestica,' there are uncouth harmonies. We may be told that from Bach onwards all composers now held in honour were apt to astonish the ears of their contemporaries by the boldness of their harmonies and harmonic progressions. That is so, but it does not follow that Strauss's harsh effects will entitle him to a seat among the immortals. The difference between Strauss and his great predecessors is this: the latter were more given to following the rules handed down than to disregarding them; while Strauss takes the opposite course.

The music which accompanies Salome's dancing before the tetrarch is fantastic and full of Eastern colour, and the interweaving into it of certain quite suitable themes is without doubt effective. This section of the work we expect to find making its way into the concert-room; anyhow, it is the only one which would bear such transplantation. The music represents Strauss at his best.

We must add that the drama is in one act, lasting an hour and a half, and the whole of the action takes place on the terrace of Herod's palace. A division into two acts, with a brief interval, would have been a welcome relief from the storm and stress of the piece.

The principal dramatis personæ were Frau Wittich (Salome), Herr Burrian (Herodes), and Herr Perron (Jochanaan), and all three deserve praise for their acting and singing. Frau Wittich's voice was not, however, sufficiently powerful to struggle against the heavy orchestration. The orchestral playing was very fine: the music is excessively difficult, but the players were determined to do their best; while as to Hofrat von Schuch, no words of praise could be too strong for the skill and mastery he displayed as conductor. At the close there were many recalls, for composer, conductor, and artists. The work, then, has made a successful start. Whether it will continue to enjoy prosperity remains to be seen.

Musical Gossip.

Sir Charles Stanford is to be congratulated upon his choice of Mozart's 'Marriage of Figaro' for the operatic performance by the students of the Royal College of Music at His Majesty's Theatre, which took place on the afternoon of Thursday last week. The singing of several members of the cast was intelligent and pleasing, as was also the acting; and the charming work had evidently been carefully rehearsed. Miss Alice Moffat, the Cherubino, sang her music in attractive style, while that for the Countess was agreeably rendered by Miss Theresa Lightfoot, and Miss Eva Brown was a bright Susanna. Of the male performers Mr. Robert Chignell as Figaro and Mr. Denis Byndon-Ayres as Don Basilio were the most alert. Band and chorus were satisfactory.

A new opera in one act, by Mr. Nicholas Gatty, called 'Grey-steel; or, the Bearsarks come to Surnadale,' will be produced by the Moody-Manners Opera Company at Sheffield towards the end of February. The libretto, by Mr. R. Gatty, the composer's brother, who is lector in English at Prague University, is founded on the opening of the Icelandic saga 'Gisli the Soursop.'

In an article by Dr. Karl Glossy entitled 'Ein Gedenkblatt,' and published in the *Oesterreichische Rundschau*, the writer states that Beethoven's 'Fidelio' was originally to be produced at Vienna on November 15th, 1805, on the *Namenstag* of the Empress, but that the censor forbade the performance, also that, through the efforts of Sonnleithner, the prohibition was withdrawn, and the first performance fixed for November 20th. For political, likewise religious, reasons, objections have been raised against many operas; but it would be interesting to know on what ground—if the above statement be correct—any disapproval could have been expressed concerning the 'Fidelio' libretto, in which a faithful wife, at great sacrifice and risk, rescues her husband from an ignominious and unmerited death.

Performances next week.

Sun.	Sunday Society Concert, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
Mon.	Madame Carlotta Ide's Vocal Recital, 8.30, Steinway Hall.
Tues.	Military and Popular Concert 2, Albert Hall.
—	Signor Busoni's Pianoforte Recital, 3, Bechstein Hall.
—	Miss E. Amethe's Violin Recital, 8.30, Æolian Hall.
Wed.	Ballad Concert, 3, Bechstein Hall.

DRAMA

THE WEEK.

Haymarket.—*The Indecision of Mr. Kingsbury: a Comedy in Four Acts.* From the French of Georges Berr. By Cosmo Gordon Lennox.

As an adaptation from the French 'The Indecision of Mr. Kingsbury' is respectable accomplishment. Though so lengthy as to belong to *le genre ennuyeux*, it is shorter than the original, and it struggles, with a certain measure of success, with difficulties that are more easily circumvented than opposed. That the original should have been given at the Comédie Française, at which house it was first played on July 21st, 1903, is a proof that at that august institution, as elsewhere, kissing goes by favour. 'L'Irrésolu'—as, after a piece of Néricault Destouches, first given at the same house on January 15th, 1713, is named the French original—is the work of a young and enterprising *sociétaire* with more stage knowledge than dramatic capacity, and starts on old-fashioned lines. His 'Irrésolu' is built on the same lines as 'The Lyar' of Foote, which takes us back by Steele to Corneille, and thence to Lope de Vega. Far enough from these writers does the later action depart, but the earlier scenes, which are the most regularly constructed and the best, have a ring of old comedy. From childhood Arthur Kingsbury (the Pierre Fontvannes of the original) has been unable to make up his mind. When an infant, we are given to understand, he was difficult to rear because he did not know how to choose between the two proffered sources of lacteal supply. Nubile now and his own master, he finds the task equally difficult to select a wall-paper and a mistress. At the outset he is provided with a secretary clever and resolute enough to profit by his master's infirmities, seize on his neglected opportunities, marry the heiress with whom the employer coquets, step into the fortune which goes a-begging, and occupy the seat in Parliament at the disposal of the *irrésolu*. When, in the end, he becomes betrothed and married—processes the more readily accomplished since it is worth the while of no one to contest with the heroine the sorry prize for which she has successfully angled—his feebleness will scarcely allow him to keep his newly acquired possession. With so much weakness does he treat his wife that she takes the reins into her own hands, nearly ruins him by her extravagance, and in pure wantonness of contempt all but betrays him with the most worthless of the despicable crowd by whom she is environed. Not before it is time, his mother—who is as strong as he is feeble—takes him in hand, and forces him to assert himself. In the end, accordingly, a glimpse of happiness lights upon the irresolute, who for a while abjures a name he will soon resume.

This analysis—if it may be so called—of the play is ironical rather than exact, but does not depart far from the truth. Ingenious and mirthful situations—some of them not too easily transferable to the English stage—are woven into the plot, and characters amusing enough in spite of a tinge of caricature are introduced. The chief difficulties of the adapter spring from the impossibility of suiting to conditions of English life the parliamentary proceedings presented, and the consequent necessity of reducing to insignificance the action of the energetic secretary. In spite of the compression that has been attempted, the whole remains unpardonably long and diffuse. Efforts to demonstrate to managements that the English public is restless and impatient under conditions of boredom which the French accept with equanimity seem futile. Accustomed as he is to play liars and impostors of every description, Mr. Charles Hawtrey finds no difficulty in exhibiting the pliancies and vacillations of the hero, his performance of whom gives the play its best chance of permanent success. Mr. Cosmo Gordon Lennox shows ability in a part played in the original by M. Coquelin *cadet;* and Misses Fanny Brough and Nina Boucicault, and Messrs. Holman Clark, Valentine, and Draycott, give the whole adequate interpretation.

Great Queen Street.—*Der Pfarrer von Kirchfeld: Volksstück in vier Akten.* Von Ludwig Anzengruber.

In 'Der Pfarrer von Kirchfeld,' the scene of which is laid half a century ago in the Bavarian highlands, a picture is given of the difficulties of a priest of advanced views in his contest against a stubborn orthodoxy, resolute in its insistence upon clerical submission to authority. A priest who pays more attention to the spirit than the letter of Christianity, sheltering in his house and furnishing with employment an orphan maid, is charged with immorality, and forbidden to exercise priestly functions. The situation thus obtained has much in common with that lately presented at the Scala by Mrs. M. L. Ryley in 'Mrs. Grundy.' A happy issue, such as is possible in the case of a clergyman, is forbidden in that of a Roman Catholic priest, and the termination of 'Der Pfarrer von Kirchfeld' is gloomy and almost fatal. Herr Hugo Waldeck played with some earnestness as the persecuted ecclesiastic, and Herr Hans Andresen exhibited his customary breadth of style as a malignant and embittered rebel against ecclesiastical discipline. Fräulein Gademann was also good as the unjustly incriminated domestic of the priest. As a whole the recent performances seem inferior to those of previous years; we miss the breeziness of one or two old favourites, and feel as if the limits of a small stage were exercising a deleterious influence upon breadth of style.

Shakespeare and Holy Scripture. By Thomas Carter, Dr. Theol. (Hodder & Stoughton.)—In his "Foreword" to this substantial volume (nearly 500 pages) Dr. Carter tells us that his endeavour has been "to find out how far the English Bible influenced the thought and formed the vocabulary of the greatest of English writers." As regards its influence on the poet's thought, we have no doubt that Shakspeare had prayed his Bible well, as Dr. Caius says, and that it had had its necessary and legitimate influence on him; but we fail to find in Dr. Carter's work any particularly convincing evidence of the fact, and as to his vocabulary Dr. Carter is good enough to admit that "words which are to be found in Shakespeare and the Holy Scripture may also have been the common property of the countryside." They were so; and of course Dr. Carter knows that Shakspeare made a vastly greater use of them than did the translators into English of the Bible. Nine-tenths of Dr. Carter's citations are of the most trivial nature, and often, as it seems to us, even ludicrous as parallels between the texts of the Bible and the plays. The good intentions and industry of the author of this volume are, of course, worthy of all respect, but we cannot avoid the feeling that they have been wasted on a tedious piece of work.

Dramatic Gossip.

'The Assignation,' a three-act satire by Mr. Hamilton Aïdé, produced for a solitary occasion at the New Theatre on the 7th inst., is a species of modernization of 'The Merry Wives of Windsor,' and shows the manner in which two chaste wives expose the wantonness of a would-be lady-killer. The wives were played by Misses Ethel Irving and Edith Olive, other parts being assigned Miss Geneviève Ward, Miss Marie Illington, Mr. Gerald Du Maurier, and Mr. Ralph Alderson.

Abandoning for a while his projected visit to America, Sir Charles Wyndham will on January 1st transfer 'Capt. Drew on Leave' to Wyndham's Theatre, where he proposes to remain until Easter, if not later.

In consequence of the indisposition of Mr. Forbes Robertson, 'Mrs. Grundy' will after to-night be removed from the stage of the Scala Theatre—whether temporarily or otherwise remains to be seen.

'La Cousine Bette,' extracted from the immortal novel of Balzac by MM. Pierre Decourcelle and Granet, has been given at the Paris Vaudeville.

On the first day of the new year 'Major Barbara' will be transferred into the evening bill at the Court Theatre, in which it will remain for six weeks, when it will be succeeded by 'The Voysey Inheritance,' which in turn will give way to Dr. Gilbert Murray's translations from Euripides.

The production at the St. James's of 'Beside the Bonnie Brier Bush' has been postponed until the 27th inst.

Performances of the 'Interlude of Youth' were given at the Bloomsbury Hall on Tuesday, Wednesday, and Thursday by the so-styled English Drama Society.

Early in February Mr. Alexander will reappear at the St. James's Theatre in Mr. Pinero's new play 'His House in Order.' He will be supported by Miss Irene Vanbrugh, Mr. Herbert Waring, and Mr. Lyall Swete.

Mr. and Mrs. Cosmo Hamilton have written a comedy entitled 'A Sense of Humour,' which they intend producing towards the close of the present year at a West-End theatre not yet named.

Irving's library will be sold by Messrs. Christie on Monday and Tuesday next. Its interest is largely theatrical, and many of the plays, &c., were at one time the property of Edmund Kean, Kemble, and other stage celebrities, and for these fancy prices will doubtless be paid. Many of them are annotated by former owners. The extra-illustrated lives of Dickens, Garrick, Edmund Kean, and Macready are of the highest interest, including many autograph letters, portraits, playbills, and numerous newspaper cuttings. The specially printed copies of the various Lyceum plays as arranged for the stage by Irving contain numerous manuscript alterations in the text in the handwriting of the actor-manager. The whole sale will occupy five days.

Daniel Edward Bandmann, who died on November 23rd at his ranch near Missoula, Montana, after fifteen years' enforced retirement from the stage, was born at Cassel, and made his début at the Court Theatre, New Strelitz. Having a reasonable acquaintance with English, he appeared at Niblo's Garden, New York, as Shylock, January 15th, 1863. Under the auspices of Tom Taylor he played in London the hero of 'Narcisse,' founded by Brachvogel on 'Le Neveu de Rameau' of Diderot. He was subsequently seen in 'The Rightful Heir,' Bulwer Lytton's rendering of 'Le Capitaine Paul' of Dumas, Lyceum, October 3rd, 1868, and in Othello, Hamlet, and other characters; he made several appearances in London, and obtained some reputation, but little personal popularity. During one of his visits he married Miss Millicent Palmer. He seems to have been best known in America, and is reputed to have been sixty-five years of age.

The death is announced from Paris of M. Paul Meurice, a well-known novelist, journalist, and dramatist. Born in Paris in February, 1820, he had nearly completed his eighty-sixth year. His début as dramatist took place at the Odéon in 1842 in 'Falstaff,' a piece drawn from Shakspeare with the avowed collaboration of Auguste Vacquerie, and the unacknowledged participation of Théophile Gautier. 'Le Capitaine Paroles,' a one-act piece written in conjunction with Vacquerie, was seen at the same house the following year; and 'Antigone,' drawn from Sophocles by the same collaborators, on May 21st, 1844. 'Hamlet,' in five acts, by Meurice, Dumas, and Maquet, was given at the Comédie Française, December 15th, 1847. Alone or in collaboration, he supplied to various theatres many popular plays: 'Benvenuto Cellini,' 'Paris,' and 'Schamyl' to the Porte-Saint-Martin; 'Fanfan la Tulipe' (translated for Fechter at the Lyceum) to the Ambigu; 'La Barrière de Clichy,' with Dumas and Maquet; 'Le Maître d'École,' with Lemaître; 'Le Roi de Bohême et ses six Châteaux'; 'Les Beaux Messieurs de Bois-Doré,' with George Sand; 'Le Drac,' with the same; 'François les Bas-bleus'; 'Le Pavillon des Amours'; 'Les Deux Diane'; 'La Vie Nouvelle'; 'Cadio,' with George Sand; 'Les Misérables,' with Victor and Charles Hugo (at the Théâtre Français of Bordeaux, October 14th, 1870); 'La Brésilienne'; 'Quatre-vingt-treize,' after Hugo, Gaîté, December 24th, 1881; 'Le Songe d'une Nuit d'Été,' from Shakspeare, Odéon, April 14th, 1886; and 'Struensée,' his latest drama, given some years ago at the Comédie Française. Paul Meurice was closely associated with Victor Hugo, one of whose executors he was, and was engaged in superintending the production of his posthumous works. He leaves some unpublished writings, notably a 'Don Juan,' likely by this time to seem rather out of date. With Dumas he collaborated in novels such as 'Ascanio,' 'Amaury,' &c. He edited Victor Hugo's paper *L'Événement*, incurring nine months' imprisonment, after which he wrote for *Le Rappel*.

Though best known as an entertainer, Howard Paul (born in Philadelphia in 1830, died on the 10th inst. at Bournemouth) was responsible for a few plays. Among these are 'Thrice Married,' which ran one hundred nights at the Princess's; 'The Mob Cap,' Drury Lane, 1863; 'Opposite Neighbours,' Strand; 'Rappings and Table-Movings,' Haymarket; 'A Lucky Hit,' Princess's; 'Old Folks,' Strand, September 16th, 1867; and 'Locked Out,' October 27th, 1879, in which he acted with Miss Letty Lind. His reputation was merged in that of his wife (known at first as Isabella Featherstone), with whom he was for a time publicly associated. Howard Paul was occasionally seen on the stage.

Mr. Heinemann has just published a close and unbowdlerized translation of Beyerlein's play 'Lights Out,' which will be of interest to many who go to the Waldorf Theatre and see the arrangement there given. This arrangement is pretty far removed from that of the original play, and would scarcely have roused Germany to "unparalleled enthusiasm." We are rather surprised that the English version does not, for purposes of reference, give the original title of the play, 'Zapfenstreich.'

Mr. F. R. Benson has, on the proposition of Mr. Sidney Lee, the chairman of the meeting, seconded by Lord Redesdale, been elected a life trustee of Shakspeare's birthplace in lieu of Sir Henry Irving.

'The Girl of the Golden West' is the title of a drama, in three acts and an epilogue, by Mr. David Belasco, produced last month at the Belasco Theatre, New York. It is a story of the wildest life in California during the gold fever, its hero being a "road agent" (otherwise a highwayman), and its heroine the fascinating keeper of a drinking and gambling saloon.

At the Schauspielhaus, Berlin, under the title of 'Der Froschkönig,' what is announced as a romantic comedy in three acts, by Herr Dietrich Eckart, has been given with modified success. The best actors of the theatre failed to commend what is extravagant rather than romantic.

'Stein unter Steinen,' the latest novelty of Herr Hermann Sudermann, given for the first time at the Lessing Theater, Berlin, on October 7th, will be produced on Monday at the Great Queen Street Theatre. In order to permit of preparation the house was closed on Monday last.

To Correspondents.—E. A. A.—H. J.—C. C. S.—O. L.—W. M.—received.
T. H.—Many thanks. R. G.—Certainly.
No notice can be taken of anonymous communications.

SANDS & CO.

STUDIES FROM COURT AND CLOISTER.

Being Essays, Historical and Literary, treating mainly of Subjects connected with the Sixteenth and Seventeenth Centuries.

By J. M. STONE,

Author of 'Mary I., Queen of England,' 'Reformation and Renaissance,' &c.

With 8 Full-Page Illustrations. Demy 8vo, price 12s. 6d. net.

THE EXTINCTION OF THE ANCIENT HIERARCHY.

Being an Account of the Death in Prison of the Eleven Bishops honoured at Rome among the Martyrs of the Elizabethan Persecution: Archbishop Heath, of York, Bishops Tunstall, Bonner, and Companions.

By the Rev. G. E. PHILLIPS.

LITERATURE

Studies in Poetry and Criticism. By John Churton Collins. (Bell & Sons.)

IT would have been difficult for us to express our opinion of Prof. Churton Collins as a critic, without seeming to judge him by standards unfairly alien from his own, if he had not himself presented us with a standard of judgment. "A cultivated taste," he tells us on p. 51, "is a poor substitute for instinct; for the one is as fallible as the other is infallible." He is speaking, it is true, of poetry, not of criticism; but the words will bear a wide application. As a critic, Prof. Collins has a cultivated taste, but his instinct is unsure. When we have done justice to what is least fallible in his taste, it will remain for us to consider the absence in him of that infallible instinct for which taste, as he justly says, is a poor substitute.

The two essays in the volume which show the author at his best are those on 'Longinus and Greek Criticism' and on 'Miltonic Myths.' There is no other English critic who could have done so capably what he has done in these two essays. His general view of the treatise 'On the Sublime' is perfectly just, and rightly enthusiastic; he does good service by his insistent reminder of the singular neglect with which it has been treated by our universities. The whole sketch of Greek criticism presents a vast amount of sober investigation in a very brief space; and the discussion of the claims of Longinus to the authorship of the treatise is, though long, distinctly not "wearisome." It ends, necessarily, in uncertainty; but the doubt is in favour of Longinus.

The essay on 'Miltonic Myths' contains an equally acute and a more conclusive investigation of the question of the authorship of the recently discovered 'Nova Solyma.' Every serious argument of the discoverer, Mr. Begley (whether or not, as Mr. Collins affirms, "a sophistical defence of a preconceived theory"), is met by a counter-argument, and it is difficult, after reading the essay through, to dispute its conclusion: that,

"while there is not an iota of external evidence to warrant the ascription of the Romance to Milton, the internal evidence is as conclusive as it is possible for such evidence to be against any such assumption."

A third essay, on 'The Collected Works of Lord Byron,' though scarcely so important a piece of work as either of these other essays, comes to a very interesting conclusion, which it does much to prove: that

"no other English poet, not Ben Jonson, not Milton, not Gray, not Tennyson, owed more to reading than Byron, or had a mind more stored with acquired knowledge."

This is not the ordinary view of Byron, who has been taken for the most part at his own valuation, and been implicitly believed when he boasts: "I never know the word which will come next." Mr. Collins tracks his rhetoric home to many lairs; among others, to the 'Mysteries of Udolpho.'

The last essay in the volume, on 'The True Functions of Poetry,' is an admirable plea for the employment of "poetry, the best poetry, as an instrument of moral and political discipline"; in education, that is, in the sense of the quotation from Aristophanes in one of its pages: "Children have the schoolmaster to teach them, but when men grow up the poets are their teachers." Mr. Collins becomes almost eloquent as he sets himself collectedly to praise poetry:—

"Poetry, in its transcendental activity, is the revelation of the infinite and invisible in the finite and seen, in its ethical activity the sublimation of man's human duties and obligations; of his conscience and impulses at once the legislator and inspiration; in its æsthetic activity it turns all things to loveliness and music."

All this—the whole argument indeed—is good and sound and useful; only, when we find Mr. Collins contrasting Keats with Wordsworth, not in order to show that Wordsworth is different from Keats, but that he is superior to him; when he tells us that we must go to poetry, "not for what poetry of this kind can give us"—not to Keats, that is, but to Wordsworth—he is showing that his conception of poetry is limited, a matter of rule and measure; a defensible form of taste, no doubt, but no form of instinct.

And so we come back to the question with which we started, and in considering the remaining essays in the volume—essays exclusively about poetry—we shall discover to what extent that cultivated taste which we have seen to be sufficient to keep Mr. Collins right about matters of detail in the work of writers whose position is fixed—Byron, Milton, Longinus—can keep him right when he begins to inquire into the fundamental qualities of writers whose position is not yet fixed, such as Mr. William Watson and Mr. Gerald Massey, such as the main part of the poets of America. The essay on Mr. Gerald Massey the present reviewer will not discuss, as he is not well acquainted with Mr. Massey's work, and might do it an injustice if he judged it merely by Mr. Collins's extracts from it. It is in his extracts, indeed, that Mr. Collins most often betrays his insufficient sense of what distinguishes poetry from mere writing in verse. On p. 56 he quotes a lyric of Longfellow, beginning

The night is calm and cloudless,

assuring us that it is "one of the most exquisite lyrics to be found in American poetry"; whereas it is a piece of sentimental fancifulness which can only be described as poetizing, not poetry. He quotes from a lyric of Richard Henry Wilde "one line which a true poet might envy"; and this is the line:—

On that lone shore loud moans the sea,

He writes on the whole sensibly about poets like Poe and Emerson, yet we find him incapable of estimating justly such other poets as Longfellow, Lowell, and Mr. Watson; and for definite enough reasons. Professing to be conscious of the defects of Lowell as a poet, he yet fails to draw the inevitable deduction; and we find him saying: "In originality, in virility, in many-sidedness, Lowell is the first of American poets." That, indeed, he might have been, had he been a poet at all; but as he is not, in the strict sense, a poet at all, of what avail are originality, virility, many-sidedness, or any number of other important, non-essential qualities? To say of Longfellow:—

"Many would no doubt dispute Longfellow's title to be considered America's greatest poet; probably no one would dispute his title to be considered her greatest poetic artist,"

is to use words like "poet" and "poetic artist" without the vaguest possible sense of their real meaning. How vague that sense must be we can realize by reading the effusive paragraph on the "something almost sacred in the fame of Longfellow"; on "his poetry consecrated by its associations." When we read that "no discriminating critic could doubt that there are more elements of permanence in Mr. Watson's poems than in those of any of his present contemporaries"; and when this statement is emphasized by a sneer at Mr. Swinburne, "the most prodigally endowed of living poets," who, in Mr. Collins's opinion, "will have infinitely more to fear from sifting time," we see more clearly than ever that what is lacking here is a sense of values, a sense of poetry as poetry—that "infallible instinct," in short, for which "a cultivated taste" is so poor a substitute.

At the beginning of his essay on 'The Poetry and Poets of America,' an impartial and painstaking piece of work which has many incidental merits, Mr. Collins complains that the best English critics have been unjust to American poetry as a whole. "An Englishman," he says, "who expects from Bryant and Longfellow what he finds in Wordsworth and Tennyson, might be forgiven for being disappointed." True; but if he expects, not similar, but equal, merit, and does not find it, is it his own fault if he is and remains disappointed? Two American poets, and two only, have so far shown absolute and unmistakable poetic genius; both are absolutely un-English, and both

XUM

have received due attention and admiration from English critics. Neither Poe nor Whitman can be accepted as a wholly satisfactory poet; we may dispute the substance of the one and the form of the other; but in those two men—and in those two men alone—there is that vital essence which criticism can never explain, but must accept, or become a dusty signpost pointing along forsaken highways. Mr. Collins does not stop to consider these fundamental questions, but, writing fairly enough of Poe and not wholly unfairly of Whitman, goes on cheerfully to balance the relative merits of Longfellow, Holmes, and Lowell, with the remark:—

"And now we come to that eminent and gifted trio in whose work the Transatlantic poetry of the last century may be said, in many important respects, to culminate."

Lord Hobhouse: a Memoir. By L. T. Hobhouse and J. L. Hammond. (Edward Arnold.)

No more conscientious public servant than the late Lord Hobhouse ever existed, and it is only right that the community on whose behalf he spent laborious days should be able to appreciate his full worth. That end will be agreeably accomplished by the readers of this compact and eloquent memoir. Lord Hobhouse once described himself as a beast of burden. He undoubtedly failed to win the position to which his abilities entitled him, partly through self-depreciation and scorn of the art of self-advertisement, and partly through ill-health. All the same, as his biographers justly claim for him, the sum of his achievement was not small. He must have been sorely vexed when his strength proved unequal to the rush of a lawyer's life at a moment when a large practice was well within his grasp. But, undefeated by this set-back, he was able as a member of the Endowed Schools Commission to place derelict foundations on a rational basis, though to timid spirits his views savoured of Jacobinism, and though, as Lord Davey admits in an otherwise appreciative sketch, mistakes were made, both in character and substance, when middle-class education came up for reform. Hobhouse owned to a deep distrust of a priori reasoning on practical subjects. Thus, though Mill was in many respects his intellectual teacher, he objected to Mill's tenderness for eccentric bequests, and later, when Legal Member of the Viceroy's Council in India, he spoke and wrote wise words against the danger of ruling that empire too rigidly from Whitehall. One of his colleagues gives an entertaining description of Hobhouse in private life, whether when walking a native Prime Minister off his legs, until the hapless man had to be held up by two attendants, or when dipping into his favourite authors:—

"Once, in particular, in the course of an excursion I made with him from Simla into the 'interior,' as we used to call it, or into the 'exterior,' as he always insisted on calling it, I came upon him in the forest in the heat of the day, reading out 'Lycidas' in a loud voice and with great gusto, to the admiration of a number of natives who were watching him intently from a little distance, and were doubtless under the impression that he was going through some solemn religious exercise."

Hobhouse was hardly a man to appeal to a parliamentary constituency, but he was fighting a hopeless fight in any case when he stood for Westminster in 1880 with Mr. John Morley as a colleague, though Liberalism was then at full tide. One of the fathers of London government, he worked zealously on behalf of the Municipal Reform League, and his letters to his brother-in-law Lord Farrer show with what intense interest he shared the fortunes of the County Council at the beginning of things. Of his whole-hearted and unsalaried labours for twenty years as Judicial Member of the Privy Council we get an admirable estimate from Lord Davey:—

"One quality which Lord Hobhouse possessed in an eminent degree was tenacity. I have known even Sir George Jessel moved by an argument to modify or even reverse his first impression of a case, but when Lord Hobhouse had once formed and expressed an opinion I have never known him yield it, either in the course of an argument or in consultation with his colleagues, on the judgment to be given. I believe this arose from his habit of not forming an opinion or expressing his views until he considered he had all the material for doing so, as well as from the natural bent of his mind to hold fast by an opinion once formed."

The trend of public events in his later years ran strongly against Hobhouse's most cherished convictions, and he became a despondent critic of modern tendencies. But, as a charming letter, written on the occasion of his golden wedding, shows, he felt that he had done well with his life, and that, "firstly, secondly, and thirdly," through his marriage:—

"And so we withdrew quietly to the scene of our first honeymoon, when the changes and chances of life were all hidden in the womb of the future; and all we knew was that we started with a good stock of mutual love, health, strength, and intelligence to work upon. Which of the two honeymoons was the most agreeable I am not quite sure; but we enjoyed the latter one very much in a sober, humble spirit. And so we await what is yet to come; only hoping that the end may not be preceded by mental decay, nor by an inordinate amount of pain."

Fortune spared Hobhouse from the realization of his one fear, the misery of declining faculties, and his devoted wife was divided from him by death for less than five months. It is pleasant to know that their last summer together was spent in serene enjoyment of garden, fir wood, and heath.

Wilhelmina, Margravine of Baireuth. By Edith E. Cuthell. 2 vols. (Chapman & Hall.)

Mrs. Cuthell has written a most interesting book. The life-story of the best beloved sister of Frederick the Great was well worth the telling, both for its human and its historical significance. In its latter aspect the author has been able to confirm by her own researches the conclusions arrived at in recent years by German historians, modifying to some extent the story of the English marriage project as presented by Carlyle and the older Prussian writers. Unfortunately, considerations of space will not allow us to enter into the question of the exact purport of these complicated diplomatic fencings; we can only glance briefly at results.

The two marriages in debate were of course that between Wilhelmina, Princess Royal of Prussia, and Frederick, Prince of Wales (son of George II.), on the one hand, and that between the Prince Royal of Prussia (the future Frederick the Great) and the Princess Amelia of England on the other. Neither of these matches was concluded, owing probably in a large measure to the personal hostility existing between the fathers of the respective parties.

But there were also other factors, thus stated by the author:—

"Wilhelmina's marriage was personal, her brother's entirely political. The King and his councillors perceived that they must hedge politically; so, while accepting Wilhelmina's marriage, they stipulated that Frederic's was not to be till the differences between England and Prussia were settled, reserving the right to fix the time, as Frederic was yet so young. They also demanded that England should guarantee the Julich-Berg succession to Prussia, and specified this as a condition *sine quâ non*."

The author calls attention to various inaccuracies in the Margravine's 'Memoirs' (which she has compared with her extant letters), more especially in passages relating to her early years. Wilhelmina fancied that she had received a proposal from Charles XII. of Sweden, and that later a marriage with Augustus the Strong had formed a clause of a treaty; and she represents her match with Frederick of England to have been fully arranged by George I. during his visit to Charlottenburg in 1723—when, as she relates, her grandfather "took a candle and looked me over from head to foot." Thinking herself "a queen on the chessboard, whereas she was hardly even a pawn" (at this time), Wilhelmina twists Hotham's mission, the object of which was to draw her father from the Imperial alliance, into a romantic marriage embassy prompted by the British nation; and in order to throw upon her father the onus of breaking off the match, she actually makes Frederick William kick the British envoy! Carlyle's suggested deduction of twenty-five per cent. from her statements is certainly, in this part of the narrative at least, well within the mark. The future Margravine does not conclude this important episode in her life without inventing a dispatch from England containing renewed overtures withheld on her very wedding day.

Before leaving the subject of the suggested "double marriage," which is the chief point of interest in Mrs. Cuthell's first volume, we would notice two obvious errors in the text. "Queen Charlotte's reply" (i. 115) should be Queen Caroline's; and "the Princess Royal's most attached *Frau Schwester*" (p. 241) must have been written for "the Prince Royal's."

The interest of the second volume lies chiefly in the correspondence of the Margravine with her brother Frederick, now king, and with Voltaire. In the notorious quarrel between the two she avoided taking sides, and subsequently was able by her tact to facilitate some renewal of their epistolary relations. Though not, like her brother, a whole-hearted disciple, Wilhelmina was always treated by Voltaire with affectionate esteem. She seems to have had the power of

bringing out the best qualities both of king and *philosophe*. Her devotion to her brother shows her as nothing less than heroic; and he fully reciprocated it. The geographical position of Baireuth and the Margravine's many French and Imperialist connexions enabled her to obtain for Frederick valuable information as to the movements of his enemies both from the west and the south, though the former factor exposed her to terrible dangers and sufferings. If the results of her diplomacy were not great, she was at any rate indefatigable in her exertions, and lacked neither skill nor knowledge of affairs. Choiseul in a dispatch gave the Margravine the credit for the "suspicions of ill-temper" with which the Austrian ministers had favoured him. Five times in the course of a year, when she was dying, did Wilhelmina open negotiations with five different French emissaries.

With a word of praise to the author for her careful descriptions of eighteenth-century Baireuth and of commendation for the excellent illustrations (some of them new) which adorn her book, we must pass with regret to some of her shortcomings. Her style, to say the least, does not err on the side of stiffness, and her translations are not invariably faithful. Her Latin is really deplorable. We defy any one to make anything of the "punning inscription" at Erlangen (ii. 12), or of "Vale et Favi"; whilst Guy Dickens probably owes the "bad Latin" imputed to him (i. 212) at least as much to his transcriber as to himself. "Maenaides" is neither Latin nor Greek; nor is "Guerchini" good Italian. We are not wont to laugh with "Democrites"; and we might be pardoned for failing to recognize Harpagon in "d'Harpagnon." "Ménu" is not French, nor is "Soane" (Saône). The German names are better; but "Ausbach" occurs several times; also "Hastenbrock" and "Kloster-Sieben." "Le Cain" is probably Lekain, the actor friend of Voltaire; but we fail to identify "Le Quint, the first actress of Paris." The stage of the Baireuth Opera-House is stated in one passage to be the "third largest in Europe," in another "in Germany." Probably the latter is correct. Pesne is the right spelling of the French architect's name, not "Pesné" or "Pèsne"; and the "Abbé de Pradés" is equally incorrect.

These deductions from the value of an entertaining and not unimportant historical biography are regrettable, especially as most of them might have been avoided by a little more care in the correction of the press.

Life of Sir John Gilbert. By Rosa Mulholland [Lady] Gilbert. (Longmans & Co.)

This well-written and delicate panegyric of a notable man, by his devoted wife, is a book of various interest, and will meet with various kinds of criticism. Nothing can be more loyal than her estimate of the man with whom she lived in perfect happiness the last nine years of his life. She found in him many virtues, great learning, witty conversation, and the fullest sympathy; and, as not only this, but also other books show, she has the literary gift which could not but appreciate that gift in others. Her pages on their home life at Villa Nova afford a delightful picture of unalloyed contentment, and we do not wonder that she ascribes to her husband every virtue under the sun, without a single speck or flaw to dim the brilliant reflection of his life.

That life was spent in literary Dublin, chiefly in connexion with the Royal Irish Academy, and so the doings of Gilbert and the letters of his many correspondents introduce us to the atmosphere of the fifties and sixties in the last century in the provincial capital, and to a society which has, alas! almost completely passed away. In this respect it reminds us strongly of Robert Graves's 'Life of Sir William Rowan Hamilton,' the great mathematician, where the thirties and forties in the same society are pictured in the same way. But Hamilton's biographer had this great advantage, that besides the letters of others he had before him also copies of all that Hamilton had written. Gilbert did not, like Hamilton, keep copies of his answers, and so, as Lady Gilbert justly deplores, his replies to many interesting questions addressed to him from multifarious correspondents are almost all lost. The very fact of all these questionings shows that he was ready to give learned or aristocratic inquirers the benefit of his vast knowledge. To the ordinary crowd he was not fond of citing his sources, even when he produced his knowledge. He evidently desired them to investigate the *Quellen*, on which he had spent so many years of labour, for themselves.

Starting from early youth as an archivist, he mastered mediæval palæography thoroughly, and his editions of difficult texts, when he made the copies himself, and did not commit them to others, are models of such work. But he took up so many various tasks, he seemed so anxious to occupy the whole field himself (Appendix VIII. affords an illustration), that the later transcripts, notably the 1641–52 papers, contain not a few serious mistakes. These were certainly not Gilbert's defects in skill. The defects in his books are rather that he lost himself in minute accuracy of detail, and became so strictly the archivist and antiquary that he can hardly be called an historian. Thus he edited Irish MSS., but was no Irish scholar; and the archives of a city or a period, but was only a chronicler. Of this his 'History of Dublin' is a specimen. The book was received with applause; it has long been out of print, and now commands an enhanced price, yet it cannot be called a history. It consists of very learned and pleasant gossip about the occupants of individual streets, without any broad or general views. Even as a collection of details it is defective, for on the history of so central a place as College Green he has missed all the information which he might have found on the spot in the Muniment Room of Trinity College, as the recent histories of the College amply show. Yet when his book came out it contained such a mass of hitherto unpublished facts that his contemporaries, and the Royal Irish Academy, covered him with praises. In the same way, the introductions to the first seven volumes of the old Dublin records, which were his last (unfinished) work, afford interesting details, picked from the records, but no general views of the development of the city.

Most of these things belong to years long before his marriage, and we will not say one word to detract aught from what the biographer found in her husband, and tells with grace and with sincerity.

Gilbert, in his younger days, was not a humorist, but a wit, and his wit was mordant enough, as when he called a stupid biographer of his acquaintance, the son of a tallow-chandler, the modern Suetonius. But in so doing he adopted the advice of a correspondent quoted in this book, who told him that an author of Celtic articles "should terminate, like a bee or wasp, in some sort of sting." There was too piquant a flavour in his puns and epigrams not to excite the anger of his victims; and so he did not pass through life without criticism or without irate opposition. There were those who said that even when he published archives his strong feelings were not wholly suppressed. Lady Gilbert quotes the words of *The London Review*:—

> "He is eminently qualified for his task, and being a Roman Catholic gentleman, by no means wanting in patriotism, we may rely on his statements respecting the Catholic Church of the Pale in these ante-Reformation times."

There were other critics who admitted the same qualifications, but deduced from them quite another conclusion.

All these things, we repeat, happened in his earlier days, and we allude to them because he was a person important enough to have his whole life, and every side of it, noticed in this sketch, which is not intended to criticize, but to supplement, Lady Gilbert's charming picture. He lived in the middle of great stores of learning which he had unearthed; he was in correspondence with the most eminent men of his day; the chequered fortunes of his life never compelled him to abandon his beloved home; his value as a specialist admitted him to some of the most splendid houses in the country; he got through an enormous mass of work; he died without a day's illness or decay. Such a career might have satisfied the requirements even of Solon. And now he has received from his devoted wife a skilful and fascinating tribute to his virtues and achievements.

NEW NOVELS.

Beaujeu. By H. C. Bailey. (John Murray.)

The historical romance, which has been long threatened with decay, seems as lively as ever since its resuscitation by Stevenson. Mr. Bailey is one of its foremost exponents, and this new book is quite his best. It follows, then, that 'Beaujeu' is thoroughly to be commended to admirers of romance. There is no contemporary writer who could have done better than this, and there are few who could have done so well. Sir Conan Doyle achieved a considerable work in 'Micah Clarke'; we remember, too, Q's 'Silver Spur,' and Mr. Weyman's 'Shrewsbury'; and we cannot forget Mr. A. E. W. Mason's 'Courtship of Morrice Buckler.' All these romances deal with much the same period as does Mr. Bailey's—that is to say,

with the late seventeenth century; and all made a considerable impression on their appearance. 'Beaujeu' raises a head equal to any. It is a work full of vigour and fire, deft invention, and knowledge of the time. And it has a real love interest, not merely a perfunctory one. Mr. Bailey introduces us to a very stirring period, when James II. was tottering to his fall, and the little hook-nosed Dutchman was waiting on Fate. The historical scenes are handled with sureness and familiarity, but it is, of course, with his own characters that Mr. Bailey is most at home. The dramatic scene in which Beaujeu and Sunderland cozen the King is masterly, and as vivid as a painting. Mr. Bailey's style is always good, but we hear too much of Beaujeu's eyes glittering. The romance marks a considerable advance on 'The Master of Gray,' which was in itself notable.

The Debtor. By Mary E. Wilkins Freeman. (Harper & Brothers.)

The author's shorter tales have rarely been equalled in their delicate power and in their graceful simplicity and pathos, and not a few of her admirers will regret that the fatal attraction of writing a long story should have tempted her from a field in which her gifts were exercised to such peculiar advantage. In this work of 560 closely printed pages the interest centres in the development of character in a man already middle-aged. The surrounding circumstances seem to be purposely described as of no extraordinary nature, and the book contains nothing worth the name of a plot. The result is, in fact, as if one of the writer's beautiful sketches of American life were seen through a glass of too high a power, by means of which the delicate features were swollen to ungainliness, and the graceful proportions distorted to cumbrous bulk. There would be less to regret if it were not evident that the author's usual power to charm is lurking beneath a surface which in this case is too solid for it to penetrate.

Baby Bullet. By Lloyd Osbourne. (Heinemann.)

Such volumes as 'The Queen *versus* Billy,' and its successor, 'Love the Fiddler,' showed that Mr. Osbourne was worth attention for himself alone, apart from Stevenson. These two books proved him capable of conceiving and executing an excellent short story, and that with no marked indebtedness to his collaborator in 'The Ebb Tide.' The present volume is, we believe, his first independent attempt at a novel or story of considerable length. It is frankly something of a farce, or, at all events, an extravaganza. We find no serious study of character, and no particular regard for the realities of life. But it is a charming and amusing sketch, a sort of rollicking holiday excursion in fiction, and one showing deft workmanship and a most pleasing sense of humour. Two young American women, touring afoot in England, become, comically, possessed of an ancient motor-car, the previous owner, who won it in a raffle, deliberately deserting the troublesome thing in a lonely place. To the delighted but helpless ladies there comes a wealthy young touring American, on a magnificent 60-horse-power car, accompanied by a French chauffeur. The subsequent adventures on the road of this irresponsible quartet make an entertaining tale.

His Indolence of Arras. By W. J. Eccott. (Blackwood & Sons.)

Mr. Eccott, whose former novel, 'Fortune's Castaway,' reached a high level, has achieved a greater success in 'His Indolence of Arras.' Though the story lacks the swift movement that belongs to Dumas, its skilfully developed plot, dramatic incidents, and picturesque scenes hold the attention without a break. The Cardinal Bishop of Arras, whose lack of energy causes him to be familiarly known as "His Indolence," uses his position as confessor to the Marquise de Montespan to extend his influence with Louis XIV. His intrigues are secretly opposed by the Jesuit Director of the College of Notre Dame of Arras, who obtains the assistance of the Marquise de la Vallière to achieve his ends. With this subtle play of plot and counterplot the affairs of Jehane de Roeux—a charming heroine—become associated. Jehane, loved by an impecunious captain of the Guards, is forced into marriage with the Marquis of Hautefort, and the schemes of the Cardinal and the Director become centred in a dispute as to the validity of the ceremony. The Cardinal, indolent and cunning, and the Director, zealous and crafty, are both drawn with a sure and vivid touch, and their conflict of will imparts real dramatic force to the narrative. Nicholas de Blangy, who is land-steward to Jehane's father when we first make his acquaintance, is another admirable piece of portraiture. He is, indeed, the most attractive figure in a very interesting story.

GERMAN BOOKS.

Curiously enough, the writer of this review was, during a recent visit to Berlin, in the society of several distinguished German pedagogues, and was asked if there was any English writer on education before Locke. "Ascham" was, of course, the immediate reply, but none of the Germans present had ever heard of him. In the preface to *Die Englische Pedägogik im 16 Jahrhundert wie sie dargestellt wird im Wirken und in den Werken von Elyot, Ascham, und Mulcaster*, forming No. xxii. of Dr. Schipper's useful and scholarly "Wiener Beiträge zur Englischen Philologie" (Vienna and Leipsic, Braumüller), Cornelie Benndorf, the author of the little treatise, acknowledges that German scholars, in their researches into the English literature of the time of Shakspeare, have left the pedagogy of the period aside. Yet its importance in helping to spread Humanism, and its influence on literature and language and on social conditions, are very great, and it further reflects the leading ideas of its time. The three pedagogic writers dealt with—Sir Thomas Elyot, Roger Ascham, and Richard Mulcaster—were all interested in improving the study of their mother tongue, in forwarding the education of women, and in advocating the practice of athletics. Their views are altogether extraordinarily modern, and greatly in advance of their age. Elyot, for instance, advocates a system of language-teaching uncommonly like the Berlitz system, deplores the lack of good teachers, and almost anticipates Ruskin when he says that people pay their grooms a higher salary than they are willing to pay their children's teachers. Mulcaster's views, again, in 1581, bear a strong resemblance to those of Mr. Sadler in 1904. Mulcaster is also a strong advocate of the proper study of English in the schools. We still neglect or despise that subject, to the despair of the wiser of our teachers, who would like to see it take the place in our time-tables that Deutsch occupies in those of German schools. Elyot's little-known, but highly interesting treatise on women—only one copy (in the British Museum) exists—which has never been reprinted, is here described and analyzed. The debt owed by English prose to Elyot and Ascham is dwelt on, and the qualities of the three writers are thus summed up: Elyot is a philosopher, Ascham a scholar, but Mulcaster is the best pedagogue. The work is full of information, and it is less dryly expressed and better arranged than is sometimes the case in publications of the kind.

In *Die Fassungen der Alexius-Legende mit besonderer Berücksichtigung der mittelenglischen Versionen*, von Margarete Rösler, Dr.Ph., No. xxi. of the same series, we get a very full account of the sources of the legend that was so popular in the Middle Ages, and of the forms assumed by its details in the different texts. It is, of course, one of the most ancient texts in the French language—older than the 'Chanson de Roland'—and one of the finest of French mediæval literary works. The author here, however, devotes her chief attention to the six Middle English versions, showing what features are common to all, and what are their relations to the sources and to each other. More than half the volume is taken up by an appendix in which a Greek version (Bibliothèque Nationale, Paris), a Latin version (Brussels Library), and a French version are printed side by side, followed by three Italian versions of different dates. The volume appeals solely to serious students of mediæval literature, and must be of exceeding value to them, but it can scarcely be recommended for general reading.

Dr. Eichler has chosen to treat largely a small subject. True it is that Hookham Frere's use of the *ottava rima* in his burlesque poem 'The Monks and the Giants' pointed out the way to Byron, and that 'Beppo' and 'Don Juan' owe much to Frere; but Frere's lasting place in English literature is due not to that performance or influence, but to his masterly rendering of Aristophanes. Therefore, when we find in *John Hookham Frere, sein Leben und seine Werke, sein Einfluss auf Lord Byron* ("Wiener Beiträge," xx.), a minute analysis—filling nearly one hundred crown octavo pages—of 'The Monks and the Giants,' we cannot help wondering if the game was worth the candle. Its sparkling wit, its pleasant irony, its happy adaptation of a foreign metre to English uses—excellent as are all its qualities, it is not 'Hudibras,' and its place will always be among the minor burlesque poems of our literature. It lacks what all great satire demands, "the life of actual manners and the strength of stirring passions"; it is intellectual humour, not the humour that comes from the heart. The annotator of Byron will find Dr. Eichler's work of great utility, and we intend no reproach to the scholarly author. Indeed, our admiration for German research and scholarship is great, and as students of English literature we owe it a deep debt of gratitude. But a due proportion should be observed. Frere will be remembered as the friend of Canning and the translator of Aristophanes rather than as the author of 'The Monks and the Giants.'

Die lateinischen Magierspiele: Untersuchungen und Texte zur Vorgeschichte des deutschen Weihnachtsspiels. Von Heinrich Anz. (Leipsic, Hinrichs.)—In this work Mr. Anz analyzes the texts of that part of the Christmas celebration which concerns the Magi. He is not first in this field, and he is able to give a couple of pages full of authorities who have treated of his subject more or less fully. Attention has been drawn to the matter lately by Mr. E. K. Chambers's excellent book on 'The Mediæval Stage'; but the wide scope of that work did not admit of more than a brief summary, the details of which have to be worked out in a monograph.

Thirteen texts have been printed, with one or two fragments. By analyzing these the author finds four types, numbered I.-IV. in order of simplicity. The kernel of them all is part of the Epiphany service, which is found in all four types: it consists of narrative, a brief song, and a brief dialogue. One or both of the two latter elements increase by degrees, until the dialogue, which originally formed 30 per cent. of the whole, becomes nearly 74 per cent. The characters increase likewise: to the original Magi, Midwives, and Angel are added King Herod and his suite, a Messenger, Scribes, Shepherds, and a Knight. At the same time there are added a scene with Herod and the Magi, one with Herod and the Scribes, one with the Messenger who passes between Herod and the others, and one of the Magi and Shepherds. All the scenes are brief, and form interludes to the solemn procession. The songs are also increased by an address to the Star and by Rachel's lament for her children. All the elements of the play are traced to their origins in the service-book or in Holy Writ. Mr. Anz finds the simplest existing text in Nevers. After his investigation is over, the author prints reconstructions of the four types, showing at a glance by italics the additions in each case; and finally he adds the Latin texts of Limoges, Besançon, Nevers (in its two forms), Einsiedeln, and Freising. Mr. Anz has not reached quite the same conclusions as Köppen, those arrived at by the latter unfortunately coming into his hands too late to be used in this book; but he has so conscientiously collected his materials that the reader can form his own judgment. The book is certainly dry, but it is careful and laborious, and a foundation has here been laid upon which others may build.

Die Schöpfung der Sprache. By W. Meyer-Rinteln. (Leipsic, Grunow.)—Old heresies revived in aggravated forms are combined with new tenets of unorthodox type in this curious work, in which the results of study during the last fifty years are utterly ignored. The nature of the author's theories can be sufficiently indicated by giving examples of their consequences. From the root "*sel*, 'glänzen,'" are developed Ger. "Ster-*n*," Lat. "stell-*a*," στίλβ-ω, (σ)ῆλ-ιος, Lat. "sol," "sīd-*us*," Goth. "skeinan" (our "shine"), Latin "splend-*eo*," and σελ-ήνη, *μήν*, between which two the middle term of change is represented by our "sun," while another kind of "shining" is expressed by στερ-οπ-ή and ἀστρ-απ-ή, instead of—more correctly—by another root-form such as Lat. "fulgur." This reminds us of the game in which one word is transposed into another by changing one letter at a time to form a new word and altering the order of letters at will. Restrictions as to meaning would not spoil this game if a large number of languages were drawn upon for words and variation in the number of letters were permitted. The author's method is illustrated by "stell-a," "sol," the last *l* of which, like the λ of ῆλιος, is held to belong to a suffix; but these instances are not so bad as equating Ital. "ost-*e*" (for Lat. "hosp-item") with Ger. "Gast," our "guest," "βότρ-υς.....=nhd. Traub-e (mit unverschobnem *b* [!])," "truc-*s* mit truc-*ulentus* und *a*-trox," and τέλος with "ult-*imus*," "mĕt-*o*" with "tim-*or*" (for "tĭ-*mor*" cf. "hu-*mor*," "tu-*mor*"), θυμ-ός with Ger. "Muth," δενδ-ίλλειν with δέρκ-ομαι, though γάγγαμον, γογγύζω, κάγκανος, παμφαίνω, &c., suggest that δεν- is a nasalized reduplicative syllable. The equation of δραμ-εῖν with Lat. "prop-*erare*" is vitiated by the possibility of "pro-" being a preposition. The interchange of *d* and *p* is defended by connecting Lat. "ed-*o*," "eat," with "ep-*ulæ*," "banquet," and δόρκ-ς, "deer," with the synonymous πρόκ-ς. This last caprice shows both inconsistency and contempt for the fundamental principles of morphology as applied to nouns. If "stars" and "lightning" are so named because they shine, a "deer" was called δόρξ because it was "keen-eyed," and πρόξ because it was "dappled," and so the two names are even more separate in primary meaning than they are in sound. The examples cited show that our author treats vowels and diphthongs as unrestrictedly interchangeable, but he seems occasionally to set arbitrary limits to consonantal mutation and metathesis. Sometimes Grimm's Law is acknowledged, at others ignored; *e.g.*, on p. 24 Old High German "trah-an" is traced to Aryan "drak." Herr Meyer-Rinteln advances from tenable mutations to untenable with a certain amount of system and caution; and though his title is misleading, since he contributes little or nothing to the morphology of speech, mature students of comparative philology may get some hints as to the pathology of languages from such specimens of root variation as are not due to mere coincidence or to faulty analysis. They will hardly accept the passage of βίβλος through βιλ-βο-ς to λιβ-="lib-" of Lat. "lĭb-*er*," "inner bark," "book."

OUR LIBRARY TABLE.

The appearance of a volume directed against the policy of M. Delcassé has been followed by that of the Report of M. Gervais to the French Budget Committee on Foreign Affairs. M. René Millet — who holds the titular rank of ambassador and who is known as a friend of M. Doumer, the President of the French Chamber, a former Governor of Indo-China, and a candidate for the Presidency of the Republic — reprints several articles under the title *Politique Extérieure, 1898-1905* (Paris, Félix Juven). He has, however, freshened his essays by many a preface and many a postscript. He has also an introduction from the skilled pen of the rival Minister of Foreign Affairs, M. Hanotaux.

The importance of the two publications to our country and to peace is considerable. Although M. Doumer is likely to receive many republican votes from various sections of the party, and probably the support of the Right, we doubt his election to the Presidency. He, however, is a man of remarkable ability, and will in any case play a considerable part; and M. René Millet is an able writer of authority; while M. Hanotaux stands in France at the head of those who combine active politics with literature. So formidable a combination is well worthy of thought.

We regret to find that, while the peace of the world is at present based on a virtual guarantee by all the Powers of the *status quo* in the East, and by many of the Powers of peace in Europe, M. Millet and M. Gervais make many proposals for the alteration of the *status quo*, especially in matters which were the subject of the recent agreements between our country and France, approved as these were all but unanimously by the French Parliament. *The Athenæum* not being a political paper, we shall confine ourselves to noting definite proposals for change in matters which affect this country. M. Hanotaux and M. Millet blame M. Delcassé for not having made use of our entanglement in South Africa to obtain conditions for France more favourable than those of the agreements. M. Hanotaux states that the policy of France deceived "Kruger and his brave people," and that, instead of choosing the right moment, M. Delcassé chose that of the entanglement of Russia, the ally of France, in order to conclude, with an authority much weakened, arrangements which would have been more favourable at any other possible time. M. Millet writes:—

> "It was no fault of the Emperor William that the connexion which had led in 1895 to the intervention of France, Germany, and Russia against Japan did not continue, and extend to other parts of the world. We are assured that he tried several times either to interest us in the future of the Portuguese possessions in Africa menaced by British expansion, or to sound the disposition of France on the subject of the Transvaal. For seven years he met with no response. On the other hand, are we strong enough to do without him?"

When we come to detail, M. Millet, followed by M. Gervais in his official Report, desires to upset recent arrangements with regard to Siam and the New Hebrides. M. Millet's references to the events in the Soudan which preceded Fashoda are frequent, but not always in exact accord with one another. He lays stress upon the pacific nature of the instructions to Capt. Marchand. It must be remembered, however, that, as is admitted in other portions of the book, the Marchand expedition was only one of five—prepared, most of them, curiously enough, by M. Delcassé when Under-Secretary of State at the Colonies, long before he first became Minister for Foreign Affairs. The reference to Portugal is explained in another passage more full than that which we have quoted. It is pointed out that the German Government made to France overtures which would have led afterwards to a more general understanding about Africa. The proposal was handed on by M. Hanotaux to his successor, and, it not having been followed out, Germany made with Great Britain the limited arrangement as to the Portuguese colonies which exists, but has not been made public. M. Millet also raises the question of M. Delcassé's supposed weakness about Muscat. It is, however, difficult to see what France could do upon the Persian Gulf.

M. Millet adopts with regard to Siam some exaggerations of the French colonial party, and the danger of such writing, and of that of M. Gervais, is considerable. The former tells us that "1,500 Hindoo soldiers occupy Bangkok under police pretexts." Throughout the East Sikh military police from India are employed by Governments, by municipalities, by great firms, and by private individuals. It will be a surprise to M. Millet to learn that a large force of Sikh police was maintained by the Russian Government at Port Arthur. It is difficult to see what he fears from the presence of Sikh police at Bangkok, even supposing that they were as numerous as he says. France has expressly disclaimed any intention of interfering with the Siamese capital and its neighbourhood. M. Millet thinks that we have continued to absorb the portion of Siam upon our side which is not the subject of a virtual guarantee by the two Powers; but his colonial friends are wrong in their facts. M. Gervais in the Budget Report proposes that Siam should be worried until she consents to cede three provinces—two of them the well-known Battambang and Siemreap—in order to obtain a peace both endurable and lasting. France is bound to keep us informed upon her Siamese policy; and to reopen the recent arrangements in the fashion proposed would look dangerously like a breach of faith, and

would certainly excite ill-feeling in the United Kingdom, in China, and in Japan, and menace the new policy of friendship and support of the *status quo*.

In the proposals which M. Millet makes to upset recent arrangements as regards the north coast of Morocco, the danger of producing an agreement between Great Britain, Spain, and Germany would be great. But there is, we believe, small chance of such a sudden change of policy on the part of France.

M. Millet's allusions to the New Hebrides are not so dangerous as those of M. Gervais, who suggests in his report to the French Parliament the turning into a French colony of an archipelago which is the subject of a working agreement between Great Britain and France, formally communicated to the Governments of the Commonwealth and of New Zealand.

There are many other points in M. Millet's interesting volume which are worth notice. He still seems to suggest that the occupation of Cyprus is of value to us, instead of recognizing that there is an almost universal naval and military opinion to the contrary. He regards it as one of our many unfriendly and grasping acts that we should have picked a quarrel with the Court of Ava, such as to lead to the annexation of the Burmese kingdom. He does not mention the fact, duly recorded in official papers, that it was the policy of an agent of the French Foreign Office in Burma which forced the hand of an unwilling Government in London. In exactly the same way similar policy on the part of France at the Court of Ranjit Singh brought about the annexation of the Sikh kingdom of the Lion of the Punjab. M. Millet echoes the common complaint of the French friends of King Leopold that British concern in the horrors of the Congo is hypocritical and covers disappointment. We are sorry to find that he goes so far as to say that Great Britain opposed the birth of the Congo "enterprise, at once philanthropic and lucrative." The British Government of the day had proposed to retain Portugal in a portion of the country which has been made Congolese. Parliament objected, and believed the philanthropic boasts of King Leopold; and a great number of distinguished Englishmen took his side—a fact which they now remember with humiliation. The same men who aroused the opinion of the better portion of mankind in all countries against the Congo State, on grounds the truth of which can no longer be concealed by the State itself, are not given to hide the existence, on a far smaller scale, of ill-treatment of natives in their own colonies: by Britons in those of the United Kingdom, and by Frenchmen in the French Congo—to which the leprosy from next door has lately spread.

A book which has recently attracted some attention in France is a Swiss volume, *Les Deux Frances*, by Prof. Seippel, published at Lausanne by MM. Payot et Cie., and in Paris by M. Félix Alcan. In our review of the admirable volume 'Rennes' of M. Reinach's work we named a passage of singular beauty in which that author calls attention to the contrasts which France presents. One of them—that between the France of the Revolution and the France of the Roman Empire and the Roman Church—already developed by Taine, is followed out in the volume before us. In his last pages Prof. Seippel tells us that the separation of Church and State in France has been voted in a moment of absolute indifference on both sides. This calm is not new. On several previous occasions, after a struggle between the two sections of France, so fierce as to have constituted a virtual state of civil war, there has been a sudden hush of universal lassitude. The one thing which the French cannot bear is boredom. An 'affaire' which lasts too long and is not continually sharpened by dramatic incidents exhausts their power of attention. They begin to yawn during the latter acts of the play. People leave their seats."

On the other hand, the author reminds us that these periods of calm have never implied the slightest prospect of a lasting peace. An example of the sudden changes of the French mood is afforded by the book itself. When it was written the French and the Germans had become so polite towards one another that the Swiss author expresses his wonder at their mutual courtesy. By the time the book was published most people in France were, mistakenly, expecting war. Neither the subject nor the book is light. The passages which will be of most interest to readers who are not philosophers and not theologians are those in which the author shows that there has always been a third France side by side with the other two, and that it is this third France—that of Montaigne, Molière, and La Fontaine—which most appeals to the outside world. The position of Rabelais, of Diderot, and of Voltaire is rather in Revolutionary than in the third France. It would be possible, we think, to contend that Renan belonged to both of the two main divisions of the French mind. Perhaps, however, he might be claimed for all three forms of France.

Hebrew Humour, and other Essays. By J. Chotzner, Ph.D. (Luzac & Co.)—Dr. Chotzner's book of essays possesses an interest of its own, but it is disfigured by a number of serious inaccuracies and mistakes. On p. 16 we read:—

"Martin Luther, too, failed to acknowledge his obligation to his Hebrew tutor, Nicolaus de Lyra, who helped him greatly in the preparation of the famous German version of the Bible."

But Nicolaus de Lyra died in 1340, and the year of the birth of Luther was 1483. We are, therefore, entitled to wonder whether we have here to deal with an inaccurate use of language or with something more serious still. On the preceding page occurs the following sentence:—

"As regards the Romans, there are likewise certain historical records which go to show that in the year 50 A.D. they had already swayed the sceptre over the Hebrews."

Is A.D. a misprint for B.C.? If so, why did not Dr. Chotzner rather mention B.C. 63, the date of Pompey's invasion of Palestine? We will refer to only one other erroneous statement, and this time in connexion with a subject which our author may claim a right to call his own. Among the works assigned to Yedaya Bedaresi, an author who flourished at the beginning of the fourteenth century, we find the short treatise on the game of chess entitled מערכי מלך ('The Pleasure of the King'), but it has been proved conclusively that the work in question was composed by Yehudah di Modena, who died in 1648. Turning now to the essay on the 'Humour of the Bible,' we do not find that we are in full sympathy with the tone in which it is written. Something essential is lacking in it. Why does not the humour that is to be found in different parts of the Bible affect us in the same way as humour in most other branches of literature? The reason lies in the fact that in the Bible humour is always completely dominated by the ethical and religious motive which it subserves. The solemn and the grand are invariably there to check the ordinary sense of literary amusement. We know that, even when jesting, the soul of Isaiah is aflame with passion for his ideal; and we cannot help realizing that the heart of Jeremiah is bleeding within him even when words of a lighter kind are passing his lips. But of this key-note to an appreciation of the true place of irony and satire in the Bible we hear nothing in Dr. Chotzner's utterance on the subject. But, notwithstanding its serious defects, the book offers a considerable amount of useful information. The papers on 'Immanuel di Roma' (reputed to have been a friend of Dante), 'Kalonymos ben Kalonymos, a Thirteenth-Century Satirist,' and 'Isaac Erter, a Modern Hebrew Humorist,' will well repay perusal. 'The Influence of Hebrew Literature on Heinrich Heine' is a subject which is capable of much better treatment than is here given to it. The question of actual knowledge of Hebrew on the part of Heine is far less important than the indebtedness involved in the mental constitution which he inherited from his race. Among the other essays printed in the volume are 'The Bible and the Ancient Classics' (uncritical and far-fetched), 'Leopold Zunz,' 'Samuel David Luzzatto and Zachariah Frankel,' and 'Modern Hebrew Journalism,' a title which is far too wide for the few remarks on Hebrew literary periodicals which Dr. Chotzner chooses to make.

The author of 'A Life of Sir Kenelm Digby' has compiled an agreeable volume out of the Reports of the Royal Historical MSS. Commission under the title of *Pryings among Private Papers* (Longmans). The gleanings are taken chiefly from the seventeenth and eighteenth centuries, and may be said to illustrate the social life of our ancestors from the cradle to the grave. Thus we get an abstract of the table and cellar book of Charles I., remarkable for the total absence of roast beef and of every kind of pork; while the fish was served after the poultry and game. In spite of the healing properties of its waters, Buxton is mentioned in 1774 as a small town of some fifty or sixty houses, which made but an inconsiderable appearance. Altogether this is a good book for an unoccupied hour, especially as it contains interesting allusions to famous individuals. Kitty Clive, for example, is to be discovered upbraiding Garrick for the exiguousness of her salary, and Sterne asking his bookseller how 'Shandys' were going. Had any been sold since Christmas, he wanted to know on March 20th; if so, how many? Monboddo's criticism of Gibbon's second volume as "neither historical, poetical, rhetorical, or didactic, but a jumble and heterogeneous mixture of all these," is also noteworthy in its way.

The Matriculation Roll of the University of St. Andrews, 1747-1897. Edited, with Introduction and Index, by J. Maitland Anderson, Librarian to the University. (Blackwood & Sons.)—This volume is the first of a series. Mr. Anderson has shown great care and accuracy in its compilation. In the introduction he treats of the constitution of the University and of the three colleges which now form part of it. He has brought to light many facts which hitherto had not been published. Necessarily, within the short space assigned to the introduction, he has been compelled to be concise, and has omitted topics which he might have been expected to discuss. But probably he will treat of these in the introductions to the subsequent volumes. As it is, the introduction will be interesting to all who are tracing the history of universities. The principal part of the volume is occupied with the Matriculation Roll. The students in St. Andrews have been in the habit of signing their own names and designations when they were enrolled, and Mr. Anderson has given an exact transcript of these signatures and designations in the spelling which occurs in the manuscripts. The students display many irregularities in their writing, and these have been transferred to the book. There are advantages and disadvantages in this method. The students seem to have been often ignorant of the Latin of their birthplace or place of residence, and they evidently forgot the exact years of their birth. The consequence is that difficulties must arise when

an effort is made to identify the students enrolled. Mr. Peter John Anderson, Librarian to the University of Aberdeen, has edited the Matriculation Rolls of his own University; but there the identification is easier, as the editor has recorded under each name the important facts in the life of the student. Mr. Maitland Anderson has not subjoined any notes. The value of his volume would have been greatly increased if he had followed the example of Mr. P. J. Anderson.

Southern Italy and Sicily and the Rulers of the South. By F. Marion Crawford. (Macmillan.)—This reprint of a work which we reviewed in 1901 does not profess to have undergone any change beyond the title-page, except that it is now bound in one volume. Not one of the corrections which we then made, or of the suggestions we offered, has been adopted. We need not, therefore, repeat what we then said, and may refer the curious reader to our original estimate of the book. It is well written and lively, but is the work rather of a novelist than an historian, with many positive mistakes, not to speak of omissions and oversights. On the art of Southern Italy there have been published, since Mr. Marion Crawford wrote, several splendid books, notably Bertaux's 'Art of Southern Italy' (in French). It seems a pity that the author has not utilized these new and profound researches, wherein the wonderful crossing of four strains—Roman, Byzantine, Saracen, Benedictine (Gothic)—has produced such strange results.

The Fronde. By George Stuart Gordon. (Oxford, Blackwell; London, Simpkin, Marshall & Co.)—Which are more credible? the contemporary memoirs filled with the scandals, avaricious intrigues, treasons, and light-hearted frivolity that distinguished this period, or the works of later historians, who would endow the episode with a seriousness of purpose which the actors in the struggle would themselves have ridiculed? At all events, take from the Fronde its wealth of gossip and anecdote, the dissolute gallantry of its inconstant and madcap heroines, together with the whims and recklessness of its heroes, cut down the Parlement's venal *rôle* till its continuity is destroyed, and behold! the revolt, at best most intricate, becomes confusion worse confounded. Hence to make a successful summary of these years of turmoil is difficult, and Mr. Gordon has not facilitated his task, either for himself or for his readers, by the manner in which he has crowded his small canvas. Moreover his style is often awkward, and his abuse of personal pronouns bewildering. Yet now and again he makes a happy hit; thus, when comparing the Fronde with our own contemporaneous civil war, he observes:—

> "Rochefoucauld, who lost his eyesight for a time after the fight at the faubourg St. Antoine, and Milton, who lost his sight for ever in the service of the Commonwealth, both composed verses on their blindness. To compare the verses is to compare the spirit of the two Revolutions."

La Rochefoucauld, as in the above quotation, sometimes appears without the prefix; accents to French words are often omitted; "incendre" should be *incendie*; the name Boutteville is erroneously spelt; the word "people" is used when *bourgeoisie* would have been more distinctive. Madame de Montbazon was banished, not "for a scandal hatched against Madame de Longueville," but for her subsequent implication in a plot against Mazarin's life (Sismondi, 'Hist. des Franç.,' vol. xiv. pp. 303, 305). We do not think that Madame de Longueville fled to Stenay and that Turenne followed her thither later; the marshal was already in that town when his charmer joined him there (De Ségur, 'La Jeunesse du Maréchal de Luxembourg,' p. 152). Queen Henrietta Maria of England was not "the granddaughter of Henry the Great," but his daughter.

As David and the Sibyls say: a Sketch of the Sibyls and the Sibylline Oracles. By Mariana Monteiro. (Sands.) — This is a wholly uncritical compilation of passages relating to the Sibyls in ancient and mediæval writers, and has not even the merit of being well arranged. The dates (*e.g.* 3934 B.C. for the birth of Virgil) are bewildering, until it is discovered that B.C. is used for *anno mundi*. Illustrations of the twelve Sibyls are given from 'Les Oracles des douze Sibyls' (1586); and at the end of the volume is another set of drawings of them, by Canon Alfred White, who suggested the composition of this work to the author.

Notes from my South Sea Log. By Louis Becke. (Werner Laurie.)—Mr. Becke's bright notes show familiar knowledge of South Sea scenery and the varied human types which abound there. The book is only a set of short sketches that can be taken up and put down at will. The glamour of the South is not laid on very thickly; rather is there a matter-of-fact directness in most of the book. A good many pages have at least the value of "things seen" in the true sense of that expression.

A History of our own Times, by Mr. Justin McCarthy, in three handy and tasteful little volumes of the "St. Martin's Library" (Chatto & Windus), is as excellent a present as could well be found for the rising generation. Mr. McCarthy makes good reading for the ordinary, unhistorical man, who is often astonishingly ignorant of earlier Victorian events.

ALL readers who love wild nature and good writing must look with pleasure for a new book from Mr. W. J. Long. His latest, *Northern Trails* (Ginn), is again illustrated by the skilful hand of Mr. Charles Copeland, and offers fascinating insight into the wolves, the whales, the salmon, the wild goose, and other creatures of Labrador and Newfoundland. Mr. Long has now published ten books concerning the birds, beasts, and fishes which haunt the wilds, and we advise readers who do not know his works to buy them all at once. Such advice is a rare compliment to pay, but Mr. Long deserves it.

THE Librairie Hachette always produces for Christmas some elegant gift-books. This year we have *Au Vieux Pays de France*, by L. Rousselet, a volume which is admirably printed and liberally illustrated. The subject of the writer's excursions is the basin of the Loire, and he treats well the stores of history and archæology which are open to him. Some of his ground is pretty familiar to the English tourist, but there are plenty of beautiful things illustrated here which are comparatively unknown. M. Rousselet is no blind admirer; indeed, he rebukes the "pseudo-styles" of Louis Philippe and the Second Empire.

YEAR-BOOKS begin to crowd upon us. *Who's Who* and the *'Who's Who' Year-Book* (A. & C. Black) are among the most useful books of reference that we know. We regret, however, to see that in the former the new detail tends to promote self-advertisement rather than public utility. — Messrs. Whitaker send us the New Year issues of *Whitaker's Almanack* and *Whitaker's Peerage*, well-tried volumes, which, on account of their special features, are always welcome additions to our shelves.

The Post Office London Directory for 1906, which we have just received, bound in admirable style for us by the firm of Kelly's Directories, was once described by us as an "indispensable mammoth." It is more than that: it is one of the most wonderful books in the world, a model of classification and arrangement. It contains 3,479 pages, which is an increase of thirty on last year, and includes changes so recent as the election of Mr. H. F. Compton as M.P., and the promotion of Mr. H. Sutton to a judgeship. Among many striking features the Trades Directory always interests us. London holds only one representative, according to this list, of accordion pleating machinery, bottle-cleaning, carving of coats of arms, moth-destroying, and mousetrap-making. On the other hand, there are two makers of "Alizarine color," of which we never heard before, and fourteen bakers who specialize in muffins and crumpets. The "memory specialist" has disappeared, yet there seems ample occasion for his trade in the London of to-day. A page or two of teachers of English would be also much to the point.

Hazell's Annual for 1906 (Hazell, Watson & Viney) is wonderfully up to date, including "occurrences during printing." The index, a matter of great importance, is improved, but we think it would be well to drop the short notices of men and women whose careers and books are amply recorded elsewhere, and leave more room for statistical matter. Politics and army and navy are well treated.

The Literary Year-Book for 1906 (Routledge) is likely to become an indispensable book of reference if it maintains its advance in accuracy and matters of real moment to the journalist and man of letters. The 'Catalogue Raisonné of Twentieth-Century Literature' is the most elaborate feature, but we doubt if so big a scheme can be satisfactorily attempted in a single section of a book of ordinary size. We find, for instance, only four biographical books on Tennyson mentioned, and these are not the best, while the painter we look for in art is not mentioned, though there is a book in English on his work.

The Official Year-Book of the Scientific and Learned Societies of Great Britain and Ireland (Griffin) has reached its twenty-second issue. It is a volume for which we wish the widest circulation, as study of it would save us many letters of inquiry from the ill-informed. It reaches a high level of accuracy in names.

The 'Daily Mail' Year-Book for 1906 (Amalgamated Press) has a new section devoted to the Empire. The case is stated for Free Trade and also for Mr. Chamberlain's proposals. Most of the special articles seem to us too brief to be of real value, nor can we regard the choice of writers for them as invariably happy. The list of 'Plays of the Year,' with date of their production and withdrawal, is an excellent idea. 'Books and Readers in 1905' is a brief and inadequate article. We suppose that there is something about the Press somewhere, but have looked in the index, under 'Journals,' 'Newspapers,' 'Papers,' and 'Press,' without noticing any reference.

THE *Almanach Hachette* for 1906 (Librairie Hachette), although described as "De la vie pratique," manages, as usual, to combine gaiety and instruction. We find a number of charming pages which are devoted to pictures by Caran d'Ache and other caricaturists, and serve to lighten the mass of tabulated detail.

WE have on our table *The Book of the Revelation*, by C. Anderson Scott (Hodder & Stoughton),—*Memorials of the Rev. Frederick Whitfield*, edited by R. S. B. Whitfield (Thynne),—*The Epistles of St. Peter*, by J. H. Jowett (Hodder & Stoughton),—*Daily Musings*, by R. A. S. Rankin (Maclaren),—*Our Lord's Resurrection*, by W. J. Sparrow Simpson (Longmans), — *The Christian Church*, by D. Stone (Rivington), — *J. M. W. Turner*, by W. L. Wyllie (Bell),—*Addresses*, by F. R. Coudert (Putnam),—*Studies in Ancient Persian History*, by P. Kershasp (Kegan Paul), — *Modern Germany*, by O. Eltzbacher (Smith & Elder),—*Baku: an Eventful History*, by J. D.

Henry (Constable),—*Rambles in Normandy*, by F. Miltoun (Duckworth),—*The Duke of Enghien, and other Poems*, by F. S. Hollings (Elliot Stock), — *The Muhammadan Architecture of Ahmadabad*, Part II., by J. Burgess (Calcutta, Thacker, Spink & Co.),—*Verses*, by W. Albery (Heinemann), — *Titus in Crete*, by F. Bourdillon (Thynne),—*The Outsiders*, by Annie S. Swan (Salvation Army Headquarters),—*Reparation*, by Adeline Sergeant (Hutchinson),—*The Progress of Priscilla*, by Lucas Cleeve (Fisher Unwin),—*For Love of Lucille*, by J. E. Preston-Muddock (White),—*Cliff's End Farm*, by Florence Warden (White),—*A Man from the Shires*, by Mrs. J. Taylor (Gay & Bird),—*The Irony of Fate*, by Muriel Crosse (Greening),—*Ida Llymond and her Hour of Vision*, by Hope Cranford (Skeffington), — *The Fortune Hunter*, by Harold Molander, translated by K. H. Cagney (Heinemann), — *The Lost Earldom*, by C. Grey (R.T.S.),—*Two Women of Kent*, by Nora Dobell (Drane),—*Old Mortality*, by Scott, edited by W. K. Leask (Blackie),—*The Winter's Tale*, by Shakespeare, with Notes by T. G. Wright, illustrated (Longmans),—*The Voyage of the Stormy Petrel*, by W. C. Metcalfe (R.T.S.), — *Die Römischen Grabaltäre der Kaiserzeit*, by Walter Altmann (Berlin, Weidmann),—*Theodosiani Libri XVI. cum Constitutionibus Sirmondianis et Leges Novellæ ad Theodosianum Pertinentes*, edited by Th. Mommsen and P. M. Meyer, Vol. II. (Berlin, Weidmann),—*Anaximenes von Lampsakos*, by Paul Wendland (Berlin, Weidmann),—*Phéniciens et Grecs en Italie d'après l'Odyssée*, by Philippe Champault (Paris, Ernest Leroux),—*Vita Moderna degli Italiani*, by Angelo Mosso (Milan, Treves),—and *Les Bulgares et le Patriarche Œcuménique*, by C. Bojan (Paris, Pichon & Durand-Auzias).

Among Reprints and New Editions we have *Westward Ho*, by C. Kingsley (Frowde),—*Marietta*, by F. Marion Crawford (Macmillan),—*At the Dawn of a New Reign*, by S. Stepniak (Chatto & Windus),—*Edward Carpenter*, by T. Swan (Fifield),—*The King's Own*, by Capt. Marryat (Lane),—*Castle Richmond*, by A. Trollope (Lane),—*Gulliver's Travels*, by J. Swift, edited by G. R. Dennis (Bell),—*Yes or No*, by Brownlow North (Thynne),—*Life and Letters of Brooke Foss Westcott*, by Arthur Westcott (Macmillan),—*Gammer Grethel's Fairy Tales*, with an Introduction by Laurence Housman (The De La More Press),—*The Army of a Dream*, by Rudyard Kipling (Macmillan),—and *A New French and English Dictionary*, by J. Boïelle, aided by De V. Payen-Payne (Cassell & Co.).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Church Congress held at Weymouth, 1905, Official Report, edited by Rev. C. Dunkley, 8vo, 10/6 net.
Gell (W. E.), The Men on the Mount, cr. 8vo, 2/6 net.
Should Clergymen criticise the Bible? by Various Writers, cr. 8vo, 3/6

Fine Art and Archæology.

CUL-DE-SAC.

The narrow houses dark and high
Shut out the sun, shut out the sky
Where neighbouring windows stand at gaze,
While blackened branches intervene
With wintry fingers bare and lean,
Though leafy still in summer days.

Now Winter tells what Summer knew;
Here, even here, the skies were blue,
And green leaves thrilled to vernal song
(Now Summer's secret stands confessed)—
Some wandering minstrel built a nest
And made sweet music all day long.

Rosamund Marriott Watson.

THE STUDY OF NATIONAL HISTORY.

The fact that no precise definition of history in relation to individual historical studies is generally accepted in this country has frequently been remarked. We choose for the purpose of research any aspect of the world-history that happens to attract us, without the slightest regard for historical definitions or requirements. The history of England or Japan, of London or Antwerp, of Protestantism or the drama, all is fish for the net of the cosmopolitan student. This sentiment, indeed, has prevailed since the first age of historical writing. Chronicles *ab initio mundi* were much in favour with mediæval historians, who eagerly found space for such stray notices of foreign events as came within their ken.

But even during the mediæval period the makers of history, the statesmen and law-givers and the learned historiographers and doctors who looked over their shoulders, were beginning to confine their attention to national issues. By the side of the political acts and precedents culled from diplomatic documents and judicial proceedings the pageants of history and its marvels become gradually insignificant. Then followed an age of international competition, of keen statesmanship and keener patriotism—an age of facts and figures, of treaty papers and political arithmetic. Statesmen were in many cases themselves expert antiquaries, or were at least versed in the precedents of their own departments. Naturally under such conditions historical study showed a tendency to follow purely national lines. Evidence of this fact is to be found in the published texts and monumental treatises dealing with native institutions upon which we have largely subsisted to the present day. With the readjustment of the European political system which followed the French Revolution, new historical interests and methods were pursued. The laborious study of national history by the light of antiquarian scholarship was to some extent replaced by special studies in universal history, or by florid dissertations on the national institutions. This diffuse historical method has done good service in the cause of literature and art, but in the interests of political science some discrimination would seem to be needed.

It must be clearly understood, however, that an advocacy of the closer study of national history is no longer concerned with the political or moral results which have been attributed to such study. It is now established that the single purpose of historical science is the discovery of truth. To this we would only add that a search promptly made is doubly valuable. Moreover, it is only fitting that we should first explore our own archives. Our local knowledge, our natural facilities, must surely enable us to accomplish this task more easily than strangers, who have already similar duties to perform at home. Nevertheless, foreign scholars, overcoming all natural obstacles, have filled many notorious voids in our 'Monumenta Anglicana' and in our historical equipment. The precedent has been allowed to blunt our sense of national honour, but the question here is of our historical requirements. It is certain that no satisfactory study of universal history can be pursued until the national histories have been exhaustively treated. It is equally certain that without remarkable exertions and a scientific method of study such a treatment cannot be adopted. Now, if it is not precisely the case that this country blocks the road to European students, a glance at the continental bibliographies will show that we lag far behind other nations in the exposition of our national sources. It is true that in the last fifty years much has been done to perfect our study of the national history during the mediæval period; but beyond the Restoration there is a complete dearth of printed sources, whilst it is only within the last few years that the intermediate period has

been adequately treated. Even so the work that remains to be done for the whole period is almost incalculable, and there are no clear signs as yet that the fact is fully realized.

Doubtless we are handicapped both by the unequalled wealth of our national archives and the tardy official revelation of their contents; but, apart from this, it can scarcely be denied that we have lost ground for lack of the methodical organization of historical study which was set on foot in France and Germany nearly a century ago. There, instead of the casual studies which pass with us for "history" at large, we find an effectual division of labour amongst a swarm of busy workers, as the result of a comprehensive scheme of historical study. At some points the work is more advanced than at others, and a certain amount of overlapping and redundancy is perceptible; but there is a reasonable prospect of its timely completion, as far as national sources are concerned.

In this country, even if we include texts, manuals, and treatises contributed by foreigners, large gaps are still left unfilled in the essential structure of our national history. For the early and middle periods a great mass of economic material remains to be edited. For the later period almost the whole series of State Papers must be reckoned with, whilst the auxiliary studies that are most essential for the equipment of historical students have been almost wholly neglected. Thanks to the industry of a foreign scholar, we at last possess a bibliography of half our national history, and we also possess adequate inventories, perhaps, of half our national archives. We have no manuals worthy of attention for the study of historical method. Of our published texts a large proportion is worthless, and the whole *corpus* is pitifully small compared with the bulk of the inedited documents. Of purely historical monographs our output, including many foreign contributions, is less than that of a second-rate continental State, whilst time and money are freely lavished on the production of an infinite number of purely conventional works.

The question may, therefore, fairly be asked whether we are entitled to pursue our historical studies in this desultory fashion; to busy ourselves in an amateurish way with the more attractive aspects of other national histories, or with purely speculative theories concerning our own institutions, whilst the reproach of neglected sources weighs so heavily upon us. Unfortunately textual work is rarely accomplished in the present day by individual enterprise, but is largely dependent on the discernment of the State and the public spirit of the various historical societies. But as matters stand the scholars who are best qualified by their historical training for the work of editing texts and producing much-needed handbooks are chiefly occupied with ephemeral or dilettante studies. More than this, from their devotion to the wider interests of historical study, their influence is frequently opposed to the unceasing exposition of the national sources.

Possibly foreign scholars also are scarcely blameless in this matter. Particularly in the United States, there has been, till quite recently, a tendency to write the national history with a complacent patriotism which has assumed historical evidence in support of its assertions. In another direction the best energies of American students have been devoted to researches which are only concerned indirectly with their national history. Incidentally this neglect affects our own position, for if at least an inventory of all historical documents relating to the American colonies which exist in British archives had been by now completed, the task of describing our modern sources would have been materially lightened. Again, even continental nations have been comparatively slow in producing texts or calendars of their modern archives, and here as elsewhere the exigencies of the showy thesis are largely responsible for the omission. The local antiquary and the provincial archivist, who live outside this academic atmosphere, receive a finer inspiration from their own surroundings, and it is these to whom we are chiefly indebted for the publication of national sources.

It may be admitted that for educational purposes a free hand should be given to writers, teachers, and students of history alike in their choice of subjects. Their survey of the domain of history can scarcely be too wide, or the discipline of their conventional studies too exacting. Many of the historical theories with which they have to deal are not, indeed, based on real historical evidence, or are, at best, intelligent anticipations of original researches that still remain to be carried out. These conditions of historical teaching must, however, be frankly accepted pending the complete investigation of the inedited sources. Our protest, if it may be allowed, refers exclusively to post-graduate studies, from the firm conviction that it is to the post-graduate student that we must chiefly look for assistance in any future scheme of national research. But first we must adopt a scheme of national study of a strictly scientific character, for no such scheme has yet been carried into effect in this country. It is true that in connexion with the University of London, which, destitute of a school of history of its own, makes special provision for the needs of post-graduate students, a fairly complete scheme of advanced historical study has been indicated as a desideratum. Recently a less ambitious programme has been prepared, and will be shortly carried out, in connexion with the history school of the University of Manchester. Naturally such schemes as these are based upon the well-known curricula of the continental universities, and they will be found to include the study both of universal and national history, in their general and special aspects respectively, supplemented by a large and varying group of auxiliary studies. These, even when they are not co-ordinated, are complementary to one another, and the familiar divisions of these departments of historical study should include every discipline of an historical nature. It is unnecessary, therefore, to isolate special branches of historical study in connexion with literature or art, as we have recently observed in the proceedings of an International Congress. They will find their proper places in a scientific scheme of classification under their appropriate divisions, or under some auxiliary study, and their true position in the scheme of universal or national history will be clearly recognized. Thus we shall be able to appreciate the real progress that we are making in the study of the national history. Forthwith we shall begin to explore the neglected sources, and in other ways to observe the first principles of historical method.

NOTES FROM BANGKOK.

October, 1905.

On October 12th the King signed a decree establishing a "National Library for Siam" in memory of his august father King Mongkut. The inception of the scheme goes back to the hundredth anniversary, in October, 1904, of King Mongkut, whose memory the King wanted to perpetuate by an "institute of public utility." The library is consequently to be known as the Vajirajan Library, the name by which King Mongkut was known during the years he spent in the priesthood before he succeeded to the throne. In 1881, on the hundredth anniversary of the foundation of Bangkok as capital, a library was founded by the children of King Mongkut; but as its scope was rather limited, and its use restricted to persons elected to membership, it did not and could not fulfil the purposes of a national library. The new library is to be, in the strictest, but also in the widest sense of the word, a national library, inasmuch as in it are to be collected and preserved the literature of Buddhism and the Thai literature. The Buddhist section is to contain the sacred Buddhist writings and commentaries on them, as they are to be found in all countries to which Buddhism has reached. It is also to contain the printed literature written in foreign languages, and it may thus be expected that in the course of time Siam will have a unique collection, rightly preserved in the only independent kingdom of the Far East which has remained Buddhist.

The Thai literature is to contain the literature written in different languages, or rather dialects of the Thai race; and in view of the wide area to which the race extended in its migrations from the south of China to the Malay Peninsula, from Annam and Tonkin to Assam, the gathering of this section will be no slight task, and it is sure to throw welcome light on many obscure points of history and ethnology. As it is known that the Thai race was a receptive one, we are sure to find in this literature traces of many civilizations, besides that of India, by which it has been influenced in manners, laws, and customs, and which may have been lost in the country of origin. However that may be, a wide field will be opened by the institution of the library, and that real earnest work is to be given to it is shown by the fact that the Crown Prince has been appointed its first President; whilst Prince Damrong, the Minister for the Interior, and Prince Sommot are the prominent members of the Council of four to which the superintendence of the library has been entrusted. O. F.

HISTORICAL MANUSCRIPTS COMMISSION.

RECENT REPORTS.

Welsh MSS.—In a second instalment of his Report on the Peniarth MSS. Mr. Gwenogvryn Evans completes his masterly survey of this famous collection. The portion under notice comprises a number of original or early MSS. and a still larger number of transcripts, most of which we owe to the scholarly discernment and industry of three men—Sir T. Wiliems, John Jones, and Robert Vaughan. For an appreciation of their patriotic labours we must refer the reader to the introduction to this Report, which incidentally forms a valuable contribution to the literary biography of the Principality.

The same observations apply to the learned editor's Report on the Panton and Cwrtmawr MSS., the former collection having been made by another poor Welsh parson, who, like Sir T. Wiliems, left the fruit of his labours to be gathered by other hands. The chief interest of the voluminous collection of transcripts deposited by the Rev. Evan Evans in the custody of his benefactor Paul Panton at Plas Gwyn consists in the fact that it formed the basis of the famous edition of the 'Myvyrian Archaiology of Wales.' We are glad to observe that Mr. Gwenogvryn Evans calls attention very forcibly to the just claim of Evan Evans to the credit of this invaluable work. Elsewhere the editor pleads with equal force and eloquence for the recognition of Sir T. Wiliems as the true author of the best historical dictionary of the Welsh language, and it should certainly be possible, with the assistance of the present exhaustive Report, to carry out the editor's suggestion for printing the work of that great philologist in its entirety.

In spite of the biographical and literary interest attaching to these antiquarian remains,

their purely historical value must not be overrated. Many famous MSS. are referred to here with which we are now familiar from the previous reports of the present editor. Occasionally we find references to historical compilations of less note, though still of considerable interest, and we are sometimes tempted to regret that the exigencies of the editor's elaborate palæographical method have apparently placed their more detailed description beyond the resources of the Commission. By way of exception to this statement mention should be made of the extracts from a nautical journal (described here as a "log-book") kept by a Welshman who visited the Cape of Good Hope on board an English vessel in 1627.

The Blickling MSS.—This collection, although in the possession of the Lothian family by marriage, is chiefly concerned with the fortunes of the Hobart family and the local history of Mid-Norfolk. In both respects the papers described in the present Report are of considerable historical value. The diplomatic correspondence of the second Earl of Buckinghamshire in connexion with his embassy to Russia in the middle of the eighteenth century has already been found to supplement the official series in several particulars, and on this account it has been edited for the Royal Historical Society, as already noticed in our columns. A further political interest attaches to the same distinguished statesman's career as Viceroy of Ireland at a later date. Mention should also be made of the newsletters addressed to this nobleman by Sir Henry Clinton, which bear upon the historic controversy respecting the conduct of the campaign in America during the year 1781. The motive for this correspondence is doubtless to be found in the close official relations which existed between the Irish Viceroy and Lord George Germain.

In their local aspect the Blickling MSS. present a graphic picture of the procedure of county administration, particularly during the latter part of the seventeenth century. The extracts from the Lieutenancy journals have an especial interest, whilst much valuable material for social and economic history is to be found in the stray subsidy lists, household inventories, and local newsletters printed in full by the editor, Mr. D'Arcy Collyer. The mediæval period is represented by a considerable collection of manorial records, from which a few inviting extracts only could be given. The student of manorial history should bear this fine collection in mind when he comes to the perusal of the long-promised edition of East Anglian manor rolls which will soon appear under the care of Miss F. G. Davenport.

The Egmont Papers.—These papers, of which the first instalment has just appeared as an enlargement of a former brief report, may be regarded as one of the typical collections of State Papers which for the seventeenth century at least, and especially for Irish affairs, have been so largely retained in private custody. The present collection is associated with the official position of successive members of the Percivall family in Ireland, and to some extent it has supplied materials for the well-known 'History of the House of Yvery.' Naturally such a collection as this must be regarded as merely supplementing existing sources, but a special feature will be found in the fortunate preservation of the original entry-book of the Court of Castle Chamber at Dublin, a find which has been already announced. The present Report deals chiefly with a voluminous series of State Papers connected with the Irish Rebellion during the Civil War, but in a later volume we are promised newsletters and diaries of the eighteenth century. This Report has been prepared by Mrs. C. S. Lomas with her accustomed skill and care.

JOHN CLELAND.

John Cleland is commonly known as the son of the supposed prototype of Will Honeycomb of the Spectator's Club. There is considerable doubt about the identity of his father with that fictitious character drawn by Steele. The 'Dictionary of National Biography' says that this is improbable from a consideration of dates (vol. xi. p. 30). Mr. George Aitken thinks Steele only drew upon his imagination, and that there was no real original ('Life of Steele,' vol. i. p. 310). However that may be, William Cleland, the father, was the friend and confidant of Pope in his dealings with the Dunces. Macaulay, in his usual trenchant manner, has thus characterized both father and son in a brief note :—

"William Cleland, who was well known twenty years later in the literary society of London, who rendered some not very reputable services to Pope, and whose son John was the author of an infamous book but too widely celebrated."—'History of England,' vol. iii. p. 276.

Now this "infamous book," 'Fanny Hill; or, the Memoirs of a Woman of Pleasure,' published 1750, is well known, and I need not here debate on this regrettable episode in its author's life. But to call him a "disreputable person," as the 'Dictionary of National Biography' does, is, I make bold to say, very unjust to him. He soon repented having written this book, to which he was forced by poverty, and showed by his later literary career of thirty years, during which he wrote novels, plays, and philological treatises, which are not brilliant, but at least respectable, that his repentance was sincere.

John Cleland was in the beginning of his career in Bombay in the service of the East India Company. But very little seems to be known about his Bombay career, and even the dates given are incorrect. The source of information whence all the biographical dictionaries have derived their account is Nichols's 'Literary Anecdotes.' In that well-known work it is vaguely said :—

"He went to the East Indies; but quarrelling with some of the members of the Presidency of Bombay, he made a precipitate retreat from the East, with little or no benefit to his fortunes."—Vol. ii. p. 458.

This was written in 1812. It was copied verbatim by Chalmers in his 'Biographical Dictionary' (vol. ix. p. 447) in 1815. Rose did almost the same thing in 1844 ('Biographical Dictionary,' vol. vi. p. 351). Even the 'Dictionary of National Biography' copies Nichols, adding merely a date which is inaccurate :—

"He went to Bombay, where in 1736 he was in the service of the East India Company. He soon left Bombay in a destitute condition, somewhat hurriedly, and for unknown reasons connected with a quarrel with the members of the Council at Bombay."—Vol. xi. p. 28, 1887.

Now these accounts seem to insinuate that Cleland was only for a short time at Bombay, and that his stay there was far from honourable. But from the Government Records at Bombay it can be proved that Cleland was nearly ten years in the service of the East India Company, that he served creditably, and that his quarrel with the members of Council was such as to do him credit for his sense of justice and public spirit. Amongst the Secretariat Records there is a List of Bombay Civilians, drawn up in September, 1738, in which John Cleland is mentioned, and particulars are given of his career. He arrived in India on October 1st, 1729, and was then holding the posts of Portuguese Secretary, official Overseer, and Collector of the Pension (land-tax). He joined the service on the incredibly small salary of Rs. 5, and in 1738 he had risen to one of Rs. 30. Those were days of small salaries and large perquisites, and the Governor drew only Rs. 300. Cleland was too honest to make money on such a salary, as will be seen, and there is no wonder that he returned to England "with little or no benefit to his fortunes." That he had made his mark and impressed the authorities with his ability appears from the following extract from the Bombay Records, dated November 1st, 1735 :—

"The correspondence with the country governments growing very large, and proving a great trouble to the President, and the present Secretary for the Portuguese affairs being infirm, a proper person is wanted for that branch. Mr. John Cleland, being well versed in the Portuguese language and otherwise well qualified for the employment, is accordingly placed in that office."—'Historical Materials for Bombay,' part iii. p. 292.

About the time that Cleland was in Bombay its government was very lax, and its high officers were lawless and corrupt to a degree scarcely to be understood in these days. John Horne was the Governor (1734–39), and his days were embittered by a dispute between Stephen Law, who succeeded him, and other members of the Council, and they threatened him with imprisonment for defalcations which had, it was said, been discovered. Philip Anderson, the author of 'English in Western India' (Smith & Elder, 1854), who was a chaplain in Bombay about the middle of last century (died 1858), has given a gruesome account of high Bombay officials as they were in Cleland's days in one of his articles in the now defunct *Bombay Quarterly Review*, that he wrote, in continuation of his work just mentioned, from the MS. Records of the Bombay Government. In this article, 'Internal Economy of Bombay a Century Ago' (vol. iii. pp. 324–52), is described the quarrel of Cleland with the members of Council, which has not been referred to by any one who has written on him. If this had been done, Cleland would have escaped injustice at the hands of his biographers. The quarrel arose because Henry Lowther, a high-placed Bombay official, at that time Chief of Surat, was sued for a debt which he owed to a native, but which he had long evaded paying, in the Mayor's Court at Bombay, through Cleland, who was appointed his attorney by the rich native, Lala Shivshankar. Lowther wanted to have the suit decided by arbitration at Surat, where his influence was very great, and where he hoped to get a favourable award. He did not appear before the Court of Bombay, but denied its jurisdiction :—

"Upon which the attorney, Cleland, becomes indignant, insinuates suspicions of defendant's honesty, and exposes his artifice in attempting to have the case tried at Surat. The Chief, Lowther, of course felt insulted, and complained to Government that not only had he himself been reviled, but that Cleland had aimed a side blow at their Honours, and dared to hint the existence of malpractices amongst the members of Government. This, if not the most candid, was certainly the most ingenious defence he could have thought of. Immediately the sympathies of power were shown to be with him, and the attorney (Cleland) was called upon for an apology, which he refused, maintaining that he had not exceeded the duties of an advocate, and if the defendant had been tried in Westminster Hall he would have been handled far more roughly. Cleland had, in truth, manifested a steadfastness of purpose and independence of spirit for which he deserves the highest credit, and on these accounts his name should be handed down to posterity. But in those days the question was how a bad Government could bend or break such a sturdy asserter of the right. Matters began to wear an ugly look, and it was felt that if the Court of Directors (in London) should read these proceedings, they would, of course, suspect that there was a foul undercurrent at Bombay which was concealed from them. So Governor Horne suggests that the affair should be brought to an abrupt termination by quashing all the proceedings, erasing from the Records all that had been written, and sending the troublesome attorney to speculate in pepper and cloth at a subordinate factory. Happily, this pacific proposition of his Honour found one determined opponent, otherwise we should have known nothing of Lowther's debt and evasions, of the suspicions which people entertained of the Government's purity, or of the way in which records could be

officially tampered with and an obnoxious critic silenced. Mr. Braddyl, who fifteen years before had worsted Mr. Cobbe (the chaplain), was now the champion of candour and truth; but we are tempted to ask how many times may Government have found itself as awkwardly situated when there was no Mr. Braddyl to enter an indignant protest against its furtive measures? how many times may an official conspiracy have shrouded the acts of a President and Council in eternal night? In this case the opposition triumphed, the papers were ordered to be registered, and Cleland, instead of being sent into honourable exile, was the same year appointed Secretary to Government for Portuguese affairs."—*Bombay Quarterly Review*, vol. iii. p. 352, 1856.

This happened in 1734, and Cleland was four years longer in the service of the Company at Bombay, after which he disappears from the Records. This long extract from Anderson, which is based on first-hand information from the Bombay Government Records, will have shown sufficiently that Cleland possessed an independent public spirit which could not long keep him in a position of subordination to such individuals as the high Bombay officials showed themselves to be. Very likely a similar quarrel may have happened again. Mr. Braddyl retired soon after the affair of 1734, and there was no one in high position to stand up against unscrupulous Bombay councillors. The Records must have been tampered with, as they had narrowly escaped being done in 1734, and we are left in the dark as to the real nature of this fresh quarrel of Cleland with the Bombay Council which led to his departure from that place. But that it was of a discreditable nature, as is insinuated by Nichols and others, seems highly improbable from the account of the previous similar quarrel. His conduct in that affair, as Anderson justly says, "deserves the highest credit, and his name should be handed down to posterity." Unfortunately his career in Bombay is entirely unknown; and for a single lapse in his later career, honourably retrieved, however, he is branded as a "disreputable person," with not much justice, as I hope I have shown.

I may here point out a strange error with regard to Cleland in that extensive and valuable American work of reference, Allibone's 'Dictionary of English Literature.' In the fourth or supplementary volume, published in 1891, his well-known 'Memoirs of a Coxcomb' are said to have appeared in 1851, and, stranger still, "John Cleland" is thought a pseudonym. There is this entry under his name: "Memoirs of a Coxcomb, 1851, Anon." (p. 343). Of course the book was one of Cleland's, and first appeared in 1751. Lowndes calls it "a work of considerable merit" (ed. Bohn, vol. i. p. 477). The 'Dict. Nat. Biog.' speaks of it relatively as "a work of greater merit" than his notorious 'Fanny Hill.'

R. P. Karkaria.

A FAMOUS FRENCH DUEL.

31, Boulevard Suchet, Paris, December 16th, 1905.

In your number of December 9th you published an article reflecting upon the memory of my late husband, Marquis de Mores, virtually charging him with unfairness in his dealings and duel with Capt. Mayer.

The Marquis de Mores was tried before judges and a jury in the Court of Assizes at Paris, and fully acquitted. The question of weight of the foils was examined, and the depositions of the two captains who acted as seconds to Capt. Mayer show that their weight was not abnormal.

In the course of the proceedings the presiding judge made the remark that in all questions of honour Marquis de Mores had the reputation of being extremely loyal and straightforward, and added that the Marquis had shown the same spirit at the trial.

It was also brought out that Capt. Mayer, who was a fencing-master, was a very dangerous opponent, and my husband's fencing-master expressed to him his uneasiness before the duel took place. Capt. Mayer was very tall, and had a long arm; it was by a riposte of my husband that he was wounded.

I ask you to kindly make these explanations public.

Marquise de Mores.

*** We regret that this letter, which we gladly insert, does not change the view formed by our reviewer. Our remark was based on the phrase "as gentle as he was brave." The raplers (not foils) are to be seen in a fencing-school, and their weight is known. In several writings of fencing experts references are made to the unusual character of the duel, which would seem to justify our criticism of Mr. Sherard. The famous trial of the Marquis de Morès for murder, in which he was acquitted, was not that which had to do with the case to which our criticism of Mr. Sherard referred, but we fully admit that the decision in the other or rapier case was not unfavourable to M. de Morès. Party feeling at the time ran so high on the question of the position of the Jews in France that, as our readers know, judicial decisions were not unlikely to be affected.

Literary Gossip.

'Initiation: a Discourse concerning the Names of Ships and the Character of the Sea,' by Mr. Joseph Conrad, opens the January number of *Blackwood*. 'William Pitt: the War with France,' is by Mr. Charles Whibley. In 'An Old Cantonment' Major G. F. McMunn tells of a soldier he knew who might have been the original of Mulvaney; and the writer of the articles on 'Old Galway Life' has some further recollections of 'The Tribes of Galway.' 'Murder Will Out' is a legal sketch. 'American Morality on its Trial' deals with the financial methods of certain United States magnates. 'To Mr. Balfour' is an address in verse by "J. K." The number also contains verses by Mr. St. John Lucas and Mr. R. C. Lehmann.

M. Maurice Maeterlinck has written an article entitled 'Our Anxious Morality,' which will appear next year in *The Atlantic Monthly*. Other contributors to that periodical will include Mr. Richard Mansfield ('The Art of Acting versus the Art of Talking'), Dr. William Osler ('The Ideal Physician'), and Mr. A. Maurice Low ('The German Emperor').

Messrs. A. & C. Black will publish in the course of January a 'Johannine Grammar' by Dr. Edwin A. Abbott, on the lines of the author's 'Shakespearian Grammar.' By alphabetical arrangement and very copious indexes it aims at something approaching to a complete commentary on the grammar, style, and thought of the Fourth Gospel, while giving some insight into contemporary non-Christian discussions, and the commentaries of Origen and Chrysostom.

Mr. Robert Brown, of Barton-on-Humber, is writing a history of his native town. The first volume, which covers the history from Roman times to 1154, is to be published by Mr. Elliot Stock very shortly, entitled 'Earlier History of the Town of Barton-on-Humber.' The work will be quarto size, and will be embellished with numerous illustrations of the locality, besides maps, plans, and facsimiles.

It is proposed by the Scottish universities to hold next year a celebration of the four-hundredth anniversary of the birth of George Buchanan (1506-82), the Scottish Humanist. Dr. Steele, of Florence, has offered a prize of one hundred guineas, open to *alumni* of the four Scottish universities, for the best essay on 'Sixteenth-Century Humanism as illustrated by the Life and Work of George Buchanan,' as well as lesser prizes. It is believed that the celebration will be held early in July next.

In the current number of *The Sphere* appears an impression of the late William Sharp by Mr. Richard Whiteing. Mr. Whiteing was one of Mr. Sharp's most intimate friends, and was all along in the secret of his identity with Fiona Macleod.

Prof. A. F. Murison writes concerning 'The Hyderabad Contingent':—

"Your reviewer of this book (December 9th) says: 'We read of constant reform and reorganization of the Contingent on one hand, and of failure to pay the force and increasing debt to the Government of India on the other. This led to the assignment in 1853 of the revenues of Berar on account of the debt and to provide for regular payment in future, the balance being handed over to the Nizam.' This melancholy story of half a century, from 1803 to 1853, cannot be dealt with here; but it should not be forgotten that Col. Davidson, the Resident at Hyderabad, wrote to the Government of India (October 12th, 1860) this conclusion: 'I believe it must be apparent, from what I have stated above, that in 1853 we had little or no real pecuniary claim against the Nizam.' But we have stuck to Berar."

The January number of *Macmillan's Magazine* contains some of the impressions of 'An American Rhodes Scholar at Oxford'; Mr. Charles Tower contributes a sketch of Russian village life which he calls 'The Black Pit'; 'Two "Passings,"' by Mr. Charles Oliver, describes some aspects of French provincial life; Mr. Anthony Collett writes of a summer day in 'The Heart of Berkshire'; and Mr. P. T. McGrath, of St. John's, Newfoundland, deals with 'The Newfoundland Fishery Dispute.'

It is proposed to publish a volume containing a selection from the letters of John Brown, author of 'Rab and his Friends.' The editor will be obliged if friends who have letters from Dr. Brown will give him an opportunity of reading them in order to judge of their suitability for inclusion in the proposed volume. All communications should be addressed to the writer's son, Mr. John Brown, 7, Greenhill Place, Edinburgh.

Until the discovery of the original copy of Faithorne's map of London which was recently acquired by the British Museum, the only known original copy was that in the Bibliothèque Nationale. These two original copies have now been collated and reproduced by the London Topographical Society. Another map of great importance to the historian is that attributed to Ralph Agas, with the assigned date 1560, the only known originals of which are in the Guildhall and the library of Magdalene College, Cambridge. These have been similarly collated and reproduced by the Society.

The title of the Faithorne map is absent from the British Museum copy, but has been supplied from the one in Paris.

The *Canadian Magazine* for January will print the first instalment of 'Reminiscences of a Loyalist,' being an account by the late Col. Jarvis, edited by Mr. S. Jarvis, of the War of Independence from a British standpoint. It is from a hitherto unpublished manuscript.

Mr. William K. Dickson has been appointed to succeed Mr. J. T. Clark as Librarian of the Advocates' Library, Edinburgh. Mr. Dickson has both technical and literary qualifications for the post. He edited for the Scottish History Society (of whose Council he is a member) the 'Jacobite Attempt of 1715,' and was joint editor with Mr. J. H. Stevenson of 'The Register of the Great Seal of Scotland under the Commonwealth.' His 'Life of Major-General Sir Murdoch Smith' is well known; and he has been a frequent contributor, chiefly on bibliographical subjects, to magazines and newspapers.

We notice that the death of Mr. Thomas Reader is announced as occurring on December 15th at his house at Peckham Rye. Mr. Reader, who was in his eighty-eighth year at the time of his death, entered the house of Messrs. Longman & Co. in 1834, his father, Mr. Charles Reader, having been for many years in charge of the "Curiosa," as the second-hand book department was called. Mr. Thomas Reader soon gave evidence of considerable ability, and he rose to be head of the publication department in a short time, being more immediately connected in this work with the late Mr. William Longman. Mr. Reader entered the firm as a partner in 1865, and retired in 1889.

Mr. John H. Ingram writes:—

"The quotation in your notice last Saturday of the Clarendon Press Shaksperean reprints—

> Sometime a lovely boy in Dian's shape,
> With hair that gilds the water as it glides—

is from Marlowe's 'Edward the Second,' Act I. sc. i. ll. 61-2."

Mr. J. Le Gay Brereton writes from the University of Sydney:—

"Mr. J. H. Slater's references to Mr. Ingram's Marlowe bibliography (*Athenæum*, September 23rd) put it in my mind to say that for some years I have jotted down Marlowe references for my own use and pleasure. The material thus collected is compiled from such various sources that it would need careful revision before it could be published; there is no predetermined uniformity about my entries. But my bibliography, such as it is, is far larger than Mr. Ingram's. Perhaps somebody with more time and more bibliographical ability and opportunity than I may be happily able to find a publisher for a bibliography which every reader of our early drama would welcome; if so, my heap of stuff is at his disposal."

We find that the Classical Association meets too late in the week to have its proceedings recorded in our number of January 6th. We shall therefore postpone our reviews of school-books and other educational literature to the week following, January 13th, when we shall hope also to pay attention to the Headmasters' Conference, the Headmasters' Association, and the Assistant Masters' Association, which all meet about the same time.

The January number of *Temple Bar* begins a new series as a sixpenny monthly, after a life of over forty years at the original price. It contains a Russian story by Korolenko, entitled 'The Last Ray,' now published in English for the first time, together with an essay on this famous story-teller by Mr. G. H. Perris. Other contributions include 'Sea-Songs,' by Mr. John Masefield; and 'Spring,' a poem by Mr. Laurence Binyon.

The chief article in the November number of the *Revue Germanique* is an essay on the psychology of women in Schopenhauer, by M. André Fauconnet, which is interesting, though rather depressing reading. We find also an account of the foundation of the *Revue Germanique* of Dollfus and Nefftzer, which first appeared in 1858, and an account of books on Bismarck, 1902–5. The section of 'Notes and Documents' contains an inedited letter of Longfellow to Xavier Marmier. We congratulate the *Revue* on a year of solid and useful work.

A still older reader than that mentioned recently is Mr. S. W. Simms, bookseller, of Bath, who is in his ninety-sixth year, and has read *The Athenæum* from its beginning. He says that he preferred it to the 'Literary Gazette' as being free from bias in favour of any publisher.

M. Ernest Merson, who died at the end of last week at Croisic (Loire-Inférieure), in his eighty-sixth year, was probably the *doyen* of French journalists. He had been an active worker since 1849, when he founded *L'Union Bretonne*, which he continued to direct up to the time of his death. This journal and the *Patriote Breton et Vendéen*, likewise edited by Merson, were vigorously Imperialist when Imperialism was on its last legs. Apart from his journalistic work Merson found time to write a number of books on political and historical subjects, notably 'La France sous la Terreur.' He was probably the last of the old school of journalists. He took an active part in all matters relating to the press, both in his own department and in France at large.

M. Adolphe Brisson makes the interesting announcement in the current number of *Les Annales Politiques et Littéraires* that M. Frédéric Mistral's 'Souvenirs de Jeunesse' will be published serially in that journal, and that the first instalment will appear on January 7th. The author has himself selected the numerous portraits, drawings, landscapes, and other views with which the various chapters will be illustrated. The 'Souvenirs' are written in Provençal and in French, but it is the latter version which will be published in *Les Annales*.

Anthony Hope's 'A Servant of the Public' and Mrs. Voynich's novel 'The Gadfly' have just appeared in Danish translations, as well as 'Wild Animals I have Known,' by E. Seton-Thompson.

Another question as to the legal ownership of letters may arise in the case of some hitherto unpublished love letters of Madame de Staël to Benjamin Constant, which are to be printed next year in *The Critic* of New York. The publication has been authorized by the Baroness de Nolde, their present possessor, who is a descendant of Constant's wife, the Baroness von Mahrenholtz; but the De Broglie family, Madame de Staël's direct descendants, are said to be strongly opposed to it.

The death, in his eighty-seventh year, is announced of Dr. W. Wenck, for many years Professor of History at the University of Leipsic, and author of several historical works, 'Der Kampf um Schleswig-Holstein,' 'Das Fränkische Reich nach dem Vertrag von Verdun,' 'Deutschland vor hundert Jahren,' &c.

We note the publication of the following Parliamentary Papers: Report of the Commissioners of National Education in Ireland for the Year 1904, Appendix, Section III. (4½*d.*): Statistics of Public Education in England and Wales, 1903-4-5 (2*s.*); and Minutes of Evidence on Medical Inspection and Feeding of Children attending Public Elementary Schools: Vol. II. List of Witnesses, &c. (3*s.*)

SCIENCE

RESEARCH NOTES.

In the *Annalen der Physik* Prof. Melander, of Helsingfors, has an article which goes to show that both violet and ultra-violet rays are given off by all metals at ordinary temperatures. The experiments quoted by him as pointing to this conclusion are entirely photographic, but there seems to be no doubt as to their validity. If this is coupled with the well-known power of wood and of the human hand to impress an image of itself upon a sensitized plate, even without the aid of a camera, it would seem that most substances yield an emission capable of affecting a photographic film. But of what nature is this emission? German physicists have failed to confirm the view of M. Blondlot that it is material or one having weight, and therefore capable of being diverted by a mechanical force, such as that exerted by an air-blast. Prof. J. J. Thomson says that, so far, at least, as the alkali-metals are concerned, it is composed of negative corpuscles, that is to say, of a stream of atoms, not of matter, but of electricity, which possess, besides their electric charge, a mass and an inertia which increase enormously as the velocity with which they are discharged approaches the speed of light. As this explanation would involve, as both he and Prof. Larmor admit, the hypothetical existence of an ether with a density far greater than that of any known substance, it cannot be said to be entirely satisfactory.

Two other objections to the electronic theory of matter are ably stated by Prof. W. Wien in a communication to the *Physikalische Zeitschrift*. The size of the electron can be calculated if we suppose it to be spherical in shape, and works out at something like a billionth of a millimetre. Now if an electric charge of anything like the quantity ascertained by Prof. Thomson and Prof. Kaufman were concentrated on so small a volume as this, it would certainly destroy it according to all the analogies we can imagine. We are in a somewhat similar difficulty with regard to the persistence of the lines in the spectrum. These are imagined by thoroughgoing exponents of the electronic theory, like Prof. Thomson, to correspond to the periods of vibration or revolution within the atom. But the radiation produced by them must in course of time damp these vibrations, and how is the revolution at a fixed rate then to be kept up?

These difficulties, however, can be paralleled by others found in the most commonplace electrical phenomena, of which no explanation has

yet been offered on orthodox lines. What, for instance, is the meaning, as has lately been asked, of the different forms of discharge in air from the positive and negative electrodes respectively, of which some striking photographs were at Grenoble shown by M. Stéphane Leduc? Or of the discharge of negative electricity from conductors exposed to ultra-violet light? Or, to mention a phenomenon less generally known and commented on, of the persistent discharge of positive electricity alone, from a conductor traversed by an oscillating current of high tension? All these are puzzles of which solutions have, indeed, been offered, but which are very hard to account for by the unaided use of the electronic hypothesis now in fashion.

Some recent correspondence as to the occurrence together in nature of metals like silver and lead has induced Mr. Soddy to write to a contemporary to express his views on the transmutation of the precious metals. He seems much inclined to agree that gold and silver are alike the products of more stable "elements," such as radium and thorium, and the possible source of others not yet defined or isolated. His principal argument is that in some gold nuggets he has found traces of the rare gas helium, although from others it appeared to be absent. In platinum, on the other hand, its presence is, according to him, invariable. Yet it seems as if all this were consistent with the known facts regarding this extraordinary gas, which has not only resisted till now all attempts to liquefy it, but also seems to diffuse more rapidly and easily through even the densest substances than any others of its group. Some further experiments with helium are also announced by Profs. Himstedt and Meyer, who, after treating a small quantity of cleveite with acid potassium sulphate in a combustion tube, which was then flushed with hydrogen and exhausted as far as possible, found only a trace of the helium spectrum present after three days. The same experiment repeated with radium bromide in a quartz tube afterwards exhausted showed at first no trace of helium, but gave the characteristic spectrum easily at the end of six weeks. They throw out the suggestion that perhaps some hitherto undiscovered "helide," or combination of helium and another substance, is present in radium bromide.

Mr. Soddy thinks that State aid should be furnished for such experiments as his, which are at once too costly and too prolonged to be conducted by a single individual. But even abortive experiments are often revived with success by scholars of a future generation. An excellent example of this has just been related by M. Langevin in a lecture to the Société Internationale des Électriciens. For many years after the death of Clerk Maxwell, his theory of "displacement" currents remained a mere hypothesis, doubted by some, and supposed by all to be incapable of scientific demonstration. Now, however, M. Perrin has shown that if a charged gold-leaf electroscope be covered, so far as its rod and ball are concerned, with a cap of insulating material such as paraffin wax, and the whole system be then exposed for a few seconds in a field traversed by Röntgen rays or by their equivalent, the Gamma rays from radium, the cap of dielectric will be found charged with electricity of the opposite sign to that shown by the ball of the electroscope. Here, says M. Langevin, the paraffin cap has arrested the charges of contrary sign, while that of the ball has displaced itself towards the field under the action of the atmosphere, made into a conductor by the rays. He thinks, too, that this may be likened to what happens in liquids in the case of electrolysis.

Sir Oliver Lodge writes that M. Langevin's explanation of magnetism as lately summarized in *The Athenæum* (No. 4075) "contains nothing new to English physicists," and further that "M. Langevin obtained it all from Cambridge," and that "it is due chiefly to Prof. Larmor and others of the Cambridge School." If he will give the reference to the work or memoir in which Prof. Larmor or any other English scholar gave the explanation alluded to, justice shall be done. F. L.

ANTHROPOLOGICAL NOTES.

The largest space in the *Journal* of the Anthropological Institute (vol. xxxv. part i.) is occupied by Mr. C. Hill Tout's report on the ethnology of the Stlatlumh of British Columbia, a treatise of 93 pages. By the help of a grant from the Government of British Columbia and of another from the Government Grant Committee of the Royal Society, Mr. Tout has been able to proceed with his studies of these people, who are popularly known as the Lillooets, after the name of the principal river on the banks of which they are settled, and has brought to light a body of interesting information relating to tribal and sub-tribal origins, to the source and significance of personal and group names, to the nature and character of personal and hereditary totems, and to certain magical ceremonies. He observes that these resemble in some striking respects the Intichiuma ceremonies of the Arunta and other Central Australian tribes, and are carried out for a like purpose, and that many features of the culture of the Lillooets of British Columbia recall those of the central and north-western tribes of Australia, as described by Messrs. Spencer and Gillen. This is especially the case with regard to the name systems and the totemistic observances.

With regard to Central America, the *Journal* contains an article by Dr. T. W. Gann on the ancient monuments of Northern Honduras and the adjacent parts of Yucatan and Guatemala, the former civilization in those parts, and the chief characteristics of the races now inhabiting them, with an account of a visit to the Rio Grande ruins.

Five papers are devoted to various African subjects. Mr. Randall-MacIver describes the manufacture of pottery in Upper Egypt. Mr. C. S. Myers continues his contributions to Egyptian anthropometry by an investigation of the comparative anthropometry of the most ancient and modern inhabitants, in which he arrives at a different conclusion from that announced by Miss C. D. Fawcett in *Biometrika* for 1902. He considers that there is no evidence that the prehistoric and modern population of Southern Upper Egypt differ in physical measurement, and that the homogeneity of the prehistoric, as determinable by standard deviation, is the same as that of the modern population inhabiting like regions of the Nile valley. He finds that the relative correlation of cranial measurements in the prehistoric and modern population shows great irregularity, and that much caution is needed in basing general conclusions as to the relative closeness of correlation on a few coefficients only. Mr. R. E. Dennett contributes notes on the cosmological and other philosophical ideas of the Bavili of Luango. Mr. R. N. Hall describes a stone fort and pits on the Inyanga estate, Rhodesia, 250 miles north of Great Zimbabwe. Mr. Franklin White furnishes a series of measurements and other notes on the elliptical ruin at Great Zimbabwe, but does not deal with the question of their antiquity raised by Mr. MacIver.

Other papers are by Mr. Ernest B. Haddon on the dog-motive in Bornean art, by Mr. Northcote W. Thomas on Australian canoes and rafts, and by Mr. F. G. Parsons and Dr. C. R. Box on the relation of the cranial sutures to age. The last-named authors arrive at the conclusion that the external appearances of closure of sutures are so variable that no estimate of age should be made from them when the inside of the skull can be looked at.

In *Man* for November the discussion of eoliths, pseudo-eoliths, and machine-made eoliths is vigorously continued by the Rev. H. G. O. Kendall and Mr. J. R. Larkby; Dr. Seligmann describes a painting on bark from the Aird River delta, British New Guinea, apparently representing a number of men engaged in a dance or ceremonial procession; Mr. H. Ling Roth discusses the evidence as to the practice of tattooing in Tierra del Fuego; Mr. R. Colson describes some groups of stones observed by him in the neighbourhood of kitchen-middens at Port Nolloth, South Africa; and Dr. Beddoe sums up the present position of the controversy as to Hungarian physiognomy recently raised. The courtesy of the Trustees of the British Museum permits the publication of notes furnished to them by Capt. R. E. Salkeld on the Boni hunters of Jubaland, East Africa.

The *Proceedings* of the Society of Antiquaries for the session 1904-5 include a paper by Mr. F. T. Elworthy on the Mano Pantea, or so-called votive hand, illustrated by several specimens. Mr. Elworthy's conclusion is that these objects were penates, and not votive, but, on the contrary, prophylactic and propitiatory.

SOCIETIES.

Astronomical. — *Dec.* 8. — Mr. W. H. Maw, President, in the chair.—Prof. A. Schuster gave an account of the results of his recent investigations relating to sun-spot periods. He had found that besides the recognized eleven-year period there were subsidiary ones, which recurred with great regularity, though they have sometimes been in abeyance. A period of about 4½ years can be traced back to 1749, and other longer periods are indicated. An explanation was suggested for the fact that the expected increase of activity may not show itself at one period, while it recurs regularly at the next.—Mr. E. B. Knobel read a paper on the astronomical observations contained in the 'Nihongi,' the ancient chronicle of Japan. These include observations of solar and lunar eclipses, conjunctions and occultations, comets and meteors. There is great difficulty in identification, owing to the complex system of chronology, which was borrowed from the Chinese. The year is a lunar one of 29 or 30 days, with an intercalary month every 33 months, or 7 intercalary months in the lunar cycle of 19 years. When the dates of the recorded eclipses are properly reduced, they agree very well with the tables of Oppolzer.—Mr. S. A. Saunder read a paper on the present state of lunar nomenclature, pointing out its anomalies and irregularities, which cause frequent mistakes in the identification of small features which have been selected for measurement. He urged the importance of a revision of the existing system.—Mr. Dyson showed photographs of comet *d*, 1905, taken at the Royal Observatory, Greenwich.—Dr. Charles Chree gave an account of a comparison of the results from the Falmouth declination and horizontal-force magnetographs on quiet days in years of sun-spot maximum and minimum.—The Rev. C. D. P. Davies gave a demonstration of his system of testing parabolic mirrors.

Geological. — *Dec.* 6.—Dr. J. E. Marr, President, in the chair.—Col. D. A. Johnston and Messrs. E. E. W. Berrington, H. Briggs, J. C. Brown, T. Clegg, C. J. Coleman, H. B. Corbin, J. H. Frogley, G. George, A. S. Horne, J. V. B. Murdoch, F. P. Paul, H. F. G. Roose, and G. W. Young, were elected Fellows.—The following communications were read: 'The Physical History of the Great Pleistocene Lake of Portugal,' by Prof. E. Hull,—and 'The Geological Structure of the Sgùrr of Eigg,' by Mr. A. Harker.—Dr. J. W. Evans showed a new method of determining the optic axial angle of a biaxial mineral.—Dr. F. A. Bather exhibited fossils from various localities in New Zealand, hitherto known as the Mount Torlesse Annelid, but described in *The Geological Magazine* (December, 1905) as *Torlessia mackayi*, a new genus and species of tubicolous Polychæta, and as *Dentalium huttoni*, n. sp.

Asiatic.—*Dec.* 12.—Lord Reay, President, in the chair.—Mr. Herbert Baynes read a paper on 'The History of the Logos.' He began by stating that the supreme act of creation was ascribed to the Divine

word by nearly all the families of mankind. In the literature alike of Palestine and Persia, Egypt and Mesopotamia, India and China, the world was said to exist as the audible thought of the Deity. Amongst the Semites, especially the Hebrews, this thought could be traced in great fullness; and in the Chaldean epic brought to light in the Seven Tablets of Creation we find that it is the word, the introduction of law and order or "the way of the gods," which turns chaos into kosmos. With the Egyptians the creative power of the Divine voice was intimately associated with the possession of the sacred name. Most interesting and characteristic was the doctrine of the word in the 'Avesta,' where Manthra is the holy soul of Ahura, the supreme law by which the prophet smites the forces of Angra Mainyu. Sraosha, the personification of obedience and piety, is the incarnate word; and Manthra Spenta, the holy word, is the mighty law which binds together all the dwellers in Irân. Mr. Baynes dealt at length with Lao-tse's conception of the Tao, and cited many passages from the 'Tao-tê-King' to prove his contention that "Logos," and not "Way," was the true interpretation of the expression. Of similar import was the 'Tai Kih' of Chao-tse, so that we had China's best thinkers agreeing to ascribe all things to right reason, or the word made manifest. With regard to the later Hebrew literature, it was pointed out how the σοφία of the Apocrypha became the Logos of the Alexandrian School.—In the discussion which followed, Sir Robert Douglas, Dr. Pinches, Prof. Margoliouth, Mr. Whinfield, and Mr. Hagopian took part.—Lord Reay then presented to Prof. Rhys Davids, who had resigned the secretaryship of the Society to accept the Chair of Comparative Religion at Manchester, a testimonial consisting of a portrait of himself (painted by Mr. Gatty) and a cheque.

Statistical.—*Dec.* 19.—Papers were read on 'The Decline of Human Fertility in the United Kingdom and other Countries as shown by Corrected Birth-Rates,' by Drs. A. Newsholme and T. H. C. Stevenson, and on 'The Changes in the Marriage- and Birth-Rates in England and Wales during the last Half Century, with an Inquiry as to their Causes' by Mr. G. Udny Yule.

Linnean.—*Dec.* 7.—Prof. W. A. Herdman, President, in the chair.—Mr. E. R. Burdon and Mr. C. G. Rogers were admitted Fellows.—Mr. Oakes Ames, Mr. E. A. Smith, Viscount Mountmorres, and Mr. A. D. Hardy were elected Fellows.—Mr. W. T. Hindmarsh sent three photographs, taken by Mr. I. C. Ruddock in April last, of a plant of *Shortia uniflora*, Maxim., in his rock-garden at Alnbank, Alnwick; the plant this year had sixty blooms, more than double the number it had the previous year.—Mr. H. J. Elwes and Mr. Frank Crisp spoke on the difficulty of inducing the plant to flower in cultivation.—Dr. A. B. Rendle exhibited a branch of a Widdringtonia, with two forms of leaves, from a farm belonging to the late Cecil Rhodes in Rhodesia.—Mr. J. Saunders showed a series of lantern-slides illustrating the habits of Mycetozoa. His observations were almost confined to the species seen within a radius of ten miles from Luton. Out of 207 species catalogued by Mr. A. Lister from the whole world, no fewer than 96, or 46 per cent., have been found in the district specified. The species shown were *Badhamia utricularis*, *Trichia varia*, *Chondroderma radiatum*, and *Physarum leucopus*.—The President commented on the exhibition, and mentioned that a small dried-up plasmodium had long served him for demonstration to his junior classes on the phenomenon of restoration to activity by moisture and warmth.—Dr. Jonathan Hutchinson then gave an oral *résumé* of his paper 'On the Ætiology of Leprosy.' Two hypotheses as to the cause of leprosy, and only two, were at present in the field. Both alike recognized the importance of the lepra bacillus, and the question to be determined was, How does it gain access to the body? One school held that it passed from person to person by direct external contagion; whilst the other thought that it was communicated only by food, with a proviso that after all it was possible that the bacillus in question was identical with that of tuberculosis, and was differentiated and stimulated by food. Prior to Hansen's discovery of the bacillus all leading authorities had abandoned the belief in contagion; and now, after a long relapse, opinion was again rapidly tending in that direction, Dr. Hansen himself having declared that the disease is one of which, as regards contagion, "it is not necessary to have any particular dread," and avowed his conviction that there must be some other circumstance "which we unfortunately know nothing of." Dr. Hutchinson proceeded to show that there need be no hesitation in believing that the use, as food, of decomposing fish constituted the circumstance in question. The fish-hypothesis, as it had been named, met all the conditions of the problem, and was contradicted by none. No other could be suggested which had any degree of plausibility. As a matter of fact, none other had been hinted at. He was particularly desirous to have it understood that this hypothesis did not require any excessive, or indeed even liberal, use of fish as food. It took full cognizance of the bacillus, and held that the introduction of the very smallest quantity of fish, if containing that parasite or an equivalent ptomaine, would suffice to initiate the disease. He proceeded to adduce a great mass of evidence from all parts of the world in support of the hypothesis in question, more especially from South Africa, China, and Norway. In places where the disease is scattered and infrequent there might, he admitted, be some difficulty in tracing the association of cause and effect; but if those only are taken in which excessive prevalence occurs, all hesitancy would disappear. He challenged any one, not yet convinced, to name any place in the whole world in which the leprosy prevalence exceeded 50 per 10,000 which was not either a fishing-station or notorious for the consumption of bad fish. As instances of places where this enormous prevalence has been recorded the following were mentioned: Minicoy (Maldives), Kalagoan (Bengal coast), Fiji and the Sandwich Islands. By way of affording a standard of comparison, it was added that the prevalence in Ceylon was only two per 10,000, and in India as a whole less than six.

Society of Biblical Archæology.—*Dec.* 13.—Dr. Pinches read a paper entitled 'Notes upon some Tablets of the Period of Hammurabi's Dynasty.' The tablets dealt with were some of those belonging to Lord Amherst of Hackney, and consist of contracts and letters, the surface of the former being generally rolled over with the cylinder-seals of the parties concerned. The contracts are of several classes, and include loans, receipts, annulments, sales, and lists of various kinds, the things to which they refer being silver, oil, grain, houses, slaves, &c., and of very varying interest and value. Among the more noteworthy are those expressly stating that the silver lent was not to bear interest; that recording a loan advanced by Samas (*i.e.*, the administration of his temple); the receipt of what was probably a periodical offering to the god; the sale of the houses of Abil-ili and Urra-kubi, &c. Especially interesting were the inscriptions recording the many captures (seemingly) of the city Isin, that mentioning the destruction of Kamari, and a tablet bearing the names of four slaves, with remarks concerning them. Two of these slaves seem to have been prisoners, and they had apparently been recaptured whilst attempting to escape from Babylonia by the road to Harran, the city where Abraham sojourned after leaving Ur of the Chaldees. Among other things these inscriptions touch upon many points dealing with the language, manners, customs, and laws of the Babylonians, and incidentally bear witness to the power and wealth of the temples of the land, and to the piety of the people to whose spiritual needs they attempted to minister.

Society of Engineers.—*Dec.* 11.—*Annual Meeting.*—Mr. N. J. West, President, in the chair.—The following gentlemen were elected as the Council and officers for 1906: *President*, Mr. Maurice Wilson; *Vice-Presidents*, Messrs. R. St. George Moore, J. W. Wilson, and W. H. Holttum; *Ordinary Members of Council*, Messrs. J. Aird, J. Bernays, A. G. Drury, G. A. Goodwin, G. Green, E. J. Silcock, D. A. Symons, and F. G. Bloyd; *Honorary Secretary and Treasurer*, Mr. D. Butler Butler; *Honorary Auditor*, Mr. S. Wood.—The President announced that Lord Rayleigh and Sir A. R. Binnie had been elected by the Council as Honorary Members to fill the vacancies created by the deaths of Sir Lowthian Bell and Mr. J. Mansergh. He also announced that the following premiums had been awarded by the Council for papers read during the past session: The President's Gold Medal to Mr. Sherard Cowper-Coles for his paper on 'The Metallic Preservation and Ornamentation of Iron and Steel Surfaces'; the Bessemer Premium of Books to Mr. E. R. Matthews for his paper on 'The Parade Extension Works at Bridlington'; a Society's Premium of Books to Mr. B. L. Bradley for his paper on 'The Grindleford Stone Quarries and their Working'; and a Society's Premium of Books to Mr. W. P. Digby for his paper on 'Statistics of British and American Rolling Stock.'

Mathematical.—*Dec.* 14.—Prof. A. R. Forsyth, President, in the chair.—Prof. J. Harkness and Mr. C. V. Durell were elected Members.—Mr. J. A. H. Johnston was admitted into the Society.—The following papers were communicated: 'Some Difficulties in the Theory of Transfinite Numbers and Order Types,' by the Hon. B. A. W. Russell,—'On Well-Ordered Aggregates,' by Prof. A. C. Dixon,—'On the Representation of Certain Asymptotic Series as Convergent Continued Fractions,' by Prof. L. J. Rogers,—'The Hessian Configuration and its Connexion with the Group of 360 Plane Collineations,' by Prof. W. Burnside,—'The Imaginary in Geometry,' by Mr. J. L. S. Hutton,—'On a New Cubic connected with the Triangle,' by Mr. H. L. Trachtenberg,—and 'The Theory of Integral Equations,' by Mr. H. Bateman.

Faraday.—*Dec.* 12.—Mr. J. Swinburne, V.P., in the chair.—Mr. J. Swinburne and Dr. G. Rudorf presented a paper on 'The Physics of Ore Flotation.'—Prof. A. K. Huntington read a paper on the same subject, entitled 'The Concentration of Metalliferous Sulphides by Flotation.'—Prof. J. Walker contributed a paper on 'The Ions of Pure Water.'

MEETINGS NEXT WEEK.

Thurs. Royal Institution, 3.—'Astronomy,' Lecture I., Prof. H. H. Turner. (Juvenile Lecture.)

Science Gossip.

The most important fact in connexion with the long list of prizes at the Paris Académie de Médecine is that the Prix François Joseph Audiffret, of the value of 25,000fr., for a remedy "curatif ou préventif" of tuberculosis, has not been awarded. The prize itself cannot be divided, but the Academy has awarded, "à titre d'encouragement," several smaller prizes, varying from 1,000fr. to 500fr., to those who have made important contributions to the subject. Dr. Christiani, of Geneva, has received one of 1,000fr. The Prix Théodore Herpin, of the value of 3,000fr., offered in connexion with "malades nerveuses," goes to Dr. O. Crouzon, of Paris. In addition to the various prizes, the Academy has distributed medals to those who have made valuable contributions to medical science in different forms.

One of the most useful annuals for the astronomical amateur is *The Companion to 'The Observatory,'* which we welcome again for 1906, being issued with the December number of that periodical, about to enter on its twenty-ninth year. The 'Companion' gives not only a summary of data and phenomena due in the forthcoming year, but also copious lists of variable stars, double stars, and meteor radiants. For the ephemerides of the variable stars acknowledgment is made of assistance received from the Paris Observatory; Mr. Maw, now President of the Royal Astronomical Society, contributes a number of places of double stars; and Mr. Denning has, as in previous years, revised the meteor notes. The editors continue the same (Messrs. Lewis and Hollis, of the Royal Observatory); and it may be well to mention that the 'Star Calendar for 1906' (already noticed by us), although, by a remarkable coincidence, it bears the initials of Mr. Hollis, is not his compilation.

Messrs. Philip & Sons send us a new large planisphere, which is very conveniently arranged for finding the stars at any hour of the night.

We are glad to learn that that valuable guide to astronomical literature the *Astronomischer Jahresbericht* has, since the lamented death of Prof. Wislicenus, been taken up by Prof. Berberich, and there is reason to hope that it will appear with the same promptitude as formerly.

We have received the eleventh number of vol. xxxiv. of the *Memorie della Società degli Spettroscopisti Italiani*. Signor Bemporad continues his note on the theory of astronomical refraction; and Father Cirera gives an account of the Ebro Observatory (illustrated by two views of the exterior) at Tortosa, at which the principal object of study is the connexion between magnetic and solar perturbations. Prof. Riccò adds a short description of the new Mount Wilson solar observatory in California.

The third (not, it would seem, the last) cometary discovery of the present year has fallen to an astronomer whose name is already well known in that line of research. Prof. Giacobini, of Nice, discovered comet *a*, 1905, on March 26th; and he also detected comet *c*, 1905, on the morning of the 7th inst. That body, when discovered, was of about the eighth magnitude, situated in the constellation Boötes, moving in a south-easterly direction. It was seen at Mount Hamilton and at Princeton on the following morning, and subsequently at several European observatories. The orbit has been computed by Dr. Strömgren, of Kiel, by which it appears that the perihelion passage will not take place until the 18th prox., at the distance from the sun of 0·13 in terms of the earth's mean distance, or only about 12,000,000 miles. The comet's distance from us is now 1·15 on the same scale, or 107,000,000 miles, and diminishing, so that the brightness is already nearly four times as great as at the time of discovery, and continuing to increase. Its apparent place is now a short distance to the north-east of the bright star α Serpentis, and it is moving in a south-easterly direction towards λ Ophiuchi. It is not improbable that the comet will become visible to the naked eye next month.

It is reported that a comet which was discovered by Prof. Barnard at the Lick Observatory in 1884, but, though calculated to be moving in an elliptic orbit with a period of somewhat less than 5½ years, has not hitherto been seen since the year of discovery, was traced last month on a photographic plate at the La Plata Observatory, in Argentina; also that a new comet has been photographically discovered at Mr. Lowell's observatory at Flagstaff, Arizona. Confirmation as to details must be reserved till next week.

FINE ARTS

Gothic Architecture in England. By Francis Bond. (Batsford.)

This is, in every sense of the word, a great book. So far as statistics are concerned, it comprises 800 pages of imperial octavo, illustrated by 785 photographs, sketches, and measured drawings, as well as by 469 plans, sections, diagrams, and mouldings. Moreover, it deals with a great subject, and claims to be "an analysis of the origin and development of English Church Architecture, from the Norman Conquest to the dissolution of the monasteries." This subtitle accurately sets forth the scheme of this treatise: its aim is no mere classification of the mediæval architecture of England into periods, but an orderly and progressive account of the construction of our churches, both great and small, beginning with the planning, and carried on, after a common-sense fashion, through abutment, vaulting, lighting, and a variety of details requiring separate treatment.

The old classification of English architecture into the four periods of Norman, Early English, Decorated, and Perpendicular, as originated by Rickman, served a good purpose at the time of its conception; but it had the effect, amongst other faults, of breaking up, for most minds, the story of English building into four almost hard-and-fast divisions, each with its own history and its own set of stereotyped designs. It fostered ignorance of the principles of gradual evolution, which are emphatically true in that particular branch of the expression of human knowledge termed architecture. The time was almost overripe for a new and careful treatise, on sound lines, expounding English Gothic architecture as an organic whole. Rickman's book and Parker's 'Glossary' have done their work, though they can never be entirely superseded. Elaborated essays, such as 'A History of English Church Architecture' by G. Gilbert Scott, jun., or 'A History of Gothic Art in England' by Edward S. Prior, will always prove of the greatest service from their suggestive reflections and historical statements. But something more was wanting, of a substantial and accurate character, to which students, ecclesiologists, general readers, and even architects themselves could turn as a fairly authoritative work in the place of those that have become, in consequence of more recent and exhaustive research, out of date. This need has been met by Mr. Bond's work and by the liberal conceptions of his publisher as to the method and extent of the illustrations. It is a book that at once steps to the front as authoritative, and it will be long before it is superseded.

Mr. Bond is not so revolutionary as altogether to ignore the four traditionary and still popular divisions of English architecture, and in the first part of the book—after an excellent account of the chief characteristics of English Romanesque and English Gothic architecture—three chapters are devoted to the three periods or styles that followed the Norman or Romanesque. But in these chapters a certain amount of originality or breadth of view is apparent, which shows itself even in the assigned dates. Allowing for overlapping, Mr. Bond considers that Early English extended from 1170 to 1315; that Decorated was somewhat strictly confined to 1300–1350; and that Perpendicular is to be looked for from 1330 to 1538.

To these succeeds a long and nobly illustrated section of much value, which gives a chronological history of the greater English churches, accompanied by dated lists of all the chief examples; whilst at the end of the volume is an alphabetical list, covering twenty pages, wherein a date is assigned to each part on either architectural or documentary evidence.

By far the larger portion, however, of this volume is devoted to the analysis, wherein each section of the building is discussed and studied in detail and development, regardless of particular "periods." The planning of the eastern limb of cathedral, monastic, and collegiate churches; the development of vaulting; and the abutment of the vaulted church, with buttress, flying buttress, and pinnacle, are all admirably discussed and generously illustrated. But the two chapters that deal respectively with the drainage of the roofs and of the walls are particularly to be commended as examples of Mr. Bond's thorough and common-sense methods. Every one who gives more than a casual glance at our old ecclesiastical buildings is aware that corbel-tables and parapets, or ground courses, hood-moulds, and strings, play an important as well as ornamental part in the whole construction; but hardly one in ten, save professional builders, notices such parts as being utilitarian in their origin. Any one, however, who studies these two chapters will find his interest in and appreciation of these details greatly quickened, and will no longer regard them as mere tasteful embellishments.

Having explained that the enemy which the mediæval builders had chiefly to dread was fire, to which they opposed their system of vaults, Mr. Bond proceeds to show that

> "there was another enemy, which did not come to the attack with the momentary fury of a conflagration, but which yet was so unremitting, subtle, and destructive in its operations, that it was quite as formidable as fire; this was rain and snow. This peril too had to be provided against; and the provisions against the destructive action of snow and rain, assisted by frost, profoundly modified the external aspect of the churches."

The due slope of the roof and its subsequent lowering are first discussed, and then follows the question of how to get rid of the roof drainage with the minimum of injury to the walls, with their window-tracery and doorways; for if the rain was allowed to drip down the walls, the surface would soon disintegrate and decay. One remedy was to make the roof overhang the walls to an appreciable distance, as is the case with thatched roofs, of which many examples still happily linger in East Anglia. In the same district, too, many lead-covered churches, such as Martham, Wiggenhall St. Mary, and Worstead, have rafters projecting from the walls with lead overhanging them, in imitation doubtless of the indigenous reed-thatched roofs. But elsewhere the usual early plan was to make the two or three upper courses of the wall project beyond the rest, forming what is termed a table or cornice. The blocks composing such a table require support, and the support took the form of projecting stones termed corbels, or of a series of small continuous arches, which are termed "corbel-tables."

But this system of throwing off the rain-water clear of the walls by projecting eaves had practical disadvantages, which were long impressed upon the builders. It was found that, in the case of a clerestoried building, rain or snow falling on to the aisle roofs had a damaging effect; that dislodged slates or tiles, falling down unchecked, were dangerous to life or limb, particularly in towns; that roof repairs, even of a slight character, were difficult and costly, involving the use of long ladders; and that due inspection of roofs was an impossibility. Hence it came to pass that the upper courses of the walls were no longer built solid, but in three parts, namely, an inner wall, an open channel, and an outer wall. Where the wall, as in later Gothic, was thinner, there was hardly room for this upper outer wall or parapet, and therefore it became usual to build the parapet somewhat projecting from the plane of the walling below; sufficient projection for this purpose was generally obtained by using long projecting blocks for the bottom course of the parapet. Thus a projecting parapet "is but an enlarged edition of the ancient corbel-table, with this essential difference, that it no longer carries the lead or tiles."

Mr. Bond, with his critical acumen and wide observation, notes that this is the form which the earliest parapets take, as in the nave of Fountains Abbey, the quire of Whitby, the quire of Netley, and Salisbury, and the presbyteries of Ely and Lincoln, which are all about the middle of

the twelfth century. In many cases, as in the western bays of Wells quire, the old system of dripping eaves was converted into the new idea of parapets, a fourteenth-century parapet having been built up on twelfth-century corbels both in the aisles and clerestory. In Beverley quire the corbel-table shows the tooth ornament of the thirteenth century, but the parapet is a century later. At Southwell Minster the transition from one system to the other is well illustrated: the Norman transept has a corbel-table, the Gothic clerestory of the quire a corbel-table and parapet, both of the same date; and the Gothic aisles, parapets without corbels.

The interesting fact is noticed in this section that the building of spires rising from parapets, in the place of the earlier broached spires, had its origin in the same causes that replaced the corbel-table and dripping eaves of the main building by that of the parapet and gutter.

It is generally to be noted in the process of Gothic development that things which engineering skill invented a sense of artistic beauty soon proceeded to ornament. In the earlier examples of decorated parapets the horizontal string immediately below was moulded and ornamented in the hollow with the ball flower, square-leaved flowers, masks, &c., as at Grantham, Winchelsea, Lavenham, and numerous other examples. Somewhat later, whilst the parapet still remained solid, it is itself ornamented, as at Beverley Minster, with a diaper of square-leaved flowers, or, as at S. Mary's, Beverley, with quatrefoils studded with pellets: both these Beverley parapets are of the fourteenth century. But it soon dawned upon the designers that a perforated parapet was much more effective against the skyline. Many of these pierced parapets are of singular beauty, and are described and well illustrated in these pages. The later battlement form of parapet was clearly borrowed from fortified walls and towers.

After discussing the question of gargoyles for throwing off the water from the face of the wall, through apertures in the lower part of a parapet, Mr. Bond proceeds to treat in another chapter of the protection of the walls from rain by ground-courses, strings, dripstones, hood-moulds, and labels. There is no space, however, here to comment on his able treatment of this branch of the subject.

It is curious to note that a dripstone or hood-mould is not needed for utilitarian purposes inside a building. In strict logic, we ought not, therefore, to find a hood-mould over pier arches, and French builders usually omit it. Nevertheless it must be admitted that it has a pleasing effect. An able architectural friend of Mr. Bond's, whose initials we recognize as pertaining to Mr. Brereton, of Oundle, says in a note on this point, "An arch without a hood-mould is as a fair face without eyebrows." May it not be possible that the wide hood-moulds to the arcades below some of our early clerestories owed part of their origin to the expectancy of raindrips down the inner walls from the numerous exposed and poorly glazed windows?

If there is any deficiency in Mr. Bond's pages, it is that there is scarcely sufficient attention given to the ecclesiastical side of the question, that is, to the religious developments and uses which led to alterations in planning and in modes of construction. Thus the great extension of eastern Lady Chapels in our cathedral churches, beyond any continental parallel, may be safely attributed to the particular cult of the Blessed Virgin, which had an exceptional sway in England. Not that Mr. Bond altogether ignores such influences, for he several times refers to the change in construction necessitated by the requirements of processional space, and for the convenience of crowds of pilgrims.

Although avowedly, for the most part, dealing with the mason or builder's side of the story, Mr. Bond cannot altogether suppress, in the mass of technical and constructural matter, the poetical fancies that the study of the Gothic art of churches can hardly fail to arouse. Thus, when describing some of the glories of the East Anglian roofs, as at March and Knapton, where angels with outspread wings spring from the ends of the hammer-beams, he describes them as

"Spirits, as it were, arrested midway in their heavenward flight, hovering over and worshipping with the faithful gathered below."

It is difficult to write about the illustrations except in what may seem terms of exaggeration or fulsome praise. Charming as were the engravings of architectural details in Parker's 'Glossary' and other works of that period, much more faithful representations and finer general effects can now be produced by careful photography. Among the twenty whole-page collotypes, two most pleasing ones, of Beverley Minster and Lincoln Cathedral, are by Mr. C. C. Hodges, of Hexham. Several good views of Northamptonshire spires and other objects are by Mr. Brereton. But Mr. Bond's own camera has reproduced a large share of the best and least-known work illustrated in this volume. The few who know the great difficulties surrounding the taking of effective photographs of vaults will be particularly pleased with his successful views of vaulting at Oxford, Norwich, Ely, and Gloucester, as well as with some of his views of East Anglian timber roofs. Among the latter we are glad to see that he has included the noble barn at Paston; but it was scarcely worth while to give a view of the roof of Southwold church in a book ending with the dissolution of the monasteries, as that work is almost entirely a modern "restoration."

There is much in the volume besides various forms of photographic reproduction. The twenty-eight sheets of mouldings from the middle of the twelfth to the middle of the sixteenth century, drawn boldly and all to the same scale, will be specially appreciated by the architectural student, as will also the twelve sheets of plans and the fifteen sheets of diagrams. Several architectural drawings by Mr. Weatherley are notable, and judicious use has been made of some of the best work by architects of the past generation, such as Messrs. Sharpe, Pugin, and Brandon. The illustrations to the section on the development of window tracery are singularly bountiful and well chosen, though even with such a wealth of examples every lover of Gothic art is sure to miss some favourites. For our own part, we are disappointed not to find Prior Eastry's window, inserted in St. Anselm's chapel, Canterbury, in 1336.

The British Numismatic Journal. (Printed for the Society by Harrison & Sons.)—There have been not a few complaints among the members of the British Numismatic Society at the delay in issuing the first volume of the Society's proceedings; but now that it has been produced, any dissatisfaction on that score will be entirely removed by the sight of the fine volume with which this new association opens its literary career. Those responsible for its issue—and the names of P. W. P. Carlyon-Britton, L. A. Lawrence, and W. J. Andrew, appear on the title-page as joint editors—will have to work hard to maintain the high standard of excellence shown throughout these pages. The remarkable success of this association (for it speedily filled up the limited number of 500 members) has now been followed by the putting forth of what is certainly a remarkable journal.

In the first place, the Society is to be distinctly congratulated on issuing a single substantially bound volume for a whole year (1903–4), instead of a number of more or less flimsy paper-covered parts. The volume reminds us somewhat in outer appearance of the annual issues of the Society of Antiquaries of Scotland, though it is more substantial, and the quarto pages are larger. The pages, admirably printed, number exactly 500. There are twenty-five full-page plates and twenty-eight text illustrations, all excellent in their way. It would, of course, be childish to judge of a work of this kind by mere appearance and size, but it may with confidence be said that the contents will prove a delight to numismatists. When Bishop Redman, the general visitor of the English houses of White Canons, encountered on his visitation tour one of those exceptional cases where the barns were overflowing with grain, and the monastery well stored with every kind of provision, he was in the habit of entering it on his report as *optime stuffata*. A somewhat similar phrase seems applicable to this book.

The longest paper is one of about 100 pages, by Dr. Philip Nelson, on the coinage in Ireland of copper, tin, and pewter, a subject of much interest, as the Irish coinage in baser metals began in 1460, or about 140 years before there was a copper currency in England. An appendix of pertinent historical records adds to the value of this communication, particularly the various proclamations relative to the gunmoney of James II., 1689-90. The same contributor supplies another substantial paper on the coinage of William Wood for the American colonies in 1722-33. The difficulties of supplying a distinctive coinage for England's dependencies, in the earlier days of imperial development, are strikingly illustrated in a paper by Mr. J. B. Caldecott on the Spanish dollar as adapted for currency in our West Indian colonies; it is a singular story of the strange expedients and ingenious mutilations resorted to in order to utilize the big Spanish dollar, or "piece of eight," as current coin in British possessions. There are also various contributions dealing with the beginnings of our home monetary system, such as some notes by Mr. Bernard Roth on three British gold coins recently found near Abingdon, and an exhaustive paper on the early regal coinage of Northumbria by Major Creeke. Those who imagine that numismatists must always be dull and prosy will find good

cause to change their minds if they read 'Brief Musings on the Exurgat Money,' by Mr. Stroud, the Recorder of Tewkesbury. It is an inspiriting and vigorous account, in well-chosen language, of the use on our money of the *Exurgat* legend, "Let God arise, and let His enemies be scattered," which, though long disused on England's coinage, is still paraphrased in the National Anthem.

Several other papers and briefer records claim attention, but the remainder of this notice must be confined to the two most important articles of this issue, the one by the President, and the other by the Honorary Secretary.

Mr. Carlyon-Britton, the President, writes on 'Treasure Trove, the Treasury, and the Trustees of the British Museum'; it is an article of the first importance for the future history of British numismatics controlled by national authority. The text for this article is supplied by the finding of the Courts in June, 1903, when the British Museum failed to establish its title to the valuable Celtic gold ornaments ploughed up on a farm by Lough Foyle in 1896. The Crown successfully claimed them as treasure trove, and the King presented them to the Royal Irish Academy. The somewhat involved question of treasure trove is here set forth after a lucid fashion, and it is shown that it is essential, in order to constitute treasure trove in the eyes of the law, that the objects must have been intentionally concealed, and must be either of gold or silver; otherwise the law of nature, tersely expressed in the phrase "findings are keepings," holds its own. After citing the severe comments of the judge on the arguments used by the British Museum to justify their purchase of these Celtic ornaments, the article proceeds to show that there are no persons more often "suspected of treasure trove," to use the legal phrase, than the authorities of the great national museum. Two recent instances of this are given. In 1894 the British Museum acquired, through the late Sir A. W. Franks (then Mr. Franks), a find of Anglo-Saxon coins in its entirety, consisting of 241 exceptionally valuable silver coins, of the probable antiquarian value of at least 1,500*l.*, and they were purchased for about 15*l.*! Again, in 1903 there was a valuable find of silver coins of Stephen and Henry II. near Romsey. They were sent to the British Museum; the head of the Coin Department selected 58 of the best specimens, of the probable value of 150*l.*, and the Trustees paid the finder of the coins, a poor labouring man, 13*l.* for them, returning the remainder to the sender. From these and other instances Mr. Carlyon-Britton comes to the conclusion that the British Museum authorities not only look upon the treasure-trove statute as a dead letter, but also set at naught "the antiquarian value" of such finds, notwithstanding a circular of the Treasury on that very point. The writer goes on to say:—

"Whatever may be said in favour of the Jesuitical doctrine that the end justifies the means, and the Museum as a national institution naturally has all our sympathies, it ought not to be necessary that there should be one law for the Museum and another for the public. The Museum is not the Treasury, and has no more authority in these matters than the humblest amongst us, as the Irish Gold Ornaments case has so clearly decided. Under the existing law, therefore, it is most unfortunate that it should ever devolve upon the Museum to take the initiative in moving the Treasury against the finder or purchaser of coins or other objects of antiquity which he desires to present to a local museum, or even is selfish enough to wish to retain for his own collection or study.....It is only right to assume that the Trustees themselves leave these matters entirely to their officials to transact, without making inquiry as to what is done and the manner of doing it."

It is also of the highest importance that the attention of the Trustees should be directed to the inefficiency of the Coin and Medal Department of the nation's museum, particularly as it affects British coins. This has long been a matter of common complaint on the part of those who have had occasion to consult it. The staff is inadequate, consisting of only five persons. These are only partially to blame for the condition of things that prevails, as they are obviously short-handed. Mr. Carlyon-Britton shows that there is actually no catalogue of ancient British coins, nor of any of the series subsequent to Harold II. There is not even a manuscript catalogue of the British coins; and the last printed catalogue, down to Harold II., was issued as long ago as 1893. Moreover, no coins of any kind are exhibited, unless electrotypes of certain Greek coins are included. The coinage, too, of our own country has of late years been allowed to fall into the background among the uncatalogued acquisitions. From 1875 to 1903 inclusive, 52,629 coins were added to the Bloomsbury collection; of these 47 per cent. are Oriental, 31 per cent. Greek and Roman, whilst less than 14 per cent. (including large and exceptional windfalls) are British and Colonial. In short, this Department calls loudly for more careful and generous treatment at the hands of the Trustees. Many besides members of the British Numismatic Society will be thankful to Mr. Carlyon-Britton for dealing so faithfully with this subject. The light thrown on almost every branch of history by the study of coins is only now beginning to be recognized, and the first issue of this new society goes far to justify the President's expectation that ere long the more advanced students will be able to say, "Show us the coinage of a nation, and we will write its history."

The other remarkable paper is from the pen of Mr. W. J. Andrew, the Honorary Secretary. It deals with 'Buried Treasure: some Traditions, Records, and Facts.' It is out of the question to present a satisfactory abstract of its contents in a paragraph or two; the article, which throws light on many hitherto almost unnoticed facts, should be read in its entirety. It deals with the great Viking treasure found on the banks of the Ribble in 1840, and known as the Cuerdale hoard; with the Beaworth hoard, found in 1833, consisting of about 9,000 silver pennies of William the Conqueror; and with the great Tutbury hoard, found in the bed of the river Dove in 1831, the contents of the fourteenth-century war chest of the Earl of Lancaster. In this last case Mr. Andrews might have given a more accurate account of the find had he consulted a small monograph on the subject by Sir Oswald Mosley which was printed in 1833. In connexion with the three large hoards of thirteenth-century coins, found respectively at Colchester, Eccles, and Sudbourne, near Orford, on the Suffolk coast, Mr. Andrew adduces much interesting and conclusive evidence as to the common purpose of these great collections of silver money and the reason for their concealment. By a process of critical examination and comparison, he is able to show (what no one has hitherto suspected) that these three hidden stores formed part of the great levy, made in 1240–1 by Pope Gregory IX., of one-twentieth of the revenues of all the churches in England, Scotland, and Ireland; and that they were hidden by the two papal agents, Le Rouge and Supino, when they hurriedly left the kingdom clandestinely, on hearing of the mortal illness of the Pope. By a rare process of ingenious but sound argument, Mr Andrew shows the exact reason why these foreigners were at each of the particular places where hoards have been found. Their treasure was divided into bags of twelve pounds in weight: two bags were buried at Eccles, four at Colchester, and one at Sudbourne, a religious site being selected in each case. Doubtless they hoped to be able to send later an agent to recover the abandoned stores; but they were imprisoned on reaching the Continent, and possibly died in confinement. Mr. Andrew ends his paper with the tantalizing suggestion that "there is still a vast army chest lying but a few feet below English soil, compared to which all these other discoveries pale into insignificance. This is the entire treasure of King John, including the ancient regalia of England, the jewels of the Normans, and perhaps even the crown of Alfred."

It was lost in a quicksand on the old road from Lynn to Swineshead, and Mr. Andrew considers that the recession of the sea and the drainage of the fens make its eventual recovery not only possible but even probable.

TWO ARTISTS.

B. R. Haydon and his Friends. By George Paston. (Nisbet & Co.) — Haydon's autobiography is a classic which should be more widely known and loved than it is, and George Paston has done well to call attention to it by this book, which is, in effect, an abbreviated edition with explanatory illustrations. It ought not to, and it will not, replace the autobiography itself, but it will make many people turn to the complete work, for no one can read the extracts here given without wishing for more. Poor Haydon's ghost may rest in peace; the immortality which he longed for, and for which he sacrificed everything, is his, though not in the way he expected. His paintings still remain almost unknown and inaccessible, the only characteristic one familiar to Londoners being the late and turgid 'Quintus Curtius' in Messrs. Gatti's Villiers Street Restaurant, not in the billiard-room below, as our author states. We wish, indeed, that it had been possible to secure reproductions of the early works, such as the 'Solomon,' which Haydon's contemporaries regarded as his masterpiece. Certainly, after reading Haydon's own words, it is almost impossible not to be hypnotized by his eloquence into the belief that he was a great and misunderstood artist, though we confess the belief has always been dispelled when we have come across his paintings.

Haydon's is assuredly one of the most tragic figures in art. To be a martyr not only without the martyr's crown, but also without the martyr's sanctity; to fall in a forlorn hope, and that unheroically — such was his unenviable fate. If he had only been the genius he claimed, his life would have been the greatest example of noble perseverance against impossible odds. Perhaps it is almost as well that he was not, since he would otherwise have become a precedent to justify any extremity of folly in aspirants to fame. As it is, there is, in spite of the tragic close, something of Dickens-like farce about his overwhelming self-confidence and enthusiasm. And yet he had sufficient excuses for believing himself one of the world's greatest: to receive sonnets from Wordsworth and Keats, not to mention Miss Mitford's unrestrained flattery, was enough to turn any artist's head. Haydon had, in fact, a prodigious *succès d'estime*, and he naturally attributed his subsequent failures to malign influences. He suffered, moreover, from the fatal effects of having once been right when all the world was wrong. He lived to see his opinion of the perfection of the Elgin marbles universally accepted, an opinion which had been met at first with the scorn of authorities like Payne Knight; and as a result he naturally supposed that he was equally right about his own work. He had, too, internal convictions of genius. He describes a kind of soundless explosions which occurred in his brain followed by a flood of visual images. It was his misfortune that this coincided with a total inhibition of critical power, so that everything that presented itself to his internal vision seemed authoritative and divine. One need, perhaps, scarcely pity him, for at such moments he discounted immortality, and drank deep intoxicating draughts of the joys of creation.

George Paston has added to the extracts from

the autobiography a good deal of interesting matter in the shape of letters from and to friends. Among the most interesting of these are Mrs. Browning's tenderly sympathetic appreciations, though she too saw the fatal flaws in his temperament. We may doubt whether, "if the hand had always obeyed the soul, he would have been a genius of the first order," since a want of selectness and distinction in his mental images seems to have been a main source of his failure; but the summing up, "He lived on the *slope* of genius, and could not be steadfast and calm. His life was one long agony of self assertion," is happy.

Whatever Haydon's failings as an artist, there can be no doubt of the brilliance of his understanding and the extraordinary eloquence of his language. His pictures of his contemporaries—of Shelley, Lamb, and Coleridge—are unforgettable, and though a personal element always marred the justice of his criticisms, they are expressed, perhaps for that very reason, with a force and flow of language which recalls the great Elizabethan writers. What could be better than this of Wordsworth in a letter to Miss Mitford?—

"I grant that Wordsworth is very pure, very holy, very orthodox, and occasionally very elevated, highly poetical; but oftener insufferably obscure, starched, dowdy, anti-human and anti-sympathetic. I dislike his selfish Quakerism, his affectation of superior virtue, his utter insensibility to the beautiful frailties of passion."

The picture that follows of Wordsworth growling out, "The Dev-v-vils," at a statue of Cupid and Psyche, is perfectly touched. Haydon goes on:—

"Ought not this exquisite group to have softened his heart as much as his old, grey-mossed rocks, his withered thorn, his dribbling mountain streams? No, give me Byron with all his spite, hatred, depravity, dandyism, vanity, frankness, passion, and idleness, rather than Wordsworth with all his heartless communion with woods and grass."

The ease and unconscious eloquence of this and innumerable other passages contrast vividly with the turgid pomposity of most of his compositions in painting, and he remains after all one of the great figures of the early nineteenth century. George Paston has admirably illustrated a fascinating subject.

Rembrandt. By Mortimer Menpes. With an Essay by C. Lewis Hind. (A. & C. Black.)—Mr. Menpes has tried persistently to improve the three-colour process of reproduction, and he has, we suppose, satisfied himself that he has carried it near to perfection. We cannot, at least, otherwise explain his attempt to perform the most difficult feat that can be imagined—that of reproducing in colour a series of Rembrandt's paintings. The process has so far proved most successful in rendering pure, flat, positive tints, such as we get in early illuminations. It has little power of communicating the subtleties of broken colour, the transparencies and opalescences of great oil paintings. And of all great colourists Rembrandt is perhaps the one who relies most on the elusive suggestions of colour, these nameless, almost indecipherable complexities. He loves, moreover, to suggest the utmost intensity and wealth of colour without ever stating what the local colour is. He makes brown monochrome arouse the sensations of intense red or blue by infinitesimal gradations of a common ground tint. Now all this refuses to be caught in the photographer's meshes. His three colours are crude and positive, and they never mingle perfectly. Consequently in these reproductions we get an exactly opposite effect to that which the originals produce; we find yellows, reds, and blues producing a muddy and hot monochrome. We can imagine that to those who know Rembrandt intimately it may be a pleasure to have the illustrations of this book to prompt their memory in reconstructing the originals; we cannot imagine any one being led to like Rembrandt by their contemplation.

Mr. Hind writes a lively and popular essay, which may help to bring people who have little appreciation of the master's art into closer contact with his mind.

NOTES ON THE CHURCHES OF BLYTHING HUNDRED.

III.

East Anglia, as is well known, is by far the best district in all England for fine and frequent examples of fifteenth-century fonts. Many of these fonts seem to have been turned out from some common workshop, or, what is more likely, by an itinerant group of skilled masons. When the great size of the requisite block or blocks of stone from which they were constructed, the cost of carriage from over the seas or from considerable distances inland, and the skill necessary for their carving are considered, some idea can be formed of the remarkable devotion of the parish gilds or of individual benefactors in making such costly offerings to their churches. It is not, therefore, surprising to find that in some instances inscriptions (usually on the steps of the font) record the names of the donors, and invite the prayers of the faithful for their souls. Three such records are extant in this Hundred.

The single circular step on which the font at Middleton rests bears a much-worn inscription. Completely beaten by prolonged attempts to read it, I took at last an impromptu rubbing with a dusty hand on some small pieces of paper, procured for me by the parish clerk out of the parish chest. A careful inspection of the rubbings, made some days later, showed how the difficulty arose. It had been not unnaturally assumed that the inscription was in Latin, whereas it proved to be an English distich. To its exact textual accuracy I cannot certify, but this is how I believe it runs:—

Cryst mote us spede
And helpe alle at neede.

A Latin inscription in a like place below the font at Darsham, now much worn and difficult to decipher, invited prayers for the soul of Geoffrey Symond, rector of Bradwell, who had caused that font to be made to the honour of God. It is recorded in Suckling's unfinished history of this part of Suffolk.

The most interesting of these font inscriptions remains to be noticed. The font in the great church at Blythburgh was, when perfect, a most noble example. It stands on two high octagonal steps, on the upper of which a long inscription has been cut. The beginning of it is easy to read, being the usual Latin form of asking for prayers for the souls of John Masin and Katharine his wife, the donors; but other parts have been for a long time quite hopeless. From certain early church notes, it is supposed that the rest of the lettering records that the font donors also built the fine south porch. This font was injured in 1577, when a storm blew down the spire, much of it falling into the church and killing more than one of the worshippers.

A particular feature of many of these East Anglian fonts, in certain districts, is the occurrence of alternate erect lions and wild hairy men (termed "woodhouses") round the octagon shaft of the base. In this Hundred they may be noticed at Chediston, Halesworth, Middleton, Theberton, and Wisset. At Brampton, Huntingfield, Linstead Magna, Linstead Parva, Sotherton, Uggeshall, and Westleton there are the four lions round the shaft, but the wild men (typical perchance of the evil nature expelled by the baptismal waters above) are absent. The eight panels of the octagonal basins of these fifteenth-century fonts are usually well carved in figures, amid which lions largely predominate. There are alternate lions and shield-bearing demi-angels on the fonts of Cookley, Darsham, Linstead Magna, Linstead Parva, South Cove, Theberton, and Westleton. In other cases, as at Chediston, Halesworth, Middleton, and Wisset, the evangelistic symbols alternate with angels. At Covehithe and Sibton the angels alternate with a variety of figures, whilst at Yoxford the angels alternate with quatrefoils. In the best examples, small angels with outspread wings may also be noticed on the chamfer below the bowl, forming an effective link with the supporting shaft. There is nothing particularly remarkable in the way of font covers; but the tall Elizabethan cover in Sotherton church is noteworthy, whilst that of Uggeshall (but ? date) bears a pelican in its piety, and there is a good fifteenth-century tabernacled font cover, 5 ft. high, at Frostenden church.

Those tall narrow recesses occasionally found in the interior walls of churches at the west end, which ecclesiologists term "processional-cross lockers," are chiefly to be observed in East Anglia. I know of nine examples in Suffolk, four of which are in this hundred—namely, at Blythford, Henstead, South Cove, and Wrentham. A far better name for these tall lockers, some of which are over 10 ft. high, would be "banner-stave lockers." The staff of a processional cross would be of no great height, but it would be otherwise with banner staves, and every church used to have its banners for Rogationtide and Litany use, as well as very often for Whitsuntide processions to the old mother-church or minster of the district.

The piscina niches of the churches are often worth noting. What are termed "angle" piscinas, where the drain is at the angle of a slight projection, or in the face of the eastern jamb of a south-chancel window, and has two arched openings over it (one facing west and the other south), are highly exceptional in most districts. Here they were somewhat the fashion, and may be noticed (mostly of thirteenth-century date) at Blyford, Bramfield, Chediston, Frostenden, Heveningham, South Cove, and Uggeshall, where the openings are very small.

The fine piscina niche in the chancel of Westhall has two credence shelves, a most exceptional feature. At Blythburgh and Spexhall the late piscina niches have cinquefoil heads.

The niches over holy-water stoups are usually plain, but the one at Frostenden has a cinquefoil, and that at Yoxford a trefoil head.

The sedilia of the district are not remarkable, save the beautifully moulded ungraded recess, with coved top, on the south side of the high altar at Southwold. In some churches, here as elsewhere, the necessary seats for celebrant, deacon, and sub-deacon at high mass would be supplied in wood; but a usual feature of these Suffolk churches is the lowering of the sill of the window on the south of the altar, thus providing the required sitting accommodation at but little expense. This feature may be noticed in the churches of Blyford, Bramfield, Chediston, Frostenden, Theberton, Uggeshall, Westhall, and Wisset; in the Theberton example the sill is graded into three heights. There are more elaborate sedilia at Blythburgh and Westleton.

There is a beautiful fifteenth-century pulpit in Southwold church, the painting of which has been well restored. The sexagon pulpit of Theberton is of late fifteenth-century design. There are several of Jacobean date, as at Blythburgh, Cratfield, Darsham, Knodishall (good), Sibton, Uggeshall (late), Wenhaston, and Yoxford (good). Two beautiful pulpits, of singularly chaste design, both bear the date of 1637, namely, those which are now in the churches of Chediston and Rumburgh. It will scarcely be credited that the former of these was of recent years ejected from a neighbouring church (which

shall be nameless) during a "restoration," and a vulgar commonplace thing put in its place, it being supposed to "harmonize better with its surroundings." The old pulpit was rescued, according to my informant, for a trifle, from out of a loft, and whilst undergoing some slight repairs at a cabinet-maker's in Halesworth was seen by a furniture-lover, who at once offered 50*l.* to become its owner. Fortunately it is now safe in the church of Chediston. The rebuilt church of Wangford contains, in the present pulpit and reading-desk, some remarkably fine examples of foreign inlaid woodwork of the seventeenth century. These two pieces of church furniture are formed out of the pulpit which used to stand in the private chapel of old Henham Hall, which was burnt down in 1773.

This Hundred possesses one glorious old screen at Southwold, another of almost equal value at Bramfield, a third, of much merit, at Westhall, as well as several, of which the greater part or good fragments remain. To take the latter first, the remains of the Blythburgh screens are well worth notice; the base of one half of the rood-screen remains at South Cove; there are two good painted panels of the old screen (St. John the Evangelist and St. Mary Magdalen) preserved in the vestry door of Sotherton church; and there is much left of a good old rood-screen at Rumburgh. The Westhall screen is remarkable for the fairly good and unrestored state of preservation of the series of saints on the panels of the base; they are eight in number on each side, and merit far closer attention than they have yet received. The Bramfield screen is of great beauty and in remarkable preservation, and worth a special pilgrimage; the village lies two and a half miles south of Halesworth. The coved canopywork that supported the rood-loft remains on each side; it projects from the screen on the west side 30 inches, and 27 in. on the east side. There are abundant remains of the original delicate painting on the screen itself, as well as on the saint-bearing panels of the base. The diminutive figures of angels among the divisions of the canopywork on the south side of the front of the screen (they are absent from the north side) probably indicate the presence here of an altar to St. Michael and the Angel Host.

The glories of the painted Southwold screens, stretching across the whole width of the church, have been too often described to need more than mention. But a word of protest must be entered against the cool assumption that the merchant princes of this part of England had to import artificers across the seas to carve and paint in these beautiful churches—and yet the run of guide-book writers will persist in propagating this very unpatriotic and baseless notion. The best short guide that I know to the church (written by Mr. C. R. B. Barrett) says of the screen that it is "a worthy monument of the skilled foreign artists by whom it must have been executed." Mr. G. E. Fox conclusively showed the falsity of this idea in an address delivered in this church a few years ago to the Archæological Institute, and even gave the names of the probable local artists.

The fairly good and interesting screen of Cratfield church has, of late, been rendered ridiculous by being moved—or rather the mover of it has made himself ridiculous—from the chancel archway to the filled-up archway leading into the tower at the west end of the nave.

Many of the churches are rich in pre-Reformation benches and bench-ends, which mostly have "poppyhead" terminals. Among them may be mentioned the churches of Cookley, Cratfield, Darsham, Frostenden, Linstead Parva, Rumburgh, South Cove (throughout), Westhall, Wisset (backless), &c. Blythburgh has some delightful remains of old woodwork, including a double lectern, and an alms-box. The quire-stalls, moved there from the Hopton chantry in the north chapel, bear the arms of Swillington and Roos, and a fine set of apostles in niches. The bench-end finials of the nave are most remarkable, particularly the set of figures that represent the seven deadly sins. It is a treat to get the good lady who has charge of the church (Mrs. Hatcher) to describe them.

In the vestry of Cratfield church is an exceptionally interesting large parish chest, on which is painted:—

Raph Walsche gaf thys cheist,
Praye for hys sowle to Jhu Creiste.

It is illustrated by Suckling. The old iron-bound cove-topped chest in the stone-roofed parvise of the porch of Southwold church is a puzzle. It is beyond doubt older than the porch. How did it get there? It could not possibly have come through doorway or window. The only solution is that it was placed there before the building was quite completed.

In connexion with woodwork, mention should be made of the wooden effigy of a knight (known to pertain to a local family of rank and importance), now carelessly placed on the ground at the east end of the south aisle of Heveningham church. The knight's lady, also a wooden effigy, and the wooden table tomb on which they used to rest, disappeared during the last century.

There is a good Elizabethan altar-table, with bulbous legs, at Blyford church, and a fairly good one of Jacobean date at Chediston.

There are one or two good stone effigies and a fair number of brasses in these churches, of which space forbids even the briefest mention; but the exceptional fact should be chronicled that several inscribed grave and head slabs of iron may be noticed in Leiston churchyard, the oldest of which dates from 1832; they tell of the establishment of celebrated iron foundries that have proved the making of this little town.

Some of the epitaphs of this Hundred, both inside and outside the churches, are marvellously strange. One great paver in the chancel of Bramfield church, to "Bridgett Applewhait, once Bridgett Nelson," is so incredible and extraordinary that I should probably lose credit if I gave it at length; but the parish clerk has had correct copies printed, and doubtless the curious could, with a stamp or two, procure a trustworthy version.

On a flat table tomb close to the south porch of Theberton church is an inscription which has made "Honest John" somewhat of a local celebrity:—

Here is a stone to sit upon
Under which lies in hopes to rise
To the day of bliss and happiness
Honest John Fenn the sone
Of William Fenn clarke
Late Rector of this Parish.
Being turned out of this
Living and sequestered for
His loyalty to the late
King Charles the first
He departed this life the
22 day of October, Anno Dom.
1678.

Only a small percentage of these Blything churches are open. Although none of them (with possibly one exception) are in a neglected state, it is noteworthy that here, as is invariably the case, the open ones are in the best condition.

J. Charles Cox.

SALES.

Last Saturday Sir Henry Irving's collection was sold by Messrs. Christie, the principal pictures being Whistler's of Irving as Philip of Spain, which fetched 5,040*l.*, and Mr. Sargent's of Miss Ellen Terry as Lady Macbeth, 1,260*l.* Drawings: H. Allingham, A Roadside Cottage, 50*l.* Walter Crane, The Apotheosis of Italian Art, 86*l.* Sir J. D. Linton, The Emperor Maximilian visiting the Studio of Albert Dürer, 54*l.* Sir L. Alma-Tadema, A Street in Rome, 283*l.*; Antium, 162*l.*; The Interior of a Palace, 294*l.*; A Street by Moonlight, 262*l.* The total realized was 10,201*l.*

Several of the smaller sales at the Hôtel Drouot last week included important pictures, of which the principal were: J. Ruysdael, Les Deux Chênes, 14,500fr. David Teniers, Le Vieillard, and Le Savetier, 13,600fr. W. van de Velde, marine, 15,500fr. F. J. Casanova, Départ pour la Chasse, and Déjeuner de Chasse, each 10,000fr. Sir Thomas Lawrence, Lady Londonderry, 29,500fr. Sisley, Les Régates à Hampton Court, 7,000fr.

The second portion of the Cronier collection, including some pictures by ancient and modern masters, old French furniture, objects of art and decoration, as well as the library, occupied M. Lair-Dubreuil four days, beginning on Monday last.

Fine-Art Gossip.

To the forthcoming exhibition of the International Society of Sculptors, Painters, and Gravers, which will open at the New Gallery early in January, the Pennsylvania Academy of Fine Arts has lent an important group of American pictures. To the second section of the exhibition a representative selection of American water-colour painters, etchers, and illustrators are contributing.

The death, in his seventy-second year, is announced from Düsseldorf of the well-known genre painter Otto Erdmann. His pictures, which generally represent scenes from the eighteenth century, are to be found in most German galleries.

The Académie des Beaux-Arts, under the presidency of M. Édouard Detaille, has just elected four new "correspondants étrangers." M. de Vriendt, the Ghent artist, succeeds Mr. Sargent; M. Benlliure-y-Gil, of Madrid, replaces Constantin Meunier, the sculptor; Mr. Waterhouse is succeeded by Mr. Phené Spiers, the architect; and M. Biot, the Antwerp engraver, by Sir Francis Seymour Haden.

The death is announced of M. Louis Hottot, the sculptor, at the age of seventy-six; and also of Madame F. H. Taffé, a native of Algeria, who exhibited at the Salon from 1870 to 1903 as Madame Fernande de Koléah.

The January number of *The Antiquary* will contain, among others, the following articles: 'Old Heraldic Glass in Brasted Church,' by Dr. W. E. Ball; 'The Beaker Class of Fictilia found in connexion with Remains of the Roman Period,' by Mr. H. St. George Gray; 'The Antiquity of the Tobacco Pipe,' with illustrations, by Mr. R. H. Quick; 'The Elixir of Life,' by Mr. J. H. Slater; 'Carrickfergus Castle Church,' by Mr. W. J. Fennell; and an illustrated note on 'An Alabaster Panel at Mere, Wilts,' by the Vicar of Mere, the Rev. J. A. Lloyd.

The Institute of Archæology of the University of Liverpool has dispatched an expedition to make explorations and excavations in the vicinity of Esna, in Upper Egypt. The funds have been privately subscribed by Liverpool citizens. The excavations will be under the charge of the University Reader in Egyptology (Mr. J. Garstang), assisted by Mr. E. Harold Jones. A third member of the staff of the same Institute, Mr. Percy E. Newberry, is already at work in Egypt upon the history of the ancient civilization of that country, under the endowment of Sir John Brunner.

MUSIC

Musical Gossip.

The Sunderland-Thistleton concerts of old chamber music at Broadwood's have programmes of great interest, concerning which, if only space permitted, much might be said. At the third concert, last Thursday week, was performed (apparently for the first time in England) 'L'Apothéose de Lulli,' by François Couperin. Programme music is not an invention of the nineteenth century, although it played a very important part in it; it dates, in fact, from the seventeenth. The work in question has no fewer than sixteen sections, and it is

not after the manner of Schumann, who to many of his pieces added superscriptions after the music was written. Couperin expressly says: "The plan of the work was first formed, and the music written afterwards." This curious, quaint work was composed for two violins, 'cello, and harpsichord. We have before expressed regret that, although these concerts are solely devoted to old music, a grand pianoforte is used in place of a harpsichord. In some instances the change may not be really injurious, but on a pianoforte Couperin's music loses much of its character and charm. And it is also a mistake to announce a "Fancie" by Orlando Gibbons for "Violin, Viola, and 'Cello." We note these things not in any carping spirit; but it does seem to us a very great pity that a scheme of real interest and importance should not be properly carried out.

Mr. J. H. Bonawitz at his Mozart Society concert on December 16th, the anniversary of Beethoven's birth, devoted the whole of his programme to the latter composer's music. There will be in a similar manner a Mozart programme on January 20th, the nearest of the dates of these concerts to that of the 150th anniversary (January 27th) of the birth of the composer after whom Mr. Bonawitz's society is named.

Signor Busoni gave a Chopin recital at Bechstein Hall on Tuesday afternoon. Many pianists play Chopin, but very few interpret him worthily. There are traditions as to Chopin's own readings of his music, and we imagine from what we read that Pachmann best represents him; Rubinstein, the great pianist, was somewhat too earnest, and we would say the same of Signor Busoni. The French element in Chopin's music must be taken into account. Rubinstein's Chopin playing, however much it may have differed from the composer's, was masterly and fascinating, and the same may be said of that of Signor Busoni. We may, indeed, add that he strongly reminded us of his great predecessor; while as regards note accuracy he surpasses him. Of the music which Signor Busoni performed we would particularly mention the F minor Ballade, and the Étude in A minor from Op. 25.

Mischa Elman has been engaged to play at the Birmingham Musical Festival, which will be held next year under the direction of Dr. Richter. The introduction of prodigies at great festivals would be a bad precedent; Elman, however, is not a mere show, but, in spite of his youth, a mature artist.

Two London Symphony Concerts are to be given in Paris on January 10th and 12th, under the direction of Sir Charles Villiers Stanford, on which occasion British art will be represented by Sir Edward Elgar, Sir Alexander Mackenzie, Dr. F. H. Cowen, and Sullivan. About three hundred selected choristers from the Leeds Festival Choir will be heard in Handel's 'The Horse and his Rider,' in Beethoven's 'Choral' Symphony, and in Sir Hubert Parry's 'Blest Pair of Sirens.' The solo vocalists engaged are all British: Miss Perceval Allen, Miss Marie Brema, and Messrs. John Coates, Francis Braun, and Plunket Greene.

The twenty-first annual conference of the Incorporated Society of Musicians will be held at Lowestoft, January 1st–6th, when interesting papers will be read by Dr. Frank J. Sawyer ('Modern Harmony'), Dr. A. H. Mann ('Some East Anglian Musicians'), Dr. A. Madeley Richardson ('Church Festival Services'), Mr. Arthur E. Grimshaw ('The Improvement of Popular Taste in England'), and Mr. H. A. Keyser ('Is Modern Music Decadent?'). The first and last of these papers are pretty sure to lead to lively and, let us hope, profitable discussion.

DRAMA

THE 'ADELPHI' AT WESTMINSTER.

It seems unprofitable, if not indecent, to review the Westminster play with any vivacity. Tradition is stamped on it everywhere, and the course of the centuries has made it venerable, a creature of fixed rule. The very applause follows regularly the agitation of two canes by two scholarly ῥαβδοῦχοι, whose services were required, we gather, forty times in the performance. The very number of these plaudits may, for all we know, be a fixed rule, too. It is true that adult visitors occasionally anticipated this tribute, but they could not, of course, compete with a regular and simultaneous school cheer.

The ideal audience for the Westminster play would be one of our lesser actors, who gabble words and sentences that can hardly reach the back parts of the theatre. The elocution of the king's scholars is always admirable—so clear, indeed, that the traditional false quantities give the modern and expert critic yearly a fresh shock. Applause was, however, fairly due to the actors for other qualities. All, with, perhaps, the exception of Æschinus (A. S. R. Macklin), who did not always speak his words as if he understood them, showed animation in conveying their points. Ctesipho was vigorous. The contrast between the two old men, Demea (A. P. Waterfield) and Micio (R. E. Nott Bower), was well realized, and the former seemed to enjoy the working out of his somewhat stupid triumph at the end, a feeling which the audience shared. His

Suo sibi gladio hunc jugulo

was capital.

The comic slave, who is a feature of Terence's comedies, was not wanting in appreciation of his chances, and Syrus (R. C. Le Blond) won merited applause for his falsetto in the drunken scene. The slave-dealer, Sannio, was admirably got up, and the same may be said concerning the female characters. The part, however, which they have to play is but small. Interest is centred on the old men, who recall the two in 'A Pair of Spectacles.' That is a good play, but Terence has solved the difficulties of his with a sudden turn which almost suggests the futile cleverness of modern drama. He amuses us at the expense of scoring off his characters relentlessly, like Mr. Shaw, and the result is remote from life, whether in the streets of Athens, Rome, or London. Still, the 'Adelphi' is more entertaining than the ordinary Latin play. The acting version—with which we were not presented, as in former years — was suitably concise, and removed all that could be of possible offence to the modern Western outlook. As a whole the play is more clever and sarcastic than moral, which need not be regretted, since it is not ancient drama at its highest.

The Epilogue was an excellent piece of easy but dignified Latin, recalling, amongst other things, the school's part in the glories of Trafalgar. The Prologue we go to press too early to receive, but it held ample store of the deft humour and allusion which make pretty play with current events and sports in ingenious Latin verse.

Dramatic Gossip.

In suggestion at least 'Stein unter Steinen,' the latest drama of Herr Hermann Sudermann, produced on Monday night at the Great Queen Street Theatre, recalls 'L'Assommoir' of Zola, known in this country as 'Drink.' The action passes among the operatives in Berlin, and shows the kind of persecution to which a working-man who has undergone imprisonment for homicide is subjected by his fellows, when once his carefully guarded secret is surprised. When jealousy supervenes, an attempt is made to slay the objectionable workman in a fashion somewhat similar to that in which Virginie all but brings about the death of Coupeau. 'Stein unter Steinen' is powerful, and furnishes good opportunities to the actors, but cannot be held to add to the reputation of its author, who is scarcely at his best in characters such as he now presents. Herr Hans Andresen and his company were seen to advantage.

On Tuesday 'Peter Pan,' by Mr. J. M. Barrie, first produced at the Duke of York's on December 27th last, was revived at the same house, Mr. Gerald Du Maurier reappearing as Mr. Darling and James Hook, and Miss Hilda Trevelyan as Wendy Moira Angela Darling. Miss Cecilla Loftus replaces Miss Nina Boucicault as Peter, and Miss Enid Spencer-Brunton Miss Dorothea Baird as Mrs. Darling. Miss Joan Burnett and many juvenile exponents reappear.

Mr. H. B. Irving's first appearance at the Shaftesbury, in 'The Jury of Fate' of Mr. McLellan, is fixed for January 2nd.

Before opening the Royalty on January 4th with 'La Source' of M. Pailleron, Madame Réjane is appearing at the Berliner Theater in 'Zaza,' 'La Rafale,' 'Heureuse,' 'L'Age d'Aimer,' 'L'Hirondelle,' and other pieces, to be included presumably in her London repertory.

'Naughty Lady Cecil,' a one-act anonymous play, has been given at the New Theatre, Cambridge, by Miss Madge McIntosh and Mr. Herbert Dansey.

Driven from his proposed home at the Avenue, Mr. Cyril Maude will open the Waldorf Theatre on January 16th with the promised play by Mr. Sidney Bowkett, the heroine of which, an attractive widow, will, it is hoped, be played by Miss Winifred Emery. 'The Particular Pet,' in which Mr. Maude will present a tramp, will also be given.

In consequence of the anticipated turmoil attendant upon a general election, the production at His Majesty's of 'Nero' will probably be postponed until January 31st. Next month will thus be principally occupied at that house by Shakspearean revivals, the first consisting of 'The Tempest,' which on Boxing night will anticipate the new year.

Under the management of Messrs. Chudleigh and Charles Frohman, Mr. Hare will appear early in 1906 in a new play by Capt. Marshall.

Sir Charles Wyndham's season at the New Theatre closed last night (Friday).

'La Jeunesse,' a three-act comedy of M. André Picard, has been presented at the Odéon by a company including M. Tarride and Mlle. Marthe Regnier. Its conclusion, in which a young and not very interesting husband triumphs over an old though fascinating lover, seems a little prosaic.

An adaptation of 'La Belle Marseillaise,' a four-act play of M. Pierre Berton, produced at the Ambigu Comique on March 3rd last, has been given at the Knickerbocker Theatre, New York. The subject of the play is found in renewed royalist attempts to assassinate Napoleon.

To Correspondents.—A. J. B.—A. R. M.—J. H. P.—received.

H. H.—Too late for this week.

H. H. J.—Will look up the matter.

A. H. K.—Many thanks.

No notice can be taken of anonymous communications.

LITERATURE

The Story of a Devonshire House. By Lord Coleridge. (Fisher Unwin.)

This volume concerns itself with but three generations of Coleridges; indeed, Lord Coleridge carries eclecticism to the point of ignoring one "vile and abject branch"—the youngest—of the second generation, for no other reason apparently than because it had the misfortune to be early and permanently transplanted from the adopted home of the family. This would be intelligible, had the Coleridges been linked with Ottery from time immemorial; in point of fact their association with the place is not yet a hundred and fifty years old, so that the seignioral or feudal sentiment which underlies this arbitrary division of the name into "Coleridges of Ottery" and "Coleridges of no account" appears incongruous, and indeed absurd.

The story opens with the birth (1719) and early vicissitudes of John Coleridge, son of the weaver of Crediton, who in 1760 was appointed master of the King's School (and soon after vicar of the parish) of Ottery St. Mary; it closes with the elevation to the judicial bench of John Taylor Coleridge, the vicar's grandson, in 1835, and the death of "Col. James," the father of the judge, in the following year. About the poet and his son Hartley it is silent, save for a few brief and not always gracious passing allusions, taken, most of them, from the family letters. The late Lord Chief Justice Coleridge does not come within the purview of this book, so that we are happily spared the invidious task of debating whether, and how far, he may be said to have made a name for himself. As to the persons whose lives are here related—upright and every way worthy though they were, and two at least distinguished in their generation—their very names would now be forgotten but for the accident of their connexion with the inspired charity-boy of Christ's. Had S. T. C. never lived and sung, these pious records might indeed have been written, but most assuredly they would never have been read outside the family circle. "Prithee, think there's livers out of Britain," says Imogen to Pisanio; and "prithee, think there were Coleridges out of Devon," says that rude person, the captious critic, to the compiler of these lively, but at times provoking pages.

Despite its limitations, however, Lord Coleridge's story abounds in interest. The Coleridges of Ottery made a practice of preserving the family correspondence, and out of the letters written by divers absentees of the second generation, and again, by the children of Col. James in the third, Lord Coleridge has woven an account of the rise and progress of his house, replete with bright examples of courage, spirited endeavour, and devotion to home and kindred.

Of two Coleridges of the second generation, already in some degree known to us through the autobiographical letters of their brother the poet—namely, John, the eldest, and Frank, the seventh, of the vicar's eight sons—Lord Coleridge gives, by way of preface to the domestic annals of his house, a circumstantial and documented history. Early thrust from the parental nest, each in turn sets forth to seek his fortune in India, to find himself—John in 1770 at the age of sixteen, and Frank in 1782 in his thirteenth year—already an ensign in the service of "John Company." Separated from home and each other by thousands of miles, they are one in devotion to their mother, in their fond recollections of the companions of their childhood, in their steadfast "forward-looking thoughts" of a happy reunion in the old home. After his father's death (1781) John contrives, out of his lieutenant's pay and allowances, to remit from time to time large sums of money—200*l.* or more at once—to relieve the straitened treasury at home, his one dread being lest "sister Nancy," whom he remembers but as an infant in arms, should be apprenticed to business; "for, you may depend upon it," he writes to brother James—for whom, by the way, he presently purchases, at a cost of 1,000*l.*, a captain's commission in the line—"I will take such steps in providing for her that shall render the scheme of binding her to a trade totally unnecessary." Nor is little Frank less eager to help: in October, 1785, he remits 100*l.*, and again, in the following January, yet another 100*l.*; out of which, he writes to Nancy, five guineas are to be handed to his "dear and faithful Molly," the old nurse to whom he lies under more obligations than to "all the Brothers and Sisters I have got, except my secundum Pater, John." Later Frank is summoned to join the expedition against Tippoo Sahib. On the eve of his departure from Calcutta the lad writes as follows to his mother:—

My ever-honoured, ever beloved Parent,—Your letter has woke me amidst the din of Arms to all the softer feelings of Nature. My Mamma, think not because you have not heard of me that you have not been daily, nay hourly, in my mind. I call my Creator to witness I love you with such affection that does not despair of Equality with my Happier Brothers, but I cannot like them tell you so every month, nor always every year.....His Lordship [Lord Cornwallis] in Council ordered me to succeed to the first vacancy in the Native Battalion up the country. He has since summoned me, with twelve other officers and 800 Sepoys, to attend the Grand Army previous to his laying siege to Seringapatam, the Capital of the Mysore Tyrant. Proud of such an honourable distinction, I join him with ardour, and if Fortune crowns my Wishes, will scatter the Pearls of the Sultan at the feet of my Mamma.....My Health has never known disease, my Character has never known a stain. My friends I have never lost. Enemies I have never made, and happy I have ever been, except when, Mamma, you call me across the Ocean. God Bless you, best of Parents.....I have not time to pour out my Heart. I am writing amongst Hundreds of Soldiers.....Mamma, receive my Dutyfull, my Eternal Affection. On my knees I call for your blessing on your ever Duteous Child,

Francis Coleridge.

The grand style of the boy may provoke a smile; but behind his large utterance lay a heart as brave, kind, and true as ever beat. Frank was wounded at the successful night attack on the Sultan's redoubt, where he displayed soldierly qualities which drew from Lord Cornwallis a special acknowledgment in the presence of the army. He died, we are told, "by his own hand, in the delirium of a fever contracted by his wound." Five years before, John, his second father, had died at Tillicherry, of a wasting illness aggravated by the Indian climate. *Par nobile fratrum.*

After the vicar's death in 1781 James, his third surviving son, became the head of the family. After some years' service in the 6th (First Warwickshire) Regiment he married, in 1788, Frances Taylor, coheiress with her sister Dorothy of the Dukes of Otterton, and in 1796 bought the Chanter's House at Ottery St. Mary, which remains to this day the family seat of the Coleridges. In 1812 James became lieutenant-colonel of the East Devon Militia, and for many years he took a leading part in the Volunteer movement. His wife brought him a net income of 717*l.* a year, and on these somewhat slender means he contrived, says Lord Coleridge, to send three out of his six sons to Eton, four to college, to train one for the army, one for the Bar, to give another the calling of a solicitor, and to place another as a volunteer in the royal navy. Two of the six—John Taylor and Henry Nelson Coleridge—carried all before them at their respective universities, and achieved distinction later in the wider fields of literature and the law; it is, however, in the brief but strenuous career of their brother Frederick that the interest of this part of Lord Coleridge's story mainly centres.

Frederick's history resembles, but with a difference, that of his uncle Frank. Entering the navy at the early age of eleven, he was gazetted to H.M.S. Impeteux, Capt. (afterwards Sir Byam) Martin, in June, 1804, and bore his modest part in the blockade of Brest. His artless letters give a graphic picture of life in the navy a century back. While the Impeteux is in port he battens on "green peas and mutton and other good

things," but presently she sails "on a very long cruise, about eight months," and the menu quickly suffers a sea change:—

"We live on beef which has been ten or eleven years in corn, or else on salt horse (*alias* salt pork) which is a piece of solid fat, there being no lean, and on biscuit which quite makes your throat cold in eating it owing to the maggots, which are very cold when you eat them, like calves-foot jelly or blomonge, being very fat indeed. We drink water of the colour of the bark of a pear-tree, with plenty of little maggots and weavils in it, and wine which is exactly like bullock's blood and sawdust mixed together. I often think what I would give for two or three quarendons off the tree on the lawn with their rosy cheeks!"

But what's the odds so long as one is happy?

"I have got a good heart and a clear conscience, and, as the saying is, a clear heart and a light pair of breeches go through the world together, so that I am as happy as anything can be, so long as you are."

This is ever his cry. His mother writes that she is enjoying a visit to her sister at Combesatchfield, and he replies: "I am always happy when you are." Once the Impeteux puts in at Torbay, and he manages to lay in a little stock of eatables: "100 apples, 4 cakes of ginger-bread, 3 pounds of cheese, one pound of butter and a loaf—most magnificent!"

On July 3rd, 1804, he climbs to the mast-head for the first time: "The sea looked most terrible to me, it being so far below me, but I was not the least afraid of falling." Three weeks later he writes:—

"The Brest fleet is expected out every day, and we shall have some hot work with them. For my part I'll fight till I am killed, for I have an unspotted conscience which does not shrink at death the least, so I am perfectly prepared.....It is blowing very hard now. We split our main-sail to-day.....I don't know anything more to say except that I am very happy."

In September he is nearly shipwrecked in a fog off Ushant; he falls overboard twice, and his leg is injured during a heavy gale. He sees fourteen men flogged on one day: "Six for leaving the deck on their watch, three for fighting, the others for drunkenness." He is present at more than one brush with the enemy: "I'm sure we are always ready to give them a bout," he crows—all, that is, except Admiral Calder, who declines battle, and is lampooned in consequence as "the compassionate Englishman" in pasquinades hung up all over the ship. At length he gets a week's leave and goes home, where he plants a pine (still standing) in the garden, and carves his name (yet legible) on an oak. Returning to the Hamoaze, he joins the Phœnix, and, forced to sport a cocked hat, buys a misfit cheap from a comrade who throws the gold lace in for the pleasure of having a shot at him with an egg. He salutes the Euryalus as it passes with Nelson's body on board. And now the Phœnix is on the point to sail, when, on December 9th, 1805, Frederick Coleridge falls from the topmast, and his brief life is rounded with a sleep.

Weep with me, all you that read
This little story;
And know, for whom a tear you shed
Death's self is sorry.

The latter half of this book is devoted to the career of John Taylor Coleridge, afterwards Sir John and a judge of the Court of Queen's Bench. The second son of Col. James, he was, says his grandson, "the best beloved of the whole family, the pillar upon which they leaned. 'Dulce' was his pet name amongst his brethren, and his sweetness of nature ever overflowed." At Eton he was the hero of a Homeric fight with Horace Mann; at Oxford, where he won a scholarship at Corpus, his most intimate friends were Keble and Arnold. At the degree examination (1812) his name appeared alone in the First Class, the candidates numbering ninety-eight. In the same year he gained the Vinerian Scholarship, and in 1813 the English Prize Essay on 'Etymology,' and the Latin Essay on 'The Influence of the Roman Censorship on the Morals of Rome'—a feat which only Milman and Keble have equalled. Soon after the announcement of his First Class he was elected to a Fellowship at Exeter. An accomplished scholar, he was of a nature so diffident and retiring that he never would have persevered in the law, had not his father and his good friend and financial backer, John May, goaded him on to ultimate success. Early in his legal career he held for about a year the editorship of *The Quarterly*, relinquishing it to Lockhart in November, 1825. When retiring he addressed to Murray, whose manner of conducting the affair had not wholly pleased him, a dignified letter indicating courteously, but firmly, the grounds of his dissatisfaction. The letter, which Lord Coleridge prints in full, should be read in connexion with Mr. Andrew Lang's account of Lockhart's appointment.

Col. James lived long enough to make his bow as grand juryman to his beloved son, who in 1835 presided for the first time at the Exeter summer Assizes. The scene at the delivery of the charge, writes Lord Coleridge, "was too much for him, his emotion overcame him, and he had to ask leave of his son to sit down. The meeting of father and son has been described by an eyewitness as tender and affecting beyond measure." Next year, after a lingering illness, the old man died, at the age of seventy-six. His voluminous correspondence with John illustrates beautifully their perfect mutual confidence and devotion. If the Colonel supplied the needful spur to the timid and reluctant junior, he found his reward in John's tender and unfailing sympathy. From his boyhood up, John possessed a remarkable gift for style, and a memoir of his brother Frank from his hand forms one of the most charming features of the book.

That the references to the poet are scanty has been said already; one regrets to add that, few as they are, they are too many by half for the credit of his brothers. An appeal to the latter for help towards Hartley's expenses at Oxford, made by Southey through John May—who himself advanced some thousands for the charges incurred on behalf of John—elicited an angry outburst from the Colonel to his son and confidant, which Lord Coleridge, with a curious lack of good taste, here prints at length. The three brothers, James, Edward, and George, were asked to contribute a yearly 30*l.* between them, and this, for one year at least, they contrived to do. They and their wives appear to have taken their full money's worth in vituperation of S. T. C., some of which the Colonel reports in his letter to John: "Uncle Edward is sadly out of sorts about it—will give 10*l.* for one year, won't be tied down, and his wife thinks the Children should not be brought up as gentlefolks, &c." What a pother over a beggarly ten-pound note! It is pleasant to know that, after this 30*l.* so grudgingly given for Hartley, the poet was never beholden to his family for a penny. The Colonel rails at him for his indolence; but if the truth—the wholesome, brutal truth—must be told, the difference between the two men lay just in this, that James, having through his brother John's bounty procured a captain's commission, made the most of his handsome person, and married a wife with 700*l.* a year; while Samuel Taylor, who had neither beauty nor the shrewdness to turn it to good account, married a penniless girl, who, though endowed with many admirable qualities of head and heart, proved an impossible wife for a poet. Of Coleridge's improvidence—of his obligations and indebtedness to his fellows—we have heard more than enough. But what of their indebtedness, and what of ours, to him who, more than any other singer since Milton, has

made us heirs
Of truth and pure delight by heavenly lays?

TWO BOOKS ON FLORENCE.

The Florence of Landor. By Lilian Whiting. (Gay & Bird.)

Florentine Palaces and their Stories. By Janet Ross. (Dent & Co.)

Where does nature smile with more contented gaiety than in the neighbourhood of Florence? is the question which Landor makes Petrarch ask of Chaucer and Boccaccio. He imagines a conversation between Milton and Galileo, the scene laid at no great distance from the gates, when Milton speaks of his walks along the quiet lanes of Arcetri, somewhat too full of the white eglantine in the narrower parts of them. Standing on the fortifications of Sanminiato, Michel Angelo and Machiavelli discuss the fortunes of the city. A Florentine gentleman calls on Landor when he is residing in the Palazzo Medici, and they talk about its later history. The scene, indeed, of several of the 'Imaginary Conversations' is laid in Florence; while the 'Pentameron' and the less-known 'High and Low Life in Italy' are full of Florentine colour and atmosphere. In Florence and at Fiesole Landor spent many of the best years of his life, and it often needs an intimate acquaintance with the flower-lore to follow his allusions. But Miss Whiting, in her descriptions, has not drawn very largely on Landor's works; and when she does quote him, the citation is not always accurate. It is not, for instance, Landor's Alfieri who bids his interlocutor look from the window on to Dante's cottage, and on to the square mansion where was enacted the first scene in the 'Decameron.' The speaker is Salomon, the Florentine Jew.

We are told what Ruskin thought about

the view over Val d'Arno from Fiesole, and how Florence struck a number of Landor's contemporaries; but he himself is rarely allowed to speak either in his own voice or through the men and women whom he brought on to his many-peopled stage. Miss Whiting takes us to Certosa, and we are treated to a discourse by Mr. Perkins on the tomb of Niccolo Acciajuolo and other matters. We do not, with Landor's help, hear Boccaccio say: "When I next stood before him, torches flamed through the pine forest of Certosa: priests and monks led the procession: the sound of the brook alone filled up the intervals of the dirge: and other plumes than dancers' waved round what was Acciaioli." Miss Whiting quotes Mr. Julian Hawthorne's account of a visit to Mr. Kirkup, who showed him his tracing from the fresco portrait (then ascribed to Giotto) of Dante. It had been discovered, says Hawthorne, "through Kirkup's means"; and a reproduction from a photograph of the portrait is among Miss Whiting's illustrations. She might have mentioned, however, that Landor sent an account of this discovery to *The Examiner*, printed in that paper on August 16th, 1840, in which the credit is rightly given to Signor Aubrey Bezzi.

So far as Landor is concerned, the more valuable parts of Miss Whiting's volume are those containing the reminiscences of his young American friend Miss Kate Field, who saw a good deal of him during the last four or five years of his long life. "Whatever he may profess," Browning said of Landor at this period, "the thing he really loves is a pretty girl to talk nonsense with; and he finds comfort in American visitors who hold him in proper respect." American born and good-looking, Miss Field had a double claim on his consideration. Five or six years ago Miss Whiting published an interesting sketch of the "prismatic career" of this lady, whose reminiscences of Landor were, we are told, placed at her disposal for the present volume. But if the reader hopes to find anything new he will be disappointed. Miss Whiting merely makes a series of extracts from three articles by Miss Field printed in *The Atlantic Monthly* in 1866, and the passages she quotes—without mentioning their source—would be all the better for elucidation. Miss Field describes an evening at Casa Guidi when Landor was a guest there. The talk ran on poetry, and Browning, opening Landor's 'Last Fruit,' read, she says, from the Idyls of Theocritus: "We often hear that such or such a thing is not worth an old song. Alas! how very few things are." Even the context may fail to make the ordinary reader comprehend that these words are taken, not from Theocritus, but from Landor's critical essay on his Idylls. Two paragraphs on p. 275 are printed as if they were written by Miss Field; but they are Landor's, and were portions of a preface to his imaginary conversation in blank verse between Homer and Laertes. Miss Whiting has only quoted part of this preface from *The Atlantic Monthly*, without indicating the omission. The manuscript of another unprinted preface to the same conversation, with other miscellaneous notes in Landor's hand, lies before the present writer. In one note Landor says:—

"Homer's age is uncertain: he may or may not have been the contemporary of Laertes. Chronology and Poesy are not twin sisters: Virgil proves it. Aeneas was dead some centuries before Dido's birth: but who looks into the Register when he writes a poem? Two heavy volumes might never have befallen us if their author had consulted 'Pericles and Aspasia.'"

The "two heavy volumes" were Gladstone's 'Homeric Studies.'

In a chapter headed 'The Dream of Rose Aylmer' Miss Whiting goes a little astray. The Hon. Rose Aylmer's uncle, Sir Henry Russell, at whose house she died in 1800, was a judge at Calcutta, and not of the Supreme Court of Bombay. Her half-sister, Mrs. Paynter, is described in the index as "*née* Aylmer," but she was the daughter of Mr. David Price, Lady Aylmer's second husband. Miss Rose Paynter married Mr. (afterwards Sir) Charles Graves Sawle, not in 1866, but in 1846. It may be added that Landor's Pomeranian dog, given him by Mr. William Story, was called "Giallo," which is good Italian, and not "Gaillo." The illustrations in Miss Whiting's book, especially the views of Landor's villa, are interesting, and there is a portrait of him from a painting by Mr. Charles Coleman.

A very attractive volume on Florentine palaces and their stories, by Mrs. Janet Ross, who has written so much and so well about the topography of Florence, may be referred to here, if only for the sake of its lucid refutation of the statement that the fresco portrait of Dante, in the chapel of the Palazzo del Podesta, was the work of Giotto. The Italian version of Filippo Villani's tract, 'De Origine Civitatis Florentiæ,' is frequently quoted in support of this theory; but the Latin text, cited by Mrs. Ross, indicates that Giotto's portrait was painted on a panel (*in tabula*) for the altar. This painting is mentioned in an inventory of the contents of the palace made in 1382. But Signor Milanesi, in his notes to Vasari's life of Giotto, contends that no mural painting could have survived the terrible fire which devastated the building in 1332; and he adduces other strong reasons for believing that Giotto could not have painted the fresco portrait. One theory, however, is that the main lines of Giotto's decorations were left intact by the fire and that in 1337, the year of his death, the frescoes were restored by one of his pupils. The work of uncovering the frescoes was undertaken in 1841 by the Florentine authorities, who employed an incompetent artist to repair the damage done to the Dante portrait by a nail driven through the poet's eye. On this occasion the shape of the head-dress was altered, and the colouring of other parts of the costume changed, from white, red, and green, to a dingy brown.

It is with the historic and literary associations of the Florentine palaces—the bold, massive, rusticated buildings, so characteristic, Fergusson says, of the manly energy of the republic in the Medicean era—that Mrs. Ross is chiefly concerned. Her book is a mine of valuable information, gathered not only from the standard works of Villari and other writers, but also from little-known contemporary records inaccessible to the English reader; and it is illustrated with many excellent drawings by Signora Adelaide Marchi. The story of Ippolito Buondelmonti and Dianora de' Bardi is told at length from the *Osservatore Fiorentino*. A manuscript in the Marucellina Library furnishes full details, as the press reporter would say, about the tragic fate of Caterina, beautiful wife of the ugly and most tiresome Giustino Canacci, beloved by Duke Jacopo Salviati and murdered by his jealous duchess. The splendours of the Palazzo Vecchio and of the famous mansions of the Medici, the Rucellai, the Corsini, and other illustrious Florentine families, are recorded; and, in the words of another lady of letters who found endless delight in Florence, the Countess of Blessington, "the old structures that seem built to bid defiance to the ruthless destroyer, Time, take us back to their founders, and we people them anew, in imagination, with a race long since passed away."

THE FRENCH NOVEL OF TO-DAY.

Le Bel Avenir. By René Boylesve. (Paris, Calmann-Lévy.)

Les Civilisés: Ouvrage ayant obtenu le Prix Goncourt. By Claude Farrère. (Paris, Société d'Éditions Littéraires et Artistiques.)

There has been a recent diminution in the production of novels in France, and a still more considerable falling-off, proportionately, in the publication of novels of the first rank. Some of the best writers classed as "French novelists" on this side of the Channel—such, for example, to name two of diverse opinions and types, as Anatole France and "Gyp"—have never succeeded with the ordinary novel. The last volume of the former we thought his best, but could hardly pretend that it belonged to the kind of literature of which we are speaking. Those French writers who had raised in us the highest expectations discover successively that the writing of plays and of short stories for the daily papers is more productive of a large income than is the annual publication of a considerable book. M. Abel Hermant, for instance, has recently published a brilliant comedy, which has had a greater triumph as a book than on the stage. Marcel Prévost has given us no novel for some time past, for his illustrated story of the one love of a blind tuner ('L'Accordeur Aveugle') is not a novel. Nor has Pierre Louÿs. The production of others has fallen off. The sister-in-law of the last-named novelist ("Gérard d'Houville"), Madame Henri de Régnier, Madame Lecomte de Nouy (author of 'L'Amitié Amoureuse'), and another woman writer, "Pierre de Coulevain" (the author of 'Ève Victorieuse'), are now producing little. Madame Marcelle Tinayre, in her recently published story, is rather at the level of her four early novels than at that to which she had attained in her fifth and sixth, justly celebrated among the critics of all countries; her tale now running in *La Revue de Paris* may prove better. Her disciple the Baronne de Pierrebourg, who has produced two excellent novels signed "Claude Ferval," is in the same position as her leader. Madame

Hector Malot and the Comtesse Mathieu de Noailles published not long ago novels in which were treated the careers of men who make their way by the help of women: a dangerous subject, delicately treated by Madame Malot, while Madame de Noailles, though bolder, failed to achieve success with her 'La Nouvelle Espérance.' Madame Malot is, we fear, too gravely preoccupied with the health of her husband, the well-known novelist, who ceased to write when his wife began to do so, for us to hope that she can soon finish her study of the life of the independent woman upon which she is engaged.

Among novelists who are just beginning to be known, we note the author of the curious book of which we have placed the title at the head of this notice. Six previous novels from his pen and two volumes of short stories had passed generally unperceived, though at least one had the honour of translation (*Athenæum*, No. 4022). Attention has been bestowed with justice upon 'Le Bel Avenir,' in the absence of great novels. It is possible to read a long way through this book without discovering its power. The story is unattractive; the characters are all stuck in a hopeless mediocrity. We find no hero and no heroine. Everything is commonplace and grey. It describes the attempt of three mothers—all intensely French and all provincial—to push their sons in Paris. It records their total or partial failure. The swans of the earlier pages all prove geese, or else change into reptiles. A point is reached, however, when the reader says to himself that he is becoming aware of the existence in the author of remarkable power, and turns back to the first page and reads the whole again more seriously. The book is, we fear, sadly true to the life which it describes—that of an enormous proportion of the population of every modern nation.

The Académie Française has to distribute prizes for virtue and also to recommend virtuous books. The new rival establishment might almost be thought, to judge from the second book before us, to have proceeded upon the opposite principle. The distinguished naval officers and colonists ironically comprised under the name which forms the title are described in the crudest language as living in a moral pigsty. The subject is one which has rarely been chosen for literary description, and the result will not be made more attractive to the ordinary reader by the fact that the flag-lieutenant who is the hero of the tale is in the habit of using rouge; while the catastrophe with which the story ends is oddly chosen in face of the present relations between the United Kingdom and France. The "aide-de-camp de l'amiral duc" is placed in command of a destroyer, and killed in sinking our best new battleship off the coast of Cochin China. The novel is especially disagreeable for the French colonial party. The appalling description of Saigon is generalized by the author in language which makes it apply to all the colonies of France. There are incidental descriptions of M. Doumer as Governor-General of Indo-China which will have special interest at the moment when the President of the Chamber is a candidate for the Presidency of the Republic. While we regard the volume as a horrible exaggeration, we do not separate ourselves from the author in his belief that in several of the colonies of several nations the European element is often so far below the proper level as to become "morally inferior to the Asiatic." He thrice tells us, each time placing the observation in the mouth of a leading man in Indo-China, or of a great officer sent out from France, that European society in the Far East is "a human dung-heap"; and it is a human dung-heap which, in the most offensive form, he has attempted to depict. That the author has talent cannot be denied, and it is possible that now that he has achieved notoriety he may begin to produce literary work which may be commended in the future. As things stand we are sorry to find the book recommended by M. Pierre Louÿs, to whom it is dedicated in an affectionate prefatory letter.

History of the Sheffield Cutlers' Company. By Robert Eadon Leader. Vol. I. (Privately printed.)

The Sheffield Cutlers' Company, otherwise known as the "Company of Cutlers in Hallamshire in the county of York," like many of the so-called Livery Companies of the City of London, has had a chequered career. In some respects they differ widely. The Sheffield Company, for instance, was greatly handicapped in early days by the fact that the manor of Sheffield, corresponding to the old Saxon manor of Hallam, was subject to the whims and caprices of a lord in the person of one of the old Barons Furnival or of their descendants the Earls of Shrewsbury. The City of London, on the other hand, has never owned allegiance to any over-lord but the king himself, and the Livery Companies have thus been free, for the most part, to make their own trade and craft regulations, subject only to the approval of the Court of Aldermen.

Mr. Leader, in the early pages of his sumptuous work, gives a graphic account of the struggle the Sheffield Cutlers had to undergo before they were able to throw off the feudal yoke and cut themselves free from the jurisdiction of the manor courts. Not only had they to submit their ordinances to the lord of the manor for his approval, but also their financial position was crippled by the lord arrogating to himself all fees paid for grants of trade marks as well as fines paid for infringement of trade regulations. The only source of revenue left to the Cutlers themselves appears to have been derived from "redemptions," *i.e.*, money paid for the right of entering the trade, or, again, money paid for some special privilege.

This state of affairs continued until the death of Gilbert, Earl of Shrewsbury, in 1616, followed not long afterwards by that of Edward, his brother and successor, when the passing of the Sheffield estates into the joint possession of Earl Gilbert's three daughters afforded the Cutlers the opportunity, so long desired, of setting their house in order. On March 25th, 1624, a Bill was introduced into Parliament, by one of the representatives of the county of York, having for its object the incorporation of

"all persons using to make knives, blades, scissors, shears, sickles, cutlery wares, and all other wares and manufactures made or wrought of iron and steel"

dwelling and inhabiting within the Lordship and Liberty of Hallamshire or within six miles' compass of the same. The Bill met with little or no opposition, and before Parliament was prorogued on May 29th it had become law. Here again the Sheffield Company differed from the London Company of Cutlers and other companies of the City in that the latter were incorporated by charter, and not by statute. The executive duties of the Sheffield Company were vested in a Master, two Wardens, six Searchers, and four-and-twenty Assistants, the other members of the corporation, known as the "commonalty," taking no part in its management. There does not appear to have existed in the Company a body of "liverymen" as distinct from mere freemen, such as are found in the "Livery" Companies of London. Mr. Leader pointedly draws attention to the narrow exclusiveness practised by the ruling body of the Sheffield Company from first to last, a practice not unknown to similar companies in London, and one that has often given rise to much tension between the rulers and the ruled.

Having once freed themselves from manorial jurisdiction and obtained their statutory incorporation, the Sheffield Cutlers enjoyed greater liberty to develope their Company (if they so willed) than their brethren in London, inasmuch as they were not subject to any municipal authority, and were not liable to "pay scot and bear lot." Its freedom, as Mr. Leader points out, carried with it no franchise of citizenship. It was not, as in London, "a step or antechamber through which men pass to the freedom of a city," and to this he ascribes the absence in the Sheffield Company of that predominance of members wholly unconnected with the trade so often found in similar companies in London. So far we agree with Mr. Leader; but he might have added that since 1835 the franchise of the City of London has always been obtainable without the intervention of a company. Again, when he writes that the Court of Aldermen had power to order the London Company of Cutlers to admit to its freedom "any man on whom it wished to confer the freedom of the City," we think the statement requires qualification; for we have reason to believe that, as a general rule, the Court of Aldermen discouraged the admission to a company of men who had no practical knowledge of its particular trade or craft, and the Court is known to have frequently disfranchised those who had obtained the freedom of the City in this manner. The real cause of the predominance in the several Livery Companies of members who are unconnected with their trade or craft, and of the consequent diminution of the practical utility of such companies, is rather to be found in the vicious system of "patrimony," which allows a son to claim admission to his father's company whether he has any knowledge of its particular trade or not. It has been otherwise with the Sheffield Cutlers. With them it has not been enough

for a man to be his father's son to gain admission to the Company. He must either have received instruction in the cutlers' trade from his father, or have been bound apprentice to some other free cutler for a term of seven years. We note, by the way, that in one respect the Sheffield apprentice was not treated liberally by his master, and that was in the amount of leisure allowed him wherein to improve his mind. The seventeenth century was drawing to a close before masters appear to have awakened to their duty of giving their apprentices opportunities for elementary instruction, and even then a single fortnight in the year was deemed sufficient for the purpose. The system of apprenticeship throughout the country received its death-blow by statute in 1814, and the same year the Sheffield Company's jurisdiction over apprentices was swept away, and the trade, hitherto so jealously guarded, was thrown open by the passing of a local Act through the supineness of the Company itself.

At times the Company could take up a bold stand, as, for example, in its strenuous vindication of the right to add the dagger mark (which the London Company of Cutlers claimed as its own) to other trade marks assigned to cutlers, shearsmiths, scissorsmiths, and the like. In this the Sheffield Company was successful. Its chief troubles arose, however, not so much from the action of the London Cutlers, anxious as they always were to protect their own trade, as from within; as Mr. Leader remarks, "its foes were often those of its own household." The legality of the Company's ordinances for regulating the trade was frequently called in question by its own members, necessitating considerable expenditure at sessions or assizes at a time when the Company's exchequer was at a low ebb. It was not, however, until the beginning of the eighteenth century that the freemen or commonalty insisted upon sharing the authority of the Master, Wardens, Searchers, and Assistants, who had hitherto regarded themselves as pre-eminently "the Company." At first the main charge brought against the officers was the mismanagement of "the stock and concerns of the corporation," a charge which was supported by the high authority of several past Masters. Another grievance of the commonalty was the repeated and often illegal attempts made by the officers to restrict the number of apprentices. Towards the close of the century we find the commonalty taking up a different attitude, and attacking the executive for having removed restrictions which they themselves had formerly challenged. The contest which had continued so long in the Company between the rulers and the ruled was at last determined in 1791 by the passing of an Act of Parliament, although both parties claimed a victory.

The Company had scarcely recovered from its internal troubles before it was assailed from the outside by combinations of workmen in the trade who refused to become freemen, and the Act of 1814 (already mentioned) was passed, leaving the Company with greatly diminished revenue and little or no authority. Mr. Leader does not disguise his astonishment at the lack of backbone displayed by the Company whilst this attack was being made upon its privileges, and at its apathetic attitude towards the real interests of the trade. This apathy was again especially remarkable in 1833, when the freemen workers renewed their claim to participate in the property and administration of the Company, but were rebuffed with the intimation that the Company was a manufacturers' society, and thus its door was finally and definitely closed to all who were not "masters of their own trade."

The year 1860 witnessed the resuscitation of the Company to fresh activity after a period of quiescence. In that year a Bill was introduced into Parliament to enable the Company to admit into its body master manufacturers of a variety of "steel articles requiring a cutting edge" that had been introduced into the trade since the Act of its incorporation in 1624. Fifteen years later, viz. in 1875, when the Government introduced a Bill for the Compulsory Registration of Trade Marks, the Company asserted its right to be recognized as the trade-mark authority within the area of its jurisdiction, and after considerable difficulty, succeeded in winning the day. It is also significant that proposals put forward by the Company were embodied by the Government in the Merchandise Marks Act of 1887.

Such is the history, in brief, of this unique Company, as set forth in Mr. Leader's work, of which the present volume appears to be only an instalment. It is not necessary here to pursue further the fortunes of the Company. Enough has been said to show the thoroughness with which Mr. Leader has so far executed his task. For particulars of the various enterprises (often unconnected with the cutlers' trade) on which the Company embarked; of its finance and charities; its Hall and Feasts; as well as for biographical notices of some of its 273 Masters, the reader is referred to the volume itself, the value of which, we may add, is enhanced by illustrations of trade marks assigned by the Company and by a well-compiled index.

NEW NOVELS.

The Labourer's Comedy. By Maud Stepney Rawson. (Constable & Co.)

In 'The Labourer's Comedy' Mrs. Rawson has left the quiet southern marshes of her last book far behind her, and is concerned with their very antithesis: a crowded quarter of London's flat-land, the world of "Mansions" about Westminster, where one roof shelters dozens of households; each in its own little set of pigeon-holes, communicating by means of a common lift funnel with the earth beneath and the tradesmen's boys; each rented at 60*l.*, and each comprising men and women of a more or less needy sort, who wage constant warfare with impecuniosity upon the frayed edges of the community they refer to with such easy familiarity as "society." The change of scene from red-roofed, somnolent Rye is radical; but Mrs. Rawson's methods are unchanged. The same affectionate care for detail; the same painstaking respect in all things for the verities; and the same shrewd consistent insight into the complex foibles and cross-currents of human nature, which gave distinction to her studies of the old Sussex port, make her novel of London life better worth study than many more pretentious essays, and richer in entertainment than most novels of the season. Here and there the author is betrayed by some masculine contradiction, but upon the whole the characterization of the men of her tale is excellent. She is a little partial in depicting women, but a ripe sense of humour withholds her from disaster here, and contributes largely to the success of her work as a whole.

Jules of the Great Heart. By Lawrence Mott. (Heinemann.)

Jules was a "free" trapper of the Hudson Bay territory, in the early days of the great Hudson Bay Company; that is to say, he hunted for pelts in that country, and did not work for the Company. The fact made him something of an outlaw, for the primitive law of that country and time seems to have laid it down as an axiom that the man who trapped must trap for the Company, and do the Company's bidding in all the important affairs of life, such as those affecting fur and caribou, whatever he might choose to do in trifles, such as the killing of his enemies. Though nominally one long narrative, there is no particular sequence about the four-and-twenty chapters of the book, beyond the fact that the one central character figures in them all. In a sense, each chapter is an unfinished short story, setting forth, in graphic and telling style, the details of some attack upon Jules, or his scheme for the discomfiture of some enemy, or the manner in which he proved the goodness of his heart, rough half-savage that he was, by assisting some other denizen of the wild. It is probably fitting that stories from this part of the world should have a bleak grimness, a certain bitter harshness of quality, like that of the pitiless wind that sweeps the Canadian barrens, searching out and slaying all save the most hardy and best-equipped. Here, when men are weary, hungry, and wounded, they lie down in the snow among their dogs and sleep the night through. And they live. Elsewhere, a tenth of the exposure brings frost-bite, insensibility, death. Naturally some human attributes must be sacrificed in the process which hardens a man till he can live the life of an Arctic fox. Some lose more and some less. Jules lost less than most, and the stories of his strenuous life make stirring reading. The French-Canadian patois is particularly well rendered by Mr. Mott.

A Trombone and a Star. By C. T. Podmore. (Arnold.)

Novelists are seldom treated sympathetically by novelists. Mr. Gant, a "writer of popular novels of a sentimental and domestic kind," who plays a prominent part in 'A Trombone and a Star,' is no exception to the rule. His friend Darnborough, a musical enthusiast with high ideals and a large purse, believes that he has found in Miss Ada Bridge, the "star" at the Frivolity Theatre, where her father plays the trombone, a singer with a voice which, properly trained, will make her famous.

Convinced that she possesses a soul as well as a voice, he offers—purely in the interests of art—to send her abroad to cultivate her gifts. Gant, who at first takes merely a professional interest in the study of her character, is sceptical as to the high principles of the young actress, and, his interest in her becoming more personal, does his utmost to prove that his opinion is right by enticing her to his rooms. These two men, with their cleverly contrasted motives, are portrayed with notable skill, but, apart from the old trombone player, a pathetic figure drawn with much sympathy, the characters are wanting in vitality. So little does Miss Ada Bridge impress us that we wholly fail to understand how Darnborough came to be impressed by her. This is the central defect of the story. Its chief merit is the style in which it is written.

Heart's Desire. By Emerson Hough. (Macmillan & Co.)

This is a weakly constructed story of a Far Western township, in which at first we have nothing feminine (except the sentimentality of the spurred and booted heroes with "guns" at their hips), and at last we have nothing masculine. The dialogue is occasionally amusing, but generally rather laboured; and the characterization is inhuman and machine-made. Nevertheless, the book is not without a certain bright prettiness, rather like that of a Christmas card, and we believe there are simple souls among the dwellers in cities who, knowing nothing of the primitive life this story is supposed to depict, will enjoy its amiable unreality.

The Sacred Cup. By Vincent Brown. (Duckworth & Co.)

We regret to find in the present work a disappointing absence of that progress towards maturity and breadth of vision for which the author's first volume led us to hope. The story is again of village life, and it has sincerity, delicacy, and thoughtfulness. But it is exotic and anæmic; the conception wants robustness, the characters affect one with a sense of weariness, as drooping flowers might. There is no fresh air in the book; its emotions are not normal; the whole thing smacks of hysteria. The title refers to the sacrament of the Communion. The central characters are a gentle clergyman, a young man, and a young woman. Also, the half-insane, brooding young man, whose character has figured in two of the author's previous books, appears here, half-heartedly contemplating murder, and winding up with suicide. Before the story opens a man has seduced a village girl, who dies after giving birth to a child. The child is brought up in the clergyman's house, a fact which scandalizes many people. Presently, the vicar hits upon the identity of the child's father, who becomes engaged to the Lady Bountiful of the district. There comes a day when the vicar feels obliged to refuse to administer the sacrament to this unconfessed sinner, and upon that action the whole book hinges. The conclusion is ineffective, and, notwithstanding a certain cleverness, the novel cannot be called a success.

Maitland Major and Minor. By Charles Turley. (Heinemann.)

Before reaching a public school, your boy usually goes through a private one, which has much the same ideals of work and play, though, of course, a much closer watch is kept over the movements of its inmates. Charles Turley has a distinct and decidedly attractive style of writing, which is familiar now to a large circle since the success of 'Godfrey Marten, Schoolboy.' This style makes the boyish conversations cleverer at times than they should be, but the author understands boy nature, and his chronicle of the games and disputes which make up so much of school life is both amusing and veracious. At the beginning of the volume is printed a eulogy from Mr. J. M. Barrie, who, we should think, knows far more about Thrums than he does about English public and private schools. But a popular idol is qualified nowadays to instruct the public on everything, with results which sometimes give a shock to that credulous body as well as the expert.

Love in the Lists. By K. L. Montgomery. (Fisher Unwin.)

There may be love of a kind in these lists, but there is vulgarity in the speech and conduct of most of the actors. They inhabit a certain Swiss *pension*, and vie with one another in ill-bred remarks and personalities astounding even in such surroundings. The books we know by the same author have been historical romances. Though they contained touches not altogether charming, they give a better idea of the author than this volume. The story is written in good English, and it is not wanting in a certain vivacity.

Maurice. By Joseph Keating. (Chatto & Windus.)

This story appears to want an abiding centre of interest rather than occasional points of interest. It is about Welsh miners, and a part of the action passes, as is natural, in the bowels of the earth; but that does not explain the somewhat ineffectual sentiments and actions of the men and women described. Maurice is a boy, at times a human and rather well-drawn boy. He arrives on the scene wrapped in mystery. There are other mysteries, mostly mining and minor, and all seem rather superfluous.

The Red Reaper. By John A. Steuart. (Hodder & Stoughton.)

Writers of historical romance do not come in serried ranks to exploit—as one might expect — the legend of Montrose. There could scarcely be better matter for their purpose than Graham's fascinating figure and personality, his loyalty to the Stuart cause during his daring leadership, his chivalry in victory, his courage in reverse, and above all his gay and gallant bearing at "the gallows tree." 'The Red Reaper' has this pretty man as centre-piece. We do not think all has been done with him that might be done. On the contrary, the view vouchsafed of him is a little formal and mechanical. But more has been made of the Scottish clans and their chieftains, whose private quarrels and self-interest did so much to wreck their leader's hopes and defeat the cause of "loyaltie" so dear to his heart.

A Flood Tide. By Mary Debenham. (Arnold.)

This is a pretty story of that "hackneyed old theme—the righting of a wrong." Miss Debenham takes her readers back to the middle of the eighteenth century, when the Fordyces loved and hated, and fought and died. The story of their feud and its healing is somewhat involved, and is, moreover, mixed up with the tangled web of the *diplomatie secrète*, that ugly pastime of Louis the Well-Beloved; but Miss Debenham has a knack of making her characters live, and Pamela Fordyce and her French cousin Manon are a charming pair of heroines, whose adventures are pleasant to read—perhaps even to read again.

AFRICA.

Major J. Willes Jennings went out in September, 1903, as principal medical officer to the small British force attached to the army sent by the Emperor Menelik to assist in Sir Charles Egerton's campaign in Somaliland. He returned in the following May with "the disappointment of not having had a fight," but with notes and photographs which he considered sufficient material for a substantial volume. This volume now appears as *With the Abyssinians in Somaliland* (Hodder & Stoughton), the name of Dr. Christopher Addison, "who arranged the matter for publication," being joined with Major Jennings's on the title-page. A much smaller book would have sufficed for all the authors have to tell, and even some of its sixty-eight illustrations could well have been spared, especially if, in lieu of the very rough sketch map given, a better one had been supplied, showing more of the places named in the text. With the volume as it is some readers may be satisfied. Those who turn to it for information, however, will find in it little besides distressing evidence of the futility of such enterprises as the one in which Major Jennings played a subordinate part, and which has forced him to "hope the day is far distant when my countrymen will spend valuable lives and treasure in extending their influence over this country and its inhabitants." He is "bound to say" that he partly agreed with the opinion of the guide who thought that the country "was intended for 'infidels' and Somalis," and that, "if it had been intended for Christians, it would have been a land rich in crops and full of rivers, like Abyssinia." Major Jennings saw much of the Abyssinians, and he speaks kindly of them, but he evidently thinks poorly both of their form of Christianity and of the progress that their crops and their rivers have helped them to attain. Biassed, perhaps, by the fact that he was concerned in the business of hunting the Somali about in their desert haunts, he takes a harsher view of these hereditary enemies of the Abyssinians than most travellers among them have done. But, except that two and a half of his twelve chapters are given up to a gossiping account of Abyssinian and Somali customs, his contemptuous remarks on the natives are merely incidental to a monotonous chronicle of his experiences and those of his brother

officers in their tedious journeying. Starting from Djibuti, he joined the Abyssinian force near Harrar, and thence accompanied it to the southern side of the Haud, where Sir Charles Egerton prudently allowed his untrustworthy auxiliaries to do no more than block the road by which otherwise the Mullah and his followers might have escaped into Abyssinia. As soon as that task had been performed all the auxiliaries were sent back to Harrar, and the British contingent made its way to Berbera. In the interval Major Jennings was chiefly occupied in doctoring the camels and camel-drivers of his company, and he makes as much fun as he can out of their ailments. Among his other pastimes were the shooting of such animals as he came across—partly for sport, and also by way of eking out the scanty commissariat of the expedition—and the assistance of his colleague Major Dunn in collecting natural-history specimens which are now in the South Kensington museum. The book, indeed, unintentionally gives some support to the charge made by unkind critics of our campaigning in Somaliland that its principal object is the providing of hunting for sportsmen and naturalists.

British East Africa: Past, Present, and Future. By Lord Hindlip. (Fisher Unwin.)—This is a somewhat extensive title for a small book of 142 not very closely printed pages; nor are its contents such as to call for any very detailed examination. Lord Hindlip writes as a man with a grievance—or several grievances—and, apparently, in great haste, which may account for his using the word "lay" when he means *lie* (p. 35); for the curious statements that "the Petitioner was tried before five *Juries* instead of nine" (p. 135), and that "the Commissioner has power to *deposit* an individual without showing cause"; and for the following truly remarkable sentence (p. 25), which cannot justly be charged upon either printer or proof-reader:

"One is bound to hold up one's hands in bewilderment and wonder if such things could have happened, or whether all David's alleged followers of Ananias have taken up their abode in East Africa for the set purpose of declaiming against the railway."

Into the personal part of the book we do not propose to enter, and the questions raised with regard to East African administration are too large to be discussed within the compass of a notice like this. We will only remark that we fail to see why approval of Sir Charles Eliot need necessarily involve the condemnation of Messrs. Jackson and Bagge, whose chief crime appears to be sympathy with the Masai. The Masai, no doubt, create a difficult question, especially for capitalists, who "naturally wish to obtain the best available land" and "cannot allow other herds and flocks to graze on what is necessary for their own"; but that question is not to be solved, nor a whole set of tribal institutions to be altered in a moment, by describing the institutions as "beastly, bloody, and immoral," and summarily evicting the people. Were it so, administration would be comparatively an easy task. It does not occur to Lord Hindlip that even the most objectionable institutions cannot be swept away at a blow, any more than it seems to enter his head that there may be a method in the madness of "collecting the folk-lore of the various tribes for purposes foreign to the actual development of the country and the interests of the British taxpayer." The officials who are rendering this service, not so much to ethnographic science as to justice and good government (a point one should scarcely find it necessary to explain), would, in Lord Hindlip's opinion, be better employed in finding labour for the settlers, and also—we may gather incidentally from other passages—in preserving game for the benefit of the cruelly wronged capitalists already referred to. We believe there are various grave evils in the administration of East Africa, chiefly due, it is probable, to understaffing; and we have no wish to see the country closed to European settlers. But that the Government merits unqualified condemnation for its alleged objection to *latifundia*, as set forth in pp. 90 6, we are not prepared to believe without further evidence. That owners, or would-be owners, of *latifundia* should hold a different view is but natural, though not a matter for discussion here. We are glad, however, to say that we cordially agree with Lord Hindlip on some points—with his protest against the employment of Masai and other "friendlies" as irregular troops in native warfare, his condemnation of Government raids, or so-called "punitive expeditions," and his view as to the system of hut-tax collection in Kavirondo and Kisumu, which is also dwelt on by Major Powell-Cotton in 'Through Unknown Africa.'

A Tropical Dependency: an Outline of the Ancient History of the Western Soudan, with an Account of the Modern Settlement of Northern Nigeria. By Flora L. Shaw (Lady Lugard). (Nisbet & Co.)—As the later chapters in this bulky volume show, Lady Lugard has not lost the skill in journalism which made her famous a few years ago, when, as Cecil Rhodes bluntly put it, she "did the colonies for *The Times*." But journalistic skill is not always helpful in the making of a book intended for serious reading and to be of lasting value. In the present work all but two or three of the first forty-four of its fifty-three chapters, covering far wider ground than is indicated in the subtitle, are occupied with a superficial and fragmentary "outline" of much more than "the ancient history of the Western Soudan." This would have been allowable enough if its chapters had appeared as separate magazine articles, but it is confusing to any one who may attempt to draw from it solid instruction. It is out of place, moreover, as avowedly a mere introduction to the concluding sixth of the volume, which alone answers to its title, 'A Tropical Dependency,' and in which the writer agreeably touches up, from experiences and observations of her own, a record of her husband's achievements as High Commissioner of Northern Nigeria during the past four years.

The origin and ramifications of the negro and negroid communities that are most plentiful in the vast Soudan, stretching from east to west in the portion of Central Africa north of the Equator, but also spread through other parts of the continent, and the changes effected among these communities as a result of Phœnician and other encroachments before the Christian era, and of far more extensive Arab encroachments since the eighth century, are matters well worth more careful study than they have yet received. But Lady Lugard's information is drawn only from sources already familiar to all who have paid any attention to the subject, mainly from French translations of mediæval Arab records and repertories, together with stray details furnished by outside travellers, from Herodotus down to Barth and Clapperton. Though she occasionally hazards bold speculations, she throws no fresh light on the material she rearranges; and though in the rearrangement she gives prominence to the most romantic matter at her hand, wandering for additional incidents into the story of Arab domination in Spain and of the subsequent adventures of Spanish Arabs in Africa, her narrative is too scrappy to be enlightening. It is hardly to be supposed, indeed, that she herself believes many of the tales she borrows from the old Arabian chroniclers, which, if Homeric in their purport, were in style more akin to the dullest of the "histories" compiled in the monasteries of mediæval Europe; and in spite of her praiseworthy efforts to enlist her readers' sympathy for the builders and wreckers of Melle and Mellestine, Bankrou and Dandi, Kanem, and many other dominions, before the advent of the Fulani, it is to be feared that readers will find the numberless wars and dynastic struggles recounted for their edification, in an order which is certainly not chronological, as uninteresting as were to Milton the contests in the time of the Heptarchy.

Lady Lugard is on more satisfactory ground, as a popularizer of out-of-the-way history, when she comes to the establishment of the Fulani empire, which apparently started in the sixteenth century, and was already decadent when it had most semblance of power under the successors of Sultan Bello of Sokoto and Sultan Kanemi of Bornu, who died about seventy years ago. Then it was that Barth practically introduced to the knowledge of Europeans the nature and extent of the civilization that had grown up under Mohammedan tyranny, and in spite of it, in the interior of the Niger district, of which the southern confines, stretching down to the Atlantic coast, were given up to savagery. Lady Lugard, while commending the Fulani for such good work as was done by some of them, tells us much about the desolation wrought by others, and continued down to the dawn of the twentieth century, in slave-raiding among their pagan subjects as well as among the adjacent pagan tribes. She might have told us more about the slave-raiding, and the traffic in guns and rum, nearly as disastrous as the slave trade, for which English and other European civilizers were responsible from Queen Elizabeth's day almost down to Queen Victoria's. As the main object is evidently to show how necessary it was that Northern Nigeria should be rescued from Fulani misrule, if not also from French or other than British appropriation, by the energy and shrewdness of which her husband has given such admirable proof, it was at least as important that those for whose instruction her book is written should be fully acquainted with the share their own forefathers had in the introduction and aggravation of evils that we have now undertaken to overcome and remove. This portion of Lady Lugard's volume is none the less interesting because it is little more than a repetition of information already given by her husband in his graphic annual reports as High Commissioner, and published in the Colonial Office series of Parliamentary White Books.

OUR LIBRARY TABLE.

Messrs. Hurst & Blackett publish a volume, well illustrated by photographs, by Annette M. B. Meakin, entitled *Russia: Travels and Studies.* If it were to be judged from the first quarter of its pages the verdict would be unfavourable; but the early chapters are conspicuously inferior to the later, and the whole presents us with much information with regard to Russia of an interesting description, and not easily to be found elsewhere. The book deals only with Russia in Europe, and the whole of the most valuable portion of the empire as regards future ages is entirely excluded from consideration. The slips and little errors in the earlier pages are, though unimportant, so numerous that we began to suspect the qualifications of the writer for the task undertaken. But we gladly admit that in reading on we found reason to change our view. Many interesting small towns of European Russia receive the consideration which their antiquities and history deserve. The account, for example, of Rostoff,

which, by the way, is not the better-known Rostoff on the Don, is full of charm.

Among the points on which the author has gone wrong is the land system of European Russia. She describes the well-known "three-field system," of the antiquity of which in the whole Aryan world she gives no hint, and, while rightly stating that it continues to exist in Russia, assumes that the redistribution of land by the village still takes place—universally, for anything that she says to the contrary. No one would gather from the account given that all the Teutonic tribes, for example, had this system (which she seems to think dates only from about 1861), and that it may still be traced in Cambridgeshire and other parts of England. The theoretical power of the Russian village to redistribute its lands is in many Governments complete, although it has been abolished in some. The actual redistribution is rare indeed. The author boldly states, apparently of all Russia, "There is a redistribution of land every three years." She rightly praises the book of Sir Donald Mackenzie Wallace, but evidently has not given much study to this or other questions dealt with by that writer.

It is in archæology that she most pleases us. There are, however, many gaps in her knowledge of Russian antiquities. The Steppes of Southern Russia are still dotted with strange seated stone figures, which have a large literature of their own. To these she refers in several passages, and quotes allusions to these statues in 1253 and, elsewhere, in 1800. Apparently she has not been much off the railways, and has consequently not become aware of the continued existence in great numbers of these statues—except in the museums, where she has seen some. An allusion to the words repeated in the chants in Russian churches shows also a want of careful attention. The words are not exactly quoted as sung, and they are not continuous, as is suggested, being in fact intended for the words which close each verse in the long litanies, as do similar expressions in the Litany of our own Prayer-Book.

We might find fault with the chapter headings, such as 'Moscow: The Largest Town in Europe'; with the indexing of N. Turguenieff as "author," while J. Targuenieff, mentioned as frequently, is not indexed. As in most books of travel, there is insufficient acquaintance with other countries, and consequent ascription to Russia as peculiarities of things common elsewhere. The author declares, for instance, that the "gigantic stoves" of Russia are "never met with out of Russia." There is nothing to choose in point of size between the stoves of Russia and those of parts of Holland and North Germany. The practice among Russian colonists in the newly settled parts of agricultural Russia by which the wife and daughters cook, wait, and do not sit down to eat until the guests have done, which the author thinks peculiar to Russia, is, of course, to be met with in all new countries where servants are hard to find, and is still common in out-of-the-way parts of Canada and the United States. There is no trace of want of respect to the women in this necessary practice. We cannot understand what is meant by the statement that Catherine II. was "the only Russian lady who ever wore a crown." The depreciation of French caricature as compared with that of Russia and of England will also not bear investigation. The statement that French governesses in Russia belonged to "the scum" and "have done the greatest injury to Russia" is incorrect. The French governess has never been an institution in Russia, where at all times the governess has usually been Swiss, German, or English. French male tutors were indeed common in Russia at one time, and no doubt had influence. The heading 'Religious Freedom,' followed by an account of the privileges of the Lutheran Church, is misleading. We do not understand the references to the Struve family, the generations appearing to be confused. The best-known member of the family, after the great astronomer, was his son, who was, we think, successively Secretary-General of Turkestan and Minister in Japan. Sir George Cathcart is four times called "Cathgart." Tolstoy's statement in the usual interview that two American ministers of religion had never heard of the chief religious writers of the United States (the name of one of these being misspelt) may possibly be accurate, but we cannot believe that they did not know the name of "Parker." The author does not explain Tolstoy's remark, but from knowledge of other conversations of Tolstoy we think that his allusion was not to an American, but to Dr. Parker, whose preaching in America Tolstoy had noticed. In any case the defect was probably in Tolstoy's pronunciation of the name.

In writing the biographical sketches which make up *Five Famous French Women* (Cassell), Mrs. Fawcett may be presumed to address herself to a special public. It is a little difficult to determine what kind of public she has in view. The superficial treatment accorded to the lives of Joan of Arc, of Louise of Savoy and Margaret of Angoulême, of Jeanne d'Albret and Renée of France, shows that her work is not intended to appeal to the serious student: if, as is probably the case, we are to regard it as a book for young people, it seems occasionally to take too much for granted. Such readers as Mrs. Fawcett appears to write for will certainly demand—and be within their rights in demanding—to be told something of the parentage of Louise of Savoy, who is introduced to them with no allusion to her family history beyond that conveyed in the statement that she was a niece of Anne of Beaujeu. The quality of "scrappiness" which such an omission indicates is unfortunately present throughout a volume in which the literary gifts and achievements of Margaret of Angoulême receive but scant notice, and the story of Joan of Arc is handled in a fashion hardly worthy of its unity and dignity. Mrs. Fawcett has been most successful in her account of the Duchess of Ferrara, who, of her five heroines, makes perhaps least demand upon the higher qualities of the biographer. Evidences of carelessness in proof-reading are somewhat numerous, and include, besides ordinary typographical errors, such slips as "Grand" Duke for Archduke (twice). We cannot endorse "cat-like" as an efficient translation of *chatouilleux*. To say that Louis XII. had a "ticklish" temper would probably better represent Fleurange's meaning.

The fourth series of the *Leaves from the Diary of Henry Greville* (Smith & Elder) brings a mildly interesting record to an end. The Dowager Countess of Strafford has been less indulgent to her uncle's extracts from speeches and leading articles than on previous occasions, and stricter editing has undoubtedly made his commentary on men and events more readable. This instalment begins with the winter of 1861, when Prince Albert was consigned to the tomb, and when England seemed to be on the verge of war with the United States; and it terminates with an entry in 1872, some eight months before Henry Greville's death. During the lifetime of Lord and Lady Palmerston he was in fairly close touch with the inner side of politics, but subsequently he seems to have gleaned his information mainly from the press. The high regard in which the abilities of Sir Charles Wood, afterwards Lord Halifax, were held by his contemporaries is a notable point in statesmen's confidences with Greville. Disraeli, whom he met at Wrest and considered "agreeable, but artificial and apparently not quite at his ease," told him that Wood was the most able man in the Cabinet. Yet that excellent administrator perpetrated the following inept prophecy. He

> "spoke much of the extraordinary sagacity with which the Emperor Napoleon had played his cards and of how completely he was the arbiter of Europe; that he possibly might be without the genius of his uncle, but he had in reality put himself into an equally great position by better means.....The conduct of Germany was suicidal, and left the Emperor *beau jeu* for getting the Rhine or anything else he happened to wish for. This would ultimately have to be resisted, and our *rôle*, as in the old war, would be to 'pay the piper.'"

Wood made this prediction in 1864, by which time the Emperor had plunged deeply into the Mexican embroilment, the first revelation of his weakness to the eyes of all men. Greville, who was on intimate terms with Morny, knew Parisian society from end to end, yet he had no inkling that the corrupt and flashy system had begun to crumble. Lord Cowley, our ambassador, perceived, however, with much sagacity, that if the Emperor's half-brother died, he would be an immense loss, as he was the only man who told Napoleon the truth. Within a few weeks Greville was chronicling the sale of Morny's pictures by order of his executors.

The 'Diary' abounds in Court gossip, some of it in questionable taste. Thus, in addition to many severe remarks on the Queen's seclusion during the early years of her widowhood, we are informed that she did everything in her power to throw cold water on the welcome of Princess Alexandra of Denmark to London, and that the popular determination to do honour to the young people was only increased in consequence. Various allusions to marriages of royal princesses are also rather unseemly, as they refer to those still living. On the other hand, it is amusing to be reminded that the original project for a memorial to the Prince Consort was an obelisk "stuck down in the middle of Hyde Park, without frame or background." At least we have been spared that.

The fourth volume of Mr. Herbert Paul's *History of Modern England* (Macmillan) covers the period from the beginning of the Eastern crisis in 1875 to the fall of the Gladstone Government ten years later. Fair-mindedness continues to be a marked feature of this able and lively work. Mr. Paul's tender regard for Lord Cross is indeed touching, and another administrator who has a full measure of justice dealt out to him is the much-discussed Sir Bartle Frere. Flashes of humour also abound, such as the remark that, through the Primrose League, "Constitutional, or at least Conservative, principles were made a passport to the sort of society which had hitherto been accessible only through *The Family Herald*." Mr. Paul's High Church sympathies come out in the epigram, "Instead of Lord Penzance putting down Ritualism, it began to look as if Ritualism would put down Lord Penzance." He positively revels in the trials to which the unfortunate Public Worship Regulation Act gave birth; and though he dwells on them at greater length than their intrinsic importance demands, it would be impossible to find anywhere else so well-informed an exposition of the intricacies of ecclesiastical law.

Mr. Paul's account of the Berlin Congress and the antecedent events leaves little to be desired, but he seems to go rather far afield when he blames Lord Beaconsfield for not taking up Bismarck's hint that England should occupy Egypt. In the first place, as he himself admits, M. Waddington had stipulated that the question should not be raised at the Congress. Secondly, public opinion in this country was by no means pre-

pared for such a step; so much the turmoil raised by such a trifling acquisition as Cyprus conclusively proved. Mr. Paul ignores dates when he argues that the dual control of England and France over Egyptian affairs was, as soon appeared, impossible. When the Berlin Congress met, the dual control was not in existence. The two Powers had not ventured beyond missions of advice, which made recommendations, cheerfully accepted by Ismail and promptly rendered useless by his intrigues. It was not until the placid Tewfik had taken the place of his unsatisfactory sire that any supervision worth having was established over Egyptian finance, and the plan seemed to promise well until it was rudely shaken by Arabi's revolt. Mr. Paul reads the experiences of 1881 into the affairs of 1878, and thus gives an erroneous view of the situation as it must have appeared to Lord Beaconsfield and Lord Salisbury at the Congress.

The troubles of Gladstone's Government are attributed by Mr. Paul, in a large measure, to its discordant composition; but he will command general agreement with his eulogy of its legislation. His account of the Irish Land Act is particularly clear, and the same praise may be applied to his summary of the procedure rules carried by Gladstone in the autumn sitting of 1882. It is the inevitable defect of books dealing with such recent events as does Mr. Paul's that they are liable to be superseded in detail by the appearance of new political biographies. Thus Lord Granville's 'Life' throws much fresh light upon the dispatch of Gordon to Khartoum, and access to it might conceivably have modified some of the conclusions presented in this volume.

Pierre et Alexis. L'Antéchrist.—Pierre le Grand. Traduit du Russe de Dmitry de Merejkowsky. 2 vols. (Paris, Calmann-Lévy.)—Mr. Merejkowsky has completed his famous trilogy by two volumes on the relations between Peter the Great and his son Alexis, which form the subject of the present notice. The story is in every way painful; it narrates the worst among the discreditable things attributed to the great regenerator of Russia. However much Peter may have been perplexed and hampered by the unfilial conduct of Alexis, the verdict of a later age has universally been that his action was inhuman. No excuse can be found for such a crime. Mr. Merejkowsky undoubtedly possesses great powers of narration and description, but we wish heartily that he had spared us some of the horrors contained in his book. He has shown a marvellous vigour in raking up all the stories of Peter's brutalities and excesses. They seem paraded with needless detail. The descriptions of the drunken orgies of Peter and his courtiers and the eccentricities witnessed at the *assemblées* are probably exaggerated. Our author, however, affords some glimpses of the good side of Peter, the giant wonder-worker, as Pushkin called him. We must bear this in mind while reading of his less creditable side. Peter is so modern, so Western in his enthusiasm, that we forget the Oriental side of his character. His cruelties jar upon us because we think of him as the shipwright of Deptford and Saardam, the lover of honest toil, the man who educated himself, and, as has been well remarked, descended from his throne that he might reascend it with greater dignity. The book becomes almost unpleasing from the cruelties inflicted upon the unhappy satellites and abettors of Alexis, such as Kikin and others—some merely licentious scamps, and others grotesque fanatics. Here and there a man is chanting staves of songs against the Tsar or is ready to burn himself alive with all the attendant horrors of the "red death."

The contrast between the lurid superstitions the old school and the novel doctrines introduced by Peter is well sketched. The story keeps close to history, and all the actors in the tragedy are put upon the stage. We have the Tsar; his son Alexis; his divorced wife Eudoxia, living in the cloister at Suzdal; Catherine, the present wife; Charlotte of Wolfenbuttel, the unhappy wife of Alexis; Feofan Prokopovich, the favourite preacher of Peter, whom he used as a kind of ecclesiastical agent; and Volynski the diplomatist. We have full details of the flight of Alexis to the dominions of his brother-in-law, the German Emperor Charles VI. How he was entrapped by Tolstoy, a spy of the Tsar's, and brought back to St. Petersburg with his wretched mistress is all matter of dolorous history. The part of Catherine as mediator between her husband and the people who had offended him forms a more pleasing part of the novel. Through Catherine's intercession Voinarovski, the nephew of Mazeppa, escaped with his life. The strange fits of epilepsy from which the regenerator of Russia suffered, and which marked his paroxysms of anger, are accurately described. Considerable space is devoted to the lectures and remonstrances addressed by the father to his son. Peter had built many hopes upon Alexis: he had drawn up careful plans for his education, in which he had received the advice of Leibnitz. His tutors, Neugebauer (not Neubauer, as it is erroneously printed in the book) and Weber, were competent men, and the latter wrote a good book on Russia. But Alexis, who was under the influence of reactionaries, was ready to undo all his father's work, to abandon St. Petersburg and bring the capital back to Moscow. He was even privy to plots against his father's life.

Finding his admonitions of no avail, the father has his son tried; and after the trial he mysteriously dies, probably under the knout. This is the view generally adopted, and Mr. Merejkowsky follows it. The miserable fanatics who surround Alexis, and are so graphically described by our author, bring Alexis to his untimely end. We can only say of Peter in the words of Virgil:—

Infelix, utcumque ferent ea facta minores.

Mr. Merejkowsky has crowded his story with minute details which show his great antiquarian knowledge and accuracy. While describing the desolation and neglect of Moscow he does not fail to introduce the winking lions made of brass which imitated roaring and performed other quaint Byzantine wonders; nor is the mythical Kitovras, famous in Slavonic legend, wanting. We believe, however, that our author is in error in assigning to Sophia, Peter's second sister, a translation of Molière's 'Précieuses Ridicules' into Russian. Some translations were made by Natalia, the youngest sister of Peter, who was fond of the drama and had a private theatre, as is mentioned in Morozov's 'History of the Russian Stage.' Natalia is said to have translated Molière's 'Médecin malgré Lui.' Sophia does not seem to have had any knowledge of the French language.

Messrs. Constable send us, under the title *Peter and Alexis*, an English version, which states on the title-page that it is the only authorized translation into our language. Of the version itself we can say that it is conscientiously executed and very readable. The translator is obviously well acquainted with the Russian language, and goes safely over the pitfalls caused by the proverbial and vulgar expressions sometimes introduced. The English reader will be able to carry off a very good idea of this strange book, which is full of terrible power. We have, by the by, kept back our notice of the French version till the English appeared; but the latter is so belated that the delay is hardly fair to the French publishers.

I.N.R.I.: a Prisoner's Story of the Cross. By Peter Rosegger. Translated by Elizabeth Lee. (Hodder & Stoughton.)—Rosegger, who has of late years been growing more and more didactic in his novels, gives us in 'I.N.R.I.' a work which can hardly be considered to fall within the domain of fiction at all. Rather it is a personal exposition of Christianity—a book in many ways akin to Tolstoy's 'Gospel in Brief,' though by no means so novel and startling in its interpretation. A prisoner under condemnation of death sets himself to write the life of Christ, narrating the events and explaining the doctrine in what he feels to be their truth: such is the scheme of the book. Of course, quite apart from any question of religious sentiment, this is a daring and dangerous thing to attempt, even from the purely artistic point of view. To retell a perfectly familiar story is always a delicate matter, for every deviation from the original will seem a sort of liberty, and every addition is apt to be resented. Yet Rosegger has encountered the difficulties of his task with great skill. By supposing the story to be written by a man of no learning, who had not even a New Testament to refer to at the time, and was therefore obliged to rely on old memories and allow his imagination to help him at need, he justifies a considerable amount of freedom in the treatment of his subject, and renders himself secure from critical and scholastic objections. But, indeed, the book is scarcely one to criticize. It is unmistakably sincere, and that being so, any merely æsthetic judgment seems a little out of place, or at least every reader may be left to make his own. Many people will certainly admire and enjoy 'I.N.R.I.' unreservedly; others—and we must include ourselves in the latter class—will not read it without a certain feeling of mental discomfort and unhappiness.

It is a distinguishing mark of what may be called the classic fairy tale that it delights childhood and age in equal measure. Thus the collection of the brothers Grimm is still a keen joy to many who are advanced in years, and Hans Andersen can never pall—though their respective methods are poles apart. The Grimms charm because their stories are without a moral, and do not profess to instruct: Andersen does not disdain a moral, but imagination, poetry, and humour make it ever welcome. Dr. Max Nordau, on the other hand, does not, in *The Dwarf's Spectacles, and other Fairy Tales* (New York, the Macmillan Company), seem to possess the magic which produces the classic fairy tale. He has none of those little homely touches which can, for the moment, make fantasy seem real. His moral is, as a rule, very obvious; a desire to use a tale surreptitiously as an engine for the impatting of useful knowledge, scientific and otherwise, is often evident, and on occasions the stories are unblushing allegory. The very young child will not perceive this, those a little older will resent it; while to grown-up people the book will be just a book for children. The stories themselves are very unequal. There are three—'The Elf-Child,' 'The Heart-Thread,' and 'The Secret Empire'—which are on the verge of being real fairy tales; and they are, in their way, delightful. 'The Master' contains some sound, if elementary, art criticism, which is perhaps rather out of place in such a book as this; and of the others it may be said that they suffer from the tendencies already mentioned. It was not wise of Dr. Nordau to call one of his stories 'The Golden Beetle who went on his Travels,' for in so doing he challenges comparison with Andersen's immortal 'Beetle who went on his Travels'—and suffers accordingly. His giants (of whom there are but two) are too solemnly treated, while his fairies are not the fairies we love—perhaps for the same reason; and though here and there we get a

touch of Andersen, as in 'The Elf-Child,' or of Grimm, as in 'The Dwarf's Spectacles,' yet they are but slight, and the author's own touch is a trifle too heavy—by reason, it may be, of the many admirable lessons with which the stories teem. The translation, by Mary J. Safford, is bald and not very attractive, and the illustrations are poor—in some cases positively bad; but for all that the book may give some pleasure to those who are as yet too young to resent a moral.

Mr. Phillpotts has identified himself so intimately with Devon that it is no surprise to find him in the guise of a poet in dialect. His very title, *Up Along and Down Along* (Methuen & Co.), is racy of the soil which he loves, that good red earth to which he is faithful. There are eight pieces in this pretty volume, and eight lithographs by Mr. Claude Shepperson offset them. The poet has found an admirable collaborator. Mr. Shepperson is undoubtedly one of our most accomplished craftsmen in black and white. He has a signal sense of composition, and a romantic atmosphere. All these pictures are good, and one or two are super-excellent. Mr. Phillpotts's muse is Devonian in essence, both tenderly familiar and homely simple. That he has grasped the true spirit of the shire, and is fulfilled of its soul, is evident from such verses as those that tell of 'Man's Days' with melancholy and rural philosophy. We quote the piece in its integrity:—

A sudden wakin', a sudden weepin';
A li'l suckin', a li'l sleepin';
A cheel's full joys an' a cheel's short sorrows,
Wi' a power o' faith in gert to-morrows.

Young blood red hot an' the love of a maid;
One glorious day as 'll never fade;
Some shadows, some sunshine, some triumphs, some tears,
An' a gatherin' weight o' the flyin' years.

Then old man's talk o' the days behind 'e;
Your darter's youngest darter to mind 'e;
A li'l dreamin', a li'l dyin';
A li'l lew corner o' airth to lie in.

There is true poetry, too—poetry such as Barnes wrote when he used the vernacular of the neighbouring county. Mr. Phillpotts's accomplishment is better in the vernacular than in classical English, though that is dignified and sonorous; his note is various, and not wholly pathetic, as witness the amusing verses on 'Blue Eyes,' which is prefaced by one of Mr. Shepperson's most successful illustrations, and tells of the deceiving of Peter Chugg by the blue-eyed Daisy who cozened him into belief in her:—

Then Peter stared, wi' all his might,
An' thought, poor sawl, as he'd seen aright;
But uplong to worship the next Sunday,
If her wadden axed out wi' the chap in grey!
Ess! he'd put up the banns, thicky chap in grey.

Now Peter's swearin', so 'tis sayed,
A man be a fule to trust a maid;
An' the Dowl, though black as a parson's shoe,
Have doubtless got eyes of a butivul blue—
Chugg knows that his eyes be a butivul blue.

La Pensée Catholique dans l'Angleterre Contemporaine, by the Abbé Dimnet (Paris, Librairie Lecoffre), is a reprint of a series of essays which appeared in a French clerical review little seen outside France. The importance of the studies and their interest to English theologians are so great that the republication deserves a few words of notice. Several chapters deal with Newman, who is the principal figure in the volume; but there is one on Wiseman, as well as some on Mr. Lilly, Mr. Wilfrid Ward, and other writers of the Catholic revival. The sympathies of the author make him more liberal towards the heretics of the Church of Rome than towards the Anglican or the Eastern Churches. His own book smells a little of the faggot. A passage towards the end seems to suggest that he is one of those who expect in a distant future

"change in the liturgy.....a time when Latin will have been forgotten for ever, when the Pope..... will no longer be in Rome, when the organization of the Church will be very different from that which we now see."

In the passages in which he looks back towards the past he seems to regret that at the time of the Reformation the opportunity was lost which would have led

"the Church to reform itself without that violence which caused it to lose much of its suppleness and shut it within the barriers behind which it was forced to protect itself.....It is from the Reformation that comes that state of war against lay culture in which the Church has found itself during three centuries, and which leaves to it even now the air of a theological fortress."

The Society for Promoting Christian Knowledge have sent us *Elizabeth Over-the-Way*, written and illustrated by Edith Farmiloe, which we can commend warmly. She is a charming artist with a style of her own, and a writer with real sympathy for children, rich and poor.

We have on our table *The Development of Religious Liberty in Connecticut*, by M. L. Greene (Houghton & Mifflin),—*The Childhood of our Blessed Lord Jesus Christ*, by Agatha G. Twining (Mowbray),—*Balthasar Hübmaier*, by H. C. Vedder (Putnam),—*Gleanings and Reminiscences*, by T. Ellison (Liverpool, Young & Sons),—*Catharine Grace Loch*, edited by A. F. Bradshaw (Frowde),—*Mrs. Gaskell and Knutsford*, by G. A. Payne (Mackie & Co.),—*Hans Holbein the Younger*, by F. M. Hueffer (Duckworth), — *Picturesque South Devonshire*, by W. H. K. Wright (Valentine & Sons), — *Pictures in Colour of Derbyshire and the Peak District* (Jarrold & Sons), — *The Spanish Settlements within the Present Limits of the United States: Florida*, by Woodbury Lowery (Putnam), — *The St. Lawrence River*, by G. W. Browne (Putnam), *Facts and Fancies for the Curious*, collated by C. C. Bombaugh (Lippincott),—*The Choice of Books*, by C. F. Richardson (Putnam),—*The Collector's Annual*, compiled by G. E. East (Elliot Stock),—*The Girl's Book of Health*, by W. N. Edwards (Melrose),—*The Council Arithmetic for Schools*, Part VIII., by T. B. Ellery (A. & C. Black),—*Handbook to the Examinations of the Institute of Bankers in Scotland*, by J. G. Johnston (Edinburgh, the Darien Press),—*Book-keeping by Double Entry*, by J. Walmsley (Hodgson), — *Psychology of Ants and of Higher Animals*, by E. Wasmann (Sands & Co.),—*The Psychology of Beauty*, by Ethel D. Puffer (Houghton & Mifflin),—*Cotton Spinning and Manufacturing in the United States of America*, by T. W. Uttley (Manchester, University Press),—*A Digest of English Civil Law: Book I. General*, by E. Jenks (Butterworth & Co.),—*The Art of the National Gallery*, by J. de Wolf Addison (Bell),—*Elocution: its First Principles*, by W. H. Breare (Simpkin & Marshall), —*Llewellyn, and other Poems*, by A. Sassoon (Glasgow, Bryce & Son),—*Alcestis, and other Poems*, by Sara K. Wiley (Macmillan),—*Admissions and Asides about Life and Literature*, by A. St. John Adcock (Elkin Mathews), —*Lays of the Round Table*, by E. Rhys (Dent), —*Types of Weltschmerz in German Poetry*, by W. A. Braun (New York, Columbia University Press),—*A Levantine Log-Book*, by J. Hart (Longmans), — *A King's Tragedy*, by May Wynne (Digby & Long),—*The Face of Juliet*, by L. T. Meade (Long),—*Wilson Carlile and the Church Army*, by E. Rowan (Hodder & Stoughton),—*Jim Trelawny*, by Evelyn E. Green (S.S.U.),—*The Silent Passenger*, by G. W. Appleton (Long),—*A Stepmother in Ambush*, by Sarah Tytler (Digby & Long),—*Different Drummers*, by Evelyne E. Rynd (Newnes),—*A Daughter of Thor*, by Helen Maxwell (Brown & Langham),—*The Purloined Prince*, by E. Turner and R. Hodder (Caxton Press),—*Willie Wee's Arm-Chair, and other Stories* (Liverpool, Young),—*The Winning of Winifred*, by L. Tracy (White),—*Die deutschen Münzen der Sächsischen und Fränkischen Kaiserzeit*, Part IV., edited by Hermann Dannenberg (Berlin, Weidmann),—*Comedia Famosa del Esclavo del Demonio*, by Mira de Mesqua, edited by Milton A. Buchanan (Baltimore, Furst Company),—and *La Mare au Diable*, by George Sand, with Introduction by L. Corniquet (Dent).

LIST OF NEW BOOKS.

THE HEAD MASTERS' CONFERENCE.

The Head Masters' Conference met on Thursday and Friday last week at the College of Preceptors, Bloomsbury Square, Dr. G. Rendall, Head Master of Charterhouse, in the chair. Over sixty head masters attended, representing not only the great public schools, but also many of the smaller grammar schools, for the common notion that the Conference admits only the aristocracy of British secondary education is unfounded.

The first subject dealt with was inspection, on which the following important resolutions were passed :—

1. "That the Conference, considering the intimate relations that exist between the schools here represented and the Universities, and being of opinion that alternative forms of inspection should be left open to the governing bodies of secondary schools, approve the action of the Board of Education in entrusting University bodies with the work of inspection."

2. "That in the conduct of inspection the Conference think it of the utmost importance that the reports of inspectors—communicated to governing bodies and head masters—should be treated by the inspecting board as strictly confidential, and that the judgments of the board itself should be deliberate and collective."

3. "That the Conference desire to emphasize the principle that inspection should take into due consideration the aims and circumstances of the school inspected, and regard intellectual methods and results as of greater weight than material equipment and appliances."

4. "That, as the purpose of inspection differs from that of examination, inspections should be conducted at such intervals of time as will best secure reality and thoroughness, and prevent waste of time, energy, and expenditure."

The significance of the first resolution, which was moved by Dr. Burge (Winchester), is that by its adoption the great public schools reject inspection by the Board of Education, so vehemently desired by the advocates of the "unity of the national system," in favour of inspection by Oxford and Cambridge. The second resolution, of which Mr. F. Fletcher (Marlborough) was in charge, had its origin, though the fact was not stated, in the dispute between the Universities Joint Board and the Warden of Bradfield with regard to the teaching of chemistry at that school. The object of the third, to which Dr. Gow (Westminster) spoke, was to protest against the extravagant standard which has been set up for the equipment of science laboratories. Nothing was more prejudicial to true education, the speaker very pertinently said, than the opinion held by the public, and shared by a great many teachers of science, that very great expenditure was necessary for effective scientific teaching. Almost the greatest names in the history of British science were those of amateurs, and it was a mistake to equip school laboratories so elaborately that boys thought it impossible to continue the pursuit of science after leaving school without great expenditure. Mr. Cary Gilson (Birmingham), in moving the adoption of the fourth resolution, urged that inspection should not take place too often. In most circumstances an inspection once in three years would be quite effective.

Dr. Rendall (Charterhouse) then vacated the chair in favour of Dr. Tancock, in order to move

"That the Conference have received with satisfaction the intimation of the Army Council that inspection of approved schools will not take place more often than every five years, except in cases where the inspecting body recommends, or the War Office expressly requires, inspection after a shorter term."

This was carried, in spite of some protests against any inspection at all by the War Office. The hope, however, expressed by Col. Ward on behalf of the War Office, that its proposal "to publish a list of schools approved for presenting candidates for the 'Leaving Certificate' in the Monthly Army List and also in other publications, such as the 'Guide to the Various Ways of obtaining a Commission,' will commend itself to the schools which have been 'approved,'" was not realized, for it was decided by a very great majority that the Conference demurred to the publication of the proposed list, and the Committee was instructed to enter into correspondence with the War Office on the subject. The Committee was also desired to give "careful consideration" to "the question as to the number of hours of sleep allowed to boys at public schools."

The next subject treated was the proposed Joint Oxford and Cambridge Matriculation Examination, and Canon Lyttelton (Eton) moved

"That the Conference commend to the Universities of Oxford and Cambridge the desirability of establishing a joint examination, to be held at schools qualifying for matriculation in either University."

The Head Master of Eton said that each University was hampered to a certain extent by the feeling of the absolute necessity of not framing an entrance examination which would entail the loss of a large number of recruits. That was a consideration not always boldly stated in public, but it lay at the heart of the whole matter. The great evils discerned in the entrance examinations to the Universities were the lack of rational readjustment of old studies and the increasing tendency to lower the standard so much that it was very difficult for them to feel that there was any uplifting influence from the Universities—statements which are sure to excite much comment in the educational world.

It was evident from the discussion that followed that the proposals of the committee which has been appointed at Cambridge to promote the joint matriculation examination were not fully understood, and inasmuch as it was generally felt that the Conference were not in a position to vote upon the matter, the previous question was moved by Dr. Burge (Winchester) and carried.

The Conference were even more cautious in connexion with the question of the rearrangement of school terms. Dr. Gray (Bradfield) moved

"That in the opinion of this Conference it would be of advantage to the cause of secondary education if the school year were divided into four terms, instead of three, each of shorter duration than at present."

Dr. Gray presented a scheme under which there would be thirty-seven weeks of term time and fifteen weeks of holidays, but failed to find a seconder, and consequently there was no discussion.

On the motion of Dr. James (Rugby) the following resolutions were next passed :—

1. "That the Conference regret that, notwithstanding previous representations made to the War Office, nothing has been done (*a*) to avert the depreciation, amounting in some important schools to the practical exclusion, of Latin and German from entrance examinations to the Army [*sic*], or (*b*) to bring preparation for Sandhurst more nearly into line with preparation for Woolwich. They desire to point out that the simple increase of optional subjects from two to three in the competitive examination for Sandhurst would go far to correct both these defects, and commend this change to the consideration of the War Office."

2. "That the military authorities be requested to issue a short memorandum of instruction in elementary drill and the use of arms for all boys, for the guidance of head masters and officers of public-school cadet corps."

To the latter resolution the following rider, moved by the Rev. W. H. Chappel (Worcester), was added :—

"And to consider the possibility of financial assistance towards the cost of instruction in rifle-shooting and of ammunition in such corps and in school rifle clubs."

A discussion on notes in classical books was then opened by the Rev. H. W. Moss (Shrewsbury), in the course of which there seemed to be a consensus of opinion that the fullness of the notes in many classical books now in use detracted from the effectiveness of classical teaching.

It was announced that an invitation to hold next year's Conference at Malvern had been accepted, and the Conference closed with the usual votes of thanks.

HENRY VII.'S ALMSHOUSE, WESTMINSTER.

AN UNRECORDED EPISODE.

There is a curious episode in the history of Henry VII.'s Almshouse, which seems quite unknown to the historians and Charity Commissioners of Westminster. At the dissolution of the monasteries Henry VIII. seized it, with other church property, as if part and parcel of Westminster Abbey, then under royal patronage. He granted, gave, or sold to one Vincent, the Keeper of the Royal Beds, the Almshouse, by the Gatehouse of Westminster; and Vincent sold it to Nicholas Brigham, courtier, scholar, and Chaucerian.* Brigham was one of the four Keepers of the Exchequer during Mary's reign, and she did not disturb him in his occupation of his purchase when she restored the Abbey itself to the Church.

Nicholas Brigham died in 1558, probably in December, shortly after his royal mistress, whom he faithfully served, and by a nuncupative will (Somerset House, 52 Chayney & Bragg 272) left everything to his wife Margaret. She proved his will and had administration granted to her on February 20th, 1558/9. Shortly afterwards she married William Hunnis, gentleman of the Chapel Royal, poet and musician.

Margaret Hunnis, *alias* Brigham, made her will (46 Chayney) on June 2nd, 1559, and left everything absolutely to her husband, except the Almshouse, which was to revert to "her cousin Francis Brigham and his heirs for ever"; that is, to the second son of her late husband's brother. Mrs. Hunnis did not live long. On October 12th, 1559, her will was proved by Robert Willot, one of the witnesses thereto, as proxy for William Hunnis, her husband.

On November 4th, 1559, there was an action

* He removed his master's bones from the Cloisters to the Abbey, and thereby founded Poets' Corner.

to impugn the will instituted by James Brigham, a nephew of the defunct Nicholas. Why it should have been James, instead of Thomas, the eldest son of Anthony Brigham, or Francis, the legatee of Mrs. Margaret Hunnis, *alias* Brigham, I do not know. The case was discussed before the legal authorities, who seem to have decided in favour of William Hunnis, for he continued to hold the property.

But another claim was made which was more serious. The Charity Commission Report states that by "the charter of the second year of Elizabeth, which established the present Chapter of Westminster, the Almsmen were incorporated into the collegiate church, and we are therefore precluded from any further inquiry concerning them." But it takes no notice of all the changes, doubts, and difficulties that lay between the foundation and the refoundation. It must be remembered that Elizabeth only took possession of the abbeys, &c., *restored* by Mary, and that the Almshouse, which had been wrested from its original purpose, *had never been restored*, and therefore did not legally come under the category; nor had the Queen the right to take possession of it any more than of the great abbeys that were inhabited by the Earls of Pembroke and Southampton and the Viscount Montague. Nevertheless she did so. A petition preserved among the State Papers gives the details of the next stage in its course fully; it is therefore advisable to print it *in extenso*, as more authoritative than a mere description of it would be:—

To the Right Honourable the Lords Spirituall and Temporall, and the Comons assembled in this present High Court of Parlyment.

In moste humble and lamentable wise complayninge shewen and besechen yor honors and the Comons of this present parlyment yor pore suppliantes, the Quenes Majestics pore subjectes and Almonsmen of her Highnes Almonse House of Westminster, of the foundation of the late King of famous memory, King Henry the Seaventh, the Quenes most noble grandfather that now is, that whereas yor said orators and theire predecessors, Almonsmen of the said house, have always hadd and enjoyed as parcell of theire foundation, by force of yor said late grandfather's letters patentes, amongst other thinges, one Hall wherein they alwaies kept theire comon table, and chappell wherein twyse every daye they made theyre comon prayeres and harde devine service, to which chapelle did also belonge one Bell, with divers other ornaments, and also theire did belonge to the said house one garden for the recreacion and necessary use of the said Almonsmen and likewise there was one prest founde to do the saide devine service and to mynister the sacriments, and also there was theire founde three pore women to dress their meat and wash theire clothes, and also they hadd gownes and badges once in the yere, with firewood and coles, untill nowe of late, that is to saye about fyftene or sixteene yeres laste paste, that one Vincent, then Wardropp of the Beds to the late Kinge of like worthie memory, Henry theighte, pretending a title and intereste to the premises afore recited, as of the gifte or graunte of the same late King Henry theighte, solde and graunted the same to one Nicholas Brigham, who entered into the said Hall, garden, and other the Premises aforementioned, and the same from yor orators helde and deteyned during his life, after whose decesse, upon humble complainte made to the Queen's Majestie by yor poore suppliantes in the firste yere of her grace's raigne, touching the premises, it pleased her highness to appointe Sir Thomas Parry, Knighte, then Treasurer of her Highnes' Householde, to enter into the premises, and to sease the same to her Majesties use, who so did accordinglie, and the same helde to her Highnes' use during his life,* promising yor orators restytution thereof accordinge to the said foundation. Nevertheless so it is, if it maye please yor honors and the comons of this presente parlyment, that sithens the decesse of the said Sir Thomas Parry one Ennys, one of the Quene's Majesty's Chapelle, hath entered into the premises, intruding upon her Highnes' possession, clayming the same by intermarryage of the wife of the said Nicholas Brigham, contrary to righte, equitie, and justice, and to the disherison of the Queene's Highnes and undoing of yor pore orators, havinge nowe lefte them towardes theire reliefe only their poore chambers, and pension of six poundes thirtene shillinges and foure pence a peace by yere, whereas by their said foundacion their lyvinges were withe the said commodyties worthe Tenne poundes by yere to every of them. In consideration whereof, and forasmuch as the said Ennys, not contented with the commodities aforesayd, mynding utterly to expulse yor said poore subjects oute of the said house, and so utterly to undo and outthrowe the said foundacion made and ordeyned of a most charytable zeale by her grace's said dere grandfather for the sustentation of twelve poore men, a Preste, and three weemen for ever, to the glory of Almyghtie God, hath and doth seke, by all the waies and meanes he can devise, to gett and take from yor said Orators the said Hall, wherein the said preste and three women did comonlye lye, with the Chappell and garden to the same belonging, to the great decaye of the said foundacion, if remedy the soner be not provided. It maye therefore please yor honores and the comons of this presente parlyment, the premisses tenderly considered, to call before you the said Ennys, and to examine his title and interest to the premises. But also to call for peruse, see, and vewe the lettres patentes of the said foundacion remayninge with the Dean and Chappiter of Westminster, and theffecte thereof, and certentye of the said tytle beinge opened to yor honores and worships, with the Injurye susteyned by your pore suppliantes. If it may please yor honors and the comons assembled in this present parlyment to restore them to the premises, and that the same maye be established to them and their successors, Almonsmen there, for and towardes the godlye intente of the saide foundacion in suche manor and forme as by the Quene's Majestie's Highnes, yor honors, and the Comons of this Hyghe Corte of Parlyment shall seme meate and convenyent. And yor said pore orators shall dailie praye to Almightie God for the prosperous estates of yor honors and worships long to contynue.

Endorsed "The Queen's Almsmen Byll of Westminster."* A modern hand in pencil adds "Jan 1563. Parliament sitting."

This remarkable petition is but one small illustration of the uncertainty of tenure of church property through Henry's action. One cannot but sympathize with the almsmen, yet it was not Hunnis they should have blamed, for he had a clear legal title, but "Henry the eighth of worthy memory" and the "Queen that nowe is." Only they dared not do that just in plain words.

I have not been able, in the Journal of the House of Commons or elsewhere, to find any notice of a consideration of this petition, or of any steps taken concerning it. But it would seem that the Queen upheld her own action of the first year of her reign, and handed it over to the Chapter of Westminster. Probably, being aware of the justice of the claim of Hunnis on the other hand, she bought him out by offering him some of the extraordinary grants she made him, as "the keeping of her gardens at Greenwich," and "the wheelage and passage of London Bridge," really in the gift of the Corporation of London. She also made him, more congruously, the Master of the Children of the Chapel Royal on the death of Richard Edwards. His work in that office I have treated in these pages in an article on 'William Hunnis, the Dramatist' (March 31st, 1900, p. 410). He was always in poverty, for, with prices rising all around him, he was expected to keep twelve singing boys on 40*l.* a year. In the remarkable "Overseers' Book of the Poor" of St. Margaret's, Westminster, he is always entered as giving nothing, but the noticeable fact in connexion with this petition is that he is always described as "Mr. Hunnis of the Almonry." Whether this implies only that he lived in the neighbourhood to which the building gave its name, or whether, during his lifetime, he was able to lay legal claim to it, I cannot find out; but there ought to be some reference to the counterclaim among the records of Westminster Abbey. It certainly did become part of the possessions of the Abbey, though it was removed, some time since, under the Act for the improvement of Westminster.

Charlotte Carmichael Stopes.

* He died in 1560.

BRATHWAIT'S 'SHEPHERDS' TALES.'

Of the voluminous works of Richard Brathwait, none better merits preservation than the series of pastorals which he called 'The Shepherds' Tales.' Brathwait was perhaps better fitted for this kind of work than any of his contemporaries. The son of a Westmorland squire, and brought up amongst the sights and sounds of rural life, he had all the instincts of a country gentleman, whilst assiduous study at Oxford and an apprenticeship at the Inns of Court gave him the tinge of classical learning and the London polish which add a certain finish to the artless rhymes of his shepherds and shepherdesses. Had the English public ever really cared for pastoral poetry, Brathwait's productions would have taken a high place beside those of his contemporaries, Barnfield and Basse, Browne and Wither; but for some reason which has never been satisfactorily explained—probably from an innate dislike to artificiality—this kind of composition has never been popular in this country, and the poets who have indulged in it have been relegated to the second or third rank. Even the 'Shepherd's Week' of Gay has probably more attractions for folk-lorists than for lovers of poetry. However this may be, the pastorals of Brathwait, notwithstanding the ease with which they were written, and the many touches of poetry that they contain, remained forgotten until they were resuscitated, after an interval of two hundred and fifty years, in the edition of 'Natures Embassie' which was printed for Robert Roberts of Lincoln in 1877. One of the reasons for this neglect may have been the extreme rarity of the works in which they were included. So scarce are they that an accurate account of the various issues will not be found in any bibliographical work with which I am acquainted. A short description of them may therefore be of service in filling up a gap.

The 'Tales' are divided into two parts, the second of which was published before the first. This second part formed an integral portion of the book called 'Natures Embassie,' which was published by Brathwait in 1621. This is a small octavo volume, of which the title and collation are as under:—

"Natvres | Embassie: | *or*, | The Wilde-Mans | Measvres: | *Danced naked by twelue* Satyres, *with* | *sundry others continued in the* | *next Section.* | Wilde men *may dance* wise measures; *Come then ho,* | *Though I be wilde, my* measures *are not so.* | Printed for *Richard Whitaker.* 1621."

This title is contained within a woodcut border, showing a landscape of hills and trees, at the top of which is Pan, seated on a mound and playing on a pipe, and at the bottom a number of naked satyrs dancing in a ring.

Collation:—Pp. [viii] + 264, consisting of—Title-page, as above, verso blank, pp. [i, ii]; 'The Epistle Dedicatorie,' pp. [iii-vi]; Contents, pp. [vii, viii]; 'The Satyres,' pp. 1-56; 'A Conclusive Admonition to the Reader,' p. 57; 'Epicedes or Funerall Elegies,' pp. 58-71; p. [72] blank; Title-page of "The Second Section of Divine and Morall Satyres.....London, Printed for Richard Whitaker. 1621," verso blank, pp. [73, 74]; 'Dedication,' pp. 75, 76; 'The Satyres,' pp. 77-172; Title-page of "The Shepheards Tales.....London, Printed for Richard Whitaker. 1621," verso blank, pp. [173, 174]; 'The Pastoralls,' pp. 175-213; p. [214] blank; Title-page of "Omphale, or, The Inconstant Shepheardesse .....London, Printed for Richard Whitaker. 1621," [215]; 'Dedication,' p. [216]; The Poem, pp. 217-234; 'A Poem describing the leuitie of a woman,' pp. 235 (misprinted 234), 236; Title-page of "His Odes: or, Philomels Teares..... London, Printed for Richard Whitaker. 1621," verso blank, pp. [237-238]; 'Dedication,' verso blank, pp. 239, [240]; 'The Odes,' pp. 241-255; Other Short Poems, pp. 256-263; Errata, &c., p. [264]. The signatures are A—S4 in eights. The following pages are misnumbered, the

correct paging being in brackets: [9] 10; [50] 98; [51] 99; [54] 102; [55] 103; [58] 106; [59] 107; [62] 100; [63] 111; [81 and 82] are misnumbered 79 and 80, although these figures had been previously employed, and not being corrected, this causes an error of two pages throughout sheet G; [174] 172; sheet N begins with 173, which causes another error of two pages; 191, 192 are omitted in the numbering; [234] 232; [235] 234; [239] 237; [241] 245; [242] 246; [243] 247.

The book is dedicated "To the accomplished mirror of true worth, Sr T. H. the elder, Knight, professed fauorer and furtherer of all free-borne studies." In the description of the book in the Huth Library Catalogue, this Sir T. H. is conjecturally identified with Sir Thomas Hawkins; but from a copy of 'Shepherds Tales' in the British Museum, in which the name is printed in full, it is established that this "fauorer of free-borne studies" was Sir Thomas Huet, who was, I presume, the Sir Thomas Hewett who was knighted by King James at Theobalds on December 15th, 1613.

'The Shepheards Tales' has the following heading—

"His Pastoralls are here continued with three other tales: hauing relation to a former part, as yet obscured: and deuided into certaine Pastorall Eglogues, shadowing much delight vnder a rurall subiect."

It is clear from this passage that the pastorals published with 'Natures Embassie' were only the second portion of the tales; but shortly afterwards this "former part" was issued in a brochure, consisting of three small octavo sheets, registered A—C in eights. There was no title-page, and the sheets were evidently meant to be bound up with 'Natures Embassie.' In the Huth Library there is a separate copy, with the title-page [pp. 173, 174] extracted from that work, which was formerly in the possession of Park, Utterson, and Mitford, and it is stated that "no other copy is known"; but this, it will be seen, is an error. I have a copy of 'Natures Embassie' in my own collection which formerly belonged to the well-known bibliophile Thomas Caldecott, and which has the first part of the 'Tales' bound in at the end, and furnished with a manuscript title-page. The collation is as follows: Dedication: "To my worthie and affectionate kinsman Richard Hutton Esquire, Sonne and Heire to the much honoured and sincere dispenser of judgement, Sir Richard Hutton Sergeant at Law, and one of the Iudges of the Common Pleas," pp. [i, ii]; 'The Shepheards Tales, The First Part,' pp. 1–45; 'A Pastorall Palinod,' p. [46]. Sir Richard Hutton, who died in 1639, was a nephew of Thomas Brathwait, Richard's father, and one of the supervisors of his will. Brathwait dedicated one of his early works, 'The Prodigals Teares,' to him.

Apparently the book under the title of 'Natures Embassie' did not sell well, so in 1623 Brathwait cancelled the title-page, and had another printed as under:—

"Shepherds Tales, | Containing | Satyres, | Eglogues, | and | Odes. | By *R. B.* Esquire. | [Printer's device.] London | Printed for *Richard Whitakers* [*sic*] | 1623."

This book is identical with the previous volume, except that the three sheets of the first part of 'The Shepherds Tales' were added to it. In the copy described by J. P. Collier in his 'Bibliographical Account of Early English Literature,' ii. 342, the dedication leaf to Sir Thomas Huet seems also to have been cancelled, and part i. of 'The Shepherd's Tales' bound in after the title-page, but in two copies that are in the British Museum that part is inserted in its proper place before the second part, the original title-page, pp. [173, 174], serving for both parts. This necessarily causes an irregularity in the signatures and pagination. It is in one of these copies that the name of Sir Thomas Huet is printed in full, but a careful examination has revealed no other point of difference.

Notwithstanding the change of title, the sale of the work still seems to have hung fire, and three years afterwards another attempt was made to get rid of the "remainder" sheets. Brathwait probably suspected that the book was waterlogged by the 'Satyres' and 'Odes,' which were of very ordinary merit. He therefore decided to cancel sheets A–M and Q7–84, as well as A1 of Part I., and make a virtually new book of the remainder. This was issued under the following title:—

"The | Shepherds Tales | Reuised and Reuiued. | By *R. B.* Esquire. | *Too true poore Louers doe this proverbe finde,* | *No sooner out of sight than out of minde.* | [Publisher's device.] | London, | Printed for *Robert Bostocke* at the King's head in *Pauls* Church-yard. | 1626."

Collation: — Title-page, as above, verso blank, pp. [i, ii]; a new dedication in six lines of verse, "To his truly knowing and conceiuing Friend M. Richard Lovther," verso blank, pp. [iii, iv]; the Prelude to his 'Shepheards Tales,' pp. [v-vii]; Illustrations upon the Prelude, p. [viii]; 'The Shepheards Tales,' Part I., pp. 1–45; 'A Pastorall Palinod,' p. [46]; Part II., pp. 175 213; p. [214] blank; Title-page to 'Omphale,' p. [215]; 'Dedication,' p. [216]; 'Omphale,' pp. 217-232; 'A poem describing the leuitie of a woman,' pp. 235 (misprinted 234), 236.

It will be seen, therefore, that, in addition to the new title-page and the three leaves of introductory matter, forming a half-sheet, A-A4, the book was made up of the three sheets, A-C, of the first part of 'The Shepherds' Tales,' (with the exception of A1, which contained the dedication to Richard Hutton), and sheets N-Q6, which contained the second part of 'The Shepherds Tales' and the poem of 'Omphale.' This poem was doubtless included because it is mentioned on p. 199 in the second part. Richard Lowther, to whom the reissue was dedicated, was probably the third son of Sir Christopher Lowther, of Lowther Hall in Westmorland.

So far, I believe, only one copy of this reissue is known. It was sold at Sotheby's on June 20th, 1904, and is now in my possession. Though it has suffered some rough usage, it is quite perfect, and is bound in the original panelled vellum wrappers, with the initials "P. C." stamped in gold on each side. The value of the book lies in the fact that it contains a hitherto unknown poem by Brathwait, including some curious "Illustrations," which deserves to be made known, as Milton, in composing his 'L'Allegro,' apparently derived some hints from it. The Prelude runs as follows:—

The *Shepherd* loues, yet so his loue doth seek,
As he seems loth to loue a painted cheeke;
His wench can blush for shame, which may be s'ed
A natiue blush, and not vermilioned.
Shee makes him osier-garlands in her bowre,
And intermingles them with euery flowre
Fresh fragrant Spring affords; which done, with speed
She wreathes them round about her *Shepheards* head.
She smiles to smooth his frowne, and can esple
No obiect worthy loue but in his eye:
Which fixt on her, as hers is fixt on his,
Shewes what th' effect of loue vnited is.
To th' fold they goe, when eu'ning time drawes neere,
Driuing their flocks *before, and †and pins them there:
Hastning on homeward, where the night is spent
In singing Carols, or some merriment,
To passe away long winter euens withall:
‡Great's their content, though their estate be small.
Now in the shades one doth another seeke,
Another euen is spent at *Barly-breake*,
Fox fo the hole, or *Maidens fo the greene*;
For *Masks*, alas, they know not what they meene.
Sometimes they *Gooselins in the ashes make*,
To know thereby what husbands they 're to take;
Or lest that one sport should their humours tire,
Each tells his tale, and roasts a crab by th' fire.
Againe, when feast dayes come, each in aray
Clad as becomes him in his shepheards gray,
Hastes to the *May-pole*, and the time to passe,
The Lasse takes in her Lad, the Lad his Lasse:
Which done, vnto their wassail-cups they hie them,
Yet closely too, lest other Swaines should spie them;
For *Shepheards* loue is bashfull, nor can brooke
That any eye should on their dalliance looke.
Kinde honest *Heardmen*, whose hearts are so pure
From any fained loue or forced lure;
From least adulterate varnish which ours borrow
This day from shop, and 's vanished tomorrow;
From augred smiles, or from a leering eye,
A guga tire, or art-affected dye;
From loue-prouoking powders, or that loue
Which takes her sent from perfume of a gloue;
From hatefull spells, or lust-enforcing charmes,
Which warmes the heart, but all her powers disarmes.
So pure, I say, from these, as their chiefe care
Is to be what they seeme, seeme what they are.
And hence it is, their §*Sleepes* are void of feare,
No dreadful visions to their sight appeare.
Their aimes are not aspiring, to possesse
By an iniurious purchase more or lesse;
Their thoughts are not ambitious, but confin'd
To the proportion of an honest minde;
Their hearts are not inflam'd, but as their fate
Was to be borne low, so they frame their state;
Their health 's their wealth, their broad-spred *Beech* their *Vine*,
Content their Crowne, their shadie shroud their shrine.
It was indeed; but where's those *Shepheards* now
Which made the *Downes* resound and eccho too
With thair eare-charming notes? Where be those Swaines,
Whose layes in beauties praise so chear'd the plaines,
And woolite heards which graz'd upon the vale,
As many times they ceas'd to feed at all;
Such willing eares they to their notes did lend them,
As they would rather starue than not attend them?
Where 's these? Alas, I cannot tell you, I,
I heare some say that they long since did die;
But if not dead, I 'me sure they liue vnknowne,
Or else lie buried in their wenches frowne.
Yes there it is: How can a *Shepheard* ioy
To see himselfe so kinde, and she so coy?
Who would haue thought these Heardmaids could be proud,
Or thus vpon their pantoffles haue stood?
Or which is worse, so their affections vary,
As one they loue, but they another marry?
Briefly, so weake 's their fancie, and so light,
As whom they loue all day, they hate at night:
So as me thinkes I heare these *Swaines* complaine,
And tune their sorrowes to this heauy straine;
"*Too true poore Shepheards doe this prouerbe finde,*
No sooner out a sight than out a minde."
This was not so, when in each flowrie groue
The *Shepheard* toy'd and dallied with his loue;
And plighting troths, confirmed their promise so
With some meane bracelet, or a ring of stroe.
And this they did, and deemd 't sufficient blisse
To seale the bargaine with a shamefast kisse;
Which done, and this was all poore *Swaines* they did,
They left the rest till th' marriage night did bid.
But see the fate of every state, God wot,
(For who knowes anything and knowes it not)
How it is chang'd; which but a while forbeare,
And in these *Shepheards* stories you shall heare:
Where each *Swaine* tells his tale, and doth expresse
The fickle faith of his false *Shepheardesse*.

ILLUSTRATIONS vpon the Prelude to his Shepheards Tales.

In the description of a Shepheards *life, is likewise expressed his taske in folding and vnfolding his sheepe, bringing them to the pin in the Euening, and going before them to their pasture in the Morning.*——*before them: *For* Shepheards *vsed in former times to goe before their sheepe, but now they follow them.* abigeus *quia abigit.*——†and pins them there; *aptly expressed by Seneca in Traged.*

Labour awakes, and euery where
Men enuiron'd are with care,
When the frost doth nip full sore,
Sillie Swaine he opes his doore,
And recounts his heard by head,
Which *unpinn'd*, they goe to feed.

Discoursing afterwards upon a Shepheards *content, he concludes,*‡Great 's their content: *Which the Tragick Poet briefly describeth thus:—*

Safe and glad am I withall,
Though my house it be but small,
And my little field doth yeeld
As much I ope as th' great mans field:
Lowest shrubs the freest are,
Choice content 's a *Shepheards* share.

Prosecuting likewise the homely but happy condition of a Shepheards *state, he concludes,*——§his sleepes are void of feare, *with that sententious moderne Poet:—*

Sweet is the *Shepheards* sleepe, while great ones are
Surpriz'd with broken sleepes, and nightly care;
Meane is his fare, his lodging homely too,
Yet sleepe these *Swaines* more than their masters doe.

W. F. PRIDEAUX.

SWIFT AND LEMUEL GULLIVER.

THE correspondence relating to this subject recalls another coincidence (if it be a coincidence) which I think has escaped the notice of commentators, namely, that several of Gulliver's experiences in Brobdingnag were anticipated by the writer of a somewhat remarkable letter published in a periodical called *The Free-Thinker*. This paper was conducted by Ambrose Phillips, with whom Swift appears to have been on friendly terms prior to his secession from the Whig party. The letter is signed Lindamore, and appears in No. cccxvii., dated April 3rd,

1721. The writer relates that while reading Locke's chapter on the 'Complex Ideas of Substances,' concluding with the twelfth section, "wherein he shows that our faculties of discovery are suited to our state," he became drowsy, and dreamt that he was suddenly endowed with microscopical eyes and intensified organs of sensation :—

"My feet were as large as the cupola of St. Paul's, and my legs were six or seven times the size of its stateliest pillars.....I advanced towards the looking-glass to survey my face, in which, notwithstanding its broken surface, I could perceive my eyes (beneath wide arching shadows) like two spacious lakes";

and among other particulars he mentions that "he was almost stifled with the ordure of the flies hanging (in a manner) like ravens on the walls." On turning to chap. i. part ii. of 'Gulliver's Travels' it will be noticed that the inhabitants of Brobdingnag were compared in size to an ordinary spire-steeple. When the farmer was exhibiting Gulliver to his acquaintance upon a table, as related in chap. ii. the eyes of the persons surveying him appeared like the full moon shining into a chamber at two windows; and the remarks of *The Free-Thinker's* correspondent on the appearance of his face in the looking-glass distinctly recall Gulliver's comment on the farmer's wife suckling her infant. Moreover, the allusion to the flies in the succeeding chapter is still more striking, for they are stated to have been as big as Dunstable larks and to have smelt very offensively. H. Lavers-Smith.

HENRY HARLAND.

A brave, gay spirit has passed with the death of Henry Harland, which occurred last week in Italy. He was only forty-four, and had the promise of his later years to redeem. He was significantly American in many ways, and intensely European by sympathies; born as he was in St. Petersburg, educated in Italy, and domiciled in England. Yet it might be more correct to say that domiciliary he was cosmopolitan. His early work, which was lurid and popular, was under the pseudonym of "Sydney Luska," and obtained a considerable vogue in America. But he found salvation, as he might have put it, after a successful career as Luska, and resolutely and courageously severed himself from his literary past. He was wont to declare that he knew no one of the name of Luska, but had dreamed of one like a bad dream. Thenceforward he lived heroically for art's sake and the sake of his ideals. It was his settled conviction that he could write nothing more important than a short story, and he even went so far as to contemn the long novel. He aimed at short, sparkling flights brilliantly, as is shown by the tales collected in 'Mademoiselle Miss,' 'Grey Roses,' and 'Comedies and Errors.' He was essentially temperamental in his work, and could only handle themes subjectively. His talent was fine, of good savour and fragrance, but small withal. He wrote daintiness as Fragonard painted it, but he added humour to his gift—a humour as gracious and as personal as that of any living humorist. He saw life in perfumes and fair linen, and he shrank from the sordid. Realism shocked him in art; he loved loveliness, and sunlight and fantasy, and the realm of faëry. When it was suggested to him that he should write a long story, he threw up his arms in horror; but he wrote it, and it proved the key to popularity. With 'The Cardinal's Snuff-Box' he mounted to a success which he had never attained either with his artistic *contes* or the novels of the period before he found grace. And then the slightness of his pretty talent began to demonstrate itself, for his succeeding stories were but variations of the same theme. He had known his limitations better than his critics. It should not be forgotten that he was the editor throughout of *The Yellow Book*.

Harland will be remembered by his exquisite accomplishment in a small compass; but he will live in his friends' memories also as a human figure of wonderful attraction. He was gay and blithe; his humour was always generous, and sometimes the most precious nonsense. He sported with his friends, rallied them, sympathized with them, and wept with them in turns. Tears were as near to his eyes as laughter to his lips. He had a grand, compassionate heart, and a faith in the high mission of gaiety. As a talker he was extremely entertaining, and displayed some of the agility of Stevenson's 'Spring-heeled Jack.' Of late years he had ailed, and his characteristic qualities had been no doubt affected. But he has died too soon, in the prime of his accomplishment and his humanity. W.

FANCY TITLES TO REVIEWS.

All good reviewers should read *The Athenæum*, and I therefore hope that the following remonstrance may reach those to whom it is addressed. A most unhappy practice has recently sprung up of prefixing fancy headings to reviews. For some mysterious reason, it is thought that a notice of a 'History of Early Greece' will be more attractive if headed 'In the Days of Agamemnon.' The public persists in demanding 'The Days of Agamemnon,' and when the bookseller reports that no such work is known, indignant reference is made to *The Daily Thunderer* review, and sarcasm is freely indulged in at the bookseller's expense. I submit it is too much to expect that the bookseller, in addition to knowing the titles of the hundred and one books which appear daily, should also know the nicknames with which it pleases reviewers to disguise their identity. Alfred Nutt.

*** We should have thought that even the unintelligent public of to-day would look for the actual title of the volume reviewed, which, we presume, is given either in the body of the review or at the bottom of the page.

Literary Gossip.

Messrs. Macmillan will publish the eagerly expected Life of Lord Randolph Churchill by his son on Tuesday next—not three days later, as was originally proposed.

Messrs. Smith, Elder & Co. have in the press, for publication immediately after the Life just mentioned, a book by Mr. Harold E. Gorst containing the full story of the "Fourth Party." Mr. Gorst has had access to Mr. Winston Churchill's proofs through the kindness of the author and his publishers, as well as to the extensive private correspondence of Sir Henry Drummond Wolff with all the members of the Fourth Party; while he has throughout the story derived first-hand information from his father Sir John Gorst, who also contributes a prefatory note to the volume. The celebrated cartoon of the Fourth Party in *Vanity Fair* forms the frontispiece.

Mr. Watts-Dunton has a poem in 'The Queen's Christmas Carol,' entitled 'Mother and Child in Famine Street,' which is a pendant to one published by him in *The Athenæum* at this season two years ago. We give the first part of the poem, which is one of the most gracious and striking features of the volume :—

I wonder whether Jesus sees and hears,
While, outside Famine Street, the Christmas board
Sparkles and steams in honour of the Lord,
The milk flows thin, my babe, and salt of tears :
I wonder how the Birthday-feast appears
To Him who in the Church is still adored
By sound of organ—Him whose touch restored
The shattered music of the stricken spheres.

Mr. Snead Cox has made considerable progress with the biography of his kinsman Cardinal Vaughan. It will occupy two volumes, and will contain an unsuspected wealth of intimate personal material in letters and diaries of the late Cardinal. Messrs. Constable & Co. will be the publishers.

The letters of the late Earl of Lytton, which Lady Betty Balfour has already got into type, will contain a good deal of interesting matter about the Brownings during their Florentine period. This vivacious record of personal intercourse gains added interest from the obvious influence of Browning, in some moods, over the verse of "Owen Meredith."

Mr. William Henry Wilkins, F.S.A., whose death occurred in London on the 22nd inst., a day before the completion of his forty-fourth year, did some sound historical work in a popular style. Probably his best book was 'The Love of an Uncrowned Queen,' a study of George I.'s unfortunate consort; but his life of Caroline Matilda, Queen of Denmark, and his recently published account of the relations between George IV. and Mrs. Fitzherbert, were also useful contributions to historical knowledge, showing the qualities of careful research, judgment, and clear exposition. Among other work, Wilkins also wrote a biography of Isabel, Lady Burton, and edited the letters written by Lady Anne Barnard from South Africa. He collaborated in several novels, including 'The Green Bay Tree,' written with Mr. Herbert Vivian.

We also regret to notice the death of Mr. Arthur Elam Haigh, an Oxford scholar, whose book on 'The Attic Theatre' (1889) has become something like a standard work. Mr. Haigh was further part author of a commentary on Virgil and an admirable Oxford tutor.

Mr. Randolph Bedford writes from Melbourne :—

"In your review of my book 'The Snare of Strength' (Heinemann) you regard it as my first venture. You reviewed my first novel, 'True Eyes and the Whirlwind' (Duckworth), in 1903 or early in 1904. In error, it was not mentioned on the title-page of my second book."

It is eminently satisfactory to learn that the four extremely important volumes of MS. copies or extracts of Orders, Returns, and Capitulations relating to the American War of Independence, which Messrs. Hodgson discovered when cataloguing the books from the library of the Royal Military College, Sandhurst, and which appeared in the catalogue as lot 193, were "bought in" on behalf of the War Office. They have since been deposited in the library in Pall Mall, together with a few of the early military treatises which also appeared in the

catalogue. The fine and almost complete set of 'Historical Records of the British Army' in this sale realized 44*l.* 10*s.*

A memorial in St. Patrick's Cathedral to the late Provost of Trinity College, Dublin, Dr. George Salmon, was unveiled on Friday last week by the Dean. It consists of two stained-glass windows and a portrait medallion in bronze, the work of Mr. A. Bruce-Joy, an Irish sculptor of repute. In a Latin inscription Dr. Bernard has paid a deserved tribute to Dr. Salmon's many gifts of heart and head. The Provost's memory is also, says the *Daily Express* of Dublin, "to be perpetuated in a little Alpine church, where it will be associated with the names of Lightfoot, Westcott, and Hort."

Messrs. Hutchinson & Co., as publishers for Mr. Charles Garvice, inform us that American editions of his novels are being introduced into this country and offered for sale, and that, as the copyright of all his novels is protected in England, legal proceedings will be taken against sellers of the editions previously mentioned.

We regret to notice the deaths of two promising official antiquaries of the younger school. Mr. F. B. Bickley, formerly of the Manuscripts Department of the British Museum, whose retirement through ill-health was recently noticed in these columns, was the editor of the famous municipal register known as the 'Little Red Book of Bristol,' and had co-operated in numerous antiquarian works. Mr. A. Hughes, who recently retired from the Public Record Office for the same cause, was one of the editors of the scholarly edition of the 'Dialogus de Scaccario' issued by the Clarendon Press, and had co-operated in several articles in *The English Historical Review*, &c. By a sad coincidence, each died within a few hours of the other from the same lingering malady.

The Canadian Archivist and Keeper of Government Records says in his latest report that he has been in correspondence with Mr. Fitzroy Fenwick, of Thirlestaine House, regarding a collection of original papers in his hands relating to the last years of the French *régime*, and the first years of British rule in Canada. The papers are held in trust, and their disposal is subject to the decision of the Court of Chancery. When in England the Archivist inspected the documents, and found six volumes of original papers in French and five or six in English of a later date. The first volume contained over one hundred letters signed by the Marquis de Montcalm between 1757 and 1759, and three entirely in his handwriting. In the second there were about one hundred letters of the Marquis de Vaudreuil, and several letters of the Intendant Bigot. The third volume contains ninety letters of the Chevalier de Lévis, with several by Bougainville. In the fifth volume there are letters of Louis XV. and others. There was a volume containing a journal of the Hudson's Bay Company which should be of public interest. Lord Strathcona arranged for an examination of the records of the Hudson's Bay Company in Lime Street, and has also completed arrangements whereby the papers of the Marquess of Townshend may be examined. An important letter (1656) of Father Ignace regarding Acadia is printed by the Archivist from a photographic copy of the original in the archives of the Propaganda, Rome.

Mr. Thomas Verrinder closes his working career this week; he has been librarian of the Grosvenor Gallery Library for twenty-two years.

The death is announced of Mr. Duncan Macnab, for many years a representative and partner in the firm of Messrs. John Menzies & Co., of Edinburgh. Mr. John Menzies started in Princes Street, in the retail line, but gained some important London agencies, such as *Punch*, *The Cornhill Magazine*, and others. Mr. Macnab, who was in his seventy-fifth year, helped—along with the late Mr. Innes, and Mr. MacKenzie, who is still active—in the development of the business.

The death is also announced on December 21st of Dr. James Stewart, Principal of Lovedale College, South Africa, who was with Mrs. Livingstone when she died at Shupanga, on the Zambesi, and with her husband on the Shire river and at Lake Nyassa. James Stewart was born on February 14th, 1831, and was educated at the Universities of St. Andrews and Edinburgh. He went to Lovedale in 1866. A volume, with fifty views from photographs, was published in 1894, with an introduction by Dr. Stewart, entitled 'Lovedale, South Africa,' describing the theological, industrial, scientific sides of the mission.

The interesting paper on the subject of Canning's famous "Rhyming Despatch" recently read by Sir Harry Poland before the Royal Historical Society has been printed, and will be issued in the *Transactions* of the Society. The completeness of the author's proofs, the amazing blunders of previous writers, and the dramatic discovery and exhibition of the original dispatches from the private collection of Col. Josceline Bagot have aroused considerable interest in diplomatic and literary circles. It is greatly to be hoped that the owner of the originals of these oft misquoted documents may see his way to bestow a further benefaction on historical students by depositing the originals in the British Museum.

The death is reported of M. Elie Cabrol, a literary man of many accomplishments. His most popular work was a 'Voyage en Grèce,' which enjoyed a great success; he was also a poet, and wrote several dramas in verse.—M. Amédée Pigeon, under whom the German Emperor studied at the University at Bonn, is also dead. He was the author of an interesting volume, 'L'Allemagne de M. de Bismarck,' as well as a volume of poetry, 'Les Deux Amours,' and two novels; in addition he wrote a series of studies on German and English art for the *Gazette des Beaux-Arts*. M. Pigeon was born in 1851.—We notice, further, the death of M. Marius Roux, a well-known Paris writer associated with the *Petit Journal*.

M. Gustave Simon has been appointed at a "conseil de famille" to succeed the late Paul Meurice, the literary executor of Victor Hugo. M. Simon, who is the eldest son of Jules Simon, has been assisting Meurice during the last seven or eight months in the national edition of Hugo's works. Although this edition was begun three years ago, only three volumes have up to the present appeared; but a fourth is due on January 15th. The edition will require, it is expected, about forty volumes, and will include a great mass of unpublished documents. M. Simon will be associated in the remainder of his task with M. Georges Hugo, grandson of the poet.

The annual prizes at the disposition of the Paris Société des Gens de Lettres were announced last week. The first prize of the Fondation Chauchard, of the value of 3,000fr., has been awarded to M. Jean Reibrach; and six other prizes of the same origin (two of 1,000fr. each and four of 500fr.) have been awarded respectively to M. Camille Vergniol, Madame Jean Pommerol, M. Edmond Lepelletier, Madame Gavin-Cassal, M. Alph. Labitte, and Madame Leroy. The two Prix Balzac have been given to M. Rémy Saint-Maurice (1,000fr.) and M. Georges Grison; that offered by the President of the French Republic (500fr.) goes to Madame Brada; that of the Conseil Municipal (500fr.) to M. Adolphe Rossay; and the Prix Petit-Bourg (1,000fr.) to M. Victor du Bled.

One of the most distinguished Belgian authors has passed away in Reimond Stijns, whose death, in his fifty-sixth year, is announced from Brussels. Among his best-known works are 'Broodnijd,' 'Sprokkelingen,' and 'Ruwe Liefde,' the last dramatized by Edmond Roelandt.

The eminent Orientalist Friedrich von Spiegel, whose death took place recently at Munich, did much to further the knowledge of Oriental philology and literature in Germany, and his scholarly investigations opened up many new branches of study. He was for many years professor at the University of Erlangen.

The death is announced from Turin of Romualdo Bobba, Professor of Philosophy and History at the University of that town, and author of several valuable works.

The Parliamentary Papers of the most general interest to our readers this week are Reports from University Colleges, 1905 (1*s.*); and Secondary Education, Scotland, Report for 1905 (4*d.*).

SCIENCE

OUR LIBRARY TABLE.

Extinct Animals. By E. Ray Lankester, F.R.S. (Constable & Co.)—The Director of the Natural History Branch of the British Museum has provided in this work a most delightful introduction to the study of fossils. It is not a technical treatise, not even an elementary text-book, but simply a volume of pleasant reading about some of the fossil treasures of the Museum, with a popular exposition of the lessons which they teach. It represents, in fact, a course of lectures which Prof. Lankester delivered at the Royal Institution during the Christmas holidays of 1903-4; but though addressed primarily to a

juvenile auditory, they were lectures which—like so many of the Christmas courses in Albemarle Street—contained much to interest those of mature years. It is a great thing, and a most useful thing, to get a master of a science to expound its leading principles in such a way that the outsider may understand him, and this simplification has been effected with marked success in the volume under review. Such is the care with which the stumbling-block of technical terms has been removed from the path of the beginner, that the very word "palæontology"—though this is the subject of the book—is never used by the author. The scientific names of the fossils are, of course, unavoidable.

Any one unversed in natural science will probably be not a little startled on reading here for the first time an account of some of the recent discoveries in the world of fossils. Take, for instance, the story of the pedigree of the elephant. The cover of the book is ornamented with a gilt figure which looks rather like the head of an elephant that has somehow got too many tusks and not enough trunk! As a matter of fact it represents, in a restored form, the head of a marvellous mammal unearthed from its resting-place in the Miocene deposits of Southern France—a long-jawed, four-tusked mastodon, which has come to be known nowadays as *Tetrabelodon angustidens*. The fossil shows one pair of tusks, bent downwards, in the upper jaw, and a pair of procumbent incisors, or short tusks, in the lower jaw; but about the trunk of this very ancient elephantine creature the fossil is of course silent. Prof. Lankester, from a study of the fossil some years ago, came to the conclusion that it probably had a short trunk-like organ which, instead of hanging down, like the pendulous proboscis of the later elephants, rested horizontally on the elongated lower jaw, fitting in between the two upper tusks. This was, in truth, an elongated prehensile upper lip, and seems to have been the forerunner of the true elephantine trunk. An original drawing gives a notion of the probable appearance of Tetrabelodon in the flesh. But the history of the elephant is carried many steps further back by the remarkable fossils discovered in recent years by Dr. Andrews and Mr. Beadnell, in the Eocene deposits of the Fayum district in Western Egypt, and known as Palæomastodon and Meritherium, the latter representing a very early ancestral type, a rather pig-like animal, yet foreshadowing in many ways the elephant to be. Those who have not had an opportunity of consulting Dr. Andrews's valuable papers will do well to read the fascinating story of the ancestry of the elephant as told in these lectures.

To realize the gradual evolution of the different kinds of animal life, as revealed by the geological record, needs an extension of our ordinary notions of time as applied to the earth's history, which it is by no means easy for the student to acquire :—

> "The difficulty in this study of extinct animals and in the geology connected with it is to think of long enough lapses of time. If you look at that clock you cannot see the hand moving, and yet it is moving."

This excellent illustration must have appealed forcibly to the young people in the lecture-room, and prepared them for very generous estimates of geological time. The lecturer certainly cannot be said to have erred on the side of parsimony in this respect if he referred to the Eocene rocks of Bognor as "deposited some thousand million years ago"!

It is explained in a modest preface that the work "does not profess to give more than a peep at the strange and wonderful history of extinct animals." The peep, however, is so attractive that it will indeed be strange if it fails to lead many a reader to a fuller view of the subject. This is naturally what the author desires :—

> "The whole art of education consists in exciting the desire to know. By showing something wonderful, mysterious, astonishing, and marvellous, dug from the earth beneath our feet, we may awaken the desire to understand and learn more about that thing."

Such surely must be the desire of any intelligent person who reads in this volume about the vanished forms of past ages—the giant sloths and armadilloes of South America, the huge marsupials of Australia, the great wingless birds of New Zealand, the gigantic reptiles of the Jurassic rocks, or the quaint fishes and fish-like forms which characterize the Old Red Sandstone. By the way, it was this last group of fossils that formed the subject of some of Prof. Lankester's earliest researches, far back in the sixties.

A notable feature of the book is the profusion, not less than the interest, of its illustrations. Many of these are reproductions of photographs taken expressly for the lectures from specimens in the British Museum. But good as the illustrations are, the real specimens are naturally far better; and it may be safely predicted that the publication of this volume will send many visitors to the Cromwell Road Museum in order that they may see, in the galleries of Geology and Zoology, examples of those extinct animals and their living representatives which Prof. Lankester has described with a masterly hand in these pleasant pages.

Elementary Experimental Science. By W. Mayhowe Heller and Edwin G. Ingold. (Blackie.)—The number of text-books that have appeared lately on elementary science affords a gratifying indication of the increasing interest which teachers are taking in this important branch of education. Messrs. Heller and Ingold's little volume is an excellent example of its class; for the main portion there can be nothing but praise, but attention must be drawn to a dangerous tendency to apply the authors' educational methods to subjects in which they can do nothing but harm. The authors are devoted adherents to the "heuristic" religion of which Prof. Armstrong is the high priest. Though we may be unable to join whole-heartedly in the hymn of praise which they raise to their master, we readily acknowledge the valuable services which the Professor has rendered to scientific education. But the heuristic method, like everything else, has its limitations. Prof. Armstrong is a chemist, and fifteen years ago chemistry, probably by reason of its obvious commercial application, was indisputably the worst-taught science; unintelligent "test-tubing" according to analytical tables was the prevalent mode of instruction. In such conditions the heuristic principle that a pupil should investigate facts for himself, instead of accepting blindly a statement of them from his teacher, came as a welcome relief. In the teaching of other sciences, such as physics or physiology, when free from the malign influence of examinations, such methods were already in vogue; the new principle might do good, and could do no harm. But the enthusiasm of the reformers has carried them too far. Moderate "heuristicism" is admirable in experimental science, but in sciences which are not of that character its influence must be disastrous; its application in the present volume to arithmetic and geometry cannot be commended. The authors wish the pupil to prove for himself the law of addition of decimals by measuring lines representing the quantities and their sum. Now, that "one and one make two" is not an experimental fact; it is a deduction from the definition of "one" and "two"; to attempt to prove it experimentally is to give a wholly erroneous idea of reasoning processes. (Some observation is required to prove that one inch plus one inch makes two inches, but the result is of so obvious a character that to point it out to a child would be to insist on needless subtleties.) Again, in geometry the pupil is directed to prove by actual measurement the constancy of the ratio of the diameter to the circumference of a circle. If this proposition is made of geometrical circles, it cannot be proved by measurement of actual circles; if it is made of actual circular bodies, it is only approximately true. In any case, to suggest that it can be proved by the measurement of four or five circles is to inculcate false ideas of induction. Of course, the pupil cannot be supposed at this stage capable of proving the proposition geometrically for himself; he must accept it, as he accepts historical truths, from his teacher, and satisfy himself by measurement that it is at least not contrary to experience. The sole value of instruction in elementary science lies in the teaching of sound methods of reasoning; such faults as we have pointed out confirm the worst and most popular of logical fallacies. The authors insist strongly in their introduction upon the value of scientific education as a means towards social and political progress; but the most fruitful source of political error is inadequate induction.

There is another danger in treating inductively subjects which are by nature deductive: it is liable to discourage children whose cast of mind is deductive. The inductive mind is far commoner; to most people to "see with their own eyes" is far more conclusive than to read a proposition of Euclid; but the deductive, or mathematical, mind is just as useful, and, being rarer, should have every inducement to develope.

Even in the experimental sciences the heuristic method requires careful handling. The pupil must not be led to believe that the few simple experiments he has performed have really proved the proposition; they have but yielded some confirmation of a theorem suggested by the teacher. Care must be taken to avoid Bacon's mistaken view that scientific discoveries are made by more or less random experiments or observations subsequently co-ordinated by inductive reasoning. In most cases induction merely confirms hypotheses suggested by deduction. But in the hands of a capable teacher this little volume may do excellent service. The experiments are well chosen, well described, well illustrated, and may be performed with the simplest apparatus; there are constant references to the bearing of the phenomena investigated upon the problems of ordinary life. The lessons of handiness, neatness, and accuracy taught by such simple means are invaluable; and we trust that books of this class will have a wide circulation among elementary teachers.

British Fisheries, their Administration and their Problems: a Short Account of the Origin and Growth of British Sea-Fishery Authorities and Regulations. By James Johnstone. (Williams & Norgate.)—The object of this work is to provide information on our sea-fisheries for those "whose public duties compel them to give some attention to the subject," as well as for the general student. Part i. gives a very useful summary of the development of modern legislation on our fisheries since 1863. Part ii. gives a short account of fundamental facts of marine natural history and of the special problems which confront modern fishery authorities. As Mr. Johnstone says, experimental legislation has been the rule in the past. That this

> "should have failed is due to obvious causes, and one has to admit that for the mass of obsolete, futile, and injurious fishery laws both the fisherman and the administrator are to blame."

It is evident that Mr. Johnstone has given much attention to this part of his subject, and we do not envy the task of any one who takes up his challenge to verify his statements, by consulting "any library containing a set of the Parliamentary Papers

published during the last forty years." What has rendered of no effect so much of our fishery legislation and other legislation is "compromise." A good Bill is proposed, objections are made, and are accepted to "save it," when in nine cases out of ten it would have been better to drop it altogether. To our intricate and bewildering network of fishery legislation Mr. Johnstone's book is much the best guide with which we are acquainted. In Part ii. he deals with 'The Life Histories of Fishes,' 'Metabolism in the Sea,' 'Fishery Statistics,' 'Marine Pisciculture,' 'Destruction of Immature Fish,' &c., in short but interesting and well-written chapters, made additionally valuable by references to the latest works on each subject. Marine fish culture in Europe seems to have no conspicuous success to point to, but there can be no question as to the national benefit derived from such work in America, which is at least encouraging for us. Mr. Johnstone's book has a good index.

SOCIETIES.

BRITISH ARCHÆOLOGICAL ASSOCIATION.—*Dec.* 20.—Mr. R. H. Forster, Hon. Treasurer, in the chair.—A paper was read by Mr. C. H. Compton on the history of the Abbey of Arbroath, situated some seventeen miles east of Dundee. The remains of the abbey have recently been acquired by H.M. Commissioners of Works, to be preserved for the use of the public. The abbey was founded in 1178 by King William the Lion, who largely endowed it; and at his death, in 1214, he was buried before the high altar of the abbey church. The abbey was colonized by Benedictine monks from Kelso, Reginald, one of them, becoming the first abbot. Owing to the exposed situation of the abbey on the shore of the German Ocean, and the unsettled state of the Scottish government during the twelfth, thirteenth, and fourteenth centuries, it was subject to the fury of the elements and to the vicissitudes of the wars with England and internal feuds, including the dispute between the Ogilvies and the Lindsays, which ended in the subjection of the latter in 1350. In 1240 litigation arose between William de Ros and the abbot concerning the advowson of the church of Haltwisel, which ended in 1329 in favour of the abbot. It was at this abbey that Robert Bruce in 1317 received the messengers from the two cardinals sent by Pope John XXII. after the battle of Bannockburn, commanding a truce for two years under pain of excommunication, with sealed letters addressed to Robert Bruce, "Governing in Scotland," to which he made the spirited reply refusing his consent so long as the Pope and his legates, under English influence, withheld from him the title of king. It was here also that Bruce convened a Parliament of the nobility of Scotland in 1320, when they framed their remonstrance to Pope John on account of the hardships which Scotland was suffering from the anathemas of his Holiness and the invasions of Edward I. In 1523 David Beatoun succeeded his uncle James Beatoun as Abbot of Arbroath. The abbot and convent also appear in Queen Mary's reign on several occasions as supporters of her claims. The act of annexation in 1587 attached the temporalities of the abbey to the Crown. John, Lord Hamilton, commendator of the abbey, who was created Marquess of Hamilton, remained in possession until April 17th, 1599, when he resigned the abbey into the hands of the king, who confirmed the same to his eldest son James Hamilton. On July 6th, 1606, the king and Parliament dissolved all the temporalities of the abbey, and created them into a temporal lordship in favour of James, with the title of a lay lord of Parliament, and the Act also provided that the memory of the abbey should be extinguished.

ROYAL NUMISMATIC.—*Dec.* 21.—Sir John Evans, President, in the chair.—Miss Edith C. Clarke and Mr. Percy J. D. Baldwin were elected Fellows.—Mr. T. Bliss exhibited a pattern half-crown of the Commonwealth, dated 1651, the work of Ramage; and proofs in silver of the gun-money crown and half-crown of 1690 of James II.—Mr. F. G. Hilton Price showed a rose-noble of Edward IV. with mint-mark a crown, and reading HIBAT for IBAT.—Mr. W. C. Boyd exhibited a base denarius of Carausius, reading on the reverse, apparently, ROM . ET . AVG, and with figure holding sceptre and patera; and a sestertius of Augustus struck *c.* B.C. 10, and countermarked with the head of Vespasian and a figure holding a wreath. These counter-marks are probably of Alexandria.—Mr. F. A. Walters showed an angel of Henry VII. of the first coinage with mint-mark a rose, three ropes from the stern of the ship, and reading DNS. HIB.—Mr. Percy Webb read a paper on the coinage of Allectus. Having given some particulars of the little-known history of this Romano-British emperor, the writer proceeded to discuss the classification of his coins, which are of gold and copper, the latter sometimes washed with silver, and which he attributed to the mints of London and Colchester. The gold coins are of London only. At each mint the different issues were distinguished by a series of letters placed on the reverses, which in some cases are difficult of interpretation. The paper was accompanied by a description of the coins, arranged, where possible, under the mints. Of the London mint there were 89 types or varieties of types, and of Colchester 91. In compiling this list Mr. Webb had consulted the public collections in London, Oxford, Glasgow, Paris, &c., and many private ones.—Mr. W. Wroth communicated a paper on select Greek coins in the British Museum, amongst which he described some interesting pieces of early date of the towns of Scione, in Macedon, and Ænus, in Thrace. The most remarkable piece lately acquired for the national collection is a drachm of Atarneus, in Mysia, having the head of Apollo on the obverse and a coiled serpent on the reverse. It has been suggested that the serpent may be a *type parlant* of Drakon, who commanded the garrison after its capture by the Spartans in B.C. 397; but Mr. Wroth was not disposed to accept this interpretation, as the same type occurs on coins of Atarneus of a considerably later date. He therefore suggested that it was the badge or arms of the town.

ZOOLOGICAL.—*Dec.* 12.—Mr. Howard Saunders, V.P., in the chair.—The Secretary read a report on the additions to the menagerie during November, and exhibited a coloured print (published by R. Ackermann in July, 1812) of Polito's Royal Menagerie at Exeter 'Change, London.—Mr. A. H. Cocks exhibited twelve enlarged photographs of whales taken by him at the Finwhaling factories in East Finmarken in 1883-9. The species represented were *Megaptera longimana*, *Balænoptera sibbaldii*, *B. musculus*, and *B. borealis*.—Mr. G. P. Mudge exhibited and made remarks upon a dog fish with an apparently abnormal disposition of the digestive viscera, and an earthworm with bifid tail.—Mr. H. B. Fantham exhibited and made remarks upon a new Hæmosporidian parasite from the blood of a white rat.—Mr. Oldfield Thomas exhibited the tail-vertebræ of a dormouse of the genus Eliomys, which showed the phenomenon (hitherto unrecorded among mammalia) of the regeneration of a bony structure in case of accident. The caudal vertebra, in this case the twelfth, which had been originally broken across, had grown out into a slender styliform appendix, 15mm. in length, and rather less than 1mm. in diameter, the normal vertebræ of this part of the tail measuring about 6 by 2mm. On further search two other specimens exhibiting the same structure had been found, and it appeared therefore that dormice, like lizards, were able partly to regenerate their tails, when these important balancing-organs got accidentally broken.—Dr. W. G. Ridewood exhibited microscopic sections of the skeletal tube found in the restored tail of one of the dormice (Graphiurus) exhibited by Mr. Thomas. He also exhibited, by way of contrast, slides of the skeleton of the restored tail of an iguana lizard.—A paper was read from Prof. J. E. Duerden, of the Rhodes University College, Grahamstown, Cape Colony, giving an account of his observations and experiments on the habits and reactions of crabs bearing sea-anemones in their claws.—A communication from Capt. F. Wall contained notes on a large collection of snakes made by Mr. Alan Owston in Japan and the Loo Choo Islands.—Mr. H. R. Hogg read a paper on a collection of South Australian spiders of the family Lycosidæ contained in the Museum at Adelaide. He stated that this was one of the most widely distributed families of Arachnida, but that, except in size, the many forms varied but very little in general characteristics from the type species found in Italy and Spain. Thirteen species were remarked upon, ten being described as new.—Mr. Oldfield Thomas read a paper on a collection of mammals which had been obtained by Col. A. C. Bailward during a shooting trip through Persia and Armenia during the past summer, and which had now been presented to the National Museum. The specimens had been trapped and prepared by Mr. R. B. Woosnam, who accompanied Col. Bailward. Thirty-one species were enumerated, and special attention was drawn to the discovery of Calomyscus, a primitive Murine, the only ally of which, amongst recent forms, was the N. American Peromyscus. The following novelties were described: *Calomyscus bailwardi*, g. et sp. nn., teeth as in Peromyscus; tail long, heavily pencilled; ears very large; colour rich sandy buff above, white below; *Pipistrellus aladdin*, sp. n., a very small species, allied to *P. nanus* and *P. mimus*; small anterior premolar in the tooth-row; colour pale; *Ellobius woosnami*, sp. n., colour as in *E. lutescens*; teeth of much simpler pattern, the last molar, above and below, nearly as simple as in *E. talpinus*.—A communication from Dr. Alfred Dugès described a new Mexican snake.—Mr. Leonard Doncaster contributed a paper on the colour-variation of the beetle *Gonioctena variabilis*. The material on which the paper was based was collected almost entirely at Granada.—Mr. F. E. Beddard contributed two papers describing two new species of worms: one a Pontodrilus from the shores of the Red Sea, and the other an Enchytræid of the genus Henlea from India, which was destructive to the eggs of the locust.—A paper was read from Dr. J. G. de Man, in which he described two species of decapod Crustacea, a crab and a prawn, collected by Dr. R. Hanitsch, of Singapore, from a small artificial fresh-water pool on Christmas Island. The interest of their occurrence lies in the fact that previous to the construction of the reservoir, a few years ago, there seems to have been no possible habitat for these animals on the island, and they must have been introduced since that time, perhaps by migration from the sea. The crab was referred to *Ptychognathus pusillus*, a species described by Heller from the Nicobar Islands forty years ago and not since found. The prawn was made the type of a new variety of *Palæmon lar*, both the variety and the typical form having a wide distribution in countries bordering the Indian Ocean.—Mr. R. Staples-Browne contributed a paper containing the results of experiments he had made in connexion with the heredity of webbed feet in pigeons.—Mr. Cecil Warburton read a paper, prepared by himself and Mr. N. D. F. Pearce, on new and rare British Oribatidæ. Eleven species were remarked upon, of which seven were described as new to science, and two were recorded for the first time as being British. The nymph of *Serrarius microcephalus* was described for the first time, and it was pointed out that *Gustavia sol* of Kramer was a nymph of an unknown species of Serrarius.

METEOROLOGICAL.—*Dec.* 20.—Mr. Richard Bentley, President, in the chair.—Mr. G. C. Simpson gave an interesting account of his 'Attempt to fly Kites for Meteorological Purposes from the Mission Ship attached to a Deep-Sea Fishing Fleet in the North Sea.' These observations, which were made in July and August last, were carried out on behalf of the joint Kite Committee of the Royal Meteorological Society and of the British Association. By the kindness of the Royal National Mission to Deep-Sea Fishermen, the kites were flown from the deck of the mission ship Queen Alexandra, attached to the Red Cross Fleet. Owing to the vessel being almost continuously employed in trawling, the opportunities for flying kites were very limited; nevertheless Mr. Simpson was able to secure eight ascents during the time he was on board the vessel, and he now gave the results obtained. The greatest height reached was 5,800 ft.—Mr. C. J. P. Cave described his method of flying kites in Barbados in April and May last year; and Mr. W. H. Dines, who had examined the records, said that the humidity traces show generally a value of about 60 per cent at the surface, rising to 80-90 per cent at heights from 1,000 to 2,000 ft., and then falling off again in some cases to 50 per cent or less as the height increased. These values are lower than might have been expected over a tropical ocean. The increase is of the ordinary kind, but the maximum value occurs at a far lower elevation than is the case in Europe. It is probable that the relative humidity forms an extremely accurate index to the vertical circulation, a low humidity indicating a descending current of air, and so it may be inferred that there is some settling down of the atmosphere over the region of the smaller West Indian islands in April and May.—The other papers read were 'Temperature Observations during the Partial Solar Eclipse, August 30, 1905,' by Mr. W. H. Dines; 'Comparison between Glaisher's Factors and Ferrel's Psychrometric Formula,' by Mr. J. R. Sutton; and 'A Rapid Method of finding the Elastic Force of Aqueous Vapour, &c., from Dry and Wet Bulb Thermometer Readings,' by Dr. John Ball.

ANTHROPOLOGICAL INSTITUTE.—*Dec.* 19.—Prof. W. Gowland, President, in the chair.—Mr. S. Hazzledine Warren read a paper on 'The Origin of Eolithic Flints from Natural Causes.' Mr. Warren classified eoliths as follows: (1) flints with battered surfaces formed by prolonged concussions; (2) flints with flaked surfaces formed by sharp percussions

(3) flints with chipped edges formed by (*a*) indiscriminate battering, (*b*) perpendicular pressure. The possible causes of the production of eoliths were considered by Mr. Warren to be: (*a*) human agency; (*b*) wave action; (*c*) water abrasion by streams, rivers, floods; (*d*) soil abrasion by the pressure and movement of soil-creep and foundering; (*e*) the drag of ice; and (*f*) wear and tear on the surface of the ground. The eoliths of the first class, as defined above, may obviously be due to water abrasion. Those of the second class bear evidences of percussion-flaking, acting along the lines of least resistance, but show no control-working upon a definite design. It is concluded that these forms, together with those having indiscriminately battered edges, are likewise due to water abrasion. It is noteworthy that these classes are characteristic of river gravels of various ages, and may be reproduced by artificial rolling. The flints with definitely pressure-chipped edges include the typical "plateau implements" of Sir J. Prestwich. The chief forms are a general chipped edge, and the notch, either single or in various combinations, such as the double notch with intervening point. It is found by experiment that these are the forms produced by the fortuitous pressure of one flint against another. The angle of chipping and the type of the fractures are also identical in the case of the experimental productions and the plateau flints. These pressure-chipped eoliths are characteristic of hill-drifts which have suffered from the movement of soil-creep and foundering, and it is concluded that this is the cause of the chipped edges. This process is named "soil abrasion" in contradistinction to water abrasion. Collateral evidence of these differential soil movements under pressure is furnished by the frequent association with the eoliths of the hill-drifts of flints with surfaces striated in all directions. Subsidiary causes of the pressure-chipped eoliths, or those which have operated in certain special cases, are the drag of ice and wear and tear on the surface of the ground, including the impact of the hoofs of animals.

Institution of Civil Engineers.—*Dec.* 19.—Sir Alexander Binnie, President, in the chair.—The paper read was 'Heat-Economy in Factories,' by Mr. H. A. Mavor.

Historical. — *Dec.* 14.—The Rev. W. Hunt, President, in the chair.—The following were elected Fellows: R. Bagwell, G. Bethell, the Rev. F. H. Dudden, and E. Hartley.—The following were admitted as subscribing libraries: Otago University and Vassar College.—A paper was read by Mr. J. F. Chance on 'The Northern Policy of George I.,' based upon the author's researches in the Foreign State Papers, some of which have been already published from time to time in *The English Historical Review*.—A discussion followed, in which the President and Messrs. Mahaffy, Skrine, and Browning took part.

MEETINGS NEXT WEEK.

Mon. London Institution, 4.—'Our Atmosphere and its Wonders,' Lecture I., Prof. V. B. Lewes. (Juvenile Lecture.)
Tues. Royal Institution, 3.—'Astronomy,' Lecture III., Prof. H. H. Turner. (Juvenile Lecture.)
Wed. London Institution, 4.—'Our Atmosphere and its Wonders,' Lecture II., Prof. V. B. Lewes. (Juvenile Lecture.)
Thurs. Royal Institution, 3.—'Astronomy,' Lecture IV., Prof. H. H. Turner. (Juvenile Lecture.)
Fri. London Institution, 4.—'Our Atmosphere and its Wonders,' Lecture III., Prof. V. B. Lewes. (Juvenile Lecture.)
— Aristotelian, 8.—'Is the Conception of "Good" Undefinable?' Mr. J. Solomon.
— Geologists' Association, 8.—'On the Geology of the Country around the Sogne Fjord and the Hardanger Fjord, Norway,' Mr. H. W. Monckton.
Sat. Royal Institution, 3.—'Astronomy,' Lecture V., Prof. H. H. Turner. (Juvenile Lecture.)

Science Gossip.

Under the title of 'The Birds of Middlesex' there was published some forty years ago a small book by Mr. J. E. Harting, which was the first attempt at a county avifauna ever made. Since its publication the author has been collecting new material, and he has now prepared an enlarged edition, entirely rewritten. It will be issued by Mr. Unwin in the spring. The book records the changes which have taken place in the bird-life of the county by reason of the extension of railways, the enclosure of commons and washes, and the continuous advance of building operations. It also contains numerous notes and illustrations of a topographical and antiquarian character.

Mr. Mee's card calendar *The Heavens at a Glance* has been published (Llanishen, Cardiff) for 1906, reaching its tenth year, and further improvements have greatly increased its utility as a handy guide to the stellar heavens through the year.

The earth will be in perihelion about 4 o'clock in the afternoon (Greenwich time) on the 3rd prox. The moon will be full at 4h. 37m. on the afternoon of the 10th, and new at 5h. 9m. on that of the 24th. She will be in perigee about 6 o'clock on the morning of the 20th. The planet Mercury will be at greatest western elongation from the sun on the 5th, and visible in the morning until about the 23rd, moving in an easterly direction through the constellation Sagittarius. Venus moves during next month from Sagittarius into Capricornus, rising later each morning. Mars sets earlier each evening, diminishing in brightness; he passes from Aquarius into Pisces about the middle of next month. Jupiter is in Taurus, nearly due south of the Pleiades; he will be on the meridian at 8 o'clock in the evening on the 15th prox., and at 7 o'clock on the 30th. Saturn is situated not far to the south-west of Mars, in the constellation Aquarius; he will be very near the moon on the 26th prox.

The Lalande Prize of the French Academy has this year been awarded to Prof. W. H. Pickering for his discovery of two new satellites (the ninth and tenth) of the planet Saturn; the Valz Prize to M. Giacobini for his numerous cometary discoveries; the G. de Pontécoulant Prize to Prof. Kapteyn, of Groningen, for his important cosmical investigations; and the Damoiseau Prize to M. Fayet for those on cometary orbits, a prize on the Guzman foundation being also given to M. Fabry for his work on the same subject.

Prof. W. J. Hussey, of the Lick Observatory, has been appointed Professor of Astronomy at the Michigan University, and Director of the Detroit Observatory, Ann Arbor, which has recently passed its jubilee, having been founded in 1854.

The comet which was photographed at the La Plata Observatory was thought to be a return, not of the comet of 1884, but of one photographically discovered by Prof. Barnard on October 12th, 1892, and calculated to be moving in an elliptic orbit of short period, about six or seven years in length; but it escaped observation in 1899. Up to the present no confirmation has been received of the alleged rediscovery. The comet stated to have been photographically discovered (by Mr. Slipher on November 29th) at Mr. Lowell's observatory, in Arizona, has since been looked for without success—by Prof. Wolf at Heidelberg photographically, and by Prof. Hartwig at Bamberg optically—so that it must be a very faint object.

FINE ARTS

British Portrait Painters and Engravers of the Eighteenth Century (Kneller to Reynolds). With Introductory Essay and Biographical Notes by Edmund Gosse. (Goupil & Co.; Manzi, Joyant & Co.)

This is the first of two volumes in which the firm of Goupil aim at presenting a sumptuously illustrated record of British portraiture during the eighteenth century. The volume still to appear will treat of the period from Gainsborough to Lawrence. The two, though sold separately, are to be looked upon as parts of the same work, since the biographical and critical notices of the engravers of both periods will appear in the second volume.

The period now under consideration witnessed the gradual elimination or assimilation of foreign influences by the rise of a national school and its swift flame-progress to maturity. The course of its like development is admirably displayed in the hundred plates contained in the present volume. We may there see how that "Vandyke-like elegance," which, though somewhat coarsened and materialized in type, is yet to be found in the work of Sir Godfrey Kneller, gave place to the comparatively untutored sincerity of Richardson and Hudson, and above all of Hogarth. We may see how this sincerity gained grace and delicacy in the work of Cotes and Allan Ramsay, and strength and subtlety with almost infinite variety in the many canvases of Reynolds.

The quality of the illustrations is such as fully to maintain the high standard of Messrs. Goupil's artistic publications. Four out of every five are taken from mezzotint engravings, and these, even seen immediately after the exhibition of the Cheylesmore mezzotints, convey something of the feeling and charm of the originals. The plates are arranged alphabetically, according to the names of the subject, and in consequence the fifty examples of the works of Reynolds dominate the whole. Among the most successful may be mentioned the plate of 'Mrs. Collier' from the engraving by James Watson, which it would be hard to surpass in softness and delicacy of texture; that of Lady Charles Spencer standing beside her horse, from the engraving by Dickinson, cool and silvery in tone, with exquisitely harmonious gradation of light; that of the Earl of Rothes from McArdell's engraving, or the bewitching little figure of the Lady Catherine Pelham Clinton feeding fowls from the engraving of J. R. Smith. The conceptions of Reynolds seem always to have stimulated his engravers to their most successful creations, and the quality of these reproductions is such that they almost of themselves suffice to make this fact evident. We have noticed one mistake in the titles of the plates. No. 56—a half-length with a youngish woman seated, drawing an ermine cloak round a child who nestles in her lap—is described as "'Hope nursing Love' from a mezzotint engraving by Edward Fisher after Sir Joshua Reynolds." The picture which the plate represents is, however, that of the beautiful Maria Walpole, Countess of Waldegrave, with her daughter Lady Elizabeth Laura, and it is taken from the mezzotint engraving by Richard Houston. 'Hope nursing Love' is the title of the picture of Miss Morris now in the possession of the Marquis of Lansdowne, of which there is an engraving by Edward Fisher.

The illustrations claim priority of mention, but the introductory essay on the status of the portrait painter during the eighteenth century has afforded Mr. Gosse a theme to which his wide knowledge of eighteenth-century literature has enabled him to do full justice. The limit of time is not interpreted very literally, and perhaps the most interesting parts of the essay are those which treat of the position of the portrait painter at the time of the

Restoration and under the later Stuarts, and show the deep line of severance that existed between the foreign painters of the Court and their humbler English confrères. The very arrogance of Verrio and Verelst tended to perpetuate that tradition of prestige which had grown up with Vandyke. So we are told of Michael Wright that he owed his commission to paint the judges for the Guildhall to the fact that Sir Peter Lely refused to wait upon them in their chambers. This difference ceased after Kneller, so completely that Mr. Gosse remarks of Aikman and Hudson that "they have saved eighteenth-century art from being too monotonously aristocratic." The dictum seems to leave somewhat out of account the work of Hogarth, but it serves to show the prevailing tendency of art, and this of necessity reacted upon the status of the artist. The change was seen to the full in Reynolds, in treating of whose work the introduction may itself seem to incur the reproach of the aforesaid monotony, though this it is perhaps hardly possible to avoid in an essay which purports primarily to treat of social status. His canvases are characterized as "scenes in which, as it must have seemed to the noble subjects of George III., the English aristocracy walked about transformed to deities, in a fairyland of glorious light and air." After this follow some half-dozen instances of the essentially idyllic character of the setting of Sir Joshua's compositions, and then we are told, somewhat incongruously, that "it must have seemed to the beautiful great ladies that for the first time the conditions of their life were comprehended by an artist."

Of the biographical notices of the seventeen painters represented in the volume, those of Hogarth and Reynolds are naturally the most considerable. They present a vivacious and succinct account of their lives and of their art. We think, however, that there is somewhat slight foundation for the statement that "it seems certain that Reynolds was bent more upon amusement than hard study while in Italy." The note-books which he made during his stay in Rome, as well as his subsequent work, both literary and artistic, would seem to point to the contrary conclusion. We may also observe that, although in the latter part of his life he felt the competition of Romney severely, it is surely an exaggeration to speak of the latter as having "decoyed away all Reynolds's best sitters"! Of Sir Godfrey Kneller, who is said to have had ten reigning monarchs as his sitters, and of the various poetic eulogies which now by their hyperbole tend rather to obscure his fame than to enhance it, there is an account, brief indeed, but eminently readable; and the other notices, though short, yet form an admirable introduction to the plates which follow.

The cult of old furniture has now developed into a religion which requires a liturgy and exegesis. Hence the large number of books on the subject that have appeared during the past few years. The latest, *Old Oak Furniture* (Methuen), by Fred Roe, may claim in some ways to be one of the best. It does not go beyond the age of oak, but it treats its theme more scientifically, and with more expert knowledge and research, than any similar book. The illustrations, although they suffice, are not in the same category with those in Mr. Percy Macquoid's history of furniture, but Mr. Roe is a far more comprehensive guide in some ways. Thus he begins his treatise with an account of the coffin of St. Cuthbert in the Cathedral Library at Durham. This has little practical relation to furniture, but it is an interesting place from which to start a disquisition on oak, for St. Cuthbert died in 688, and the coffin is the restored oak in which he was buried. It is noticeable that the 'Ancestral Furniture' of Mr. Ernest Crofts, Keeper of the Royal Academy, is drawn upon by many writers on furniture, and Mr. Roe is no exception. He has gone everywhere for his information, and it is perhaps a pity that the scope of the book did not allow him to make better use of the pictures he must have had at his disposal. For the eye of the romantic there are two later chapters, full of interesting anecdotes, on 'Furniture with Hiding-places,' and the vicissitudes of furniture. Mr. Roe dwells upon the influence of Walter Scott in reviving an interest in old furniture, but we cannot think that our grandfathers, who lived among horsehair cushions and early Victorian ottomans, and packed all the old-fashioned furniture into attics, were much affected by the author of 'Waverley.' The revival is much more modern, and springs from a better taste. No book of this sort nowadays is complete without a chapter on forgeries, and Mr. Roe gives one, but after perusal one hardly feels confident of one's ability to detect a "fake."

The Cathedrals of England and Wales. By T. F. Bumpus. (Werner Laurie.)—Mr. Bumpus has many qualifications for writing about English architecture; chief among them a thorough knowledge of his subject and great enthusiasm for the English styles. We ourselves should hardly have asserted that "England has a greater number of noble parish churches than France and Germany put together," or that "our cathedrals are proportionately nobler and more numerous than those of any single nation in the world"; but we are glad to feel that such theses may be reasonably maintained. Mr. Bumpus describes Durham, Ely, Lincoln, Salisbury, and five other cathedrals, both architecturally and historically. When one reads the detailed catalogue of the crimes committed under the name of restoration by such men as Wyatt and his modern successors, one wonders how it is that anything beautiful or authentic survived their frenzy. Mr. Bumpus's book is a valuable guide in the case of these buildings, not only describing them very fully, but also pointing out what parts of them are original, and what new. The book is illustrated by twenty-five plates from good photographs. We hope Mr. Bumpus will continue the series forthwith.

An Elementary History of Design in Mural Painting, especially during the Christian Era, with an Introduction on the Art of the Pre-Christian Period. By N. H. J. Westlake, F.S.A.—Vol. II. *From the Second until the Twelfth Centuries*, A.D. (Parker & Co.)—The contents of this volume are very difficult to understand and analyze. The key-note of the author's ideas seems to be that the character of Christian art in early times is largely the result of Oriental influence and imitation of older forms. He says (p. 86), "The art of Western Europe.....would be historically incomprehensible unless considered with that of Greece, and Greek influence, European, Asiatic, and African." And again, he draws attention to the influence of Egypt, Assyria, and Phœnicia on ancient Greek art, and the reflected influence of Hellenic art on those countries, and that of all these sources on Etruria, Southern Italy, and Rome. All this is but truism written hazily; art, like language and all other prehistoric attributes and accomplishments, has one common origin; and just as we can trace the modern man back to the anthropoid animal, so we can trace the handiwork of the Gothic cathedral-builder back to the primitive constructor of a wigwam, and the masterpiece of an Italian Cinquecento artist back to the delineator of outlines on a fragment of mammoth ivory. Unless this were so, we must admit of a gap in the continuity of humanity. We fear Mr. Westlake has never realized, or has forgotten, this universality, and the paramount necessity of admitting it. The examples he has brought together are numerous, and valuable factors towards establishing the points he seeks to inculcate; but the pictorial instances of them are mediocre, and in these days of excellent reproductions it is shocking to see, for instance, the Madonna of St. Luke, the portrait of our Lord in the church of St. Bartholomew at Genoa, or the head of our Lord in St. Silvester at Rome, through the medium of coarsely drawn copies reproduced by some cheap process. The importance of the teaching which they are adduced to verify demands the more accurate aid of a photographic method. Let any one compare, for example, the illustrations of the earliest representations of our Lord's head, given by Sir Wyke Bayliss in 'Rex Regum,' plates xiv. and xv. (two), with those on pp. 11, 12, and 13 of the present work, which are infinitely inferior in every respect. Further, as one reads through this volume, and loses one's way in the vagueness of the author's deductions, the fact is very quickly brought to notice that either his printer has wreaked a terrible vengeance upon him, or his ideas of language are strange indeed. The work teems with error. Take, for example, the passage (pp. 6, 7): "I have sent you a copy of that decree.....and I will that it be openly proposed on a table of brass," &c. How does one propose a copy of a decree? In the same p. 7 occurs the passage: "It is also granted to Hyrcanus and to his sons.....that in fights,..... that they sit amongst the Senators," &c. What do the words "Art cone Nicæn." mean on p. 10? Why "Rothwell, in Germany," in the text, and "Rottwell, in Germany," in the note on p. 10? and what are the subtle distinctions between "quasi-Hellenic" and "Semitic-Hellenic" on the same page, where the author speaks of the origin of mosaics?

The first chapter deals with the early representation of our Lord's face and the Crucifixion. Sufficient notice of this has been laid before our readers in our review of the 'Rex Regum' of Sir Wyke Bayliss (whom, by the way, Mr. Westlake calls Baylis, pp. 16, 19), a valuable work which does not appear to have been consulted, though it was published three years ago. Mr. Westlake deals also with the portraits and *sudaria*, and seems to believe in their authenticity, although he admits that St. Augustine did not support the genuineness of any of the former. We find "Iræneus" (p. 16) and "Lentulius" (p. 18). And, beyond all, what nightmare is responsible at p. 18 for a reference to "'Itinera et descriptiones Jeuce Sancta,' ed. Iobler," which we suppose indicates Tobler's well-known work 'Itinera,' &c., 'Terræ Sanctæ'? In this chapter the series of portraits is brought forward to indicate that

> "the tradition which involves the *sudaria*, the portraits and pictures in the Catacombs, on the glasses, and on the sarcophagi, were [*sic*] accepted and respected from the most ancient time."—P. 18.

Mr. Westlake's Latin is as bad as his English. Take, for example, "mulieres nimium cujusdam sedentis effigiem" (p. 21) for "mulieris nimirum," &c., in his quotation descriptive of the earliest picture of the Annunciation, in the Cemetery of St. Priscilla on the Via Salaria. On the same page we read of the "Higoumenus of Daphne" and the "Abbey of Malvern."

In the next chapter we find good examples of very early Christian Roman art, but they are badly drawn. In the account of the Roman

method of painting on the surface of a wall before it was dry, what are we to make of a quotation from Vitruvius thus rendered: "Colores autem udo tectoris cum diligentur sunt inducti, ideo non remittunt"? The well-known Cavalcaselle is made into "Cavascacelle" (pp. 29, 87). Is there not a double error in the mention of the name of "Sister Costalga de Santa-croce," an Italian abbess who allowed excavations to be made which resulted in the discovery of S. Maria Antiqua in the Roman Forum at the corner of the Palatine hill? Of this church the author gives excellent illustrations. Why garble the names of two saints (p. 44) into "Chrysostum" and "Epiphanus"? What are we to make of "Ego Beno de Rapiza .....fecit" (p. 47), and of "Ego Maria Macellaria pro timore Dei et remedio anima meo hæc pingere feci" on the same page? At p. 56 the author uses the expressions "Toga picta" and "Toga pictus," the latter an error which would disgrace a first-form boy. What can "Mabillon's Annales Ordinores S. Benedicti" mean?

Chap. iii. deals with mural paintings in North and South Italy, and reproduces examples—interesting on account of their derived styles—from Ravenna, Naples, Brindisi, Palermo, and other sites, Pompeii being especially rich in Græco-Christian art of the fifth and sixth centuries. The Latin extracts in the foot-notes of pp. 65 and 66 may be taken as specimens of the author's way of rendering unintelligible the statements of his authorities. The Swastika occurring in Pompeii, Germany, France, and England is worthy of remark, as it seems to link our native art with that of the Orient; and Oriental influence, with the addition of the copying of older forms, is the key-note of this work. Chap. iv. treats of mural paintings in European and Asiatic Greece, Coptic and Slavonic art, and other styles, from the second to the twelfth century. Here, again, we meet one Waltmann (p. 86), rightly called Woltmann (pp. 29 and 88), and Pausanius (p. 91), and marvel why these things, and the terrible Greek on p. 80, were allowed to stand. A chapter devoted to mural painting in France follows next; among the examples, those from St. Savin, in Vienne, are remarkable for their drawing. The early German wall-paintings described in chap. vi. are equally curious, and the Celtic nature of those at St. Gall is so interesting that they deserve a book to themselves. The chapter dealing with English mural painting is perhaps the best written of all; but it treats of many other things as well, being very discursive, and betrays the same careless dealing with details—for example, the line of rhyming inscription over a picture of the Salutation is given as "Virgo Salutatur, Sterilis fecunda probatior." This slipshod manner of writing, of which we have mentioned only a few out of many examples, cannot fail to arouse suspicion as to the author's competence. No man with a claim to scholarship should leave his book in a state like this.

Handbook of English Antiquities for the Collector and Student. By George Clinch. (Upcott Gill.)—This is an interesting and attractive little volume which will be welcome to beginners in the pleasant study of English archæology. A great portion of its contents is trite and commonplace, but there is no harm in that, and to learn any science well a student must begin at the beginning. The writer says in his preface that his desire is to be intelligible to those having a very slight acquaintance with archæology, and it is in obedience to this that his subjects have been selected for their prominence and frequency of occurrence, and that what he says of them is rudimentary rather than profound. Being also intended primarily for the use of collectors, the book mainly deals with antiquities likely to be acquired for collections. The arrangement is chronological. We have the introductory part, dealing with prehistoric, and with historic, periods and relics. But the different ages or progressive stages of human culture, as shown by the surviving objects, are not uniformly contemporary, nor coincident either chronologically or geographically. Then comes the Age of Stone, with notices of early pottery and flint instruments, palæolithic and neolithic (we find no mention of the "mesolithic" which some antiquaries have placed between the two), and remarks on the now frequent forgeries of such articles.

The author has not ventured to record the controversies circling around the objects recently discovered in the Clyde, by some gravely suspected of being spurious, but not without parallel among genuine objects found lately in Portugal. The Age of Bronze introduces a consideration of hoards, celts and palstaves or axe-heads, knives, swords, and similar weapons, with their concomitant *fictilia*. Then comes the prehistoric Age of Iron, with remarks on Late Celtic antiquities and pottery, gold ornaments, the penannular brooch, combs, &c. Here some mention might have been made of the sharpened leg-bones of the sheep, often stained with greenish colours, and presumed to have been used as tools for making holes, or ornamenting the coarse clay vessels of this and appropriate periods. The Romano-British period, with its wealth of relics, follows. Here occur glass vessels, enamelled trinkets, pottery both native and of the so-called Samian style, flue-tiles, armour, keys, pins, *styli*, and many other objects indicative of the widely increasing intelligence of man brought to bear upon the improvement of his domestic *supellex* and his military apparatus. Anglo-Saxon remains of armour, glass, jewellery, enamels, and art-metal work are perhaps more fascinating to the collector than the rugged and uncouth specimens of anterior times; and when we come to the mediæval age, with its range of remains, only a few of the now greatly diversified forms of articles can be dealt with in so rudimentary a work as the one before us. Perhaps this accounts for the omission of any notice of seals and matrices of seals, seldom absent from the cabinet of the collector, however small may be its capacity. It is true the 'Dictionary of Antiquities,' a chapter towards the end of the book, devotes about fifty or sixty words to this popular class of mediæval objects, but the seal really deserves a book to itself.

The remarks on forged antiquities ought to be of the highest value to the tyro, who is frequently impressed with the fictitious value of the forgery, and difficult to persuade into a disbelief of its genuineness. Pilgrims' *signacula*, intended to be worn on the clothing by way of badges indicative of a visit to a favourite shrine or resting-place, are another popular class of antiquities. That described and figured at pp. 204, 205, is wrongly read as to its inscription. The reading around the royal figure is given "Sigillum sancti Edwini regis pmartiris," "The Sign of Saint Edwin King (and) Protomartyr." The true reading at the end is "et martiris," for the *et* is represented by an arbitrary sign, and *p* could never stand for *proto*. Besides, King Edwin laid no claim to be the Protomartyr of England; that honour, as many people know, belongs to St. Alban. Edwin or Æduine, King of the Northumbrians, was converted by Paulinus, Archbishop of York, and by the advice of his pastor built the chapel of St. Peter in that city in the early years of the seventh century. On the reverse of this curious relic, which is probably of the fifteenth century, is an effigy of St. Ecgwine, Bishop (of Worcester) and Confessor. The author rightly says that the "reasonable explanation of these two Saints being shown on one badge is that there may have been a joint shrine where relics of the two Saints may have been preserved, and where the sign or badge was probably procured" (p. 208). We know that St. Ecgwine's body rests at Evesham, from the passage "Thonne restedh sanctus Egwinus bisceop on Eoues hamme neah thære éá Afene" in the recent edition of the 'Hyde Abbey Register,' p. 92; and it is not unlikely that the opulent Abbey of Evesham, on the Avon, possessed the relics both of Edwin and Ecgwine—possibly miracle-working relics—and took care to perpetuate the fact by distributing metal impressions of this commemorative badge among those votaries who visited the remains. A very useful chapter on the preservation and proper treatment of antiquities is given at the close. This work should be extensively circulated among the young students of a science which deserves more attention than it usually receives.

A PORTFOLIO which Messrs. Cassell publish of *Pictures from Nature*, by Richard and Cherry Kearton, deserves to be widely known and appreciated. We have here fifteen photogravures of an exquisite kind of beasts and birds caught in their natural haunts by the exercise of patience and ingenuity. The reproductions are selected out of a very great number, and are of the highest quality. The letterpress gives some idea of the unwearied assiduity which refused to be baffled by any difficulties. Most of the pictures are of birds, but we find also leverets, a squirrel, and a hedgehog.

MR. WALTER CRANE'S *Flower Wedding* (Cassell & Co.) recalls his 'Flora's Feast.' It is a blaze of bright and beautiful colour, which should appeal both to young and old. Mr. Crane is highly ingenious in inventing human types of flowers, and he has done some bold things in the way of introducing our "modern small-souled garb," as Heine calls it; but even he cannot make a frock-coat look tolerable in a picture. There is, however, good store of older and more attractive dress, and we find several pretty fashions of head-dress.

Fine-Art Gossip.

TO-DAY is the press view, at the rooms of the Royal Society of Painters in Water Colours, of the work by six painters which has become a feature of the Christmas season.

AT the last meeting of the Council of the Royal Society of Painter-Etchers and Engravers Mr. J. R. G. Exley, Mr. Malcolm Osborne, and Mr. D. I. Smart were elected Associates.

THE editorial article in the January number of *The Burlington Magazine* on 'The Lesson of the Rokeby Velazquez' proposes that the Trustees of the National Gallery and the Committee of the National Art-Collections Fund should co-operate in taking steps to preserve for the nation works of art of first-rate importance in private collections, whenever they come into the market. Sir Richard Holmes contributes the first of a series of articles on the English miniature painters, dealing this time with Nicholas Hilliard. Prof. Baldwin Brown concludes his paper on 'How Greek Women Dressed,' and Mr. Lawrence Weaver deals with 'Some English Lead Fonts,' illustrating his article with several fine examples. A paper of importance to students and collectors of English pottery is that by Mr. A. J. Caddie on 'Recent Discoveries at the Wedgwood Factory.' Gaston Gramont writes on the furniture at Windsor Castle, and Mr. Beck concludes his series of articles on 'Ecclesiastical Dress in Art.' Among the miscellaneous notes are one by Mr. W. H. J. Weale on a Franco-Flemish picture which he publishes, and another by Mr. Walter Dowdeswell on a painting which he attributes to Bartolomé Vermejo.

A PICTURE in the Ambrosian Library at Milan, hitherto known as a portrait of a Duke of Milan, and attributed to the school of Luino, has now, owing to the removal of paint by a later hand,

revealed an inscription with musical notes and the words "Cantus Amoris." This is thought to refer to Gaffurio, who was painted by Leonardo towards 1483, and thus we have, possibly, a portrait of the utmost interest.

The admirers of the work of David d'Angers, in concurrence with his son, M. R. David d'Angers, have obtained permission to place a commemorative tablet on the house built on the plot of ground on which the great sculptor's studio once stood, in the Rue d'Assas, at the corner of the Rue de Rennes, Paris. The tablet will be fixed on January 5th, the fiftieth anniversary of the death of the sculptor.

The death, at the early age of forty-eight, is reported from New York of the portrait painter Carl Fredrik von Saltza, who was a native of Sweden, and was Lecturer on Fine Arts at the University of Columbia.

The January number of *The Reliquary* will contain articles on 'Recent Researches in connexion with Roman Remains in Scotland,' 'The Silver Altar of Pistoia Cathedral,' 'Ye Antiente Hospitall of Ye Holye Trynitie, Croydon,' and 'The Sculptured Caves of East Wemyss: III. The Factor's Cave.'

The Amir of Afghanistan has issued an order for the preservation of ancient monuments and buildings in his country. The governors of provinces are to be held responsible for this being done; but in the absence of a capable archæological adviser it may be feared that as much harm as good may be done by unskilful restoration.

MUSIC

OUR LIBRARY TABLE.

The Life and Letters of Peter Ilich Tchaikovsky. By Modeste Tchaikovsky. Edited from the Russian, with an Introduction, by Rosa Newmarch. (John Lane.)—Among modern composers no one has been more played—at any rate in England and America—than the subject of the present volume. The lives of some composers—as, for instance, those of Schumann and Brahms—offer little interest apart from their art-work. In the Russian composer's short career there was, however, a certain romance, and in his marriage a certain mystery; while a few months after his sudden death in 1893 his 'Pathetic' Symphony, produced under Sir Alexander Mackenzie at the Philharmonic Society, created special interest. The present volume will therefore find many readers. Mrs. Newmarch had already published in 1900 'Tchaikovsky, his Life and Works,' and, as she tells us in her 'Introduction,' there was a proposal made to her to prepare a new edition. Meanwhile, however, the three-volume life of his brother by Modeste Tschaïkowsky (we adhere to the old spelling) was published at Moscow, so she gave up the idea of revising her book, and resolved to translate the work just mentioned, but finally decided to make only a "careful selection" of the voluminous matter contained in it. The present abridged version, like the original work, is virtually an autobiography, for it consists to a very large extent of extracts from letters written by the composer. Those addressed to Nadejda Filaretovna von Meck are of special importance. A lengthy correspondence was carried on between the composer and this lady, whom Modeste Tschaïkowsky describes as "my brother's best friend and benefactress," and yet "they never saw each other except in a crowd—an accidental glimpse at a concert or theatre." All letters on both sides have been preserved, and the brother is of opinion "that the publication of the entire correspondence on both sides would be of profound interest."

Various letters explain the composer's views on the burning subject of programme music. To Taneiew, for instance, in reference to his Fourth Symphony, he says:—

"Of course my symphony is programme music, but it would be impossible to give the programme in words; it would appear ludicrous, and only raise a smile."

Yet in a letter to Nadejda von Meck, who was in thorough sympathy with him and with his music, he declares that "*our* symphony has a programme," and adds, "I will tell you—and you alone—the meaning of the entire work and of its separate movements"; and then he proceeds to do so. In like manner Beethoven seems to have explained to friends the inner meaning of certain of his works, though he was by no means inclined to publish it to the world at large.

As a rule, great composers are unable to render justice to their contemporaries, but Tschaïkowsky's opinions in many cases show considerable acumen. Towards Brahms he may have been rather severe. Of Liszt's works, his declaration, "They have more poetical intention than actual creative power," seems, however, to us most sensible. And this comment on Wagner's services to art is not unreasonable:—

"He has proved that the older forms of opera are lacking in all logical and æsthetic *raison d'être*. But if we may no longer write operas on the old lines, are we obliged to write as Wagner does? I reply, *certainly not*."

The history of stage music since Wagner has shown that deliberate attempts to imitate him have not been successful. Of Richard Strauss, Tschaïkowsky said, "Such an astounding lack of talent, united to such pretentiousness, never before existed"; but this, it should be remembered, was written seventeen years ago, when Strauss was almost at the outset of his art-career. Of his great predecessors Tschaïkowsky seems most to have admired Mozart. Bach he did not regard "as a great genius"; to him Handel was "only fourth-rate, he is not even interesting"; Haydn is that "genius of 'burgher' music which induces a fierce thirst for beer"; while of Beethoven's last period he said he "really hated it, especially the latest quartets." Like Berlioz, he probably knew very little about the art-work of either Handel or Bach.

Tschaïkowsky was very fond of reading, and in a long letter to Von Meck he discourses about Schopenhauer; but he does not appear to have studied him very thoroughly, for he says:—

"A man who is convinced that non-existence is the best thing of all should endeavour to act up to his conviction; should suppress himself, annihilate himself, and leave those in peace who desire to live."

In 1880 he is trying to master English, for "to read Shakspeare, Dickens, and Thackeray in the original would be the consolation of my old age." But he became busy, and left off studying; moreover, he died before old age overtook him.

The Singing of the Future. By David Ffrangcon-Davies. (John Lane.)—"With the march of time," remarks Sir Edward Elgar in his brief yet thoughtful preface to this volume, "and with it the improvement of musical education, a new desire has possessed us—the desire to *understand*." By "us" the author evidently means the general run of musicians; for in every age there have been some earnest lovers of the art possessed of that desire. Mr. Davies, the author, at the outset claims forgiveness if in presenting his ideas he is "somewhat emphatic"; but as the emphasis is the natural outcome of great earnestness, the request is readily granted. The art of *bel canto*, as practised by the great Italian teachers of the eighteenth century, was something higher than mere sensuous beauty of voice and vocal plastics, and we are rightly reminded that "the singer's art must embrace the whole of man's nature"; it was the mere "vocalizing" tendency of the school of Rossini, Donizetti, and Bellini which brought about the false idea that the term merely meant agile, pretty singing.

Our author easily disposes of the contention that the "ability to do" is of greater moment than "the thing which is done." We have plenty of able musicians, but "geniuses do not arrive in crowds." And yet he is far from underrating technique, for, as we read, though "not the main thing, it is an integral part of it." Mr. Davies is a singer who thoroughly understands the technique of his art. He states its basis, and enters into details respecting the important matters of breathing, pronunciation, &c.; in fact, he is not only a preacher, but also a practical man.

The second part of the volume is headed 'Style, Oratorio, Opera.' Operatic drama deals with mundane aspects of love, hate, fear, &c.; oratorio drama, on the other hand, "with the dealings of God with man." Thus our author, and he considers "music which depicts a lofty mood eternally superior to that which illustrates restless movement and action." Operas could, however, be named of which the subjects are not mundane, and oratorios by no means of lofty character. Mr. Davies is perfectly right in saying that "opera cannot be held to supersede the necessity for the cultivation of oratorio"; but to set one above the other is surely a mistake. 'The Messiah" and 'Die Meistersinger' are both masterpieces, yet totally different in kind. Then we read that the leanings of Bach and Beethoven "were toward oratorio rather than opera"; also that, "apart from their abstract music, they occupied themselves with sacred and kindred subjects mostly, and their works supply musicians with a standard to this day." Bach wrote principally sacred music, simply because, by reason of his calling, he had to provide music of this kind. As to Beethoven, he wrote only one oratorio, and, though he undertook to write another, never fulfilled his promise. His opera 'Fidelio,' by the way, is a great work; the same, however, cannot be said of his oratorio 'The Mount of Olives.'

Mr. Davies has written a book which prompts thought. Vocalists at the present day are too anxious to appear in public, and the fact that a fine voice, though imperfectly trained, does sometimes bring success, and with it fortune, unfortunately tempts many to consider time spent in slow, steady work as in great measure wasted. But the singers whose names stand highest have laid a good foundation, and, in addition, always felt that they had still something to learn.

PERFORMANCES NEXT WEEK.

Mon. New Year's Concert, 3, Queen's Hall.
— 'The Messiah,' 8, Albert Hall.

DRAMA

THE WEEK.

Drury Lane. — *Cinderella: a Children's Pantomime.* By Sir F. C. Burnand, J. Hickory Wood, and Arthur Collins.

In 'Cinderella' Drury Lane has essayed a return to ancient faiths, and has attempted to substitute for unmeaning splendour something like the grace and prettiness of fairy legend. Its task in so doing has been the easier since this year it has encountered no opposition, and has had, so far as the West-End is concerned, a monopoly of pantomime. With regard to the libretto an improvement is perceptible, and Sir Frank Burnand's verses, though not specially noteworthy, are in neatness and sparkle an advance upon anything that has been heard

in Drury Lane in modern days. The effort at improvement in other respects commends itself the more readily to the management, since it involves, apparently, a reduction in expense. Still further retrogression is necessary before the primitive simplicity of the nursery legend is restored and fancy rather than science is the magician evoked. That the ground that was lost when music-hall performers were substituted for actors will be regained is scarcely to be expected, and that no employment should be made of the recent discoveries of science is not to be desired. There is room for further improvement in regard to the songs, in which simplicity is an object chiefly to be sought. Elaborately orchestral or operatic arrangements only impose new difficulties, and suggest contrasts by which pantomime is not likely to profit. The vulgarity of reference concerning which too much was heard last year has entirely disappeared, and the rough-and-tumble humour which attends the production is no more than is to be expected in what was once called, and still is, a burlesque introduction. The place of Dan Leno in Christmas pieces is not to be filled. In his own grotesque fashion Dan Leno was as unrivalled an artist as was, more than a generation ago, in another and a broader line, Robson. Close imitation of Dan Leno's methods is pardonable enough in one called upon to replace him, but the result is scarcely proportionate to the exertion that has been made. In the Baroness de Bluff, the stepmother of Cinderella, we have the only instance of a feminine character played by a man, and the reticence of Mr. Walter Passmore in the rôle is specially to be commended. The classical names Hippolyta and Œnone accorded—amusingly, if incongruously—to the unamiable sisters of Cinderella, whose real name is supposed to be Fioretta, we attribute to the collaboration with Mr. Hickory Wood and Mr. Collins of Sir Frank Burnand. The leading characters of the tale of Cinderella are well realized. Those of such persons, now first introduced into the legend, as Alfonso, a so-styled page of the baron, and of Dandigny, a species of mignon of Prince Jasper, are not intrinsically funny, but may become so when the exponents have contrived to reshape them. The representative of Dandigny is Mr. Fragson, a music-hall performer of English birth, who has been, we are told, the rage of late in Paris. His musical numbers are sentimental rather than comic, and have been in some instances written for him by men so considerable as M. de Féraudy. They are, however, in translation not specially suited to the position assigned them.

Great Queen Street.—*Aschenbrödel.*

The only rivalry attempted with Drury Lane is, curiously enough, at the Great Queen Street Theatre, whereat the German comedians have given a performance of 'Aschenbrödel,' not, as might have been expected, in the well-known play of Benedix, which supplied T. W. Robertson with the basis of 'School,' but in a prettily sentimentalized rendering of the fairy legend. The musical accessories to this render it a specially attractive entertainment. Fräulein Margarete Russ constitutes a delightful representative of the heroine, who is credited with more virtue than the average Cinderella is supposed to possess.

Dramatic Gossip.

The Aldwych Theatre was opened last Saturday, under Mr. Seymour Hicks, with a revised (or rather an elaborated) rendering of 'Bluebell in Fairyland,' the principal parts in which are still played by Mr. Seymour Hicks (the author) and Miss Ellaline Terriss.

'Charley's Aunt' was revived on Boxing Day at Terry's Theatre, where it is expected to run till the end of January, when it will give way to Mr. Henry Arthur Jones's promised novelty. Mr. Brandon Thomas plays his original part of Sir Francis Chesney, and Mr. Stanley Cooke reappears as Charley's Aunt.

It seems settled that Mr. Forbes Robertson and Miss Gertrude Elliott will not return to the Scala Theatre, but will go on a country tour.

The Théâtre Français in London will begin on Thursday next with Madame Réjane in 'La Souris.' On January 8th that piece will give way to 'Décoré,' which will be succeeded on the 10th by 'Heureuse,' and on the 12th by 'La Rafale.' M. de Féraudy, Mlle. Leconte, and Mlle. Laparcerie will be seen on the 15th in 'Le Paon,' and on the 17th in 'Les Cabotins' of M. Pailleron. Mirbeau's 'Les Affaires sont les Affaires,' 'Notre Jeunesse,' by M. Capus, 'Brichanteau,' and 'Le Barbier de Séville,' will be given before M. et Madame Silvain appear in 'Le Père Lebonnard,' 'Le Misanthrope,' 'La Femme de Tabarin, and 'Louis XI.'

Afternoon performances of 'As You Like It' are to be given on Tuesdays and Thursdays during the tenure by Mr. Mollison and Mr. Durward Lely of the St. James's Theatre. The first of these will take place on January 9th. Miss Lilian Braithwaite will be Rosalind; Miss Lettice Fairfax, Celia; Mr. Mollison, Jaques; Mr. Henry Ainley, Orlando; Mr. Charles Groves, Touchstone; and Mr. Sydney Brough, Le Beau.

'The Lion and the Mouse,' a play by Mr. Charles Klein, now running at the New York Lyceum, will shortly be produced in London under the direction of the author.

The production of an English version of 'Heureuse,' by MM. Maurice Hennequin and Paul Bilhaud, is contemplated by M. Gaston Mayer, the director of the French company in London.

Mr. Frederic Harrison has now completed a dramatic version of his 'Theophano,' with good hopes of its being staged in London.

A one-act farce by Mr. Edward Knoblauch, entitled 'The Partik'lar Pet,' was given on the 18th inst. at the Theatre Royal, Brighton, by Mr. Cyril Maude, who will include it in his opening programme at the Waldorf. It is said to be derived from 'L'Aisle de Nuit' ('L'Asile de Nuit'?), by M. Max Maurey. Mr. Maude plays a tramp sheltering in a workhouse.

'Le Réveil' of M. Paul Hervieu, a play in three acts at the Comédie Française, is a great success for the interpreters, who include M. Mounet Sully, M. Le Bargy, M. Paul Mounet, and Mlle. Bartet.

'Les Déblayeurs,' a four-act play by Madame Marya-Chelga, given at the Théâtre de l'Œuvre, is a picture of life and revolt in Russia, gloomy enough to be faithful.

To Correspondents.—H. H. J.—J. G.—G. B.—C. C. S.—received.
H. H.—W. B.—Many thanks.
E. A. C.—Too late.
No notice can be taken of anonymous communications.

MESSRS. BELL'S
STANDARD WORKS.

CATALOGUE SENT POST FREE ON APPLICATION.

BRYAN'S DICTIONARY OF PAINTERS AND ENGRAVERS. A New Edition, Revised and Enlarged under the supervision of G. C. WILLIAMSON, Litt.D., assisted by a Staff of Specialists. With about 500 Illustrations, including 40 Photogravure Plates. In 5 vols. 21*s.* net each, or in half morocco, 31*s.* 6*d.* net each.

Illustrated Prospectus on application.

ECONOMIC INQUIRIES AND STUDIES. By Sir ROBERT GIFFEN, K.C.B. 2 vols. Demy 8vo, 21*s.* net.

Variorum Edition of Beaumont and Fletcher.

THE WORKS OF FRANCIS BEAUMONT AND JOHN FLETCHER. Edited by A. H. BULLEN. In 12 vols. 8vo, 10*s.* 6*d.* net each. Vols. I. and II. now ready.

LIFE OF NAPOLEON I. By J. HOLLAND ROSE, Litt.D., late Scholar of Christ's College, Cambridge. Largely Compiled from New Materials taken from the British Official Records. In 2 vols. large post 8vo, with numerous Illustrations, Maps, and Plans, Third Edition, 18*s.* net.

Also a CHEAPER EDITION, without the Illustrations, 2 vols. 10*s.* net.

NAPOLEONIC STUDIES. By J. HOLLAND ROSE, Litt D., Author of 'The Life of Napoleon I.' Post 8vo, with Maps, 7*s.* 6*d.* net.

HENRY III. AND THE CHURCH: a Study of his Ecclesiastical Policy, and of the Relations between England and Rome. By the Right Rev. Abbot GASQUET, D.D. O.S.B. Demy 8vo, 12*s.* net.

THE EVE OF THE REFORMATION: Studies in the Religious Life and Thought of the English People in the Period preceding the Rejection of the Romish Jurisdiction by Henry VIII. By the Right Rev. Abbot GASQUET, D.D. O.S.B. New and Revised Edition. 6*s.* net.

GREGOROVIUS' HISTORY OF THE CITY OF ROME IN THE MIDDLE AGES. Translated from the German by Mrs. HAMILTON. Crown 8vo, 8 vols. 3*l.* 3*s.* net; or separately, Vols. I., II., and III., 6*s.* net each; Vols. IV., V., VI., VII., and VIII., each in two parts, 4*s.* 6*d.* net each part.

THE DIARY OF SAMUEL PEPYS, M.A. F.R.S., Clerk of the Works and Secretary to the Admiralty. Transcribed from the Shorthand MS. in the Pepysian Library, Magdalene College, Cambridge. By the Rev. MYNORS BRIGHT, M.A., late Fellow and President of the College. With Lord Braybrooke's Notes. Edited, with Additions, by HENRY B. WHEATLEY, F.S.A. In 10 vols. demy 8vo, with Portraits and other Illustrations. 10*s.* 6*d.* net each.

Also a CHEAPER EDITION, in crown 8vo, without the Illustrations and volume of Pepysiana, 5*s.* net each.

CORPUS POETARUM LATINORUM, a se aliisque denuo recognitorum et brevi lectionum varietate instructorum, edidit Johannes Percival Postgate. 2 vols. large post 4to, 25*s.* net each, or in Parts. Parts I. and II., 12*s.* net each; Parts III. and IV., 9*s.* net each; Part V., 6*s.* net.

London: GEORGE BELL & SONS, Portugal Street, Lincoln's Inn, W.C.
